The first criticism that one may make on the broad statement contained in the Bill is the word "highway," which, strictly speaking can mean nothing but a public road. It states also that drains laid by a private person along a private street are to be sewers, provided they are constructed to the satisfaction of the local authority. On the face of it, it would seem to be best for the ratepayer to let the private individual maintain his sewer if he so wishes, and in any case the local authority should see that all drains acting as sewers in the ordinary sense of the term should be constructed to their satisfaction.

With regard to the actual wording of the Bill, this could, and should, be materially altered, in order to obtain the best results.

Section 2 defines drains by the involved process of eliminating all those things which are not drains. This makes it difficult of comprehension, involved in meaning, and militates against its general utility. It is too much to expect anything in the nature of honest commonsense in an Act of Parliament, but this would appear to be an extreme limit of complexity. It states in as many words that every "sewer" shall, with certain exceptions, be a drain and not a sewer.

Considering the subsections seriatim, Mr. Fraser made the following remarks. Subsection (a) needs no comment. Subsection (b), this is in effect quite covered under subsection (c). Subsections (c and d) require no comment. Subsection (e), in his opinion, should most certainly be struck out of the Bill. It was difficult to conceive why sewers made for a person's own profit should be maintained and repaired at the cost of the general public. Subsections (f to h) need no comment. Subsection (i) should be amplified to explain in what way the water-course could become a sewer. It should be noted at the end of this clause which local authority is referred to.

A hint for the better framing of this Act might be borrowed from the number of private Acts, now over 60 in number, which have been passed to overcome the acute difficulties experienced in various localities.

The City of London is exempt from the general provisions of the Public Health Act dealing with sewers and drains, it being governed by Metropolis Management Act and the Public Health (London) Act, 1891. Under this Act the definition of drain follows the Public Health Acts, 1875, but with the following important addition:—" And shall also include any drain for draining any group or block of houses by a combined operation under the order of any vestry or district board."

The Metropolis Borough of Woolwich was up to 1900 outside the scope of the Metropolis Management Acts, so that it now holds a unique position with regard to sewers and drains which are governed by a Special Act, entitled Woolwich Borough Council Act, 1905. Section 21 provides that drainage constructed before November 1, 1900, which drains "any group or block of houses by a combined operation," shall be a drain and not a sewer.

Section 2 needs no comment.

In Section 3 it is a doubtful policy to introduce the words "belonging to different owners," which seems to have been such a prolific source of controversy ever since 1875.

The following are of general interest in considering the whole question:—1, Single private drain has been defined as one in private ground to which there is no public access. 2, Neither owner of a combined drain can open up without trespassing. 3, The vesting of sewers with a local authority does not give them ownership of the soil. 4, Sewer made for profit does not mean for money profit only, and in some cases does not even mean for money profit. 5, Sewers constructed and maintained by a voluntary rate do not vest in a loca authority. 6, A block of flats is one house for the purpose of these sections of the Acts. 7, The site of a house is the ground on which the house stands, but does not include the curtilage In conclusion, one must again express regret at the defects o the Public Health Acts, 1875, relating to drains and sewers and of the remarkable ineptitude of the somewhat grotesque amendment of 1890. There has been more litigation arising from these sections of the Act than from the rest of the Ac put together.

The associations and individuals who have spent so freely of time and money in the past to remedy these defects ar deserving of best thanks.

That the Government has not legislated in a matter s urgent that over 60 private Acts have been passed to mee the difficulties is somewhat scandalous.

Mr. G. W. Chilvers proposed a very hearty vote of thank to Mr. Fraser for the way in which he had placed before them the main points of the Bill. They were all agreed that legis lation on this matter was required, and had been required fo a very considerable period, apart from all the legal case which have proved the same thing. The question was "Which is the best way of altering the present state c things?" Instead of further amendments to the Publi Health Acts it would be far preferable to get a consolidatio of them all. But with regard to the Bill about which the had just heard, it was a question of amending it in the righ way. The modern tendency was to municipalise everythin The promoters of this Bill (whether it was because they ha had a great deal of experience of the dangers attachin thereto he did not know) seem to wish to relieve the loca authorities of all difficulties by putting the onus on to privat owners. Whether that was the best course was open to que tion. In combined drains there were many advantages whic could not be overlooked from a public health point of vie and from that of economy. There seemed to be no reaso from a public health point of view why a Bill should not b drafted to make the matter clear. It could be taken as a pr position that a good drainage system was a valuable asset any community. For that reason it should be vested in th local authority, and not in a private individual, and, ther fore, any Bill passed to amend the present law should hav that end in view. There were, of course, two sides to ever question, and there were many difficulties attaching to th subject from whichever way one looked at it. Supposin this Bill were passed, it is quite possible that nine-tenths the sewers of new suburbs would be drains and not sewer so that the best part of the sewers of the district would drains, and not vested in the public authority. Such a sta of affairs was undesirable from a public health point of vie Clause 3, Section B, seemed very unsatisfactory, becau supposing there was a street of twenty houses, each of whic was in a different ownership, and reconstruction of the dra was required at any one part of it, the local authority a able to call upon any one of the tenants of that proper (failing the owner) to put the drainage in repair forthwith. is possible the defects might not be in that particular owner property. They might depend upon it that if there we half a dozen different owners, and only one a man of financi substance, the local authority would go for him. He believ that as far as possible all drains except those in one curtila should be sewers repairable by the inhabitants at large. the public authority is called upon to keep them in prop order, they are more likely to be done properly than if le to private owners. The public authority has a right to ent upon private property if a drain is defective, and they wou have no greater right under the Bill. These matters we not a question of the interests of individual sanitary e gineers, or the sanitary authority themselves, or of th owners, but the best interests of public health. So it r

›lved itself into this: "In which way will the drains be ıaintained in the best manner?" The more we can get each rain vested in the engineering department of the local ıthority the better they are likely to be constructed and aintained.

Mr. J. T. Griffin said that, speaking as a public official, had to confess that he was in favour of the Bill *in toto.* erhaps he might except one or two minor points. Mr. raser had suggested that all highways were repairable by the habitants at large. This he did not think was the case. e had one instance in his mind where a road was partially ade up under the Private Streets Act, and although it was wered, lighted, and gravelled they did not consider the road ıs in a condition worthy of being taken over by them as the al authority. The whole Bill seemed to him to be useful, d as far as he was concerned he hoped it might go through th one or two exceptions. He failed to see why a system combined drainage should be repairable. The local thority derived their money from the ratepayers gener- y, and they therefore should not be expected to do work special property owners. If a number of houses belonged him, and he had a combined system of drainage for them, d one of his tenants stopped up the drain, why should the epayers in another part of the district be called upon to the repairs to a private drain?

Mr. Chambers Smith thought it was undesirable that ners should be allowed to construct their drains as they se. The majority of builders, for example, did not go in good work, but rather for constructing houses as cheaply possible, and especially the drainage. In his opinion, Bill could not be very much improved upon. Many of the clusions to which Mr. Fraser had arrived came from an perfect knowledge of the Public Health Acts, and they l not heard anything to show much fault was to be found h the Bill. There was, undoubtedly, always a tendency municipal officials to look at things from the point of w of the local authority, and to bleed the owners as much hey could. At this present time the law was about in as fused a state as it could be. But the local authority who e to legislate for the greatest good of the greatest number st consider their obligations towards the people at large, not to certain owners who wish to make money at the ense of the greatest number.

Mr. F. W. Mason said he believed the Bill was drawn up the representatives of the Municipal Associations, the an District Councils, and other bodies round London. as to everybody's interest to see that the Bill was amended uch a way as to stop litigation. In his own experience s had occurred in which the owners, on being called on ut right certain defects in their drains, refused to do so, ıding that the drains were vested in the local authority. the latter body would not touch them either, the nuisance t on as before, and the public continued to get poisoned. ely, a Bill could be drawn up by which all drains after have left the house and been carried into a common drain ıld become a sewer. That should be done in this Bill. ryone knew that now no builder could lay any drains ss he had first submitted his plans to a local authority. he district he was most conversant with they looked after e matters pretty well, and they not only inspected the ıs, but they also tested the drains after their completion. prevented shady work, and it made it their business e that the drains were all right and in a fit state to be n over. For his own part, he certainly thought that the le of the sewers should be vested in the municipal ıority, who saw after them when they are laid down, and should see that they were kept in repair. There were now acres of property where the sewers are a disgrace, some of these were not five minutes' walk from the ling in which they then were.

Ir. Baxter was of opinion that, thanks to the official rvision, however jerry-built the house might be, they d not find the drainage jerry-built. The plans had to be ed first, and then tested before filling in.

Ir. Chambers Smith pointed out that the previous speaker hardly correct, because in many places there were no by-laws. In other cases the plans might be passed as factory, but unless they had a very able sanitary in- or they were sure to be unsatisfactory.

Ir. E. R. Palmer considered that in many instances uld be to the builder's advantage if he were made liable he whole of the drains. That course would certainly a large amount of litigation. The owners would know responsibility, having completed their work to the satisfaction of the local authority. The builder should also be liable, as owner, to keep that drain in proper repair. He believed that each house should be self-contained; that is, the drains should be complete in themselves, and finishing in a manhole before they enter the highway in the rear. If the owner were held responsible for the working of the drains matters would be greatly simplified, and there would not be very much difficulty in interpreting the law.

Mr. T. F. L. Gopsill, speaking from a personal unfortunate experience, said there was something to be said for the unfortunate house-purchaser if the local authority failed to see that the work they were supposed to supervise was not carried out properly. The Public Health Acts had been brought into force, not for the sake of finding sanitary inspectors and surveyors something to do, not for screwing something out of property-owners, but in order that the public should be protected. In the same way, if the Government authorised the local authority to inspect drains and take over sewers it was done for the sake of the people in the neighbourhood of those drains and sewers. The state of the drainage did not often affect the men who put it down; it was the neighbours and fellow-ratepayers who suffered from defective work. He had found the Bill they were discussing that night very difficult to understand, and after reading it through a great many times he was not yet clear in his mind about it.

Mr. A. Alban H. Scott remarked that it was a very short Bill, but the litigation which has taken place on the matters dealt with justified its most careful consideration. The various interests concerned might be classed as—(1) The health of the general community; (2) the interests of the County Councils and local authorities; and (3) the interests of the private individuals. The County Councils and authorities did not always have in view the interests of the general community. If the public authority had a choice of two alternatives they might be depended upon to always select the cheapest. According to his own experience, architects sometimes got imposed upon by builders, and even with the best intentions on the architect's part they sometimes got jerry-built drainage work. It seemed to him that the framers of the Bill had gone on the assumption that it was necessary to use the words which had given rise to so much litigation in the past, and without making any attempt to define those terms, whereas many of the terms should be either defined or very clearly amplified. The Bill seemed to promise no advance from the public health point of view, and certainly none from the legal point of view. He himself was in favour of the local authority taking over the whole of the combined drainage system. If combined drainage were allowed in the future the Council ought to take it over. He would prefer combined drainage to be cut out altogether, and for them to start with a clean sheet.

Mr. A. J. Martin, the Chairman, in closing the discussion, said there was one point on which they had all reached agreement, and that was as to the existence of a state of hopeless confusion with regard to this question. He was not sure that their agreement went very much further. It was very easy to look at a question of this kind from a single point of view, and to come to very simple conclusions. But the present Bill dealt with a complicated question beset with many conflicting considerations. A grave hygienic objection existed to the multiplication of drains. To combine the drains from two or three houses was to reduce the length of drains in the district, and to benefit the interests of public health. In country districts the houses often lie a long way back from the main road, necessitating a considerable length of drain. For these there is but little fall, and the flow is so small it is very difficult to keep these drains properly clear. But when it is possible to group the drains, this difficulty is escaped, because the flow is quite sufficient to clear the drains. Then there was another consideration. Frequently houses have their conveniences at the back, while the sewer is in front. But to have a drain under each house was very undesirable, and from a sanitary point of view the sewer should be at the back. The proposed Bill was, he thought, emphatically an occasion for taking broad views. The local authorities did not, to his mind, always do this, and were chiefly concerned with avoiding expenditure which could be cast upon a private individual, whereas the main consideration to be held in view ought to be public health. It was not possible to limit the consequences of bad drainage to the owners or occupiers, for they spread far beyond the people immediately interested in those drains, and are sometimes felt very severely by the inhabitants at large. It was therefore in the best interests of health to exercise the greatest possible control over the drainage. He presumed that one of the objects of an Act of Parliament was not to provide work for the profession engaged in unravelling Acts of Parliament. The fact that no by-laws exist in some places suggested one of the great difficulties. The local authority should have powers granted to them irrespective of ever going to Parliament for laws. There ought to be powers given to all local authorities to deal with questions which affect the interests of the public.

A vote of thanks having been accorded, Mr. Fraser replied.

THE GLASGOW TECHNICAL COLLEGE ARCHITECTURAL CRAFTSMEN'S SOCIETY.

AT a meeting of this Society held in the Societies' Room, in the Technical College, Mr. James S. Boyd, President, in the chair, Professor Charles Gourlay, B.Sc., A.R.I.B.A., delivered a lecture entitled "The College Diploma and Certificate Courses in Building." In his introductory remarks the lecturer pointed out that it lies more with the student himself whether or not he succeeds in obtaining a thorough knowledge of his subject than with his teachers or the general course which has been planned out for him. The student requires to exercise such qualities as earnestness and thoroughness, also the faculty of taking pains to understand and learn what he is taught. From the practical point of view the most important quality to be cultivated by a student of building is the habit of accurate observation. Assuming a student to possess these qualities, then the greatest profit, in so far as attendance at classes is concerned, will accrue to him if he takes those classes in the order which experience has proved to be most beneficial. The fundamental idea underlying all courses of instruction is the desire on the part of the educational authorities that the student should receive a good foundation and a thorough equipment for his work in life. They wish him to leave college strong in his subject and able to pursue his labours with as great certainty of being right in them as is possible. The lecturer then detailed the day and evening courses in building, dealing with the entrance examinations, the continuation schools, and the place they fill in the courses of study which lead ultimately to the junior and senior certificates and to the diploma of the Technical College, which is the highest point at present attainable by the student of building. In conclusion the lecturer said that the education of the building student was a serious matter, and much of that genuine happiness to be found in one's work in life depended on the sense in which he pursues his studies, which, when completed, should greatly add to his skill and to the pleasure in exercising it which practical work affords him.

LECTURES ON SANITARY PLUMBING.

A MEETING was held on Wednesday evening, October 18, at the L.C.C. Schools, Ferndale Road, Brixton, to inaugurate the winter course of special lectures to be given on the subject of sanitary plumbing. Mr. W. D. Caroe, M.A., F.S.A., architect to the Ecclesiastical Commissioners and Past Master of the Worshipful Company of Plumbers, presided. There was a large attendance of plumbers from all parts of London and district.

The Principal, Mr. H. W. Richards, who welcomed the audience on behalf of the Chairman and Committee of the school, expressed appreciation of the work of the Council for the National Registration of Plumbers in organising the meeting and their interest in the work of the school. He thanked Mr. Caroe for his presence, and referred to his continuing support of efforts in the promotion of the efficiency of plumbers' work. He said such recognition of the value of the school would be encouraging to the L.C.C. as affording further proof of the wisdom of their expenditure upon it.

Mr. Caroe explained that he presided in the absence of the Lord Mayor, and read the following letter from his Lordship:—

Mansion House, London, E.C.,
October 17, 1911.

Dear Sir,—When I consented to preside at the inaugural meeting of the winter course of instruction on sanitary plumbing to be given at the L.C.C. School of Building at Brixton, I was obliged to stipulate for an earlier hour than it was subsequently found would be convenient for the attendance of plumbers and others. In these circumstances I have no alternative but to express my regret that I am quite unable to be present.

I regret this the more that I feel the object of the lecture is one most heartily deserving all the support I could possibl render by attendance or otherwise, whether in my capacit as Lord Mayor or as Master of the Worshipful Company o Plumbers.

Changes in domestic habits and the great increase in th number of sanitary appliances of all kinds add greatly t the complexity of plumbers' work in and about the house of the people, and I feel the London County Council ar entitled to the gratitude of the community for the suppor they are giving to the classes of instruction for plumbers.

I understand that these classes are instructed by prac tical teachers, well versed in the technicalities of the trad and well abreast of modern sanitary requirements, and th plumbers of London are thus brought to regard the classe with confidence as affording fit training for the apprentice and young men entering the plumbing trade.

This confidence and the co-operation of the men in th trade with the school authorities is, of course, essential t the success of the classes.

I am glad to learn that the Managing Committee, whic acts with the Plumbers' Company for the National Regis tration of Plumbers, heartily appreciates the working of th classes, and I shall therefore be pleased to move the Cou of the Company to consider offering some award to successf students attending the course of instruction given at th school.—Yours truly,

(Signed) T. VEZEY STRONG, Lord Mayor.

Mr. Frank Randall, R.P., Secretary to the General
Council for the National Registration of Plumbers.

Mr. Fretwell, R.P., teacher of sanitary plumbing, d livered a lecture on domestic water supply. He describe the various forms of boilers and methods of circulatin hot water by the cylinder, tank, and auxiliary systems. Th lecture was illustrated by numerous diagrams, and part culars were given of the relative costs of heating water coal and coke fires and electricity.

Mr. Caroe congratulated the lecturer on the practic character and lucidity of his treatment of the subject, ar expressed the hope that the lecture would be published f reference.

A vote of thanks to Mr. Caroe was moved by Mr. Wright Clarke, seconded by Mr. W. Beecroft, support by Mr. J. Beeston, and carried with acclamation.

There were present on the platform Mr. Charles Hudso Past Master, and Mr. W. R. E. Coles, Clerk to the Wo shipful Company of Plumbers, and Mr. Frank Randa R.P., Secretary to the General Council for the Nation Registration of Plumbers.

At the conclusion of the lecture, specimens of t standardisation mark applicable to plumbers' work und regulations of the Board of Trade were shown on pipes lead, cast iron, wrought iron and copper, and the Clerk the Plumbers' Company briefly explained the system marking.

LECTURES ON HEATING AND VENTILATIO AT UNIVERSITY COLLEGE, LONDON.

THIS subject was further dealt with by Mr. Barker, B. B.Sc., in his third lecture on the "Real nature of t problems in heating and ventilation awaiting solution the engineer," on Tuesday, October 31.

He had referred in a previous lecture to desirable te peratures and heat cost, and now proposed to briefly exami the question of economy of heat by thermo-dynamic metho Under this heading he suggested that the heat from the outside a building might be used for warming the interi although of a much lower temperature than that requi for this purpose. An analogy could be drawn between su an idea and that of a water supply drawn from a high-le lake or stream, the water thus reaching the consumer at pressure more than sufficient for the needs of the case, wh a great percentage of the energy in the water was being was because it happened to be greatly in excess of that requi to reach the consumer's taps or cisterns. In fact, the press of the water had to be neutralised or impeded in such ca before it could be conveniently used for domestic purpos It was quite possible to utilise the vast store of energy in t high-level water by passing it through a turbine, which co be used, say, to pump deep well-water to a reservoir at level just high enough to supply the same at a convenien low pressure for ordinary purposes. At the same time exhaust-water from the turbine might still be used by allo ing it to pass into the low-level supply. Thus full adv

age would be taken of the high pressure of the natural upply to pump and store deep well-water for purposes equiring a low-pressure supply only, without even wasting he water thus used.

We could apply a similar idea to the utilisation of heat at resent wasted. Just as water was required at low pressures) was heat—as far as the warming of inhabited buildings as concerned—required at low temperatures. The methods eretofore adopted had been those concerned with heat con-uction, convection, and radiation, the body to be heated eing at a lower temperature than the means of heating, and ; was supposed that heat would only flow in the direction of rise in temperature. Water would only flow downwards, ut it could be made to flow in any desired direction by pumping. So also could heat be extracted from the air by pumping, although it might be at a lower temperature than was required. The method was simple, although the first cost of the necessary machinery, to which must be added the cost of depreciation, made the provision of power an expensive item at present. The existing price of coal and the ease with which heat could be extracted from it rendered our present methods so cheap that it was not worth our while to save this cost.

The thermo-dynamic method of producing heat consists of the simple operation of compressing a gas, which act is sufficient to raise its temperature in proportion to the amount of energy expended in so doing. Conversely if the gas is allowed to expand, a corresponding diminution of temperature takes place. The sudden compression of 1 lb. of air at atmospheric pressure is sufficient to raise its temperature from 40° to 80° F.—an increase of 40°—the amount of energy necessary to accomplish this being 7,340 foot-lb. If then brought into contact with a body which it is required to warm, say a volume of water, the same temperature can be maintained by the expenditure of 12,450 foot-lb. of energy, the pressure then being two atmospheres, or 29.4 lb. to the square inch. On the volume of air being removed from contact with the water and allowed to expand suddenly to a temperature of 40° it will be found to give off the same amount of energy as was originally put into it to raise its temperature through 40°. The difference between the work expended in maintaining the temperature at 80° while in contact with the water and the total heat obtained represents the only cost of the latter, which works out at 1,150 foot-lb. of the 19,790 expended.

Heating engineers have yet to fully appreciate the enormous economy of such methods of heat production which resolve themselves into the provision of a cheap power supply; for it is necessary to have power before heat can be obtained from the air in this way. The provision of electrical energy without the consumption of fuel would be a solution of the problem, although not within sight of realisation at the moment.

THE ROYAL INSTITUTE OF PUBLIC HEALTH.

BERLIN CONGRESS, 1912.

THE Council have accepted an invitation from the Ober Burgomeister (the Lord Mayor) of Berlin to hold their Congress in 1912 in that city, from Thursday, July 25, to Sunday, July 28, inclusive, and a Local General Arrangements Committee has been formed consisting of representatives of the Royal Ministry of the Interior, the Imperial Board of Health, the City of Berlin, the Medical Officers of the Headquarter Staffs of the Army and Navy, the University of Berlin, the Medical and Hygienic Societies of Berlin, &c., to promote the success of the meeting.

The Congress will be under the presidency of the Right Hon. the Earl Beauchamp, K.G.M.G., LL.D., his Majesty's First Commissioner of Works, and will be conducted in the following sections:—

A. State Medicine.—President: Sir T. Clifford Allbutt, K.C.B., M.D., LL.D., D.Sc., F.R.S., Regius Professor of Medicine in the University of Cambridge.

B. Bacteriology and Comparative Pathology.—President: Professor G. Sims Woodhead, M.A., M.D., LL.D., F.R.S. Ed., Professor of Pathology in the University of Cambridge.

C. Child Study and School Hygiene.—President: Sir James Crichton-Browne, M.D., D.Sc., LL.D., F.R.S., Lord Chancellor's Visitor in Lunacy.

D. Military, Colonial, and Naval.—President: Major Sir Ronald Ross, K.C.B., M.D., D.Sc., F.R.S., Professor of Tropical Medicine in the University of Liverpool.

E. Municipal Engineering, Architecture, and Town Planning.—President: P. C. Cowan, D.Sc., M.Inst.C.E., Chief Engineer of the Local Government Board, Ireland.

The various Congress and Sectional Officers will also include gentlemen of German nationality occupying distinguished scientific and municipal positions.

Facilities will also be afforded for visiting the various public health and educational institutions in Berlin, &c., in connection with the Imperial Board of Health, the Municipality, the University, &c., and it is confidently hoped that the Congress and the unique opportunities which will thus be given to representatives of municipalities, county councils, and other sanitary authorities of the United Kingdom for becoming practically acquainted with institutions in the work of which they are concerned will not only be of much interest but of the greatest value.

Arrangements are being made for travelling and hotel accommodation at reduced charges.

The subscription for each delegate is one guinea.

COMPETITION NEWS.

BARNSLEY.—The Town Council recently invited competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. Premiums of £50, £30, and £20 were offered. The assessor's awards in the competition, for which 25 sets of plans were sent in, were made known last week as follows:—1, Mr. E. Burgess London; 2, Messrs. Bowden & Wallis, London; 3, Mr. E. W Dyson, Barnsley.

Correspondence

[The Editor will not be responsible for the opinion expressed by Correspondents.]

Australian Federal City Competition.

SIR,—I have just received from the Honorary Secretar of the Institute of Architects of New South Wales a cop of a notice issued by the Council of that body asking thei members not to take part in the competition unless the con ditions are made more satisfactory. The Competitions Com mittee of the Royal Institute are considering this notic with a view to recommending the Council to take simila action as soon as possible. I send you with this a copy c the notice I have received.—Faithfully yours,

IAN MACALISTER.
Secretar

October 30, 1911.

Institute of Architects of New South Wales,
Royal Society's House,
5 Elizabeth Street, Sydney,
September 191

To Members of the Institute of Architects of New Sout Wales.

SIR,—With reference to the competition for designs fo the Federal City, as the Federal Government have refused t amend the conditions of this competition in the matter of th appointment of assessors, and the final decision is in th hands of the Minister alone, in spite of the recommendation made by the Institutes throughout the Commonwealth as we as the Royal Institute in London, my Council has decided t ask the Members of this Institute not to take part in the com petition unless the conditions are made more satisfactory.- I am, yours faithfully,

ARTHUR WM. ANDERSON.
Hon. Secretar

New Indian Patent Act.

SIR,—May I, through the columns of your paper, brin to the notice of such of your readers as are interested i Indian patents the fact that a new Act comes into force i India on January 1, 1912, which will alter the condition under which valid patents are obtainable? The particula point to which I should like to draw attention is that, unde the new Act, valid letters patent cannot be obtained for a invention which has been previously used or published (as b the printed British specification) in India. Under th present Act, however, it is allowable to file an application a any time within one year of the filing of the British appl cation, or of the actual sealing of the British letters paten Therefore, any intending applicants for Indian patents c which the corresponding British specifications are now pul lished, or will be published by December 31 next, shoul take care to have their applications filed before that date.- Yours faithfully, CHAS. B. KETLEY.

Birmingham: Oct. 25.

The Crystal Palace.

SIR,—As one who attended the meeting at the Mansio House in reference to the purchase of the Palace an grounds, I want particularly through your pages to tende to Lord Tenterden and his friends my hearty appreciatio of his efforts in this direction, and I am sure that of man of your readers. His scheme and hard work it was tha at last awakened the sleepy ones at the Mansion Hous to the fact that it was time something was done in th matter, and I most heartily concur in the remarks whic fell from the lips of Alderman Sir Wm. Treloar. I, to consider that Lord Tenterden has deserved better of th City, and ought to have been shown more consideration; bu whether his admirable scheme goes through or whethe the Corporation of the City of London carry out the scheme I am sure that Lord Tenterden and his influential Counc will deserve full credit for having forced the matter throug by their efforts, and the aid afforded by your influentia journal.—Yours faithfully. A SYDENHAMITE.

FORTHCOMING EVENTS.

Monday, November 13.

Architectural Association: Paper by Mr. J. B. Fulton, A.R.I.B.A., on "That the true hope of Architecture lies in the study of good modern work," at 7.30 P.M.

Tuesday, November 14.

Institution of Civil Engineers. Papers on "The Loch Leven Water-power Works," by Mr. A. H. Roberts, M.Inst.C.E., and "The Hydro-Electric Plant in the British Aluminium Company's Factory at Kinlochleven," by Mr. F. B. Sonnenschein, A.M.Inst.C.E., at 8 P.M.

Wednesday, November 15.

Northern Architectural Association: Opening meeting, presidential address by Mr. H. C. Charlewood, F.R.I.B.A., at 7.30 P.M.

Institute of Sanitary Engineers: Annual Dinner at the Holborn Restaurant at 7 P.M.

Thursday, November 16.

Society of Architects: Opening meeting; presidential address by Mr. George E. Bond, at 8 P.M.

Friday, November 17.

Illuminating Engineering Society: Report of Progress during the Vacation by Mr. L. Gaster, hon. secretary, and paper on "The Design of Motor Car Headlights," by Dr. H. R. B. Hickman.

XAMINATIONS AT THE ROYAL INSTITUTE.

NCE again the syllabus of the examinations of the Royal Institute of British Architects has been cast to the melting-pot and a new form evolved. Repetitions the process must be expected at greater or lesser tervals as fresh members take the place of those who ve acted for a time on the Board of Examiners or the oard of Architectural Education. Particularly from the tter body will there come reversals and upheavals of any isting order of things, for it is too much to expect that en of note, when they are appointed thereto for the press purpose of supervising the education of architecral students, will be content to sit still and quietly prove what has been done by their predecessors.

Men who have made their mark and come to the ont in architectural, as in every other walk of life, have ually done so in modern times by the exhibition of special ility in one or other direction; hence in any one notable lividual there is likely to be a preponderating inclination some one particular direction and an absence of an partial and comprehensive all-round view of things. pecially is this the case in matters artistic, and perhaps ove all in architecture, and herein lies the explanation the violent advocacy now of Gothic, now of Classic dition, by some of archæological correctness in design, others of freedom and originality even to the excesses *l'art nouveau*. Hence when fresh accessions of notable hitects to the Board of Architectural Education occur re are likely to obtrude fresh points of view.

Again, the practice of architecture is an occupation of y great complexity. It is, or should be, an art, a siness and a profession, and there will ever be differces of opinion amongst its practitioners as to which uld be the predominant element and to which should given the greatest importance in testing the qualificas of a student for the purpose of determining his fitness be regarded as a competent architect and a worthy mber of the Royal Institute.

In respect of the art of architecture, when we come draw up an actual scheme of examination we are conted by a sharp difference of opinion as to whether test applied to the student should be that of knowge or of ability, and some have gone so far as to that whilst it is perfectly easy to examine a candidate his knowledge of art, either historical or critical, ability artistic design cannot be judged or estimated, and refore examination in design should be omitted from syllabus of the Royal Institute.

With this extreme view we are unable to agree. The ission of design as a subject of the qualifying examination for an Associate would tend to imply that an architect might be properly qualified without possessing either knowledge or ability in artistic design, which even the objectors would scarcely be prepared to maintain; indeed, we might safely say, would be the last to suggest. Nor is there that difficulty in estimating the possession of ability to design that some would assert. It principally depends on the examiner. If he is a man of strong individuality, of violent antipathies, of deep prejudices, he will see along one line of thought only, and be unable to recognise merit which does not conform to his own preconceived ideals. But if he is a man of wide sympathies and broad views, as well as extensive knowledge, a critic rather than a partisan, he will be able to rightly judge merit and ability in artistic design in whatever form they may be manifested.

There is one other important point in the consideration of a student's artistic ability, and in our opinion it is the only real difficulty in testing the designing power of a candidate in an examination. The point is that there is a great difference between able designers in the amount of india-rubber they use and in the time they take to evolve a conception. Under the conditions of examination in design as they have hitherto existed at the Royal Institute, india-rubber has been almost an impossibility. Rapidity of draughtsmanship has been a primary essential. The man who could make an excellent design in a week has had no chance when he has been asked to turn out a full set of drawings in a couple of days. There has been no time for thought, still less for careful consideration and selection of the best solution of the problems set. The first idea has had to be followed and displayed with the utmost rapidity of draughtsmanship.

Given a capable examiner and sufficient time for the candidate, there does not seem to us any insuperable or even considerable difficulty in testing a candidate's ability to produce work of artistic merit. Such testing is done each year by the Hanging Committee of the Royal Academy and at the Ecole des Beaux-Arts. Why not at the Royal Institute of British Architects?

The principal difference between the most recent syllabus of the Institute examinations and those that have preceded it is that we now have introduced the encouragement and approval of specialisation by students of architecture. In a way this is really a reversion to the older practice of the Institute, even before the introduction of examinations, to recognise as fit and proper persons for membership the artist, the scholar, the man of business, and even the quantity surveyor. The examinations, however, have been practically the same for everyone, and

OLD HOUSES IN THE PIAZZA DEL PIANTO, ROME.—From a Sketch by Mr. LAURENCE DAVIES.

hence a minimum standard of attainment has been the necessary result. The artist has been required to know something about drains, the scientist to have some slight ability in design, but in neither case could the qualification be other than the minimum. The examinations have therefore favoured mediocrity.

The Board of Architectural Education having decided to recognise specialism, have done so thoroughly, and permits even candidates for the Intermediate examination to select special branches of knowledge or attainment. We are not altogether sure that in this they have not gone rather too far, and that it is altogether wise to enlarge the scope of this examination beyond the limits of what every architectural student ought to know. It must be remembered that the Intermediate is an examination that should be passed by every embryo architect during his pupilage, or at latest immediately on the expiration of his articles. Such students surely ought not to be allowed to choose whether they will be historians, mathematicians or designers. Nor is it desirable that an architect should be labelled as qualified without a knowledge of "Descriptive geometry, including the mensuration of simple plane and solid figures." The A.R.I.B.A. of the future will not necessarily be able to assist a mason or a bricklayer in a difficult piece of setting out. He will have to depend on the clerk of works or the builder's foreman for the solution by descriptive geometry of constantly recurring problems.

In the testimonies of study for the Intermediate there is at first sight but a small modification, but it is one fraught with very serious consequences. It is no longer necessary for a candidate for membership of the Institute to make any serious study of mediæval architecture, but only to give it so much superficial attention as may suffice for a chance question in a couple of papers which cover the whole ground of the "Principal styles and general history of architecture, and the purpose of architectural features in relation to the buildings in which they occur." Hence we may possibly have a race of British architects who when they are called upon to repair, restore or alter any of the thousands of mediæval buildings in our country will know nothing of Gothic architecture, and will repeat the treatment accorded by Wren and the classicists of the eighteenth century.

The outstanding feature of the change in the Fi
examination is the prominence now given to design. T
present members of the Board of Architectural Educat
certainly do not hold the view that it is not possible
examine in design. Every candidate must submit fo
designs as testimonies of study; he must make a design
the examination room; he may, as his obligatory thes
submit another design, and thus 900 marks out of a ma
mum 1,200 for the whole examination may be obtained
design alone.

Professor Reginald Blomfield, in his explanat
"Note on Recent Changes in the R.I.B.A. Exami
tions" that appears in the Journal, deplores the dis
pearance of the "Student-scholar-architect." The lat
revision of the Institute examination syllabus will,
fear, complete his extinction. Students who must att
a considerable degree of proficiency in design will not of
be tempted to select either history or science as the subj
of their thesis.

NOTES AND COMMENTS.

The current number of the *Architectural Associat*
Journal commences the record of a week in C
and neighbourhood spent by a party of members of
Camera, Sketch and Debate Club, which, combined w
Mr. H. H. Hill's recent lecture on this year's excursior
the Loire Valley, shows that some members of the Asso
tion do not agree with the view of the new Director
Education, as appears from the Brown Book, that Frer
architecture should be tabooed by students.

Professor Arnold's views on smoke could hardly exp
to escape criticism and opposition, and Dr. Owen has ta
up the cudgels against them; but we do not think v
successfully. We did not gather that Professor Arnold
jected to any amount of reduction of smoke from bo
furnaces and domestic fires, but deprecated legislative
other interference with metallurgical smoke. Dr. Ov
admits that he has no special knowledge of metallurg
furnaces.

The question of Portinscale bridge stands adjourned
a local inquiry, in which no architect or engineer is to
allowed to take part, and the witnesses must be ra

payers in the county of Cumberland. Whilst there are still advocates on the County Council of the destruction of the old bridge, it appears that the Highways Committee are prepared to let the old one stand for people to look at and build another for use.

Connemara Green Marble is to be exploited by a new company with a capital of £100,000 (if it floats), and we should be pleased to see the mineral resources of Ireland in stone and marble still further developed by the aid of more capital and better business methods than have been seen in the past. Many architects are aware that there is much excellent stone and many beautiful marbles in Ireland, but it is almost hopeless to expect to get them supplied with any promptitude or even at all.

This month's issue of *The Connoisseur* contains little of special architectural interest, but there are, as always, excellently illustrated articles on various byways of art. Winterhalter and his paintings of the days of the crinoline, eighteenth century variegated pottery ware, the tapestries of France as illustrated by examples from Sir John Murray Scott's collection, Viotti the violinist, a second instalment of Mr. Peacock's articles on Albrecht Dürer woodcuts, are the subjects of the principal articles, whilst the coloured plates include portraits of Queen Elizabeth and Darnley of Lennox; Constable's Water Lane, Dedham; a silhouette portrait of a lady on plaster.

A writer in the *North Middlesex Chronicle* makes a sensible suggestion for the prevention of the ever-recurring cracks and settlements that trouble the suburban householder after a dry summer. The basis for the suggestion is that the cracks occur (in London suburbs) through the drying of the clay which has become soaked by the rains of autumn, winter, and spring. Therefore, the preventive is to keep the clay dry, and the suggestion is "Keep your front garden as dry as possible during the wet weather; then when the drought comes there will be no shrinkage of the clay beneath." And a concrete pavement next the walls is the means recommended for keeping the clay dry.

The subject of cheap churches has been recently ventilated in the columns of the *Manchester Guardian*, and the possibility of building at a cost of about £7 per sitting has been strenuously advocated by Sir William Houldsworth as if it were an always desirable thing. Of course it is possible to build a good and serviceable church at this figure, but the clergy and their congregations usually desire something better. A writer in the *Manchester Guardian* puts the case in a nutshell in these words, "The whole success of the attempt to provide really cheap churches depends on the brains of the architect. That is the one point where there must be no economy." He further gives in detail the methods by which the problem has been solved in several instances. "First, the architect has in every case taken particular pains to think out a scheme for the particular church which should make the most of the site at the least cost. Too often the cost of a church is increased because the plan, though excellent in itself, is not well adapted to the conditions of the site or the requirements of the parish. Then it has to be modified under conditions which are bound to be expensive. Secondly, great care has been used in the selection of material. The use of a local stone or brick will often make considerable difference in the total bill, and if the building is designed with special regard to that material nothing will be lost in the final effect. Thirdly, all ornamentation has been reduced to the least possible, consistent with a good appearance. As, however, much modern ornamentation in churches tends to be purely conventional, a well-proportioned church often gains in dignity of appearance from the absence of what we may perhaps be allowed to call builder's ornamentation."

The destruction by fire of St. George's Church, Leicester, has formed the basis of a correspondence in *The Guardian* on the too-prevalent foolish parsimony of churchwardens in under-insuring the churches for which they are responsible; and Archdeacon Arbuthnot, of Coventry, points the moral by stating the fact that in his archdeaconry of 120 parishes there are seven churches insured for £500 or less and five more for £1,000. He does not say whether, as is probable, the policies in these cases are "subject to average," but even if not there is no doubt that the churchwardens, on behalf of the parishioners, are underwriting the risk. It is only the comparatively long odds against a fire occurring in a church that has encouraged the pernicious custom of under-insurance, but it should be remembered that if the contingency is remote the risk of a total loss is great and almost a certainty.

"THE ARCHITECT" STUDENTS' SKETCHING AND MEASURING CLUB.

We are not surprised to find that the majority of examples that have been contributed by our students of a pulpit constructed prior to A.D. 1800 have been of Renaissance work more or less pure. The number of mediæval examples that remain in this country is, unfortunately, but small, whilst of post-Reformation date there are plenty.

"Malaya" has drawn the pulpit in All Saints Church, Pavement, York, a richly-carved oak example, with a canopy or sounding-board evidently contemporaneous, and bearing the date "Anno 1634." The general form closely follows that of late pre-Reformation pulpits, and the influence of tradition is also shown in the use of cusping and in the form of the angle posts, though the character of the detail as a whole is naturally of the bastard Renaissance of the period. Our contributor's work is well done, but would have been better with a larger scale for the general drawings and full size for the mouldings.

Mr. Irwin Walker has selected a Gothic example, and a very fine one, the stone pulpit and stair in the refectory of the monastic buildings attached to Chester Cathedral. This is thirteenth century work of rather late Early English character. Mr. Walker's work has suffered both as a record and as a study from inability to clearly distinguish the jointing of stonework and the details of moulding and carving by reason of the thick coating of whitewash with which the stonework has been covered. He should in future, when drawing Gothic work, use a thicker line, and always, wherever possible, carefully measure and show the jointing.

"Jock" has found a very simple Jacobean pulpit in the church of Bolton Percy, near York, which, though scarcely exceeding the limits of village carpentry, is well proportioned and artistic in feeling. "Jock" has done well to adopt the large scale of one-quarter full size, but should have completed his work with sections of the simple and few mouldings and sinkings that outline the detail of the design.

Mr. E. H. Gibson sends measured drawings of the pulpit in Holy Trinity Church, Boar Lane, Leeds. This is an interesting example of eighteenth-century work with a good sounding-board, and is admirably drawn by our contributor.

"Alpha" has found his example of a pulpit in the chapel of the Trinity House, Newcastle-on-Tyne, which was built in 1636. This is of a very good design for the date, and has been well drawn by "Alpha."

We award this month prizes of one guinea each to Mr. E. H. Gibson and "Alpha."

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The first general meeting of the seventy-seventh session of the Royal Institute was held on Monday, November 6, at 9 Conduit Street, W., Mr. Leonard Stokes, President, in the chair.

After some formal business Mr. Stokes gave the following

Opening Address.

Since I had the honour of addressing you last year we have passed through all the glories of a Coronation, and long may our beloved patron George V. live to wear the crown, placed upon his head amidst so much rejoicing, and surrounded by so much pomp and splendour! Such an occasion naturally gives great opportunities to the architect and decorator, and I think we may congratulate ourselves upon the fine results achieved in many cases. It is, no doubt, to be regretted that more use was not made of our services; and that, when they were called in, our schemes were not more completely carried out. Nevertheless, the best results along the great processional route, and elsewhere, were produced undoubtedly—as might have been expected—by our noble selves and not by the commercial firms too often in evidence. It would be invidious to mention individual cases, but I should like to place it on record that the most effective, pleasing, and characteristic of the many great efforts to adorn our streets and buildings were those produced by architects. The only case of misplaced architectural genius that I noticed was the annexe to Westminster Abbey, erected "in the Gothic style" at large expense. Surely, the culminating point of the great procession along an otherwise gaily decorated route should have been something better than a mere plaster sham—supposed, no doubt, to be in harmony with the Abbey, but really a very poor compliment to it. One would have thought a fine marquee in gold and gorgeous colours surrounded by Venetian masts carrying flags, banners, and pennants much more suitable to the occasion than an impertinent imitation Gothic building.

Closely bound up with this same subject is the unfortunate *impasse* connected with the completion of the great processional road through St. James's Park. This road is in itself a fine thing, but how it came about that it has no proper opening into Trafalgar Square is quite incomprehensible, and, I fear, is another illustration of the hopeless manner in which our public improvements are invariably mismanaged. In this case a processional road starts from a palace, and leaves off, if you please, with a flourish of trumpets behind a row of houses which practically block its further progress. And when the houses have been dodged, further progress is effectually barred by an underground convenience! I should have thought that the possibility of getting properly and effectively into Trafalgar Square would have been the first thing to consider by those responsible for the scheme, instead of the last, and it now looks, I fear, practically impossible ever to make a really good finish towards the Square without spending a further huge sum of money, which might have been avoided if the scheme had been properly thought out from the first, by all three of the large public bodies really interested in the scheme, instead of by one alone, which one went to work apparently without any regard to the other two until the last moment, when, alas! it was too late. Architects are, unfortunately, too often forced, by the near-sighted policy of their employers, into designing incomplete schemes of this sort, and get all the blame for so doing, whereas they, of course, can only do as they are bid on the land at their disposal.

This brings us once more face to face with the fact that there really should be one authority responsible for the whole of London, and not several as at present. London, with its seven millions of people, is as important, and probably as difficult, to govern as any European country; and instead of its City Corporation, its London County Council, and its two dozen or so of borough councils, with the Office of Works and the Woods and Forests thrown in, one would have thought that at least one Minister of the Crown—aided, perhaps, by a committee of experts—would have found work enough very profitably to engage his time in looking after London, and seeing that its affairs were properly managed.

Mr. Waterhouse last session read us a most interesting paper on this subject, but I fear his suggestion of a chief architect acting with the architect from each borough council would probably cause friction and confusion, and I would much prefer to take, say, H.M. First Commissioner of Works, and—after divesting him of many of the duties he now performs—make him responsible for the proper domestic government of London. He should, of course, have a good deal of power, and some knowledge and taste. There are, I assure you, grave reasons for some change, even from an architectural standpoint; take, for example, our street improvements. Most of us can remember when Piccadilly Circus was improved—into a hopeless muddle—and it is now proposed again to alter it, and make it very much what some of us of this Institute suggested at the time! But this, of course, now can only be done at a very much greater cost. Shaftesbury Avenue and Charing Cross Road are each wide thoroughfares, but both hopelessly laid out from a town planning point of view. Kingsway is quite out of scale with its neighbourhood, and has, as I told you once before, tw ends at one end, and no proper end at all at the other! Th alterations at the Marble Arch have perhaps relieved th traffic but spoilt the appearance of the place, and the slic of Green Park that was thrown into the road by Hyde Par Corner has done no good whatever—though I believe it wa done to please the police—and the ordinary rules of the roa are not in force now at this spot, which will lead befor long, I feel sure, to some horrible accident.

If we go a little further back still, what a great opportunity was missed when the land behind the Albert Hall wa dealt with! This is now covered largely by public buildings and yet none of them look well placed, neither do they tell a a group, as might have been the case had the land been properly laid out, as it certainly would have been in any othe country but ours. This all shows that such work should no be left to amateur committees or corporations, driven thi way and that, first by one consideration and then by another but should be in the hands, as I have suggested, of, say, Minister of the Crown, who should advise, control, and direc the various authorities now responsible for the government o London, and see that they worked together for the good o London as a whole, and that their various schemes and plan formed part of a comprehensive whole, arranged with du regard to the future.

Surely, some general scheme for the improvement an development of London in the future should be at onc got out, and might be taken in hand by the suggeste Minister. In Rome we were recently shown a plan whic is to be carried out during the next twenty years, and al the property so required has been scheduled and the pric fixed, and any improvements on it can only be made at th owner's risk, knowing that it may be wanted at any tim during the next twenty years. We, however, do not appea to realise the importance of a comprehensive scheme, an the only people who do know, to some extent, that the publi really likes well laid out and well designed buildings are thos who run Exhibitions such as the White City. When wil our Corporations learn the same lesson, and realise the fac that there is money in it too?

Take a concrete example which has been exercising some o us a good deal lately, viz. the Corporation of London Bridge Bill. This Bill was promoted by the Corporation of London and has now become an Act of Parliament, and provides fo rebuilding Southwark Bridge and for building a new bridge to be called St. Paul's Bridge close to it. Now, as we all know that the traffic in the City is already about as congested as it well can be, so what it will be like when fresh streams of traffic are created flowing to and from these two great new bridges heaven only knows! It would seem a wiser policy to try rather to coax traffic away from the heart of the City instead of into it, particularly as the enormous cost of land tends very much to prevent improvements there being carried out on any very comprehensive scale. But the City has money to spend on bridges, so spend it it must, and in the City precincts, too, quite regardless of whether it might not be far better to go to work either higher up or even lower down the river. A Minister of the Crown might help us here.

One last word on St. Paul's Bridge. This Institute has for years been agitating, as you know, for proper architectural consideration for this bridge from the outset, and the Corporation turned a deaf ear to us. Parliament, however, came to our help, and at the eleventh hour three well-known architects were called in to advise the Corporation. This was what we had been working for all along, and I think we should congratulate ourselves on having got what we asked for in the end. That some of us may have been disappointed at the form the advice took is not the point. The lay-out received architectural consideration before the Corporation got its Bill; and now we can only devoutly hope that if both bridges are gone on with the Corporation will take such steps as will insure the designs of these two great bridges being as fine as it is possible to make them.

I should like to explain, however, the reason why we architects seem to be somewhat divided on the subject of St. Paul's Bridge. The reason is that there are two very different ways of looking at the subject. The first may be said to be the aspect *of* the bridge itself, and the second the aspect *from* the bridge. Unfortunately, it is not easy to combine the two, and hence some of us took the view that the first thing to consider—apart from the great traffic problem—was what we saw from the bridge, and others what we saw when we looked at the bridge itself. Doctors are allowed to differ, so I must claim for our profession the same privilege. If not too late, however, I should like even now to suggest that Southwark Bridge might be rebuilt first, so that we may see what effect it has upon the traffic. This course would have the further advantage of preventing the river and its vast floating traffic from being obstructed by works to two bridges so close together at the same time.

I have already suggested that my proposed new authority might be the First Commissioner of Works after his present duties had been lightened. These I would lighten by very largely reducing the size and output of the huge architectural mill now running under his control. This mill turns out work just now of the annual value of £1,195,410, which large sum is spent on palaces, law courts, Government offices, schools, labour exchanges, museums, post offices, and telephone exchanges, &c., &c., and on the maintenance of similar buildings over which the Office of Works has control.

Now, it will be seen that the work turned out is very varied in its nature, but, unfortunately, very uniform in its architectural character. I want to be strictly fair in what I say, but I honestly think that the bulk of the work produced by the Office of Works is poor from an architectural standpoint. Some of it has been better of late, I admit, but let us take post offices as their particular speciality. These may be seen in our towns all over the land, and are generally, as far as I have seen, pretentious and costly, and devoid of those good qualities essential in really fine work, and their other buildings are very much the same.

So much for the quality of the work; now for the cost of production. The architectural staff which produces this work receives £71,849 per annum, or just about 6¼ per cent. on the outlay, for salaries alone, without any allowance for rent, rates, taxes, pensions, fees to specialists, cleaning, lighting, heating, porters, messengers, and various other sundries. Five or six years ago the salaries amounted to only about 3½ per cent. on the amount expended, which was then about £400,000, or one-third of what it is now. Fifteen or sixteen years ago only about £250,000 was spent per annum, and the cost of architectural administration was only about 2 per cent. These figures seem to show that the larger the office is the more expensive it becomes per cent. to administer.

I maintain, therefore, that, as the work now produced by the Office of Works is not very good and not very cheap, the bulk of it might with advantage be put out to independent architects to be better done at a smaller cost, and so relieve the First Commissioner of Works very considerably. This you will see has the advantage of killing two birds with one stone, for we thus enable the First Commissioner to do work which we want him to do, and we free him from the work which we would much rather he did not do.

You must not think that I have any particular grudge against the Office of Works, or that I am finding fault with he many good friends I have on the architectural staff there, for my remarks are directed against all large public bodies who attempt to do their own architecture. The recent Conress at Rome passed a resolution to the effect that "Architectural works intended for the State, Municipalities, or ther public bodies should only be entrusted to qualified architects after competition or otherwise." It will thus be seen that the architects all over the world are in accord, and n order to further prove the case I have looked up the cost—the quality speaks for itself—of the architectural work roduced by the Admiralty and the War Office. Both of hese authorities run large architectural departments, spendng in round figures about a million and a half per annum ach, the former at a cost of about 7 per cent. and the latter bout 10 per cent. in salaries alone, and in neither case, of ourse, including the cost of rent, rates, pensions, cleaning, ghting, heating, &c., which, if added, would probably aise the cost by about another 1 or 1½ per cent.

I should like to have been able to include the London ounty Council in my list, but I can find no published figures n the subject. I am told, however, on good authority, that he Architectural Department of this body is run very onomically at present, greatly to the credit of the very able entleman at its head. When, however, in the course of time e retires, I venture to predict that no one else will be found ith the same capacity for work and power of organisation; onsequently, confusion will arise, and the cost of production o up to something like that in the three other cases I have uoted. And the more this department undertakes now, the reater will be the fall then. For it stands to reason that ne man cannot have time to design all the work produced n a great office of this nature, and if he has not time to do t himself it must be done by others. He is, therefore, at the ercy of his staff, and if at the mercy of his staff, why not at the mercy of the outside architect? In the case of the London County Council, their architect is even called the Superintending Architect: his duty should, therefore, clearly be confined to superintending the work, not of a staff, for then it becomes his own work, but of those architects who work in London under his jurisdiction; and this principle applies equally to the architects of the Office of Works, the Admiralty, and the War Office, and other large public and municipal offices, for all these gentlemen, if they attempt to design any work themselves, must neglect their staff, and if they leave it to their staff it must be good, bad, or indifferent, according to the staff, for one man even cannot control a staff, the salaries of which at the Office of Works, for example, amount to something like £1,400 per week, or perhaps as much as 99 per cent. of our practising architects pay to their staff during a whole year instead of in one week.

In these days of free trade and buying in the cheapest market, why should public offices be given preferential treatment? If there are a number of professional men of high standing prepared to accept a recognised scale of fees, why should these huge cormorants receive about half as much again as the ordinary rate? Hen-roosts, I know, are in demand just now, and I venture to suggest that, without robbing anyone at all, thousands of pounds might be saved annually from the unnecessary expenditure now involved in running these large architectural mills. The three which I have named together spend annually in round figures about four and a half millions on building works, at an average cost of about 9½ per cent., or 4½ per cent. more than the recognised payment for such work. This equals rather over £200,000 a year paid unnecessarily for the privilege of running these departments. It may be contended, however, that these departments are necessary, as there are a number of works like painting park railings, mending broken windows, &c., that must be looked after; but a staff of surveyors could do this very well without mixing up architecture in the matter at all, and this, I imagine, is what was intended when the Office of Works was established.

My figures may not, of course, be quite correct—figures never are—and those who understand them better than I do may be able to put a much better complexion on them. I can only say that I have worked on the official published figures, and these, as a rule, are carefully and takingly prepared with a view to their being swallowed by the British taxpayer, and I hope I have not much overstated the case.

Again, it must be only too obvious that a large Government office is not a likely place for the production of various kinds of architectural work, either well or cheaply, for the originating is generally done by understrappers, and sent up to the higher grades for approval or otherwise—a sort of Class of Design—and I have heard of as many as nine separate designs having been made for one building before such approval was obtained. In other professions, does one man profess to be able to specialise in all subjects? Are there not landscape painters, and portrait painters, and some sculptors who work best in low relief and others in the round? Do not some lawyers go in for criminal work and others for the probate and divorce? Are there not doctors who cut at our insides and others who cut our throats? And even with us some architects do church work and others domestic work. But these public offices, as far as I know, claim to be able to do everything, from a palace to a prison, and no doubt they can, and equally well, too!

I have already referred to the ninth International Congress recently held at Rome, and to the resolution passed there respecting architectural work intended for the State and municipal bodies being entrusted to non-official architects only. A number of other resolutions were also passed, but perhaps the following are the most interesting, viz.:

(1) "That the right to use the title of architect should be reserved to those who have obtained it as a result of a proper examination passed after an artistic, technical, and scientific education."

(2) "That the title of architect should be placed in the same rank as the title Master of Arts, Doctor of Medicine, &c."

These two resolutions are particularly interesting to us just now, for, as you know, this question has been before the Institute as long as I can remember, and it may help us to know what other architects think on the same subject. We, as you know, have been working towards these ends for some time past, and as a preliminary step have created a new class of members called Licentiates, nearly two thousand of whom have already joined our ranks. With the object, too, of organising the profession—with the sanction of Parliament—into a strong, united, disciplined, and protected body, negotiations have been proceeding between this Institute and the Society of Architects, it being felt that two Kings in Brentford were hardly necessary, and that together we should be much more powerful than working independently. A number of meetings were held early in the year, as you are aware, and the general principles and a number of the details were satisfactorily agreed upon. Unfortunately—perhaps through my own fault—we got on rather faster than our legal advisers approved of, and we were brought up by finding that we had perhaps exceeded the powers we possess under our existing charter and by-laws. This was rather a shock to some of us, but as we had gone so far, we felt that in justice to ourselves and to the Society of Architects, we could not do otherwise than make good the mistakes made. Your Council has therefore been considering a revised charter and by-laws which will enable the two bodies to unite under terms I think advantageous to both parties. This charter and by-laws will, I hope, be very shortly laid before you, and I trust you will pass them, not, of course, without due consideration and discussion, but without forgetting what has already taken place. For many reasons it seems to me obvious that the two Societies should unite, but the reason that will perhaps appeal most to our only too human natures is the fact that by building up and increasing the power and influence of this Institute we are building up and increasing our individual power and influence. For the fact of belonging to a powerful body strengthens each of us, and makes us more confident when dealing with the many difficulties that abound in our multifarious duties.

If this address should happen to be read in the provinces, I hope those interested in the good of the profession will endeavour to make as many of their *confrères* as possible join our ranks, and so still further help to build up a really powerful and representative body. Another way in which our internal economy might be strengthened would be by a number of our Associates who have been Associates for years becoming Fellows. They are, in a number of cases, highly qualified in every way to become Fellows, and I hope they will consider the advisability of doing so.

It is a matter for congratulation, I think, that an architect has been associated with a sculptor in connection with the King Edward Memorial. The ideal method, no doubt, would be for one man to do the whole thing, but until our sculptors take a little more trouble to ground themselves in architectural matters, the only course I can see that will insure our monuments being satisfactory is to associate an architect with the sculptor: the custom hitherto too prevalent of leaving the sculptor to produce his own so-called architecture, or to get some compliant ghost to do it for him, is most unsatisfactory.

You will be glad to hear that there is now an immediate prospect of something in the nature of a British School being established in Rome, such school to embrace architecture, painting, sculpture, and archæology. Nothing, however, very definite has been settled, but there are prospects that, aided by private benefactors, helped by the Commissioners of the Exhibition of 1851, and backed up by the Royal Academy, the Royal Society of British Sculptors, and ourselves, a school will be shortly opened in Rome. Scholarships connected with it will be established, I anticipate, by this Institute with funds lately left us under the Jarvis bequest, and I think I am at liberty to say that the Commissioners of the Exhibition of 1851 will probably also give at least one scholarship each year to architecture, painting, and sculpture, so that with students who we hope may be able to attend this school, either privately or encouraged by the universities and schools about the country, a good school should be got together; and in such an appropriate centre for study as Rome, where most of the other nations have schools, we British subjects should be able to offer our students the means of completing their studies at a much higher level than has hitherto been the case. For it must be remembered that if we architects are to hold up our heads with any degree of success we must have something in them, otherwise the public, which is very quick at finding out impostors, will go back to their old friend the jerry-builder, leaving us to pine in a well-deserved obscurity.

Sir Robert Hunter, C.B., proposed a vote of thanks to Mr. Leonard Stokes for his very able and humorous paper. There was one feature of that paper, he said, which they could not expect him to fall down in admiration of at a moment's notice—viz. the proposal that the Government's architectural work should be thrown open. It would hardly become him as a Civil Servant to rejoice in the work of his colleagues being thrown over. Probably the Treasury would be able to give some explanation of the figures quoted by Mr. Stokes, which would put a different aspect on the matter. He believed that a great bulk of the duties of the Office of Works consisted in the supplying of post offices. It would ill become him to pass remarks about the elevations of those post offices, but he felt sure no one would suggest that the construction was other than sound and good; and he also believed that they were suited for their purpose. It would, he heartily agreed, be a very valuable thing for some controlling influence to supervise the execution of so-called improvements in London. It always struck him that the great difference between London and Paris was that while in London they had fine buildings and splendid open spaces there was a great absence of broad effects to catch the eye as there were at every turn in Paris. In London when they did get broad effects they seemed unable to keep them. For instance, the whole route from St. James's Park to Regent's Park was originally of one design—at any rate it was harmonious. But now it was neither one thing nor the other. The Office of Woods and Forests had allowed the line of buildings to be broken into in a heterogeneous way, and there was now no line which gratified the eye. Piccadilly Circus at the bottom was a space which could not be said to be void, but which was certainly without form. Admittedly there were difficulties in a city like London. The enormous growth in the value of the land afforded a continual incentive to put more buildings on a good site and get more and more money out of it. That tendency must run counter to a desire to carry out an harmonious plan. There existed also that intense feeling of individualism which resented any hard-and-fast control by a central authority. But the sovereign remedy for all architectural ills lay in the growth of public opinion. Public opinion as to matters of beauty on a large scale was of very recent growth. Hitherto in any question in which considerations of beauty and symmetry came in the general attitude had been that it was very nice to have a fine building or a fine street, but that if there was any question of money all other considerations must go to the wall. That some inroad was being made on that feeling there were many signs, including the recent controversy over St. Paul's Bridge. Whatever the result of that controversy might be they had this gratification, that Parliament had directed that the artistic and æsthetic point of view should be considered. He would venture to congratulate the audience upon the growing importance of their profession. Of recent years there had been a bigger general feeling that persons should take some interest in getting good houses and even good offices than there was some time ago. They had before them the whole subject of town planning, which was a growth of yesterday but was now a matter of importance. The attempts to produce something a little better than they had been accustomed to in the shape of garden cities and suburbs showed that there was a great future before them. It might be that there had been recently some check to building, but he could not help believing that in the future the architect would be the right-hand man to every local authority and that he would be called in to lay out and plan every collection of human dwellings of any magnitude, and that he would co-operate with the engineer and the medical officer. Such spirited and suggestive papers as they had heard that night would greatly aid towards that movement.

Mr. Irving K. Pond, President of the American Institute of Architects, said it was a great honour and pleasure for him, on behalf of the sister institute and himself, to second the vote of thanks to Mr. Stokes. The address had given him so much to think about and talk about that he could keep the audience longer than they might expect. He felt it a great pleasure to speak in that room, where there was a community of speech and interest. At the recent International Congress in Rome they never knew whether they were being understood or not. While listening to the presidential address that night it had been brought home forcibly to him that the mother country and the child have a community of speech, of thought, and of ideal. The same problems as confronted the profession in this country confronted them in America. In many of the larger American cities there was a diversity of interests which made development almost impossible. Concerning the proposed establishment of a school in Rome there must be, as in the case of the proposed St. Paul's Bridge, two points of view, and there might be a division of opinion among the members. What was the school to bring them? English architects had traditions, and he could not blame them because these were followed. But he did blame his own confrères for being still bound in their swaddling clothes. They began to design in Classic when young, and they design in Classic still. In America they were far more tied to Classic tradition than architects were in this country. In England they already had a culture of their own, and there was no need to seek it abroad. If England sent her students to Rome in order to study Classic tradition and they came back with forms and facts therein they would have failed. But if they went to Rome and tried to emulate that Classic tradition then Rome would have helped them. The problem had been brought home to them in America, as they had a school in Rome which was conceived by a former President of the American Institute of Architects, and to which he had devoted his life and fortune. His own advice to the student was not to use Rome as a studio, but as the ground for expansion of his ideas. The problems of official architecture alluded to by Mr. Stokes affected them in America in the same way as English architects were affected. The American Institute of Architects was the father of a law which had been in operation for a number of years, by which the principal work is given out to individual architects. Recently that law had been attacked, ostensibly in the interests of economy, and the figures were made to show very favourably in favour of departmental architecture. But they knew that whereas the individual architect gets his 6 per cent. for his work, it would cost the Government at least 7½ per cent. Moreover, a higher type of architecture is produced than under departmental control. He hoped that the American law would not be overturned and an English law on the same lines would be enacted.

Mr. Stokes, after acknowledging briefly the cordial vote of thanks, announced that the next meeting would be on November 20, when Mr. H. H. Statham will read a paper on "Modern French Sculpture."

BRITISH SCHOOL AT ATHENS.

THE annual meeting of subscribers to the British School at Athens was held on Tuesday last in the rooms of the Society of Antiquaries, Burlington House, W. The chair was taken by the Dean of Westminster (the Right Rev. H. E. Ryle, D.D.), who proposed the adoption of the annual report. The School was founded in 1886, when Mr. F. C. Penrose acted as the first director. In his remarks, Dr. Ryle took occasion of this the twenty-fifth anniversary to sketch the development and success of the School.

It appears from the report that the excavations at Sparta being successfully completed the committee and the director made careful search for a new field for the activities of the School. After protracted negotiations the Imperial Ottoman Government has just granted a firman for excavations on a promising site on the Dorian promontory, to the east of ancient Cnidos. The spot, which once bore the Greek name Akanthos, is now known by the modern Turkish name of Datcha. Mr. Dawkins twice visited the site, and reported that there is reason to suppose that this is an archaic Greek sanctuary with votive offerings. The remains of the ancient city are extensive, but it is only proposed to excavate this sanctuary, which lies in a small valley near the sea. Mr. Dawkins will go out specially to take charge of the excavation.

Mr. Dawkins, the director, after returning to Athens at the beginning of November 1910, went to Datcha to get the local information necessary for application for a firman for excavation. The boycott of Greek shipping and the quarantine regulations made steamers infrequent, and the journey, further hindered by bad weather, took several weeks. These delays were used to visit Ephesus, Patmos, Cos, and Cnidos. He then went to Melos to make the local arrangements for the excavation, visiting the chief ancient sites in the island, and then spent some time at Sparta. Here he worked in the museum at the arrangement and publication of the finds from the Orthia excavation. In April and May he conducted the excavation at Melos. He spoke at two open meetings of the School. In July and August he travelled in Cappadocia. This is the third summer he has spent there, gathering material for a work on the dialects of Greek spoken in Asia Minor. Mr. Dawkins will now take a year's leave of absence from the School, his place being filled by Mr. F. W. Hasluck, M.A., as acting director. Mr. Dawkins will, however, go out to superintend the excavation at Datcha.

The excavation at Phylakopi in Melos lasted from March 30 to May 30, with a break for the Greek Easter. The director was present throughout.

The German Institute lent their old and experienced foreman, Evangelis Kosmopoulos. Mr. W. J. Jones was present from May 15 to 29 as architect, and made the plan and drew some of the more important vases. A series of photographs was taken by Mr. R. Rohrer, the photographer of the German Institute, who had previously worked for the School at Sparta. As mender, Jannis Katsarakis came from Palaikastro. The work was on a moderate scale, the number of workmen varying from twenty to fifty. The finds are to remain in Melos to form the nucleus of a local museum.

The object of the excavation was naturally to supplement the results of the previous work, especially in the light of our greater knowledge of Crete and the mainland of Greece. Some measure of success was attained in this.

At the beginning of the excavation a few trial pits were made to explore the lower levels in parts of the site which had been previously dug, notably underneath the Palace and in the region to the north of it on the edge of the cliff, where the earliest remains had been found. The results of these operations were to give good preliminary ideas of the stratification, and to produce a number of vases, but no buildings of importance were found underneath the Palace, and the remains of the earliest settlement seemed to have been entirely exhausted at the first excavation.

After Easter the main part of the year's work was begun, which was to clear to the bed-rock a substantial area of the town, which had been hardly touched before. This was the south-east part of the town, just inside the eastern part of the great wall. The surface of this area was practically flat, and proved to have been terraced at some period since the desertion of the site. In consequence of this the houses were somewhat destroyed to the north, but excellently preserved to the south at the outer edge of the terrace. Here there was a metre and a half of surface soil almost entirely without sherds, and below this walls to a further depth of six and a half metres, before the rock was finally reached. This area was sufficient to give satisfactory results, and in several points Mr. Dawkins was able to carry further the observations of the previous excavators.

At the meeting on Tuesday, Mr. Dawkins, the Director, gave an illustrated account of the excavation at this prehistoric city at Phylakopi, in Melos. This has already been the scene of a long excavation of the School (1895-1899), the account of which has been published in book form. The central position of Melos and its trade in obsidian, the best material for knives before the discovery of iron, gave the island a special importance, he explained, in the Bronze Age, and its capital, situated on the sea cliff now called Phylakopi, was a flourishing city all through this period. The earlier excavation revealed the remains of three superimposed cities, and gave a complete history of its art as shown in a long series of painted vases. Foreign importations from Crete and later of Mycenean pottery were detected, and it was to supplement these observations in the light of our present increased knowledge of pre-historic Crete and the mainland of Greece that this supplementary excavation was undertaken. The hope that further chronological links between Melos and the outside world would be established in this way was fully justified.

A part of the city was chosen for excavation which had been hardly touched in the previous work. The surface had at some time been artificially levelled, but in the best preserved part the walls were covered with four feet of earth, and from this point down to the bed-rock, some 16 feet below, the remains of walls were found, and the three successive cities clearly made out. The pottery was carefully preserved according to its levels, and yielded the following main results. In the first and early second cities, that is, in the latter part of the third millennium B.C., the external relation was rather with the mainland of Greece than with Crete, as the imported pottery was for the most part of types found at Tiryns and in Bœotia and Thessaly. The native art at this time, however, has an independence which it presently lost and never regained. These earlier connections, reflecting the obsidian trade, gradually gave way to the increasing influence of Crete, which begins in the Middle Minoan period, about the turn of the third and second millennium. This influence was marked by numerous imported vases from Crete. Of these, fine examples were found dating to about 1500 B.C., showing the characteristic patterns of nautili and other marine forms. This influence was so strong that the earlier style of vase-painting gave way to a style based entirely upon these foreign Cretan models, first of the Late Minoan I. and afterwards of the Late Minoan II. period, although this style was developed in the native manner and with the native technique. The latest remains, dating from the end of the

Bronze Age, and probably going as late as 1000 B.C., show this Cretan influence giving way to the Mycenean, and reflect the decrease in the Cretan power which followed the sack of the Palace of Knossos. This final period witnessed also a great decadence at Phylakopi itself, for the native vase-painting, which was at first independent, and then a copy of the Cretan, is now at last almost extinguished, and hardly any vases are found except these imported Mycenean. With the beginning of the Iron Age, obsidian, as a cutting material, lost the value it had had all through the Bronze Age, and Melos, as the centre of the trade, declined in importance, and the site of its capital at Phylakopi was finally deserted.

Amongst the minor antiquities some clay crucibles for bronze casting were of interest. They had three feet and a spout, from which, when the crucible was tilted over on its two front feet, the molten metal could be poured. A fine stone mould for a double axe was found in the earlier excavation. These crucibles showed signs of considerable use.

It was established that, at least in the time of the first city, the custom prevailed of burying children inside, or at least amongst, the houses. In several places lying on the rock or placed in holes made in its surface large jars were found containing the bones of young children. Two of the jars were painted, and all belong to the early geometric style, which goes with the latter part of the first city. There seems little doubt that the burials were actually in the houses, and from the numerous examples found, and the fact that all the burials were of children, it seems that this custom of intramural burial was confined to infants. One such burial was found in the original excavation. The jars were all broken, but the majority of them have been reconstructed and photographed. In two cases the mouth of the jar was covered by a basin. The jars themselves contained practically nothing except bones, but in association with the main groups of these burials there were a number of painted jugs and cups which, though not inside the jars, were probably buried with them.

In addition to the photographic slides shown on the screen, a number of drawings, plans, and photographs were arranged round the room to show the work of the Society.

LEEDS AND YORKSHIRE ARCHITECTURAL SOCIETY.

THE first general meeting of the session was held at the Society's room, Leeds Institute, on Thursday evening, November 2, the President, Mr. Sydney D. Kitson, M.A., F.S.A., F.R.I.B.A., in the chair. Messrs. Harold H. Woodhead and Walter Butler were elected Associates of the Society. The following changes in the officers of the Society were then announced, owing to Messrs. Ralph W. Thorp, A.R.I.B.A., H. Ascough Chapman, F.R.I.B.A., and J. H. Farrar having left the vicinity of Leeds:—Mr. Wm. Whitehead, A.R.I.B.A., elected Hon. Secretary; Mr. Peel Schofield, A.R.I.B.A., elected Hon. Librarian; Mr. J. W. Morley, F.R.I.B.A., elected Member of Council; Mr. Douglas Bowman, elected Associate Member of Council.

An exhibition of the students' work during the year was then held, and the following awards made:—

The Society's silver medal and £5 5*s.* awarded to Mr. F. L. Kruckenberg for measured drawings of Hubberholme Church, Yorkshire.

The prize for construction, £3 3*s.*, was awarded to Mr. W. Voelkel for a design for an entrance hall and staircase to a public building, the winning design being a well worked-out scheme in reinforced concrete.

The following gentlemen tied in the design competition, four subjects having been competed for during the session:—Messrs. E. H. Gibson, L. A. Elsworth, and P. G. Robinson. A prize of £3 3*s.* was awarded to each.

The Halden prize of £4 4*s.* was divided between Messrs. L. A. Elsworth and Walter Butler, whose work was considered of equal merit.

The Sketching Club prize of £2 2*s.* for sketches was awarded to Mr. F. L. Kruckenberg, and £2 2*s.* for detailed studies to Mr. C. B. Chadwick.

The President expressed his appreciation of the excellent work done during the year.

ILLUSTRATIONS.

ST. BARTHOLOMEW THE GREAT, SMITHFIELD.

ST. BARTHOLOMEW THE GREAT, of which the drawing shows the north transept and choir aisle, was founded in 1123 by Rahere, companion of Hereward, "last of the Saxons." From the chronicles of the period it appears that Rahere, repenting of the levity of his early life, went in the year 1120 on a pilgrimage to Rome, where, on arriving, he contracted a sickness under which he made a vow that, should he recover, he would found a hospital for the sick poor. On his return to England it is related that St. Bartholomew appeared to Rahere and bade him build a church in Smithfield, which, with the King's consent (for the spot indicated stood on the King's market) he accordingly did. The choir is all that now remains of Rahere's erection, and the drawing shows the north aisle of this part of the early building. The nave disappeared when Henry VIII., at the dissolution of the monasteries, sold the "House of Black Canons," as it was then called, to Sir Richard Rich. The choir and transepts remained as a parish church. The nave was rebuilt by Queen Mary, but, unfortunately for the student, the "Black Friars" were dispossessed by Elizabeth, and nothing remains of what would now have been a most interesting curiosity. During subsequent years the thrifty and apparently not too conscientious parishioners were not above putting small portions of the building that they could do without to various profitable uses. A smith's forge was soon at full blast daily in the north transept, and the Lady chapel was sold as a fringe factory. These were recovered in the works of restoration completed in 1868 under the superintendence of Messrs. Lewis & Slater. At this time the floor of the church, which had been buried several feet deep by the accumulation of dirt caused by centuries of neglect, was dug out. The work of restoration continued in 1887 under Sir Aston Webb. The Norman portion of the building asserts itself in the round arch and massive circular piers with their cushion caps, and is of about the same period as St. John's Chapel in the Tower, to which it is very similar. The wall on the right of the picture, pierced by two Early English pointed openings, is probably, not as may be supposed, a piece of modern patchwork, but the parclose backing of the choir stalls which ranged across the transept openings. Between these it is probable the rood screen extended, for hard by are the circular turret steps, which led, no doubt, to the rood-loft above, long since disappeared. This screen existed in the thirteenth century, and was probably contemporaneous with the wall here seen, the foundations of a similar wall ranging across the south transept opening being discovered in 1864. The old transepts, deeper than the present erections, were destroyed by fire except a small portion of the south. It is curious to see how the later work has been joined on to the top of the old Norman. Of this there is little to interest, but volumes might be written upon the crumbling remains of Rahere's mighty work, that speaks through the centuries of the powerful grandeur and rugged dignity united with pious devotion of a people of the past. Our drawing by "Reynard" was awarded a prize in *The Architect* Students' Sketching and Measuring Club.

NEW SIDE-CHAPEL, ST. PHILIP'S CHURCH, EARL'S COURT ROAD, S.W.

THE space to the south of the choir hitherto used for lumber has been converted into a side-chapel. The new window seen in the illustration to the right of the reredos is successful in providing light to the chancel, which was before very dark and gloomy. The chapel is part of a scheme which includes deepening the chancel and opening it up to this new source of light.

The reredos and table, altar rail, clergy desk, and the screens on the north and west sides are all of Austrian oak specially chosen for its grain. The sanctuary floor is a scheme of black and white marble with sanded surface, the altar and Communion steps being accentuated by being polished. All the metal work was specially designed for the chapel, and is carefully executed in the old manner. The three panels in the reredos are intended to be painted, and panel doors, in lieu of the temporary wing curtains, are to form a triptych.

At the same time as this work a new entrance porch has been built to the south transept, providing access to the church and parish hall.

The main contractors for the work were Messrs. Maides & Harper, of Croydon, and the architect Mr. Francis Bacon.

BANK PREMISES, PORT SAID AND TANTAH.

THESE premises were designed and carried out for the Anglo-Egyptian Bank from the designs and under the superintendence of Mr. Robert Williams, F.R.I.B.A.

HE A.A. EXCURSION TO THE LOIRE, 1911.*

(Concluded from last week.)

T Villandry we spent a most exhilarating morning. The château, standing on the site of a mediæval predecessor, which only one tower remains, was built in the second half the sixteenth century, altered in the eighteenth, and ain, for the worse, in the nineteenth (I presume t fact De l'Orme, when appointed Surveyor-General to the throes of more alterations, but this time undertaken a spirit of architectural zeal, with much taste and judg- nt, though some of us may think without quite a suffi- nt leaven of discretion. M. Carvallo, the present owner, o described himself as owner, architect, builder, and work- n, very kindly devoted a morning to our entertainment. took us all round his garden, and showed us what the glish *bestiaux* had done. There had originally been a y large formal garden; but when the English family ived, believing themselves, no doubt, to be people of great te, followers of the romantic revival, and devotees of land- pe gardening, they levelled all the terraces, did away with stiff, formal gardens, and planted grass and trees every- ere and anywhere. M. Carvallo is bent upon restoring all s. He is at work excavating, and has already found the es and sometimes the walls of the principal terraces and lks. The garden immediately in front of the house he has eady laid out, and very well he has done it, too. But his scorn of grass as a herb for garden effects I don't nk many of us will share. Grass can be kept green and el all the year round—in our country, at least, if not in —and, therefore, is surely as suitable as anything else in arden colour scheme.

In the house, too, he is making sweeping alterations. He estoring it as nearly as possible to what it originally was. tainly it had been spoilt. Many of the added windows e only shams, he assured us. The tower certainly looks ter solid than it did when pierced with windows, except t, of course, the newly-built-up portions look very patchy present. But it is a better foil to the rich Renaissance k. The removal of the terrace and bridge at the side of house, too, has done no harm.

M. Carvallo is nothing if not an enthusiast. Architecture, freely confesses, has altered his whole outlook upon life. was a scientist, and Villandry has brought him, in addi- n, culture, civilisation. It has humanised him. He even t the length of telling us that we, as architects and artists, ck him at once as better-looking and more intelligent- ing men than the ordinary men of commerce and affairs!

From Villandry we drove to Azay-le-Rideau, to the teau that, if I may make bold to choose, was the gem he excursion. The river front is altogether delightful. re is a kind of music in it, obtained, I know not how, ept by a happy combination of excellent qualities. Good portions there are, fine scale, and symmetry, though this is by no means the mathematical sort, for there are many le irregularities which the eye does not at first detect. the quality which above all others distinguishes it and kes it so much finer than the work of the same period at is is its marvellous rhythm. With the bright sun upon he whole elevation dazzles one in its shimmering white- . It seems hardly real.

At the other side, too, the approach is equally charming. ong, straight avenue on the axis of the entrance doors s one first past a pair of excellent gate piers of seventeenth ury or eighteenth century design, upon either side of ch, facing the château, are picturesque stable buildings, ted at about the same period. These piers serve a very ul purpose. They block out the view of nearly the whole he château, allowing one to see only a vista of the en- ce feature, for feature it is, and a good one by itself. I think it must have been a thorn in the side of the archi- of the building. I should fancy the history of it must been something like this: Gilles Berthelot, the owner the house, and sometime Treasurer-General to King ncis I., probably wanted to be in the latest fashion. He ted to have in the middle of his house a fine feature, one in the new Italian style. Accordingly he did just what y another foolish client would do to-day. He dispensed his architect's services for this portion of the building, introduced the sculptor from Italy over his head. The ptor really did well, on the whole, though there is a deal of petty nonsense in his detail. But where he failed where a great many other people used to fail at the period—he did not realise that what he had designed in no way belonged to the building of which it was a part. It is just as if one design were inserted in a part cut haphazard out of another.

I have left mention of the Château of Chenonceaux to the last for this reason: it contains the latest development of architecture that we saw, with the exception of Mansart's wing at Blois. But whereas at Blois the characteristic part—the part that one always, though maybe involuntarily, associates with the name—is the wing containing the staircase, at Chenonceaux the bridge gallery is the picture that flashes to one's mind with the word. This, together with the stables here also, is the work of Philibert de l'Orme.

De l'Orme, having studied his art in Rome, was practically the first French architect to understand what Classic architecture really meant. Not only did he see that it was more than an affair of decorative details, such as had marked the Renaissance up to this, but that a building should be a single work of art, the intellectual output of a single individual. The system of producing architecture by collective craftsmanship died with the old Gothic. De l'Orme hated the old order of things, and he probably saw enough of the bad work resulting from a combination of French masons of the old school with Italian carvers and painters of the new, each out of sympathy with, and failing even to understand, the aims of the others.

In the bridge of Chenonceaux the feeling is different from any of the contemporary work in the neighbourhood. The building is not better than some of the others that we saw. I do not think it is as brilliant a piece of work as the river front at Azay-le-Rideau. It contains certain faults of detail, such as the missing out of some of the modillions in the cornice, in order to bring in the tops of the pediments, and the placing of semi-circular headed windows in the rounded bays over the piers of the bridge—this being rather typical of De l'Orme's weakness for constructional feats, for there was a certain difficulty in doing what the surveyor would call "circular-circular" work. But this bridge is a design. I feel that the quality of breadth which it possesses was sought for deliberately and scientifically. Every effect was first considered on the drawing-board. To compare it again with Azay-le-Rideau, the one is a sonata, the other an impromptu.

The remainder of the château, also partly built over the river, makes a good foil to De l'Orme's more serious work. On both sides it groups up in a very picturesque manner, but the stunted proportions of the first floor rather spoil the effect of the entrance front. One's sympathies are all with Diane de Poitiers. To be turned out of so beautiful a home as soon as it was hardly completed by the jealous vengeance of Catherine dei Medici was a harsh punishment.

I cannot conclude a description of this year's excursion without some reference to the towns.

At Blois we spent more time than anywhere else. And a very pleasant little town it is, too. With the château on one hill and the cathedral on another, the town itself converges to the river bank and a fine bridge across the Loire. Here is a piece of laying-out that will commend itself to town planning enthusiasts. The axis line of the bridge is continued through a portion of the town, climbs by a flight of steps uphill past a big flower bed, and terminates in a statue to Denis Papin, a native of the town, and the George Stevenson of France. From here the view looking back is most impressive, for the same line is continued to the horizon in the other direction in a fine *route nationale*, between forests upon either hand.

In addition to the buildings already described are many others that are worth seeing. There are two interesting eighteenth-century gateways close to the cathedral. They lead to the Bishop's palace, the gardens of which are open to the public, and from where there is a fine view across the river and over the surrounding country.

Tours is a very different town. In the first place, it is very much bigger, and then it is situated on flat ground at the south side of the Loire. Nominally, we stayed here for a longer time than we did at Blois; but we were so much occupied with our excursions into the neighbouring country that really it is hardly correct to say that we visited Tours at all. This was unfortunate, but it was also unavoidable. The town is interesting from many points of view. It contains many old buildings of all periods. But the general impression that one gains is that of a modern city, not much more than 120 years old, well laid out, and the majority of its buildings belonging to the latter half of the last century. The town glories in a new Hôtel de Ville, a building which suffers from too much sculpture and a general want of restraint. I prefer the older Greek revival, Palais de Justice, which

---

A paper read before the Architectural Association on ber 30, by Mr. H. H. Hill, B.A.

balances it, and is more in keeping with the general quiet air of the architecture of the place. The building of which we saw most—naturally—was the railway station, a very fine piece of work, and, unlike almost any station that one can think of in England, a pleasure to the eyes.

When we went to Loches we visited a typically mediæval city clinging round the base of the feudal castle. Here there is no town planning. The streets are narrow and winding. They have that mediæval trick of never seeming to go straight for anything. The Early Renaissance Hôtel de Ville is unceremoniously poked into a corner, and built up against one of the gateways of the old town. The Tour St. Antoine, all that remains of an old church, is a landmark; but, like so many other Early Renaissance towers, does not appear to be a success. Early Renaissance forms are too small and too refined to be of value in tower design, where bigness of scale and boldness of outline are the chief requirements. If that tower had been built in the old Gothic days the walls would have been battered, and something would have been made of the buttresses.

Saumur looks a fine town as one approaches it. Our first view took in a strictly orthodox Classic theatre, just over the bridge, an imposing building, though rather dull. The Hôtel de Ville, a little farther up the town, has much more life in it. Partly Gothic and partly Renaissance, I think the earlier work, with its plain wall space and quaint roof, was the more interesting.

Mr. Gerald C. Horsley, the President, in opening the discussion, said that in the last words of his interesting paper Mr. Hill had told them how he came to address them that night. It was the privilege of the President for the time being to ask one of the members present at the Annual Excursion to read a paper to the Association about it. He believed the audience would agree with him that in asking Mr. Hill to undertake that work he had been very fortunate in his choice. It seemed to him that Mr. Hill was altogether too modest in disclaiming any special knowledge of the history of French architecture. His paper, on the contrary, which was extremely sympathetic and a just and critical account of much that was seen, proved at any rate that he had a wide knowledge of the subject and a true and deep insight into the enthusiasms and those irresistible motives which impelled forward the development of French architecture. Certainly the A.A. was fortunate in its choice of the locale of the excursion. Rich as it was in works of the greatest architectural merit, it was also rich in the beauties of nature. They did not see the river Loire in a moment of her special power and magnificence, but they saw her in her summer mood and dress, supremely beautiful under the bluest and clearest of skies. Mr. Hill had rightly lamented in his paper that they could not give more time to Tours. There was a large amount of fine painted glass in the cathedral, and the bays of the choir and of the nave were excellent examples of that splendid bay design where the windows of the clerestory are large ones, being the full width of the bay. There was also a remarkable seventeenth century organ front in the transept. Tours again was famous for good town planning, especially at the point where the principal bridge crossed the river. The churches were extraordinarily interesting, particularly the Abbey of Fontevrault and Candes. Mr. Hill had referred to the fact that some of the châteaux were rich in their possessions of old furniture, and instanced Chaumont and Langeais. This was notably the case, and besides furniture the wealth of fine tapestries of different dates was quite remarkable. The painted ornament also in the wooden ceilings formed part of interesting schemes of decoration in the rooms; and in this connection one remembered the fine tiled floors. He was glad Mr. Hill had spoken of the charming chimney-pieces at Langeais. All who saw them agreed that these were the finest they had seen on the tour.

Mr. J. Johnson, in proposing a vote of thanks to Mr. Hill, remarked that the detail of the work seen on the excursion was most interesting and distinctive. The arabesques on the pilasters were of the greatest refinement and delicacy. Many of the châteaux were very much alike, but they varied so much in detail that they were exceedingly picturesque. After having a surfeit here of the Georgian box of bricks, it was interesting to see how the French treated their residences in those times. For his part, he would like to say he had been delighted with the excursion.

Mr. H. W. Searles-Wood said he had followed the paper with the most intense interest, as he did not go on the excursion. Professor Blomfield, in his paper at the Royal Institute in December, made the remark that François I. was his own architect to a large extent. Perhaps that accounted for some of the irregularities in design alluded to. An
teresting account was given by Mr. Noel Williams in
Henri II. of the period when most of the châteaux visited h
been erected. He would also like to mention that in To
there was a very interesting Vacation Course in French
English people in connection with the University. This
carried on during the month of August; there were the cou
at the University in the morning, and in the afternoon th
were opportunities for visiting places of interest.

Mr. Louis Ambler said he would have liked to have g
on the excursion, but unfortunately he had not been able
renew his acquaintance with the châteaux and church
It was about twenty-five years since he had seen any of the
He had then been fortunate in having a month to spe
among them. Of course, a good deal of the time was ta
up by sketching. It was a wonder to him how the A.
excursion party managed to see so much in a week, for
did not see much more in a month. Chambord was v
interesting, and very huge and vast at a distance; but p
haps a little disappointing when seen close. What one t
to be a black marble inlay, for instance, proved to be o
slates nailed on. At Chaumont they were then allowed
sketch inside the house; one very interesting feature was
fireplace in the Astrologer's Room. In those days the w
at Blois by Mansart was not considered quite the thi
whereas now fashion had changed and many regarded it
the finest part of the buildings.

Mr. A. Oliver said one of the important points to be bo
in mind was that the buildings exemplified the grad
transition from the great fort and fortified house to
château. At Loches they had a fortress, and nothing
a fortress; at Langeais there were battlements and machi
latures, although used first of all for defence. At Azay-
Rideau the idea of defence had gone and the features w
used as ornament. At Chenonceaux there was only a sm
portion of the castle left. At the beautiful church at Can
they found in the west front a fortified church door t
was almost the exact counter-part of that at Bégadan
down in the south. In the whole district from Rheims
Toulouse there was a string of fortified churches with
western doors. The architect who put up the west fr
came, no doubt, from the South of France, where he w
accustomed to those features. Those who went on the
cursion were very much obliged to the organisers for
care taken. He felt certain that if they tried to map ou
more interesting tour showing that process of evolution t
could not have done so.

Mr. A. T. Bolton said that he had not taken part in t
architectural "bean feast," but about 1893 he had gone do
that way. He did not think that any one passing down
Valley of the Loire could fail to be greatly impressed. So
miles further south there was the château of La Roc
foucauld, where it was possible for the student to do a gr
deal of work; it might not be so fine as many of those in
tour just described, but at any rate it was available for sket
ing. In his opinion, Mr. Hill had been very hard on
work of François I. He would like to emphasise the po
that they must not entirely disassociate these châteaux f
the history of the time. With François I. building wa
life-long hobby, and the largest part of the income of
kingdom must have gone on the erection of his châteaux.
soon as one was finished he began another. But he did
trouble about keeping them up. The idea of Chambord
a royal hunting lodge. It was not built as a house,
rather as an architectural idea. Some of the châteaux w
simply given to ladies of the court. If anyone wanted to kn
of the relations between the King and artists they would f
them given in the record of the relations between Franç
and Benvenuto Cellini. The latter came from Italy wit
queer reputation; when he arrived in Paris the King g
him a small château which at the time belonged to some
else. Cellini became extremely annoyed at finding the Fre
tenants there. On complaining to the King he was ask
"Are you the Benvenuto Cellini we heard so much about
Taking the hint, he pitched the owner out neck and cr
Cellini in various ways thoroughly played up to François
as in his proposal for a statue 80 feet in height. W
things began to go not quite as well Cellini appears to h
tried to skip out of the country with some silver things, tho
in his biography he protests that he was going home to l
after some relations. The picturesqueness of the epoch sho
be considered in relation to these châteaux. Other sma
buildings of the period were of very great interest.
whole district in fact was well worth anyone's while to sp
as much time as they could in.

Mr. E. Gunn thought that Mr. Hill's similes had be mply delightful—especially his allusion to Touraine as being kind of ecclesiastical no man's land. In speaking of the yal château of Amboise, Mr. Hill hardly brought out the ct that what remains is a mere fragment of the original.

Mr. G. H. Jenkins said that if a man started to go on e A.A. excursions he was sure from his own experience that at man would continue to go in future years. If they only ew what a splendid thing the excursion was they would avel a long way in order to attend. He now felt extremely rry that he had not been before that year. They saw a lot work in the laying-out of gardens and so on which had be borne in mind. The ideal did not seem to have had uch effect on the ultimate completed building. At Chamrd they started with a plain structure, when they got near e roof they blossomed out in the wildest extravagance, and e result was incongruous.

A vote of thanks was then put by the President, and rried with applause.

Mr. Hill, in replying, alluded to the assistance received om the photographs by Mr. Baxter Greig, Mr. A. W. ennings, and Mr. F. R. Farrow, without which his paper uld have been much duller. Perhaps he had been wrong use the words "carelessness of design" in connection with ançois I. But owing to the circumstances of design or to ançois being his own architect, or to the buildings growing by bit, they did not grow quite in the way they were tended. Certainly that was so at Blois. He thought the thusiasm of the age sometimes outran the scholarship of e race of architects that was growing up. The French ilistine was, he considered, far worse than the English. A eat many châteaux were destroyed in the eighteenth cenry simply because people did not want the trouble of keepg them up.

ENGLISH MEDIÆVAL ARCHITECTURE.—IV.

HE fourth of the course of ten public lectures by Mr. Edward S. Prior at University College, Gower Street, .C., was described in the synopsis as dealing with "The formed Architecture and its Provinces." In the precedig lecture, which treated of the coming of the Normans and glo-Norman Romanesque, emphasis had been laid on three periments of the masons in their building of great abbey urches—(1) in respect to the rib-vault; (2) in the recessing arches; and (3) in the resultant shaping of the arcade r. All these were an advancement through obvious and aightforward manipulations of construction. They might regarded not as a fancy of designing, but as deformations sacred classical conventions by the masons, partly under ssure from their ecclesiastical masters and partly from necessities and conveniences of building.

Although the originating principles were the same, Anglo-rman developed in one way and South French Romanesque another, because limiting circumstances peculiar to each ality controlled the ambitions of the builders. The one ermining factor in the English tradition and convenience in the growth of great oak timber in the British Isles—t best constructive timber of the world. The practical stion of timber made style. If the Anglo-Norman nave s intended to be vaulted, yet in practice, as at Durham, st often it had to be wood-ceiled as well. In the South of nce, oak being less to hand, men were driven to experint with solid stone roofings without use of wood. This eriment with domes led to naves of great width—50 or feet, like that of St. Front. In England it was difficult get oak beams longer than 35 feet; consequently, the glish naves became indefinitely long, but only about 35 feet e. The ambition of vaulting was continuously in the nd of the builders—the bay design is proof of this.

A distinct variation from the large Benedictine foundans of the East of England occurred in the two great ley churches of the Western Midlands, Gloucester and wkesbury. The ground plan was of different proportions. nave was not so elongated (say 180 feet), a double square plan, whereas at Norwich and Winchester the Norman es had been planned as halls of four squares and 300 feet length. The best evidence of fresh construction is the pression of the triforium in the naves and in their lofty ar-piers. Many of the peculiarities have a German plexion.

There were thus two constructional elements appearing by side in the early Anglo-Norman style—on the one d the vault and the big scheme of pier triforium and estory functioned for it (which may be called the "great Benedictine scheme"), on the other the wood ceiling and the wall arcade, triforium, and clerestory functioned for it (which may be called the "lesser Benedictine scheme"). In practice there was no settled choice by abbey builders in many of their designs between the two constructions. Constantly there are signs of indecision. There can be no doubt, however, of the intention of wood ceiling as definitely adopted by the builders of many of the smaller abbey churches. In the smaller abbey building the germs are to be recognised of much that was afterwards advanced into the English Gothic Transition. The prevalence of a smaller monastic church-building in which vault ideas were inoperative counted for much in the course of the English style as this became Transitional to Gothic. For one thing, it explains how at the outset the first Gothic building in England seems to turn away from the most forward developments of the antecedent Romanesque.

The building of the great abbey churches of Benedictine foundations in Eastern England created a body of masoncraft that was paramount over wide stretches in their neighbourhood. Its bay designs and vaulting intentions, its masonry and ornament were copied. But there were stretches of England outside this masoncraft. The diocese of York, for example, was open to the Canon foundations, Secular and Regular; not conservative of the great abbey church tradition, of a different use in plan, or freer experiment in construction, going immediately to the purposes of the wood ceiling. This may be designated "Canons' style." This freer building at once produced two developments which are immediately of consequence as indicative of the advance in style. First, the constructive pointed arch; second, a rich sculptural decoration originating in Cluny. The pointed arch in its first use, and until it became universal, was in its meaning always building experiment; it was a device to secure stability in the abutments against the thrust of the arch. In England it was used in the twelfth century for the arches of crossings, as at St. Bartholomew's, Smithfield, also for the last arch of an arcade where its abutment was weak. The next use was in the vault for the sake of convenience, and then this vault use made it convenient, too, for the window. Finally, it was thought necessary for the eye, and was adopted in the doorway.

The discovery of the pointed ribbed vault by the Gothic builders has been too much considered, said Mr. Prior, as a geometrical question—as if the paper setting out of arches determined their shape, whereas the inducing experiment that led in English style to pointed arch-ribs seems to have been the habit and experience of wood roof-builders. The existence of the wood roof, with its tie-beams, necessitated that the vaulting immediately below should be level crowned, and the transverse arches had to be pointed in order to rise as high as the diagonals.

The next evident mark of style coming into mid-century Anglo-Norman building is the increased elaboration of sculptured ornament. Some constructive richness came by the development of wall arches. These were not merely ornament. As the wall was functioned vertically by the concentration of thrusts to certain points, so the wall was functioned horizontally by means of wall-arcades. By them, in place of masonry being of full thickness throughout, its bulk could be reduced in places, leaving the full necessary width of wall for support or abutment only where this was wanted, viz. at the base externally, at the sills of the windows, at the heights of the floor lines, or of the roof plates.

The main sources of the ornament used in Benedictine building are to be found in the manuscript painting and in the coloured decorations of the wood halls and ships of the Saxons. The patterns painted first by monks on the plain stone walls began to be carved when the skill of the masons grew capable. Some were more easily carved than others, the notched diapers, for example, and zigzags of all kinds, and so came early into use. Certain types of the ornament may be traced to the pre-Conquest cross-carvers, particularly the flat incised outlining of animals. Another source of carving style was the much-practised metal work. But all such decoration as applied to stone was a surface affair; no more constructively part of the forms which it decorated than the flat painting it replaced.

As the chisel-ornament grew sumptuous, quite new elements made their appearance—particularly in the adornment of arches. Here a close alliance with the ornament of the West of France is to be seen in English style, though the derivation is complicated by the suggestion of mixed origins. This peculiar period of twelfth-century carving might be called the "zodiacal" phase, because it employed a profusion of symbolical animal forms, in which the signs of the zodiac were conspicuous. The new elements did not immediately supersede the Norman zigzags, but became mixed with them. There now also appeared for the first time since the departure of the Romans a power of distinct figure sculpture with a modelling of relief from the round. The derivation was most distinctly from South-west France. But the way of this connection was probably by the famous St. Iago di Compostella, where, as early as anywhere in Europe, figure-sculpture made a definite start. At the same time came the free treatment of foliage based on nature instead of on manuscript, and shaped in the actual body of the fabric instead of merely surfacing construction with decoration.

The strong force for English art in the direction of simplicity lay in the reformation of the Benedictine Order by St. Bernard. The Cistercian founders inveighed against the senseless barbarous ornament of Romanesque style, just as they rejected bell-towers as evidences of luxury and pride. The daughter houses of Citeaux were established in England in considerable numbers, and on a considerable scale, in the second and third quarters of the twelfth century. A similar rejection of Cluniac opulence was emphasised by the Augustinian houses. In addition to simplicity of plan, austerity of style appeared in the Reformed building. In England, the first symptom of this was the rejection of Benedictine ornaments, the profuse zigzags, the grotesque beasts, as well as the intricate arcadings and apsidal complexities. In some places the foreign reformers brought with them certain Burgundian features; in others, the local masoncrafts seem untainted with any specially foreign mixture, and to have been practised by plain English builders in distinction from the elaborate ornamentalists of the developed monastic Anglo-Norman style.

CONCRETE INSTITUTE.

A SPECIAL meeting of the Concrete Institute was held at Denison House, 296, Vauxhall Bridge Road, S.W., for the purpose of hearing an informal lecture illustrated by lantern slides on "Fireproofing," given by Mr. Richard L. Humphrey, of Philadelphia (President of the National Association of Cement Users, &c.). The chair was occupied by Sir Henry Tanner, C.B., I.S.O., F.R.I.B.A., &c.

Mr. Humphrey in his opening remarks said America had the proud distinction, if it could be put in that way, of having, as she had in many things, the greatest fire losses in the world. The losses in America are enormous, and each succeeding year does not seem to bring an appreciable decrease in the total. Whereas in Europe they are only reckoned in cents, the capital losses in America are reckoned in dollars, i.e. nearly ten times as much. It would seem, therefore, to be rather incongruous for America to talk to a country that is particularly low in fire losses on the subject of fireproofing. But the very fact that they had such enormous losses in America has led them to study the subject of fire prevention and to find out ways and means to prevent this annual destruction.

Although in Europe the question was not by any means of the same urgency as in America, yet his observation led him unhesitatingly to believe that it behoved all the countries of Europe to study the subject seriously.

While it is true in Europe there were not the capital losses of 2 or 3 dollars per cent. annually, nevertheless there is no reason why Europe should have the capital losses at all. And the mere fact that looking across the great pond the losses were found to be much greater in America than here, was no reason why people here should be self-satisfied and not strive to prevent the losses that they did have.

There were three great epochs in building construction. First came the primitive savage, who must have shelter and who constructs it of such materials as are available. Next comes some regard for the sanitary condition of this structure. And then finally regulations have to be adopted for the safety of the building itself and its safety from damage by fire. Great Britain was blessed with an abundance of slate and building stone, while America was blessed with an abundance of lumber. When the settlers came to America the frame structure sufficed for their needs; and when in later times the permanent structures came they were surrounded by these frame buildings, which were a constant menace. That building construction was nearly always a question of economy was shown by the present condition of things in America, where the growing scarcity of lumber and the growing cheapness of concrete has led to the elimination of these flimsy buildings. In time they might expect that the ever-present menace i
many cities would become eliminated.

The use of the term "fireproof" was dangerous w
applied to buildings, for it instilled into the minds of
occupants ideas which led them to neglect the necessary
cautions and which they would observe if the building
labelled non-fireproof. It was necessary to erect struct
of high fire-resistance and then to provide means for putt
out any conflagration. In America, however, they b
under the usually rather poor building laws buildings
low fire resistance, while equipping the fire departments w
magnificent fire-fighting appliances and high-pressure wa
systems. The country is subjected to a great annual tax
the maintenance of this expensive fire-fighting system.
annual losses are not by any means represented by the ann
destruction of property. In addition to the destruction
property and building materials, there is the annual tax t
is necessary for the upkeep of the fire-protection service,
then the additional tax that comes from the very high ra
of insurance; so that year by year the total annual lo
from fire, which he believed are entirely preventable,
represented by a great deal more than the two or three doll
per capita which is merely the value of the prope
destroyed.

It was regrettable that this property once destroyed wa
permanent destruction, for the lumber and other matters t
go into the buildings are permanently destroyed. In Amer
where the question of the conserving of natural resource
receiving so much careful attention, it was felt to be of
utmost importance to study the conservation of build
materials. There is now generally throughout America
tendency to revise the building laws for the purpose of ens
ing the erection of better structures, but of course it
impossible to make those laws in a large measure retrospecti
and there must necessarily exist for many years to come bu
ings which at best can only be described as tinder boxes.

Great conflagrations also occurred in Europe, as he
found out in his last European trip. At Antwerp t
summer he had seen a warehouse in which an enorm
quantity of cotton had been destroyed. The precauti
taken had been inadequate for the safe storage of such
material. Of course in America great conflagrations
occurred. The one in Chicago was perhaps only second
that in San Francisco. In Boston in 1872 and Baltim
in 1904 conflagrations of great size, which destroyed prope
worth millions of dollars, occurred; but these were only sm
in comparison with the large area of Chicago and S
Francisco.

In San Francisco the destruction of the water mains
earthquake left the city at the mercy of the flames, wh
literally swept the city, which was in its residential secti
almost entirely of frame construction. The failure of
water supply was due to the fact that none of the mains h
been laid on the mud, where they could have withstood
earthquake. Most of them were in the sand. This has n
been remedied by constructing a pumping station which w
be independent of earthquakes. San Francisco after the f
was as desolate a sight as one could see, and should ha
served as a strong lesson for the dangers of such constructio
Chicago was second to San Francisco in the extent of
fire-losses. In Baltimore the fire-fighting service from Phi
delphia, New York and Washington were practically pow
less, because in the extreme cold weather which prevailed
that time the water service was of little value. It is intere
ing to note that in the San Francisco fire it was estimat
that the profits of twenty years were destroyed in a fire
three days' duration.

It frequently happens that the walls of a structure a
standing after a fire, and people point to those walls as
evidence of the fact that the building has satisfactorily pass
the conflagration. But the buildings could scarcely be co
sidered fireproof if their interiors had been gutted and 90 p
cent. of the property destroyed. Sometimes the walls are
concrete, and after the fire are in good shape, and only requi
a renewal of the floors, doors, and windows and roof to ma
a habitable dwelling. In other cases the floors and colum
are fireproof, but the front walls, being of cast iron, a
destroyed, or the walls of brick fall down. One of the be
examples in America of the behaviour of reinforced concre
in a serious conflagration was the building of the Guaranto
Trust Company of Baltimore, and load tests were made
those floors after the fire by the building department, an
they were found to be amply safe under the ordinary regul
tions. In the destruction of the adjoining building oppo
tunity was afforded for the construction of a modern buildin
and it became necessary to tear down the rebuilt structu

ecause it did not fit in with the new structure, otherwise it as in very good condition.

Stone is very largely used, not only in this country and America, but all over the world, as an ornamental material, nd it is evident from the study of buildings where there have een fires of intense heat that the stone is almost entirely estroyed. It is usually found almost impossible to replace e ornamental character without rebuilding the structure tirely. The behaviour of granite and hard sandstones in re, which splinter and split, is ample evidence that the bject of natural building stones should be studied with a ew to determining their resistance to fire. The United tates Government have undertaken some studies of this nd, and they found that it made a material difference as how the stone is quarried in its fire resistance. They und that granite could be quarried so as to offer almost 0 per cent. greater resistance to fire in one direction than another direction; so that in the matter of ornamental ilding stones there is much to be learned in the manner in hich the stone is quarried from the point of view of its fire sistance. Of course in a building of this kind the destruc- n cannot be estimated. The mere fact that the skeleton mains is not very much consolation, and when ornamental rts are also structural parts carrying the walls, then of urse the construction seriously endangers the safety of the ructure, and when granite columns form the interior lumns of the construction their destruction is a matter of rious concern. If stone is to be used as a structural member a building it must be fireproofed, just the same as a steel mber should be fireproofed.

In nearly all the great conflagrations in America it was a quent sight to see buildings of steel which had not been operly fireproofed entirely destroyed. It is evident that nething must be done to protect that material, for while el may have great strength at normal temperatures it has tle or no strength at high temperatures. Then again it quently happened that the floor of a structure may be sonably fireproof and constructed properly, but the pports of the floor are cast iron or some equally bad terial, and the failure of the column to support the floor ses a collapse.

It is a striking fact that architects and people in general America regard burnt clay as an admirable fireproofing terial. In a large measure this opinion has been based the fact that small pieces of burnt clay when placed in a and made hot do not disintegrate when placed in the ter. But the clay is not used in that way. It is used in shape of a tile. During the process of manufacture it en happens that these tiles become cracked in the corners, when a column which is so fireproofed is subjected to the ion of the heat the unequal expansion of the outer face the tile, as contrasted with the inner face against the el, causes an expansion which the thin web at the corner unable to resist, and the tile and the web cracks. As a ult the tile is broken away from the column, and the tal column being exposed to the action of the heat col- ses.

In the construction of columns an attempt has often n made to fireproof them by binding around the column haps a metal fabric, and then plastering it. In the Fair- nt Hotel about 100 columns fell as a result of this kind fireproofing, and some of the floors settled as much as a t. Now there was no great fire in that building. The el had not been completed, and the only material there the lumber used in its construction, which was not a at amount. But the burning of this lumber was sufficient develop enough heat to buckle the flimsily constructed umns. In the destruction of such buildings one saw the y of evasions of the law.

It is quite general in a fire to find that where terra-cotta s have been used the lower web by reason of its expansion flaked off. Sometimes as much as 35 per cent. of the tiles failed so as to come off altogether, while a larger cent. perhaps are cracked so badly as to be able to be ed away with the fingers. In a case of that kind noth- can be done in the way of restoration, except by entire nstruction of the floor. Other objections are that in the ning these clay tiles become cracked, as also in the ham- ing while being fixed. Such cracks are plastered over; it is only under fire that their weakness is revealed.

The floor, of course, is an all-important part of the cture. If the column is reasonably fireproof it is neces- that the floor shall be fireproof also. The suspended ng, it was found in the San Francisco and Baltimore , acted as an excellent shield, and greatly increased the resistance of the floor above. Unfortunately, in carrying this idea ordinary gypsum or plaster is frequently used, and with a very flimsy anchor—the gypsum loses its life at a very low temperature, the anchor is destroyed, and the ceiling falls.

It generally happens that the roof trusses of a building are never protected. The upper ceiling is rendered reasonably fireproof, but the steel trusses of the roof are not protected, and as a result the roof becomes the entry for a fire from the outside. It is just as necessary to protect the steel work of the roof as it is any other part of a structure.

In most cities there are buildings of large size that are reasonably fireproof and monumental in their construction. But they are surrounded by fire traps. This is particularly true in large cities in America, where there are buildings extremely high, and which, if they were properly protected with metallic window frames and door frames and wired glass windows, would probably act as a barrier, but with unprotected plain glass and perhaps wooden frames the destruction of the tinder boxes surrounding them brings about the destruction of the contents of the large buildings, and then of the buildings themselves. It is not only necessary that the floors and columns of a building shall be properly protected against fire, it is also necessary for the exterior exposures to be protected. The destruction of windows leads to an easy access for the flames to spread from floor to floor, and so causes the entire ruin of the building.

In some cases where metal doors and windows of approved type were used and plain glass introduced in the windows, the glass simply softened and fell down, and so, of course, the barrier was of little value. On the other hand, when the window is constructed with metal frames and wired glass windows of approved type the glass often softens, but still stays in place and prevents the fire from gaining access to the building.

Personally, he believed that concrete was going to play a very important rôle in the question of fireproof construction in the future, and that the Concrete Institute of England and the concrete organisations of America had a very important responsibility and a very important task before them. They knew concrete to be reasonably fireproof. They did not know much about its properties or the methods of the construction from the point of developing buildings of the highest fire resistance. It was a fact in America that in a report of the various concrete buildings erected during the last five years, the owners of 23 per cent. of the buildings reported that they carried no insurance on the building themselves, that they merely insured the contents.

Now a building of concrete when properly constructed was the highest fire resistance, but unfortunately there is a tendency to design parts of it without providing any fire protection. It was unwise to say that concrete was fireproof, and did not need protection. It was just as necessary to provide fire protection for the concrete member in the structure as it is for a steel member, a wooden member, or a stone member. There is no doubt that different aggregates have different rates of expansion, and that these different rates of expansion cause a proportionate destruction of the concrete.

It behoved the members of the concrete organisations to study the question of the fire-resisting properties of concrete and the method of its construction, so that in the future the material would be applied to the very best advantage. By the study of such problems the whole world was benefited. In conclusion, Mr. Humphrey said he would like to pay his tribute to the work of the British Fire Prevention Committee. Its effect had been widely felt, specially in America.

Mr. Edwin O. Sachs, in proposing a vote of thanks, said they were extremely indebted to Mr. Humphrey for devoting one of his four evenings in London to give them that highly interesting talk. They were also indebted to him for the many instructive slides shown on the screen. The word "fireproof" was a most abominable misnomer, and had done more to check the progress of fire-prevention than anything else. Fortunately its use is now decreasing. In the States there had been debates about its use, and he hoped it would be given up in favour of "fire-resistance." The lantern slides went very much towards showing that the use of terra-cotta slabs as a casing was not to be recommended. The material was certainly out of place where true fire resistance was wanted. Nevertheless the employment of terra-cotta tiles for light partition work was extremely useful and suitable for any building which could be classified as "temporarily" protected as against "fully" protected. Taken all in all, there could be no doubt that for economy and practical utility properly designed and properly composed concrete affords the most practical fire resistance to be got at the present day. It would certainly be most welcome if among the subjects to be taken up by the Concrete Institute was an enquiry into certain phases of fire resistance which have not yet been entered upon. But reinforced concrete structural features require fire protection. A reinforced concrete beam with its metalwork protected perhaps with half an inch or one inch of concrete is not fireproof. For beams over ten feet span at least two inches of concrete are necessary. Where the fashion had come from of not protecting the metalwork sufficiently he did not quite know, though he was inclined to suspect France or Belgium. In some large warehouses he had recently seen at Brussels the concrete was little more than a coating. In the same building there were one hundred rolling steel doors of the most approved pattern, while over each door was a window filled in with plain glass, at once minimising the fire-resisting efficacy of the doors. In England as compared with the United States we have one very great advantage, in that we limit the cubic extent of our buildings. Until recently this was rigidly enforced. Now powers have been obtained for extending those limits to a certain extent. He would say as a word of warning that such powers should not be extended too liberally, for the law on that point used to be a great safeguard. Other safeguards in London were the limiting of the height of buildings and the splendid way in which the regulations as to party walls had been enforced. In this country they probably paid greater attention to the safety of human life than anywhere else. Many regulations existed for ensuring the safety of life (such as the provision of external staircases and so on), which all make for better protection as a whole. England had to thank the United States for a great many improvements connected with building construction of late years, such as the better types of fire-resisting floors and doors and for wire glazing.

Mr. E. Fiander Etchells, F.Phys.Soc., M.C.I., considered that the small loss of life in this country from fires was due largely to the provision of means of escape, apart from the construction of the buildings. The getting of fire protection for the contents of a building is so mixed up with the rental that absolute fire prevention is almost impossible. In all recent legislation it is recognised that even "fire-resistance" is only a relative term. The great care taken of life in this country might be due to the belief that one Englishman was as good as three foreigners any day.

Mr. W. G. Kirkcaldy, A.M.Inst.C.E., M.C.I., said the general idea that terra-cotta was an excellent fire-protection was evidently wrong. Concrete was far more promising as a material.

Mr. E. P. Wells, J.P., thought that structural metal work should be encased in three inches of concrete. Under no circumstances should plaster casing be permitted. The casing should be either concrete or brickwork. Such concrete should be of a very much richer nature than for ordinary work, whereas in many cases the concrete actually employed is of such a kind that it is practically impossible for it to be fire-resisting.

Sir Henry Tanner, the chairman, in closing the discussion, said he would like to add his thanks to Mr. Humphrey for the paper. He quite agreed with him on the subject of terra-cotta tiles, and the photographs had shown how very little they were to be relied upon.

Mr. Richard L. Humphrey, in replying, said that experiments in fireproofing were being made all over the world. The City of New York authorities required new systems of fireproofing to go through a preliminary test before approval. In almost every case the first test has resulted in failure, as defects revealed themselves which have subsequently been put right. In the casing for a reinforced column the important thing was not the thickness of the covering so much as the insulation of the material behind. If any heat is conducted or transmitted the casing can be of no use. In his opinion the most efficient protection of all was keeping the contents of a building in small units. In America they still had a great many bad things in their construction, and they looked to England for help in the solution of the problems.

WOMAN AS A DOMESTIC ARCHITECT.

A MEETING of the Camera, Sketch, and Debate Club of the Architectural Association (Ladies' Night) was held on Thursday, November 2, when the subject for discussion was "Woman as a Domestic Architect." Mr. Edwin Gunn, A.R.I.B.A., opened with the following short paper:—

Architecture is a great and difficult art, the mere scope and meaning of which not one in a thousand laymen, or perhaps one in a dozen professed architects, fully understands. The broader and truer meanings of the term as
relating to dealings with the masses of buildings and the
design to excite definite emotions in sensitive beholders ar
however, now more readily grasped than they were, owir
perhaps, to the frequent bandying of such phrases as "grar
manner" and "town planning," and it is commonly reco
nised by people sufficiently interested to care that ingenio
contrivance of detail is not architecture, though forming
part of it in some of its minor applications.

Ruskin rather unkindly said of Welby Pugin in one
his scathing denunciations of English architecture (whi
he did not understand), "Expect no cathedrals of him; b
no one, at present, can design a better finial." Continent
opinion seems to sum up the typical British architect
somewhat similar lines: "Expect no cities of him; but
one, at present, can design a better cottage." Even th
modest qualification has latterly been questioned more tha
once in current journalism. It has been freely stated th
all is not well with our domestic architecture, and the clai
of woman as the natural saviour of the situation have be
again and again advanced. I have not gathered that arch
tecture had much to do with the claims put forward, thou
the writers concerned seem to have thought so. They attac
really, from another point of view. Briefly, the argument
this—and I hope they will soon elaborate or develop the
pleas, as continual restatement has somewhat staled the
oft-reiterated cry—"Women alone should design house
because they live in them and understand their working
Or, as Mr. Robertson Scott, well known as a writer under t
pen-name of "Home Counties," puts it even more directl
"Structures which are to be lived in most of the time
women, and are to be wholly worked by women, are plann
by men, chiefly 'single men in barracks' of offices."

It will not do to push this line of argument too far,
we shall be committed to the principle that the criminal (
should it be the warder?) must always design his own ce
but, seriously, is there anything in this claim? Where d
man live? The cheaper class of (alleged) humorous pap
is perhaps responsible for an impression that his time
divided between his office and his club, but this can be d
missed as obviously untrue as regards the cottage-dwelli
class. And does woman so devotedly attach herself
home? Is her existence divided between the kitchen passa
and somewhere in the neighbourhood of the linen clos
Not to anything like the extent she would have us belie
Often she is fluttering about the West End, corrupting
taste and making herself envious and discontented by w
shipping the numerous ingeniously-misshapen creations
which the fashion of the moment decrees that she shou
clothe herself. Enough of this; it is a side-issue.

The assumption, however, that woman, while preserv
and cultivating all the domestic virtues, will yet find ti
to become a prolific designer of houses is, to say the least
it, amusing. For, observe, it is not the mere fact of be
a woman which fits her to design houses for people to l
in, but the fact of being a *domesticated* woman, and as
architectural business increases so her fitness to conduct
would automatically diminish—a state of things not
known with male architects, by the way. But even conced
the claims made, and allowing that woman might make
efficient designer of the domestic machinery of the ho
(reserving the right to object that this is a very minor p
of architecture), what is to prevent man from doing, or
prove that man has not done, the same thing as well
woman can hope to do? Instances to the contrary can
doubt be produced—kitchen ranges badly lighted, drain
boards for left-handed washers-up, no draw-off taps on up
floors, insufficiency of cupboards (I use the word with ba
breath); but is anyone bold enough to declare that the
tellect of man is incapable of satisfactorily grappling w
such very simple problems of arrangement, or that m
architects would have a monopoly of carelessness
stupidity? And, after all, is there not something nob
than a cupboard? I don't mean a wardrobe. A sense
proportion is the one absolutely essential quality of
architect—not alone in the sense of geometrical ratio betw
masses and parts and subjection of detail in subservience
the whole conception, but in the avoidance of any exagge
tion of certain components to the sacrifice of others.
instance, it is desirable to have good drains, but the arc
tect who designed his drain plan and fitted his house to
would not be committing architecture. An extreme instar
no doubt, but we are invited to let woman design our hou
on somewhat similar lines around the domestic offices.
sign in plan and section as practised by the abler of
domestic architects is something very much more than
mere fitting together of so much accommodation (includ

cupboards) to serve the needs of domestic convenience. But, again, is woman always so determined in securing convenience at all costs? The woman who "lives in the house" craving for cupboards denied by the unpractical male architect is quite a touching picture. But what of woman who lives in her dress craving for—not pockets, but a solitary pocket? Why? Fashion forbids! We know something of fashion in architecture—everything at present must be redolent of the days of good King George, to be followed by neo-Greek—but I see fearful visions of exaggerated fashions in architecture if woman once gets her head! We all know the mushroom, aeroplane, and other expensive forms of hat (practical, you will observe, in the perfect ease which is permitted their wearers when seated, say, in a railway carriage). Picture our domestic architecture if a fashion for roofs on a similar lavish scale but started, followed by a reversion to the toque or baby boy style. No; I don't think that woman can maintain the claims to that sweet reasonableness and hard commonsense in dealing with the minor conveniences of life which have been put forward on her behalf by interested parties. One feels that she would always be prone to become, to an even greater extent than man, the mere slave to an idea, before which cupboards, sinks, water supply, and possibly even roofs and windows, would have to retire if they did not conform.

Now, taking it as demonstrated that woman would be most likely to fall short of the high hopes entertained for her as a contriver of domestic convenience, what of her claims to success as an architect? Unfortunately, the "lady architects" who from time to time prevail upon journalists short of copy to print their wearisome effusions on the eternal topic, "cupboards," do not seem anxious to publish their designs, so that I am acquainted with no feminine building to which the test of critical examination can be applied. There was, indeed, a cottage at one of the early cottage exhibitions, but—— We must perforce rely on other evidence.

Woman has been fortunate in receiving tacit admission to a sort of pretension to "better taste" than man. Goodness knows how it came about—lack of self-confidence on the part of man, I suppose, or possibly a feeling that anything so unreal and inessential as Art was beneath his lordly notice. As far as I can gather, it largely depends on woman's displayed preference for the more delicate (*i.e.* washy) shades of blue and pink in decoration, a fondness for draping, and a passion for knick-knacks which converts the drawing-room (woman's sphere) into the most fussy and unsatisfactory room in the average house. William Morris, at least, knew better. "There are two things," he said, "about which women know absolutely nothing—dress and cookery: their twist isn't that way. They have no sense of colour or grace in drapery; and they never invented a new dish or failed to half spoil an old one." I do not think that I need labour this point. I am not anxious to prove that the average woman is less likely to make a successful architect than the average man—who makes a precious poor one—but that there is no evidence to show that she would be likely to make a better one.

Upon the physical aspects of the case I have not touched. I do not regard woman's obvious difficulties with excavations and scaffolding as really material or insuperable. Sir Christopher Wren was hoisted to the giddy heights of St. Paul's in a basket, and I am sure that this method of transport would commend itself to woman, who, I am given to understand, is the chief supporter, both directly and by nfluence, of such delightful inventions as the wiggle-woggle, toy wheel, and similar violent pleasures at our educative exhibitions.

I confess that when I rashly undertook the preparation of this paper it did not occur to me that the argument would be so one-sided. It was my intention to array the points for and against the probability of improvement in our domestic architecture resulting from woman's entry into that sphere. But at close quarters with the subject the probabilities have appeared to me to be all in one direction, and I shall be really grateful to anyone who will redress the balance.

The proposition which I shall ask to be allowed to submit to the meeting is: "That available evidence does not ustify the assumption that woman would improve on the domestic convenience of the average man-planned house." Before leaving this proposition to the animated debate which I hope it may provoke, I will briefly summarise the points which I consider vital.

1. If there is anything to fit woman as a better designer of liveable homes than man, it is her intimate and constant ouch with their working. This, I fear, is not so intimate and constant as it was, and in the case of a successful professional must become still less so. 2. In any case the needs are relatively simple, and the man who cannot grasp them will certainly fail to grasp the more complex needs of the larger problems of architecture, and hence be a poor architect—and there may just as well be poor woman-architects. 3. Evidence in the spheres in which woman already holds free sway tends to show that convenience is the last consideration entertained in design.

Miss Cohen said that her feeling on the point of women architects was that a woman's knowledge would be specially useful in the provision of labour-saving devices. Anything which tended to a saving of manual labour ought to be welcomed, and in such matters women were the best guides. Again there were a great many places which now lacked proper cooking appliances, good sinks, and storeplaces sufficiently big for such food supplies as must be bought in fairly large quantities if economy was to be practised. Another common fault was the designing of windows with numerous small panes which, however nice they might look, involved difficulties in cleaning; others again would not open. Fireplaces were another frequent fault, and rooms were not properly ventilated. When visiting a consumptive sanatorium recently in the Lake Country, the Matron had told her that, beautiful as was the air in the neighbourhood, most of the patients were natives, owing to the fact that so many of the bedroom windows in the cottages would not open. Then present-day cottages were often neither light nor airy. These and other faults were in man-designed houses. Personally she liked to think there was no sex in architecture, it being merely a case of a good architect and a bad architect, whatever the sex might be. Mr. H. G. Wells, after setting forth in "Kipps" many of the faults of a London house, makes his character conclude: "It is having a house built by men, I believe, that makes all the work and trouble." The question whether a woman could design Westminster Cathedral was beside the point. But she held that in domestic work her experience ought to make her supreme. On the comfort of the home depended the welfare of the nation, and therefore its designing was a matter of vast importance. A curious point came to her knowledge in connection with a garden suburb. In one of these it was absolutely impossible if anyone died to get the coffin upstairs. That was a practical fact that had never been thought of. Of course she did not want to argue that a woman would have necessarily thought of it either. In America women in large numbers were doing very well as architects, being taken as pupils by practising architects and allowed to specialise in domestic work. So far as internal planning went and the meeting of domestic requirements there was, she thought, a great province for women architects.

Mr. H. W. Brittan contended that most of the remarks of Miss Cohen were not levelled against the architects of to-day, but against defects arising out of a lack of education in past generations. The type of house alluded to was not designed by architects, but by builders. He did not care for the idea of lady architects.

Mr. A. G. R. Mackensie thought the matter was one for serious consideration. There were a great many things which women naturally knew more about than men did; and it seemed to him that the person who knew a thing from practical experience knew it better than a person who knew it merely because he had been told about it. He had to confess it had never occurred to him before Miss Cohen mentioned the point that it was more difficult to clean small windows than large ones. That was an excellent example of where women have the advantage over men. It was a very sweeping assertion to say that women ought not to take up a specialised profession. In the case of painting and sculpture there could be no doubt that women have already won their place. It had been said that man still holds his own at the very top; but even if that was so, there are a great many women far ahead of men in the lower grades. There are heaps of women who he was certain would have made far better architects than some men if they had been properly trained.

Mr. J. D. Crace suggested that a great deal more might have been made of the point about the professional occupations of American women. Some fifteen years ago there was a great iron railway bridge being built to cross an expanse of water in the neighbourhood of New York. During the course of the contract the engineer died, and his sister took his place and carried it through. That incident proved that women were capable of carrying out extensive works. He did not think that architecture pure and simple opened up a very promising prospect for women. Their advice certainly might be good; but there were a great many difficulties in the way of supervision on a large scale. There were, of course, many who with training could build a very excellent cottage. But when one came to architecture he believed there were very few who could carry it out with the active superintendance and the knowledge of the trained man. To do so was almost a physical impossibility. As regards the presence of fixed windows, he had lived in a house built about eighty years back, where the windows did not open at all. But this was probably done purposely in order that they should be strong enough to resist the violent gales. What men architects as well as lady architects would do well to remember was that the foundation of all training was a good general education. Education should be carried a good deal further than is usually the case at present, though a professional could begin to specialise at a very early age. On the subject of the motion he did not feel prepared to give a vote either way. Women with a special capacity would, he believed, find an opening. But he thought they would be wiser to have in view not the erection of great buildings, but the design of interior fittings and of the decoration. But they could not do even the latter successfully unless they had had an architectural training.

Mr. F. B. Last thought that the question before the meeting was not quite as it ought to be. It should not be a matter of rivalry between the two sexes, but of co-operation and of a combination of the two points of view. The fact that women spend so much of their time in houses did not necessarily mean that they were the most qualified to design them, for having one's nose right on to a thing was not the best way of getting to know it. There were certainly bad as well as good men architects. It seemed to him that it was impossible to get a definite answer to the proposition and to say that woman was likely to be a better or an inferior architect to man.

Mr. A. L. Snow thought that the chief conclusion they would arrive at was that a woman's sphere was more in the nature of a consultive than an active one. In the former she was likely to achieve the best results—if one excepted her possibilities as a client. As a matter of fact, he would like to know how far woman was responsible for the present condition of planning. Every architect had to follow the directions of his client, and these were not usually given by the man, *i.e.* the one who pays. The size of the drawing-room suggested a woman's influence. In his opinion women would make much better garden architects and decorative designers. The busy architect had not enough time to be able to devote attention to either of those matters. In that field there need be no competition against men.

Mr. L. Jacob thought that while a woman's ideal sphere was to be a ministering angel, yet, as the sex outnumbered the men, some must earn their own living, and therefore it was well that they should be trained to do it in a profession. She would do well to co-operate with man. He had seen it stated in a magazine that as the home was a woman's place of business, things would go a great deal better if men were only as careful about their wife's place of business as they were about their own. If a man would take over the housework for, say, a month, he would find out many little things that he did not know now.

Mr. A. H. Belcher also supported the idea that women should look after the decorative finish of houses and also garden architecture, as being much more in their sphere, if they had any spare time. His fear was that they would neglect their womanly duties. Women's help ought certainly to be of great assistance to men, but it did not follow that they should be architects. The more information an architect can get the better. There were too many practical difficulties attached to architecture for women to be able to follow it.

Miss Cohen said it was all very well to say that women ought to stay at home. But were those who so argued ready to keep their unmarried sisters and the women who had no one to support them? Not to approve of the idea because there was not evidence of its success was unfair. She would say, give women the opportunity of proving themselves.

Mr. T. L. Dale suggested that when man was left to himself he did not require a house. Directly a woman appears on the scene she must have a drawing-room, and then a kitchen, and so the whole structure is built up. If ladies did not like their houses it was very much their own fault. The best thing for an architect was to take woman into his confidence and make her partner. Personally he could not see any reason except the obvious selfish one why women should not be architects. It was only jealousy that made architects stand up against the idea.

Mr. A. E. Bullock thought that, given the right training, women could undoubtedly become very good architects. A quantity surveyor he knew trained his wife and daughter i his business, and they did it so well that they practicall ran it. Where a woman's forte lay, however, was in th artistic side of decoration and perhaps of planning.

Mr. C. G. Boutcher was all in favour of co-operation Ladies undoubtedly had a far better knowledge of domesti matters than men. The best way out of the difficulty seeme to be for an architect to train a girl pupil and then to marr her.

Mr. Stanley Hamp, in concluding the discussion, quit agreed that women could assist in domestic work. There we details which men had not the capacity to follow. But whe they came to consider larger schemes she might fail. Th peculiar construction of a woman's mind justified one i assuming she would make a better domestic architect tha anything else. He hoped they would not have many lad architects, because already there were too many male ones There were business women who seemed quite as capable a any man. But he thought women ought to stay as domesti architects and not to enter any larger field.

Correspondence

[The Editor will not be responsible for the opinion expressed by Correspondents.]

The Royal Institute and the Society of Architects.

Sir,—There appears to be some misunderstanding amon some of the members of the Royal Institute in regard to tha portion of the Society's annual report in which it is state that the Council of the Royal Institute propose to make a application to the Privy Council for a supplemental charte in order to give them the necessary powers to enter into th agreement.

It did not occur to my Council in drafting their annua report that any amplification or explanation of the foregoin statement of fact was necessary, as it was not anticipate that the members of the Royal Institute, or any one els would not realise the obvious fact that any proposals whic may be agreed upon between the Councils of the Roya Institute and the Society must in each case be subject to th consideration and approval of the general body of th members before any final settlement can be arrived at.

I have not had an opportunity of consulting my Counc on the matter, but I am sure they would be extremely sorr to think that any misunderstanding on this question coul possibly arise. Will you, therefore, kindly allow me to mak it perfectly clear that proposals for a new charter and by-law are being considered by the Council of the Royal Institut with a view to laying them before the general body, and tha they will also, in due course, be laid before the general bod of the Society.—Yours faithfully,

C. McArthur Butler, Secretary of the Society.
November 6.

Australian Federal Cspital Competition.

Sir,—Members and Licentiates of the Royal Institute c British Architects are requested not to take part in the abov competition.—By order of the Council.

Ian MacAlister, *Secretary.*
Royal Institute of British Architects.

Mr. Norman Thorp, A.R.I.B.A. (of Messrs. T. E Watson & Norman Thorp), was on Saturday last presente at the twenty-fifth annual gathering of the Elstonian Ass ciation with an illuminated address, an antique Sherato bureau, and a spirit case in recognition of his work as Cust Rotulorum of this association, formed of past scholars c Elstow School, Bedford.

The Liverpool Cathedral Committee on Monday accepte the designs of Mr. Gilbert Scott for the carving of the porc to the Lady chapel. The cost of the porch and decoration i being defrayed by the children of the diocese. The design i the gable is to represent Our Lord as the Good Shepherd wit a boy on one side and a girl on the other. Lower down fou figures are to be carved representing Samuel with a lamp David with a sling, a boy with five loaves and two fishes, an Timothy with a Bible. The Financial Committee reporte that there were sufficient funds in hand to complete the choi vestries, chapter-house, and Lady chapel, but that the now required to raise £70,000 to build the first of the trar septs, which will increase the seating accommodation to 2,50

FORTHCOMING EVENTS.

Saturday, November 18.

Aberdeen Architectural Society : Paper on "Structural Ironwork and Steelwork for Architects," by Mr. Harbourne Maclennan, at 7.30 P.M.

Monday, November 20.

Royal Institute of British Architects : Paper on "Modern French Sculpture," by Mr. H. Heathcote Statham, F.R.I.B.A., at 8 P.M.

Liverpool Architectural Society : Paper on "The Architecture of Bath," by Mr. Mowbray A. Green, F.R.I.B.A., at 6 P.M.

Tuesday, November 21.

Nottingham Architectural Society : Paper on "Reinforced Concrete Construction," by Mr. H. Burke, at 8 P.M.

Wednesday, November 22.

Northern Architectural Association : Students' Meeting at 7.30 P.M.

Manchester Society of Architects : Paper on "The Contrasted Development of Paris and Vienna," by Mr. P. Abercrombie, at 6.30 P.M.

Thursday, November 23.

Architectural Association : Conversazione at 8 P.M.

Friday, November 24.

Glasgow Technical College Architectural Craftsmen's Society : Paper on "Town Planning," by Mr. T. G. Gilmour, at 7.45 P.M.

CIVIC ART.

WHAT distinction is there, if any, between civic art and town planning? Such may readily be our nquiry when we hear the term "civic art" used for he first time. The answer may be found in the magnificent volume* bearing the title which we are considering, and given to the world by Mr. Thomas H. Mawson, Hon. A.R.I.B.A., whose reputation as a landscape gardener, or, perhaps we should rather say, garden architect, to-day world-wide. If, as is now generally recognised, he garden should be the subject of architectural design, nd the combination of more or less building with planting, there would seem to be still more reason in the lanning of a city for the tempering of the preponderance f building with some liberal incorporation of gardening, both for the sake of health, by the provision of open space nd oxygen-makers, and for the greater amenity of the ity, which in itself results not only in pleasure but in healthiness of body and in the increase of mental fficiency of the citizens.

In the planning of a city it might be possible to restrict ne's outlook to the consideration of traffic facilities and ygienic conditions, and to call the result town-planning, ut when we begin to talk of civic art there is immediately connoted the inclusion of beauty amongst the hings that matter in the planning of a city or town. And nasmuch as the increase of the amenity of a city by the nclusion of beauty makes, whether consciously or subconsciously, for the augmented mental and bodily health f the citizens, we may justly regard this factor as roperly comprised within the domain of hygiene. Thus ven if we conceive that town-planning is limited to the onsideration of the convenience and health of the townspeople, we should still be forced to admit that, as their ealth demands, for its fullest development, beauty of environment, there is no real difference, in essence, between town-planning and civic art. But inasmuch as the term "civic art" suggests the element of beauty, which herwise might possibly be overlooked as an important adjunct of hygiene, we may well follow Mr. Mawson in th designation he has adopted.

Whilst our author defines the primary desiderata of paramount importance in the essential qualities of a modern city as Circulation (or traffic facilities), Hygiene and Beauty, and places their relative position as "firstly, circulation, which may be said to represent two-thirds of the anatomy of the subject, having to do with transit facilities, whether above, below or on the earth; secondly, hygiene, which may fittingly be likened to the lungs, sinews, and muscles of a city; thirdly, beauty, or the comely external presentment, including also expression, which must always be superimposed on the two first and more practical considerations," he devotes by far the greater amount of his space to the various means by which beauty may be incorporated in the design of a city.

Mr. Mawson explains three main schools of town-planning characterised respectively by the use of the chessboard or gridiron plan, the radial or web plan, and the informal or short vista plan, but he has omitted to mention yet another type, which is essentially of English and quite recent introduction, the pretty pattern plan, which though formal follows neither the gridiron nor radial method, but demands a symmetrical disposition about an axial line of roads and spaces irrespective of contours and more or less oblivious of natural features and dominant lines of traffic, at least to the extent that if a main artery of circulation is imperative on one side of the axial line, a corresponding road is provided symmetrically on the other, though it leads from nowhere to nowhere. The introduction of this type of plan is the direct result of modern competition designing, in which, for success, it is essential that axial lines and symmetrical disposition should produce an apparently well-ordered plan. The fallacy of the type in town-planning results from the truth that towns at present are rarely viewed from an aeroplane, but that their vistas are almost entirely seen only from the ground level. We might almost, from an inspection of Mr. Mawson's own designs, as, for example, that for the Carnegie Dunfermline Trust, formulate yet a fifth type of town plan, the diamond, or gridiron intersected by many diagonals.

Both as a gardener and as an advocate of beauty in civic art, Mr. Mawson naturally gives much space in his book to park systems and parkways. A park system, he defines as a chain of parks, gardens and open spaces connected by boulevards or parkways, arranged according to a comprehensive plan and extending from the city into the open country, the object being to secure a continuous through route under leafy canopies, or across beautiful green lawns or naturally wild common reservations. We are told that there are two distinct recognised systems of park development, the radial system and the ringstrasse or encircling boulevard, and our author informs us that, save in exceptional instances, the radial system is the soundest and most in harmony with town growth and expansion.

---

* *Civic Art : Studies in Town Planning, Parks, Boulevards and Open Spaces.* By Thomas H. Mawson, Honorary A.R.I.B.A., Lecturer on Landscape Design at the University of Liverpool. (London : B. T. Batsford. 50*s.* net.)

Somewhat related to the question of park systems is the matter of town gardens, which may often form links in the chain. Of these features our author acknowledges the superiority in Continental examples over those in our own country. From town gardens we pass to the consideration of public monuments and street equipment, fountains, lampposts, and other adjuncts.

The relation of the property owner to town development furnishes the author with material for a chapter, and he discusses at length the operations of the Housing and Town Planning Act, with especial reference to the collaboration of private property owners and local authorities. The advantages of systematised and comprehensive town-planning to the property owner are fully and lucidly explained, and the influence of local circumstances on the provision of large or small plots, the proportion of road area to building land, the arrangement of property of different classes, the control of designs and other practical points of detail are well and thoroughly discussed.

Not the least interesting part of the book is the description of many schemes by Mr. Mawson for the improvement of various towns and cities in Great Britain, which are admirable object lessons for the student of civic art, whilst the lavish profusion of charming illustrations of many of the best productions of Continental designers tends to make the volume an indispensable fountain of information and instruction to all who are practically concerned with town-planning, whether as designers, administrators, or property owners.

NOTES ON BOOKS.

"Small Country Houses of To-day." Edited by Lawrence Weaver. (London: Country Life: George Newnes, Ltd. 15*s.* net.)

The collection into one volume of a series of monographs or individual examples of the small English country house of to-day affords an opportunity of making a fair estimate of the amount of thought and artistic feeling that is being put into their work by English architects at the present time. The judgment that has been exercised by Mr. Lawrence Weaver in the selection of the examples thus assembled has resulted in a high level of excellence being maintained in the character of the designs which are presented as a microcosm of modern English domestic work, whilst a generous catholicity of view has led to the inclusion of a great variety of treatment of many classes of material by a number of different architects. It is needless to say that, as with the publications of *Country Life* in general, the book is amply illustrated with excellent photographs, the value of which to the architect is greatly enhanced by the inclusion of the plans of the houses chosen and the discriminating criticism of the designs which for the most part has been supplied by Mr. Weaver.

"Piranesi." By Arthur Samuel. (London: B. T. Batsford. 12*s.* 6*d.* net.)

It is not surprising that Mr. Arthur Samuel, an enthusiastic collector of Piranesi's etchings, should have desired to know more of the history of this wonderful man and his son Francesco. The only wonder is that he should have had to collate the information for himself from a multitude of sources instead of finding it ready to hand in a biography written nearer the time of the subject. For Piranesi has been even during his lifetime and from then onwards ever recognised as one of the greatest of etchers who have found their theme especially in the representation of architecture. Having collected and brought together in a pleasant and readable form the scattered facts of the life of Piranesi, our thanks are due to Mr. Samuel for offering them to the public. We can even forgive the enthusiasm of the author in his subject for his contention of a higher place in eighteenth-century design than is perhaps his due, when he claims for Piranesi that to him should be accorded the credit that has usually been bestowed upon Adam, Sheraton, Chippendale, and Pergolesi for their designs in furniture. The span of life of Giovanni Battista Piranesi, A.D. 1720-1778, coincided with a passion for the antiquities of Greece and Rome, of which the Dilettanti Society founded in 1733 was a manifestation, and on the wave of which Piranesi rode to fame and success. It is scarcely, therefore, wonderful that a coincidence of detail should be recognisable between th designs of many artists of the mid-eighteenth century, sinc all who desired to be in the fashion were looking toward the same sources of inspiration. Waves of fashion are amongs the most consistent features of architecture and architectura design in all periods of history, and we might as well sa that in our own time Hare, Gibson, Russell, and a host o others were copying Belcher, as assume that Adam an Chippendale were copying Piranesi because of a resemblanc of detail in their work. Mr. Samuel throws an interestin light on the trade in old masters and antiquities, even in th eighteenth-century days of the cult of the ancient, in hi description of the proceedings of Hamilton and Jenkins an of Francesco Piranesi. The book is adorned with reprodu tions of some of Piranesi's works, and although these suffe from very considerable reduction, particularly in colour, the are sufficient to give an adequate impression of the genius Piranesi as a draughtsman, a designer, and an expone of the spirit of classical design.

"American House Building in Messina and Reggi An Account of the American Naval and Red Cross Com bined Expedition, to provide shelter for the survivors the great earthquake of December 28, 1908." B Reginald Rowan Belknap, Lieutenant-Commande United States Navy, late Naval Attaché to the Americ Embassy at Rome. (New York and London: G. Putnam's Sons. 7*s.* 6*d.* net.)

An interesting account of the erection of about thr thousand small wooden houses, the material for which w contributed by the United States Government and t American Red Cross, shipped in five steamer-cargoes fr New York and New Orleans, and the greater part of erected into houses, ready for occupancy, under the directi of an American construction party headed by Lieut.-Co mander Belknap. The story of the difficulties encounter and of the skilful organisation of very raw material in labo by which they were overcome, makes instructive reading, a if the resulting buildings can lay no claim to beauty architecture, they at least are a tribute to American ener and hustle in providing the essentials of shelter and comf in as short a time as possible.

"An Analysis of the Church of St. Mary, Cholse in the county of Berkshire." By F. J. Cole, D.Sc. Oxo Professor of Zoology, University College, Reading. W twenty-three plates. (Oxford: R. H. Blackwell. Lo don: Henry Frowde. Reading: G. A. Poynder. 5*s.* ne

This is one of the volumes issued in accordance wit scheme for the publication of studies dealing with particu aspects of local history initiated by the Council of Univ sity College, Reading. The *raison d'être* of its product is, therefore, local history, and as an example of how s study should be prosecuted and facts distinguished fr traditional error the volume before us is an excellent mo But the church of St. Mary, Cholsey, possesses someth more than merely a local interest, chiefly from its pl As it now stands, Cholsey church is on plan a Latin cross w long narrow nave and chancel, and both aisleless, north south transepts, and a central tower. The nave and transe are of twelfth-century date, the chancel a thirteenth-cent substitution for the earlier building. Dr. Cole has pro by excavation that the north and south transepts origin had semi-circular apses on their eastern walls, and in that the Norman chancel was, as is most probable, apsidal. Hence we have here an example of a tri-a parish church plan of a type not uncommon on the C tinent, and probably, in our opinion, more general in own country than is usually supposed. There are m points of detail in Cholsey church, particularly in thirteenth-century work, which are interesting and inst tive.

"Great Engravers." Edited by Arthur M. Hi Albrecht Dürer, his engravings and woodcuts: Watte Boucher and the French engravers and etchers of earlier eighteenth century: Andrea Mantegna and Italian pre-Raphaelite engravers: John Raphael Sn and the great mezzo-tinters of the time of Reyno (London: William Heinemann. 2*s.* 6*d.* net e volume.)

In these charming little volumes we have the result o interesting experiment by the publisher of printing from h tone blocks on an unglazed paper especially made for the purpose, and obviating the unpleasant reflection of a glazed surface. The experiment certainly effects its object of avoiding reflection, but the paper has a softening effect on ll reproductions which, though admirable in the presentation of work characterised by strong contrast, as in the Albrecht Dürer volume, the Mantegna, and most of the Watteau, where line is the predominant element of the drawing, rather too much accentuates the softness of mezzotint and other engravings in which tone is the means of xpression. As an introduction to a sound knowledge of the different schools of engraving, the varied technique of en- ravers and the *cachet* of individual artists, these inexpensive handbooks are of the highest educational value, a value which s enhanced by the lucid exposition of the historical facts and methods of work in the life of each artist-engraver by which ach volume is prefaced, whilst for those who, having ob- ained from these publications the rudiments of knowledge, esire to extend their studies further there are provided xcellent bibliographies. In these days of prolific output f illustrated periodicals and volumes, it is of high im- ortance that the public should have an opportunity of ducating their taste to a correct appreciation of what is ood and what is bad in black and white, and this education an be no better obtained than by the study of the works of reat engravers, with which acquaintance can now be so leasantly and easily obtained from these volumes.

“Hints to Students and Amateurs.” By Louise opling, R.B.A. With the preface by Sir William Blake ichmond, K.C.B., R.A. (London: George Rowney & o. 1*s*.)

“Guide to the Art of Illuminating on Vellum and aper.” By George Ashdown Audsley, LL.D., Archi- ect. Illustrated by sixteen plates and several drawings the text. (London: George Rowney & Co. 1*s*.)

These volumes are two of the latest additions to Messrs. owney & Co.'s series of treatises on the Fine Arts, and have ike the characteristic of clear expression by writers who now their subject. It is sometimes urged that instruction in t cannot be imparted by books, but it is always recognised at oral tuition from a master is valuable. If, therefore, e spoken word is useful, why not the written? Indeed, the ritten word may be the better of the two, for it can be erused over and over again, whilst the spoken word may sily be forgotten. Hence books can and do teach some- ing of art, provided that the writer can express clearly to e pupil the knowledge to be imparted, and that clarity we ve in the writing of Mrs. Jopling and Dr. Audsley. Mrs. pling's teaching is for those, whether professional or nateur, who desire to draw and paint, whilst Dr. Audsley's ok, as its title conveys, deals with a specialised department drawing and painting. Technique is the main subject of th little books, and is well and thoroughly explained.

“Reinforced Concrete Construction. Elementary ourse, with examples worked out in detail for all types beams, floors, and columns.” By M. T. Cantell, centiate R.I.B.A.; Associate Surveyors' Institution; ead of Architecture and Building Department, Municipal echnical College, Brighton. (London: E. & F. N. on, Ltd. 4*s*. 6*d*. net.)

Although containing some minor defects of grammar and fact, as in the suggestion that steel may be fused at a nperature of 1500° F., this small handbook gives in about simple a manner as possible the essentials of an elemen- y course on reinforced concrete. Particularly good is the struction on the making of forms or moulds for the ncrete, and the insistence on the importance of careful rkmanship by skilled labour in the mixing and depositing the concrete. Readiness of comprehension by students is edicated by the inclusion of numerous fully-worked amples illustrating the practical use of the various formulæ d methods of calculation explained.

THE ARCHITECTURAL ASSOCIATION.

N ordinary general meeting of the Association was held at Tufton Street, S.W., on Monday, the 13th inst., . Gerald C. Horsley, President, in the chair. After the nutes of the last meeting had been read by Mr. H. A. ll, the Hon. Secretary,

Mr. G. C. Horsley said that the next business was one really great sadness, for it fell to him to announce the death of their Secretary, Mr. D. G. Driver, which took place early on Saturday morning. So far they had received no particulars concerning it other than the bare intimation. They all knew that Mr. Driver had been out of health for many months. His health really broke down last summer, and he was obliged to go away. After some eight weeks' holiday he returned, apparently quite strong and well. But he could not have been so, and sometimes since he came back it seemed that the effects of his illness were still upon him. Unfortunately that was now proved to be only too much the case. He (Mr. Horsley) would ask first Mr. A. T. Bolton to propose a vote of condolence with the relatives, and next the members to pass that vote standing. The Council had decided to adjourn the ordinary meeting arranged to be held as a mark of respect to their late secretary. That proposal, he was sure, they would all fall in with. All would agree that the Council had done right in taking this step as a small indication from the general body of the members of the Architectural Association of their deep feeling in this matter, and their realisation of the great loss which they had sustained. He would only remind them that Mr. Driver was appointed their secretary exactly twenty years ago, and that during all that period he had devoted the whole of his energies and, he was going to say, the whole of his time—for he worked early and late—to furthering the best interests of the Association. They would all individually miss their old friend. The Association as a society would miss him as an earnest worker and as a devoted adherent to the interests of the Architectural Association.

Mr. A. T. Bolton said he was very anxious to propose a vote of condolence as being the member of the Council who was longest acquainted with Mr. Driver. It was now twenty years since he first came to them, and it seemed difficult to remember a time when Mr. Driver was not, and when the Association was conducted by the energy of honorary secretaries alone. Ever since his appointment Mr. Driver had devoted himself to placing the Association on a splendid business footing. He never became a mere official at all, for he knew everyone, and there was never anyone less bound up in red tape or more open to receive new ideas. He gave a most wonderful support to the Council whenever they undertook any new thing. Speaking from his personal recollection, he could say how, after long and complicated council meetings (and they used sometimes to be very long before the present businesslike habits prevailed), everybody on going away would tell Mr. Driver to see that everything was right, and Mr. Driver would work early and late to put the proceedings into order. Everything was managed in a marvellous way, thanks to him. When he (Mr. Bolton) undertook the day school, he would never have done so but for the knowledge that he had Mr. Driver to help him. Mr. Driver was a wonderful man, always willing to give up his time, and always ready to suggest means as to how things could be carried out in the best way. He was always present at the meetings, and the members were always glad to see him. If anyone resigned, it was Mr. Driver who won him back; if anyone's subscriptions were in arrear, it was Mr. Driver who got them. He had, in fact, no object in life except the promotion of the good of the Association. At the time of his recent breakdown, Mr. Driver had come down to the coast of Kent, and he (Mr. Bolton), hearing he was in the neighbourhood, invited him over. Mr. Driver came, and made himself so amiable to the children that they could talk of nobody else after he had left. That was characteristic of him.

Mr. Arthur Keen said he felt glad to bear his testimony to the excellent qualities that Mr. Driver showed on all occasions. He had been a friend to everyone, and one thought of him instinctively as a man of many friends. If, on any of the Association excursions or visits, they happened to knock against any old member whom no one else recognised, Mr. Driver was sure to remember all about him. They would miss him more than one dared think. It seemed extraordinary to have a meeting without him, and he (Mr. Keen) would always look back with greatest pleasure to their associations with him. Mr. Driver never spared himself from the time he arrived to the time he left the premises—and sometimes it seemed as if he were able to return home all too late. They would find it extremely difficult to replace him.

Mr. G. E. Neild said he would like to associate himself with the vote of condolence. The testimony to Mr. Driver's worth was perfectly accurate. If any member stayed away one, two, or three years he was always remembered and welcomed by Mr. Driver on his return. Mr. Driver was never so happy as in giving people every assistance.

The vote of condolence was then passed by the members rising in their places.

Mr. G. C. Horsley said he had only one more announcement to make, and that was that the conversazione would take place as arranged on the 23rd inst. The Council had considered the matter very fully, and had finally decided that the first thing their late secretary would have wished would be that the work of the Association should go on fully and without hindrance, and he would have been the first to say that the conversazione should take place.

GREAT BURSTEAD, LITTLE BURSTEAD AND LAINDON.*

THE church of St. Mary Magdalen, Great Burstead, consists of very large nave and aisle, Perpendicular tower of ragstone and shingled spire. The walls are of Norman date, very thick, with small windows inserted on the north side. The doorway to the north porch is a very good example of Late Decorated or Early Perpendicular work, and has carved scroll work and inscription *Ave Maria gratia plena.* There is a stoup here, and the carved capitals originally had heads of Edward III. and his queen; the timber in the porch is very fine.

The parish, and indeed the district, was held by Odo, Bishop of Bayeux, brother of William of Normandy, who exercised rights over some thirty churches in Essex. Geoffrey de Mandeville had authority over some forty churches. In the thirteenth century it was given to the Prior and Chapter of Stratford Langthorne. At the Dissolution, Henry VIII. granted rights to Sir Richard Rich, who also came in for the church and lands of Little Burstead. He held them *in capite* by knightly service. In 1600 he alienated all the lands of these two parishes to one Walter Farr, and they afterwards passed into the hands of the family of Petre, who still hold rights over much land in the county. The Petres being adherents of the Roman Church, the Bishops of London appoint to the livings.

CHURCH OF ST. MARY, LITTLE BURSTEAD.

The church possesses a fifteenth-century chest, said to be formed out of one solid piece of timber, and some oak benches of interesting character. A window on the north wall contains fragments of old glass, reproducing the sun, moon and stars.

On one of the fourteenth-century bells there is an inscrip tion *Vox Austini sonet in aure Dei.* In the old paris registers there are some quaint entries of much antiquaria

CHURCH OF ST. MARY MAGDALEN, GREAT BURSTEAD.

interest, one in particular—a burial of one Watts, the wido of a Marian martyr, who was burned at the stake Chelmsford by Rich and Bonner; the baptism and marria entries of the family of Joseph Hills, which family form part of those emigrants who left their homes and count in 1611 with the Pilgrim Fathers, and founded a settlemen calling it after their old home, "Billericay," in Mass chusetts, U.S.A. The anomaly of the "Georgian" rered in the old fabric was the subject of remarks. This carv work is said to have belonged formerly to a London pari church, that of St. Giles-in-the-Fields.

St. Mary's Church, Little Burstead.—The families Melvin de Bohun, de Waleden, Peckenham, Tyrell, Admir Sir Geo. Walton, and, later, the Petre family, owned lan and possessed rights in this parish and district. Sever members of these families are buried here, and the memorials are to be seen. The church is of thirteent century work, but has undergone much alteration, yet st remains a good memorial of our forefathers' reverence a love for their parish church. The material used in its wa is conglomerate. The timber tower is similar to those which Essex shows so many good specimens. The two no side windows are of late Norman work. The oaken south si door is probably of the fifteenth century.

The west end nave windows are of the Decorated perio and contain fragments of the original painted glass. T 1542 mutilated tie beam has brackets resting on corbel these had figures of angels originally, but now difficult to seen.

There is a recess in the north side of the nave which h an obscure origin; also a fragment of the rood screen on t south side of the chancel, with a portion of the wall on t south-east corner, probably part of the old stairway to t rood loft, a fragment of mural decoration being observab There is a beautiful thirteenth-century piscina and jamb window, forming the sedilia recess, and an aumbry in t north chancel wall. The two defaced octagonal stones outsi of the porch are interesting, being generally supposed to ha originally formed part of steps or pediment of a village cross.

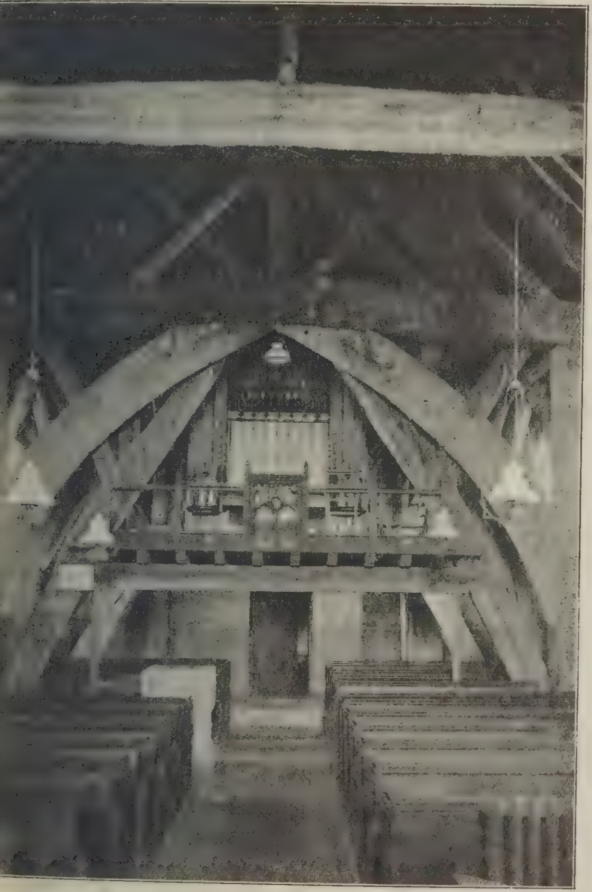
---

* Read at a meeting of the Upper Norwood Athenæum by Mr. Arthur W. Wollen.

In the immediate neighbourhood of St. Mary's is Stockwell Hall, formerly belonging to the Walton family, a fine example of an Elizabethan mansion. There is to be seen a sun-dial and clock, known as "Old Bones," from the fact that the figures on its face are made of bones, and an old tree in the grounds by the roadside, a survival of the oaks of the King's hunting-ground, the forest of Epping and Hainault, which forest formerly extended to Billericay.

The old-world, quaint market town of Billericay—or Billricky—has gabled houses, some good specimens of Tudor brick residences, the very old forge occupying the front of one house, and the fine ornamented brick tower of the church of St. Mary Magdalen. This old town and its immediate neighbourhood was once a Roman military station. It bears evidences of this, as close by, at Blunt's Walls, traces of Roman occupation are still in evidence. A vallum and ditch and Roman pottery urns, &c., have from time to time been unearthed, but it is Great Burstead that still holds the position of its parish church, and is the principal in educational matters. An Urban Council rules over its business.

St. Nicholas, Laindon, is a fine old sanctuary, small, with nave and Lady chapel separated by graceful massive pillars;



CHURCH OF ST. NICHOLAS, LAINDON—INTERIOR.

ned originally by the same proprietors as its neighbour-g churches and land of Great and Little Burstead. This urch is upon an eminence. Among objects of interest are e priest's house of timber and the interior massive timbers support the roof, which, starting from the floor of the urch, are carried up through the roof to form a belfry (free the wall or of the roof).

The style is Early English, with Perpendicular windows. ring restoration some twenty-eight years since, a fine rved oaken roof was brought to light, and remains of ornantal work can now be seen. The ancient piscina in the le, under which is a sepulchral stone, lacking its brass; re are also two small brasses of priests now inserted in the ancel walls, having chalices in their hands, supposed to of date 1480 and 1510. There is a thirteenth-century ndow on the north side; the font is of twelfth-century work. at an older building existed on the same site is probable. e porch, like those of other Essex churches, shows an exple of some fine old wood work and carving. This church has five bells, one bearing date 1588 and another 1619. It also possesses a few specimens of choice church plate.

Perhaps the principal feature is that of the old timber house for the priest, already mentioned; the ground floor room is now used as a vestry and robing room; there are two rooms above, the whole staircase, loft, &c., looking most quaint. On the ground floor is the old oaken Communion table and muniment chest. This old priest's house was formerly the village school, and the schoolmaster, with his wife, resided there, having the upper rooms as domestic offices. This teacher lived here for a period of fifty years. The present rector opened the Lady chapel after many years of disuse, and celebrated Holy Communion some few years since; in commemoration of this a brass memorial tablet is affixed to the wall.

The writer owes much valuable information to the very kind assistance of the several clergy attached to the three churches visited—the Rev. Herbert Carpenter, of St. Nicholas, for loan of most valuable work by Mr. Ernest Godman; the use of a volume of Essex Archæological Transactions loaned by the Rev. W. Trousdale, rector of St. Mary Little Burstead; the assistance and use of the old register of the church of St. Mary Magdalen, Great Burstead, Rev. Mr. Coldwill, not omitting aid from our friend and photographer, Mr. A. C. Weller, and our esteemed chairman, Mr. A. J. Pitman, and others.

THE CONCRETE INSTITUTE.

THE twentieth ordinary general meeting of the Concrete Institute was held on Thursday, November 9, when Sir Henry Tanner, C.B., D.S.O., F.R.I.B.A., read his presidential address.

The Institute, he said, came into being at a luncheon given by Mr. Edwin O. Sachs at the Ritz Hotel in July 1908. Subsequently the Institute was reconstructed on similar lines to those of other bodies of a like character. The membership is now about 875, and is distributed approximately as follows: 350 in London, 260 in the country, and 260 abroad, while the professions, &c., are represented by 582 engineers, 91 architects and surveyors, 31 concrete specialists, 45 chemists and cement manufacturers, and 28 contractors. A Committee has been appointed to consider how the Institute could best be broadened in its scope and interest, and in its usefulness to members, as it is found that less interest appears to be taken in the papers read, and there is increased difficulty in obtaining papers. It is suggested that papers on structural engineering might be included, since concrete and reinforced concrete form parts only of structures, frequently there being much steelwork and other materials involved, including heavy timbering, either permanent or in false work. The Committee is empowered to take energetic steps to foster that side, so that in the future it will be not only a Concrete Institute, but an Institution of Structural Engineers as well.

Sir Henry Tanner said he could not but think that the membership required better classification, and could usefully be re-arranged on the lines of several of the engineering societies. There might, for instance, be members, associate members, honorary members, associates, and students. In the future also it may be possible and advisable to hold an examination in advanced structural engineering which shall in no way trench upon the examinations of other bodies, but be supplemental thereto. Such prospects of extended scope for the energies of members is encouraging. There can be no question of the greater desirability of structures of these materials with a minimum expense for maintenance, less cost for heating (concrete being a good non-conductor), while the reduced cube must make for economy. A loan period of thirty years was referred to, while the usual loan period for schools of ordinary construction was stated to be fifty years. It is impossible to understand the difference in treatment. The new notation appears likely to be adopted generally in English speaking countries, and its adoption is now being considered in America with reasonable hopes of success. The Concrete Institute has already intimated that they would be happy to co-operate with the American Joint Committee in endeavouring to arrive at some common notation for English speaking countries, the basis being that it shall be mnemonic, the symbols coinciding with the initials of the chief words in the terminology of the subject.

A paper read before the Institute last session by Mr. R. W. Vawdrey, on "The Dissociation of Competitive

Designs and Tenders,'' was of much interest to many. It is seldom that tenders including design are asked for in any other branch of building than that of reinforced concrete. It is true that, as a rule, the general scheme is laid out by architects, and the reinforced concrete designer has only to deal with the sizes of beams and columns, thicknesses of slabs, and their reinforcement, but even this involves a very large amount of work where repeated by a number of persons or firms, and it has to be remembered that quantities have to be prepared by the specialist, one reason being because the drawings are so incomplete that it would be impossible for anyone else to prepare them. In the circumstances the quantities must be to some extent conjectural, a most objectionable state of things. Such quantities should, of course, be prepared from completed drawings and by an ordinary surveyor if competition is to be on equal terms. The responsibility for their accuracy, however, lies between the specialist and the contractor, but the tendency is for any deficiency to be saved in some way. With the architect's plans to work on there seems to be little opening for much variation when the R.I.B.A. rules have to be applied; nevertheless there results very considerable divergence in the amount of the tenders submitted, and this would seem to be due partly to the ordinary differences in builders' tenders and partly to the quantities of work to be done, of which there may be a dozen different sets. This plan avoids the selection of a specialist who is probably interested in some system and more or less indefinite patent, but it involves the employment of an expert to check the specialist, while the method affords open competition for the design and limited competition for the carrying out of the work. This seems to be the wrong way about. From an architect's and from a surveyor's point of view, the method is not satisfactory, and it prevents that consultation and co-operation between the architect and specialist which is essential. Competition for design and construction must involve the utmost economy which may perhaps be carried to the verge of safety, otherwise there is very little prospect of the work being obtained. Economy in first cost appeals to most people, but there are other points to be considered, such as efficiency and the running of unnecessary risks by which comparatively nothing is gained. The specialists, however, have the whole matter in their hands, and it is of no use theorising while they submit their designs and tenders, or, rather, builders do so for them on the mere chance of obtaining the work. It is almost impossible to make a satisfactory contract when there are no quantities attached thereto, and few, if any, drawings, these being left to be approved afterwards.

Competition in reinforced concrete work has now proceeded to inordinate lengths, and steps should be taken to put some limit to it. To effect this designers must be placed more in the position of consultants and not so closely associated with contracting firms, and must remain so unless the two things can be dissociated, and the expert, instead of checking the specialist, should co-operate in putting the latter on a higher plane. The disappearance of patent royalties and licenses will no doubt facilitate the change.

Much is said about the architectural treatment of concrete, and that that treatment should be appropriate to the material. The subject is a difficult one. The great desire is to make the whole building of reinforced concrete including the external walls and developing some new method of architectural treatment. There are many opportunities for this, as in isolated structures, where various methods of surface treatment may be adopted, but in town streets it is doubtful whether anything but stone or brick front elevations will satisfy building owners or ground landlords. It seems equally logical to apply a stone or brick front to a reinforced concrete structure as to an ordinary steel-framed and concrete one.

He was pleased to be able to say that the Institute of Civil Engineers had taken up the subject of reinforced concrete through the Committee which it appointed some time ago, and a considerable sum of money has been devoted to experiments which are in process of being carried out. There was no doubt that experiments are needed in this country with a view to obtain a consistent and complete series based on materials to be obtained here and mixed and tested under similar conditions. At the present time we have to rely on experiments in America, Germany, and France, with cement of varying character and local aggregate, and it would be of the greatest advantage if these could be repeated in some cases at intervals for some years, the improvement in strength being so great.

For some time past the Joint Committee appointed b the R.I.B.A., on which the Concrete Institute are represented, have had under consideration the revision of it first report, and the revised edition was published in a mucl more handy form than before. It is satisfactory that thi report, so far as it goes, is accepted generally as the basi of local regulations for governing buildings of this character. These regulations require to be framed in such way that they can be amended in order to keep pace wit the growing knowledge. The importance of being able t do this is shown by the London County Council having t obtain an Act of Parliament in order to make such alterations and additions to its Building Act to admit of reinforced concrete being used in an adequate way, and so nc prevent the development of a method of construction whic has been proceeding in America and on the Continent at pace considerably in advance of this country, and at saving of much money.

However, with the approval by the Local Governmer Board of the L.C.C. by-laws, it is expected that there wi be a considerable extension in the use of reinforced concrete, other cities having also taken steps to admit of suc methods of construction.

This country has fortunately been fairly free from an serious failures in reinforced concrete construction, b experiences in America and on the Continent show th there is a need for watchfulness. Although most of t failures have been attributed to bad construction and t ignorance or carelessness of contractors and their employee cutting in design may have been a contributory cause.

The Board of Education appointed a Committee inquire into the question of economy in building and as whether buildings of a more temporary nature could n very well be brought into use. Reinforced concrete can in for its share of the discussion, but the estimates of co varied largely, from 33 per cent. less to 10 per cent. mo than for ordinary building. No difference of locality wi account for these variations. It seemed as if witness having a more intimate knowledge of the cost of su buildings might have been called, while it should be possib to standardise them.

Mr. Edwin O. Sachs, F.R.S., Vice-President, in pr posing a vote of thanks to Sir Henry Tanner, remark that his presidential address covered a vast field in a mc interesting manner, and contained much informatio together with many useful hints. Personally he was somewhat of an optimist, and in considering the record of t Concrete Institute he felt that it was now going throu its childish diseases, and that when it had got over the it would grow to be the strong, important, and influenti individual such as many a man now is who has had a somewhat measley childhood. The Institute's greatest succ was perhaps its dinner. That was a well-managed affa it went well, and the speeches were interesting. Th must give their very best thanks to Sir Henry Tanner having arranged it, for it was through his putting personality into it that it proved a success. They mu congratulate themselves that Sir Henry Tanner had be elected to the Committee appointed by the Institute Civil Engineers to deal with the subject of reinforced c crete. It was a very great step forward to find that t Institute of Civil Engineers, which, in the early days reinforced concrete, slightly pooh-poohed the materi having a Committee on which their President and t Concrete Institute's President sat. The Concrete Instit was also represented on the Joint Committee appoin by the Royal Institute of British Architects; moreover t had the pleasure of knowing their President was Chairm of that Committee. Another reason for self-congratulat was on the arrangement by the Council of a series of l tures of an elementary character given by Mr. R. Vawdrey during the spring. The last point on which would like to comment was the steps to promote the ad tion of a new common notation for English speaking co tries. These efforts were pleasing their American frien and they were half-way to some understanding on each s of the Atlantic. The members had to admit, however, t in membership and in other ways the Institute had b marking time. Previously they had been going rather f in some directions. The Institute had attained a stand which was quite equal to that of many of the older institutions. Marking time for a little while had done th good. There were many administrative changes to be ma Now that those changes had been completed, the Instit could get to work, and do still better service for the scie of building construction.

Mr. Alexander Ross, M.Inst.C.E., Vice-President, in seconding the vote of thanks, said that Sir Henry Tanner had done a great deal for the Concrete Institute, having nursed it from the first. He was never careless or afraid of carrying out work on its behalf. Personally, he considered that the Institute had made decided progress. It was still comparatively new, and very few institutions of the same age stood so well with the public and the professions. That being so, they ought to be very careful before bringing about revolutionary changes. There was one great essential fact about the papers read in the past, and that was that they had all been practical. Possibly an endeavour to listen to an excellent paper and then to discuss it n one night was unwise. He thought it might possibly be an improvement if the discussion were carried over to meeting after meeting until the subject was exhausted. This course had the advantage of allowing time for the members to look up the subject and equip themselves well for the discussion.

ENGLISH MEDIÆVAL ARCHITECTURE.—V.

IN the fourth of the ten lectures now being delivered at London University, Gower Street, W.C., Mr. Edward S. Prior, F.S.A., F.R.I.B.A., reviewed the Anglo-Norman style of the mid-twelfth century and its Continental connecions—successively Cluniac, Premonstratensian and Cistercian—not as taking architecture from those places but as sharing in what was a cosmopolitan development independent of nationality. There were little traces of direct importaion of architectural style, and in the latter part of the cenury the English masons obtained control of the English advance in the direction of Gothic.

This transition was from Romanesque to Gothic. But, aid Mr. Prior, in his fifth lecture, which he devoted to "The First English Gothic," no special defect of style was to be mplied in the word "Transition" any more than any virtue f style lies in the word Romanesque. Indeed, the whole tory of mediæval architecture is one of transition. Romansque had begun by being an architecture of mass, Gothic nded by being an architecture of line; and at no time is ne conscious of any jump of style. These transitions occupied a period of 150 years, from 1100 to 1250, though the word Transition is specially applied to the work of some two enerations in the middle of this period, say from 1140 to 190. The principles of Gothic style had already been well ettled by 1140—roof and wall were being vertically and orizontally resolved and specialised into ribs, piers, and butment. Mass had been lost in these resolutions and pecialisations, but now a distinct lightening of all the elements was to accentuate the principle, and a change in decoation was to intensify its action upon style. Put concretely, his meant the appearance of four particular experimental hapings of structure: first, the detached shaft; secondly, he undercut moulding; thirdly, the pointed arch; fourthly, he projecting buttress. In buildings of the late twelfth ntury where these developments have not been quite eached, there we can speak of "Transitional" style. Where he whole four uses occur in adequate distinction, there we ay talk of English "Gothic." Transitional buildings in ngland exhibit, therefore, English Gothic, as it were, in ieces, and not as a connected whole.

Different parts of England exhibit peculiar manners of ransitional work and show the existence of more or less eparate schools of experimenting masons. To present a eneral view of these diversities, Mr. Prior divides the untry into four, in each of which the peculiarities have, he nsiders, a definite origin. First comes the "Northern" strict, comprising Yorkshire and the counties adjoining, ith an extension into the south of Scotland, and with its uthern boundary marked by a line from Chester to the ash. This area stood outside the influence of the great enedictine foundations, and was marked by a less conserative building of smaller edifices which were not so excluvely according to set fashion in ornament, construction, and an. Here was a "Reformed" architecture in its most stinct development and in greatest contrast to that richly namented Romanesque which was the last word of the nglo-Norman Benedictine mason. The gritstone available uld be quarried in large blocks, but its texture was coarse d too rough for fine moulding. The presence near York, wever, of a close-grained magnesian limestone led to a local aborately sculptured variety. In construction the northern asons developed, among other features, that distinct foot base to the wall which afterwards belonged to the Gothic yle. This northern building, with its vigorous masoncraft and delight in its expression of structural development, went far in the direction of the Early English style.

The "Western" Transitional style occurs in all the counties bordering on the Severn and its confluents—stretching to the north up to Chester, in the Midlands to Lichfield, and in the south to Dorset, including Wales and running over to Dublin. Here was a distinctly austere building under the influence of the Cistercian Order, with its craft foundation on plain parish church style, but also at its outset specially open to the Continental suggestions of Burgundian building. Generally the stones available were of finer grain and easier working than the "gritstones" of the North, but, like them, could be got of good size. Most characteristic is a roll taken round panels without capitals or base. The windows have broader proportions generally than in the northern style, and the openings are fully moulded outside. Constructionally, the most striking development of the western mason lay in his treatment of the circular or polygonal chapter-house, with its vaulting to a central pillar. The western style showed more variety, as resulting from more varied influences, than that of the north. It is less stern, as resulting from a kinder stone, and it is more romantic by its legacy of Keltic carving. Moreover, it displayed many of the characteristics of the developed early English Gothic in a more complete form than the northern style.

The "Eastern" district comprised specially the counties from Lincolnshire to Essex that border on the North Sea and its river basins. Here were established the great Benedictine foundations by the monks who were, to the end of the twelfth century, still building their great churches at Durham, Peterborough, and Ely, &c. This all-powerful body of masoncraft gave the fashion to smaller churches in the neighbourhood of the great buildings of Benedictine (or Cluniac) architecture, both in north and south. A conservative bent was imparted to building style by the workmen who were accustomed to the traditional monastic forms and were outside the influence of the Reformed Orders. In such churches as Ely, Canterbury, and Durham the forms of "Gothic" style are not led up to by that series of experiments which is conspicuous in the Augustinian and Cistercian building of the west and north. The coarse local stones of Anglo-Norman building remained generally in use, though the elaborate carvings of the latest style were worked in Caen or some local fine-grained stone. This style is a continuation of the late phase of enriched Romanesque masoncraft, with a finer and thinner cutting as its Transitional feature. Details belonging to the northern and western styles were introduced by recruits versed in the mouldings and ornaments of "Reformed" building. This phase came suddenly to an end c. 1190, and by 1200 those abbey buildings which had been most conservative—*e.g.*, Ely and Peterborough—suddenly blossom out into English "Gothic," as the Galilee porch at Ely and the west front of Peterborough.

The home counties made up the "South-eastern" district, which included London, Sussex, Hampshire, and East Dorset. London being the centre of a trade in stone and marble, the habits of her masons controlled a wide district of church building, and those habits were undoubtedly influenced by Picardy and Flanders. Indeed, on a map of European Transitional style in the last half of the twelfth century one might take south-east England with north-west France and Flanders as one province. In this province both the use of marble shafts from Purbeck and Tournai respectively and the development of a white stone constructional scheme out of Norman Romanesque are characteristic. Another foreign influence came from the new religious bodies, particularly from the vigorous Augustinian and Premonstratensian building at Laon and its neighbourhood. Out of the rubble or flint structure faced only with dressed stone, or, indeed, often only edged with it (that was the condition of south-eastern building), there grew up a distinct method, a use of marble and stone which constitutes the Early English method, and which, in the thirteenth century superseded and replaced the local methods.

The buildings in which the south-eastern style begins its specialised career are the Temple Church, London, and Canterbury Cathedral choir, rebuilt after the fire of 1175. Of the first a very complete rebuilding has remade every surface, so that what we see is only a false record of the ancient art. The value of Canterbury choir is very great, first because it has been less restored, and secondly because we know all about its rebuilding, more accurately, indeed, than is the case with any other mediæval building, through the two contemporary histories written by Gervase, the Christ Church monk. It is, however, a mistake to take Canterbury as the only piece of English building about 1175, or to reckon its architecture as specially inventing a new style. William of Sens, the first master builder, was selected not because he knew the secret of French Gothic but because he professed that he could build up again the old work as it was before. However, when hired, he set out the building on the lines of his native church at Sens. But there were English as well as French masons employed, and a kind of building craft appears such as no French example can show. When the French master retired, after his fall from the scaffold, his place was taken by William the Englishman, who was possibly a stranger to the work. At once the traces of French style disappear.

SHEFFIELD SOCIETY OF ARCHITECTS.

UNDER the auspices of the Sheffield Society of Architects and Surveyors, Mr. W. S. Purchon, A.R.I.B.A., lecturer of the Department of Architecture at the Sheffield University, lectured, on the 9th inst., on "The Architecture of Oxford." The lecture was given in the Education Room at the University.

After referring to the value of a visit to Oxford as a source of inspiration for architects, the lecturer proceeded to deal chronologically with some of the fine buildings for which the city is so famous, including, among others of the Gothic period, the Cathedral, the Chapel of Merton College, the spire of the church of St. Mary the Virgin, and the tower of Magdalen.

Mr. Purchon next drew attention to some of the buildings of the Jacobean period, such as the tower of the Bodleian Library, with its wondrous treatment of the Orders, and the extremely beautiful garden-front of St. John's. Reference was made to the porch of the church of St. Mary the Virgin, and following that Wren's Sheldonian Theatre, and the interior of the chapel of Trinity.

The plan of New College, the first of the colleges built as a complete scheme, was examined, and its influence on later college planning noted. It was also shown that Wren wisely objected to the closed quadrangle, and abandoned it. Buildings by Vanbrugh, Hawksmoor, Gibbs, and the amateurs, Aldrich and Clarke, were next considered, Gibbs's fine Radcliff Library calling for special attention.

In dealing with the work of the Greek and Gothic revivals, the lecturer pointed out that in the eighteenth century it was only lack of funds that in many cases saved beautiful Gothic work from destruction, and that the architects of the Gothic revival often had as little respect for Renaissance work. He hoped the present proposal to pull down Butterfield's chapel at Balliol, and to replace it by an imitation of the one which was removed in 1856, would prove to be the last chapter in the history of vandalism. If those in authority did not appreciate Butterfield's work they must at least realise that those who destroyed works of art in the eighteenth and nineteenth centuries had the same excuse to offer, in addition to the one that the buildings which displeased them were often not in the best of repair.

The lecturer then touched on some of the many beautiful buildings which have been erected recently, including work by Mr. T. G. Jackson, Mr. Basil Champneys, Mr. Hare, Mr. Warren, and Mr. Reginald Blomfield.

"Let us now imagine," the lecturer concluded, "that the visitor's last half-day in Oxford has arrived. He will do well, I think, to re-visit Magdalen, to see once more its beautiful tower, to walk down 'the stream-like windings of that glorious street' to the church of St. Mary the Virgin; then by way of the Radcliff Camera into Broad Street, and so on to the interior of Trinity Chapel; and finally I would have him spend an hour in the gardens of St. John's, leisurely examining the garden-front of that college. So that it will be with thoughts of these beautiful buildings that he takes leave of 'that sweet city with her dreaming spires.'"

THE Local Government Board have, it is understood, given authority to the Corporation of the County Borough of Bournemouth to prepare a Town Planning scheme under the Housing, Town Planning, &c., Act, 1909, in respect of an area of about 202 acres in the Boscombe East and Southbourne Wards of the borough.

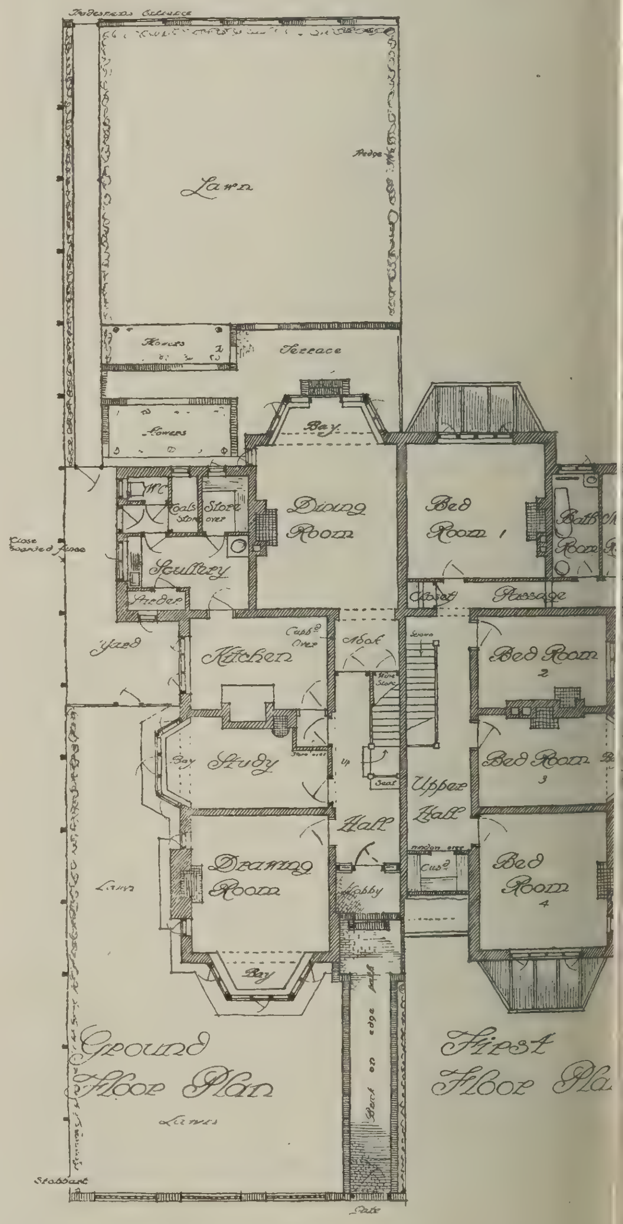
MR. HENRY R. ALDRIDGE (Secretary, National Housing and Town Planning Council) on the 15th inst. commenced a course of four weekly free public lantern lectures on "Town Planning," in the Firth Hall at the University of Sheffield.

ILLUSTRATIONS.

SEMI-DETACHED HOUSES, BLYTH, NORTHUMBERLAND.

THESE brick and rough-cast houses, which have been recently erected, add interest to the district, where the prevailing styles of architecture are certainly no interesting.

The bricks for facings are 2½ inches, pointed with whit mortar, and the roof tiles are from Boroughbridge. Brick have been used for the pavings to porches, terraces, an paths. The whole of the windows are casements, filled wit leaded lights. All external woodwork has been treated wit "Solignum." The floors of the halls are of oak wood blocks bees-waxed. The interior treatment of the hall and dining room of each house are entirely different, one being kep very simple, half-round plaster cornices, white woodwork and black iron furniture to doors and windows; the othe having ceilings and cornices treated with plasterwor modelled from casts taken from an old house on the Qua side, Newcastle; this work was done by Messrs. Fergus & Sons, Prudhoe Street, Newcastle-on-Tyne. The wo fireplaces were made by Messrs. Robson & Sons, of Ne castle-on-Tyne. The stoves, grates, and hardware we supplied by Messrs. Emley & Sons, of Newcastle-on-Tyn The electric wiring was installed by Messrs. Robson Coleman, of Newcastle-on-Tyne. The wood block floori was supplied by Messrs. Burgess & Sons, of Liverpo The general contractors were Messrs. Robson & Waddle, Blyth. The architect was Mr. Edward Cratney, Wallsen on-Tyne.



THE SOCIETY OF ARCHITECTS.

A MEETING of the Society of Architects was held at their premises on Thursday, November 16, when the resident, Mr. George E. Bond, delivered the following ldress :—

It is with great diffidence that I appear before you for e fourth consecutive year as your President, and I feel at some explanation may be desirable in case there are any embers who are not acquainted with the reasons which led my again occupying this position.

The negotiations between the representatives of the Society d the Royal Institute (in which I have taken a prominent rt) being still incomplete, I felt it would be unfair to my lleagues on the Council to desert them at this moment, ough I assure you that nothing but this fact would have duced me to have accepted re-nomination, and I am aware at the circumstances to which I have referred are the incipal reasons which influenced the Council in re-nominat- g me, and you in re-electing me.

I none the less appreciate the high honour that you have ain conferred upon me, the highest which it is in the power the Society to bestow on any of its members, but the most atifying feature about my re-election is the assurance ich it gives me of the continuance of that trust and goodll which you have so long extended to me, and the conmation of my belief that you are in sympathy with the licy which your Council and myself have been advocating view of a united profession) in regard to registration. is being so, I am able to look forward hopefully, knowing at we may confidently rely upon you to support us in our orts to secure at an early date the presentation to Parliant of a Registration Bill agreed upon between ourselves d the representatives of the Royal Institute, and such as ll command the support of the profession as a whole.

The difficulty we have been faced with in the past is in fact that the profession itself has been divided on this oject, or rather that there has been organised opposition the Society's Bill, which militated against any chance of ogress, as it is impossible in the present congested state Parliamentary business to obtain a second reading for any vate member's Bill of a contentious character.

If, however, we can present to Parliament a Bill such as nave previously referred to, we can be practically assured its securing a second reading and of its then being fully alt with on its merits.

At present, only the general principles of a Registration ll have been considered and agreed between the represenives of the Society and the Royal Institute, and much luous labour and thought will be entailed before its details ready for presentation, but if the members of the int Committee to whom the duty of drafting the Bill s been delegated, can be fully assured of the sympathetic l reasonable support of the members of their respective neral bodies, they will be encouraged to proceed, and to vote their best energies to the drafting of such a measure will, when completed, satisfy a very large majority of the ofession.

In regard to the effect which the negotiations with the yal Institute during the past twelve months have had on the Society, you will already have gathered from the uncil's annual report that notwithstanding the difficuls of our position, due to the unfortunate delay in the comtion of these negotiations, the progress and development the Society has been phenomenal, and but for the fact that considered ourselves in honour bound to observe the spirit the agreement tentatively entered into between the uncils of the Society and the Royal Institute (which at time we anticipated would be at once concluded) and ich compelled us to close the list of applications for memship, many more members would have been added to the ciety.

Many important and far-reaching proposals which in the jority of cases have been approved in principle by your uncil and referred to the respective committees to carry , have been held up. Among them the following :—1. e re-organisation of the examination scheme to qualify membership. 2. Qualifying examination for admittance the register of students. 3. The institution of a code of ofessional ethics. 4. Comprehensive scheme of memberp classification. 5. Extension and development of the rary. 6. The provision of a sinking fund.

Each of these proposals and several minor ones had ched such a stage of development at the commencement the negotiations that had they not been held in abeyance should by this time have altered our Articles of Associan to an extent which would have meant practically a reanisation of the Society.

When we found that a hitch had occurred (a matter over which we had no control) and that it was not likely that the difficulty in which the Royal Institute found itself could be got over at an early date, your Council felt that it was imperative for the Society to resume its ordinary business of admitting new members and carrying on its other work.

With regard to the proposals referred to, it was felt that it would be wise to defer their consideration, as the negotiations between the representatives of the Society and the Royal Institute have now reached an interesting stage, amounting to a settlement so far as the two committees are concerned.

I ought in fairness to say that the Council of the Royal Institute were not intentionally responsible for the delay referred to. You will remember that the negotiations culminated in the terms of an agreement being approved by the Council and general body of members of the Royal Institute, which agreement it was arranged should be executed by the Presidents on behalf of their respective bodies, and only at the last moment was it found by the Royal Institute that under their Charter the Council had no power to enter into such an agreement.

The only way that the Royal Institute could get over the difficulty was by drafting a supplemental charter which would give the Council the power to enter into this agreement.

It is anticipated that this proposed supplemental charter and the new by-laws will shortly be submitted for the approval of the general body of the Royal Institute, who having already endorsed the principles involved, will, it may be hoped, feel bound to facilitate to the utmost of their power a settlement on the lines of the agreement previously referred to. Subject to the approval of the Royal Institute and ratification by the Privy Council, the whole matter will be submitted in detail to the members of the Society, in which case, I feel convinced that they will in the same spirit recognise the wisdom and justice of renewing the approval which they gave it on a previous occasion.

It is because you naturally expect that at the opening meeting of the new session some reference should be made to this subject, that I have endeavoured to define and explain the present position of the Society, but I do not think it advisable to discuss the matter in detail, before the members of the Royal Institute have had a further opportunity of considering the proposals for the supplemental charter and the necessary amendments of the by-laws.

In the meantime I will refer in general terms to the situation, and touch upon the points and principal reasons why in my opinion the arrangement come to between the representatives of this Society and the Royal Institute should be fully consummated. My remarks will be addressed more particularly to the younger members of the profession, for it is they who will ultimately reap the benefit of legislation on the lines proposed. Under the most favourable conditions it will, in my opinion, take something like five years to get a Bill through Parliament.

The general principles of the Bill as drafted are those already laid down in the Society's Bill, and make provision for the recognition of all vested interests (which would in any case be insisted upon by Parliament). Consequently all persons who can prove that they are bona-fide practising architects at the time that the Bill becomes law will be entitled to continue that practice during their lifetime.

The first effect therefore of a Registration Bill will be to prevent any further addition of the unqualified to the ranks of those already practising, and the latter will by the natural process of elimination gradually die out, and this will necessarily be a matter of time.

The second effect will be that none but those who have been properly educated and who possess the necessary qualifications and are able to prove them, will be admitted to practice, and as this is a matter which will affect the younger generation of architects, it is obviously chiefly a question for them.

It is therefore pertinent to inquire whether they desire registration by Act of Parliament. A plebiscite instituted by this Society and by *The Builder* have proved that eight out of nine members of the architectural profession desire registration, and it is fair to assume that very few young men voted with the minority, and that of these there were none who had spent years of arduous study and preparation for passing qualifying examinations; for these, speaking generally, are the chief sufferers under the present system, or rather want of system. There are many young men on whose education and architectural training considerable sums have been spent, and who possess every qualification to practise architecture, who are obliged to remain in the position of assistants at about the average wage of a bricklayer, or who are even unable to obtain regular employment, simply because the profession is overcrowded, and there is consequently keenness of competition, so that the remuneration of the competent is kept down by the competition of the incompetent.

You may further have observed that the more incompetent a young man may be, the more likely he is to commence practice for himself at the earliest possible moment.

If he has been found worthless by his principal during the period of his apprenticeship, the result is that he is advised to try a change immediately the time expires, and if other architects find him equally incompetent as a junior assistant, his only course is to open an office of his own. It then frequently happens that some indiscriminating member of the general public (who has no conception of the duties of an architect) actuated by a desire to do the young fellow a good turn, or more probably because he hopes to get his work done for a small fee, gives him some small commission, and generally speaking, the completed work is so unsatisfactory that the client resolves never again to trust a young architect, and his reasons are made known very freely to his friends and neighbours. The competent therefore suffer with the incompetent, and the small commission which the qualified young architect would like to have an opportunity of carrying out, and which he could do in a manner calculated to secure further and more important commissions, is withheld, and probably given to a builder's clerk or foreman, who, although he may not have any knowledge of art or even draughtsmanship, will generally give his client what he expects at a reasonable price. It sometimes happens, however, that these incompetent young men have wealthy connections, or it may even be that their incompetence is the direct result of the knowledge of the fact that they will not be entirely dependent on their work for a livelihood, which knowledge makes them careless and negligent in their student days. I know instances where such young men, having been given good opportunities, have, with the aid of "ghosts" whose services they could afford to pay for, further assisted by good builders whose general foreman has been subsidised, turned out creditable work which has earned for them fair reputations, and they are now able to employ qualified assistants who are practically responsible for every detail of the practice, except when it becomes necessary to exhibit a figure-head, and they will no doubt continue on these lines for years, securing remuneration which rightly belongs to better men. I have two such cases in my mind at the present moment.

The presence of such persons in the acknowledged ranks of the profession is a grave injustice to the earnest and thoughtful young architect who has devoted much time in acquiring a thorough knowledge of every branch of his profession.

There are probably some thousands of young men in the United Kingdom serving their articles at the present time not an eighth of whom will ever attempt to pass any qualifying examination, and of whom a large proportion will go to swell the ranks of the incompetent, and thus depreciate to a great extent the general standard of ability and discredit the profession generally in the eyes of the public.

A preliminary entrance examination would reduce this number by at least one half, while another fourth would be eliminated by an intermediate examination, and I am confident that every young man who has, after years of study, proved his efficiency by successfully passing a stiff qualifying examination, must feel that the time has arrived when his competitors must be compelled to submit themselves to a similar test before being allowed to practice.

My personal observations and experience have shown me that the overcrowding of the profession and the unfair competition to which qualified men are forced to submit is the direct result of the large influx of incapable and incompetent persons into the ranks of the profession through the ordinary portals of pupilage, rather than the presence of those other undesirables who combine the practice of architecture with some other callings. If they are dependent on architecture for their livelihood and are without means or influence, their only chance of securing even that class of work which does not call for either great skill or artistic merit, is to offer inducements by way of reduced fees, by this means obtaining employment; and frequently, to compensate themselves for this, they will further stoop to the acceptance of illicit commissions.

To sum up, I would point out that it is the fully qualified young men commencing practice who have to bear the brunt of unfair competition; therefore it is obvious, for reasons already stated, that it is presumably the young men who will specially desire to support the registration policy which, if
successfully carried through, will check such competiti
and at the same time raise the status and general standa
of practice in the profession.

This will be effected by the institution of examinations
graded as to first of all test a candidate's general knowle
and aptitude for acquiring professional qualifications,
lowed by a further examination, by which means the u
would be eliminated, leaving only the capable to hope t
by the exercise of their talents, combined with strenu
and persistent study, they may pass the final test and t
qualify themselves for practice. Such examinations
not merely shut out the incapable in the early stages
their attempts in finding a career, but the knowledge t
such examinations have to be passed would have the furt
effect of compelling the idle and careless but talen
young men to diligently apply themselves in their ea
days to the task of making themselves proficient, and wo
encourage all those qualities at that time in their li
which would tend to the ultimate benefit of themselves
their clients.

Assuming therefore that the young men are convin
that the registration policy is a really practical attempt
solve their difficulties, and that its success is extremely de
able, I venture to point out that the only possible cha
of carrying it through will be by earnestly supporting
combined Registration Sub-committee and approving
agreement to be entered into between the Society and
Royal Institute.

Let us consider the situation. For more than a qua
of a century we have been actively and strenuously advo
ing a Registration Bill, but the only practical though
important result has been that the profession generally
been educated to appreciate the benefits of such a pol
During all this period we have persistently stated that
Royal Institute ought to take up the question. They h
now done so, and those members of the Royal Academy
Arts who are also members of the Royal Institute have
is understood, intimated that although they are not
pared to actively support the Registration Bill they
not oppose it; therefore one might imagine that all opp
tion had been done away with and that its success is assu
Such is not the case, as a real difficulty occurs with reg
to the composition of the administrative and registe
authority under the Bill. We contend that such a Gen
Council should be composed of representatives nominate
varying proportions by the Royal Institute, the Society
Architects, the Royal Academy and the Irish Instit
together with others elected directly by and from the gen
body of practising architects.

My personal opinion is that this would be the better p
but the Royal Institute Council, for reasons I thoroug
appreciate, could not agree to this, and had the Socie
Bill (which we had just revised and brought up to d
been presented, the Royal Institute would have strenuo
opposed it. On the other hand, it was provided in t
suggestions for a Bill that the Council of the Royal I
tute was to have full control with regard to administra
and registration under the Act, and it is obvious tha
long as the Society of Architects remains an indepen
body we should be compelled to oppose such a measur
Parliament, with the inevitable result, for we must
roughly understand that in the present congested stat
Parliamentary business only unopposed measures have
chance of reaching a second reading.

It is recognised by both parties that the oppositio
either would suffice to kill a Bill, therefore the only solu
of the difficulty is the fusion of the Society with the R
Institute. The question is, therefore: Is registration w
the sacrifice? If we are satisfied that registration is a
lutely essential, then both sides must sacrifice someth
and in the proposed agreement between the Councils of
Royal Institute and of the Society the extent of those sa
fices has been closely defined and the limit of concessions
been reached by both parties. The result represents
maximum of what either party is prepared to concede
the minimum of what either will accept.

I feel confident, therefore, that if the present sugge
arrangement is for any reason blocked, or if it is allowe
fall through, the labour of many years will have
wasted, and a very considerable time must elapse be
either party will be prepared to initiate a new schem
unity, and it is quite certain that neither the Royal I
tute nor the Society of Architects will be able to car
Registration Bill through except by mutual agreement.

I am sure that in a profession which demands of
bona-fide followers such wide and varied gifts, and in wh

who hope to attain to some degree of excellence carefully ain themselves in habits of clear and consistent thinking, esight and self-reliance, no more need be said to commend them the decision arrived at, after long and earnest deli-rations, by those who were specially delegated to inquire o and report as to the best solution of the problem with ich they had to deal.

But there is another point to which little reference has n made, and one to which all our leaders attach even ater importance than to that of registration—viz., that consummation of the suggested arrangements will be the t real step in the process of attaining complete unity in profession. The well-being of a great profession cannot considered merely as a question of to-day, or to-morrow, even ten years hence; there is a long future before it, and is with this thought ever in our minds that legislation is posed. Looking ahead your leaders see a vista of long rs of useful work, progress, and development, under the ner of one great Institution, including within its ranks *bona-fide* architects in the United Kingdom, strong ugh to legislate within itself for the ultimate benefit of members, and with sufficient power to compel their obedi-e to its moral edicts and code of professional honour, by these means be able to enforce its reasonable regula-ns upon those outside with regard to competition con-ions and other matters affecting the honour and interests the profession. Your present leaders are but laying the ndations upon which their successors—that is to say, the re able, earnest, and thoughtful of the young men of to-—will raise and maintain the superstructure.

Is the attainment of such an ideal worth a little present f-sacrifice? I simply ask the question, hoping it will be l considered by all before a definite opinion is expressed.

CTURES ON HEATING AND VENTILATION AT UNIVERSITY COLLEGE, LONDON.

HE fourth of a course of six public lectures on the "Real Nature of the Problems in Heating and Ventilation aiting Solution by the Engineer" was delivered by Mr. hur H. Barker, B.A., B.Sc., on Tuesday, November 7.

He had in the previous lecture commenced the considera-n of the possibilities of utilising waste heat from industrial erprises for warming inhabited buildings.

This could be divided into several heads, which included: heat supplied in excess of requirements, and wasted in nging about results obtainable by a much smaller expen-ure of energy if properly applied; (2) heat lost by con-tion through inefficient non-conductive material or leaky e joints; (3) heat contained in exhaust steam or denser water; and (4) that which found its way in the n of flue gases direct into the open air.

The heat lost under the first two heads could be regarded irrecoverable, but there were certain possibilities in the lisation of waste energy of the nature of numbers three four.

Other forms of energy, such as were contained in coal and amite or, better still, electricity, could be transferred from ce to place, but the same operation with heat must always mpossible. It was part of its very nature to get lost, in-uch as it imparted some of its warmth to anything in tact with it or through which it passed.

At present the only purpose which the heat in the flue es served was to create a draught through the furnace, a steful process when it was remembered that this could effected quite as efficiently by means of a fan.

The present cost of fuel, however, made the existing hods possible, and it was not thought to be commercially fitable to face the outlay necessary in order to save the t wasted in this way.

Another factor was the probable distance of the factory works, where the heat was generated, from the building to warmed, a consideration which limited the possibilities of idea. Here again it was at present found cheaper to n fresh fuel at the point where the heat was required, and price of this fuel was the root factor of the whole blem.

The waste heat, after being collected and transferred to e medium such as water, would have to be pumped from centre through pipes to the various houses. What sys-could be devised for charging the consumer for this heat ply? It would be difficult to register the quantity of t used, for although this would be simple in the case of quantity of water which passed through his meter, it ld also be necesary to take into account its temperature. The charges might be levied according to the area of radiating surface provided on the annual value of the house.

There were many difficulties in the way of adopting such a scheme which would probably prevent the practical consideration of the idea until there was either a rise in the price of fuel or a decrease in the cost of power. In our climate, where prolonged cold was unknown, the saving would be less, compared with parts of America and the Continent, where it might be worth while to incur the necessary capital outlay under present circumstances.

The possibilities of leakages from the pipes would render it necessary to construct subways, preferably of sufficient size to allow a man to walk along them. An expense of probably £8,000 per mile would thus have to be faced at the start. If steam were the medium employed, the water produced by condensation would have to be returned, and any difficulty as to levels would require a system of pumps for this purpose.

Some solution of the problem as to the expansion of large pipes was required, and here there was need for an efficient invention, there being no really satisfactory joint to provide against this.

The whole cost of a system would mean, for a 4-inch pipe, £950 per mile, rising to £4,200 per mile for a pipe 9 inches in diameter, to which must be added the cost of subways, say, at 30*s*. per foot run, and cost of maintenance, power, and interest.

The essential hard fact was that the cost of heat saved must be sufficient to render it commercially profitable to face this capital outlay.

He had made a careful calculation of the requirements of a small establishment such as his own, and he thought that at the outside the heat necessary to warm his house was 35,000,000 thermal units per annum. Taking a thousand houses of this size, which would represent a small town of from 7,000 to 8,000 people, say two miles from a manufacturing centre, the output would need to be 20,000,000 thermal units per hour. Allowing for cost of plant, interest, and depreciation, it would then be necessary to charge each householder £15 per annum for his heat supply, and he did not think that, with coal at its present price, many people would be willing to pay this amount, when they could, with a separate plant, warm their premises at half the cost.

Added to this was the fact that in this country the prejudice in favour of the open fire was so deeply rooted as to be practically ineradicable.

The future might produce such conditions, however, as would force some such system upon the community, and he believed that in two hundred years' time some modification or improvement of the thermo-dynamic method mentioned in his last lecture would be in practical operation.

Our present practice was in many cases too expensive, and the temperatures of some rooms, especially in such institutions as workhouses, were maintained at positively unpleasant figures. To attain a temperature just necessary to comply with health requirements was what we must aim at, and this depended largely on the interchange of air that went on in a room. This interchange, which was a great factor when considering heat loss, obviously varied with the position of a room or its relatively exposed situation in a building, and any degree of accuracy in estimating its extent was impossible, whilst calculations of the heat required to maintain a given temperature must be mere assumptions based upon general experience. Heating engineers were often provided with drawings and asked to decide what provision should be made for heating a building before certain features which would affect the question of an interchange had been determined. He had one case in mind where the employment of a different wall-paper had affected the temperature of a room to 4° or 5°. Any estimate of heat required to maintain a temperature, which often had to be guaranteed, might be in error to the extent of 25 per cent. merely in consequence of such a difficulty. Air interchange was affected by the construction of the walls and the size of windows and fireplace.

Experiments had been made by introducing a known quantity of CO_2 into a room under various conditions, and by careful subsequent analysis testing the extent to which the air had become changed. With the outside air still and fireplace closed one-third of one interchange per hour was found to have taken place. With the fireplace open the interchange was one per hour, whilst a similar figure was recorded with the fireplace closed when there was a slight breeze outside. With a brisk breeze outside the interchange was 1.4 to 1.6 per hour, and with a lighted fire during a slight breeze the change of air reached 2.5 to 5 per hour. In a larger hall the interchange was one-third per hour during a slight wind and one-half per hour with a stronger breeze.

These figures showed how impossible it was to tell with any accuracy what heat would be required, in given cases, to maintain a guaranteed temperature.

THE SURVEYORS' INSTITUTION.

AN ordinary general meeting of the Surveyors' Institution was held on Monday, November 13, when Mr. Edgar Horne, M.P., President, delivered the opening address. Previous to this the portrait of Mr. Daniel Watney, painted by the Hon. John Collier, was presented to the Institution. The meeting was held in the recently enlarged Lecture Hall of the Institution.

Mr. Edgar Horne, in his address, said that they, as surveyors, could not overlook the criticisms which have arisen during the past year in the debates in the House of Commons on the subject of the administration of the land taxes and the valuations in connection with them. Cases have been quoted which, although the speakers have usually disclaimed any intention of casting aspersions upon the conduct or integrity of the valuation staff, have indirectly had that effect by holding up for public condemnation the methods employed by them.

Those who have had experience in valuations know the difficulty and care needed in collecting all the data necessary in order to come to a sound conclusion, and the undefinable period of assimilation of those data before the result can be stated with any confidence; and even then allowance must be made for errors of judgment. When therefore one takes into consideration the youthfulness of the Government staff, their enthusiasm and anxiety to make progress in the formidable task that lies before them, such cases as have been the subject of complaint, and as should not more correctly be attributed to the hard-and-fast methods of valuation laid down by the Act, must be ascribed to haste and to that ignorance of material factors affecting value, which is almost inseparable from haste. Speaking as President of the Surveyors' Institution, he would beg those who have control of this body of young surveyors to urge their staff to be deliberate and cautious in forming their opinions, but beyond this when errors have been made, as made they must be, to give them an opportunity of adjusting them without delay, and thus avoid the risk of exposing these young professional men to public odium.

Another subject which had pressed itself upon his notice, said Mr. Horne, was the position which has gradually grown up in connection with the compulsory purchase of land by means of powers obtained under Private Acts of Parliament.

Much has happened since the railway boom in the first half of last century necessitated the passing of the Lands Clauses Consolidation Act—a measure which still stands as a memorial to the thoroughness and care expended by our forefathers upon legislation of this class—and he was one of the last to suggest that with these changes some amendment in the procedure there laid down had not become both inevitable and desirable. All recognised that property which is needed for public purposes should be acquired readily and on terms fair both to the community and the owner, and in the provision of small holdings, the planning of our future centres of population, and the laying out of through routes of transit, the Legislature has decided that the national need has justified the adoption of special powers.

But the acquisition of land by Private Bill comes under a different category. It is not uncommon to find in some innocent looking Omnibus Bill promoted by a local authority a clause inserted, which by a seeming mere verbal alteration would give powers considerably in advance of those previously granted. He did not pretend to say whether such powers might be desirable or not, but he did say that their effect was often not appreciated, that they provided precedents for similar legislation in the future, and that it is not to the public advantage that important alterations in the law should be allowed except through the medium of a general statute. Within the last three or four years attempts have been made in Private Bills by Corporations to alter the provisions of the Lands Clauses Consolidation Acts in three important particulars, viz.:—(1) In enacting that any enhanced value accruing from public works executed within five years from the date of the notice to treat should be excluded from any question of compensation; (2) In enacting that, where the particulars of claim are insufficient and not delivered within sufficient time, the claimant should pay half the costs of the proceedings; and that, where the award or verdict was for a sum less than or the same as the offer, all the costs of the proceedings should be paid by him. (In enacting that a single arbitrator should in certain cas determine compensation.

These attempts, with one slight exception, have not yet proved successful.

In the House of Lords the Model Clause No. 27 (Misce laneous) "Costs of Arbitrations under Lands Clauses Acts, which has been in existence since 1901, has been followed every instance, and no alteration from the Model Clause h been allowed.

While fully aware of the difficulty of steering a compl cated measure through the House in the present congest state of Parliamentary affairs, he was strongly of the opini that the time had now come when an attempt should made to lay down comprehensive regulations on this subje of compulsory purchase, so that all concerned may kn exactly where they stand.

Mr. Horne gave some interesting figures to show t growth of London during the last forty years.

Taking the areas of the various rating authorities detail, the City of London shows a fairly regular increase rateable value each quinquennium, but it should not forgotten that the last reassessment was conducted und fresh conditions, inasmuch as many rating authorities the City were done away with, one central authority subs tuted for them, a process of unification which wou naturally be followed by a levelling up of the low assessments.

Battersea, after exhibiting an increase for the fir 35 years from 1871, comes out with a slight decrease for t last quinquennial period.

Bermondsey exhibits the same state of things, and so al does Bethnal Green.

The next five areas, Camberwell, Chelsea, Deptfor Finsbury, and Fulham, although they show slightly bett results, yet exhibit a marked check on their increase duri the last quinquennial period.

Greenwich and Hammersmith figures, although they sh a slower rate of expansion during the last five years, a not unsatisfactory.

Hackney and Hampstead have practically ceased progress, and the same may be said of Islington, Kensin ton, Lambeth, Lewisham, Paddington, Poplar, and S Pancras.

Holborn and St. Marylebone still exhibit increases value though the rate is a diminishing one, while Sho ditch, Southwark, Stepney, and Stoke Newington are, as whole, falling in value, though Wandsworth, probab owing to the amount of new land developed during the la quinquennium, shows a moderate increase.

The City of Westminster again shows a fair increase, b it is doubtful if this rate will be maintained in the futu as there is no doubt that this city, like its sister City London, has profited by the unification of its rati authorities.

Turning now to the totals of London as a whole, t growth which was fairly continuous during the thirty-fi years from 1871 has practically disappeared during the la five years, and it is very questionable whether the ne quinquennium will see any improvement over the figures this year.

The results of the census are equally remarkable. Tak as a whole there is an actual decrease of the population London, residing within the Metropolitan Boroughs and t Cities of Westminster and London, of something over 13,0 and were it not for the very considerable increases shown the still suburban boroughs of Lewisham and Wandswor this shrinkage would have amounted to over 126,000.

People are apt to consider that increases in the assessa value of London must be due either to the improved val of the land or to the new buildings erected upon it. Bo these factors may, and indeed generally do, contribute to but the rates also benefit very largely by the assessme of hereditaments which owe little to either land or buildin and whose value is determined by their profit-earni capacity; and the growth of these has been the means materially swelling the gross values for rating purposes.

1. *The Land.*—The increase in the value of land, wh the whole of London is being considered, is probably impe ceptible, and certainly not at the rate imagined by man The various imperial and local taxes to which it is expose and which each year we see becoming more onerous, must held responsible for this. Of course there are appreciatio in value in some parts, but they are accompanied by depr ciations in other localities, and if we adopt the simile of t waves of a nearly tideless sea we shall not inaptly descri

phenomenon of the varying values as recorded from year year.

2. *Buildings.*—The additional rating values which new ldings afford are counterbalanced to a very large extent the depreciation due to wear and tear of existing build- s, and the varying requirements of fashion and trade ich are continually operating to render these structures olete. This is particularly noticeable in the case of vate residences, which have suffered very severely during last few years. The large number of empty houses with rds up, indicating that they are to let, not only show ir failure to attract occupants but also depress the level rents of similar houses in the neighbourhood. If the icism is made that their failure to attract tenants is due their not being in accordance with modern requirements, answer must be that the rent, which even a modern house he particular neighbourhood would command, would little re than cover the fair interest on the cost of building the rates which have to be paid. The land value would n, therefore, in reality to be small, although owing to e old lease the premises are still saddled with a ground t far in excess of the present site value. In cases of character the municipal authorities have already taken, means of the rates, a large proportion of the value which land would otherwise have.

3. The peculiarity of the third class of rateable heredita- its is the naked and unblushing way in which their value profit-earning concerns form the basis of their contribu- is; and the fact that the rates are becoming in London pecies of income tax chargeable on the profits of trade is which merits serious attention. Of course shops and er trading businesses suffer in the same way to some ent, but the figures in their case are masked by other siderations.

London is now suffering from a want of the activity nerly shown in providing new thoroughfares, and im- ving old ones to cope with the necessities of traffic and merce. The corn and coal dues in former days provided means of carrying out these enormous and much needed rovements, but these were given up foolishly, and were ot for the resources of the Bridge House Estates, it is btful whether London would have any chance of being vided with the new bridge, which we have been promised, which is so much needed. The spirit of parsimony, ch is not true economy, puts off from year to year the k which is so necessary if London is to keep pace with the uirements of the people, and the interminable wranglings veen the boroughs and the county council as to what local and what county improvements never come to an . The widenings of the Strand and of Piccadilly promise ake another twenty years. Waterloo Bridge is incapable arrying the traffic, and the new streets and traffic regu- ons suggested by the Royal Commission or the Board of de seem to serve no better purpose than to provide the erial for a few newspaper articles.

How desirable it would be if some procedure could be sed for acquiring compulsorily properties required for ening and similar improvements other than under the quated provisions of a section in Michael Angelo lor's Act. The rights of both parties need to be more rly defined than they are under that statute, and the er of a Naboth's vineyard should feel secure that it may be wrested from him by a rich and unscrupulous neigh- r, who is able by some means or other to induce the horities to put the Act into force.

THE INSTITUTION OF MUNICIPAL ENGINEERS.

T a meeting of the Council held on November 1 the following applicants were recommended for admission:—(*a*) To nbership: A. E. Rosser, deputy surveyor and engineer, nsea R.D.C.; John Lewis, surveyor, Yiewsley U.D.C.; Fothergill, deputy borough engineer, Bexhill; G. F. wford, highway surveyor, Southport; H. E. Gilkes, f assistant surveyor, Yardley R.D.C.; A. MacDonald, gh surveyor, Stornoway; R. S. Wilson, city surveyor's e, Sydney, N.S.W.; B. P. Varma, executive engineer, jab Irrigation Branch (P.W.D.); F. J. Hurley, sur- r and water engineer, Crickhowell R.D.C. (*b*) To ociate Membership: C. T. Chadwick, assistant borough eyor, Maidenhead; G. L. Harrison, city surveyor's office, ney, N.S.W.; M. B. Khan, sub-divisional officer, .D., India; W. A. Jackson, borough engineer and sur- r, Malton. (Under the new by-laws these elections will be ratified at the next Council meeting if no written objections are lodged within 14 days.) (*c*) Elected to Studentship: W. Jackson, Municipal School of Technology, Manchester. *New Members, &c.*—From the applicants recommended for admission at the last meeting three members and two Associate members were elected. *Chairman of Council.*—Mr. Henry J. Farmer, borough surveyor of Christchurch, was elected chairman of Council for the year 1911-2. *Hon. Librarian.*—Mr. Henry J. Weaver, of Gloucester, was elected hon. librarian for the year 1911-2. It was decided that Council meetings be held on the fourth Wednesday and fourth Saturday in alternate months, the next meeting to be held on November 22.

NOTTINGHAM ARCHITECTURAL SOCIETY.

THERE was a capital attendance at the first meeting of the Designing Club in connection with this Society held on Tuesday, November 7. The subject set for competition was a design for "A Co-operative Stores in a Mining Village." Three designs had been submitted, and were fully criticised by Mr. W. V. Betts, who had set the subject and prepared the conditions. After he had placed them in the following order, "Carbon" first, "Capricornus" second, and "Old Friend" third, an interesting discussion took place. At the close Mr. A. E. Heazell, F.R.I.B.A. (who took the chair in the absence of the president), thanked Mr. Betts for his kindness in criticising the designs and the three competitors for submitting them. Mr. H. Gill, in supporting this, said that as the subject set required special treatment, Mr. Betts had not only pointed out the merits and defects, but had also given them a great deal of valuable information, which could not but be useful, not only to the younger but to the older members present.

The Chairman announced that at the next meeting on November 21 Mr. Burke, of Manchester, would read a paper on Reinforced Concrete Construction.

THE INSTITUTION OF CIVIL ENGINEERS.*

The Loch Leven Water-Power Works.

By A. H. Roberts, M.I.C.E.

THE Loch Leven Water-Power Acts were obtained in 1901 and 1904, authorising the construction of works to utilize the rainfall of the western slope of Rannoch Moor for power for industrial purposes. The scheme possesses a number of advantages, including large catchment-area, heavy rainfall and high head, all in proximity to the seaboard. The author refers to the usual waterworks practice of reckoning only upon the mean rainfall of the driest three consecutive years, and suggests that in power-schemes of this character it might often be possible to obtain a greater output of power with the same expenditure. This could be effected by installing extra units of power plant (turbines, &c.), making a reduction in the height (and therefore in the cost) of the storage dam, and arranging to work the extra power in wet seasons.

The catchment-area for the Loch Leven Works is the basin of the River Blackwater, and is fifty-five square miles in extent, lying between Lochs Treig, Ossian and Rannoch and Glen Coe. Rain-gauges established in 1905 and 1906 have given average readings of over 70 inches for the Blackwater basin and 80 inches for Kinlochleven. No compensation-water had to be supplied, this feature greatly increasing the available power. The site of the reservoir is favourably contoured for storage purposes, and the full reservoir is about 7½ miles in length and ½ mile in breadth. Its greatest depth is 75 feet, and it impounds over 20,000 million gallons of water. The Blackwater dam is 3,112 feet in length, with a maximum height of 86 feet, its top surface being 1,068 feet above Ordnance datum. About half its length is formed as a waste-weir in six horizontal steps of 6 inches each. The foundation is of an exceptionally sound character; only a few feet of the surface beds had to be removed to obtain a satisfactory foundation. The plant and materials required for the construction were brought by sea to the wharf and carried thence to the dam, &c., by an overhead cableway and an overland railway of 3 feet gauge, which latter included two rope inclines. The cableway was driven by a Pelton wheel at the foot of the Falls of Leven. The dam is built of large blocks of stone embedded in a matrix of ordinary concrete, with fine concrete facework. The bulk of the cement was of rotary-kiln manufacture, and exhibited certain characteristics, which are described. Cracks due to the contraction of the concrete appeared after the dam was built, traversing it vertically from top to bottom. Reference is made to the question of inserting contraction-joints in large dams. The valve-tower contains the six valves of the three draw-off pipes, the spindles being carried up to the valve-house above top water level. The draw-off pipes lead to the upper penstock chamber, whence the water is delivered over a measuring weir into the conduit.

---

* Abstracts of two papers read at the ordinary meeting of the Institution on Tuesday, November 14.

Water is conveyed to the pipe-track by this conduit, which is 3½ miles in length; it is of square section 8 feet by 8 feet, and is laid to a general gradient of 1 in 1,000. The construction consists for the lower part of a channel excavated in the rock and lined with concrete; while the work above rock level is of concrete reinforced with expanded metal and round bars. Expansion joints are inserted in the walls at intervals of 64 feet. Contraction cracks, however, appeared midway between these joints until the conduit was brought into use, after which they closed up entirely. The arrangements for the maintenance of the natural surface drainage are described, and also the methods of shuttering and concreting the work. Along the route of the conduit and above the same lies a catchment-area of 3½ square miles, with a rainfall of about 75 inches, the greater part of which is drained by three streams. These have been laid under contribution by collecting their water and turning it into the conduit. A description is given of their intake works and of the automatic valves for throwing off superfluous water. Electrical transmitters and recorders indicate to the valve-keepers at the lower penstock chamber the changes taking place in the contribution of the side streams, enabling them to take advantage of the extra water and reduce the draw-off from the reservoir, thus storing an equivalent quantity of water in the reservoir. The conduit discharges its water into the lower penstock chamber of about 300,000 gallons capacity, where it is measured and delivered to the pipes as required.

From the penstock chamber water is conveyed to the power-house in six welded steel pipes of 39 inches diameter. The track is 1¼ mile in length, and the fall of 935 feet yields a normal static pressure of 406 lb. per square inch. Pipes are supported upon concrete pedestals, and at the bends there are heavy concreted anchorages to resist the thrusts of the water and pipes. The pipes are made from one plate welded longitudinally, and vary in thickness from 10 millimetres (0.394 inch) at the top of the hill to 22 millimetres (0.866 inch) at the foot. With the exception of flange-joints in special positions the whole line is jointed with a special "muff" joint, a form of spigot and socket with joint rings for securing the packing material. Expansion is thus accommodated at every joint. The pipes were brought to the site by an overland railway laid up the hill alongside the track, and were lifted into position by specially-adapted derrick-cranes. Water is distributed from the six main pipes to the various turbines by a system of pipes comprising two omnibus pipes and six feeders, all of 39 inches diameter. Each "bus" pipe with its three feeders forms one complete system, the two systems being at different levels to enable branches to cross. One branch from each "bus" pipe feeds each turbine. The main valves which control the supply of water to the distributing pipes are of ordinary sluice-valve type, but specially designed to meet the combination of large diameter and high pressure. They are hydraulically worked, and are fitted with operating gear and automatic closing appliance, together with a mechanical device for controlling the speed of closing. At the top of the pipe-track, immediately below the penstock chamber, automatic cut-off valves have been installed, of the usual "butterfly" pattern, to stop the flow of water in the event of a burst occurring on the main pipe-lines. At the summit of a slight elevation in the main line air-valves have been fixed of a special design to allow large quantities of air to pass in or out, as required, when filling or emptying pipes. The tail race is of concrete, the channel leading to an outfall in the River Leven.

The company have constructed a wharf and a jetty, both of timber, in Loch Leven, and have dredged a channel through the Loch Leven Narrows. A domestic water supply has been installed for the village and factories of Kinlochleven. It comprises a storage-reservoir with concrete dam in a neighbouring valley, pipe-line, a service reservoir of reinforced concrete, and distributing mains. The dam at present is only carried up to half its ultimate height; this, when completed, will be 55 feet, and its length will be 440 feet. Contraction-joints are provided, and have proved efficient i preventing the occurrence of cracks.

The works described in the paper have cost about £600,00 and are now the property of the British Aluminium Com pany. The electrical plant in the power-house forms th subject of another paper (see below). The construction wa begun in August 1905, and the factory commenced workin in February 1909. The engineers were Messrs. Thoma Meik & Sons, and Messrs. Kennedy & Jenkin, in collabora tion with Mr. W. Murray Morrison, the manager an technical adviser of the company. The principal contractor were Sir John Jackson, Limited, and there were othe subsidiary contracts. The author was resident engineer.

The Hydro-Electric Plant in the British Aluminium Company's Factory at Kinlochleven.

By F. B. Sonnenschein, Assoc.M.Inst.C.E.

This paper deals briefly with the plant erected in th power-house at Kinlochleven, other than that which is c standard design in England, and a detailed description of th tests made on the turbines and generators is given. Th aggregate power installed is 30,660-h.p. at the generato couplings, the generators being capable of a maximum outpu of 21,088 kilowatts. Nine main units and two exciter unit are erected, each unit consisting of a turbine and two genera tors. The main turbines are of the Pelton-wheel type, wit two water-jets, and are designed to give 3,200-b.h.p. as maximum; each drives two generators coupled in paralle and having an output up to 2,200 kilowatts together. Th two small exciter units are also of the Pelton-wheel type, eac driving a pair of generators on one shaft. These consist c an exciter and lighting machine, capable of giving an outpu up to 550 kilowatts, and a traction machine up to 94 kilowatt capacity. All the connections between the generators, fu naces, &c., are made of bare aluminium strip. The feede and distributors for lighting and power in the village an on the railway and wharves are also made of bare strande aluminium cables erected on poles, and this metal has bee found to be perfectly satisfactory under all conditions.

Efficiency and governor tests were carried out on the mai units, and governor tests on the exciter units, as follows:- An iron wire resistance was used for absorbing the electri energy, and was placed in the tail-race, being kept cool b the discharge water. Below the resistance a hook gaug was suspended for measuring the head over a weir. A gat constructed in the tail-race could be closed at will, thus form ing a reservoir to measure the quantity of water passin over the weir at varying heads. After the weir curve wa known, measurements were taken of the output of the genera tors at varying loads, and from these figures the efficienci were calculated. The results obtained showed that the tu bines did not quite reach their anticipated output, and th their efficiency was slightly below that guaranteed by th makers. Further tests are described, in which the areas the jets were increased in size. It is shown that the efficienc was improved about 2 per cent. by increasing the area of th lower jet, but keeping the top jet of the original size, an by this alteration the turbines were enabled to give th specified output at the guaranteed efficiency.

The governing tests are then described. The specifie limits for the variations in water-pressure and speed a enumerated, and the natural conditions are given und which these results had to be obtained. It was found durin the tests that the generators were liable to flash over if th voltage increased excessively, and that they were also liab to flash over if a circulating current flowed round the tw armatures of the dynamos on the same shaft running i parallel, when load was thrown off. An electrical protecti device was therefore designed and fitted to each pair generators, which automatically breaks the field-circuit whe either of these two conditions arises.

Messrs. Escher, Wyss & Co. supplied the turbines, an Messrs. Dick, Kerr & Co. the dynamos. The author acte as resident engineer for Messrs. Kennedy & Jenkin.

FIRE TESTS WITH FLANNELETTE.

THE British Fire Prevention Committee's testing opera tions on Wednesday, November 8, were devoted to series of 120 tests with ordinary flannelette and flannelett that had been washed with a solution intended to make i less inflammable.

The members of the Committee and the visitors prese were received by Messrs. Edwin O. Sachs, F.R.S.Ed. (Chai man), and Mr. Horace S. Folker, F.A.I. (Hon. Treasurer), embers of Council, and among those present were represen- tives of the Home Office, London County Council, and other blic authorities, as also Sir Horatio Shephard, M.A., ,.D. (of the Coroners' Committee), and some officers from lgium and Hungary interested in the subject.

The tests were with flannelette that had been washed ce, five times, and twenty times respectively. The flannel- e was partly of rough and partly of fine finish, and was ted when hung straight and when hung pleated.

The tests were conducted by a sub-committee of eight, th Mr. Ellis Marsland, district surveyor, as directing mber. The sub-committee included Messrs. J. Herbert er, Oswald Wylson, F.R.I.B.A., Bertram Chatterton, J. A. Fulkes Nicholls, M.Inst.C.E., J. T. Cuss, J. W. ooker, R. W. Henderson.

The British Fire Prevention Committee will issue an cial report on the results shortly.

ECTURES ON ILLUMINATING ENGINEERING.

HE first of a series of twelve lectures on "Illuminating Engineering" was delivered by Professor J. T. Morris, I.E.E., on Tuesday, October 31, at the Polytechnic In- tute, Regent Street, W. The subject was that of Electric ghting.

The chair was occupied by Mr. A. H. Seabrooke, who efly opened the proceedings, being followed by Mr. L. ster, editor of the *Illuminating Engineer*, under whose perintendence the course is to be held.

Mr. Gaster referred to the enormous developments which d taken place during recent years with regard to this sub- t, a fact that was emphasised when it was remembered t not very long ago the word "illumination" was generally derstood to mean something to do with "fireworks." The sent course would deal with all aspects of the science of mination, including the effect of light upon the eyes.

Professor Morris commenced his remarks by dealing briefly h the general nature of electrical supply. This was ally at a constant pressure and voltage, and any fluctua- ns in this respect led to marked variations in the c.p. of lamps. A carbon lamp would be affected to the extent 5 per cent. by a mere variation of 1 per cent. in the supply, d although metal filament lamps are not so susceptible to h changes, the same variation in current would cause lifference of 4 per cent. and 4.6 per cent. in the c.p. of a ngsten and tantalum lamp respectively.

As to the methods adopted in charging the consumer for supply of electric current, the present system seemed erally satisfactory. The cost of making the connection, ., was split up into a small annual charge, in addition which the customer paid so much per unit for the current d. This was found to be more satisfactory than the ximum demand system, which was difficult to explain to ordinary consumer. With regard to charges for base- nt lighting, it was certain that some difference should recognised here, since the current was used during the time, when there was less demand, and consequently less ficulty in supplying it. The charges in this case should be hter.

It was often asked why the consumer could not be con- cted to the electric mains and allowed to use as much as quired, as with the water-supply. The answer to this s that there were no means of preventing the most reck- s waste other than that of making a man pay for what consumed. Another difficulty arose from the change in mand occasioned by an increase in candle power of the nps in a house. When the total candle power was aug- nted the annual charge should be correspondingly raised. ch a regulation, however, would mean a rigorous system inspection, and this was what the average Englishman y much resented. It was necessary to develope a plan ose success would be independent of such means. A solu- n lay in the employment of an instrument known as a rent limiter, which, when adjusted to the requirements an installation, and when the ordinary demand was ex- ded to any extent, conveyed this fact to the consumer in plainest way by causing his lights to blink in a most asperating manner until he replaced his old lamps.

Passing to the consideration of the lamps themselves, the lting-points or temperatures of various types of filament re compared, from which it appeared at the first glance at carbon possessed the highest value; but it was known at this material became plastic at 1,750° to 1,800° C., which ct could be easily proved by simple experiments. The lting-point figures for metals were: Platinum 1,730° C., nium 2,200° C., tantalum (not pure) 2,910° C., tungsten 3,080° C., below which these substances could be used without their giving off deleterious vapours to any great extent.

This contributed to their larger use.

At one time experiments were made with carbon filaments coated with various oxides, but it was found that this either split away from, or was absorbed into, the carbon core when used for some time. The relative efficiency of well known lamps in terms of candle power per watt compared as follows: Carbons .29, metallised carbon .37, tantalum .53, tungsten .77, helium .90.

A series of slides was next shown illustrating the various stages in the manufacture of the tantalum lamp. The mechanical strength of a filament was demonstrated by lifting a two-pounds weight suspended from a single strand. These lamps had been much improved since their introduction. The connection between the leading-in wires and the filament had been improved, and was now effected by drilling a hole in the end of the former, into which the latter was inserted. The connection was then pressed together, thus doing away with the use of solder. The breakages which occurred in the earlier lamps, through the filament possessing a tendency to tighten, had been obviated by forming corrugations in the filament, thus imparting to it considerable elasticity. Care had to be taken that these corrugations did not assume a spiral form, as this would set up other damaging stresses.

Another drawback experienced with earlier types, the projection of the light in a horizontal direction, had also been got over by arranging the filament in a conical form, the light being thus radiated to a greater extent in the direction required—downwards.

Some experiments made by the American Institute of Electrical Engineers some year and a half ago showed that when first used a 32 candle-power tungsten lamp steadily increased its candle power to 36, after which it again declined, reaching its original candle-power after 650 burning hours. A similar characteristic was to be found in tantalum lamps. It was believed by many people that an old lamp consumed more current than a new one, but this was not so. The current used was the same, but being old it gave less light; hence its efficiency was lower.

A series of microscopic photographs illustrating the change effected in metal filaments after being used was thrown on the screen. The effect was most marked in the case of those used on alternating currents, and was proportionate to the number of hours during which they had been burned.

Another series illustrated numerous types of metal filament lamps and the various methods of supporting the wires, showing the real effort that had been and was still being made to produce a thoroughly satisfactory lamp for practical use.

It had been found that the light given by metal filament lamps was partly composed of ultra-violet rays, a fact which demanded our attention, inasmuch as these rays were very injurious to the eyes. The difficulty had been overcome by manufacturing a lamp of "Euphos" glass, a slightly tinted glass which, while it eliminated the injurious rays, did not obstruct the ordinary light to any appreciable extent.

In conclusion, Professor Morris expressed his thanks to those firms who had kindly provided him with numerous samples and specimens illustrating their manufactures, which he invited those present to inspect after the lecture. Messrs. Edison & Swan, The General Electric Co., and Messrs. Siemens Bros. were specially mentioned.

OUR CONTEMPORARIES FROM OVERSEAS.

THE *American Architect* (New York) contains a full set of geometrical drawings, plans, sections, and elevations of the Graduate College, Princeton University, New Jersey, of which Messrs. Cram, Goodhue & Ferguson are the architects.

Deutsche Bauzeitung (Berlin) illustrates the new King's Colonnades in Berlin, and the new Stadt Theatre at Hagen in Westphalia, and continues its illustrated description of the new Stadthaus at Berlin, of which Dr. Ludwig Hoffmann is the architect.

The *Western Architect* (Minneapolis) gives views of the People's Savings Association building, Toledo, Ohio, and other works of Mr. E. O. Fallis; also of a series of water towers by various architects, Mr. Fallis, Mr. Robert D. Kohn, Mr. G. E. Wiley, Mr. Clarence H. Johnston, and Mr. Geo. R. Mann.

The *Architectural Record* (New York) has an interesting and well-illustrated article on Toledo; another on new New York houses, which are not all beautiful or even possessed of the charm of Pennsylvania farmhouses, on which Mr. Aymar Embury II. discourses. Mr. M. Sloan continues his series of reviews of the architectural treatment of concrete structures.

Berliner Architekturwelt (Berlin) contains this month much domestic architecture, prefaced by an article on the Gartenterrassenstrasse of Wilmersdorf, from which many of the examples of houses are drawn. A design for a Rathaus at Klausenburg by Herr A. Szende, and for a synagogue by Herr Richard Ziegler, with some mosaic cartoons by Wilhelm Köppen, afford a change; and the Föhrer Bridge at Berlin is a good attempt to give architectural character to a piece of engineering.

La Construction Moderne (Paris) illustrates a successful block of artisans' dwellings in the Boulevard Bessières, Paris, and a prize design in the Concours Roux at the Académie des Beaux-Arts.

Moderne Bauformen (Stuttgart) is a monograph on the work of Professor Fritz Schumacher as exemplified in the new public buildings of Hamburg to the tune of sixteen and a half million marks, principally schools and hospitals of various kinds.

Correspondence

[The Editor will not be responsible for the opinions expressed by Correspondents.]

The Railway Unrest.

Sir,—In spite of the fact that the Trade Unions were given a monopoly of representation, so far as the men were concerned, on the Royal Commission they are again threatening a general strike because the Report of the Commission was not to their liking.

The Report of the Royal Commission appointed to inquire into the Sheffield outrages in the sixties of last century said: "The power of working, and consequently the value of a man's labour, varies in different individuals according to their skill, their strength, and their industry. The workmen who think it for their advantage to combine together in the disposal of their labour are no more justified in constraining any other workman who does not desire such association to combine with them—to bring his labour into common stock, as it were, with theirs—than an association of capitalists in constraining an individual capitalist to bring his capital into common stock with theirs; and it is the more important that the law should protect the non-unionist workman in his right freely to dispose of his labour as he thinks fit, because, standing alone, he is the less able to protect himself."

The Report of the Royal Commission just issued is in complete harmony with the Report of 1869, for in it the Commissioners say: "Men have the right to determine their engagement by giving lawful notice, but in the exercise of their freedom in this respect they should not, in our opinion, be permitted to incite or coerce by threats or any form of intimidation men who desire to give their labour." This is encouraging, for thus far we may claim that our country is

A land of settled government,
  A land of just and old renown,
  Where Freedom slowly broadens down
From precedent to precedent.

And as the great majority of the workers are not members of Trade Unions it will so remain, if all who are opposed to tyranny wil bestir themselves.

There is an object-lesson for us in the Australian Commonwealth, where the Trade Unions have obtained such influence that the Department of Home Affairs have just issued a circular, from which I quote the following:—

"Please note that the Minister has directed that absolute preference is to be given to unionists; see that this is given effect to in any future engagement, and in discharging any present men, discharge non-unionists first.

"The Minister also desires at once to be furnished with a list of non-unionists employed. Please make necessary inquiries and supply at once."

This should bring matters to an issue unless liberty in the Commonwealth is to be a thing of the past.

We are fortunately in no fear of the issue of such circular from any Department of our Government, but ther is among many of the Trade Unions in this country the sam evil spirit that dictated the Australian circular, as is eviden from the following:—Mr. A. Bellamy, the President of th Amalgamated Society of Railway Servants, in addressin the recent annual meeting of the Society at Carlisle, sai they would use their organisation *illegally* if necessary obtain their demands. While Mr. J. E. Williams, th Secretary of the Society, issues a "warning" to non-uni railway workers that if they remain outside the Union the will no longer be considered "fit fellow-workers."

Surely these things will not be tolerated, and as a memb of the Committee for Promoting the Formation of Societie of Free Workers I appeal to your readers for support for th Committee.

Full particulars of the movement may be obtained b applying to Mr. Mark H. Judge, Chairman, 7 Pall Mal S.W.—I am, your obedient servant,

Dysart.

Buckminster Park, Grantham: November 15, 1911.

GENERAL.

In connection with the Faculty of Engineering an Architecture at the University College, Dublin, the Professo of Architecture will deliver a series of lectures, which commenced on Thursday, 16th inst., in the University Colleg 86 St. Stephen's Green. The lectures will be resumed eac Thursday during the present month at 4.30 p.m. Admissio will be free by ticket. The School of Architecture has bee established in connection with the Faculty of Engineerin and Architecture, and the courses of instruction at th school are designed to provide a liberal and professiona training of a full University standard for students intendin to practice as architects. Students desiring to enter th schools with a view to proceeding to the degree of B.Arch should communicate with Professor W. A. Scott, withou delay.

A new building, comprising a Central Library and a adjoining Art Gallery, at the junction of May Bell Aven and Queen Street, Blackpool, was opened last week. Th library extends along a part of both thoroughfares, while th art gallery flanks the Queen Street front. The library ha been built at the cost of Mr. Andrew Carnegie, who contr buted £15,000 for the purpose, under the usual condition and the site, costing £5,800, was provided by the Corporatio The art gallery is the gift of Mr. John R. Grundy, R.C.A and Mr. Cuthbert C. Grundy, R.I., V.P.R.C.A., of Blac pool. The design for this new handsome block was prepare by Mr. James Lockhead.

Arising out of the Tattershall Castle controversy, h Majesty's Office of Works have issued a letter to Coun Councils calling attention to the Ancient Monuments Prote tion Acts, 1882 and 1900, which provide for the guardia ship of monuments of historic, traditional, or artistic interes The letter states that the matter is of national importanc and that the expense involved in some cases would be mo fittingly borne nationally than locally. The First Co missioner hopes that the County Councils will not hesitate draw his attention to any monument worthy of permanent adequate protection.

The new chapel at Worksop College, Nottinghamshir was opened on Tuesday, the 31st ult. It was designed by S Aston Webb, R.A. (who also has charge of other exte sions at the college), and has been erected at the expense Lord Mountgarret, who gave £10,000 for the purpose. Th chapel is a red brick building, treated in free Gothic, wit stone dressings and traceried windows to harmonise with th rest of the college. Externally it is divided into six bay with two lofty turrets to mark the east end, which is furth accentuated by a large niche, containing a figure of St. Cut bert, placed in the upper part of the east gable. The chap is approached from the east side of the school building throug a large ante-chapel, and will accommodate 450 boys. Inte nally it will be finished in plaster, with brick bands abo an oak dado, and covered with an oak dado painted an decorated timber barrel ceiling. The chancel has a stor vaulted roof, and the whole internal effect will depend upo its great height and graceful proportions. The total lengt including the ante-chapel, will be 128 feet, the width 36 fee and the height to the apex of the roof 56 feet.

ENGLISH IRONWORK.

LTHOUGH we cannot claim for Englishmen any superiority over the craftsmen of other countries o have been workers in iron, we can at least congratu- e ourselves that throughout the greater part of our art tory English ironworkers have produced excellent mples of the smith's craft. They may not equal the est specimens of Belgium, France, Germany, Italy, l Spain in costliness, in elaboration, or even in beauty, they have their own charm and individuality, and, refore, are worthy of our study.

As a help to this study we shall find useful Mr. Starkie rdner's new book* on English ironwork of the seven- nth and eighteenth centuries, even although it is ited to the development of exterior smithcraft. We appreciate Mr. Gardner's restriction of the subject- ter of this volume to exterior work, for the plenitude examples still existing of such work from the seven- nth and eighteenth centuries is overwhelming to one who would attempt an historical and, still more, analytical account.

A brief sketch of the history of mediæval ironwork the hiatus which seems to have occurred in English ithcraft from the close of the Wars of the Roses forms opening chapters preceding the more detailed descrip- n of the work of the seventeenth and eighteenth turies. The earlier buildings of even the seventeenth tury lack both quantity and quality of smithcraft as pared with what was being done on the continent of rope during the same period, and it is not until the ent of Jean Tijou that smithcraft in England began ake a prominent position amongst the arts allied to lding.

Tijou certainly exploited the resources of smith's work wrought iron to their fullest extent, and, indeed, in his k of designs even exceeded the legitimate limits of craft, for many of the designs "are irrespective of struction or technique, and impossible of execution." refore the designs as illustrated were frequently con- rably modified in execution. Mr. Gardner points out t Tijou's personal skill as an embosser resulted in the cealment to a large extent of the true smithcraft of ging by the introduction of a wealth of acanthus, ettes, masks, draperies, eagles' heads, &c., which he oduced in profusion whenever he had a free hand.

This exuberance of invention which characterised Tijou's designs may in part have been the cause of the apparent coldness between him and Sir Christopher Wren, for although Tijou's ironwork is principally an adornment or adjunct of Wren's buildings, neither man makes mention of the other. Mr. Gardner champions the fame of Tijou against that of Huntington Shaw, whose claim to eminence is stated by the author to rest on a gratuitous assertion, added to his tombstone or memorial tablet 123 years after his death, that "he designed and executed the ornamental ironwork at Hampton Court Palace."

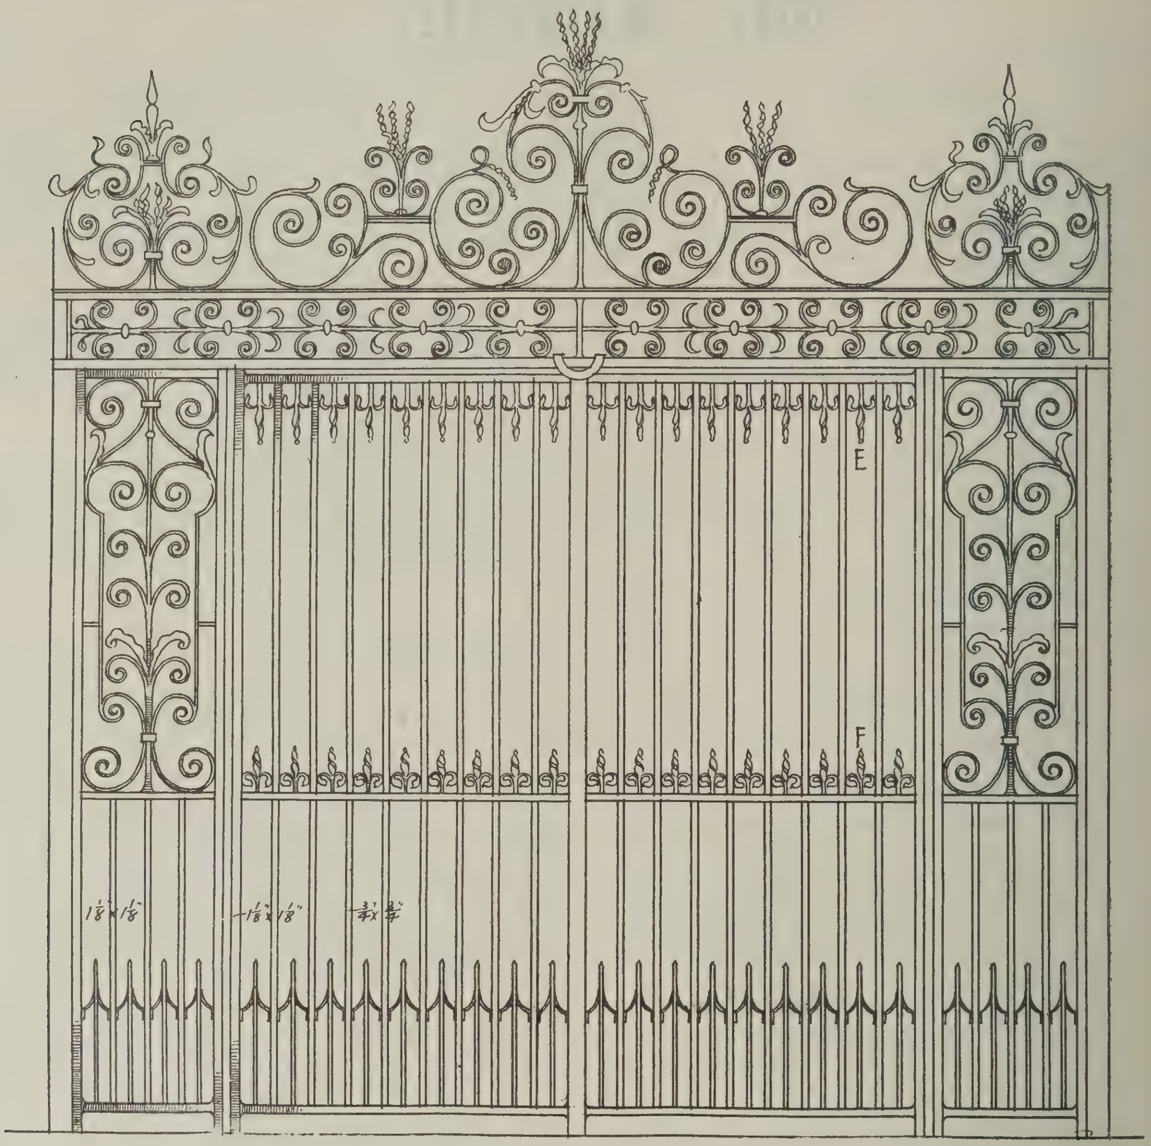
We are not altogether satisfied with the conclusiveness of the evidence on which Mr. Gardner disposes of "the mystic Huntington Shaw." It is true that there is documentary proof that Tijou, and not Shaw, was paid for ironwork at Hampton Court and at St. Paul's Cathedral. But though he died in London, Shaw was commemorated by a monument in Hampton Churchyard, and the contemporary inscription thereon stated that "he was an artist in his way." His monument was enclosed with an iron railing, an illustration of the monogram on which, "H.M.S.," is given in Mr. Gardner's book, and in allusion to which he says, "Not the least charming of the innovations due to Tijou are the delicately interlaced monograms, in place of heavy shields of arms in the overthrows of gates. This feature is already seen in Daniel Marot's designs, and had been much used by English locksmiths in their key bows." The delicacy and pure smithcraft of these monograms do not seem to accord with Tijou's predilection for embossed work, and may quite possibly be due to the traditional craft of English associates of Tijou, amongst whom Shaw may have been one.

Tijou's work undoubtedly required the assistance of a large and able staff of highly skilled craftsmen, and Mr. Gardner presumes that some at least of these may have been Englishmen, amongst them Robert Bakewell, of Derby, the brothers Robert and William Edney, of Bristol, of whose works we are given illustrations and a critical description. Satisfactory historical proof of the association of these craftsmen with Tijou does not appear to be forthcoming; we are left to presumptive evidence in their work of the relationship of master and disciple. But when he proceeds to an account of the English School of Smiths Mr. Gardner demolishes his own evidence by his picture of the craftsman passing from one employer to another, learning and carrying all the peculiarities in forging and style from one workshop to another, resulting in the number of new forms of scrolls,

---

* *English Ironwork of the Seventeenth and Eighteenth Centuries.* nistorical and analytical account of the development of erior smithcraft. By J. Starkie Gardner. With 88 collotype plates a photographs chiefly by Horace Dan, architect, and upwards of 5 other illustrations. (London: B. T. Batsford. 42*s*. net.)

"THE ARCHITECT" STUDENTS' SKETCHING AND MEASURING CLUB.



WROUGHT-IRON GATE AT ENFIELD.—Measured and Drawn by "Plato."

finials, drops, dog-bars, &c., introduced by Tijou and his followers, or his contemporaries, becoming the common and accepted and traditional elements of English smithcraft.

Mr. Gardner does not venture to claim that Thomas Robinson and Thomas Coulbourn, who shared the work in St. Paul's with Tijou, were his disciples, and he is therefore forced to the admission of an English School of Smiths.

The book of designs, produced by Tijou, does not even prove that Mr. Gardner is correct in assuming that Tijou was the maker of ironwork accredited to him because therein illustrated, for we are told that a design is included for a staircase balustrade at Trinity College, Cambridge, for which one Partridge, of London, was paid in 1691-92, shortly before the publication of Tijou's book.

All of which goes to show that our author has attempted an almost impossible task in the compilation of a veracious history of English smithcraft, but we owe him thanks for the attempt and for the unearthing of such facts as are available, even though we forbear the unreserved acceptance of his deductions from similarity of design and technique. We can, at least, agree that the influence of Tijou and of the architect, Daniel Marot, to whom Tijou himself was indebted, was an important factor in the great and glorious development of smithcraft in England in the later seventeenth and the eighteenth century, but although we are glad to have rescued from obscurity the names of some of the master smiths of the period we are forced to recognise that the wealth of the productions that still exist must have been produc by many skilled craftsmen and artists whose names a still unknown. Their works are, many of the gloriously represented in the admirable illustratio which make Mr. Starkie Gardner's book an inten pleasure to peruse and to admire.

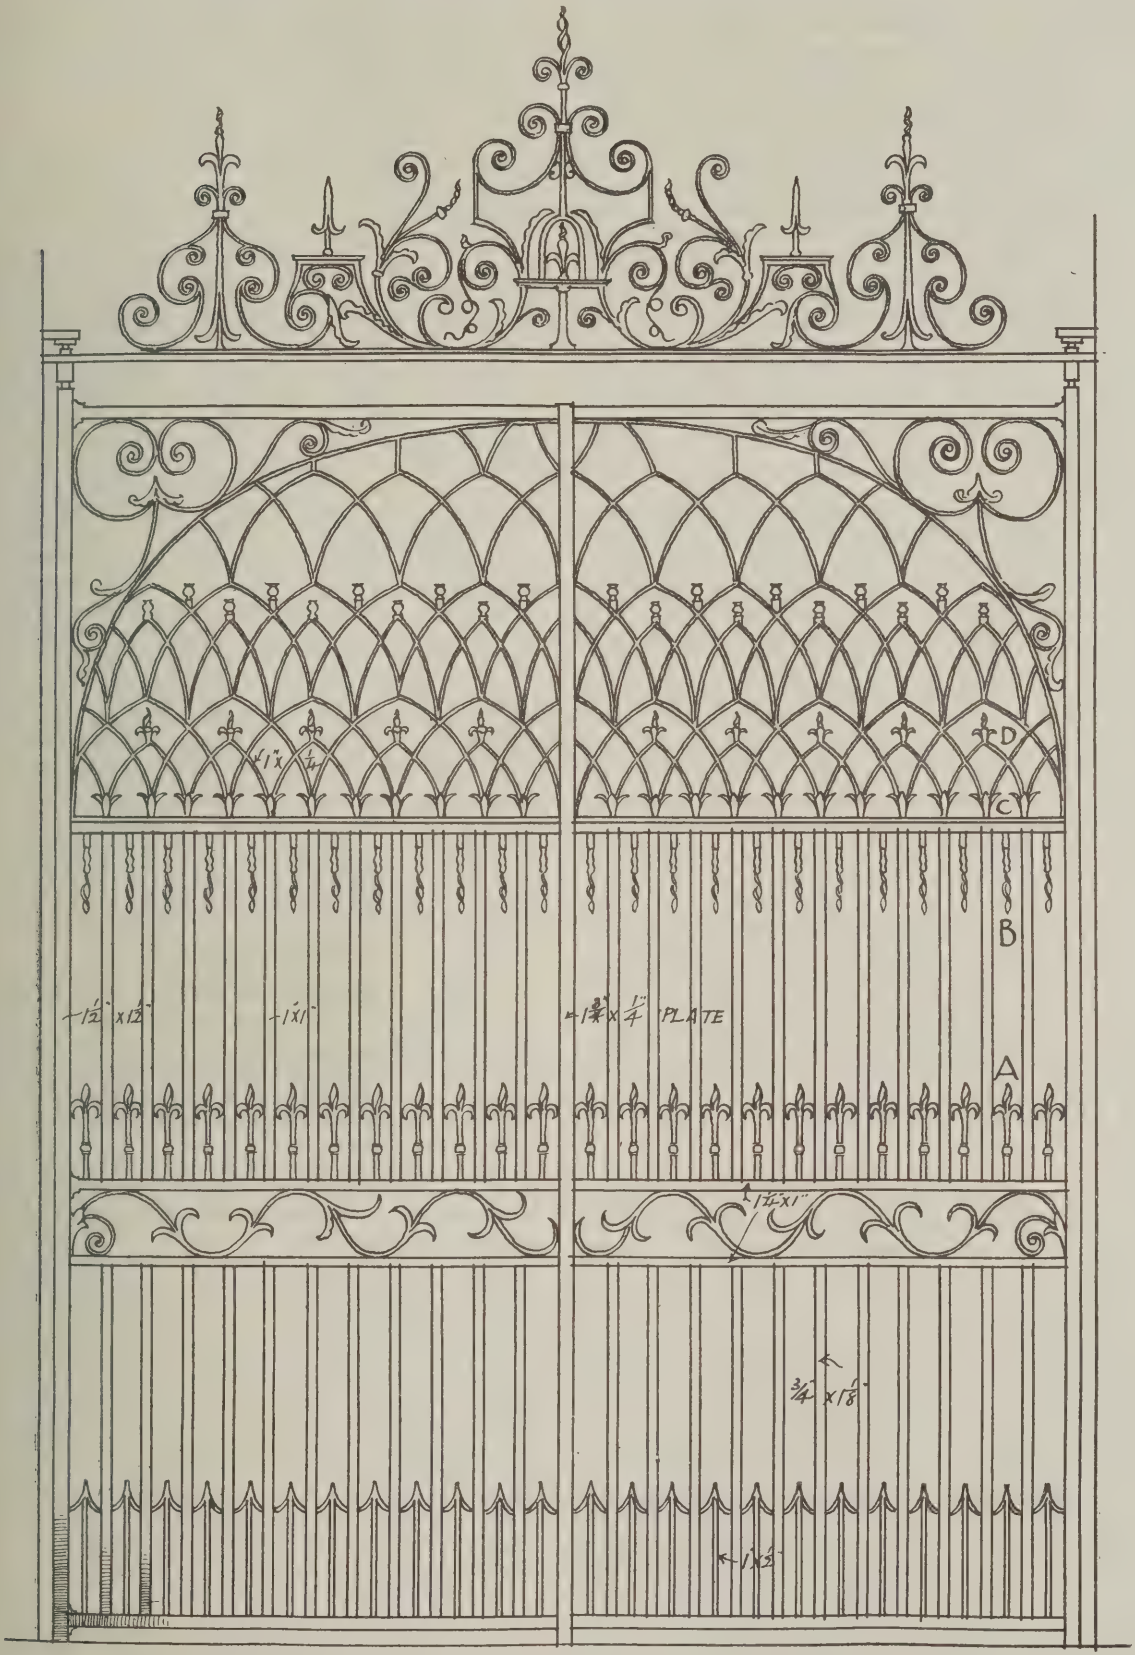
WROUGHT-IRON GATES AT ENFIELD.

THE drawings show two simple but good examples c English wrought ironwork. The narrower of tl two gates is hung to panels, with a lintel over and elaborate overthrow on top. The other example is ve uncommon, with curious intersecting tracery in the upp panels.

NOTES AND COMMENTS.

At last Great Britain will have its Prix de Ron students in architecture, in sculpture, and in decorati painting by the happy development of the British Scho at Rome announced at the annual meeting of subscriber of which we give a report elsewhere. These prizes w naturally become, as in France, the highest recognitic of merit open to students of the allied arts of architectur sculpture, and painting, and the opportunity they wi afford to genius for extended study will, if rightly use be of high value to architecture.

" THE ARCHITECT " STUDENTS' SKETCHING AND MEASURING CLUB.



WROUGHT-IRON GATE AT ENFIELD.—Measured and Drawn by "PLATO."

The exhibition of the works of Alfred Stevens, which now open at the Tate Gallery, is an occasion not only obtaining some idea of the genius of the great parted master but for useful instruction in the weldg of sculpture and architecture in design. More than y other man of modern times Alfred Stevens proved his productions the truth of the saying: "There is t one art." If he had not touched the forms of istic expression peculiar to sculpture or to architecre, he would have been a great painter. Incalculable is the loss to British Art of the want of opportunity that prevented Stevens from leaving behind him a vast monument of artistic genius.

In his lecture on "Attainable Ideals" at the Edinburgh Architectural Association, Mr. James Morris rightly said that there might be an ideal in the practical and business as well as in the architectural side of work. An ideal might be of little or great altitude, but to have an ideal at all was to ensure that work could not be altogether poor. The beginnings of art, the desire after the unseen and unknown in primal days, the same elemental desire of, in different environment, touching men still, and the abstract qualities of dignity, beauty, power, and reverence were but different notes sounded in different ages on the human chord of emotion and feeling. Keeping cost of work within the range of a client's purse and purpose, setting face against asking contractors to reduce tenders, and against allowing work to be done at prices which could not pay, thus militating against good work, were business ideals. Art again, besides being creative, was also in no small degree selective, while in yet another phase it was even the visible embodiment of silence. A weak man or a guilty was full of excuses, while strength and innocence were often dumb. Well would it be then for them also so to think in their own art, for in architecture there was marvellous virtue in the silence of a plain, an unbroken wall.

We are glad to know that the Glasgow Institute of Architects is following the lead of the Royal Institute and many Allied Societies in an organised opposition to the evils of competitions, recognising that the increasing tendency during recent years to select an architect only after obtaining competitive plans from a number has become a serious burden to all engaged in that branch of work, owing to the very large outlay involved, combined with the uncertain chance of any return. The Royal Institute of British Architects now debars its members, under penalty, from engaging in competitions the conditions of which are considered unsatisfactory by the Council, and a similar course has been followed by several of the local societies throughout the country affiliated, as is the Glasgow Institute, with that body. After prolonged consideration of the subject, the Institute adopted some time ago in general assembly the principle involved, and a meeting was held to consider the methods to be adopted towards carrying it out, as proposed, in a series of resolutions brought forward by the Council. In the course of discussion considerable divergence of opinion was manifested with regard to some of these, and on a vote being taken, it was decided by a majority to remit the scheme back to the Council for reconsideration in detail.

The lesson of Tattershall Castle and its mantelpieces is bearing fruit, and the Surrey County Council has requested its County Surveyor to compile a list of ancient monuments in the county, a copy of which is to be supplied to H.M. Office of Works, who wrote calling attention to the provision in the Ancient Monument Protection Acts, 1892 and 1900, for the guardianship of monuments of historic, traditional or artistic interest, not only by the Commissioners of Works, but also by County Councils, and assuring the Council of the entire sympathy and approval with which the Commissioners would regard the action of any County Council in this respect. It was clear, the letter pointed out, that in a county rich in monuments the expense of their adequate maintenance from county funds would effectually limit the action of the County Council in this direction, but, as the matter was undoubtedly of national importance, it appeared that such an expense might more fittingly be defrayed from national than from local resources.

At a meeting of the County Council on the consideration of this matter Sir Thomas Skewes-Cox suggested that a new county committee be formed for the purpose. It would be very difficult for the county surveyor to find out what objects and monuments of interest in the whole county might be included in the return. The suggested committee would be able to receive communications from anyone interested in the subject, so that a proper list of value for all time to the county might be prepared. He proposed the election on such a committee of Lord Farrer, the Lord Lie tenant, Dr. Chester, Mr. Campbell-Bayard, Mr. Powe and himself, with power to add to their number gent men, not necessarily members of the Council, who to interest in matters archæological. It was resolved adopt the suggestion.

The reconstruction of the ancient market cross Glasgow has been offered as a gift by Mr. Willi George Black, chairman of the Glasgow Elders' As ciation, chairman of the Open Churches Associatio and a manager of the Royal Infirmary; whilst M Black is president of the Glasgow Day Nurser Association, convener of the Finance Committee of t Ladies' Auxiliary in connection with Bellefield Sar torium, and a governor of the Logan and Johnsto School. The offer was conveyed to the Glasgow Co poration in the following letter from Mr. Black to t Lord Provost:—

"Ramoyle, Dowanhill Gardens,
"Glasgow: November 13, 1911.

"Dear Lord Provost,—My wife and I desire to permitted to offer to our native city a reconstruction the ancient Town or Market Cross of Glasgow, whic erected many centuries ago, had become dilapidated 1659, and was removed in that year. We have lo had this in contemplation, but the difficulty was to how, in the limited space available, the cross could re-erected at or near its proper site at the foot of t High Street. The recent decision of the Town Coun to consider as to a reconstruction of the area forme occupied by the Tontine buildings and other prope appears, however, to offer an opportunity for restori to Glasgow an emblem of the continuity of civic l from remote times, such as is familiar in Edinburgh a other ancient burghs of Scotland."

THE BRITISH SCHOOL AT ROME.

THE annual meeting of the British School at Rome to place at Burlington House on Tuesday, November Professor J. S. Reid, Litt.D., chairman of the Managi Committee, in the chair. In connection with the meeti there were exhibited in the room a large number of drawi showing the students' work.

On the architectural side Messrs. F. R. Barry and Phi E. Webb sent, conjointly, a good set of measured drawi of Bramante's work in Rome; Mr. C. d'O. P. Jack (holder of a travelling scholarship from Edinburgh Mu cipal College of Art), a restoration of the Arch of Titus, w a portion of the inscription to full scale; Mr. W. N. Kees, A.R.C.A., some measured drawings of early Christian a Byzantine decoration from Rome and Venice; and Mr. Prestwich a study of the marble lining of the Pantheon a of the Porta del Palio at Verona. Some large water-colo by Mr. G. Halford included one of the Basilica of Const tine in Rome, the apse of S. Clemente in Rome, and of the Raphael ceiling in the Vatican. Miss B. E. Molyne sent a panel from an ambone in S. Maria in Aracoeli, Ro and a drawing of a tapestry designed by Raphael, in Vatican. Other painters exhibiting were Mr. H. P. H gill, Mr. H. Brown, Mr. Noel H. Leaver, and Mr. E English.

The annual report gives a detailed account of the w carried out by the students.

Messrs. F. R. Barry and P. E. Webb (students of R.I.B.A., admitted 1911) reached Naples early in Mar and after a short visit to Sicily, Naples, and Pompeii, p ceeded to Rome, where they were joined by Mr. J. A. Sla (student of the Architectural Association admitted 191 Their studies in Rome and Florence were confined alm entirely to Bramante's and Brunelleschi's work; while Venice (after Mr. Slater had left them) they made drawi of the Palazzo Grimani and the Libreria Vecchia, and Vicenza of the Teatro Olimpico of Palladio. In July th reached Milan, and thence proceeded home.

Mr. W. B. Binnie, of the Glasgow School of Architectu studied for a month in Rome, studying classical archit tural details in various museums and buildings, and maki a restoration of the details of the Basilica Aemilia; he th proceeded to Florence and made measured drawings of t

rch of S. Spirito; he also studied Renaissance archi-
ure in Venice, Vicenza, Verona, and Milan.

Professor J. S. Reid, D.Litt. (chairman of the Manag-
Committee), in proposing the adoption of the report,
l that it gave evidence of successful work carried on in
nection with the school. Dr. Ashby, the director, con-
ued his remarkable investigation into the ancient history
he Campagna, and has carried out other important tasks.
cial reference might be made to the approaching publi-
on of the first part of a catalogue of the Municipal Col-
ions in Rome. This volume would deal with the Capito-
Museum. The work will be one of which the friends of
school may be proud. It is a labour of love, carried out
the co-operation of a number of distinguished scholars.
pleasant relations between the school and the Roman
ols of other nations had continued. Since the present
ion opened a very satisfactory number of students had
taking advantage of the facilities for study offered by
school. In connection with the great exhibition at Rome,
school were specially interested in the exhibition of casts
originals to illustrate the art of the Roman Empire
ch was housed in the Baths of Diocletian. It was the first
mpt to give a comprehensive view of the art of the great
ian world, and it will assuredly make an epoch in the
ly of that art which has become so interesting in our day.
as regrettable that the number of casts from Roman relics
Britain was not larger. He trusted that in future the new
ety for the Promotion of Roman Studies would be able
ring about a better appreciation of the remains of the
ian age in this country. The exhibition at Rome was in
f proof of the falsity of the idea that the field of study
ented by the ancient Roman world was approaching
austion. Any competent student who visits Rome, and
iders all that lies within his easy reach will soon receive
pposite impression. The scientific exploration of ancient
y is in reality only in its youth, and there are innumer-
tasks which await the scholar. He would venture to
eal to some of the colleges to encourage some of their
ibers to continue their studies in Rome and Athens. It
no uncommon thing to see young men fresh from the
ols almost pitchforked into their life's work as teachers
lassics or history without a moment's pause for higher
y. Would not these gain immensely in efficiency by a
od of residence in one of the great centres of ancient
isation?

There was a great project, continued Professor Reid,
h promised to give the school a new constitution, a more
le life, and a new and worthy home, and to unite at
centre in Rome all the interests of British students who
rt there, not merely archæological interests, but those
h are artistic and architectural, and literary and his-
al. Among the students who have been welcomed at the
ish School during the whole time of its existence, there
been many who have made art, and, perhaps, especially
itecture, their study. Very naturally some of the
ers of the architectural profession in England have
red that there should be in Rome a residential centre, a
el, available for British students of architecture during
r stay in the city. The cramped space which the exist-
school occupies does not permit of the residence of
ents. When the idea of a hostel for architectural stu-
s began to take place, the committee were glad to have
inated by the R.I.B.A. as a member Mr. J. W. Simpson,
had taken a very keen interest in the scheme. It was
that to have two separate and unconnected institutions in
e for the reception and guidance of British students
ld be a misfortune. The committee were therefore very
rous of co-operating with the Royal Institute of British
itects, of which body Mr. Simpson was the member most
ially interested in this matter. Negotiations were car-
on which gave a good hope of a successful issue. But
e the plan was under consideration, the Commissioners
e Exhibition of 1851 entered the field with a more com-
ensive scheme for an institution which should embrace
British artistic and learned interests in Rome. Long
erences took place between the Commissioners and all the
ortant bodies which guard the interest of art studies in
country, notably, the British School at Rome, the Royal
lemy, the Royal Institute of British Architects, and the
ety of Sculptors. The negotiations have advanced so
as to enable Lord Esher, the chairman of the Commis-
ers, to draw up a memorandum. Lord Esher had shown
iling consideration and courtesy during the somewhat
racted negotiations, and given unwearying attention to
problems that have called for solution. That memoran-
showed that some splendid gifts have been made in
herance of the new undertaking. Sir Rennell Rodd (whose services in connection with the scheme have been of the highest value), in speaking of the site of the proposed expanded school, recently wrote: "Anyone who could have seen this site this autumn in all its beauty would inevitably have rejoiced in our prospects. . . . Things have so changed in Rome to-day, rents are so high, and ground so scarce, that it is quite hopeless to expect to obtain a site for a school and a hostel in the centre of the old city. . . . The new site is within easy reach of the Vatican, a couple of hundred yards from the Villa Papa Giulio, and very near the Borghese Gallery. It will be practically included in the Villa Umberto (Borghese Gardens), the most beautiful and characteristic Roman part. It is on high ground, where the air is good and sanitary conditions will be satisfactory. I can only say that our prospects are envied by everyone here. The city will spread beyond us in future, but we shall remain in a garden and park-like area, which will be as essentially Roman as anything can be in a city which, throughout its history, has always been changing." The committee of the British School at Rome believed, concluded Professor Reid, that the completion of the scheme will benefit all students drawn from this country by the many-sided attractions of a residence in Rome. They felt sure that a bright future might be expected for those departments of study which the existing school has had committed to its charge.

Mr. John F. F. Baker-Penoyre, the secretary, then read the memorandum sent by Lord Esher, the chairman of the Board of Management, to indicate the development and nature of the scheme which the 1851 Commissioners are formulating with the assistance of the British School of Rome and other bodies interested in the artistic side of the proposals. The scheme is, however, still under the consideration of the various authorities concerned. Lord Esher, in his covering letter, said: "I sincerely hope that it will not be long before we obtain from His Majesty a Royal Charter of Incorporation for the new institution when we may regard its establishment as an accomplished fact, and look forward to the great results that are eagerly anticipated by all who are interested in the higher education of the country."

The memorandum from Lord Esher is as follows:—

On the Scheme for the Enlarged British School at Rome.

Part I.

(Giving particulars of the development and nature of the scheme.)

In the early part of the year (1911) the Royal Commissioners for the Exhibition of 1851 resolved to establish a system of travelling scholarships in architecture, sculpture, and decorative painting, on lines somewhat similar to those of the French Prix de Rome, and in the course of their inquiries they were advised to make the scholarships tenable in Rome. They accordingly approached the Archæological Institution, known as the British School at Rome, and arrangements were about to be made with that body for providing facilities for the Commissioners' scholars during their residence in Rome, when information was received that the site of the British Pavilion, erected from the design of Mr. Lutyens for the Exhibition of Rome, had been offered by the Italian municipal authorities to Sir Rennell Rodd, the British Ambassador, to be used for the purposes of a British Institution of national interest. The Commissioners saw an opportunity not only of acquiring a building for the use of their scholars but also of rendering a substantial service to the higher education of this country, and, accordingly, with the concurrence of the British School at Rome, they intimated to Sir Rennell Rodd that if the site in question were made over to them, they would be willing to purchase and adapt the building for the purposes of an enlarged British School at Rome, which should be made thoroughly representative of art as well as archæology.

Sir Rennell Rodd, who had in the first instance offered the site to the British School at Rome, subsequently with their concurrence made arrangements with the Italian Government for the transfer of the site to three nominees of the Crown, namely, Prince Arthur of Connaught, President of the Royal Commission, Lord Esher, Chairman of the Executive, and himself, Sir Rennell Rodd. Shortly afterwards Colonel Charlton Humphreys, the head of the firm of contractors who built the Pavilion, and to whom it will revert at the close of the Exhibition, generously undertook to present the building to the Commissioners.

Thereupon the Commissioners, with the co-operation of the British School at Rome, who throughout had acted in a liberal spirit, showing a due sense of the public interests involved, approached various bodies interested in art, notably the Royal Academy, the Royal Institute of British Architects, and the Royal Society of British Sculptors, with a view to enlisting their support in the scheme, and being met with favourable replies proceeded to the work of drawing up a constitution for the new British School.

The object of the Commissioners in taking a leading part in the establishment of the new school is to secure the institution from sectional control. While they desire that the artistic and archæological interests of the school should be managed by experts, they consider it essential that the general control of the school should be in the hands of a committee comprising a sufficient proportion of laymen, along with representatives of these interests. The full details of the constitution are not yet completed, as the desirability of drawing into the scheme various bodies other than those already mentioned, as well as individuals who, though not themselves artists, are immediately interested in artistic education, has made the work of adjustment and division of labour within the constitution a long one.

As to the objects of the new school, it is intended to provide a centre in Rome where advanced students of art and letters may carry further those studies on which they have been engaged in the art schools and universities of this country. Existing scholarships in art enable a student to travel abroad for a short time and gain what inspiration he can from brief periods of study in the great art centres of the world. But it is of the greatest importance that a student should be able, by prolonged study in the atmosphere of a great art centre, to gain a thorough knowledge of the principles underlying the work of the great masters, and by that means to prepare himself for original work in the domain of art he has chosen. Such an opportunity for study and research in archæology and history is already present in the existing institution at Rome, and the union of these two forces—art and letters—is not the least important feature of the new scheme. It is essential that some measure of guidance and supervision should be available for the students during their residence abroad, and it is the object of the school to meet these needs, rather than to be in any sense a teaching institution.

The Commissioners propose to award three scholarships annually, one in architecture, one in sculpture, and one in decorative painting, and as the scholarships will ordinarily be tenable from two to three years, there will be from six to nine scholars of the Commission always in residence. The school will, however, have accommodation for students holding scholarships in the gift of the Royal Academy and the Royal Institute of British Architects, and other bodies, as well as for students of art and archæology pursuing their researches in and about Rome.

The Commissioners believe that a hostel is an essential part of the scheme. Living in Rome has, of recent years, become more expensive for young students working alone, and it was one of the objects of the Commissioners in promoting the scheme to relieve their scholars from material worries of any kind. The living accommodation at the hostel will be necessarily limited, but it is anticipated that the studio, library, and other working accommodation of the building will be sufficient for as many students of art and archæology as may be expected to make use of it.

The first director of the new school will be Dr. Thomas Ashby, the director of the present British School at Rome, and Mrs. Arthur Strong will, it is hoped, continue to give her valuable services to the school as assistant-director under the faculty of archæology. It is proposed to enlist the services of eminent artists, who may be able to pay occasional visits to the school, in order to assist and advise the art students as occasion arises; but from the nature of the work and the high standard laid down for the scholarships, it is not at present considered necessary to provide for the permanent retention of an artist's services in the school.

PART II.

(*Roughly indicating general lines for the organisation of the school.*)

The supreme control of the institution will be vested in a Council, consisting of about thirty members, including representatives of the Royal Academy, Royal Institute of British Architects, and Royal Society of British Sculptors; archæological representatives of the existing British School at Rome, representatives of other bodies, and also individuals likely to be specially interested in the scheme.

It is proposed that a small Executive Committee appointed by the Council should undertake the general control of the school, and that the purely artistic and archæological work should be organised and supervised by committees of experts forming the Faculties of Art and Archæology. The members of these faculties will be selected for their fitness
for the work to be performed, without any regard t
official positions they occupy. The intention is to fo
faculty of art that will gain the confidence and supp
the artistic world as a whole, while a like result is expect
the archæological faculty, the members of which ar
pointed by the subscribers to the existing British Sch
Rome.

A precise definition of the duties of the Executive
mittee and its relation to other bodies is difficult to p
paper at this stage. It is assumed, however, tha
Executive Committee will be the main determining auth
in matters of administration. It would, therefore,
or report for the Council's decision any question of
affecting the school in Rome or in England, prepar
annual report on the whole school for the Council, nom
official representatives of the school for special occasions
make arrangements for an annual meeting. It would
central financial body receiving interest on endowment
investments, and paying salaries, scholarships and
tenance accounts. It would receive from the faculties
hand on to the staff in Rome for recommendation to th
ferent Italian authorities concerned, all application
permessi. It would appoint or recommend to the C
for appointment the officials of the School in Rome,
the date of the terms or sessions, and authorise the a
of officials from Rome for special purposes. It wou
ceive the director's representations, and give decisions o
more important *res domesticæ, e.g.*, the condition o
fabric, the rules of the school, and allocation of quart
students of various departments.

The Faculty of Art would supervise the work o
various students of art who may come to the school
existing scholarships given by such institutions as the
Academy, the Royal Institute of British Architects
Royal College of Art, and other bodies, and would
those students by drawing up courses of study which
fulfil the conditions attached to those scholarships.

It would formulate a scheme for the scholarships in
tecture, sculpture, and decorative painting, to be giv
the Commissioners for the Exhibition of 1851. It wo
responsible for the examination of the candidates, and
nominate the successful candidates for the Commissi
election. It would further lay down courses of study
shall fulfil the conditions attached to these scholarship
supervise the work of these scholars.

It would advise the Executive Committee on all m
concerning the interests of the students under this fa
it would advise the Executive Committee respectin
appointments on the staff in Rome; it would further s
a report to that committee on the work of the studen
inclusion in the annual report.

It would arrange for an annual or periodical exhi
of the work done by students of the faculty, and also p
for the publication of the more important drawings.

The Faculty of Archæology would carry on tho
searches hitherto prosecuted by the existing British
at Rome. It would continue to publish the series of v
(papers of the British School at Rome, Vols. I.-V.), co
ing researches, and also the Catalogue of the Mun
Museums of Rome, on which the school has been at wo
many years. It would continue to carry on topogra
research, and such excavations as are possible. It
like the Faculty of Art, make representations from ti
time to the Executive Committee respecting its intere
the appointments on the staff in Rome. It would co
to administer such Scholarships as the Oxford, Pelhan
christ and other studentships; and it would collect fun
its archæological undertakings. It would hold an a
meeting of its subscribers, at which it would prese
annual report and balance-sheet. The report would b
mitted to the Executive Committee of the enlarged sch
form a section of the annual report presented by that
to the Council.

ENGLISH MEDIÆVAL ARCHITECTURE.

THE sixth of the course of ten lectures now being del
on Thursdays, at 6 P.M., at London University,
Street, W.C., was given on the 16th inst., and deal
"The Early English Constructional Development."

In his previous lecture Mr. Prior had defined the
sitional architecture as not only developing those constr
experiments by which the masses of fabric were sha
into a framework of construction, but also as formu
this new function of architectural matter; that is t
creating distinct expressions of a new style—for ex
the system of shafted piers, pointed arches, and free

in the round. The preceding Anglo-Norman Roman-
e had already resolved the column, the arch, and the
t of the Classic prescription into constructive constitu-
—shaping the pier, recessing the arch voussoirs, ribbing
vault, and arcading the wall. But the English Gothic
further than this, and its speciality was the emphasised
f of constructional items. Its shafts were to stand free
the pier in the mason's audacity of his new art; the
lines were to be accented by deep hollows, the vault ribs
to be multiplied in emphatic rejection of the theory
lassic groining, the walls were to be arcaded range behind
ge till their substance was a honeycomb of shafts and
es. In all this the English mediæval architecture
rts from the method of Continental Gothic. Its style
t no longer be called cosmopolitan, for it grew insular,
ng a genius and ideal different from those which, con-
orary with it, were producing the immense constructions
he Ile de France Gothic.

he marble shaft was the driving force behind this insular
er of English Gothic. The Purbeck marble architecture,
nning in south-east England, established its character
ughout, breaking up and superseding the local characters
ent in Transitional style. The significant peculiarity of
marble shaft was its being turned instead of dressed by
chisel as in the Anglo-Norman buildings. Tournai, in
nders, had been exporting to England its famous black
ble fonts and memorial slabs. There was, however, at
same time a very similar trade of such things in Purbeck
ble. The first certain instance of the use of Purbeck
ts was in the Galilee at Durham (*c.* 1150). At the
ple, Purbeck marble formed a very substantial part of
building (*c.* 1170-1180). At Canterbury marble pillars
inserted in the crypt as substructure for the piers of the
ity Chapel, in order to carry the new work of William
ens. The earliest was a nondescript Romanesque pier
capital, and then, in the work of William the English-
, a few years later, there is an immediate translation into
English Gothic of circular planned capital. At Chiches-
in the work of 1185, there is the same rapid translation
he hands of the Purbeck marble worker. The abacus,
being originally square or octagonal, became circular.
was the first step taken in an important evolution; the
d planning of the abacus influenced the arch moulding,
h began to be developed from a rounded instead of a
re section. Next, the habit of turning omitted the
ing of the crockets, and the capital was made with the
n moulded bell which was the peculiar form of the
y English style. This Purbeck marble trade produced
stone and marble imitations of the shafts, capitals,
bases. The exploiters found the turnings of the shaft
base in the local material was an easier business than
carving of the foliage in the capitals, so the latter were
ed in white stone, in imitation of the Purbeck patterns.
his way the crocket—*i.e.*, the stiff-leaved crocket with its
ing ball which the Purbeck marblers had taken over
Romanesque and enriched with foliage—was, in the
ds of the stone-carvers, spread throughout the Early
lish style and became the foundation of future experi-
t. The governing condition of the marble expression
in the beds only being, as a rule, from four inches to ten
es thick. The shafts are usually about eight inches in
neter and have their detail on a proportionately petty
. The whole result of this English marble style is
rkably distinctive and unlike anything to be seen on
Continent; indeed, it is in marked contrast with the
st constructional scheme of the Ile de France, nurtured,
ne latter was, on the big calcareous stone of the valley
he Seine. The gradual spreading of the south-eastern
ner all over the country, and the ousting of the local
ts, began *c.* 1200. But in the north and west (those two
nct districts of a big quarry craft engaged in church
ling) these crafts absorbed the principle of the marble
, but, carrying them out in their own materials, con-
ed the development of their own character.

ne of the most striking uses of the detached marble
t in North England is in the chapel of the "Seven
rs," at Fountains. The secular churches of Yorkshire,
ever, took the lead in this remarkable architecture.
rley is considered to be the first specimen of the English
od—strengthened as it was by the vigour of the northern
ncraft. York showed an acceptance of southern marble
white stone; in the vaulting the builders fought shy
one, and, like most northern builders, relied on a wood
ng only. The same interest and expression of style can
een in the "Nine Altars" at Durham, a hall 200 feet
0 feet replacing the Romanesque apse.

The modification of the peculiar local style of the West of England, when there were introduced the marble shaft and freestone architecture of the south-east, is as distinct as in the north. The manner of the Wells building in the nave, with its stout pillars and many moulded arches, was conspicuously of twelfth century western stonecraft. The west front of Wells and the choir of Worcester are the great works of the thirteenth century which witness to the extension of Early English style. Worcester choir was probably started shortly after 1200, but its main building took place from 1220 to 1230. The great front of Wells is one of the most notable buildings of English architecture. It was begun in 1220, and, as compared with the lowest storeys of the nave, shows what a revolution had taken place. Yet this English style is of thoroughly English expression—as much in the planning of the front as in the masoncraft. The purpose of display was plainly not the doorways (that are the point of the contemporary French building) but the screen of sculptured figures, and this conditioned the front. The external richness depends here, as in other instances of the grand manner of the Early English, on the shaft and deeply-cut moulding. There is, however, a robustness of detail as well as a deeply-cut sculpturesque expression which makes the front a legitimate development rather than an exact transplantation of the eastern masons.

The most characteristic outcome of First Gothic style is to be found at Salisbury. The cathedral was begun, *c.* 1220 on a new site, being in this respect unlike all the other great contemporary churches, which were rebuildings or additions to existing structures. For this reason it can be accepted as the model for its time, and the record of what was the ecclesiastical dictation to English church-planning in 1220. Salisbury has its own way of building, which is an astonishingly distinct one from that of the contemporary French cathedrals. Here, for example, are no flying buttresses, but the vaults are carried ostentatiously by the wall—which, indeed, is by no means bent on disappearing for the benefit of the vaulting scheme, but exhibits itself in manifest horizontal extension, the vault pier being hardly expressed at all. Compared with French cathedrals that were being built alongside of it, Salisbury is little, of elegant make, small in its parts, certainly inexpressive of the great vaulting construction of Gothic. At the same time it is picturesquely expressive of its ecclesiastical plan—broken in outline, with an interior of many recessed chambers. When its spire came to be built, in the fourteenth century, it made the cathedral a more than usually finished object for a mediæval building, whereas Amiens appears still somewhat unshaped. It is on similar terms, perhaps, that we must accept the English masoncraft—as a more finished, less ambitious, and decidedly less heroic constructive experiment, but accomplishing what it aimed at with a humdrum, practical compromise, not neglecting the French ideals but interlaying them with their own practice.

This building of Salisbury, before its completion in 1280, brought, said Mr. Prior, English building art to its summit of "Mid-Gothic." An extraordinary and rapid evolution of style had occurred from the Anglo-Norman Romanesque ideal of mass and weight to the Gothic ideal of line and elasticity. This evolution expressed a change in the conditions: it meant the replacement of one mastering condition by another. Architecture, as church building, had, up to the thirteenth century, been essentially monastic and had fallen successively under the influences of every reformation or alteration of monastic ideal. But now the control of its expression ceases. There occurred a very distinct and consequential evolution of religious orders in the early thirteenth century—viz., that of the Friars. The Dominicans, and Franciscans, and Augustinians were established in every town in England; their churches were shortly of a style and magnificence that competed with those of older institutions. But there was no Friars' influence on architecture as there had been Benedictine, Cluniac, Premonstratensian, and Cistercian.

ORIEL COLLEGE, OXFORD.

By Arthur W. Martin, M.A.

ORIEL COLLEGE, in point of date of foundation, ranks fifth in the colleges of Oxford, its seniors being University, Balliol, Merton, and Exeter. Its founder, Adam de Brome, was almoner of King Edward II. He was also rector of St. Mary's, which accounts for the close connection that has always existed between the College and the University Church. Adam de Brome obtained his charter of foundation in 1324; for his statutes he took as a model those which Walter de Merton had framed for his College of Merton in 1269. The College was refounded by Edward II. in 1326, when he bestowed on it the advowson and rectory of St. Mary's. The power of the King was, however, rapidly on the wane, and Adam de Brome, prompted presumably by the feeling that his new institution would be safer under ecclesiastical than under Royal guidance, transferred the College to the patronage of the Bishop of Lincoln—Henry de Burghersh—in whose diocese Oxford was at that time included. This arrangement lasted until 1726, when, as the result of litigation, it was decided that the statutes of Edward II. should be preferred to those subsequently granted, and that the College was in consequence a Royal foundation.

The College was known originally as the "Hall of the Blessed Mary at Oxford," but the title soon became altered to that of "Oriel"—the reason of which change is explained in the following way. Shortly after its foundation the College became possessed of a tenement, originally known as Senescal Hall and later as "La Oriole," situated at the angle formed by the junction of what are now known as Merton and Oriel Streets, and occupying part of the site of what is now the Front Quadrangle. Various suggestions as to the meaning of the name "La Oriole" have been made; its significance is by some referred to an architectural detail in the building, by others to the word "oratoriolum," "a place of prayer." However, the former is probably the more likely explanation.

The College must in the first place be briefly considered from the architectural point of view. It should be remembered that, as is the case in some of the other colleges at Oxford, none of the original buildings now remain, and although it is one of the older foundations, it is architecturally contemporary with Wadham—a College which dates only from the beginning of the seventeenth century. A rough idea of what the first buildings were like may be gathered from a drawing by Neale in 1566.

Shortly after its foundation the College began to acquire property, starting from "La Oriole" and extending northward until it ultimately reached to the High Street. The boundaries on the west were Schidyard Street (now Oriel Street), and on the east Grope Lane (now Grove Street). As time went on there arose on the ground now occupied by the Front Quad buildings which formed the original College. These consisted of a chapel on the south side, adjoining Merton Street, which was built in 1373—mainly through the generosity of Archbishop Arundel—a library on the east side, and a hall on the north side. The demolition of the then existing buildings and the rebuilding of the College were begun in 1619. Anthony Blencowe, who was Provost from 1574 until 1618, had seen that the growth in numbers and importance of the Society over which he ruled would necessitate increased accommodation, and on his death he left a considerable legacy for effecting that end. The work was undertaken and vigorously carried on by his successor, William Lewis, who was Provost from 1618 till 1621, and in 1619 the west front facing Oriel Street was erected. This was followed in the next year by the south front facing Merton Street. After an interval which was spent in collecting further funds, the work was continued in 1636, and the Quadrangle was completed by the building of the north and east sides, the whole being finished in a uniform style. The charm of the Front Quad is undeniable, and in its general plan and style of design it may be compared with the Front Quads of University and Wadham, and the Back Quad of Jesus, with which it is contemporary.

As one enters, the Provost's lodgings lie immediately on the left. On the east side is a flight of steps leading to the hall, and passing under a portico, which bears the inscription "Regnante Carolo"—for the work was finished just before the outbreak of the Civil War. This portico was restored in 1897, and is a reproduction of the
much older one which had long ago fallen into decay
had been superseded by a different design. Of the st
over the portico, in canopied niches under semicir
pediments, the two lower are those of Edward II.
Charles I. (or possibly, as certain evidence goes to s
of James I.), and that above is of the Virgin and Ch
recalling the original name of St. Mary's College.

In the hall, which possesses a fine oak roof,
portraits, among others, of Edward II., Queen A
Bishop Butler, Sir Walter Raleigh, Keble, Whately
Arnold of Rugby.

The chapel, which was restored in 1860, and agai
Mr. T. G. Jackson, in 1884-5, does not contain
thing of particular interest. The window on the
side, nearest the entrance, dates from 1767, and
memory of Henry, Duke of Beaufort.

(To be concluded.)

ILLUSTRATIONS.

DESIGNS SUBMITTED FOR BIRMINGHAM OFFICES OF ATLAS ASSURANCE COMPANY.

THESE designs were submitted in competitio
Messrs. Nicol & Nicol for the above buildings
requirements being a dignified scheme to form part
street architecture of Colmore Row, the most impo
position for offices in the city. The façade was to
Portland stone, containing large windows to provide
lighting to the various offices.

Scheme A shows the treatment suggested for a
entrance for the insurance office, in the design of wh
incorporated the emblem of the company—viz., Atlas
porting the world, a piece of sculpture to a large sc
the round, which would, with its architectural setting
great distinction to the building. The fenestration
upper part is so arranged as to concentrate the inter
the single piece of sculpture, and to gain effect b
contrast of plain surfaces with the rich centre. The
is crowned by a colonnade to the top storey, thus pro
the horizontal lines necessary to give dignity to the
treatment below.

Scheme B is designed to be the outward expressi
a plan having two entrances, which are on either si
a large window lighting the general office. This trea
at once suggests the idea of a large central feature fl
by strong vertical lines. In this case it is worked
the use of a large semicircular arch for the main then
the keystone of which is placed the figure associated
the name of the company. The wall surface beneat
semi-arch is recessed slightly to give the necessary
and is enriched with an attached Ionic order, the c
of which is at the springing of the arch, the lines
columns being carried up to its soffit, a favourite trea
in Classic and Renaissance times.

WROUGHT-IRON GATES, THE MANOR HOUSE, JES NEWCASTLE-ON-TYNE.

THE eighteenth-century gates shown on the accompa
drawing are those to the old Manor House, Jesmo
Georgian house of pleasing appearance. The ironwork
very good quality and of excellent design. Though n
sessing the delicate scroll-work of gates seen further
a good effect is obtained by judicious spacing of pane
use of different sections of metal. The gates are flank
each side with stone piers about 100 feet apart, with
between, the whole forming a charming and thorough
of craftsmanship. The drawing, by "Sans Peur,"
awarded a prize in *The Architect* Students' Sketching
Measuring Club.

ORIEL COLLEGE.

WE commence this week the publication of a num
illustrations of Oriel as part of our series o
Oxford colleges. A descriptive and historical accou
Oriel is given above.

According to the *Board of Trade Journal*, the *F*
Fédérale Suisse of November 8 contains a decree provi
sum of £459,600 for the purpose of enlarging the F
Polytechnic School at Zurich; and plans have been sub
to the Prague city authorities for the erection of a ho
in Lieben which will consist of sixteen sections an
have accommodation for some 550 beds. The cost is
mated at £250,000.

OYAL INSTITUTE OF BRITISH ARCHITECTS.

N ordinary general meeting of the Royal Institute was held at Conduit Street on Monday, November 20, Mr. onard Stokes, President, in the chair.

Mr. Henry T. Hare, Hon. Secretary, in announcing the ease of Mr. Edwin Austin Abbey, R.A., Hon. Associate, cted 1905, said his work was of such a kind as to particuly appeal to architects in so far as it was work of a decorae nature. The Institute, therefore, felt that they had susned a very serious loss in Mr. Abbey's death. The late . D. G. Driver had been Secretary for twenty years of Architectural Association. A great many of the Institue's members had been associated more or less intimately th the Association, and they would realise how great was loss in the death of its energetic Secretary, and how diffit it would be to fill his place adequately. Mr. William rrest Salmon, Fellow, elected 1876, past President of the asgow Institute of Architects, had been a sometime mber of the Institute Council. A vote of condolence was ssed to the relatives of these three gentlemen. The decease s also announced of the following members since the June eting of the Institute: Mr. William Henry Hill, Fellow, cted 1888; Mr. James Pigott Pritchett, Fellow, elected 53; Mr. George Ransom, elected Associate, 1880, and llow, 1906; Mr. John Davidson, Licentiate; and Mr. rry Edward East, Licentiate. Obituary notices of these ntlemen have appeared in the *Journal*.

Mr. H. T. Hare also announced that Mrs. Arthur Cates l presented to the Institute a handsome mahogany cabinet ntaining a large and valuable collection of photographs, incipally of buildings in Italy. A vote of thanks was ssed to the donor.

Among the members attending for the first time since their ction, who came to the table to be formally admitted by the esident, was Mr. Harold Oakley, Licentiate.

The following opening remarks were then made by Mr. Heathcote Statham, in connection with his illustrated view of

Modern French Sculpture.

When my friend Mr. Spielmann gave us his interesting ustrated paper, three or four years ago, on modern English lpture, it occurred to me that it might very well be folved, at a convenient season, by an illustrated paper on dern French sculpture. Perhaps this paper would have ne more suitably, as it was first intended, at the close the session, since it is not a strictly architectural subject, t I was asked to read it now to take the place of another, author of which could not be ready in time; and, after , sculpture is the art most closely connected with architecre, being, as I heard a sculptor once remark, "only a gher form of masonry." But this was said at a meeting of hitects.

That some notice and illustration of modern French sculpre is not uncalled-for is evident from the fact that, as a neral rule, I have found that the only name that anyone ows in England is that of Rodin. I went into a well-own art-photographer's to ask if they had any photoaphs of modern French sculpture, and was told—"Rodin? , yes; we have a number"; and the same was the result the London branch of a French art-photographer's. In ch case they had a whole portfolio of Rodin's works, and all the other eminent sculptors of France only some half-zen stray photographs; and why that was, the usual law supply and demand, of course, explains. As to the origin d the reasonableness of what I call "the Rodin craze," have something to say just now. In the meantime I would rely remark that if people on this side of the Channel ally believe that French sculpture of to-day is summed up the works of M. Rodin it is high time they were told differtly. I believe I may claim to have seen every piece of ench sculpture of importance for nearly a quarter of a ntury back; at all events, I have seen and made notes on e sculpture of every Paris Salon since 1889. And I wonder netimes whether those who profess to be interested in connporary art, but who never take the trouble to visit the lon—whether they realise what the annual sculpture exhiion at the Salon means. It means that for at least a arter of a century back—first in the great central court the old Palais de l'Industrie (originally built for the 1878 xhibition); then the vast space covered by the roof the Galérie des Machines; lastly in the great central court the magnificent Palace of Art built in 1900—there has been en every year a collection of between 800 and 900 new works in sculpture,* some of them, no doubt, commonplace in conception, some of them, perhaps, rather *outré* and violent in composition; but all, I think, up to a good standard of technical execution, and a considerable number of them every year representing, both in conception and execution, the highest style of sculptural art. I do not think the whole history of art can show such an extraordinary evidence of artistic energy and vitality as is displayed in these successive annual exhibitions of French sculpture. I have in most years had the opportunity of recording my impressions on the Salon exhibitions in one or another English periodical (chiefly in the *Fortnightly Review*, or, more lately, in the *Nineteenth Century*), and, as one cannot very well remember, twenty years afterwards, what one's impressions were at the time, I should like to quote a few words that I wrote in closing a review of the Salon of 1890:—

"Taking this as a representation of French sculpture for one year, and comparing it with our little show at the Royal Academy, the contrast is extraordinary enough; and the evidence of mental vigour and power of invention, as well as of execution, among French sculptors is equally extraordinary. . . . In walking through the collection at the Palais de l'Industrie we are confronted by new ideas, new treatment, and new force and meaning imparted to old subjects; we are gaining new poetic conceptions of those subjects; and this not only in isolated instances but in the case of a large proportion of the works exhibited."

If there has been a certain degree of decline in French sculpture the last few years—and I am afraid there has—still I think the impression here recorded as to its intellectual interest would be true, in the main, up to the present moment. It must be admitted, however, that 1890 was rather an exceptional year; that and 1904 are the two greatest years I remember in Salon sculpture.

Now, what do we look for in sculpture? First and preeminently perfectly modelled form, sculpture being the art dealing with form only, without the assistance of colour and perspective; for even relief sculpture is not so much perspective as the super-position of two or more planes of delineation. And hence the nude figure will always be the highest effort and ambition of the sculptor: first, because there alone it is that form has to be refined to the utmost. As Browning puts it in one of his poems, when he imagines someone exclaiming:—

> "'As like a hand to another hand!'
> Who said that, never took his stand,
> Found and followed, like me, an hour
> The beauty in this—how free, how fine,
> To fear, almost, of the limit-line!"

And secondly, that the figure, delivered from the conventional bondage of costume, becomes an abstract thing, not tethered to time or place. And though mere beauty in a figure is in itself enough to justify sculpture, this abstract figure may also be made the means of symbolising an abstract idea, so that sculpture may in that sense become, what Matthew Arnold said poetry ought to be—"a criticism of life." And it is for the frequent recurrence of this effort to symbolise thought that French sculpture of the modern period is, among other qualities, especially remarkable. And to furnish man with an adequate material for such abstract and symbolic form in sculpture, God created marble:

> —"as it were
> Some clear primordial creature dug from depths
> In the earth's heart, where itself breeds itself,
> And whence all baser substance may be worked":

so says the sculptor in "Pippa Passes." And when his bride glances up at the model of a figure of a mediæval German Kaiser in splendid array, he says:—

> "Ah! do not mind that; better that will look
> When cast in bronze":

and he was quite right; marble is too ethereal a material to be prostituted to the carving of tailoring and millinery.

The expression of abstract idea through abstract form is then the highest mission of sculpture. Beyond or below that, what possibilities are there? The actual form and presence of memorable personages, in their habit as they lived, can be commemorated in bronze, though not suitably in marble; or, which is far better, the portrait head alone can be represented, in bronze or marble, accompanied by figures symbolical of the character and career of the person commemorated, which is the favourite way with the French; and here we come round again to the abstract ideal. Sculpture may represent also significant facts and forms from the life of its own day, especially those which are typical rather than merely incidental; though this is a function of sculpture to be used with caution and reserve, lest it should degenerate into mere realism and playing to the gallery. Of all these varied functions of the art of sculpture you will see examples in the illustrations I have to show you.

---

* The Old Salon this year contained 868 works, the New Salon (in which sculpture is less prominent) 334, making a total of 1,202 works produced for one year's exhibition only.

Mr. Statham then put on the screen a succession of slides showing typical works of the best sculptors. First came a small group of men now dead. These included Guillaume, Paul Dubois, Carpeaux, E. Barrias, H. Chapu (particular reference being made to his monument to Henri Regnault), L. Gérôme (whose equestrian figure of Bonaparte at Cairo was shown), and Jules Dalou. In the next group came A. Mercié (equally good at vigorous groups like *Gloria Victis*—now in a courtyard of the Paris Hôtel de Ville—and restrained monuments such as *Souvenir*), Gustave Michel, A. Boucher, D. Puech (*The Siren* and *The Muse of André Chénier*), Verlet, Mercié (who contrived to give some dignity to his monument to King Louis Philippe and his queen, Marie Amélie), Jean Boucher (*The Antique and the Modern*), Roger Bloche, R. de Saint-Marceaux (*Genius Guarding the Secret of the Tomb*), and Albert Bartholomé. Of M. Auguste Rodin the lecturer did not speak with unqualified praise. Rodin's work had been exhibited in London and practically ignored before the present Rodin craze.

In concluding his review Mr. Statham pointed out three advantages which the French enjoyed in connection with the advance of sculpture. First, they possessed a place where they could really exhibit it; secondly, the French public was really and intelligently interested in the art; and thirdly, their Government take care to encourage and reward it. If English sculpture was to develop with the freedom of French, one requirement was that the State should be prepared to spend money on it and to take an interest in it. Up to the present any efforts to accomplish this are met with the official reply, "We have no money for it."

Sir W. Goscombe John, R.A., said he had been asked to propose a vote of thanks to Mr. Statham for his most interesting lecture. Mr. Statham had given them such a tremendous lot to think about that it was almost impossible, in proposing a vote of thanks, to touch upon the many most interesting points he had raised. They had had an amazing and bewildering vision of modern French sculpture. Everyone who loved that sculpture would probably have each had their own different selection of examples, but what Mr. Statham had shown was sufficient to suggest what that great intellectual effort meant. Many of the works shown were epoch-making, and looked upon all over Europe as inspirations—things which, during the last twenty-five years, have moved every sculptor to make a great effort himself. One looked upon French sculpture as the last of the three great periods. First came the Greek, then the Italian, and then the French. All over Europe the local schools were more or less echoes of the modern French. There never had been, he believed, a time when France was without great sculpture, from the days of the building of Amiens and Rheims down to the present day. What is more, they have never been tied up to paralysing conventions. Such work as that of our Gibson and Thorwaldsen would have been impossible in French art, in which the conventions of scholarship were vitalised by a most loving study of nature. With the first all nature took a second place, and their thoughts were all for the antique. The mere mention of Rodin's name was a challenge for difference of opinion. But all would agree, whether they admired him or not, that he was an epoch-making sculptor. No sculptor since the days of the Greeks had interested people so much. Rodin was now a tremendous influence. If one considered the epoch-making work of all time he did not believe there was anything more remarkable than Rodin's *St. John*—anything which been more dynamic in its force. Personally he (the speaker) felt very proud that they had got a copy of it in South Kensington, and he felt pleased to have subscribed towards it. In England they only knew of him because the papers found that he made interesting "copy." There were now at least a score of great French sculptors. One of the things which had occurred to him while listening to the paper was that the French seemed to find their true expression in the art and that they had something definite and exact to say. One could not fail to be struck also by the importance of the nude. In expressing abstract ideas one was compelled to go to the nude, for if one went to costume one was connected with some definite date. In England sculptors were now in
an almost pathetic position. All of them were full
enthusiasm and strongly desirous of doing all they coul
produce beautiful things and to make worthy monume
But they were all dominated by the committees for w
they worked. One of the greatest of modern sculptors
St. Gaudens, but he produced scarcely a single nude fig
because American public opinion would not have them.
aim of every American monument seems to be to show
boots, trousers, coat, and watch and chain of the pe
commemorated. The experience of almost all sculptors
that the committees will have all this. In France, howe
one got the State as a great patron, as well as the var
municipalities all over the country. That was why
got two Salons filled with a mass of living work. In
land there was nothing like that; there might be a com
sion from a municipality for a bust of a mayor or a
alderman, but that was all. The one redeeming featur
this country was the Chantrey bequest, and they ha
be very grateful for giving them that chance. In the R
Academy galleries it was only possible to show little thi
otherwise the works would be out of proportion.
public powers of discrimination seemed to depend u
their being able to rub their noses against it in orde
see if it was smooth and highly finished. To impr
there must be in this country more sympathetic commit
and a larger place to show the sculpture. Then per
the British public will begin to appreciate the art.

Professor W. R. Colton, A.R.A., in seconding the
of thanks, said it was a delightful evening such as one ra
got in this arid desert of London. Mr. Statham had st
that one of the greatest qualities of sculpture was its pe
form. But to-day people hardly seemed to think much a
the perfect form of sculpture. When the Greeks did a fi
they modelled it perfectly, however far removed it was
the eye. The Elgin marbles, for example, were so unn
sarily well done, they could not be fully appreciated u
they were brought closer to the eye in the British Muse
To-day all this is not thought necessary. People seen
imagine that the roughest-hewn blocks of marble ha
virtue all their own. Consequently, in a building the hi
the sculpture went the less money the sculptor got. Of cou
he felt the greatest admiration for French sculpture.
there was also a good deal of fine English work, which,
rule, could not be seen. A noteworthy display was that
at the Franco-British Exhibition, and it competed
favourably with the French work shown there. A Fr
sculptor who saw it said that the English had nothing to
learn. The French throw over all limitations. The gr
of dancers, by Chapu, for instance, which is outside the O
House, Paris, was rather too vital and overdone. In m
instances they went beyond what was the legitimate prov
of sculpture. A good deal of what Mr. Statham had
hibited belonged to the more classical school, and posse
reticence, refinement, and reserve. In leaving his work
finished Rodin followed Michel Angelo, who was too
to do so. But Rodin increased the unfinished part to
immense amount. Of course, he had only done this sinc
found that eccentricity paid, as it attracted the public.
first experiment was to bury the base so that the figure see
to be walking on the floor. Then he elevated the next fi
on a pole. The foundation of the whole thing was that R
was a great sculptor. It had also been found out by
school that if one did a figure, that was so much to o
credit; but if one cared to cut it up and exhibit the pi
separately your credit was so much the more enhanced. T
was also great gain by this method. If one wished, it
easy to stick them together again as a whole afterwards.
modern times undoubtedly wonderful sculpture had
produced. Ever since the time of Michel Angelo sculp
have been wishing to say too much. In times when thou
was easily crystallised, there was only one idea to expres

Mr. Leonard Stokes, the president, in closing the dis
sion, suggested that the order of Mr. Statham's suggesti
for an improved state of things might be reversed, for if
public would only appreciate sculpture, the gallery to exh
it in and the Government ready to pay for it would foll
The existing state of affairs here is due to the fact that
public is so unappreciative. Fortunately they seemed t
waking up. He had expected that Mr. Statham would h
endeavoured to demonstrate that the architect was necess
at least in some works. They had heard of a sculptor
became a painter, and of a painter who became a sculp
but not of an architect who became a sculptor. It was in
esting to find that no instance of this had been quoted.
his thanks to Mr. Statham for his paper he would like to
thanks for the most excellent set of slides shown.

Mr. H. Heathcote Statham, in replying to some of the ints raised, said he was quite conscious there were included the two Salons works of vulgar realism. He was not lec- ring on English sculpture, so he had not alluded to the onderful progress he had noticed here during the last enty-five years. What was wanted in this country was eater opportunities and greater encouragement. As to the des, one-third of the photographs he had collected himself d for the others he was entirely indebted to the French ulptors who had sent over photographs of their work. With- t these he could hardly have given his paper.

THE SOCIETY OF ARCHITECTS.

HE first ordinary meeting of the new session was held at 28 Bedford Square on November 16. It was preceded the annual meeting of the students for the election of the mmittee and officers for the year. The Chairman of the udents' Section, Mr. H. V. Milnes Emerson, A.R.I.B.A., esided at the students' meeting and was re-elected, as were so the members of the Committee.

The President of the Society, Mr. G. E. Bond, J.P., then ok the chair, and the minutes of the previous meeting ving been confirmed, the proceedings opened with the mination of twenty-six candidates for membership and five the Register of Students.

The ballot for new members and students resulted in the ction of twenty-nine members and nineteen students. e President then handed Mr. J. R. Leathart, the winner the Society's Travelling Studentship, 1911, the silver dal and a cheque for £10, the latter being the balance of e award of £25. The Chairman congratulated the reci- ent on the work which he had submitted, both in the com- tition and as result of his subsequent sketching tour. r. Leathart's drawings, together with others, were on ew.

The hon. auditor, Mr. Ellis Marsland, presented the ditors' report and balance sheet for the year ended tober 31, 1911, and stated that there was an increase in e revenue over last year of £666, due principally to the crease in the membership, the membership examination ndidates, and on the revenue from publications. The neral expenses had naturally increased somewhat owing to e maintenance of the establishment and new premises, but ere was nothing to call for particular comment in regard the expenditure. The net result was a surplus for the ar of £626, which was a record for any year. The total rplus of assets over liabilities was £2,626, and the loan om the bank had been reduced during the last fortnight om £1,500 to £1,100. In comparing one year with another ey had to take into account the varying character of the rk which the Council was called upon to undertake, and was satisfactory to find that the first year of the Society in new home had been the most successful of its existence, d the action of the Council in thus providing for the needs the Society in the way of accommodation had been justi- d. Mr. Marsland proceeded to refer to the progress of e Society during the past thirteen years, as shown by a art which had been prepared by the Secretary. This owed that the annual income had risen during that period om £710 10*s.* to £3,222, the subscriptions from £559 to ,886, the entrance fees from £8 to £285, and the member- ip from 530 to 1,076. The progressive policy of the uncil had borne good fruit, and ever since they had taken e wise step of raising the annual subscription (a matter ich met with the entire approval of the members at the ne) the Society had continued to prosper in every possible y and had never stood in a more sound condition finan- lly and otherwise than at the present moment, and this in ite of various hindrances which had been encountered ring the past year. The auditors' report and balance sheet re unanimously adopted.

The President then gave his annual address on the posi- n of the Society both in relation to the Royal Institute d the question of registration. The address was given in ll in our issue of last week, pp. 297-299.

Mr. A. E. Pridmore (Vice-President) proposed a hearty te of thanks to Mr. Bond for his most excellent and prac- al address. They could imagine, he said, that it was mewhat difficult for Mr. Bond in his fourth presidential dress to find anything new to say. Every word, however, at they had heard was practical. Mr. Bond had also ven an outline of what had been done with regard to the oposed Registration Bill. The members would recognise e great care taken by the President and Council in seeing at the interests of the Society were preserved.

Mr. G. A. T. Middleton, in seconding the vote of thanks, remarked that there were three things in the address to which one might pay particular attention. The first was as to the work carried on between the Royal Institute and the Society of Architects. On that subject every member of the Committee had to speak with a certain amount of reserve. The success of the negotiations was, however, almost entirely due to the firmness and perfect straightforwardness shown by their President, who had conducted them as perfectly as any man could have done. The Society could not have been led by anyone better. He himself looked upon the educational powers of the Society as of the most importance. The value of the examinations was shown by the greatly increased importance of architecture, and that men going through them are compelled to train. If the proposed examinations were made compulsory, education would become compulsory also. Architecture as such would advance, the general standard would rise, and if the general standard rises so will the standard of those at the top. He felt sure architecture was going to advance very far in the future providing that they could only obtain a thoroughly sound Registration Bill. The latter was what they were all aiming at. Possibly here and there inconveniences would be felt which must be put up with for the sake of future generations, just as England of to-day has been made by the sacrfices of our forefathers.

The vote of thanks was passed with acclamation.

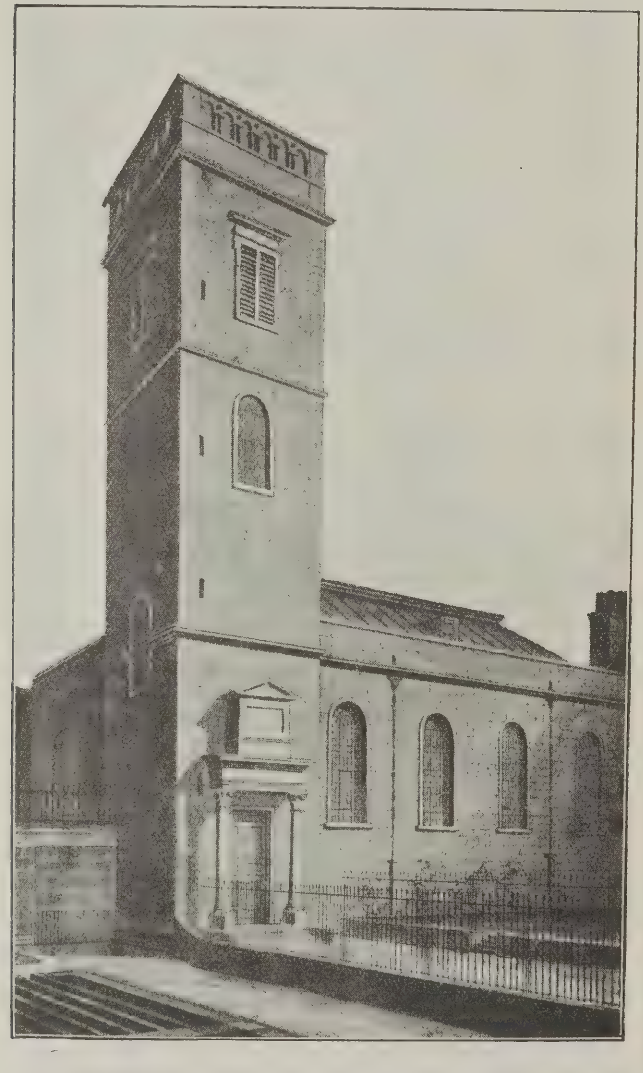
Mr. Geo. E. Bond, in thanking the members for the way in which they had received the vote of thanks, assured them that anything he had done for the Society during the last four years had been done with the greatest possible goodwill. At all times he had had the interests of the Society deep in his heart. He believed that at the present moment they were on the way to success, and he sincerely hoped that before a year had passed the whole arrangements with the Royal Institute will have consummated and that he would be relieved from his onerous position.

LOMBARD STREET AND THE CHURCH OF ALL HALLOWS.*

IN the thirteenth century, after the expulsion of the Jews, the Lombards (or merchants of Genoa, Lucca, Florence, and Venice) succeeded them as the moneylenders and bankers of England, establishing themselves in the street to which they gave their name—Lombard Street. They remitted money to Italy by bills of exchange, and transmitted to the Pope and Italian prelates their fees and the incomes of their English benefices. To these industrious strangers we owe many of our commercial terms, such, for instance, as debtor, creditor, cash, usance, bank, bankrupt, journal, diary, ditto, and even our signs £ *s. d.*, to represent *libri*, *solidi*, and *denarii*. In the early part of the fifteenth century these merchants advanced loans to the State, their security being a mortgage of the Customs duties. Pardons and holy wafers were sold in Lombard Street before the Reformation. One of the celebrated dwellers in mediæval Lombard Street was William de la Pole, king's merchant or factor to Edward III. In 1338, at Antwerp, he lent that warlike and extravagant monarch a sum equivalent to £400,000 of our money. In 1559, when Gresham was honoured by being sent as English ambassador to the Court of the Duchess of Parma, he resided in Lombard Street. His shop (about the present No. 18) was distinguished by his father's crest, namely, a grasshopper. This sign was in existence as late as 1795. Gresham was not only a mercer and merchant adventurer but a banker, a term which in those days meant also "a usurer, a pawnbroker, a money scrivener, a goldsmith, and a dealer in bullion." He was appointed royal agent in Antwerp, where the merchants of the Low Countries subscribed to the King's loans at 14 per cent. interest. He succeeded so well that he was knighted. After his knighthood Gresham seems to have thought it undignified to reside at his shop, so left it to his apprentice and removed to Bishopsgate, where he built Gresham House. It was a vulgar tradition of Elizabeth's time that Gresham was a foundling, and that an old woman who found him was attracted to the spot by the chirping of grasshoppers. The story, no doubt, was an invention to account for the crest. Gresham's wealth was made chiefly by trade with Antwerp, and, dying childless, he made over the whole of his fortune in equal moieties to the City and the Mercers' Company. In the reign of Charles II. the "Grasshopper," in Lombard Street, was the sign of another wealthy goldsmith, Sir Charles Duncombe, the founder of the Feversham family and the purchaser of Helmsley, in Yorkshire, the princely seat of George Villiers, Duke of Buckingham. Sir Robert Viner, the Lord Mayor of London in 1675, and apparently an especial favourite with Charles II., resided in Lombard Street. The Post Office, Lombard Street, formerly the General Post Office, was originally built by this great banker on the site of a noted tavern destroyed in the Great Fire of 1666. At the commencement of the nineteenth century Lombard Street was a narrow, tortuous roadway flanked on either side by dwellings of smoke-blacked brick matching in colour the mud with which coach or wagon, or mail cart, as it passed along, freely bespattered the basement storeys. After about 3 P.M. miserable oil-lamps tried to enliven the foggy street with their "ineffectual light," while through dingy, greenish squares of glass tall tallow candles dimly disclosed the mysteries of bank or counting-house. As six o'clock drew near the district echoed with the din of letter bells, and from every quarter came men, women and children hurrying to post their letters. Then later a long train of gaily-got-up coaches emerged from Lombard Street, bugles and horns sounded, and mails and passengers started on their journey by road into the provinces. Lombard Street, still narrow and dark, now presents a very different aspect. In Plough Court (No. 1), Lombard Street, Pope's father carried on the business of a linen merchant. The house was afterwards occupied by the well-known chemists, Allen, Hanbury & Barry. Mr. Allen was an eminent chemist who found that the diamond is pure carbon. He was mainly instrumental in founding the Pharmaceutical Society, and distinguished himself by his zeal against slavery.

---

* Read at a meeting of the Upper Norwood Athenæum by Mr. Arthur J. Pitman.



SOUTH-WEST VIEW OF ALL HALLOWS CHURCH.
From an old Water-colour Drawing.

In digging a sewer in Lombard Street in the latter part of the eighteenth century, the remains of a Roman road were discovered, with numbers of coins and several antique curiosities, some of great elegance. The beds through which the workmen sunk were four. The first consisted of factitious earth, about 13 feet 6 inches thick, all accumulated sinc desertion of the ancient street; the second of brick, 2 thick, the ruins of buildings; the third of ashes, 3 inches; the fourth of Roman pavement, both common tesselated, over which the coins and other antiquities discovered. Beneath was the original soil. The pred nant articles were earthenware, and several were orname in the most elegant manner.

When every house of business was known by its sig can easily be imagined how picturesque must have been appearance of so many signs in a street full of bus houses. In the Guildhall Museum some of these signs still be seen, and the book by Mr. F. G. Hilton Price des ing the signs of Lombard Street, with pictures of then a work which must have a special interest for all pe interested in antiquarian matters.

The church of All Hallows, which is the old Englis All Saints, is now the church of the united parishes o Hallows, Lombard Street; St. Benet, Gracechurch St St. Leonard, Eastcheap; and St. Dionis Backchurch.

All Hallows forms one of the thirteen Peculiars of Archbishop of Canterbury in London. The first recor the church dates back to 1053, when, according to "Monasticon Anglicanum," Britmer, or Brihtmeru citizen of London, gave to the Archbishop his messuag Grassechurch, and by the license of Stigand, the Archbis and Godric, the Dean, he gave to them the church of Hallows, Grassechurch, as described by Stow. The li has remained in the gift of the Archbishop ever since. original church lasted till the end of the fifteenth cent when it was rebuilt. This building lasted till the G Fire of 1666, in which conflagration it suffered severely. parishioners tried their hardest to patch up the walls straw and lime to conceal the effects of the fire, but a no purpose, and the church was rebuilt by Sir Christo Wren at a cost of £8,058, the work being completed in 1 This was the last work in the city of London in which W took part. The church was restored and redecorated in by Messrs. Francis (architects), when ten new stained- windows were put in by Gibbs.

The church is completely hidden from view, an approached through a narrow alley from either Lom Street or Gracechurch Street. It is entirely surrou by buildings, which makes the church somewhat dark. ternally the architecture is, perhaps, somewhat poor, th not without special features. As we look at the tower w an example of a simple square tower making a contrast i severe form and pallid purity of tone with its dusky ne bour the tower of St. Edmund, King and Martyr. worthy of more particular notice are, first, the beauty of mouldings over the upper windows, forming a minor cor to the main one above, and, secondly, the pierced par in which Wren so seldom indulged, but here so appropria introduced. The tower is 85 feet high, and contains a of bells brought from St. Dionis Backchurch in 1879.

In the porch of the south-west entrance is placed the gate through which one formerly entered from Lom Street. The piers and lintels of this gate are curio sculptured with death's heads, cross bones, hour-glasses, other emblems of mortality. It was erected just after Great Fire, and was removed to the porch where it stands in 1865. By many it is thought to be a typ what is known as a "Resurrection" gate, for which London churches are noted.

Inside we view a building oblong, without aisles length 84 feet, in breadth 52 feet, and in height a 30 feet. For such a large, plain church it must be admi that Wren showed his skill in securing both an appear of grandeur and a peculiar gracefulness the more ex ordinary in the absence of detached pillars. The ceilin flat and of plaster, with coved sides all round and a sha recess at the east end containing the altar. In the ce of the ceiling a skylight in a quadrangle of fretwork inserted in 1880 to obviate the darkness resulting from coloured windows. On the north and south sides of church are lofty windows with groined coves. The c glory of the church is, perhaps, the extremely beautiful richly carved woodwork, the churchwardens' and Corpora pews, and the doorways, pulpit, and organ case being esp ally noticeable. It is abundant in quantity and excel in quality. Round the church is a wainscoting of oak 9 in height. No period in modern English architectur more justly noted for foliated carving than that belongin the school of Sir Christopher Wren, at the head of which st Grinling Gibbons. For skill in workmanship, dexterit manipulation and close imitation of nature, this pe stands, perhaps, higher than any previous or later

e altar-piece, one of the most imposing of City altar-
ces, was erected at a cost of £186. The whole composition
overed with most beautiful carvings of wreaths, foliated
k, cartouches and shields. The upper part is a circular
el with the "Agnus Dei" finely painted and adorned
h an enrichment of carving, flowers, fruit, &c. ; above all
a large triangular pediment and seven candlesticks
resenting the seven Churches of Asia. Below the "Agnus
" and in the middle between the arching parts of the
nes of the two pictures is a pelican—the emblem of piety—
ling her young with her own blood, thus typifying our
iour. The two pictures are entitled "Ecce Homo" and
hrist Bearing His Cross," and take the place of the two
les of the Law, now removed to the north side of the
ss. The entablature of the four columns of the reredos
eautifully cut, and the fine pediments are of the Corin-
n order. The communion table is veneered; under-
th is the Holy Lamb on a chalice, and at each of the four
of the table a dove.

The pulpit is finely carved and veneered, as is also the
ar and sound-board, which are of the Ionic order adorned
palm branches, flowers, leaves, fruit, vases, &c.

The organ case is richly gilded and carved. It was
ted by Renatus Harris in 1675, and remained unaltered
n to 1868, being rebuilt in 1870.

The font, of marble beautifully sculptured and sur-
nted with an equally beautiful carved oak cover, is but
more feature of the exquisite work this church contains.

he two doorways are now erected at the west end of the
rch, on the north and south sides respectively, with the
churchwardens' pews and the entrance to the centre
e between. Both doorways are of the Corinthian order,
fluted pilasters and well-carved capitals, frieze and
ice. Over each is a large circular pediment containing,
he one case, the image of Death, and in the other the
ge of Time. Underneath are other small pilasters and
arching pediment, the space between which and the
ice under it is replenished with a piece of curious carv-
the view of part whereof is intercepted by an artificial
ain in wood, likewise carved, but so natural that many
attempted, in the days when it was painted green, to
it to one side and see what was behind.

n the Corporation pew are two sword rests. At one
the Corporation swords and mace which rested in
Dionis Backchurch were, on the destruction of St. Dionis,
ved here.

here are no monuments of very great interest. Perhaps
most remarkable is one of Dr. Edward Tyson (1708),
ved from St. Dionis. He was a Fellow of the Royal
ety and was caricatured under the name of Carus in a
by Garth entitled "The Dispensary."

n the north-eastern wall of the nave is a tablet remind-
us that John Wesley preached his first extempore sermon
his church.

hat the church has escaped destruction is a matter for
ratulation, especially as it was one of those scheduled
he Commissioners appointed under the Union of Bene-
Act to be sold.

he church is especially rich in the plate it possesses,
ng been enriched by that of St. Benet and St. Leonard.
as flagons of 1605 and 1613, cups of 1612, 1617, 1624,
1663, patens of 1560, 1597, 1604, and 1660, and alms-
es of 1685, 1706, 1709, 1765, and 1771. The plate of
Dionis was handed over to the church of St. Dionis,
am.

he internal arrangements are much altered from what
were in the time of Sir Christopher Wren, but the fine
ng—such superb specimens of seventeenth century work
s fortunately been retained.

he registers and records of the church are of great
est, and in the church, in a glass case, are to be seen a
e of the reign of James II., and a portion of one of the
s of Erasmus.

NCHESTER SOCIETY OF ARCHITECTS

E sessional papers meeting on the 8th inst. was held
on somewhat novel and distinctly interesting lines.
J. J. Burnet, F.R.I.B.A., who was the visitor for the
ng, instead of reading a formal paper, led what was
unced as an informal discussion, mainly upon points
ng from an exhibition of drawings of his own work
h had been on view for a few days. In opening the dis-
on Mr. Burnet said that they were there that evening
spirit of *camaraderie*. He would say that his works
shown represented genuine pleasure in solving problems
d before him by his clients. It had been his privilege
to work for clients—themselves highly trained technically, shipbuilders and mechanics—who clearly enunciated the problems set before him. He also spoke of the pleasure which he had always found in travelling in pursuit of knowledge to equip him for his work.

In the course of the conversation which followed, Mr. Burnet outlined the inception of the scheme of extension of the British Museum. The splendid drawings of the work provided fruitful ground for discussion, and the way in which the minutest details had been thought out was in many ways a revelation.

Besides the drawings of the Museum, photographs and details of many other works of Mr. Burnet were exhibited.

ILLUMINATING ENGINEERING SOCIETY.

AT a meeting of the above Society, held at the Royal Society of Arts' premises, John Street, Adelphi, W.C., Mr. Leon Gaster, hon. secretary, presented "A Summary of Progress during the Vacation," of which the following is an abstract:—

Committees on School and Library Lighting.—After the discussions on school and library lighting last session it was decided to form two Sectional Committees dealing with these two subjects. During the vacation a number of gentlemen have been approached to act in this capacity, and the practical co-operation of the Library Association, the Association of Medical Officers in Schools, the Association of Technical Institutions, the Association of Teachers in Technical Institutions, and the London Teachers' Association has been secured. Representatives have been nominated by these Associations, and it is hoped that these Committees will act as a permanent centre of information, and that they will presently have a record of valuable work to bring before the Society.

The constitution of these Committees is as follows:—

Committee on School Lighting.—Prof. W. C. Clinton, Mr. J. Darch, Dr. W. Ettles, Mr. F. W. Goodenough, Dr. J. Kerr, Mr. W. R. Rawlings, Mr. T. E. Ritchie, Mr. A. Stokes, Mr. S. E. Thornton, Mr. R. J. Wallis Jones, representing the Illuminating Engineering Society; Dr. R. S. Clay, representing the Association of Technical Institutions; Mr. P. Abbott, representing the Association of Teachers in Technical Institutions; Mr. E. S. Mortimer, representing the London Teachers' Association; Dr. E. H. Nash, representing the Medical Officers of Schools Association.

Committee on Library Lighting.—Dr. W. M. Bayliss, Mr. J. G. Clark, Mr. J. Eck, Mr. S. Hamp, Mr. Haydn T. Harrison, Mr. Chas. W. Hastings, Dr. H. R. B. Hickman, Mr. B. H. Jenkinson, Mr. V. H. Mackinney, Mr. N. W. Prangnell, Mr. A. P. Trotter, representing the Illuminating Engineering Society; Mr. H. Bond, Mr. J. Duff Brown, Mr. H. Jones, Mr. R. A. Peddie, representing the Library Association.

Ex-officio on both Committees.—The President, Hon. Secretary, and Assistant Secretary of the Illuminating Engineering Society.

The Standard Street Lighting Specification.—The Joint Committee, on which representatives of the Institutions of Gas and Electrical Engineers, the Association of County and Municipal Engineers, and the Illuminating Engineering Society have been nominated, are continuing their meetings, and a considerable amount of data has already been collected.

Congress of the Royal Sanitary Institute at Belfast.—At the invitation of the Royal Sanitary Institute, the Illuminating Engineering Society nominated the President, the Hon. Secretary, Mr. J. Eck, and Mr. J. Darch to be present as delegates. A paper was presented by Mr. Darch on the subject of "Hospital Lighting." A paper read by Mr. W. H. Webb on this occasion contained some notes on "School Lighting." Special reference was made of the suggestions on the subject made at the meetings of this Society during the past session, and they were recommended to school officers for special consideration.

The International Hygienic Congress at Dresden.—At the suggestion of the Society some exhibits dealing with illumination were dispatched to this exhibition, including photographs taken by artificial light showing the condition of illumination in various gas-lighted schools, by the Gas Light & Coke Co., in various factories lighted by high-pressure gas by Messrs. Keith & Blackman, and of interiors illuminated by inverted electric arc lamps by the Union Electric Co., Ltd.

A Government Committee on the Hygienic Aspects of Lighting.—An important step has been taken by the French

Government in appointing a Committee to inquire into the hygienic aspects of lighting. This Committee includes within its reference the framing of standards of illumination for industrial purposes and of simple rules on illumination, the nature and causes of defects of vision and their relation to lighting conditions, the measurement of illumination, &c.

The attention of the authorities in this country has been drawn to this Committee. It is hoped that the precedent established by France will shortly be followed in other countries. The evidence before the recent Departmental Committee Commission on Accidents in Factories and Workshops in this country strongly emphasised the need for more definite recommendations on lighting as a means of avoiding accidents and for the safeguarding of dangerous machinery. It was suggested that meanwhile inspectors should be given general statutory power to require adequate illumination. It is understood that the Home Office is now giving this matter very careful attention, and has arranged for tests to be made and evidence collected bearing on this point.

The International Electro-technical Commission.—At the invitation of this Commission, the Hon. Secretary was present at the meeting in Turin, and a resolution was passed unanimously "that the National Committees should co-operate with the illuminating engineering societies in their respective countries in studying the question of symbols, nomenclature, and other matters relating to illumination."

The International Electrical Congress in Turin.—At the International Congress of Applied Electricity in Turin, the Society was again represented by its President and Hon. Secretary. The latter read a paper dealing with "The International Outlook in Scientific Illumination," urging that some attempt was needed to co-ordinate the efforts of the various national and international committees which dealt with illumination, so that there might be some common plan of action. In accordance with this suggestion the following resolution was proposed and carried unanimously at the plenary general meeting on September 16:—"That this Congress deems it desirable that an International Commission should be appointed in order to study all systems of lighting and technical problems in connection therewith; and, having been informed that the Illuminating Engineering Society of London has the intention of forming such a Commission, and of putting itself in touch with the other existing national and international committees, approves their taking the initiative in this respect."

The Illuminating Engineering Society is in an exceptionally fortunate position for carrying out this work, since it already includes among its members delegates on all the various national and international committees interested in illumination. During the vacation a number of distinguished representatives of the International Electro-technical Commission and the International Photometric Commission gave their support by becoming corresponding members.

Courses of Lectures in Illuminating Engineering.—The L.C.C. Educational Department was approached some time ago on the subject of arranging courses of lectures on illumination, and this year it was decided that the time was ripe to sanction the organisation of trial courses at several institutions in different parts of London. Such courses have already been organised at three centres, the Regent Street and Battersea Polytechnics and the Northampton Institute. These lectures are intended as a preliminary to more complete courses in the future. But a new precedent has been set in the organisation of a course in which the various sections of the subjects, gas and electric lighting, photometry, &c., are dealt with by lecturers who have made a special study of their respective departments.

The Society may congratulate itself on having substantially increased its membership and influence during the vacation. An interesting series of papers has been arranged. It is hoped that members will continue to give their active support in making the aims of the Society known, so that it may reap the benefit of this preparatory work during the coming session.

LEEDS AND YORKSHIRE ARCHITECTURAL SOCIETY.

THE annual general meeting and smoking concert of the above Society was held at the Queen's Hotel, Leeds, on Thursday evening, November 16. The President (Mr. Sidney D. Kitson, M.A., F.R.I.B.A.) occupied the chair, supported by the Lord Mayor (Mr. Wm. Nicholson). The proceedings opened with the President's address to members and associates of the Society, followed by the distribution of prizes to the students.

The President's Address.

Gentlemen,—I don't know to whom the greatest con lence is due—to the President in his second year of office to the audience which has to listen to his second openi address. In his first year the ideas which he has been form lating for a lifetime come tripping from his pen. He eage seizes the first opportunity which has been vouchsafed to h of putting forth his views and of boring his fellow-archite with his own theories of the past, present, and future architecture, of the building trades, and of every sub remotely, or not at all, connected therewith. He spe weeks in looking up quotations and in fervently study past presidential addresses in the hope of culling therefr some choice phrase or subtle suggestion.

But a second presidential address is a very differe matter—the message has all been given before, the well is d fresh inspiration refuses to appear. You must bear wi me, therefore, to-night in the few commonplace remar with which I propose to address you.

And firstly—as good Yorkshiremen—a few words abo ourselves. The Society has lost this summer the services its Secretary, Ralph Thorp, who has gone to Canada. Sh as the time was in which he served as Secretary, he won t good opinion of all our members by his courtesy and e ciency, and our good wishes follow him. Mr. Whitehea who has done such good work for the Sketching Club, h kindly consented to take his place. I believe he will n fall below the high standard of achievement set by his p decessors in the office.

The year that has just passed has not been an importa one in the history of our Society; but happy is the socie which has no history, and the object of this Society is not make history but to go quietly on its way as a permane and unpretentious guardian of the interests of architectu and architects in this province. It is its business to hold watching brief and not to take action unless its good offi are required or its intervention is tolerably certain of succe Nothing is so harmful to a society such as ours as und haste in action or the tendering of unasked-for advice, whi is likely not to be accepted. I therefore submit to you th it is in no sense detrimental to the Society that its name h not been in evidence in the newspapers, and I assure y that it has done a considerable amount of quiet, unseen, b none the less useful work during the past session.

There are points, however, of a more public nature whi our Council might well take in hand in the near future, suc for instance, as a firm protest against the increase of offici architecture, which is becoming a menace to practising arch tects and which is costing the ratepayers and taxpayers, was so ably pointed out by Mr. Leonard Stokes in his pre dential address at the R.I.B.A. the other night, considerab more than if the work were put out in the fairer and mo reasonable way to ratepaying and taxpaying architects. T public ought to be made to realise that they are paying mo for what we may be pardonably permitted to term a wor article.

Another point which has been discussed by our Coun more than once is the growing evil of builders who make the own plans with one hand and hold out their caps with t other to architects to give them work. It is a cardinal fa of elemental justice that a man cannot eat his cake a have it, and if a firm and united attitude were to be adopt by members of this Society it is reasonable to suppose th those misguided builders could be made by practical mea effectively to see the errors of their ways. And this brin me to the time-worn subject of registration, a subject whi requires no arguments in its favour here. I own that my early days I was opposed to registration, but experien has taught me to be a thoroughgoing advocate of that polic It is unnecessary at this time of day, when every trade a profession has formed itself into a trades union, to point o the advantages which would accrue to our profession by closer union and a sterner discipline. It ought to be impo sible for an employer to bargain for a less remuneration tha the modest minimum prescribed by the Institute, or for a architect to agree to such an arrangement. It ought to impossible that architectural work should be done—and i done at that—by builders, plumbers, rent collectors, a undertakers.

The Institute is moving slowly but surely towards th achievement. The policy was ably advocated more years a than, probably, he cares to remember by one of our ex-Pres dents, Mr. J. W. Connon; and it has been endorsed, I thin by everyone else who has occupied this chair. Nearly 2,0 Licentiates have already been enrolled in the ranks of th Institute. Thus a most useful element of solidarity has be ined in furtherance of the policy of registration. No lication for the licentiateship will be entertained after June, and therefore all members of this Society who are ble and still remain outside the Institute are urged to l themselves of the opportunity. The Council of the itute have pledged themselves to elect as Licentiates all are recommended by the Council of their local Society out further formality. I should be grateful, therefore, y who are still hesitating in the matter would come and a talk with me about it. The amalgamation of the ety of Architects with the Institute seems likely to be nplished in the near future. This statesmanlike ngement has meant self-sacrifice and the exercise of much and common-sense on both sides. The fact that such ities have been so fully shown in these negotiations is a antee for the successful termination of the campaign for tatutory recognition of architects.

ll this is, perhaps, rather dull, but I am convinced it is e utmost importance to the profession. The reason why e past men have held aloof from the movement is that felt that it would mean the embracing of all—good, bad, indifferent—who professed architecture. It has come ly to be realised that statutory recognition is necessary use, among other things, of the increasing and intoler- burdens which recent legal decisions, with almost impish uity, continue to pile up upon the poorest architect. It alised that it means the inclusion, for the time being, of who, under the more stringent tests of the future, would ind a place. But it will be the part of architectural tion, which has made such rapid strides in late years, ise the standard and to weed out the unfit. And so in though we may not live to see it, architecture will take lace beside medicine as a well organised and disciplined ssion, doing a work hardly less important than that edicine for the benefit of the community.

he most important thing of all in connection with the ssion is the provision of education. Twenty years ago tectural education outside the usual office routine of age hardly existed. Much progress has been made since and the proposed establishment of a British School t and Architecture at Rome is another step in advance. erto the winners of studentships have wandered, sketch- in hand, over Europe, filling up their time, doubtless pleasantly, but with little or no discretion or continuity eir efforts. Whether Rome at the present day is the place for the study of living architecture is, I think, to doubt. But if we cannot all go to Rome it is open l students in this province to attend the architectural l at the Leeds School of Art, where, under the direc- of Mr. Coombs, a very thorough and sympathetic teach- s to be obtained.

he work sent in by our students is always an interesting nstration of the standard of architectural education at ime. One learns what they are thinking about, what heir preferences, and what is their present idea of tectural design and achievement.

his year the work is of a high quality, but there is not gh of it. Consequently the competition has been poor, ugh the work submitted has in nearly every case ed a sufficiently high level as to demand, and to obtain, ze.

he silver medal for measured work goes to Mr. Krucken- for a very carefully and artistically rendered study of erholme church—a building which seems to enshrine n itself the traditional characteristics of Upper rfedale. The author has lovingly noted on his drawings e charm of texture and of almost accidental design goes so far to make up the attractiveness of the sub- But I should like to see next year some sets sent in is competition of more modern buildings, such as the Town Hall, the Mansion House at Roundhay, or the Exchange—to take at random a few local instances. e can be no doubt but that the study of good modern is far more helpful than the measuring of ordinary eval work, so much of which depends for its appeal upon icturesqueness or other entirely fortuitous quality.

he competition in the design class has been very keen, the results have justified all the trouble which our Secretary has taken with the organisation of the four cts for design. Three men have each severally occupied rst, second, and third place; and so prizes of the full of the first prizes are awarded to each of them. And nk the members of the Society will endorse the verdict e Council and agree that all three deserve the honour.

he subject of the prize for construction was a difficult and elicited two very elaborate designs for a staircase and dome in reinforced concrete. The prize goes to Mr. Voekel for a carefully constructed and well worked out set of drawings.

Mr. Chadwick's measured sketches form a very fine record of work, ably rendered, and the series of details from the interior of Kirkstall Grange are particularly good.

There was only one competitor for the essay prize, which is disappointing. The subject was "Yorkshire Building-Stones and Their Influence upon Design." It was hoped that, after Mr. Henderson's interesting lecture on the houses of the Dales, several students would be induced to compete. The work of Mr. Palmer, who is the author of the only essay sent in, has been adjudged to be of sufficient merit to obtain the prize. It is a painstaking effort which is, perhaps, too strictly geological. There are, too, considerable evidences of scissors and paste; nor has he illustrated his remarks sufficiently with marginal sketches. But further criticisms must be reserved until the students' evening, in March, when he will have the honourable ordeal of reading it to his fellow-students, and of listening to their criticisms.

The Sketching Club has had a good year favoured by fine weather and an equally fine Hon. Secretary, and the attendances at the meetings and the enthusiasm shown are most encouraging. It is to be hoped that this club will continue to flourish, for it promotes good comradeship and healthy emulation.

A review of the state of employment among our members during the past year is not an inspiriting one, and we have to record the departure from the province of some of our number. Several firms of contractors, with honourable records behind them, have ceased business. The feeling of confidence that was in the air up to a few years ago seems to have died away; people are marking time and hesitating to invest money in building enterprise. Nor are the census returns of the current year for Leeds of an inspiring nature. It is not good news to hear that the population of the city is increasing now at a less rate than it was this time a hundred years ago. There were then probably not five architects practising in Leeds, while now there must be ten times as many. There is, however, no reason why a manufacturing town should grow indefinitely, and there are many reasons why it should not. And, after all, a city which contains nearly half a million of inhabitants is a respectable unit. Athens, at the height of her artistic achievements; Florence, in the Renaissance, never contained so many inhabitants, and it is doubtful if the London of Sir Christopher Wren counted many more.

(To be concluded.)

LECTURES ON ILLUMINATING ENGINEERING.

THE second lecture of the course was delivered by Professor J. T. Morris on November 7, at the Polytechnic Institute, Regent Street, W.

Professor Morris said that the present lecture, which was the last of those allotted to electric lighting, would deal with the subject of arc lamps and their probable improvement, but he would first like to refer to a matter which he had omitted to mention on the occasion of his first lecture, when he had devoted himself to the consideration of glow lamps. This was the question as to whether the constant switching on and off, to which the average lamp was subjected, was at all deleterious to metal filaments, and although he must say that the life of a lamp was affected to some extent, it was a very small consideration indeed—a matter of about one-half per cent. only at the most. He might also mention that the British Thomson-Houston Company were now manufacturing drawn wire tungsten lamps, a fact which he did not acknowledge when dealing with this subject.

Arc lamps differed fundamentally from glow or incandescent lamps in that the illuminant was produced by an arc struck between carbon electrodes, and these carbons were disintegrated or consumed during use. Experiments had been made to eliminate this process of disintegration, which was not necessary in producing the arc. There were possibilities in the idea of a pair of carbons which would transfer the disintegrated matter from one pole to the other, the lamps being re-carboned by reversing the old ones.

An increase in the life of carbons had been effected by excluding the air from the surrounding globe as in the small "Foster" lamp, which was very useful for interior use, the light being suitable for judging colours.

Other types of enclosed arc lamps had been evolved in which the carbons were impregnated with salts, such as salts of calcium, and this was found to produce a light of a very distinct colour, being rich in red rays. By this means, too, the length of the arc could be greatly increased without snapping, whilst the consumption of current was less in relation to the light given. A difficulty with these lamps, which were known as "flame" arcs, was the white deposit which collected on the enclosing globe, especially in those with a smaller inner globe. This deposit, if allowed to accumulate, would obscure the light until but 30 per cent. was being obtained. The difficulty was minimised if the enclosure was not too small, and some later types had been devised, such as the "Jandus" lamp, where the gases from the carbons were withdrawn through tubes encircling the outer globe, the deposit being collected on the inside of these tubes instead of on the glass enclosure. Easy access was provided to the interior for cleaning purposes. Another improvement was to be recorded in the introduction of magazine arcs, of which there were now several makes, such as the "Excello" lamp, manufactured by the Union Electric Company. By means of a supply of carbons stored in the hood of the lamp, a fresh pair were automatically projected into place directly those in use were consumed, much on the same principle as that used in a magazine rifle. These lamps were now largely used, and could be burnt for long periods without re-charging, eighty burning hours being the time reached by a "Johnson Phillips" lamp, the makers of which had also shortened the period during which the arc was extinguished, whilst the carbons were being changed. This had now been reduced to a few seconds by arranging that the new pair of carbons should be in place before the stumps of the old ones were dropped. Some manufacturers aimed at producing a steady light, and there was room for improvement in this respect with flame arc lamps, although such faults had been minimised of late. The Abbey Electric Company and the Westminster Engineering Company were working in this direction, and the former were also making a lamp to dispose of the deposits from prepared carbons as mentioned in the case of the "Jandus" lamp.

During the consideration of the subject of arc lamps the images of the arcs produced by various types of carbon were projected on to a screen, making it possible to accurately compare them. The composition of their light was also demonstrated by interposing a prism into the rays, by which means the spectra of the light produced by the different carbons were also shown on a second screen.

Passing to the question of vapour lamps, these were shown to consist of tubes, often of considerable length, containing gases which, when excited by an electric current, became actively luminous. Arrangements had been provided whereby the tubes were compensated automatically for the gas absorbed.

These lamps were objected to by some people on account of the somewhat unpleasant colour of the light, but it had been found possible to overcome such objections to a large extent by fitting red reflectors above the tubes, the rays missing from the original light being thus introduced. This fact was demonstrated with a Cooper-Hewitt mercury vapour lamp, with the result claimed. The tubes of some of these lamps became so hot that it had been found necessary to make them of some other material than glass, which became softened by the extreme temperature, and quartz tubes had accordingly been successfully introduced.

In conclusion Professor Morris thanked those firms who had lent the lamps and apparatus by which he had been able to make the lecture a practical one, and he also paid a warm tribute to the governing body of the Polytechnic, who had given him the most cordial help in providing the necessary facilities for fitting up the apparatus.

Land Tax Valuation.

Sir,—The decisions of the Court of Appeal in the actions "Burghes *v.* the Attorney-General," brought under the auspices of the Land Union, and also "Dyson *v.* the Attorney-General," confirm the judgments of Mr. Justice Warrington and Mr. Justice Horridge that the inquisitorial deman known as Form 8 and Form 4 are "unauthorised." T issue of these forms is typical of the attitude adopted by t Commissioners of Inland Revenue, and it is to be hoped th these decisions of the High Court and the forcible commen of his Majesty's judges will check the growing tendency Government Departments to exceed their powers and co strue Acts of Parliament to suit their own purposes. Th illegitimate methods have for their first and easiest victi those who, from lack of means or information, are slow exercise the right they have possessed for centuries of appe ing to the Courts of Justice against the arbitrary action the Executive.

But these decisions have settled only two out of ma points upon the provisions of the Finance Act where the terpretation placed on them by the Commissioners is op to grave doubt. The Land Union, acting upon the advice counsel, has prepared a detailed statement of some furth important questions which have already arisen, and I wi to take this opportunity of notifying these to proper owners and to their professional advisers, and to strong urge them to make a formal objection to every provisio valuation where any of these questions arise until it h been settled by the referees or by the Courts.

The following short summary is sufficient to indicate t nature of the points at issue. The detailed and speci statement can be obtained by applying to the Secreta Land Union, Westminster.—I am, Sir, yours obediently,

E. G. Pretyman.

The Land Union,
St. Stephen's House, Westminster, London, S.W.
November 17, 1911.

Summary.

1. Whether the Commissioners are right in refusing, spite of the express words of the Statute, to make any allo ance for the value attributable to land appropriated roads?

2. What is the proper method of deducting the value tithe? The Commissioners' views on this point differ wid from those of the owners.

3. What is the true interpretation of the phrase "val attributable to buildings"? The Commissioners write large sums for depreciation.

4. Whether, in the case of agricultural land, deductic are allowable for expenditure on drains and fences? T Commissioners refuse to allow them.

5. What is the method of arriving at the agricultu value of undeveloped land? The Commissioners are und valuing in most cases.

6. When does duty become payable on undeveloped la which is let? The Commissioners are claiming and receivi duty in many cases where it is not legally due.

7. Whether the Commissioners are right in claimi mineral rights duty on arrears of rent accrued before, b received after, the passing of the Act?

8. Whether "surface rights" are liable to mine rights duty? The Commissioners have claimed that th are, and have appealed against the decision of the Refe that they are not liable.

9. Whether the Commissioners' contention that increme duty is leviable upon value attributable to a builder's gene scheme of development is correct, having regard to the Cha cellor of the Exchequer's statement that value due to "ski brains, and expenditure" should not be taxed?

10. Whether the contention of the Commissioners th when a property is sold above its market value such exc should always be taxed as increased site value is correct?

11. Whether the Commissioners are right in asserti that substituted site value cannot be claimed where grou rents have been purchased or leases granted?

12. Whether, as contended by the Commissioners, t fact that an owner has not stated the value of his miner on Form 4 debars him from placing a value upon them su sequently? The fact that Form 4 is now held to be una thorised will materially affect this question.

The Royal Academy of Arts will hold in January next election to the professorship of chemistry vacant by t resignation of Sir Arthur H. Church, K.C.V.O., F.R. The professorship is tenable for four years, the holder bei eligible for re-election. The duties of the professor are deliver six lectures annually, of which one should be on t chemistry of stones, and to give advice to members a students of the Royal Academy on chemical questions rel ing to art. The fee is £100.

FORTHCOMING EVENTS.

Monday, December 4.

Royal Institute of British Architects : Business meeting at 8 P.M.

Liverpool Architectural Society : Paper on "Architecture as an Expression of Faith," by Mr. George Hubbard, F.S.A., F.R.I.B.A., at 6 P.M.

Society of Engineers : Paper on "The Design of Tall Chimneys," by Mr. Henry Adams, M.Inst.C.E., at 7.30 P.M.

Tuesday, December 5.

Nottingham Architectural Society : Exhibition and Criticism of Designs for "An Approach to a Public Park."

Wednesday, December 6.

Manchester Society of Architects : Paper on "Science and Proportion," by Mr. Paul Ogden, F.R.I.B.A., at 6.30 P.M.

Northern Architectural Association : Students' Meeting at 7.30 P.M.

King's College, London : Paper on "The Early Roman Churches," by Professor Elsey Smith, at 5 P.M.

Friday, December 8.

Aberdeen Architectural Association : Paper entitled "A Historical Tour in Aberdeen," by Mr. G. M. Fraser, at 7.30 P.M.

Glasgow Technical College Architectural Craftsmen's Society : Paper on "The Duties of a Foreman Mason," by Mr. J. Crawford, at 7.45 P.M.

REINFORCED CONCRETE IN LONDON.

AT the present moment there is no provision in the London Building Act for reinforced concrete buildngs, and such are therefore not permissible in the Metropolis except where, as in the case of the General Post Office, the buildings are exempt from the provisions f the London Building Act. But under the provisions of ection 23 of the London County Council (General Powers) ct, 1909, the London County Council have power to make regulations with respect to the construction of uildings wholly or partly of reinforced concrete, and with espect to the use and composition of reinforced concrete n such construction.

The Building Acts Committee of the Council has now repared draft regulations, and as by the Act empowering he Council to make regulations for reinforced concrete uildings, the Council is required to give to the Surveyors' nstitution, the Institution of Civil Engineers, the Royal nstitute of British Architects, and the Concrete Institute notice of its intention to apply to the Local overnment Board for allowance of any regulations made, nd with a view to the avoidance of material alterations in e regulations by the Local Government Board, the suggestions of these authorities on the draft regulations have een invited, and, in a large majority of instances, incorporated therein.

Thus we are not surprised to find a very close agreeent between the draft regulations of the Building Acts ommittee of the Council and the second report of the int Committee on Reinforced Concrete, consisting of presentatives of the Royal Institute of British Architects, e District Surveyors' Association, the Institute of uilders, the Municipal and County Engineers' Association, the War Office, the Admiralty, the London County uncil, and the Concrete Institute.

Reinforced concrete is defined by the draft regulations concrete reinforced by metal so combined that the metal ll (a) be sufficient to take up all the direct tensile esses; (b) assist in the resistance to shear; (c) assist the resistance to compression where necessary.

The value of the permission to use reinforced concrete s in the regulation that when the dead loads and superposed loads of the building are transmitted to the ndations by proper reinforced concrete construction, r external enclosing walls of reinforced concrete may of any thickness not less than 4 inches, provided t such enclosing walls are designed and reinforced to ist any loads and pressures they may have to carry. ternal walls of brickwork, stonework or plain concrete may be of a thickness of not less than 8½ inches for the topmost 20 feet of their height and 13 inches for the remainder. Hollow concrete blocks are also permissible for filling between the reinforced concrete skeleton structure, the total thickness being not less than 8½ inches nor the hollow space more than 3 inches.

A further concession is also made in the extent of the permissible openings in the external walls, which in a reinforced concrete building may be two-thirds of the whole area of any storey above the ground storey, provided that the aggregate width of the openings does not exceed three-quarters of the whole length of wall in each storey.

Buildings partly of reinforced concrete and partly of brickwork or steel-framed structure, except as regards party walls or filling-in walls, will not apparently be permitted, for it is provided that "Nothing in these regulations shall be deemed to authorise the construction of buildings of reinforced concrete in which the loads and stresses are not transmitted through each storey to the foundations by a skeleton framework of reinforced concrete or partly by a skeleton framework of reinforced concrete and partly by a party wall or party walls." This does not prevent the use of one of the most useful forms of reinforced concrete construction, cantilevered work, for it is elsewhere provided that "In cases where bracketed work is necessary and provided to carry loads, it shall be reinforced sufficiently to provide for the stresses due to such loads."

A very reasonable but sufficient schedule of the superimposed loads for floors is included and recognition of the homogeneity of reinforced concrete buildings is afforded by a permissible reduction on lower storeys of the calculated superimposed load for buildings not of the warehouse class. But as in the regulations for steel-framed structures the method of estimating the superimposed load for roofs is, in our opinion, an illogical one. A roof of 21 degrees slope will have its superimposed load estimated at 28 pounds per square foot of sloping surface normal to such sloping surface, but on a roof of 20 degrees slope the superimposed load is to be estimated at 56 pounds per square foot measured on a horizontal plane.

It would appear that the use of expanded metal or metal lattice, whether of wire or ribbon, is not permitted under the regulations as drafted, for in the case of beams it is provided that the least diameter or thickness of the longitudinal bars shall not be less than one-quarter of an inch, and wiring may be used solely for holding the bars during the process of placing the concrete in position. All other reinforcements in beams shall be at least one-eighth of an inch in diameter or thickness. With respect to slabs similar stipulations are made, with the difference that the "all other reinforcement" is to be at least one-tenth of an inch in diameter or thickness.

The length of pillars in reinforced concrete work will not exceed under the proposed regulations thirty diameters, for at this length the stress allowed is one-fifth only of that on a pillar whose length is eighteen times its effective diameter; the effective diameter being measured to the outside of the reinforcement. There is a slight variation in the regulations from the Joint Committee report in respect of the limit of stress on the metal reinforcement of pillars; the regulations restricting this to half the elastic limit of the metal and the report to half the yield point.

Coarse material or aggregate of reinforced concrete must not include coal residues, slag, sulphates, including plaster of Paris or limestones, and must pass a mesh three-quarters of an inch square and be retained on a mesh three-sixteenths of an inch square.

It is evident that the regulations have been drawn up with full recognition of the latest knowledge of the capabilities, the limitations, and the essentials of reinforced concrete construction, and we can see nothing in them to which serious objection can be taken from an architect's point of view.

NOTES AND COMMENTS.

We are glad to see that the Education Committee of the London County Council have recommended the Council to increase their grant to the School of Art Woodcarving from £400 to £450 per annum. The School is doing good work, and, as the L.C.C. Education Committee testify, is doing it economically, but its expenditure exceeds its normal income. As the School proposes to increase the number of places at the disposal of the Council from nine to twelve, there is sufficient justification for increasing the grant from the county funds.

At the Conference of the Smoke Abatement League of Great Britain, held at Manchester last week, Mr. W. B. Smith, of Glasgow, made a good suggestion for the diminution of the amount of smoke produced by domestic fires, which are now the chief producers of smoke in towns. He said that if they could get rid of the domestic smoke that would immediately solve the larger part of the smoke problem in cities, and he believed that this might be accomplished without resorting to legislation of any kind by supplying the public with smokeless fuels, both gaseous and solid, at reasonable prices. They must look for the first improvement to the use of gas, because gasworks had been long established and their mains were laid through nearly all the streets and into all the houses of the working classes and most of the houses of the middle and upper classes. The gasworks must supply some form of coal residue much better than the ordinary gasworks' coke or char. They must so alter their process of distillation of coal that they might get a clean gas of fairly high calorific value, that need not have a high illuminating power, and that would leave a form of coke that could be burned in an ordinary domestic grate; so that at the same time they would be making two products in great demand—a cheap, efficient gas for the up-to-date people who would use gas appliances, and a smokeless fuel that could be burned in the old-fashioned grate by those who meantime had a prejudice against using gas or who could not afford to buy or hire new grates and appliances. At the price for which this smokeless fuel could be sold there would be a considerable profit that would go to lower the price of the gas.

Mr. Smith also pointed out the unsoundness of the finance of municipal authorities owning their own gas and electric supplies, when they made handsome profits for the relief of the rates, and pointed out that this method of contributing to the rates did not in reality lower them; it only altered the incidence of taxation. It meant that the householder who had fitted his house with gas appliances, and thus kept the atmosphere pure, was compelled to pay more in rates, whereas his next-door neighbour, by continuing to burn raw coal in the old-fashioned way, really paid less in rates, while he was helping to poison the atmosphere for himself and the community. Unfortunately, this contribution was levied by many English local authorities. The same bad system applied more or less to electricity. In Manchester last year they took £12,000 from the Electricity Department and the same amount the year before, thereby penalising the manufacturers who were using electricity in place of steam. At present electricity was doing a great deal towards the prevention of air pollution from works, because so many were adopting it now in place of steam power; but it had hardly had time to do much for domestic chimneys. Within the last year or so great improvements had been made on the electric appliances for heating and cooking, especially in the direction of economy of current, and as in many towns current for these purposes was sold at about 1*d*. per unit it was likely to be largely adopted.

At the annual meeting of the West of Scotland Sanitary Association Sir William Bilsland, Bart., the Chairman, emphasised the importance of periodical and at least annual inspection of house drainage in order to ensure its efficiency. He also said that he thought many people who were very careful about their town houses did not always consider the importance of having the sanitary condition of country houses tested, even if their residence in them was only to be for a few months.

In a lecture delivered before the Builders' Managers and Clerks of Works Association at Newcastle, Mr. J. Wightman Douglas, F.S.I., elucidated some important points with regard to dilapidations. He explained that as regards "express covenants," if the landlord undertook to do the repairs, and did not do so after due notice, the tenant could do so and recover, and if any injury occurred to occupiers through non-repair the owner was liable for compensation. It was essential to observe the exact words of repairing covenants, for if such words as "outgoings" or "Parliamentary and parochial assessments" were added to the usual clause for the tenant to pay rates and taxes, the tenant could be held liable for any work done by the local authorities in making streets or relaying drains. The words "to keep" in repair implied that the tenant must put the buildings in repair even if not in good repair when he leased them. All phrases such as to keep in "good repair," "tenantable repair," "substantial repair," meant very much the same, and the interpretation depended on the age, position, use, and period of the lease. Generally the better the house and the longer the period of the lease the more the words implied. Such clauses as "to paint every five years," &c., did not operate until every fifth year, and a person properly terminating his tenancy, say, on the fourth year, would not pay four-fifths of the cost of painting.

LINGFIELD AND CROWHURST*

LINGFIELD, at one time part of a forest, but now an agricultural and residential locality, probably took its name from the fact that the early settlers cut down the trees and made a clearing, hence we get the terminal "field," as Limpsfield, Nutfield, Hartfield, &c.

There was a large area of common land in this parish, some 1,100 acres in all, but it gradually became enclosed, partly under the Commons Enclosures Act, although probably the greater part was fenced in by settlers. There is a chalybeate spring on Lingfield Common, the water from which is supposed to be equal to the Tunbridge Wells water.

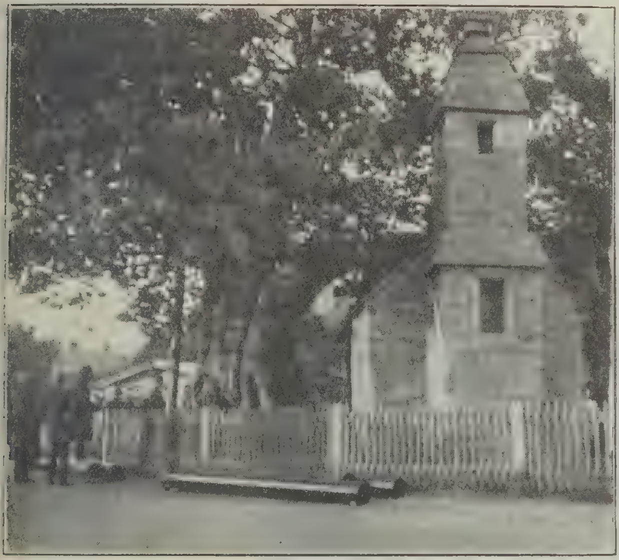
This portion of the county of Surrey is rich in reminiscences of the past—Hever, Tandridge, Crowhurst, Starborough Castle, and Lingfield. Hever and Starborough, once embattled and fortified strongholds, now mere ruins; the latter founded in 1342, in the time of Charles I., was occupied by the Parliament forces, and after the King's death was ordered to be dismantled, so that it might no longer endanger the peace of the kingdom. It was here that the founder of the College, Reginald Lord Cobham, resided.

---

* Read at a meeting of the Upper Norwood Athenæum by Mr. D. Thorold Lowdell.

Tandridge, Crowhurst, and Lingfield were monastic establishments, although in the case of the two former the actual sites of the conventual buildings can only be conjectured. In Lingfield we have to-day viewed the site of the old College, the old Guest Hall, and what was supposed to have been the almonry (now a butcher's shop), but the fine old Collegiate Church remains, with many evidences of the work and piety of those long since gone. It is mentioned in "The Victoria History" of the counties as one of two churches of a monastic house still in use, the other one, I may incidentally mention, being St. Mary Overie, Southwark. Lingfield belonged to the Carthusian brotherhood, while Crowhurst and Tandridge were founded by the Augustinian monks—two Orders, one established and one revived in the eleventh century.

In Plaistow Street stands a fifteenth-century stone obelisk, St. Peter's Cross. There are some openings or niches in its sides, which were doubtless formerly occupied by statues. This erection was originally surmounted by a cross, and one writer says on top of it was an iron basin as a recipient of holy water for use at the church. This basin and the cross are missing, but a stone found at the chalybeate spring before referred to has taken their place. The stone built room attached to the base of the cross, and called the "Cage," was until recently used as a temporary prison.



ST. PETER'S CROSS AND CAGE.

There must have been a church here in the eleventh century, as historians tell us that Æthelfleda, wife of King Edgar, gave Lingeldefield with six hides of land and the church to the abbey of Hyde. The tower and a portion of the walling to the west is probably about 100 years older than the rest of the church, which was rebuilt in 1431. In this year a college was founded by Reginald Lord Cobham. The patrons of the church at the time were the Abbot and Convent of Hyde, who obtained a licence to cede the advowson to Reginald Lord Cobham and others, to convert it into a Collegiate Church, served by six chaplains, one of whom should govern as Master of the Collegiate Church of St. Peter at Lingfield, and at the same time a licence was granted to Sir Reginald and the others to transfer the advowson and rectory to the newly founded college. The college was built at the west end of the churchyard, and although Aubrey, writing in 1719, describes the court and cloister of the buildings as nearly perfect, nothing now remains of the edifice. We have, however, that beautifully restored Guest Hall, which was probably built some seventy or eighty years later. This with its massive old oak beams, the picturesque half-timber work, silvery with age, and its quaint muntinged windows compensates somewhat for the disappearance of the monastery.

The vesica shaped college seal represents St. Peter seated in a canopied niche with tiara, in the left hand a patriarchal cross, and the right raised in blessing. In the base a half length priest praying, and below this the arms of Cobham, the founder.

In 1449 a licence was granted to Anne Cobham, Lady of Starborough, Sir John Fortescue (Chief Justice), and others to alienate to the College the manors of Hexsted and Bylyshough, with appurtenances and five messuages, two watermills, 128 acres of land, and 16*d.* rent in Lingfield.

In 1489 John Underhelde, of Lingfield, granted to Alice Croker, daughter of John Croker, formerly of this parish, certain land called Newhachecroft and Dormannyslond (now called Dorman's Land) on condition that she find yearly for ever a wax taper of 2 lbs. weight before the Trinity in the Church of Lingfield. The seal is annexed, tied with a piece of rush.

Provost Culpeper surrendered the College to Henry VIII. on April 26, 1544, the surrender being signed by Anthony Sharde (priest) and Richd. Augur (clerk).

The same year Thos. Cawarden obtained a grant of the Collegiate Church of Lingfield, which he resigned in 1547. Wm. Cawarden, nephew and heir of Sir Thomas, in 1560 had a licence to alienate the Manor of Lingfield to William Lord Howard of Effingham.

A very interesting article appeared in the *East Grinstead Observer* a short time back describing a visit of Anne Boleyn to Lingfield. It was in 1536, not many years before the suppression of the monastery, when Queen Anne rode over from Hever, and arrived in great splendour, accompanied by some of her courtiers, among them Sir Thos. Bullen (the Queen's father) and Master Thos. Cromwell, whom the King put such implicit trust in, and was attended by Thos. Stacey and Thos. Carwarden, two of the most efficient of his pupils.

Sir John Gaynsford, with his younger brother Richard, had ridden over from Crowhurst; Sir Ralph Manly, Sir Robert Blenkinsopp, Anne Mountjoy, and many others, in their bright silks and glittering jewellery. One can imagine the contrast to the white robes and black cloaks of the Carthusian monks. The costume of the Queen herself was most gorgeous, and, quoting from the paper before referred to, for which I am indebted to Mr. W. H. Wills, it says:—

"With her sparkling eyes and crimson lips she was a striking figure even in that brilliant throng, though the more acute observers thought they noticed a strained and anxious expression on her face, and remembered the rumours that she had fallen under the King's displeasure, and wondered. But now Master Colepeper is being presented to her Majesty, and the procession moves forward to inspect the College and Church. They go over the new almonry first, and then turn to the west of the Church, where stood the College itself, a low, square building of two storeys, the upper one timbered, within which was a square court surrounded by a cloister, where the monks walked and worked. Then they went to the north of the Church to the Guest House, and finally they went to the Church . . . . where the Queen, sitting in one of the new unfinished choir stalls, heard Mass."

And now comes the real object of the Queen's visit. She had a quiet talk with Master Colepeper, and after expressing herself satisfied and pleased with all she had seen, she asked "Would the Provost receive a young friend of hers, one Rich Knoyle, among his brethren?" The Provost, knowing that the endowment was for but six monks, and that there was no vacancy, and that Knoyle was a notoriously bad character, tremblingly refused. The Queen rode away in wrath, but it was not long before one Thomas Stacey, agent of Master Cromwell, rode up to the College and demanded admission in the name of the King, which was at once granted by the Master, who took the requisite oath and surrendered all to his Majesty; and all surrendered save one Thomas Wyche, the carver of the choir-stalls. He faithfully performed his duties daily, finishing his carvings before Thos. Carwarden took possession. Again, quoting from the same paper:—

"And the new owner, superintending the work of spoliation and destruction in the church, came to the newly-finished choir stalls. There, in the seat where Anne Boleyn had sat, Thos. Wyche in grim satire had carved her face, but her eyes were fierce, her brow frowned, and her lips were set. And Thos. Carwarden laughed—laughed as he stood there amidst the evidence of her power, for who feared the Queen now! was she not to be executed for treason the next day?"

The church, dedicated to St. Peter and St. Paul, is built of stone and roofed with Sussex stone slabs. It is of the

Perpendicular style, and has nave, north aisle, and north and south side-chapels, all of which have the same form of waggon roof. The flanking tower, of fourteenth-century work, contains five bells. On the north side, between the third and fourth windows, is a polygonal projection which formerly was a stairway to a rood-loft, although there is no internal communication at the present time. This turret is now being used as a heating-chamber or coal-hole; its walls are of the same height as the aisle, and, like the main roof, is covered with stone slabs. The external door has been improperly inserted, and the lower and upper interior doors have been closed up, leaving no trace of the former. According to the Rev. J. C. Cox, in his "Religious Houses of Surrey," I gather that the upper doorway emerged at the extreme east end of the north aisle, where the north chapel commences, on to the top of the rood-loft. The threshold is nearly 13 feet above the present floor-level, and on the right-hand side, the outer moulding of the aisle-arch respond being cut away to about 8 feet below the threshold. In my opinion, this does not necessarily follow that the rood-loft platform was below the top step of stairway, although there might have been one step down.

The rood-loft extended from the north to south walls, being 63 feet long. The rood-screen, under the chancel arch, was standing in 1844, but must have been removed in 1847, at the time of the alterations and repewing. It was of the same design as those in line with it across the aisles. The four enclosing screens of the choir and side chapels have square Gothic pateras, alternating with shields in the cavetto of the lintel, and have buttresses attached to the faces of the principal muntins, and are all of about 10 feet 6 inches in height. The north and south aisle-screens have a series of mortice-holes, 7 inches by 3½ inches, along the top, some of them with the mortice broken in; these are the only traces of the ancient rood-loft.

CROWHURST CHURCH.

Brayley gives the total length of the church at 140 feet and width 70 feet, although I believe the interior measurements are 116 feet by 63 feet. He probably gives the exterior to the outside of the buttresses.

The east window is not the original, but has some old glass.

It is curious to note that, with one exception—that to the west of the tower—all the windows in the north and south walls are of one design, and were possibly inserted in 1847, when, apparently, extensive work was carried out. From a sketch dated 1810 these windows on the south side of the church are shown with pointed heads and the mullions intersecting, which is, of course, of earlier date than the present form.

The chaplains' stalls in the choir are particularly interesting, beautifully carved by Thomas Wyche, the faithful chaplain who remained to complete his task after the other brethren had departed. It is possible that these seats were on both sides of the choir, but vandalism has wrought its work and only a few remain.

There are two unique sixteenth century tile tablets on the wall near the organ. Other treasures there are here—the chained Bible, the old Prayer Book, the chalice, the parish registers, the royal arms, brass chandelier, the peal of bells, and the well-preserved tombs, brasses, tablets, &c. I will refer briefly to each of these memorials of the past.

The black-letter chained Bible is supposed to be a "Miles Coverdale," and the date is given as 1600. This has been injudiciously rebound. The stand, or lectern, on which it rests is of oak, and tradition says that the round-headed opening at end of same was where the holy-water, supplied from the basin at the top of St. Peter's Cross, used to be kept, but the holes are too small for this to be the case. The old Prayer Book, with the New Testament, shows the date of publication (1678). The chalice, which I understand is still in use, is of about the same date as the Bible. The Registers date from 1559. I had not an opportunity of seeing these before writing my paper, but I think it was in Brayley I found the following lines, which he quotes from the oldest register:—

> Mors tua, mors Christi, fraus mundi, gloria cœli
> Et dolor inferni, sint meditanda tibi.
> (Thy death, the death of Christ, the world's temptation,
> Heaven's joy and hell's torments, be your meditation.)

The royal arms, bearing the letters "A.R.," are on the west wall of the south chapel, which is also the east wall of the tower. The brass chandelier was presented to the church by one William Agate in 1754. Of the peal of bells Mr. F. Cobham, in his useful little work, "Antiquities of Lingfield," gives us the following information:—

The marks on the bells are:—

1 }
2 } Bryan Eldridge made mee 1648 { RC. CK.
3 } { RC. CK. &c.
4 }
5 Richd. Constable.▾ Christopher Knight.
Churchwardens 1648.
Francis Collin
B.E.
diam. of treble 33″ of tenor 44″.
Edwd. VI. 6 Return:—"Item in the steple
ffowar greate belles, and a litell bell."

Of bells made by Bryan Eldridge there are in Surrey seventeen, and two more which are known to have been re-cast; among them is the entire peal of five at Lingfield, dated 1648, a rather unusual thing for the time of the civil war. (Stahlschmidt's "Church Bells of Surrey.")

And now we come to the memorial tombs. The most ancient tomb in the church adjoins the chancel screen on the north side, and contains the remains of Reginald, first Lord Cobham, who died in 1361 of the pestilence. He was one of the earliest Knights of the Garter, and occupied the ninth stall at Windsor on the princes' side. In 1346 he was one of the principal leaders at the Battle of Crecy. In 1356 he was a marshal in the Army, and took part in the battle of Poictiers. In 1342 he was raised to the baronage as Lord

Cobham of Sterburgh. Lord Cobham married Joan, daughter of Thomas, Lord Berkeley, and left a son and heir and a daughter.

The effigy of the knight is represented with face uncovered, a helmet on head, with a camail of chain-mail attached to it, and falling below the chin; the body is covered with a short surcoat, which was richly gilt, and was emblazoned with the arms of Cobham on the breast. This is confined by a girdle composed of small square plaques filled in with blue enamel. The plate-armour consists of jointed greaves and brassarts and vimbraces, with protection for elbow and knee joints. There are twelve escutcheon forms upon the tomb, representing family alliances.

The second Baron Cobham left instructions that he should be buried "de rere le test mon très honorable sieur et père" ("behind the head of my very honourable lord and father"). This tomb is near the north wall in the north chapel, but it originally stood near the chancel screen. It has a beautiful effigy in brass, and is a fine illustration of the change in armour during the forty years since his father's death. He has a pointed skull-cap, a hood of chain-mail, and a shirt of mail also. This lord was appointed one of the Council of Fourteen to carry on the Government during the minority of Richard II. He left many legacies to churches, among others "to the warden of the goods of the parish church of Lyngefield for the maintenance and support of the said church, 40s. and my best vestment and chalice." He died in 1403.

There is a white marble tablet in the chancel to the memory of Sir James Burrows, who died in 1782. From the inscription we note he was a Fellow and once Vice-President of the Society of Antiquaries.

The church was new beautified in 1757, and repewed and repaired in 1847, at a cost of £2,343.

Crowhurst, about three miles north of Lingfield, was in former times extensively wooded, as its name implies. In the churchyard there is an old yew-tree about thirty feet in circumference. Its age possibly exceeds 1,000 years; it is, indeed, marvellous how a tree, hollowed out by the hands of man, bound round with iron bands, and rods fixed here and there, should still thrive, and yet the top remain fresh and green. The cannon ball which is in the tree was found embedded during the hollowing process.

Haydn's "Dictionary of Dates" (1878) says the origin of planting yew trees in churchyards (these latter being fenced) was to secure them from the cattle, and so preserve them for the encouragement of archery. As in the words of Keats: "Again I'll poll the fair-grown yew tree for a chosen bow."

At "The Mansion," opposite the church, are some curiously clipped yews.

Aubrey speaks of a spring a little below Mr. Angell's house here, in a grove of yew trees, which tradition says rises on the approach of some remarkable alteration in Church or State.

It is to be regretted that we were unable to view Crowhurst Place, the old moated house built about the time of Henry VII., and where the Gaynsford family lived. It is recorded on a stone in the churchyard, bearing the arms of Gainsford, that Erasmus Gainsford, of Crowhurst Place, was the eldest descendant of that family residing there long before the Norman Conquest. The family, however, purchased the manor of Crowhurst in 1338.

The Angell family settled here before 1615. Their mansion was opposite the church, and is now a modernised farmhouse.

Sir John Gaynsford, Knight, who was M.P. for the county in 1467, married six wives, by whom he had twenty children; and John Angell, caterer to James I., Charles I., and Charles II., and chief porter at Windsor, and who resided at the mansion opposite the church, also had twenty children.

Crowhurst Church, dedicated in honour of St. George, is mentioned in the Valor of 1304. The patronage originally belonged to the priory and convent of Tandridge, and was given by Henry VIII. to John Ride and others.

The parish registers extend over 500 years. In January 1652 "part of the body of Crowhurst Church which had been in heapes a long time was made plain and repaired."

The church has a nave, chancel, and south aisle, and contains portions of different periods of architecture, from Early English down to Perpendicular. It has a picturesque exterior, its shingled spire rising through the west end of the nave giving dignity and grace to the otherwise somewhat squat building with its low-pitched roof. The font, which might be of Norman times, more probably Early English, is octagonal, dying on to a square supported by a central round column with four smaller columns at either corner.

YEW TREE, CROWHURST CHURCHYARD

The most striking tomb in the church is the alabaster one in the chancel, facing the altar. Here lies buried Sir Reg. Cobham, son of the preceding lord, and Ann, his second wife, his first wife being Eleanor, daughter of Sir Thomas Colepeper. It was this Sir Reginald who rebuilt the parish church and founded the college; he died in 1446 and directed that his body be buried in the Collegiate Church of Lingfield, before the high altar. The knight's effigy is in a perfect suit of plate armour, except the head, face, and hands, the head being laid on a helmet surmounted by the family crest. Here, again, we see a further change, the armour becoming much heavier and more elaborate, and here we have a "skirt of trees." The lady's head is supported by two angels.

The Purbeck marble tomb near the north chapel wall is supposed to be the tomb of Sir Thomas Cobham, who married Ann, daughter of the Duke of Buckingham, and died 1471.

I can only give a very short account of some of the remaining brasses and tablets.

In the north chapel, on a brass plate, "Hic jacet Isabella Cobham."

Another brass, under the figure of a woman praying, "Orate pro anima Katerine Stokett."

There is a black marble gravestone to George Turner, late of New Place, who died 1682.

In the chancel, on black stone, to Gulielmus Widnellus, with Latin inscription and the following lines:—

Desist those profane feet, forbeare
To fowle this hallowed marble where
Lies Vertue's goodness, Honour's heire.
'Cause the world not worthy him to have
The Great Jehovah shut him in this grave.

The lower portion of the wooden framework supporting the turret and spire springs from below the floor-level of the church, the four massive front posts having a four-centred arch with traceried spandrils running through same and forming a kind of west screen.

Lady Uvedale, dying in 1489, bequeathed 20*s.* for the rood-lights. There was formerly a rood-loft 17 feet 9 inches in length, the width of the nave. The Rev. A. Hussey observed, in 1842, that marks then visible in the chancel wainscot proved the latter to have been co-existent with the rood-loft itself.

The hexagonal pulpit has linenfold panels, and must be of Jacobean date. Manning says the east window is of three lights and six smaller ones above, and contains some old stained glass.

There is a fine specimen of an old Sussex cast-iron slab to the south side of the altar, whereon are figures of two boys in one small square, over them "W.R."; in another two girls kneeling, in the middle a woman in a winding-sheet, and the following inscription, in which the F's are written upside down and the S's reversed:—

HER : LIETH : ANE : ℲORST
R : DAVGHTER : AND :
HEYR : TO : THOMAS :
GAYNSℲO RD :ESQVIER.
DECEASED : XVIII : OℲ :
IANVARI : 1591 : LEAVYNG
BEHIND : HER II : SONES
AND : V : DAVGHTERS.

Below are two small shields of arms. On the one a lion rampant. (2) ——. (3) A chevron between three greyhounds. (4) ——. Her method of publishing her claim to the family of Gainsford.

On this side of the chancel, inside a semi-circular arch, is a tomb to John Gainsford, 1460. The border is ornamented with various sculptured devices, such as a grapple with a cable twisted around it, a branch of oak with acorns, &c. In the centre are two grapples with flukes set against each other, in one the fluke being double. On a covering slab is a brass figure of a man in armour, with sword and spurs, his feet resting on a buck.

Adjoining this, under an obtuse arch, is another monument, but with no inscription. Under an achievement against the north wall is another, in memory of Nicholas Gainsford, who died in 1705.

In the churchyard, on a tomb, is the following:—

Here lieth the body of Mrs. Susanna Turner, died
July 16, 1800, aged 47 years,

and this epitaph:—

I'm now at rest, and free from all the cares
Of this tumultuous world and its affairs;
I now shall sin no more, no more shall weep,
For now I do enjoy a quiet sleep.

And there are many other interesting epitaphs in this churchyard, but space will not allow me to mention them here.

New Place, close to the station at Lingfield, is well worth mention. The present house, built in 1617 but recently altered and restored, was erected by one Turner. An older house consisting of four gables is supposed to have been there as far back as 1300. As the cottages close by belonged to the college, it is quite possible that this was the residence of some one connected therewith. We read that in 1753 Thomas Griffiths, "ye old tinker," resided at New Place, and kept nineteen cats.

ORIEL COLLEGE, OXFORD.

By Arthur W. Martin, M.A.

(*Concluded from last week.*)

As has been mentioned, Oriel now possesses no buildings dating from the time of its foundation; but although architecturally it does not claim many features of particular interest, yet the general impression made on the mind of the visitor, as he passes through the gateway under the tower, is one of pleasure at the view which meets his eye. The Front Quad has, as has been said, an especial charm, which is the result mainly of the harmonious and symmetrical grouping of the buildings, and of the weather-stained and crumbling stone of which they are constructed, and which gives the impression of age greater than that which they really possess. An advantage which the Quad has over those of some of the other colleges is that its construction was practically continuous and was spread over a comparatively short time, the result being that the original design was carried out without any alteration. The tower, for instance, bears its due and intended proportion to the adjoining parts, and is not dwarfed by subsequent additions as has often been the case elsewhere. The general style of the Front Quad is that sometimes described as "Oxford Gothic"—an attempt, very often successful, to combine the features of the true Mediæval Gothic with ornaments and ideas borrowed from the Renaissance—"that is to say, it is neither Mediæval on the one hand nor unmitigated Renaissance on the other. It is a hybrid if the truth must be told; and yet how the homely picturesqueness of it grows upon one! How remarkable considering the sort of buildings that were being reared contemporaneously in other parts of the country, how remarkable is the College in retaining so many characteristics as it does of earlier traditional work! Here are mullioned windows hooded by labels; here are string-courses to scale the building and to define its several stages just as would occur in a product of the fifteenth century! Here also, on the east side of the Quad, are windows which, rejecting the late form of Tudor arch, obviously and deliberately revert to the earlier two-centred arch, with tracery flowing much more on the lines of the fourteenth century than anything to be found in Perpendicular work. Only the gaunt emptiness of the oval in the head bewrays them."*

The Second Quad, which one enters by a narrow tunnel-like passage leading from the north side of the Front Quad, is not completely surrounded by buildings On the east side, and continuous with the buildings of the Front Quad, is the block known as the Robinson Building the erection of which was due in great part to the generosity of John Robinson, who, after a successful career in various fields of activity, finally became Bishop of London He had held an Oriel Fellowship from 1675 to 1686. Th building was started in 1719, and was finished in a shor time. Robinson's example was imitated by Carter, wh was Provost from 1708 till 1727, and in 1729, as the resul of a legacy left by him for the purpose, there was erecte the building which still bears his name, and which form the west side of the Quadrangle.

On the north side of the Quad stands the library—building in the Ionic style of architecture—which has bee described as "much admired at the time of its erection. The architect was Wyatt, and the foundation-stone wa laid in 1787. It is difficult to see much attractive in th appearance of the building, and it must be admitted tha it harmonises but indifferently with its surroundings. Th upper floor is occupied by the library, and on the groun floor are the two Senior Common Rooms. The latte contain a most interesting collection of portraits. Amon those represented are Copleston, Eveleigh, Hawkin Cardinal Newman (by Ouless), Matthew Arnold, T. A Froude, Samuel Wilberforce, and Keble.

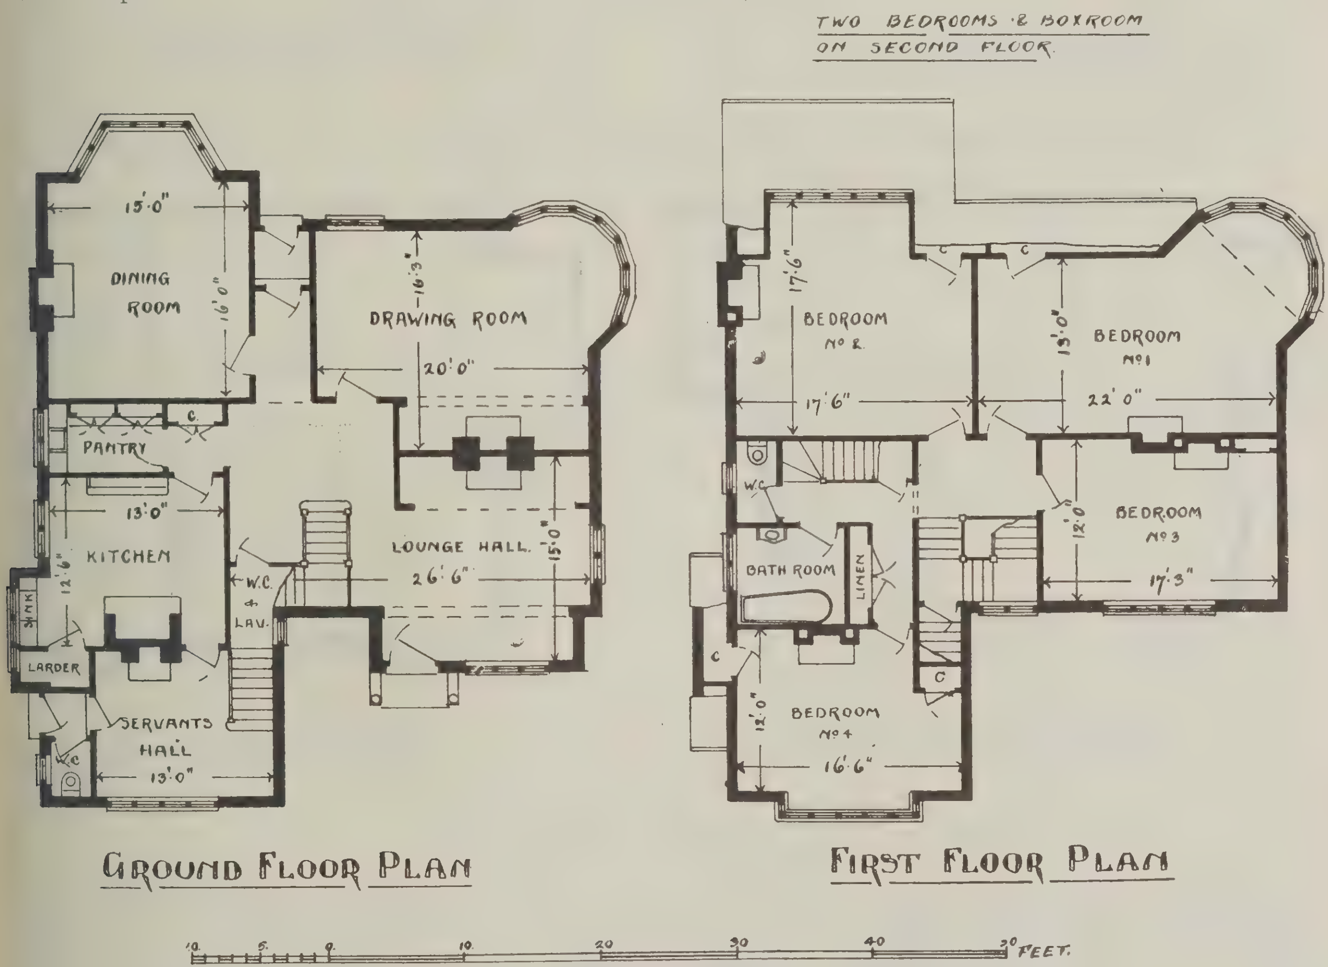
Finally, to the north of the library lies the Quadrang of St. Mary's Hall—known familiarly to undergraduat as "Skimmery"—which, after a life of more than fi hundred years as an independent institution, has aga become merged in Oriel. The site was originally occupie by the Rectory of St. Mary's Church, and was presente by Edward II. to Oriel in 1325. In 1333 the College co verted it into a separate foundation, and it remained until nearly the end of the last century. The buildings a picturesque, if miscellaneous, in style. The old hal turned into a Junior Common Room, and the chapel abo it, now used in connection with the library, are interestin and date from the beginning of the seventeenth centur The north side, however, of which a plate is here give now no longer exists, as it has been swept away to mal room for the new buildings. The carrying out of th scheme, which the College had long cherished, for th extension of its buildings to the High, was accelerated by the munificence of the late Cecil Rhodes, who, in addition to the great sum which he left for the furtherance of his educational ideas, bequeathed £100,000 to his old College. Part of this sum he allocated to the contemplated building extension. Accordingly in 1909 the work was begun from the plans of Mr. Basil Champneys, whose recent "new buildings" at Merton have been so much admired.

---

* Mr. Aymer Vallance, in the *Oriel Record*, September, 1909.

One cannot leave the history of Oriel without some mention of its "golden age," the time during which it reached its highest eminence, and was admittedly the most intellectual College in the University. This period began under the rule of Eveleigh, who was elected Provost in 1781, and whose reforming zeal had, with the aid of Parsons, Master of Balliol, and Cyril Jackson, Dean of Christ Church, brought about the institution of the Honours Schools in 1801. The chief cause of the renown of Oriel, which dates from this time, was the throwing open, free of all restrictions of residence or place of birth, of the Fellowships. The result was that the best scholars in the University offered themselves as candidates, and an Oriel Fellowship came to be looked upon as one of the highest prizes obtainable in the academic world. Edward Copleston, who afterwards became Provost, and whose name is closely associated with this famous period in the history of the College, was the first to be elected to a Fellowship under the new regulations. In these elections the underlying principle was, on the one hand, the avoidance of any slavish regard of successes gained in the Schools, and, on the other hand, the choice of the man whose mind was considered "an instrument, and not a receptacle"—the man who was likely to become an intellectual force. The presence of such men as tutors naturally stimulated the undergraduate section of the College, with the result that for many years the chief prizes of the University fell to the lot of Oriel. There was thus gathered together a band of men whose preeminent ability made Oriel the intellectual centre of the University. These were the great days of the Oriel Common Room—the days of the "Noetics" or "Intellectuals," to be followed at a slightly later time by the founders of "Tractarianism," for Oriel has always been looked upon as the home of the Oxford Movement, if only for the long and close connection between John Henry Newman and the College. The appointment in 1828 of Hawkins as Provost was, although not so recognised at the time, in reality the death-blow of the intellectual preeminence of Oriel, but it is now idle to speculate as to what would have been the course of events had Keble, who was the other candidate in the field, been elected to rule the College.

From that time down to the present day the life of the Society has resembled closely that of any other of the Oxford colleges: that is, it claims a record of useful educative work combined, in the case of our College, with exceptional success in athletic achievement—for the name of Oriel has for many years been famous on the cricket ground and the football field. May this happy state of affairs long continue. In the words of the College motto, "Floreat Oriel!"



PLAN.—ASHLEWORTH, GERRARD'S CROSS.

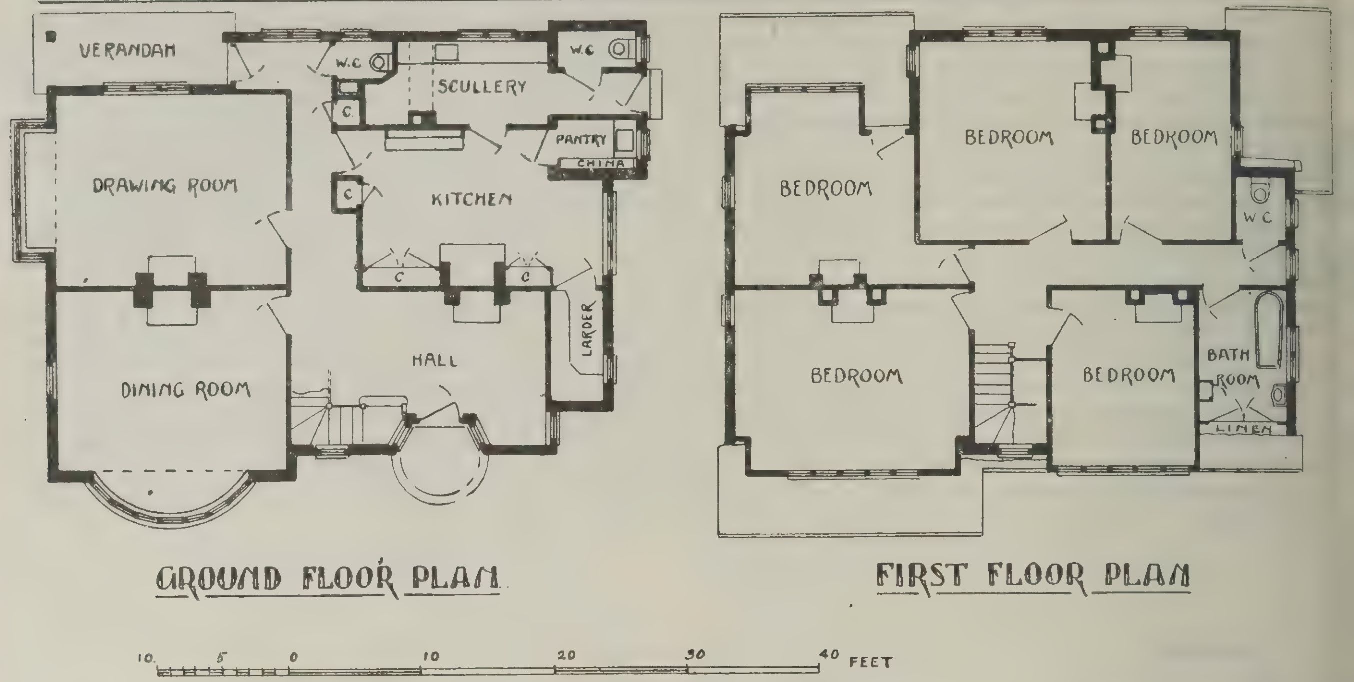
ILLUSTRATIONS.

MODERN BUCKINGHAMSHIRE HOUSES.

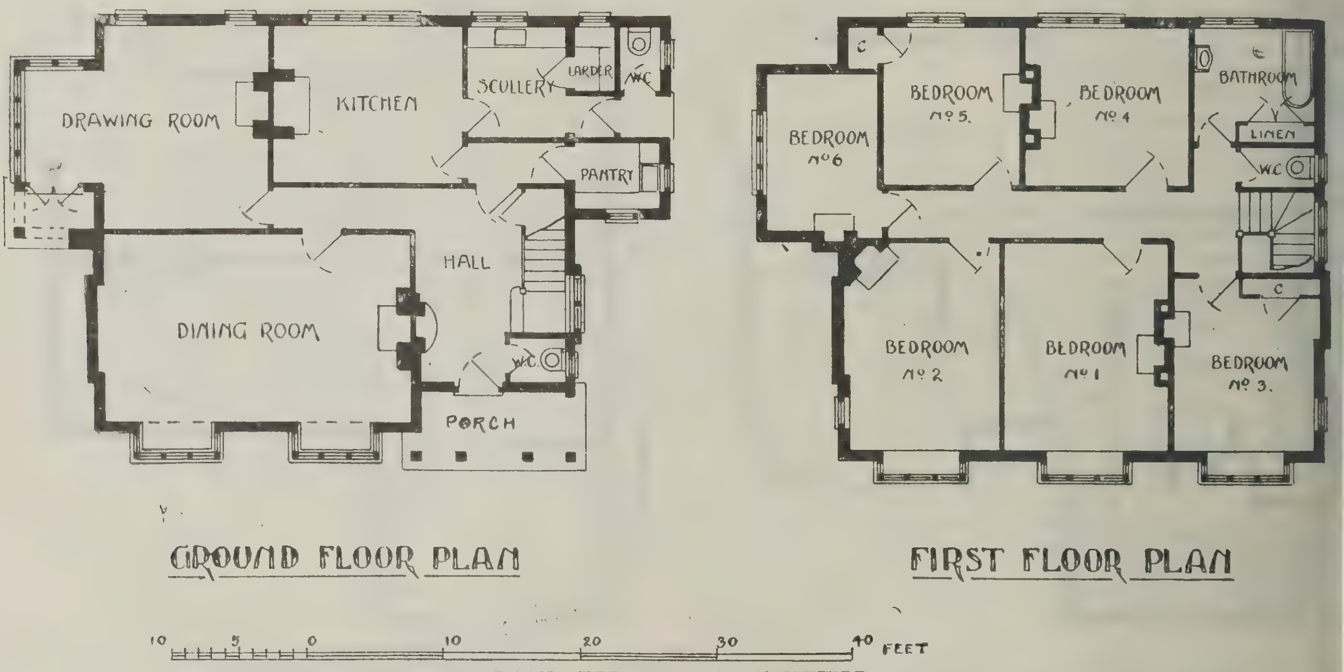
These houses now illustrated have been erected during the last four years from the designs and under the superintendence of Messrs. Johnson & Boddy, and are of interest as representing modern domestic work of an artistic nature.

Ashleworth, Gerrard's Cross, is built on a well-wooded site, and has fine views over Chalfont Park. The planning of the house is a little unusual, there being no scullery, but a sink is fixed in the kitchen in accordance with the wishes of the client. It will be seen that a servant's hall is obtained by this method, and a back staircase meeting the main staircase sufficiently high up so as not to spoil the privacy of the lounge hall. Externally the woodwork is finished with "Solignum," the walls of cream rough-cast, and the roof of red sand-faced tiles. The woodwork internally is painted, and the walls distempered. Messrs. Y. J. Lovell & Son were the builders.

Manawatu, Beaconsfield.—This house is on one of the highest parts of Beaconsfield. There are seen from all rooms lovely views of woodlands (mostly beech). The walls are built



PLAN.—MANAWATU, BEACONSFIELD.



PLAN.—UPLANDS, BEACONSFIELD.

of stocks covered with smooth cement, tinted cream, the brickwork, where exposed, being of local mottled reds. Although the roof is kept low, there is very little cutting in the bedrooms. All the external woodwork has been treated with "Solignum," also the hall and passages. The remaining work is painted. The internal walls are distempered. The windows are casements filled with lead light glazing. The builders were Messrs. Y. J. Lovell & Son, of Marlow and Gerrard's Cross.

Uplands, Beaconsfield.—This house, built on the Burke's Estate, is within one minute of the site on which stood the house occupied by Burke. A considerable amount of woodwork has been used externally as being suitable to a house surrounded by woods. The brickwork, except where exposed, is of stocks covered with smooth cement. The roof is of dark sand-faced hand-made tiles. The whole of the external woodwork is treated with "Solignum," the interior painted. The walls internally are distempered. The windows are casements filled with lead light glazing. The builders were Messrs. Y. J. Lovell & Son, of Marlow and Gerrard's Cross. In a subsequent issue we shall publish some interior views of this house.

THE NORTH PORCH, BRIDLINGTON PRIORY, YORKS.

BRIDLINGTON Priory Church, on the N.E. coast of Yorkshire, is renowned for the beauty and proportion of the Early English nave arcade. The north porch, which is not used for entry into the church, is a most beautiful specimen of twelfth-century architecture and workmanship. The porch is vaulted, in which dark brown stones are used as borders, forming a beautiful contrast with the white stone severies.

The upper portion of the porch has been restored, presumably on the old lines, but sadly lacking the strength and character of the old work.

A store-room, or priest's chamber, on the porch, is reached by a narrow staircase in the width of the wall, and the entrance is about 15 feet above ground floor level. Great variation is found in the carving, use being made of birds and beasts, heads of kings, queens, bishops, &c., all of which give a most charming effect.

It is a pity that this beautiful work is not better known.

The drawing from which our illustration is taken was awarded a prize in *The Architect* Students' Sketching and Measuring Club.

OXFORD COLLEGE SERIES—ORIEL.—INNER QUAD AND ST. MARY HALL QUAD.

WE this week give further illustrations of Oriel College, in continuation of the series commenced last week. Those views were wrongly attributed to Mr. A. E. Walsham, the photographs from which our blocks were prepared having been taken by Mr. J. W. Borland and Mr. J. Halliday Borland.

THE ARCHITECTURAL ASSOCIATION.

An ordinary general meeting of the Architectural Association was held on Monday, November 27, Mr. Gerald C. Horsley, President, in the chair.

It was announced that the Athletic Club Dance will be held in the Wharncliffe Rooms on December 8 at 9 P.M. The following elections were agreed to: Mr. W. Allison, Wandsworth Common; Mr. G. B. Booth, Bayswater, W.; and Mr. M. H. C. Doll, Much Hadham, Herts. The re-instatement was announced of Mr. G. A. Humphreys, Llandudno. The President announced that there is a vacancy on the Council, and that the Council will nominate a member to fill this vacancy at the next ordinary general meeting, when it will be possible for members to make further nominations. A vote of thanks was passed to Mr. Francis Sells for presenting to the A.A. a copy of *Ye Solace of Pilgrims* (a description of Rome in 1450).

Mr. Arthur T. Bolton then read a paper entitled

Thoughts on Jacobean Architecture.

In his opening remarks Mr. Bolton said he had to confess to having always found the subject of Jacobean architecture very obscure. Domestic architecture was in itself essentially complicated. For instance, in looking into the history of a house extending over two or three centuries, the customary absence of records, either of building or reconstruction operations, renders many common assumptions and historical deductions very unsafe. Broadly speaking, each generation makes its own alterations; and sales, with the accompaniment of new ownership, are pretty certain dates of successive upheavals. A good many facile deductions based on plans of old buildings seem to rest on insecure foundations.

In speaking of Jacobean architecture, Mr. Bolton said that he proposed mainly to adhere to the reign of James I. and its sequel under Charles I., but in no case to cross the gulf of the Civil War—that is to say, from 1600 to 1649.

Off-hand most architects would state a distinct preference for the Elizabethan work of the preceding half of the sixteenth century, and admit a belief that Jacobean work was a decadence from a more vigorous and interesting class of work. Probably the truth may be found in recognising that it was a transition age, with all its accompanying difficulties, weaknesses, and occasional acts of baseness. In spite, however, of the assumed signs of decadence, we have this paradox, that in architecture, music, and painting we stood, as a nation, on the verge of a veritable golden age. The shifting direction of Tudor, Elizabethan, and Jacobean foreign and social policy has its reflection in our architecture. Italy, France, the Spanish Netherlands, the liberated Netherlands, Spain itself, and more transiently Germany, each and all were shifting centres of influence. It was not only by the diffusion of ideas and of books and prints, but also by the actual immigrants, largely workers and workmen, that these forces were felt. All the while, however, England was finding herself not only politically, but also artistically, and, as a man grows, absorbing or rejecting those elements which the state of her growth dictated.

By the end of the seventeenth century a vast fund of experience had been accumulated. Able workmen abounded, and the need of the moment was for some directing mind to focus the confused and scattered elements into a lucid whole, formulating a line of action along which future progress could be assured. The need was met. In Inigo Jones an architect appeared whose work was destined to bridge even the gulf of civil war and to determine the future course of English architecture.

The Elizabethan and Jacobean ages, however, were not unprovided with skilful architects. Quite a list of names of men, whose biographies we should be only too glad to have, has been collected. The Thorpe collection of plans, drawings, and designs show that in the Thorpes, father and son, we have a type of the high degree of zeal and intelligence that the age produced. The impression produced by a careful study of the drawings is that in them we have the record of studies made and designs conceived in the true spirit of the working architect. Thorpe was interested in many things, and, above all, desirous of extending his outlook. He seems to be groping after the development that Inigo Jones was to achieve.

The main dates in Inigo Jones's life are the following: Born in 1573, he went to Italy up to 1604, and may have been at the Danish Court in the service of King Christian prior to that date. He is known to have been in England for the Mask of Blackness, presented by Anne of Denmark, wife of James I., on Twelfth Night, 1604-05. Inigo Jones was a King's Messenger to France in 1609. He was appointed Surveyor to Henry, Prince of Wales, from January 16, 1610, up to his death on November 6, 1652, and was a good deal occupied in the production of the famous Court masques, supplying scenery and devices to Ben Jonson's libretti. Over the ordering of these performances a violent quarrel between them broke out. Jones being neglected at Court between 1612 and 1621, went to Italy a second time in the summer of 1613, but definitely returned home in the autumn of 1614. He was appointed Surveyor-General of Works in 1615.

Of the early Jacobean work attributed to this stage of his career, Bramshill is the most important. It is certainly built over an old building to the extent of being tied in plan by the preceding structure. Begun in 1605, it was completed in 1612. Bramshill illustrates, as well as Hatfield, the Jacobean tendency to discard entablatures and obtain effects independently, either by flat masses or by vertical breaks.

Hatfield, 1607-11, suggests that the superintendent of the works had been supplied with a plan and only two elevations, and that in working out the other two as he proceeded he dropped into the gable style in which he had probably been brought up. Owing to the omission of Hatfield in Thorpe's collection, it is hazardous to express any opinion on the authorship of the design of the main façades. However, the omission in the building accounts for the period in respect of payments for architectural services is not conclusive evidence against any architect being employed. There were various ways of acknowledging their services in those days.

The plan of Hatfield is of very great merit. It seems to be a development of Hardwick Hall, but while the latter is a more coherent design, it is in respect to Hatfield as a summer villa or casino compared to a house. Unfortunately, the plan is not fully worked out architecturally; the chimneys illustrate it, rising up in long, ugly lines like nineteenth-century party-wall stacks, showing a want of that combination and grouping for which a skilful architect will always provide. The worst injury after 300 years' occupation is in the re-glazing of the two lower floors, including the unfortunate screenwork in the arcade of the cloisters. Naturally, to our notions of old work, there is too much paint, gilding, and polish; but in this we perhaps differ from the Jacobeans themselves. Knole staircase painting, for instance, has the appearance of being original. They did not appreciate oak as we do, and they had at times a very naïve taste in gold and crimson plasterwork.

The Jacobean work at Knole, Kent, 1603-05 (and later), is in the nature of an alteration of an older house, a refashioning to date of an old double quadrangular plan. As the work was for the Earl of Dorset, for whom John Thorpe had designed Buckhurst, and as it shows in the gables and treatment of the south side traces of his manner, it is fairly safe to accept that attribution.

Inigo Jones made designs for the Star Chamber in 1617, and tradition has also connected him with the Rolls Chapel, and he laid out Lincoln's Inn Fields in 1618. The decisive stage of Jones's career began in 1619 with the Whitehall designs, but the Star Chamber design of two years previous is quite Palladian. There is, however, in the Burlington-Devonshire collection an admitted drawing of a semi-Jacobean character signed by Inigo Jones and dated 1616. It is a three-storey narrow entrance bay, ending with a pediment abutting on a pierced balustrading, Jacobean in character. It is decidedly an experiment in style. As to Chilham Castle, the structure is differentiated from a simple traditional house by a unity of conception arising from the deliberate adoption of a complicated hexagonal plan, having an evident intention of creating a court effect at the back, visible by means of the open sixth side of the hexagon. The plan, moreover, shows the study of the outcome of the use of the hexagon, because the extended front and the management of the right and left wings are calculated to obviate any defects of the bare geometrical form. We have here, therefore, something much more complex than the triangle of Longford Castle, or the symbolic trinity of Rushton Lodge, or the geometrical fancies of John Thorpe's book.

There seem to be no real grounds to doubt Inigo Jones's authorship of the famous second quadrangle of St. John's College, Oxford, including the lovely garden front. Archbishop Laud had the work done in 1631. Laud's Chaplain and biographer, after describing it, says:—"The whole composure fashioned in an excellent symmetry according to the exactest rules of modern architecture, not only graceful in itself and useful to that private house, but a great ornament also to the University." The Whitehall designs of 1619 are usually taken as marking out Inigo Jones as a pure Palladian, and from this standpoint other work attributed to him is judged. Eleven years later, however, he gives us this lovely garden façade, English, but with a fine shading of Italian ideals, as unique in its kind as some of Shakespeare's "sweetest wood notes wild." There seems no reason to refuse the authorship of the porch of St. Mary the Virgin to Jones as well. Purists may say what they like, the fact stares us in the face that this little work is a gem of its kind; one of those things that only a master can achieve with success.

The highly interesting church of St. John, Leeds, 1631-3, and St. Catherine Cree, 1628-30, illustrate the tendencies of the ecclesiastical architecture of the age. The London church is much more advanced, having round arches with coffered soffits rising direct from the capitals of Corinthian columns, as is also the case with the cloister arcade at St. John's College. The outside follows the usual lines of an old mediæval city church, but the semi-Perpendicular tracery windows are more or less framed by semi-Classical mouldings having the character of architraves. The ecclesiastical policy of Charles and Laud, steering between Rome and Geneva, required precedents of a recognisable English character. These semi-Gothic churches are more typical of the age than St. Paul's, Covent Garden, where the design is related to that of the Piazza, in which it stood. In any event, we have in the chapel of Lincoln's Inn, 1617-23, existing, but added to, in the church of St. Albans, destroyed in the Great Fire, examples of Inigo Jones's handling of Gothic architecture.

When we come to Kirby Hall, 1638-40, we find Inigo Jones completing the work of his predecessor, John Thorpe, 1570-72. There is a good deal yet to be learnt about the building process at Kirby. It looks very much as if Jones undertook there what he had already done in 1624 at Castle Ashby, *i.e.*, to build a connecting block between two extended wings, completing a quadrangle in each case. Kirby, however, is the more extensive undertaking, and one that is more sympathetic to the older building.

Much of the Jacobean fantasy in ornament is only a shading, or texture, over the surface of the architecture. It plays the part of the apparently excessive lines of a mezzotint, preventing by a play of light and a fretted surface a severity of mass inconsistent with the fancy or gaiety of the general conception.

It is certainly true that the study of Elizabethan and Jacobean architecture has been prejudiced by the excessive attention given to its often ill-regulated ornamentation. Naturally, if we adopt only a standard of decorative design, such as, say, King's College Chapel screen at Cambridge, where the level of the original examples, as at Perugia and Verona, is reached, then the great body of Jacobean detail must strike us as coarse and debased. Jacobean work varies enormously, fluctuating between the fretted, bossy, intricate, and involved types that prevailed in Elizabeth's reign, and better models inspired by the increasing tendency towards ideals of classic grace.

Finally, we may well be careful in ascribing mere ignorance to some of these Jacobean architects as the motive of their handling of classical detail. There will be found in the best of it a wit and humour of treatment which implies knowledge, observation, and thought, and is as legitimate as any other form of fancy or burlesque. The actual degree of refinement is in the discretion of the artist, and it will be a reflection of the taste of the age. There are instances where these brave shows touch high levels and awake deep feelings, as though they were already tinged by the scaffolds of the Civil War. We do an injustice to this half-century if we are alive only to its materialistic pomp. The Jacobean age closes with the violent deaths of Buckingham, Strafford, Laud, and Charles, with a Court in exile, a ruined nobility and gentry, and a broken and scattered school of artists.

Mr. Bolton led up to the conclusion that we inherit from this half-century some unique and lovely English homes, and derive therefrom a pleasure that is certainly no mere outcome of sentimental associations. Places like Fountains Hall, Abbots' Hospital, Kirby Quadrangle, St. John's, Warwick, Moyn's Park, and the garden front of St. John's, Oxford, produce an impression that no prejudgment can efface.

Mr. Lawrence Weaver, who was invited to propose a vo
of thanks, said he had been much impressed by the eruditic
which Mr. Bolton had brought to his task. He had bee
particularly interested by the information as to Inigo Jone
which, he took it, was the most important thing in the pape
It was not, of course, an absolutely new fact that Ini
Jones was working in the vernacular manner after his Pall
dian outbreak. About this period there was enough inform
tion available, provided they could get a fresh intelligence
play upon it. It gave something of a shock, however,
realise that Inigo Jones was doing traditional work and w
doing it in an efficient way long after his Palladian wo
was supposed to have put everything in the backgroun
He could not help feeling that if buildings were studied
the terms of the people who lived in them they would have
better understanding of both them and the occupants ther
selves.

Mr. W. Curtis Green, in seconding the vote, said that th
had had a most extraordinarily interesting paper, one whi
covered a great deal of ground and touched on a great ma
problems. Mr. Bolton was a most wonderful man—a so
of walking encyclopædia, full not only of architectur
history, but also of anecdote. He was an ideal student w
did not think too much of the superficial aspect of the thin
but got at it on every side. Mr. Bolton had, in fact, a sen
of architectonics—if he might say so in default of a bett
word. In his paper he had rightly tried to minimise the i
portance which ornament usually took. Often ornament on
concealed architecture, and they therefore wanted to get
the buildings themselves and the idea behind them. Th
could only do that by studying fine architecture, whether o
or new. Mr. Bolton had rather surprised him by not goi
further into the question of a comparison between Ini
Jones's work and that of François Ier., and by not drawi
some analogy between them. Personally, he (the speake
would like to suggest that some English work of the Jacobe
period was very comparable to the François Ier. They h
been lately told that a cool and critical study of the Fren
buildings would show that they were not consummate wor
of art, but rather the efforts of beginners. The use of su
a paper as Mr. Bolton's was to suggest how old work shou
be studied and to encourage them to soak themselves in
He himself would suggest that attention should be conce
trated on one great period, or on one group of buildin
so that the student might thoroughly grasp one great peri
of design, and begin to realise where the inspiration ca
from and also to realise that present-day architects m
look for inspiration to their own time, and to the peo
for whom and with whom one worked.

Mr. E. S. Yates asked if Mr. Bolton had come across a
painted work of the Jacobean period, as some years ago
past president of the Association had applied to him for
formation on that point, and he had been unable to sup
it. Mr. Phenè Spiers had said that he did not know of a
either. Of course a hundred years before there had been
lot of such work in the church screens of Norfolk and Suffo
but the art seems then to have died out. He wished to kn
why it seemed to have disappeared after being brought
such great perfection.

Mr. Weaver said he would like to mention in connecti
with the point just raised that there was a very interesti
and astonishing ceiling to the gallery at Pinkie Hou
Musselburgh (1613), a house built by Lord Chancellor Du
fermline. Scotsmen would not accept it as other than
English house mainly because of that ceiling.

Mr. C. H. M. Mileham remarked that the Jacobe
period was one of the greatest importance, because it was
in which the individual man comes forward almost for
first time, and it was the first time when architecture refle
the life of the village as well as of the monastery. That w
to say, the human element now began to enter largely i
architecture. They had to thank Mr. Bolton for putting
paper before them with such excellent slides.

Mr. A. Oliver inquired if Mr. Bolton had come across
money accounts of Jacobean buildings. In the Record Of
there was the original bill for Whitehall.

Mr. Louis Ambler said that Mr. Bolton was a mass
information and erudition. One of the questions he sho
like to ask was as to the exact date of Moyn's Park, for
whole design had appeared to him to be Tudor rather th
Jacobean. Mr. Bolton had stated that "all of them co
distinguish between Elizabethan and Jacobean work"—p
sonally he had to confess that he could not easily do
It was largely a question of locality. In the north the Eli
bethan style as they knew it did not develop in the same ea
period as in the southern counties. Again, Hardwick H

built about 1590-7, was, as Mr. Bolton had very truly said, extremely like Hatfield, except that it had no wings; but Hatfield was built twenty years later. He had been hoping that Mr. Bolton would mention the names of more architects of the period. No mention was made, for example, about the well-known Smithsons of the Midlands, of whom there were three generations. The first was Robert Smithson (1534-1614), described on his monument as architect and surveyor to the Wollaton family. Then came his son John, who commenced Bolsover Castle and was buried in the local church. Finally came his son Huntingdon Smithson, who continued the work there and did much else.

Mr. Gerald C. Horsley, in closing the discussion, said that Mr. Bolton had put before them a picture of that fascinating period of architecture when it was emerging from the mediæval times to a period of which the world knew a great deal more. It would be most interesting and profitable to have a complete list of Jacobean architects, such as Mr. Ambler had suggested, so that they might ascribe the different great works to their authors.

Mr. A. T. Bolton, in replying, said that as regards the proposed list of architects, he was afraid that at the present time its compilation was almost hopeless. He had a lot of names, but he could get no further as to biographical details. The main points of such careers were only dug up by chance. It had been suggested that someone should search for twenty years in Somerset House for Thorpe's will. The Civil War was responsible in a great measure for that lack of information. The registers of St. Catherine Cree which have disappeared were probably commandeered by order, to obtain evidence against Laud, and were never restored. It was difficult to realise the enormous gap which the Civil War caused. Some of the best facts about Inigo Jones were obtained after the war from scattered recollections of him. All the accounts of Hatfield are known, as also those of Wadham, which are given by Mr. Jackson in his book. It was difficult to see how architecture could be properly studied without reference to the prevailing political questions. Without such knowledge it was impossible, for example, to understand how the designs for Whitehall came to be made, and how they were not carried out. Ignorance as to history would not do for a study of the works of the Renaissance at any rate. It was very doubtful whether Smithson did any work at Wollaton. There seemed very good reason to believe that John Thorpe at any rate made the designs; Smithson may simply have carried them out. It was certainly possible to distinguish between the work of Jones and Thorpe. In different localities Jacobean work undoubtedly varied. A ceiling introduced into Holland House, for example, looked absurd, as it was a piece of provincial Jacobean work.

Mr. Louis Ambler has sent us the following in amplification of his remarks at the meeting:—

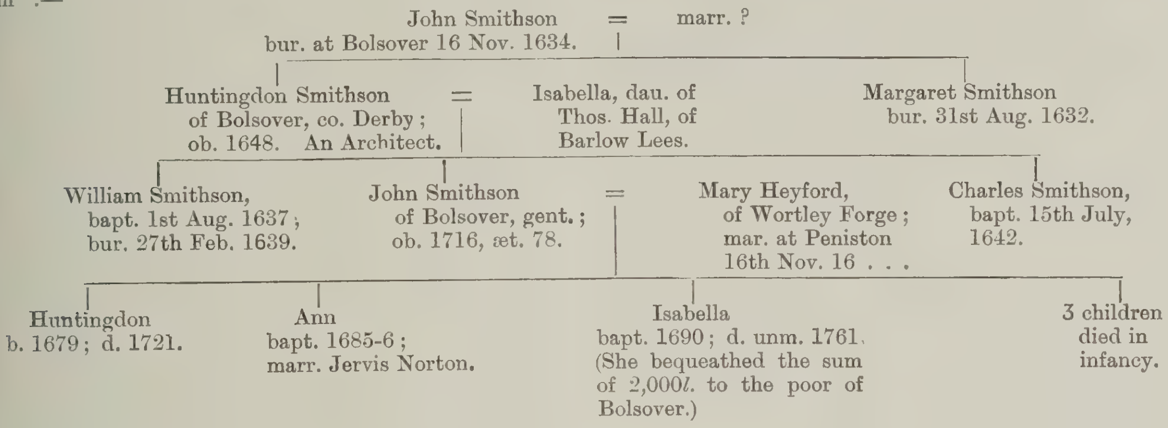
My authorities for the particulars of the three generations of Smithsons, architects in the reigns of Elizabeth, James I., and Charles I., are the following:—

(1) The inscription on Robert Smythson's tombstone in Wollaton Church, Notts:—

Here lyeth y^e body of Mr.
Robert Smythson, gent.
Architector and Survay-
or unto the most worthy
House of Wollaton with
diverse others of great
account, he lived in y^e fayth
of Christ 79 years and then
departed this life y^e XV^{th}
of October Año Dñi 1614.

N.B.—In those days "i" and "y" were used almost indiscriminately, the same person's name being sometimes spelt with an "i" and again with a "y."

(2) The pedigree of the Smithson family in the Harleian Society's publications, vols. 39 and 40, "Familiæ minorum gentium":—



John Smithson = marr. ?
bur. at Bolsover 16 Nov. 1634.

Huntingdon Smithson = Isabella, dau. of
of Bolsover, co. Derby; Thos. Hall, of
ob. 1648. An Architect. Barlow Lees.

Margaret Smithson
bur. 31st Aug. 1632.

William Smithson,
bapt. 1st Aug. 1637;
bur. 27th Feb. 1639.

John Smithson = Mary Heyford,
of Bolsover, gent.; of Wortley Forge;
ob. 1716, æt. 78. mar. at Peniston
16th Nov. 16 . . .

Charles Smithson,
bapt. 15th July,
1642.

Huntingdon
b. 1679; d. 1721.

Ann
bapt. 1685-6;
marr. Jervis Norton.

Isabella
bapt. 1690; d. unm. 1761.
(She bequeathed the sum
of 2,000*l.* to the poor of
Bolsover.)

3 children
died in
infancy.

(3) Horace Walpole's "Anecdotes of Painters in England," third edition, 1782:—"John Smithson was an architect in the service of the Earls of Newcastle. He built part of Welbeck in 1604, the riding house there in 1623,* and the stables in 1625; and when William Cavendish, Earl and afterwards Duke of Newcastle, proposed to repair and make great additions to Bolsover Castle, Smithson, it is said, was sent to Italy to collect designs."

(4) The collection of Smithson drawings belonging to Colonel Coke, of Brookhill Hall, including some plans of Bolsover, Welbeck, Worksop Manor, Clifton, Wollaton, and other houses in Nottinghamshire, many of them signed or initialled "J. S." (John Smithson).

(5) The inscription on Huntingdon Smithson's tombstone in Bolsover Church, viz.:—

Reader beneath this plain stone buried (lie)
Smithson's remainder of mortality
Whose skill in architecture did deserve
A fairer tombe his mem'ry to preserve
But since his nobler gifts of piety
To God, to men justice and charity
Are gone to heaven a building to prepare
Not made with hands, his friends contented are
He here shall rest in hope till th' world shall burn
And intermingle ashes with his urn.
Huntingdon Smithson
Gent.
Obiit IXbris 27, 1648.

(6) Walpole confuses John and Huntingdon Smithson, father and son, to some extent, saying that the former died in 1648 and "his son, a man of some skill in architecture, was buried in the same grave," whereas John Smithson was buried November 16, 1634. Samuel Pegge, the antiquary, in his letter describing Bolsover Castle addressed to the Duke of Portland, September 26, 1785, says that Huntingdon Smithson, who was living at Bolsover in 1601, was its architect. Most probably he was associated with his father in the work begun by Elizabeth, Countess of Shrewsbury ("Bess of Hardwick"), shortly before her death in 1607, and continued by her second son, Sir Charles Cavendish, and completed by him in 1616. This was the rebuilding of the main structure on the old foundations, and the external pavilions. Sir Charles died in 1617, and his son William (afterwards Earl, Marquis and Duke of Newcastle) built the detached pile now in ruins. On a stone in the building

---

* As appears by his name over the gate.

is engraved, "H. S. 1629," no doubt referring to Huntingdon Smithson, the architect.

For (2), (3), and (6) I am indebted to some notes by Mr. Walter L. Spiers in vol. 16, third series, R.I.B.A. Journal, and for (4) to Mr. J. Alfred Gotch's paper in the same volume.

The Architectural Association held their annual conversazione at 18 Tufton Street, Westminster, S.W., on Thursday, November 23. The members and the large number of guests were received by Mr. Gerald C. Horsley, the president, and Mrs. Horsley, on the first floor. The galleries had been tastefully decorated for the occasion. Round the walls of the first-floor gallery there was an exhibition of photographs and sketches by members of the Camera Sketch and Debate Club. In the room adjoining it there was an interesting display of jewellery, enamels, silver and repoussé work, bronzes, pewter work, tapestries, and art metal work, together with drawings by Messrs. W. S. George, Charles Gascoyne, Philip Hepworth, W. J. Palmer Jones, W. Walcot, and H. F. Waring. At one end of the room there was an exhibition of designs and four models for stage scenes lent by Mr. Edward Gordon Craig. During the evening a programme of instrumental music was gone through by Pitman's Blue Imperial Orchestra.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

EXAMINATIONS of candidates for the offices of district surveyor under the London Building Act, and of building surveyor under local authorities, held by the Institute pursuant to statute, took place on the 26th and 27th ult. Of the ten candidates admitted, the following three passed, and will be granted by the Council certificates of competency to act as district surveyors in London, viz.: Roland Reginald Seymour Andrews, of 103 Bow Road, Bow, E.; Joseph Edward Mundell, A.R.I.B.A., 157 Wool Exchange, Coleman Street, E.C.; and Herbert Henry Young, 11 Tankerville Road, Streatham, S.W.

At the general meeting (business) of the Royal Institute next Monday there will be on view the "Arthur Cates Collection," an important collection of photographs of buildings in Italy, Greece, &c., recently presented to the Institute by Mrs. Cates. At this meeting there will be put up for election five Fellows and fifty-six Associates, as well as the following two Hon. Associates, viz.: Mr. Walter Crane, R.W.S., and Mr. J. H. Marshall, M.A., C.I.E., Director-General of Archæology in India.

ENGLISH MEDIÆVAL ARCHITECTURE.—VII.

HAVING dealt in his preceding lecture of the course now being delivered at University College, Gower Street, W.C., with the broad aspects of the Early English extension of style, Mr. Edward S. Prior, F.S.A., F.R.I.B.A., in his seventh lecture dealt with the technical constructive advances.

In apportioning a certain distinctiveness of style to the four districts of Transitional Gothic (viz. "Northern," "Western," "Eastern," and "South-eastern"), Mr. Prior had touched on a difference in their vaulting. He mentioned the aisled chapter-house of the Northern Cistercian—vaulted with ribs of similar section for transverse and diagonal arches, so producing a system of uniform ribbed ceilings with rubble filling—well illustrated in the Fountains undercroft. Then in the west had arisen the circular chapter-house vaulted from a central pillar, as in the Worcester method; here again may be seen the expression of a level uniform encircling ribbed ceiling. In the east, in the home of Anglo-Norman monastic style, the Romanesque oblong vaultings held sway—heavily ribbed, but still as at Durham managing the same uniform ceiling effect. Finally, in south-east England were the Continental vault dispositions which at Canterbury were still making thick transverse arches, and a ceiling lifted or domed by the rising of the diagonal ribs between. But immediately following at Chichester and Boxgrove this Continental doming style was discarded for the same level uniform extension seen elsewhere.

The tie-beams of the wood roof above the vault in England were the mastering condition of its development. Their action is to be seen at Chichester—the arched ribs are depressed so as to get them under the tie-beams, and they can be seen to be distinctly four-centred instead of regular curves. This was an anticipation of a peculiarity in arches which some 150 years later occurred generally and for the same purpose—*i.e.* not appearance but for building convenience. At Chichester, too, may be observed the conditions introduced by the circular-planned abacus of the marble style, by which the vault ribs spring evenly from it and have all to start at the same curve and tend towards fan-shaped springers. These springers were taken up in level courses to some four feet above the actual springings of the ribs so as to save costly wood centreing. When these first courses had been taken as high as possible before curving they were left until the carpenters had put the wood roof with its tie-beams. Then with this roof overhead it was easy to finish the vault, having plenty of abutments and strength to set the centres. This method crippled the arch ribs, because in order to get the diagonal and transverse ribs to the proper places to meet they had to be doctored in plan as in rise, and became four-centred.

Other solutions were also available. In sexpartite vaulting, at the meeting of the diagonals in each square bay, two extra arches are brought up from the intermediate pier making instead of the four webs between the ribs of the quadripartite vault six webs. This expedient strengthened and strutted the weakest point and so cut up the web as to make heavy centreing superfluous. In the east of England the oblong bays were in the practice of traditional Benedictine setting out. At Lincoln there was between 1200 and 1240 a whole series of vault experiments founded on this tradition, and proceeding to the development of the many ribbed Early English vault. The first point to notice in these is the introduction of the mid-rib carried along the crown of the vault. This rib strengthened the weak part a the meeting of the ribs and ministered to a peculiar development of English style—viz. the carving of vault bosses. Th subsequent course of the English vault method was a continual development of these extra ribs or liernes and of th bosses at their intersections. In addition to this strengthening, the extra rib obviated the break in direction of th diagonal rib; also it gave a greater curvature for th diagonal ribs, and finally it further lessened the spaces o web filling between them. Another expedient was th "ploughshare" treatment of the web at its haunches so a to raise it above the side wall of arches and to allow greate height for the window.

In the progress of Early English vaulting methods wer absorbed from the whole body of Transitional work. It di not emanate from one source as a settled invention that coul be passed on and adopted wholesale. It discovered no fixe method, but took ideas from all sides and made experiment in each case determining the expediency of its own effort The "Reformed" building of the Northern and Wester chapter-houses contributed its share to these experiments— just as the vigorous Benedictine uses of the eastern abbey in oblong rib-vaulting, and just as the square-planned Continental types of the south-eastern school. The result wa that the insular or native style of English Gothic is a marked in Early English vaults as it was in the Earl English marble shaft and in the window.

The conditions of construction in "marble" and "white stone" worked to shape the Early English window. In Transitional building the pointed arch was wanted as a necessit of vaulting, and so the pointed window or lancet becam immediately necessary to fit economically in the bay. Ju the same simple necessities were at hand to produce tracery The important factor in the development of separately arche windows into a single traceried one lay in the question not the glass that filled the window, but of the wall in whic the window was a void. That wall had to be lightene rather than the glass to be enlarged—this applied especiall to the side walls, whether of aisle or clerestory. Romanesqu construction had aimed at putting a round-headed windo broad as possible in each bay of aisle or clerestory. Gla being costly and difficult to fix in too large stretches, ver wide lights seemed forbidden to mediæval construction by th expediency of building. Accordingly the first effort to redu the wall proposed, instead of a single opening, a double; i Transitional style such double windows came into use f aisles very frequently. At the outset, the double windo had two internal arches, one for each light. In order to out of the way of the vaulting wall-arch these double interna arches were best drawn together so as to become an arcad with a single shaft, and it was a clear convenience when on internal arch included the arches of the two glass opening But long before glazed lancets got their tracery the principl of arch development were in adoption for the unglaze openings.

But apart from external openings, the common practic of arcades which split up and economised the substance the wall had experimented with the same lesson of piercin the spandrel. In the triforium the idea of tracery begin with pierced circles in the spandrels. The enlargement hese can be traced on with an increasing use of foiled openngs. The idea of tracery spandrels once conceived, the idea f making wall surface all arches grew apace. The whole rea of the fabric would be mapped out into series of double ighted traceried arcades, used as windows and glazed, or as penings as occasion required.

It is clear how the three-light clerestory window grew ut of the internal arcade that made a clerestory passage in he vault in Anglo-Norman building. The influence of Purbeck marble made this internal arcade still more slender. Triple arcades for the clerestory internally are a special eature of the south-eastern masoncraft of Purbeck marble and Caen stone. Moreover, just as in the double-arched triforium o in the triple triforium, whose arches are contained under ne retaining arch, the spandrels have the quatrefoil and refoils which develop into tracery. By a similar transfernce the triple window, too, gets the complete attenuation of ts substance and becomes the three-light traceried window.

In gable ends the experiments had aimed at once at the eduction of wall-substances by multiplying arched lights nd arranging them together. In the Transitional buildings we find groupings of these windows in a gable-end, with the entral light rising above the flanking lights, so as to reduce he high and wide wall body ; but at first little extra reducion was obtained out of the internal arches. For a long ime Early English style was content with various arrangements of lancets—either making them very lofty or putting hem in tiers and graduating the top tier to the gable. In hese later experiments the treatments of the gable-end ranch in two directions : one acknowledges the three contructional storeys of the side walls, the other disregards them nd treats the gable-end as a single piece of wall. In the rst the tendency is to reproduce just the developments of he side windows ; in the second, progress towards a further evelopment was rapid.

Besides the lancets, there was another motive in the evelopment of end-wall tracery. The square-ended gables f Transitional building, especially in southern style, have circular or shaped window inserted above the lancets, and his in its growth became as efficient a factor in the reducion of wall-body as were lancets themselves. The constant nlargement of the circle goes on until it is directly upon he heads of the lancets, and finally it is brought into direct onnection with them under one arch, being absorbed into the cheme of the window in the same way as had been the refoils and quatrefoils of the triforium. Also, however, t preserved an identity of its own as a round window.

Briefly then window tracery developed from four experiments: first, the aisle or two-light development which got ts tracery out of the internal wall arcade that had been the ere-arches of the window ; secondly, the clerestory or threeight window was similarly affected by the internal triple rcade, whose origin goes back to the Norman passage along he clerestory ; thirdly, the end-wall of nave and choir experimented—first with various arrays of graduated lancets, n the same way as the clerestory windows, but for a wider ffect ; fourthly, the end walls of transept specially introduced and developed the circular windows ranged above a ow of lancets.

ROYAL SCOTTISH SOCIETY OF ARTS.

AT a meeting of the Royal Scottish Society of Arts, Edinburgh, held on November 27, a paper was read on the ubject of ventilation by Captain Geo. A. Chaddock, the patentee of the well-known Chaddock mechanical windows, which have been adopted in many public institutions.

Captain Chaddock, in prefacing his scientific explanaions, said that the advocates of natural ventilation did not appear to realise the importance of even heat distribution, as well as air distribution. He contended that when cold air enters a room it should be regarded as matter seeking warmth, which scientific research showed it would have at any cost. Therefore, unless temperature matter in the form of artificial heat was immediately available, the cold air would gather heat by robbing the inmates, which it did to heir intense discomfort. The first consideration is temperature or even heat, as well as air distribution, in conformity with nature's principles ruling in our oceans of air and water.

The lecturer next entered upon a scientific description of the properties of natural heat, and of the natural laws which regulated its equable distribution with the air. He went on to show that perfect ventilation of apartments could only be attained by adopting as the master key a mechanical application of these natural laws. Details were then given of many interesting experiments which had been carried out by the lecturer before different public and scientific bodies, the results of which were accepted as showing that the usual methods of ventilation were frequently unhealthy and dangerous.

Captain Chaddock explained technically the method of ventilation which is adopted in the House of Commons, which is known as the "upward theory" ; warm air being forced up through gratings, and thereafter rising vertically it is drawn out by an extraction fan. The inmates of the House are thus subjected to the danger of breathing matter ejected by each others' exhalations, quite irrespective of the foreign matter brought in on their boots.

The lecturer gave an account of the effects which had been realised in many public schools and institutions from the adoption of the mechanical windows installed by the Chaddock Ventilation Company. Illustrations and diagrams relating thereto were shown, the principle of the system being to produce a continuous and equable mingling of the fresh air with the artificial heat supplied, thus eliminating draughts, and maintaining a standard of purity equal to that of the actual open air, though regulated, of course, to any desirable temperature.

On the important question of ventilation in regard to schools, Captain Chaddock's demonstrations before various authorities have led to a widespread crusade of reform, and his contention is that if air is allowed to move on the line of least resistance it can only do so by passing out of a classroom into a central hall or corridors, thus polluting other portions of a building. The great bulk of schools in England are, he said, thus contaminated, and for this reason the Board of Education are now prohibiting central halls. The system of air moving on the line of least resistance was thus not only dangerous as a means of circulating impurities, but it tended to the maximum of discomfort, in setting up draughts and irregularities of temperature, and had, therefore, been a principal reason for the introduction of artificial systems. In contrast to this, if the rotary air movement was adopted, outlets and inlets being on the same side of the classroom, the air would pass out on the side on which it entered, therefore on the line of greatest resistance, thus ensuring a steady even movement, and thereby eliminating draughts and irregularities of temperature. This procedure, he said, admits of open air treatment all the year round, and as the system necessitates complete isolation of classrooms, it spelled for the general health of those in the building; also excluding noise from other rooms, instruction can be carried on to advantage.

LEEDS AND YORKSHIRE ARCHITECTURAL SOCIETY.

(Concluded from last week.)

CONTINUING his Presidential address at Leeds on the 16th ult. Mr. Sydney D. Kitson said it must be admitted that in artistic matters Leeds has not progressed during the past year. The starving of the Art Gallery, the suppression of its curatorship, and the abolition of municipal concerts may save a few hundreds to the rates, but one is tempted to think that they are economies bought at too dear a price. All who care for the few remaining buildings of an older Leeds will deeply regret the drastic treatment at present being portioned out to Red Hall. As usual, the literary gentlemen have not spared us. In an ode to the statue of the Black Prince the poet of *Punch* alludes to Leeds as "a haunt of misery and gloom" ; while a sonnet in the *Spectator* had some hard things to say on the ugliness of Leeds. In a recently published guide-book to the West Riding I find the following choice passage :—"It is questionable whether any other city—except, perhaps, Sheffield—displays to the railway traveller such a scene of smoky hideousness as is offered to those who, descending from the Bramhope tunnel, and having left only a few minutes behind them the green and open valley of the Wharfe, look out towards the east along the filthy river Aire from the summit of the viaduct which crosses the Kirkstall Road." These extracts do not make pleasant reading, but it is as well sometimes to see ourselves as others see us. It is inevitable that the stranger who approaches Leeds expecting to find it a Vienna or a Paris should be disappointed. Nor has the claim yet been made for the city that it is a health or pleasure resort. But it is a great manufacturing centre where nearly half a million people live and work probably as hard as in any other town in the world. And by reason of the strenuousness of their lives sunshine and pure air should be all the more necessary to their existence. Only recently a professor, speaking in Sheffield, told his audience that smoke was essential for the production of the best steel. But surely, as Mr. Gladstone once said with reference to another matter, in a place not a hundred yards from where we now are, "the resources of civilisation are not yet exhausted." And it is difficult to believe that science could not produce the best steel by a more cleanly method if it was made worth the while of science to do so. People have grown so used to what is really a reproach to our civilisation, or they are so busy making money, that they have come to regard our smoke-laden atmosphere with regret certainly, but with resignation. The architect suffers from this nuisance perhaps more than any other member of the community, for the public are disinclined to put up good buildings when they know that they will be shrouded in soot within a year after erection. Recently a miniature "White City" has been growing up at the bottom of East Parade, built of a white terracotta of local manufacture, which has done much to brighten the neighbourhood. But this material is, after all, only a palliative whose use would never have been thought of but for the present atmospheric conditions of our big towns.

Town-planning in our province has not yet passed out of the region of talk into that of practical politics. A very generally expressed desire has been, however, shown that the new colliery districts so rapidly growing up round Doncaster should be something better than the sordid mining villages to which we are accustomed. The Archbishop of York said the other day that now our municipalities had great opportunities put into their hands, and he believed that had there been more care and desire in the past to check individual enterprises by the common good they would have been able to present to the world something that was not only stimulating but something more beautiful and healthy than those amorphous streets which crawled up and down like ugly insects in the manufacturing districts of Yorkshire.

In Halifax a competition, with prizes given by the local Member, has been held for the best plan for improving the laying out both of the town and suburbs. It is much to be desired that a similar competition should be held in Leeds. There seems an opportunity now, when additional municipal accommodation is so urgently needed, and when the Infirmary is embarked upon an extension scheme, that the approaches to the Town Hall—which stands in its inky cloak as a sort of Hamlet among the buildings of the world, bemused by its own surroundings—should be widened and improved. No street alteration of any kind has taken place here since the Town Hall was built, and surely it is high time that the setting to the fabric which our forebears wrought so well should be taken in hand.

There is now the chance for the correlation of some of the more important of our public buildings. The obvious truth cannot be too often repeated that one fine building does not make a fine city, but the wise grouping together of fine buildings not only doubles the value of those buildings themselves but also provides the only elements out of which a stately city is made. In an interesting address which the City Engineer, Mr. Lancashire, read to the Association of Municipal Engineers last summer, upon the development of Leeds, he said, "Although recent improvements have resulted in the possession of many streets and buildings of which Leeds is justly proud, it cannot be argued that reconstruction is as satisfactory as construction properly planned in the first instance, even apart from the extremely heavy extra cost. One is bound to realise that, in some cases, there has been no design beyond street widening for better travelling facilities, no motive beyond the wider streets and the better buildings which have followed the widenings, and some of the fine new buildings have been erected where it is impossible to appreciate properly the full beauty of the architect's creation."

Now that the population of Leeds has become steady and almost stationary, and now that it is no longer needful that the owner of agricultural land at some remote distance from the city should display a notice-board calling attention to his "ripe building land," the opportunity arises for a general tidying up in our suburbs. There is no longer any reason why they should resemble a miners' camp or a navvies' settlement—all barbed wire and empty tins. Because every plot in a suburban road is not built upon it seems hard on the unfortunate people who are there that their roads should be entirely unmade and often impassable. Even now, by the exercise of some thought and by the co-operation of adjoining owners, the suburbs might be opened out from the blind-alley condition in which they have so often grown up.

Probably the most important building enterprise in this
neighbourhood at the present time is the City of Le
Training College and its fleet of attendant hostels. Th
every care has been taken with the disposition and groupi
of the various buildings, and this forethought will, I thi
result in an interesting and satisfactory lay-out. There
every chance, too, that the suburb which will grow up arou
it will be carefully and effectively planned.

For the first time there is a Lord Mayor of Leeds who
connected with the building trades, and we may rest assu
that Mr. Nicholson, who is an honorary member of
Society, will do what he can to promote its best intere
during his term of office.

I hope that members will attend the lectures well dur
the coming session. They form a varied and attractive l
and the best way to show appreciation of the trouble a
kindness involved by the various lecturers is to turn up w
and to join in the discussion afterwards.

Now nothing remains but to wish you a pleasant a
prosperous year. The happiest life that a man can lead
an architect's life, if his interests and sympathies lie t
way. And, I would add, the happiest architects are the p
vincial architects, for they usually have a greater range a
variety in their work, and have more varied lay intere
than is possible to Londoners. And, to crown all, they h
the open country at their back with all that it means t
man's health and spirits. Nor does it seem needful now t
a traditional style is once more beginning to emerge from
chaos of clever electicism, and now that opportunities
study are so much greater, that the design of provincial arc
tects should be measurably inferior to that of their Lond
brethren.

Professor Blomfield, indeed, in his history of Engl
Renaissance architecture, spoke of "the technical inferior
in design which has to some extent characterised the w
of provincial architects since the eighteenth century." Ye
the ten best designs which he, as assessor in the recent M
chester Art Gallery competition, selected, seven, if I mist
not, were the work of provincial architects. And one of
selected ten designs was by the treasurer of this Soci
This occurred, mind you, in a competition calling for
highest qualities in monumental planning and design.

So, although it is quite certain that we cannot al
men of genius, we can, at any rate, see to it that our bu
ings shall fulfil the sound and common-sense requireme

LECTURE ROOMS BUILDING, HAMBURG.—Herren H. Distel & A. Grubitz, Architects.

LECTURES ON HEATING AND VENTILATION AT UNIVERSITY COLLEGE, LONDON.

THE fifth of a course of six public lectures on "The Real Nature of the Problems in Heating and Ventilation Awaiting Solution by the Engineer," by Mr. Arthur H. Barker, B.A., B.Sc., was delivered on Tuesday, November 14. In the previous lecture he had dealt with the possibility of utilising waste industrial heat for domestic purposes, and had considered briefly the commercial aspect of the idea. The problem, however, of economy in fuel consumption as at present used is largely one for the architect and builder to solve, inasmuch as they are responsible for the design and construction of the buildings to be warmed. The maintaining of a given temperature in a room depends upon the various factors which contribute to loss of heat, and many of these factors are themselves dependent upon the quality and nature of the construction of a building. A large variation of temperature, to the extent of 5° or 6°, is caused by the conductivity of brick or stone walls when built solid, stone being the better conductor of the two. The greater the exposed surface of wall or roof, the greater the leakage of heat and the greater the expenditure of fuel required to maintain the required temperature within the room or building.

The prevailing conditions outside, such as wind and rain, also have their effect on the inner temperature of our dwellings, and we must, in consequence, consider to what extent the particular house under consideration is exposed to, or sheltered from, the elements.

It is known that heat passes more readily when the humidity of the air is higher, and that the rate of transference is increased by the use of a fan to the extent of 50 per cent. All these factors served to make the problem one of extreme complication, and at present there is no means of estimating the extent to which this loss goes on. The causes are out of control of the engineer, and, as hinted above, lie more within the province of the architect.

The construction of the wall, whether it consists of one or more materials, and the mode of building it, both have much to do with the possibility of solving the difficulty.

As regards the mode of building walls, he suggested a 9-inch outer wall, and 4½-inch cavity, and a 4½-inch inner wall, which method would prevent a large amount of heat transference. Care must be taken, however, that this idea did not defeat its own object. A relative of the speaker had adopted such a suggestion in order to secure walls that would remain perfectly dry, but the fixing of gratings at intervals to further this object had converted the cavity into what was practically an upcast flue, and the resulting free circulation of air had rendered the house so cold in winter as to be almost uninhabitable. This was cured on the ventilation gratings being closed, thus demonstrating that, as far as heat economy was concerned, the space between the walls must be air-tight or have no direct communication with the outer air. Could this be done without sacrificing dryness—in itself an essential and important in its effect on the temperature of the house—inasmuch as a damp wall possessed extra conductivity? Plaster has little effect on the heat transference—seeing that its composition is much the same as that of the wall it covers—beyond adding an extra inch or so to the thickness of the wall. Some benefit might be derived by the introduction of a non-conducting plaster, for it has been shown that wood linings contribute largely to the maintenance of warmth in a room. In fact, any device that will tend to lessen the conductivity of walls, and so increase the temperature of their inner surfaces, will go to the root of the whole problem.

Considering that the co-efficients used in practice are known to be in error, it is time that efforts were made to test, by careful and exhaustive experiments, the extent to which temperature and air changes occur. A number of rooms in different parts of the country should be taken, their exposed surfaces in walls, ceilings, and floors calculated, and account taken by means of an automatic machine such as he had devised of the amount of heat required to maintain a given temperature over a long period. Air interchanges should be tested by Haldane's methods, and in every case careful note should be made of the prevailing weather conditions during the experiments. The cost of a machine such as he mentioned would be considerable, but the present methods of making calculations for heating installations showed how very necessary it was that some satisfactory figures should be available upon which such calculations could be based. Architects to-day hand the matter over to the heating engineers, merely requiring a given temperature in their buildings, and the tenders are sent in with no knowledge of the conditions which will vitally affect the efficiency of the plants provided. It is this fact that is responsible for the enormously disproportionate variations in price which are always occurring.

The number of thermal units to be supplied to each room should be specified, with the heating surface and temperature. Reverting to the economy of fuel, the problem for the heating engineer to-day is how to cheapen the cost of burning fuel under present principles. First of all the consumer pays 21*s*. per ton for good coal or coke, when cheaper fuel, in the way of engine slack or coke breeze is available; and, secondly, where such cheaper fuel is used much of its energy is wasted because he does not know how to burn it properly. To thoroughly burn the fuel every particle or molecule of volatile matter, which ordinarily passes up the chimney in the form of black smoke, must come into contact with oxygen at a sufficient temperature to burn it. Experiments have been made in Germany with finely-ground coal-dust, which was blown into the furnace, it thus being already mixed with the necessary oxygen. These experiments had proved entirely successful scientifically, but commercially the scheme was at present impossible, the expense of the process being prohibitive.

The heating engineer should apply himself to the solution of these problems, to the invention of an inexpensive furnace service which will ensure the complete combustion of every particle of fuel, to the use of inferior fuels and economical production of power therefrom, and to the utili tion of the waste flue-gases. There are certain possibilit in the utilisation of waste heat by using it in some way reheat return water from pipes and radiators, and by su means as this we might someday be able to use as much 95 per cent. of the energy in our fuel.

OUR CONTEMPORARIES FROM OVERSEA

The *American Architect* (New York) contains illustrati of some of the work of Mr. A. W. Longfellow, in State of Massachusetts; the Army and Navy Club, Wa ington, by Messrs. Hornblower & Marshall; a pictures country house by Messrs. James E. Ware & Son, and one "colonial" type by Mr. Arthur B. Heaton.

Der Architekt (Vienna) has quite a domestic number w illustrations of houses, single and in flats, in Vienna, an design for an architect's house in the Wagnerian manner.

Construction (Toronto) makes its chief feature "Domestic architecture as illustrated in suburbs a country," which, with an ample number of views and pla shows the creditable position to which architects in Cana have attained in the domain of domestic architecture.

La Construction Moderne (Paris) illustrates a n chapel added to the château of Chalo-Saint Mars, n Etampes, the architects of which, Messrs. Julien Barbier Mehu, have well interpreted the spirit of French flamboya work. A "maison à loyers," by Mons. Agati, at the cor of the rue Vaneau and rue Oudinot, Paris, is a good exam of modern Parisian domestic architecture. The n children's hospital at Vienna is also illustrated, and mineral water establishment at Evian.

Deutsche Bauzeitung (Berlin) gives a number of ill trations of Chinese timber buildings, of the new town thea at Hagen, of new public buildings at Glogau, of the n Stadthaus at Berlin, and of a picturesque mountain chu on the Au near Berchtesgaden.

Het Huis (Amsterdam) in an article on antique art ill trates several examples of furniture of the seventeenth a eighteenth centuries. The tombs of the Heeren van Ijselst are described and illustrated, as is also the sanatorium Groesbeek.

The *New York Architect* (New York) illustrates in peculiarly beautiful style some of the work of Mr. Ha Allan Jacobs.

Stone (New York) gives an excellent photograph of Bombardiera portal at Verona. Our contemporary's insta of concrete failure this month is that of the Prospect Str bridge at Akron, Ohio.

COMPETITION NEWS.

St. Marylebone, London.—The designs submitted in co petition for new Municipal Buildings for the Metropoli Borough of St. Marylebone have been examined by Assessor, Mr. H. T. Hare, F.R.I.B.A., and he has selec the following designs:—First, No. 15, Mr. Edwin Coop F.R.I.B.A.; second, No. 79, Messrs. Thomas Wallis J. K. Bowden; third, No. 39, Messrs. North & Robi fourth, No. 13, Messrs. Septimus Warwick & Herbert H We shall give a critique of the designs in our next issue.

The following designs were commended by the Assessor No. 76, Mr. Wm. Whitehead; No. 99, Messrs. Edwin Hall & E. Stanley Hall; No. 108, Messrs. Clyde Young H. S. East; No. 121, Mr. Matthew J. Dawson; No. 1 Messrs. H. Townshend Morgan & Alan Bruce; No. 157, A. Brumwell Thomas.

The National Advisory Town Planning Committee h decided to try to arrange two conferences—one to be held Manchester on March 27 and 28, the other in London April 24 and 25.

The Advisory Committee of the Fund for providing Memorial of King Edward in London, at a meeting at Mansion House on the 24th ult., unanimously approv the proposal for a memorial in bronze and Portland stone his Majesty, to be erected at Piccadilly end of the Bro Walk in the Green Park. Mr. Bertram Mackennal a Mr. Edwin Lutyens were requested to prepare and subm within three months a complete model of the memorial. T committee rejected an alternative proposal for a site at Hy Park Corner submitted by Professor Adshead.

FORTHCOMING EVENTS.

Friday, December 8.

Glasgow Technical College Architectural Craftsmen's Society : Paper on "The Duties of a Foreman Mason," by Mr. John Crawford, at 7.45 P.M.

Saturday, December 9.

Royal Academy of Arts : Distribution of Prizes and Exhibition of Students' Work, at 9 P.M.

Monday, December 11.

Architectural Association : Paper on "Is the Texture of Materials a Fetish?" by Mr. Alan E. Munby, M.A., F.R.I.B.A., at 7.30 P.M.

Tuesday, December 12.

Nottingham Architectural Society : Paper on "The Law Relating to Building Schemes," by Mr. W. H. Taylor, F.S.I., L.R.I.B.A., at 8 P.M.

London Association of Master Stonemasons : Annual Dinner at the Cannon Street Hotel, E.C., at 7 P.M.

Wednesday, December 13.

Northern Architectural Association : Paper on "The Evolution of the Church Plan," by Mr. J. Hall, F.R.I.B.A., at 7.30 P.M.

Thursday, December 14.

Society of Architects : Paper on "Alexandria : Its Place in Architectural History," by Mr. G. A. T. Middleton, A.R.I.B.A., at 8 P.M.

Concrete Institute : Paper on "Some Recent Works in Reinforced Concrete," by Mr. G. C. Workman, M.S.E., at 8 P.M.

Sheffield Society of Architects : Paper on "Manufacture of Paper and Methods of Printing," by Mr. C. Pawson, at 7.30 P.M.

COMPETITION FOR MARYLEBONE MUNICIPAL BUILDINGS.

As we announced last week the designs selected by the assessor, Mr. H. T. Hare, F.R.I.B.A., as the most meritorious were :—First, No. 15, Mr. T. Edwin Cooper, F.R.I.B.A. ; second, No. 79, Messrs. Thomas Wallis & J. K. Bowden ; third, No. 39, Messrs. North & Robin ; fourth, No. 13, Messrs. Septimus Warwick & Herbert Hall. Mr. Hare also noted as worthy of commendation :—No. 76, Mr. William Whitehead ; No. 99, Messrs. Edwin T. Hall & E. Stanley Hall ; No. 108, Messrs. Clyde Young & H. S. East ; No. 121, Mr. Matthew J. Dawson ; No. 126, Messrs. H. Townshend Morgan & Alan Bruce ; No. 157, Sir A. Brumwell Thomas.

This is one of the competitions which has attracted so large a number of competitors that it is not, from a pecuniary point of view, a profitable one to the profession as a whole, the cost to their authors of the drawings submitted being, at a moderate estimate, twice the amount of the fee that the successful architect will receive for carrying out the building. The chance of securing a £60,000 job in London in an obviously fair and well-conducted open competition was an alluring bait to many who, with the optimistic self-esteem usual amongst artists, felt convinced that they could design a municipal building as well as anyone else. The event proved that they could not, at any rate on this occasion, for the design placed first is pre-eminently superior to every other submitted. It has that simplicity, directness, and effectiveness of plan which, when it is accomplished, seems such an obvious solution of the problem that no other can bear comparison. Such are the qualities of plan that mark a really great design, and we congratulate Mr. Cooper on his achievement.

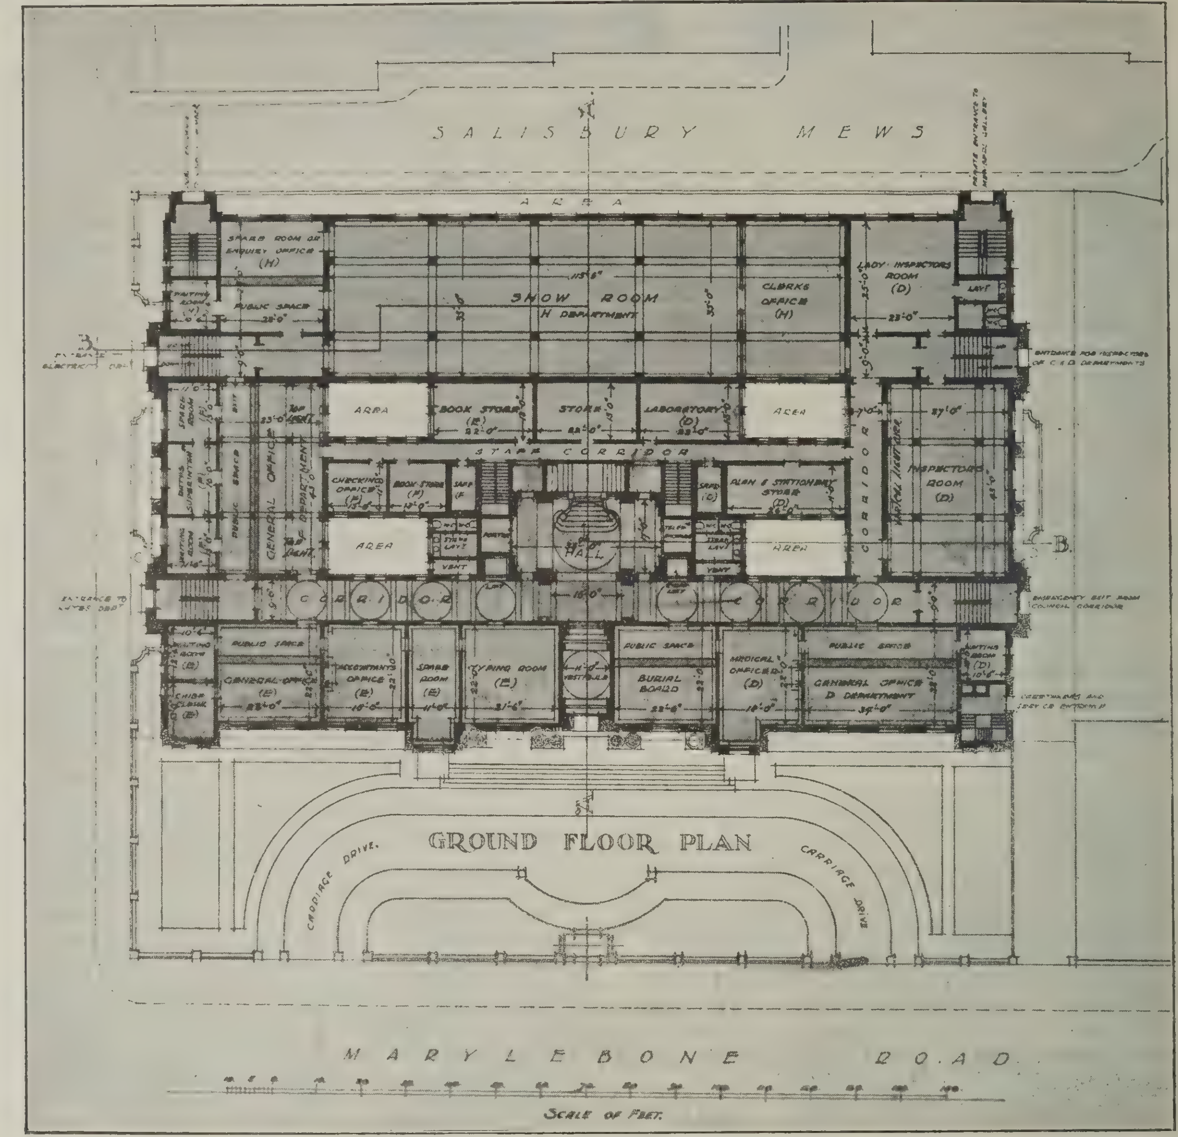
It is one of the curious facts of open competitions that when a number of designs are sent in by architects of the highest ability, there is, more often than not, one whose superiority is head and shoulders above all other competitors. Such designs have been submitted in the past by Lanchester & Rickards, Warwick & Hall, Leeming & Leeming, Wills & Anderson, Clyde Young & East, E. T. Hall & Son, J. S. Gibson, Sir Brumwell Thomas, A. W. S. Cross, S. B. Russell, and yet none of them have on this occasion attained to anything like an equality with Mr. Cooper. If the cracks were always at the top of their form there would be fewer designs submitted in open competitions, but as there is always the possibility and even probability that some of them may be off colour or not competing, the young and the ambitious who have not yet won their spurs are encouraged to hope that they may find their opportunity.

Besides, the cracks were once young and inexperienced, and have often won their way to the front by dogged perseverance and repeated effort in spite of failure, so there are always plenty of young men eager to follow their lead. Then there are others, who are represented in no small number in this competition, those who repeatedly produce good and able designs, but not quite good enough to win, such as Jemmett & McCombie, J. B. Fulton, Robert Atkinson, Lovegrove & Papworth, William Flockhart. When we take into consideration all these different groups, we begin to understand why a well-conducted open competition attracts so many participants, and if the result is a pecuniary loss to architecture as a business, it is, in our opinion, beneficial to architecture as an art.

In a well-conducted and properly assessed open competition nowadays, a very good design is required to command success, and it is surely an advantage to the art that a number of artists should be trying to produce a very good design. And from this point of view the open competition is superior to the limited. We have seen at Marylebone that the cracks are not always at the top of their form, and if half a dozen of the ten we have mentioned above had been invited to join in a limited competition, is it conceivable that they would have produced something better than they have done in the open field? But the best they could do has been bettered.

Two things are required in the evolution of a first-class plan, the conception of a good idea and the thoughtful elaboration or working out of the primal conception. Then there results such a plan as Mr. Cooper's, in which everything seems to be in its right place and to fit in with everything else. The next reform that we want to see universal in open competitions is the separation of the conception from the elaboration. Let one and all submit their primary ideas in the simplest possible fashion and then let only those who have satisfactory ideas work them out. In this way there will be a saving of the vast amount of entirely fruitless labour that is now expended in every open competition on ideas that are fundamentally wrong.

The basis of Mr. Cooper's success in plan seems to us to be the manner in which he has utilised his lower ground floor, which too many of the other competitors have regarded as a basement. The space thus gained has enabled him to provide two large internal courts, 35 feet by 30 feet, and even on these there are dependent for



MARYLEBONE MUNICIPAL BUILDINGS.—SECOND PREMIATED DESIGN. By Messrs. Wallis & Bowden.

their light hardly any parts of the building than corridors, stairs, lavatories, and cloakrooms. The main idea of a principal entrance from the Marylebone Road leading to a grand staircase which forms an approach to the committee-reception rooms and council chamber is one that is shared by the designs placed second, third, and fourth, as well as by others less favourably assessed by Mr. Hare. As all the designs are priced, in accordance with the conditions, at the uniform figure of 1*s.* 2*d.* a cube foot, the figure of Mr. Cooper's estimate, £57,653, shows that his plan is an economical one. The exterior is dignified and well composed with a lofty central tower, at an additional cost, and the detail is Franco-American of the Beaux-Arts type.

Messrs. Wallis & Bowden, in the second premiated design have a more grandiose treatment of the principal stair, which obliges them to reduce their four internal lighting areas to very small dimensions and to depend upon these to a considerable extent for many offices, though of minor importance. The inferiority in compactness is shown by the estimated cost of £69,350.

The third premiated design, by Messrs. North & Robin, though similar in its main lines to that placed first, is inferior in point of detail, as, for example, the location of the mayor's parlour, with its outlook on to an internal court. They have, however, managed to keep down the cost of their design to £56,952.

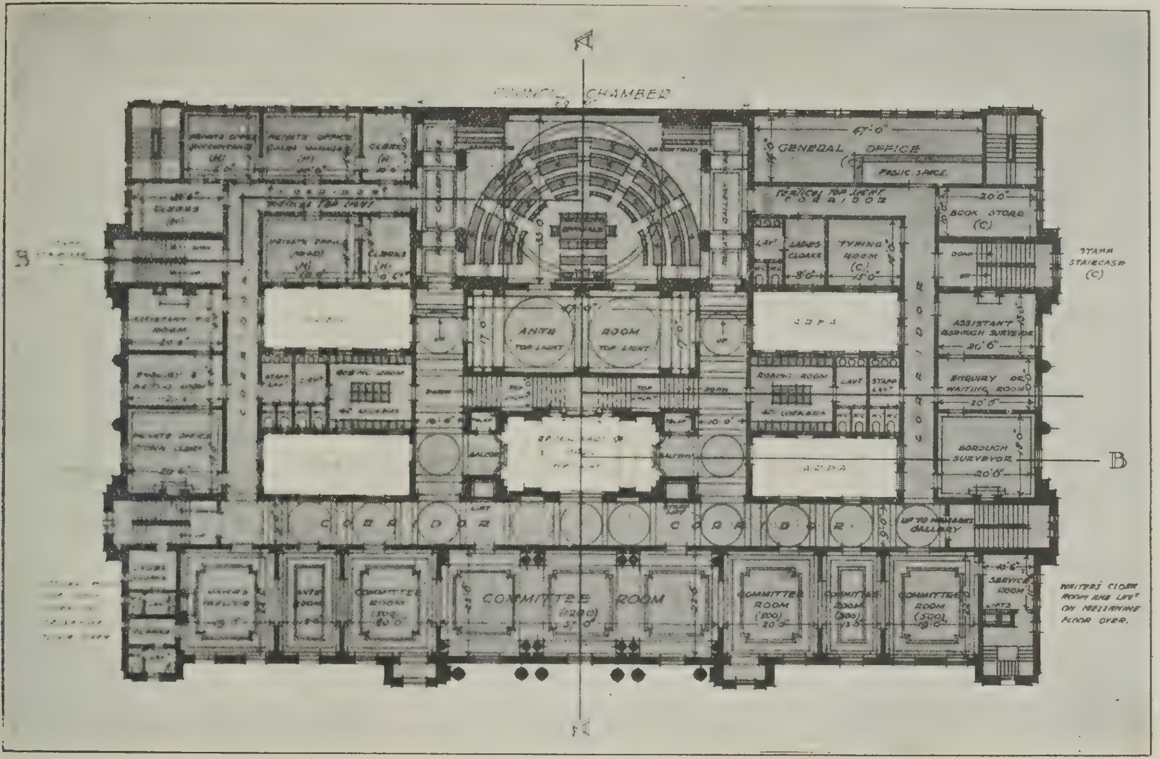
The design by Messrs. Warwick & Hall, which has been placed fourth, differs from the first three in placing the council chamber at one corner of the site. This enables them to treat their main staircase in a more satisfactory way, though more costly than in the designs placed first and second, in which the first-floor landing of the stair is somewhat lacking in dignity. The estimate for this design is £69,255.

Mr. William Whitehead's commended design, except in having the council chamber in the centre, is on somewhat similar lines both in plan and detail to the winner, and, like it, is economical, the cost figuring out at £56,000. It is a design good enough to win if there had not been a better.

Messrs. Edwin T. Hall & E. Stanley Hall have departed from the usual lines and placed their council chamber in a projection on the west side of the site. There is a big entrance hall on the ground floor and the reception hall on the first is a colonnaded gallery or corridor instead of a committee room. Thus the plan is well adapted for ceremonial functions. The design shows a good dignified elevation, with colonnade to the front. The cost is estimated at £69,989.

Messrs. Clyde Young & H. S. East manage a clear circuit of corridor on the first floor, with the council chamber in the centre; but the approach to this latter is rather abrupt. The electric light department is on the Gloucester Place front, which Mr. Hare evidently did not think the most suitable, and possibly this was the determining factor that caused this design to be only "commended" instead of premiated. The cost is moderate, £57,500.

Mr. Matthew J. Dawson also has his council chamber



FIRST FLOOR PLAN.
MARYLEBONE MUNICIPAL BUILDINGS.—SECOND PREMIATED DESIGN. By Messrs. Wallis & Bowden.

in the centre, but the approach from the main stair is less abrupt. The lighting areas are not altogether satisfactory.

Messrs. H. Townshend Morgan & Alan Bruce have produced an effective interior, with a workable and architectural plan. The seating of the council chamber suggests party politics to an extent undesirable in municipal life. The elevations are quiet and dignified in the use of the Doric order. The cost is estimated at £64,865.

Sir A. Brumwell Thomas has made too much of his internal approaches, so that the council chamber has to be fitted in at the end of the site; thus the grand principal staircase leads to nowhere in particular and delivers on to balcony corridors which lead both ways to other corridors, and these ultimately to the ante-room and so to the council chamber. The site in fact is not big enough for the grand conception of the author.

Space does not permit of our noticing more than a few of the remaining designs.

Messrs. Lanchester & Rickards have sacrificed their chance of success to the fetish of axiality, and as the longest dimension of the site is parallel to Marylebone Road, have decided that the major axis of the site must be their principal axis and run east to west. This entails on that axis a pseudo-principal entrance in Gloucester Place, but the main entrance is to be from Marylebone Road, so one of two similar and symmetrical entrances on that front must be treated to a portico and balcony to make it more important than the other. The "main" entrance leads to a central hall on the principal axis, and then you turn left to the council chamber up straight flights of stairs or right to the office stair. The council chamber must be on the principal axis, and so is located on the Gloucester Place front—not a desirable position. The detail is of very florid Rococo character and the cost, £79,450, is prohibitive.

Messrs. J. S. Gibson, Skipwith & Gordon conceived a general idea similar to that of the winner, but the working out is crude and lacks thought. The design is elaborate in detail, with a tower at the front, and the cost is estimated at £68,000.

Mr. J. B. Fulton sends a good plan somewhat similar to the winning one, and a fine set of drawings with a domed tower as a feature of the external composition. The cost is estimated at £72,190.

Mr. F. T. Verity adopts the correct main idea, but with a big entrance hall. The seating of the council chamber is rather peculiarly arranged. The drawings include a beautifully drawn detail in which a French treatment of the Greek Ionic order is adopted.

Mr. W. Curtis Green has a staircase too grand for the site, which accordingly necessitates wriggling round balconies to reach the ante-room, and then there is no space for the council chamber on the direct line; and this, as in other designs, including that of Messrs. Warwick & Hall, has to be fitted in at the side. The detail of Mr. Green's design is distinctly founded on French Renaissance work of the seventeenth century.

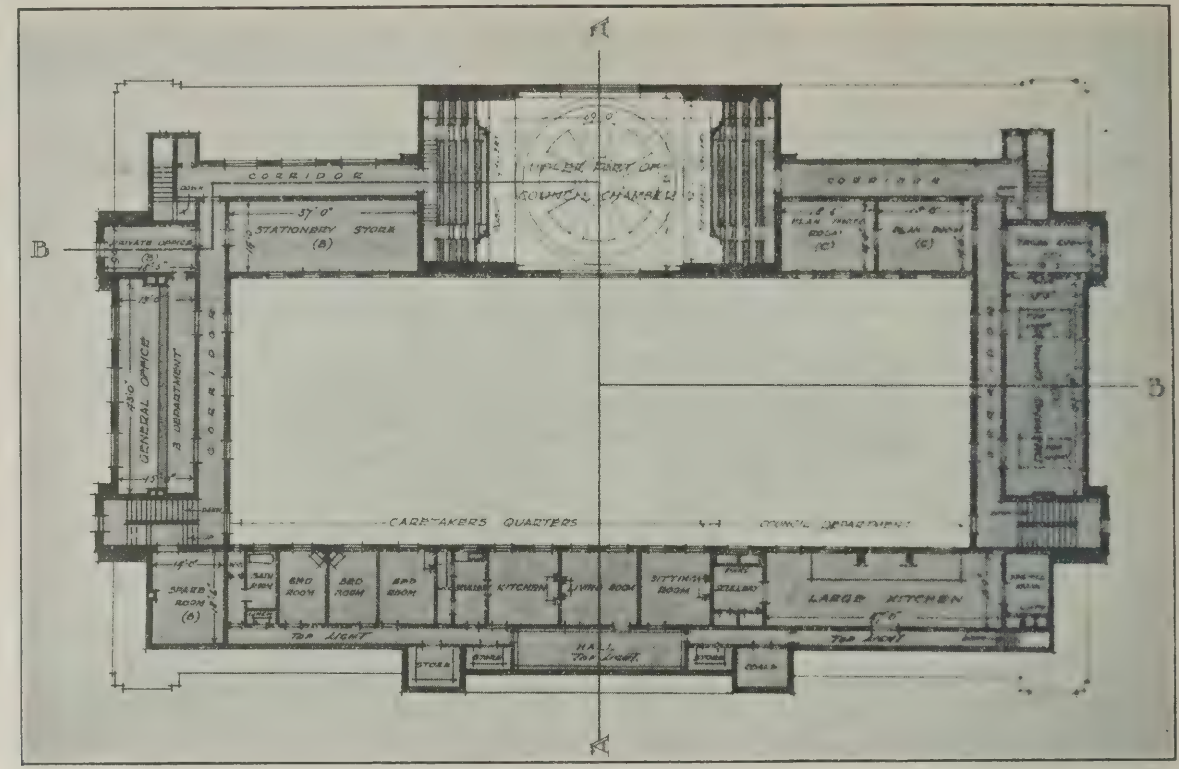
Messrs. Lovegrove & Papworth have sent in an able design, with a plan very thoroughly and commendably worked out in detail. and are unfortunate in not obtaining recognition.

Messrs. George Elkington & Sons have, like Mr. Cooper, a central tower, but their estimate is too high for the occasion, £76,478. The council chamber is in a quiet position, but the grand staircase, as in so many other cases, leads to nothing.

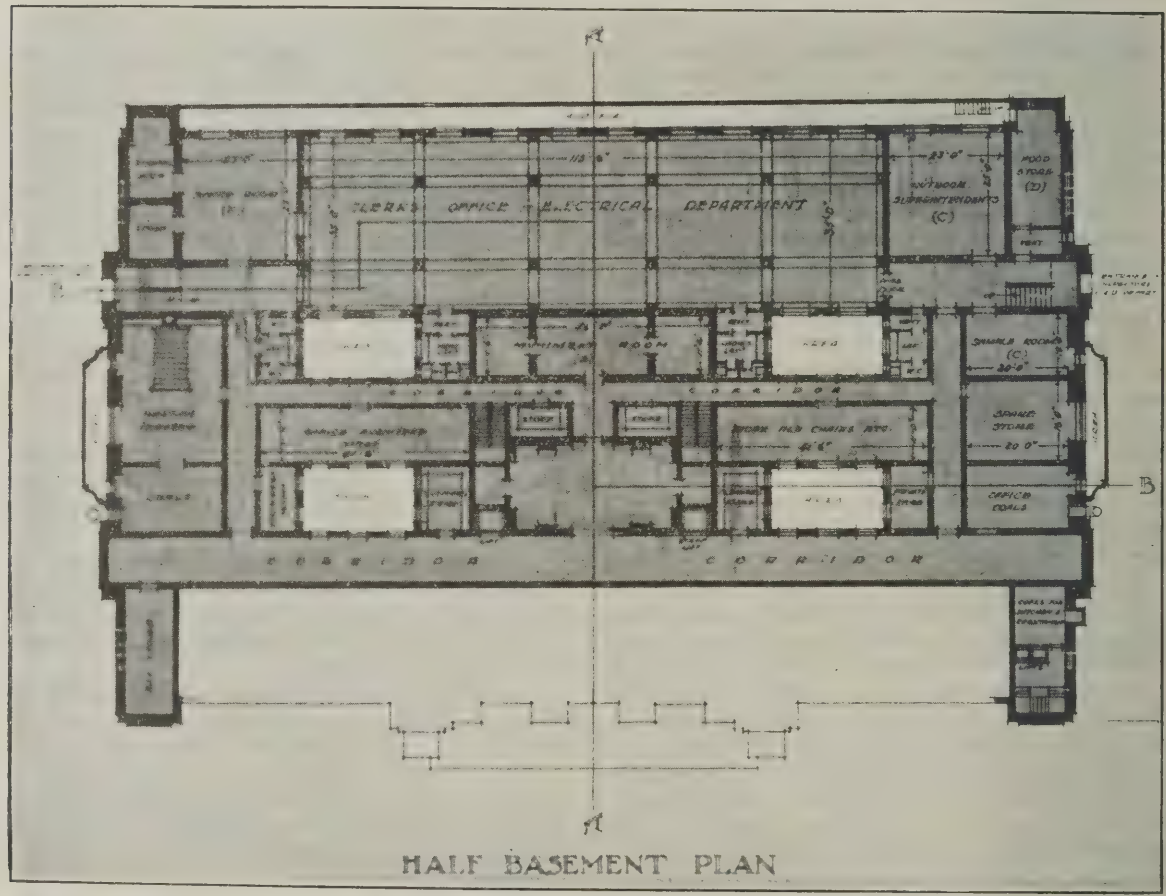
Similarly Messrs. Mangnall & Littlewood desire to spend £72,147, and their good plan is out of court through too much desire for internal effect.

Mr. Charles Gascoyne has evolved an effective and economical plan, with very nice detail in his external treatment. He has thus avoided the temptation to be grandiose, which has tripped so many of his fellow-competitors.

It is instructive to notice in the designs that have not been premiated or commended by the assessor how many have failed through a desire for a grand approach to the first floor. The main entrance being from the Marylebone Road, the principal axis of the building must be the minor one of the site. In the designs placed first, second, and third the council chamber, with its ante-room and the main entrance, have been placed correctly on the principal axis, and the authors have contented themselves with as good a principal stair as the depth of the site permitted and their ingenuity could devise. This was



SECOND FLOOR PLAN.

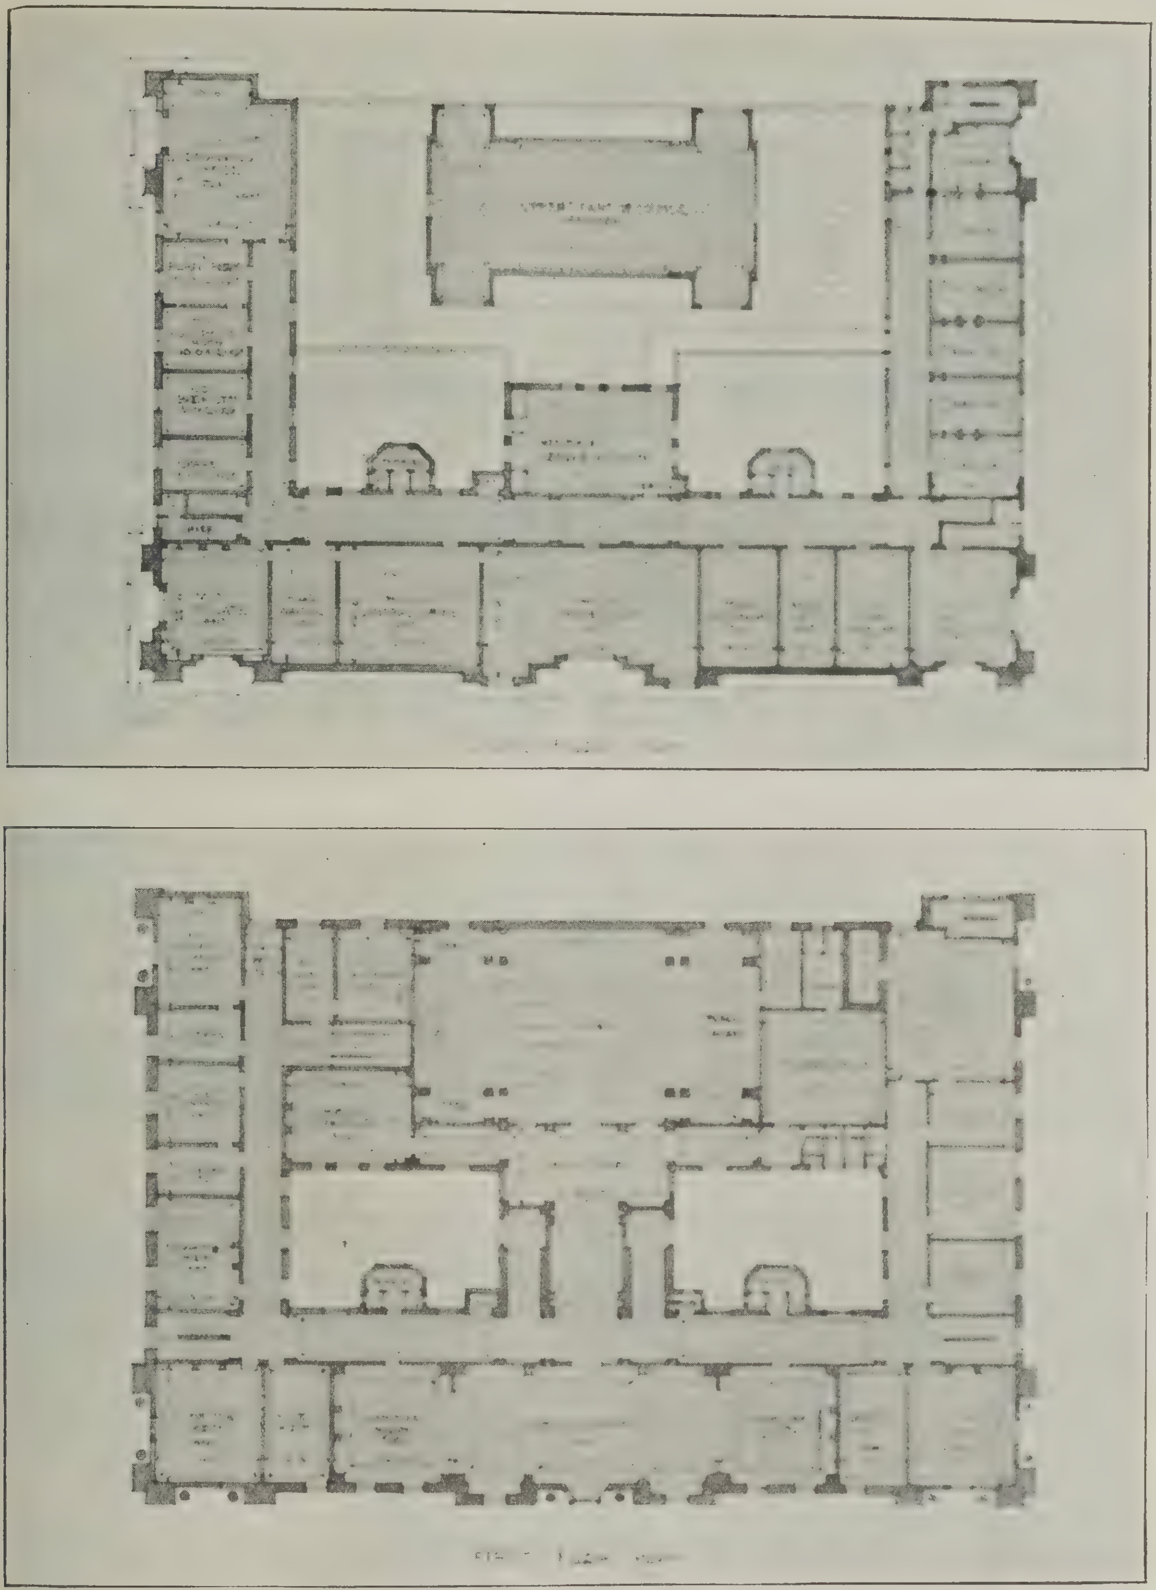


HALF BASEMENT PLAN

MARYLEBONE MUNICIPAL BUILDINGS.—SECOND PREMIATED DESIGN. By Messrs. Wallis & Bowden.

not good enough for Messrs. Warwick & Hall; so they planned a grander approach, but then they have to turn round the corner to the objective of the approach, which is, æsthetically, bathos. Many others have been similarly misled.

There is an apparent compensation in the accessibility to the electrical showroom from the grand entrance and approach on the ground floor, as seen in the fourth premiated design and others of similar type; but the compensation is not really adequate, for the municipal electric supply is rather a white elephant to Marylebone, and although demanding so much space is not a feature of the municipal buildings worthy of a grand approach. Mr. Cooper's treatment gives sufficient importance and ample accessibility to the department without undue exaltation.



MARYLEBONE MUNICIPAL BUILDINGS.—THIRD PREMIATED DESIGN. By Messrs. North & Robin.

NOTES AND COMMENTS.

It may not perhaps be too much to hope that the latest suggestion by Mr. Norman Shaw for the treatment of the King Edward Memorial as an adjunct to St. George's Hall may terminate the somewhat unseemly and certainly bitter controversy that has raged in Liverpool around the various proposals that have been put forward. Briefly, Mr. Shaw's new scheme is for a fine flight of steps through the podium wall from St. John's Lane to the southern end of the hall, with King Edward's equestrian statue by Sir William Goscombe John as an adjunct on the one side and somebody else on the other. This certainly exalts the hall and so should satisfy its champions, but may not please so much those whose objective is the King Edward Memorial until they realise that, great and good as was King Edward, his reign is but one link in the chain of the nation's history.

The Improvements Committee of the London County Council are now recommending the expenditure of another £20,000 for "the ornamentation of the new bridge," in addition to the amount already agreed upon by the Council in July last, for the reconstruction of Lambeth Bridge at £220,000. The Improvements Committee well deserve,

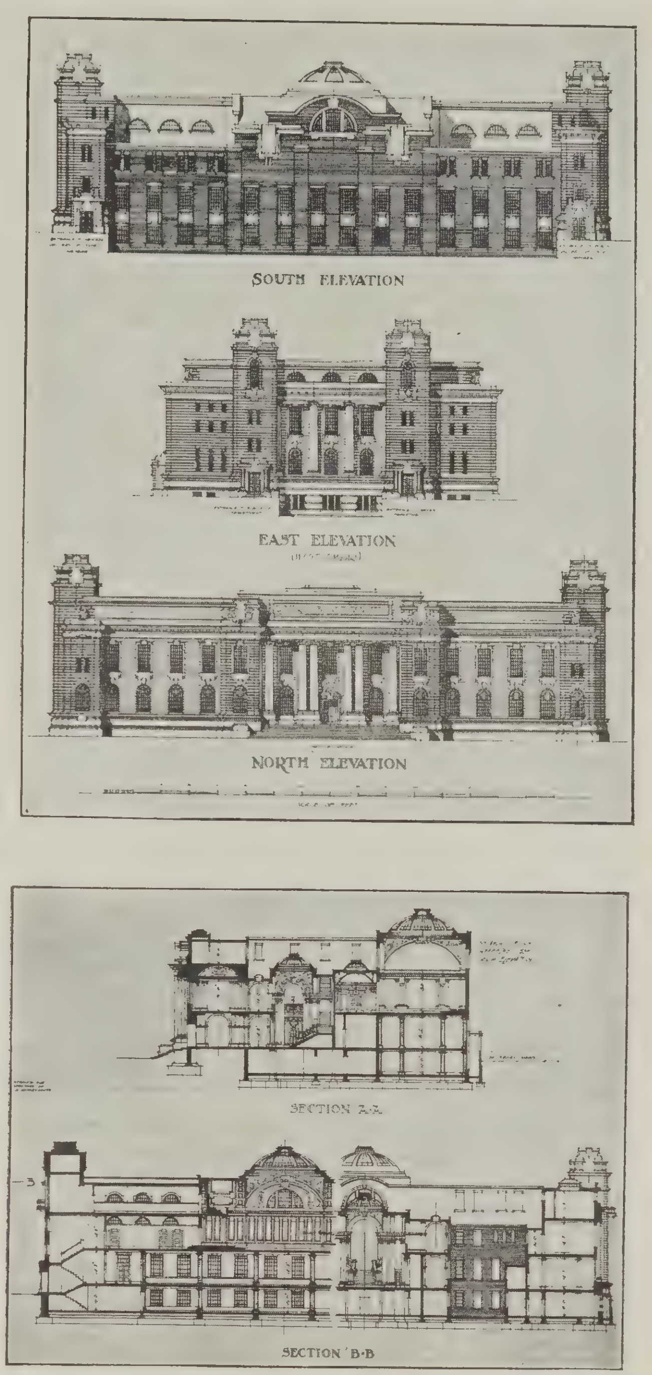
we think, the snub administered by the Finance Committee, to the effect that the cost of the appropriate architectural treatment of the bridge should have been included in the original estimate for which approval was obtained. It is characteristic of the Philistine to get a design made for a bridge to cost £220,000, and then months afterwards to think it can be "ornamented" by spending another £20,000. Obviously the "ornament" is something stuck on and extraneous, instead of being part of the essence of the design.

Edinburgh having in its Calton Hill a twin brother to the Acropolis of Athens was minded in the early nineteenth century to duplicate the Parthenon as a national Valhalla, but funds ran out when twelve columns had been erected and the project was abandoned in 1830. Now with our new-found zeal for civic art the idea is revived, and has found expression in a lecture on the Calton Hill by Mr. H. F. Kerr, A.R.I.B.A., who said that with its fine distance outline and its natural facilities for magnificent views it would, if situated in any wide-awake Continental capital, be made a chief sight of the city. Edinburgh had often been compared to Athens, and there were many resemblances, notably the two hills—the Acropolis and the Calton Hill—immediately overlooking the cities. It was this resemblance doubtless that decided the promoters of the National Monument (in 1822) to make the Calton Hill the site of the reproduced Parthenon. The hills had their differences—the Acropolis was precipitous on all sides, whereas the Calton Hill was of "crag and tail" formation. It was an interesting fact that the summits of the two hills were practically of the same area. The Calton Hill was higher from the adjacent land and altogether of rather more bulk than the Acropolis. The approach to it from Princes Street, and almost all the buildings upon it—the City Observatory, Playfair's, Stewart's, and Burns's Monument, the National Monument, and the Royal High School—were all of good classic design, and when upon the hill one felt in a classic atmosphere. Of the National Monument it was now the ambition of many to see the complete building there, as a memorial to the good and great of all lands. When a classic building was decided upon the promoters did well to select the Parthenon as a model, because, although not a great temple in point of size, yet for beauty of simplicity in design, for refinement of proportion of detail, and for wealth of sculpture it was unrivalled in Greek art. Fortunately for the exterior they had every detail necessary for an accurate reproduction wherein all the delicate refinements of this beautiful building would be included; and what with faithful study and the interested and skilful help of selected workmen—for every stone must be perfect, every stroke of the mallet reverent and true—this great, nay, truly sacred, task would be brought to a successful issue, and the Calton Hill, which had overlooked the city during its centuries of progress, would at last be nobly crowned.

In the consideration by the House of Lords of the Copyright Bill on Report a further attempt was made to deprive architects of the benefit of copyright in the amendment, unsuccessfully moved by Viscount St. Aldwyn, that "Where, in the case of an architectural design or drawing for the erection or restoration of any building, the design or drawing was ordered by some other person and the author was paid for superintending such erection or restoration, then, in the absence of any agreement to the contrary, the person by whom such design or drawing was ordered shall be the first owner of the copyright." It is evident that copyright for architects cannot be regarded as assured till the Bill is finally passed, but the repeated failure of attempts to eliminate the benefit from the Bill inspires us with hope.

The Christmas number of *The Connoisseur* contains an interesting illustrated article on "Barn Elms, the Kit-Cat Club, and Ranelagh of To-day," by Mrs. Willoughby Hodgson, which includes excellent photographs of some of the architecture and furniture of the mansion as well as of the gardens. A good selection of reproductions from drawings by Sir Thomas Lawrence, P.R.A., accompany an article by C. Reginald Grundy.



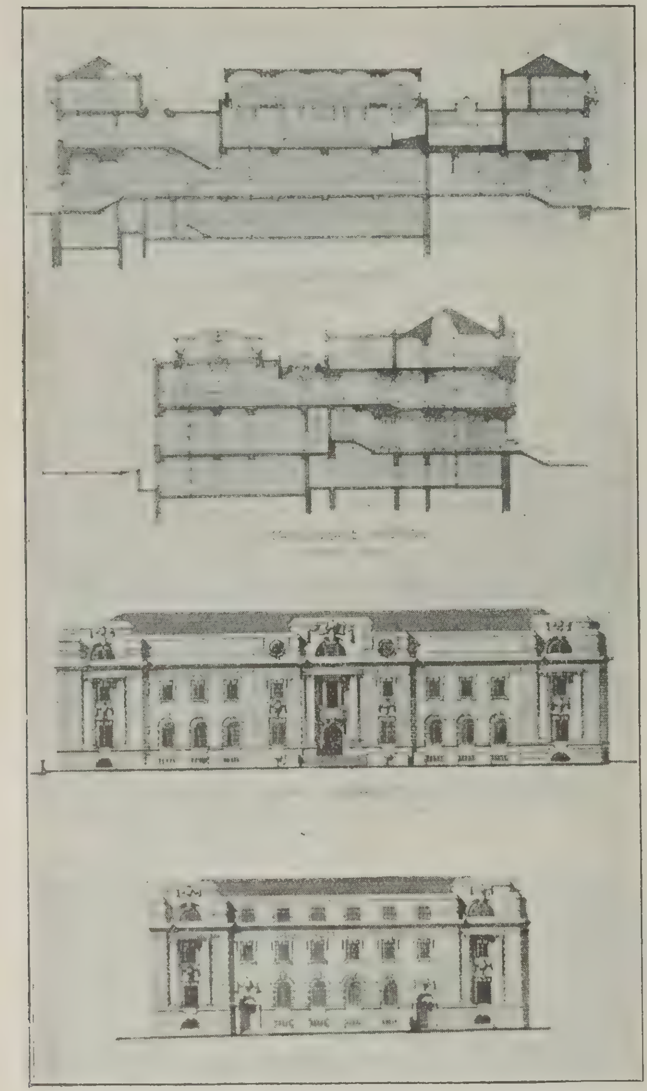
MARYLEBONE MUNICIPAL BUILDINGS.—SECOND PREMIATED DESIGN. By Messrs. Wallis & Bowden.

ILLUSTRATIONS.

THE LONDON OPERA HOUSE.

THE new Opera House in Kingsway stands on a site the total area of which is 24,500 superficial feet, having a frontage in Kingsway of 265 feet, with two returns in Portugal Street and Sardinia Street of 103 feet and 88 feet respectively. The principal facade is of Portland stone supplied and worked by The Bath Stone Firms, Ltd., with granite base, which is continued for 50 feet in Portugal Street and Sardinia Street, after which light red brick facings, relieved by stone bands, have been used.

The main entrance to the building is at the lower end of the Kingsway front. Here a broad flight of marble and mosaic steps leads into the vestibule and booking-offices. The outer and inner entrance doors and screens and the fronts to



MARYLEBONE MUNICIPAL BUILDINGS.—THIRD PREMIATED DESIGN. By Messrs. NORTH & ROBIN.

the booking-offices are in mahogany, as is all the hardwood joinery in the house.

Beyond is the entrance hall, a large space with columns, panelled walls and coffered ceiling, all carried out in fibrous plaster. A panelled mahogany wainscot runs round this hall, which opens on to the private box foyer. There are twenty-one boxes on this tier, twelve of which are provided with large ante-rooms.

Two marble staircases lead down to the stalls, where are also situated sixteen more boxes. The stalls saloon stretches right across the building, and is decorated in the same manner as the entrance hall, the counter and cabinet being in mahogany. From the entrance hall a marble-lined staircase leads to the circle foyer, where the scheme of decoration is of a similar nature.

The stage is 84 feet wide and 65 feet in depth. The proscenium opening is 45 feet wide and 50 feet high, and designed to prevent echoes, so that each portion of the house will have a clear sound of the voices of the performers. The stage is lighted from above by means of eight battens containing 200 lights in each. The footlights have also 200 lights. There are seventy-five lights at each side of the proscenium opening, and there are also twelve hanging lengths of twenty-four lights each at the sides of the stage. Metallic lamps have been used, and are in four different colours. In addition to this, there are eight large projecting arcs to give several effects, such as sunrise, sunset, rainbow, storm, waterfall, &c. The latest improved dimming regulators are used, and at the back of the stage there is a special effect board of 300 amperes. All the lights are operated from one switchboard on the prompt side. Seating accommodation has been provided in the spacious stalls and galleries for considerably over 2,000 persons.

An artesian well has been sunk in the north-east corner of the building to a depth of 450 feet. A motor pump pumps the water into two 800-gallon tanks on the roof, one at eithe
end of the building. These in turn feed two 500-gallon tank
at the Portugal Street end—one for the lavatories and th
other for the heating installation, and two 200-gallon tank
for the supply to the dressing-rooms.

A roof garden has been provided for the benefit of th
artistes, and above this a system of wireless telegraphy wil
be installed, by means of which it will be possible to ascertai
what seats are available, and to make the necessary booking
from any wireless station or from ships at sea fitted wit
wireless when within range.

The upper and lower galleries and the circle are each buil
upon heavy girders carried on stancheons, the box floor bein
suspended from the circle girder and from two wing girder
carried from the circle girder into the stalls on either sid
of the auditorium. The roof trusses are of the lattice type
By means of this construction there are no exposed column
thus ensuring clear views of the stage from all parts.

The "Plenum" system of ventilation has been used, th
two main ducts being formed at each side below the level
the stalls floor, from which branches worked in with the co
crete partitions or formed with galvanised iron tanks a
carried to all parts of the house with four electric fans in th
auditorium roof.

The architect is Mr. Bertie Crewe, and among the contra
tors are the following:—

MARYLEBONE MUNICIPAL BUILDINGS.

WE illustrate this week the successful design by Mr.
Edwin Cooper, F.R.I.B.A., in the recent competiti
and next week we shall give details of the designs pla
second, third and fourth, plans, elevations and sections
which are included with our text and referred to in our le
ing article on the competition.

THE Carnarvon Town Council have prepared a memor
for presentation to the Office of Works concerning Carnar
Castle. It is proposed that the old banqueting hall sho
be rebuilt in commemoration of the investiture of the Pri
of Wales, and that it should then be used as a national
gallery.

THE Board of Education give notice that the library
the Victoria and Albert Museum will be closed from Dece
ber 12, 1911, to January 20, 1912, inclusive, for cleani
re-lighting and general renovation.

ENGLISH MEDIÆVAL ARCHITECTURE.—VIII.

THE essential summit of Gothic style might be described, said Mr. Prior in the eighth of his course of ten lectures at University College, Gower Street, W.C., as a crisis—a turning point which introduced new expressions of sentiment and new factors in building conditions. Yet its outlook was hardly altered at first as the new aspects of architectural styles did not at once rise into prominence. For example, in Westminster Abbey the sentiment of architecture passed from the priest to the king, that is to say, from the satisfaction of religious requirements to that of state and display. But none the less for a full century the religious sanction of church building controlled the expression of architecture. The Gothic theory that every stone of a building should express construction with the utmost economy of substance was in much of early English building completely realised, *e.g.*, the Lady chapel of Salisbury. But at the very moment of this achievement constructive simplicity in vault and window began to be compromised. For instance, the vault of the Galilee porch at Lincoln left the necessities of ceiling construction and multiplied unnecessary ribs. While at the moment the window made the wall a network of arcading, it left the necessities of arch construction and developed bar tracery. In the third quarter of the 13th century the English insularity was invaded. Such peculiar marks as the lofty lancet window, the Purbeck marble slenderness of shaft, the stiff leaf crocket and the hollow undercut moulding were all replaced by the broader, fuller conception of that architectural mechanism which the course of French architecture developed. By the year 1300, however, English peculiarities again showed individuality, and furthermore took the leading part in the European development of Gothic style, and her inventions were spread abroad.

In the years 1275 to 1300, though English style was no copyist of the Ile de France masoncraft, yet the details and moulding of the parts of architecture were practically of the same pattern in England and all the provinces of French style. At Salisbury, on Bishop Bridport's tomb, c. 1262, appeared a class of carving which departed from the earlier stiff-leaved trefoiled type, and this begins what was a peculiar and beautiful phase of English leaf-sculpture. Towards 1280 the natural carving of foliage became common. About the same time there appears in English figure sculpture a naturalistic treatment of draperies in smooth broad folds. This absorption of French technique probably was disseminated from the craft schools of London. One special class of building peculiarly representative of mid-Gothic expression as developed under English conditions was the polygonal chapter-house or room of state of the secular English cathedrals and churches at Salisbury, Wells, Lichfield, Southwell, and York.

At Salisbury together with the chapter hall was built a stately open courtyard or cloister, which is one of the perfect pieces of English art. Similar secular cloisters were added at Lincoln and London at the end of the 13th century. In the making of such accessories it is clear that one passes outside an architecture whose aspects are strictly conditioned by use, for its direct motives began to be overlaid by expediencies of design. These forms of ecclesiastical magnificence had to be made as elegant as possible, and constructional decoration was elaborated to the top of its capacity. Still at Westminster and Salisbury it left place for sculpture worked in the fabric of the building, for a natural carving of capitals in place of the moulded marble uses of thirty years earlier. When as at Wells at the turn into a new century the sculpture of the wall arcade has been displaced by an architectural canopy, that treatment heralds a change from the summit of Gothic.

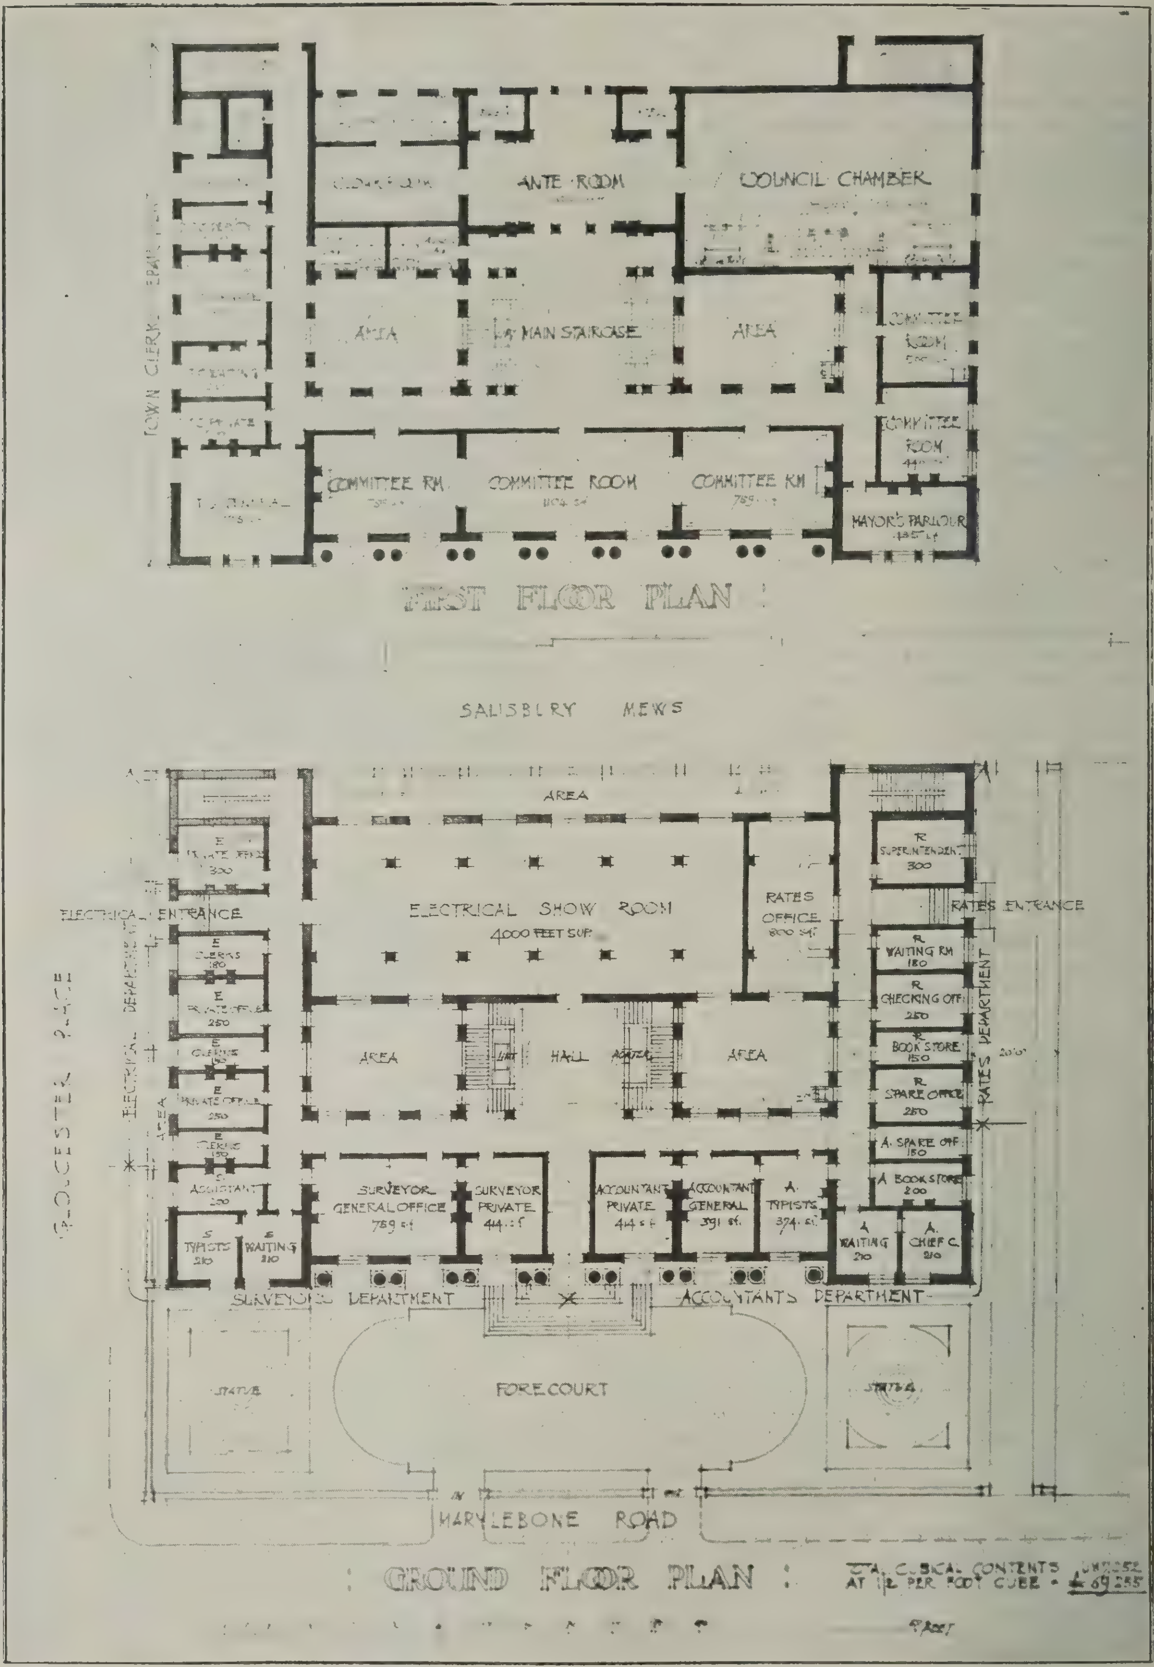
In this Wells chapter-house the creation of Gothic style in England reaches its third phase, *i.e.*, the "Decorated." This rightly implies, said Mr. Prior, that the interest of the mason had passed from the functional (or masonic) invention of building expediency into the superficial invention of decorative expediency. About 1300 the makers of shrines, tombs, screens, statues and images began to separate from the stone masons and to work sculpture independently and outside construction. It marked the commencement, as it were, of the break-up of a family in which the common estate grew more and more reduced until now in the 20th century we have a carcase of a building, a lay-figure without meaning, in itself without expression, built for the purpose of being bedizened by finishings, decoratings, and furnishings that may give it style. We are fortunate in possessing the Eleanor crosses, which date about the last years of the 13th century, and exactly mark the summit of Gothic vitality, and at the same time mark the entry of a new era. The accounts show that the chief mechanic in these works was the mason (coementarius); but there are mentioned in connection goldsmiths and bronze-founders and makers of statues in stone.

At the end of the 13th century three things had already happened:—(1) The Purbeck marble building work had been superseded by the architectural work of the free-stone mason; (2) the Purbeck marble effigies or big sculpture work had been superseded by the free-stone sculptor; and (3) the works of the marble-workers were now neither constructional nor sculptural, but objects of furniture—tombs and stones, the productions of workshop art. Finally, a fourth thing was to happen: the free-stone worker was by the middle of the 14th century to become a shop-worker too. One of the best examples of this change of architectural expression occurs in the doorhead. The expressive symbol of Decorated style may be taken as the canopy—that sort of diminutive model in shorthand note of an architectural façade. Treated as in the Rochester chapter-house, a doorway is as much an insertion in the scheme of building as a metal image or a glass picture.

In the treatment of the wall-arcades the surrender of architectural ideal is similarly shown. At Selby, for instance, c. 1340, the whole surrender of interest is definitely made to traceries and arches. Figure-work is inessential; diapers and cusps are considered sufficient decoration. Such was the final elimination of the sculptor from the building scheme. A contrast of as wide significance can be seen between the motives of triforium decoration at Lincoln in 1270, where the figure-sculpture conditions the scheme, and those at Ely of 1340, whose clever masonic decoration is the accepted finish of construction. The vaulting, the window schemes, and the capitals all tell the same story. We see it too on the large scale of a great architectural composition, as in the tower at Lincoln, or the spire at Salisbury, or indeed the whole effect at Lichfield. It is clear how solidity of construction takes on in the 14th century a disguising dress. The developments of tracery and pinnacle are employed not merely to reduce masses structurally, but as effectually to bury structure under an effect of intricacy. Skilful masons were requisitioned from a distance because of their skill—another condition that wrought on 14th century style. The clients were no longer religious who expressed the simple ambitions of religious fervour in building the most magnificent churches. The monasteries were now become high aristocratic institutions, the preserves of lordly families. The personalities expressed in 14th century architecture were the extravagant lordly client and the competing personal artist. Both by the whims of the one and the zeal of the other, architecture at once assumes an appearance of great variety, both in the big features of design and in the details of execution.

Another symptom of the same kind lies in the development of tracery which appeared in the enormous east windows. At first this development must be counted as an advance towards tenuity of construction, seeing that it cuts out of the block forms which in any scheme of geometrical shaping remained between the figures. But nearly every window of the decorated art is different. The London windows appear to show that the ideas of the glass-painter were at last offering themselves as a condition for window making.

If, however, we must look to the strongest impulses under which the religious and constructive instincts of Gothic style lost their vitality we shall find them in the monument trades. Monuments and memorial chapels are to be seen elbowing in upon the shrines and altars, and crowding against the screens. The shop mason as a statuary was employed to carve the image of the deceased; then as a decorative furnisher he turned out canopies and tabernacles of ever-increasing elaboration and dexterity. The imagers' workshops of the great cities were the sources from which such monuments proceeded. London was perhaps the first in the field; but soon too the crafts of church furnishing flourished in every great city and supplied monuments and effigies, statues and images, screens, retables of stone as well as of wood and metal. But of all such local styles of monumental art the most characteristic and peculiar was that which the masons of Bristol and Gloucester produced. It was the destiny of these to completely transform English style, for the Gloucester style became that of perpendicular building.



MARYLEBONE MUNICIPAL BUILDINGS.—FOURTH PREMIATED DESIGN. By Messrs. Warwick & Hall.

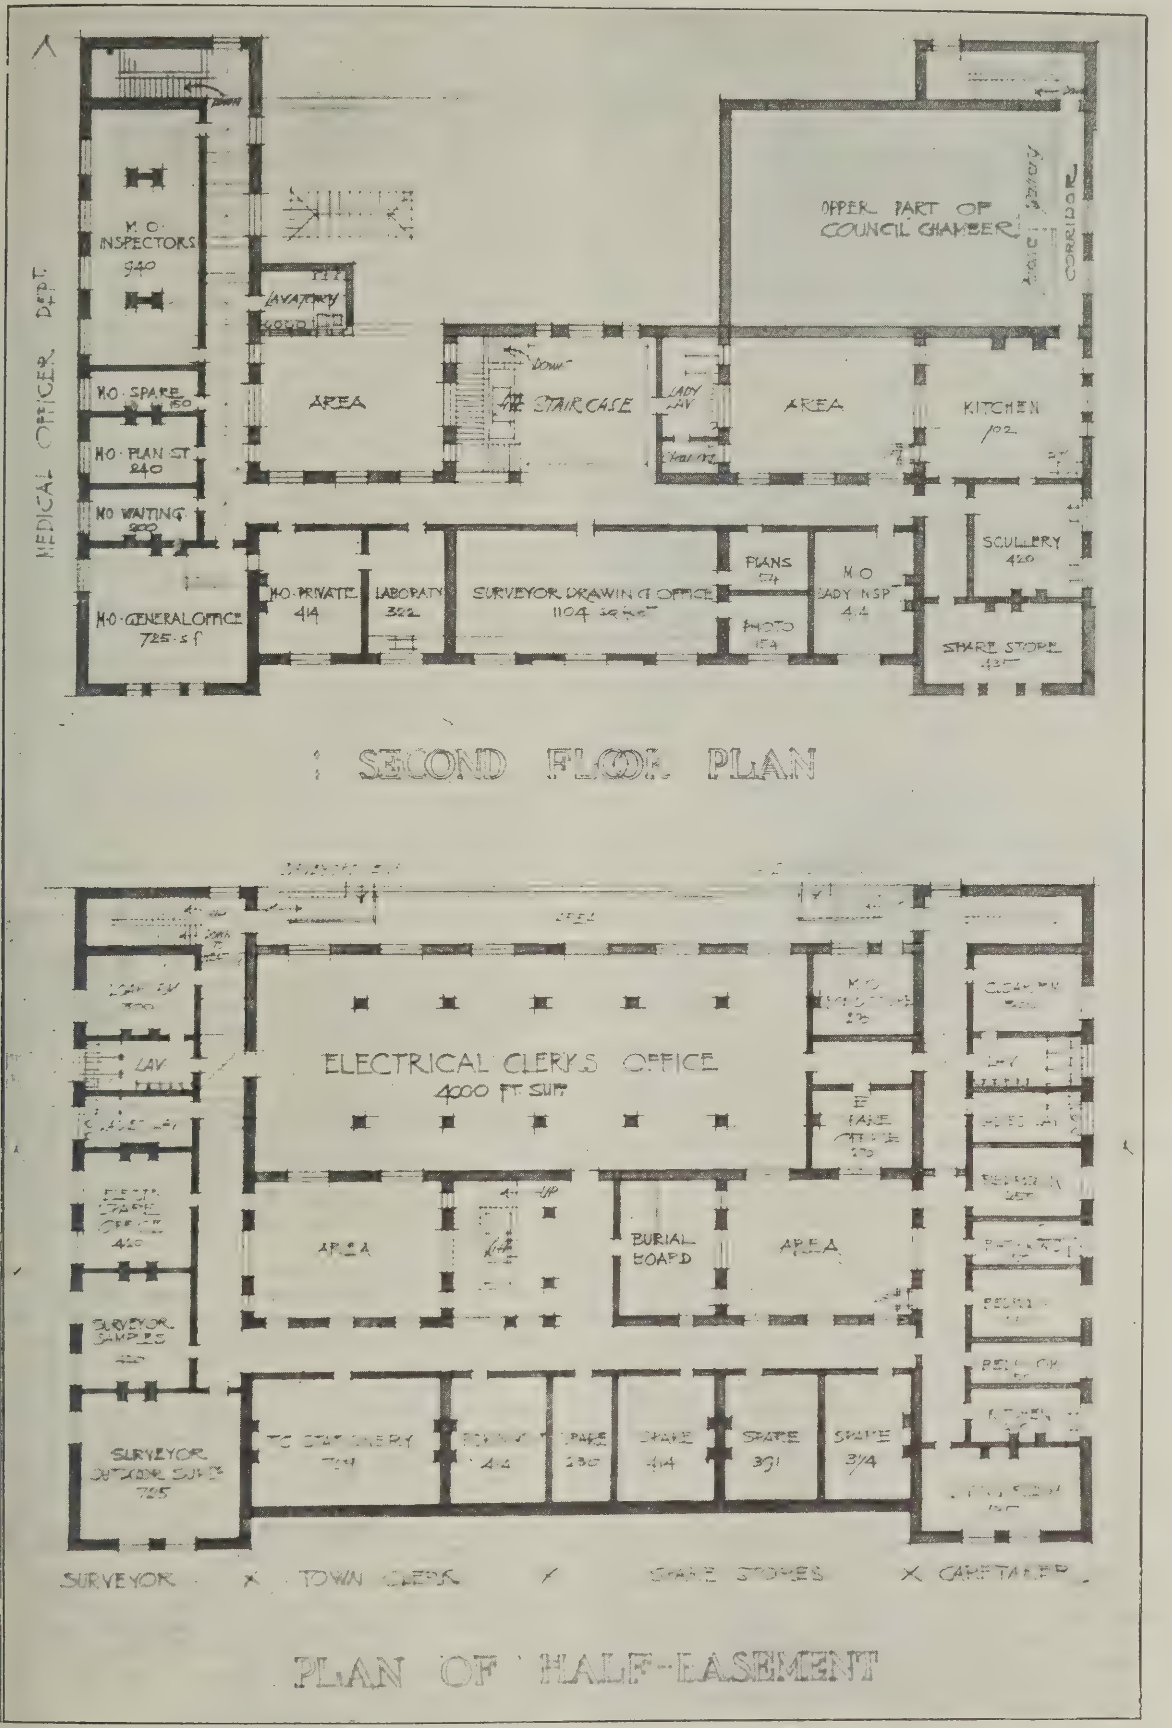
NOTTINGHAM ARCHITECTURAL SOCIETY.

At their meeting on Tuesday, the 21st ult., the Architectural Society of Nottingham invited representatives of the Nottingham and District Master Builders' Association, when Mr. Harry Burke, C.E., of Manchester, presented a paper on "Reinforced Concrete."

The President, Mr. Evans, occupied the chair, and there was a very large attendance of members.

Mr. Burke, who has considerable experience in the design and erection of work generally in reinforced concrete, directed his remarks at the outset to the comparison between the architect and the consulting engineer's position and that of the engineer for the various reinforced concrete systems, stating that the time had come when both the engineer and the architect should be in a position to examine any design sent in detail and become master over the work whilst in progress, which would ensure a thorough understanding and give him confidence.

The lecturer then passed on to the advantages and disadvantages of the construction, and particularly dealt with reinforced concrete against steel frame construction.



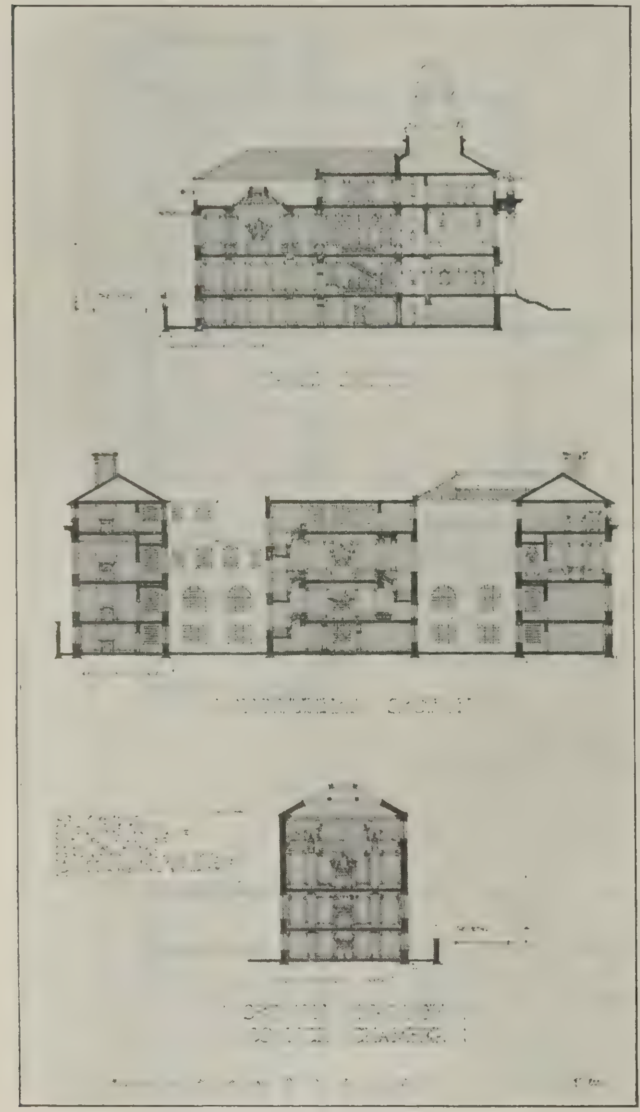
MARYLEBONE MUNICIPAL BUILDINGS.—FOURTH PREMIATED DESIGN. By Messrs. Warwick & Hall.

Three examples he instanced to show where in ordinary architectural work the steel frame, &c., would be more advantageous; and on the other hand where reinforced concrete would be more suitable than either the steel frame or ordinary construction.

For engineering works Mr. Burke stated that the bay system, which modern practice shows is the best for economy and ensures convenience in the handling of material, was the most suitable.

To construct such a works in reinforced concrete would not be as suitable as the steel frame, for the reason that the stanchions must be arranged so as to carry the crane and girders for the roof principals. The cost would be less than reinforced concrete, and the building lighter both in appearance and structure. The work of erecting also would only take a portion of the time compared with reinforced concrete.

He next dealt with house and villa work, showing that as concrete has a cold nature it would not be as satisfactory or



MARYLEBONE MUNICIPAL BUILDINGS.—FOURTH PREMIATED DESIGN. By Messrs. Warwick & Hall.

as cheap as brickwork, and in the summer there would be the chance of condensation and sweating of the walls.

Mr. Burke then turned his attention to warehouse and large factory premises, where a building must be as fire-resisting as possible, and illustrated by diagrams where such a structure is far superior and cheaper in reinforced concrete.

After dealing with the theory of reinforced concrete, showing how to get the neutral axis, moment of resistance and the percentage of steel for various crushing stresses of concrete, models were shown illustrating a column and beam forming part of a perfect monolithic structure built up in reinforced concrete, which is practically impossible in any other construction.

Great stress was laid on the method of stirruping reinforcement so as to ensure that all the bars are placed accurately in position before any concrete is put in. This gives facility for thorough inspection and satisfaction on this vital point. This was illustrated by a small model showing double reinforcement in a beam with the necessary stirrups.

Mr. Burke also spoke on the respective merits of the bond and plain bar, showing the advantages of a bonded bar, and that the cost, if designed thoroughly, was no more than plain reinforcement yet with a safer resistance. From this he dealt with the subject as regards rusting action on the reinforcement, the chemical action on a reinforced concrete structure, and also on the electrical influence which could act on such a structure.

The lecturer afterwards dealt with the various aggregates suitable for reinforced concrete.

Passing from this he then went very closely into the costs of reinforced concrete work which he had recently carried out, illustrating this work by a number of lantern views.

The first example was the reconstruction of a two-storey galvanizing works, which had to be as fire and acid-resisting as possible. The works are 200 feet long by 180 feet wide, spaced into bays of 20 feet by 18 feet. The height is 16 feet 6 inches from ground floor to first floor, and from first floor to roof 14 feet. The loads to be carried were 2½ cwts. per square foot for first floor with certain positions on this floor to carry acid baths of 20 tons weight, and hoods 40 feet by 7 feet had to be slung from the ceiling. The roof was designed for 1¼ cwts., allowing in each case a factor of 4. The roof is a flat one, and a portion is kept level without fall for building pattern stores, &c. The superficial area is 8,000 yards (two floors). The contract schedule-price was £11,994. In this amount the following items were allowed for, which cannot be spoken of as forming part of the building contract. Cast-iron plates round baths, £500; fans for ventilating, £150; hoods for fumes, £320—total, £970; leaving the contract, in round figures, at £11,000, which is equal to 27*s.* 6*d.* per superficial yard, or practically 2*d.* per cubic foot.

In addition to the amounts included in the £11,000, £500 was provided for terra cotta and £150 for treating the front concrete wall, half of which could be deducted if it was required to be cheapened.

The most interesting part of these works was the comparison of the three schemes, so as to get the lowest price from open tender, and to show how each construction compares with the other.

In the first case a scheme was prepared on the steel frame system, the whole to be cased in with concrete afterwards. A design was then prepared making the steel work of light sections, such as angles, tees, built up at the makers' yard ready for fixing at the site, and in this scheme full value was taken of the concrete for the compressional members.

Later, it was designed in reinforced concrete, and the costs from actual tenders were:—Reinforced concrete building, £11,994; light steel frame, £13,210; steel frame cased in concrete, £14,200.

This clearly shows the saving in a reinforced concrete building where the building is of average size and the sheeting can be turned over.

Another interesting example was a floor built over wire ovens and prepared for taking five storeys.

The load was 2½ cwts. per square foot, and, including foundations, superstructure, 4-inch reinforced concrete walls, cement finished, and all steel casements and fittings, the cost was 25*s.* per superficial yard of floor covered, two floors only being erected.

Another work recently executed was a floor with a cantilever, 10 feet 6 inches long, built over ovens again, but in an existing building. The area covered was 800 yards, and the price when carried out for foundations 3 feet below the ground was 19*s.* 6*d.* per superficial yard.

For foundation work Mr. Burke gave a very interesting example, which he was called in to act upon in Liverpool some 18 months ago.

A site had been chosen for a public building, and after the contractors commenced excavating they found that hal the building would come upon a quarry partly worked, the other half on that which had been worked and had been filled up to 90 feet.

The design eventually carried out was the sinking of two concrete piers 90 feet to solid earth, and from these reinforced concrete beams, 7 feet 6 inches deep by 24 inches wide, were carried and cantilevered so as to take the new building.

The cost was about £1,000. What would the cost have been to go down to the solid, which would have been necessary on account of the chance settlement and the building breaking its back?

Another interesting example some time ago was a schem of precipitation and sludge tanks for treating 1,000,000 gallons daily of sewage. Space was very limited. A schem of tanks, 250 feet by 12 feet wide, with cast-iron plates fo the sides and bottom was prepared. The cost of this worked out to nearly £7,000.

A scheme of brickwork in cement was then arranged. I this the capacity could not be obtained without buying mor land. Apart from the land, the price worked out to jus over £6,000. It was then decided to use reinforced concrete having internal walls without ties 9 inches thick at th bottom, 6 inches thick at the top, 8 feet high, and this was jus over £4,500. The work when it was being constructed wa shown on the screen, and the author said he believed it wa the first set of tanks to be constructed to give such a capacity in this country in reinforced concrete.

A very interesting example of pile and roadway work wa given. This was designed for the English Velvet and Cor Dyers' Association.

They wished to enlarge their works, but they were handipped through having the river on one side, the goyt (for pplying the works with water) on the other, and beyond at the footpath and canal.

On the one side the river was dammed and a reinforced ncrete raft made. From this ran the columns and beams ir forming a new roadway over the river, and at the same ne carrying the buildings to be erected. On the other side -inch concrete piles were driven to carry the new buildings.

The superficial yardage of the work done was 1,250, and the tal cost was £2,800, including paving. The roadway was signed to take a 10-ton motor-waggon.

Another work designed was a new roadway, 36 feet wide, carry two traction engines and boilers passing side by side. e suspended area carried by columns, beams, and slab was 0 yards, and an equal portion had retaining walls to support e made-up road. The cost of this work was £2,000.

In railway bridge work one example was shown for Amberte to carry one set of rails. This was one central pier in e river, the width of which is about 120 feet. There are o 60-foot spans, and the width of the bridge is 12 feet. e cost, from tenders already sent in, is £850.

Mr. Burke then dealt with the treatment of reinforced ncrete for architectural effect.

He stated that this must appeal to everyone as very teresting and worthy of consideration in view of the fact at as time goes on this particular method of construction ust come more and more into favour. His own experience d been in buildings of the warehouse and heavy works type, ere the first consideration was utility, with very little scope r elaborate design on the elevation; but at the same time e question had been considered, and the following were his ews on the subject:—

Taking the ordinary works or warehouse building with the thodox piers, plinth courses, stone heads and sills, stone nds with cornices, parapet, &c., this type of building in inforced concrete can be very ably and economically treated. e concrete columns on the outside walls would be designed piers of the necessary proportions to suit design, and the ame beams between same utilised as window heads with ntinuous band. Between the framework a light 4-inch inforced concrete wall could be constructed so as to be nnected with the columns and the frame beams; the window enings and sills would, of course, be framed in the sheeting, d in case of any moulding, &c., being required the jambs ould be left rough and the moulded work formed at another eration.

In the case of rustication or V-joints being required in the ocking out of the piers, this can be done by ribs of timber ing fastened on to the sheeting before same is fixed, care ing taken to prepare the timber with a good wash, and also at these strips are slightly bevelled so as to ensure clean riking. The ballast for this class of work should be very e and of granite if possible.

If the elevations are rubbed so as to ensure all voids being osed, after the sheeting is struck, a very good job is assured, d the difference from stone is hardly noticeable.

If a combination of brick with stone dressings is required, e framework may be carried out exactly the same way, but e 4-inch reinforced concrete wall would be substituted by a inch brick one, and the introduction of moulded work or rra-cotta cornices is a simple matter.

Suppose, then, the treatment of a Classic building in inforced concrete is reviewed:—Consider the monolithic ethod. The building of the main walls would be a very mple matter, as any details in the way of cornices, blockingt and the like, as well as panelling, could be easily executed the sheeting.

Then turn to a shaft with a Corinthian capital. You ill see instantly that to carry out the shaft alone satisactorily would be a very difficult job, and as far as the pital is concerned would be practically impossible.

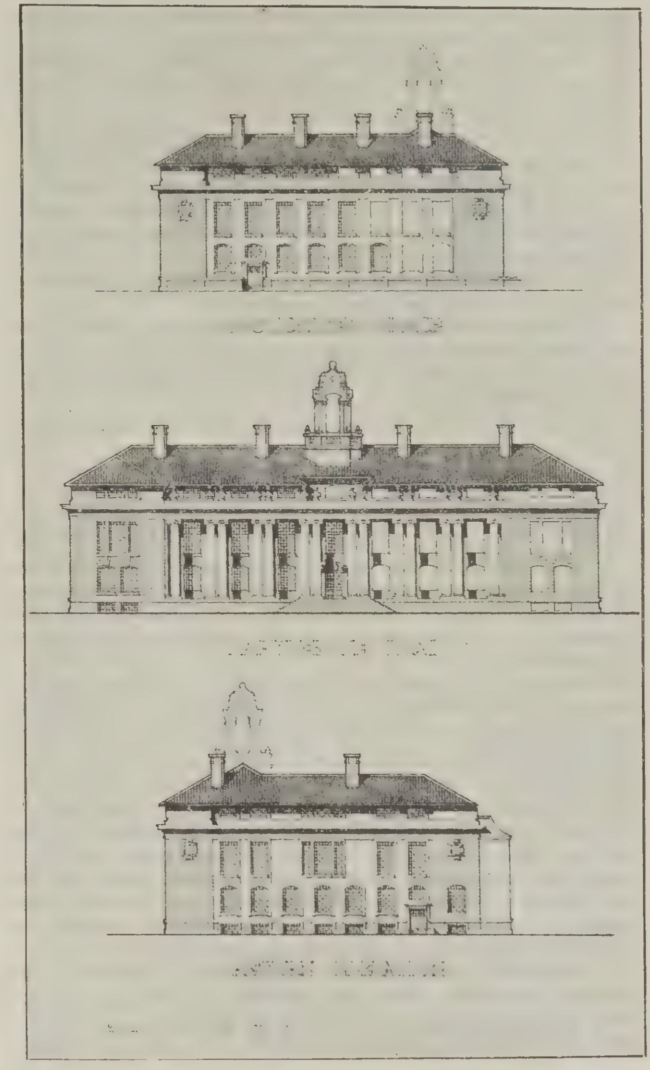
This now carries us to the method of casting independent ocks which would be placed in position in the same way is now adopted with terra cotta and reinforced concrete. he question of carving then arises. Taking it for granted at such a front could not be executed in concrete alone, the troduction of stone for reasons stated becomes necessary. onsidering the combination of concrete and stone blocks, the o substances would have to be matched both in texture and colour to be at all satisfactory. This, of course, could done with care; but supposing that a suitable appearance the work on completion be attained, we must not lose sight the probable change that would take place through the posure to weather and general atmospheric conditions. rom this the architect would then have to decide whether it would be worth while taking the risk (which would certainly exist) of adopting reinforced concrete with the combination of stone to save the extra cost which an entire stone front would incur.

In conclusion, Mr. Burke illustrated by lantern many examples of work he had carried out.

The lecturer was accorded a hearty vote of thanks.

An interesting discussion followed. In reply to the questions, Mr. Burke stated that he always specified the best English cement to be properly aerated and slow setting. He did not like coke breeze or slag for the aggregate. He preferred broken bricks. The concrete in the proportion of 3 : 2 : 1 should be very liquid and well rammed. Although theoretically spiral reinforcement was best, he preferred to use ⅜-inch bent angle-rods to connect the vertical bars. It was not necessary to paint the steelwork previous to encasing it. He urged builders when tendering to allow for plenty of strong timber for casing—at least 33 per cent., as, although the sides could usually be struck after ten days, the bottom supports sometimes took three or four weeks.

At the business meeting previous to the lecture two new members and one new associate were elected.



MARYLEBONE MUNICIPAL BUILDINGS.—FOURTH PREMIATED DESIGN. By Messrs. Warwick & Hall.

THE INSTITUTION OF MUNICIPAL ENGINEERS.

At a meeting of the Council held on November 22, the following applicants were recommended for admission:—

(*a*) To Membership: Albert Light, surveyor, Wharfedale R.D.C.; C. F. Hodgson, surveyor, Otley U.D.C.; F. Hatcher, deputy borough engineer and surveyor, Neath. (*b*) To Associate Membership: F. J. Reilly, surveyor's office, Cockermouth U.D.C. (Under the new by-laws these elections will be ratified at the next Council meeting if no written objections are lodged within fourteen days.)

New Members, &c.—From the applicants recommended for admission at the last meeting eight members and four associate members were elected.

Examinations.—The report of the Superintending Examiner giving the results of the examination held November 2, 3, and 4 was received. The results are as follows:—

A. D. Barron, diploma in municipal engineering (covering the subjects of buildings, highways and sanitation), with special mention for excellence of work.

R. Wilson Jones, certificate in electrical and mechanical engineering as applied to municipal work.

J. Reed Edwards satisfied the examiners in building and structural engineering as applied to municipal work.

Henry Peake and T. S. G. Menezes satisfied the examiners in the general paper.

Council Meeting.—It was decided that the next Council meeting be held on December 16.

BY-LAWS AND BUILDING REGULATIONS.

A MEETING of the Architectural Association Camera, Sketch and Debate Club was held at Tufton Street, S.W., on Thursday, November 30. The proceedings were opened by the following short paper from Mr. F. S. Chesterton:—

I feel some diffidence in dealing with this subject for many reasons; for one thing, any paper which deals with such an important matter cannot cover the ground more than partially and superficially. Then, again, building regulations have been amplified, extended, and incorporated in various Acts which have special application to certain towns and districts. I do not propose to even attempt to enumerate these Acts, but to deal with the average by-laws that are prevalent in the rural and urban districts which have adopted them. It will also be my endeavour to avoid as far as possible being informative in the circumstance of addressing an audience far more knowledgable in these matters than myself.

As to the necessity for the regulation of buildings, this seems to have been taken for granted for centuries, but in a very general fashion. I think I am correct in saying that one of the earliest building regulations was an Act of Elizabeth prohibiting the enlargement of London, as the size was considered to be rather alarming—an opinion held since, I believe. The Fire of London seems to have resulted in the restriction of timber buildings, and I am inclined to think that this had a share in fixing the sash window brick house as the type for town building. But I cannot trace any appreciable endeavour to deal with building in country districts.

Now, as to the advisability or otherwise of having regulations, one might argue for days. As a mere personal and primal preference I have a leaning towards anarchy. If people choose to build homes that fall down it devolves upon the inhabitants to take an intelligent (and anxious) interest in building construction. In course of time, public knowledge would result in the survival of the better work. A plausible case can be made out for no by-laws. Some districts have none, and it can be contended with truth that in these districts the buildings are customarily no worse than in those which are controlled. It may be said against this that the result of regulation, as a whole, is to create a general average or standard of work up to the by-law standard, below which even a jerry builder would feel it impossible to descend. To have no control whatever is, you may say, individualism run mad, but whatever it is there is no need to consider it, because whether one likes it or not, the tendency is more and more towards regulation, and it is our obvious duty to see that these regulations are as suitable and useful as they can be made.

The Public Health Act of 1875 is really the *fons et origo* of the by-laws under which we work. It always seems to me a most curious and very English feature of the by-laws that they are adoptive, and that it is only a mixture of tact and good fortune that they are not infinitely worse than they are. The model by-laws which are suggested by the Local Government Board are some thirty-five years old, and they are remarkably good—doubtless because the R.I.B.A. had some share in the drafting. They have been added to by many local bodies with consent of the Board, sometimes improved, often not: but, take them all round, it would be difficult to compile a better and more sensible code of regulations. Some of the sanitary clauses are out of date in view of our present knowledge, but then I much doubt if little more than a yea or two does not alter the views of the sanitary experts— had almost said tyrants.

The attacks made upon the by-laws during the last fiv or six years—practically since the "Garden City" move ment was started—have taken various forms, but are chiefl directed against the road clauses and the structural clause There are depressing photographs shown of what are calle by-laws roads with dreary terrace rows of identical litt houses.

Personally, I don't like those sort of streets, but I r member an old country builder once calling my attention to street where even the chimney pots were so carefully in line that they were like a regiment of soldiers—he thoug it magnificent. But this had nothing on earth to do wit by-laws, and to use it in a campaign for power to mal narrower roads seems to me unfair. With the greate respect to the garden cities, I think it is hardly proved th roads with grass borders are less costly of upkeep and— neglected—better to look at.

Then I have seen photographs of a wreckage of timb showing someone's cottage destroyed by a local authority. was very sad and annoying, no doubt, for the owner of t wreckage, but I feel the ideal for which he suffered is wrong one, and it is on these grounds that I feel the stronge reasons for defending the by-laws. The outcome of all t abuse of the laws was the exhibition at Letchworth, whi set out, *inter alia*, to show the building world what cou be done if only the authorities did not stand in the way, an after seeing it, I was still on the side of authority. In fa the impression I gathered was that building with bricks w not really appreciably more expensive, and always the was the feeling that their ideal of building was radical wrong. It did not aim at permanence, and that is precise what good building should aim at.

Having said so much in their favour, I feel there a some of the building clauses of most districts which are op to improvement and amendment which I should like to s dealt with.

One very hampering clause is that which prescribes t window to be one-tenth of the floor area. On the face of it reasonable provision, in practice it is a most exasperati requirement, for it takes no account whatever of aspect the height of the top of the window from the floor. In attic it is possible to put a window low down with o tenth of the floor area, which would pass, while a small window high up, giving better light and ventilation, wou be condemned. Then, again, a south window will give m light in proportion than an east window.

Another ridiculous clause is that requiring window fram to be 4 inches from the face of the wall. This, in practice, generally not noticed, but I have been made to do it. T clause should be struck out, as it is quite useless, and one knows whether it is a precaution against fire or water.

The clause requiring party walls to be carried up ab the roof is, no doubt, well intentioned, but is disastr in any effort to make a group of cottages or houses presen decently reposeful roof. The spread of fire, which it designed to prevent, would be greatly safeguarded by insisti that the roof covering is bedded direct on top of the wall groups of a limited number of houses.

I was given a suggestion (on which I have more th once acted) for getting over this clause, which may be interest. The case was a gable, the apex of which I want to be in the centre of the party wall in grouping a small r of little houses. By putting concrete slabs not less th 1 foot 6 inches from the ridge across the party wall a terminating the rafters below these slabs I maintained tha was giving the 15 inches above the roof, and filling in the sp above the slab with concrete and bedding the roof tiles on gives a better fire protection than any other method.

I have neither time to comment upon nor have been able collect all the variations of the model by-laws—they are numerous—but one or two that I have had experience strike me as tending in the wrong direction. One is t insistence of 9 feet in height in attics for two-thirds of t floor area with 5 feet minimum. This is unreasonable, a makes it very difficult sometimes to fully utilise the cu contents of a small house. To start with, 9 feet is too hi for a minimum, especially when coupled with no provisi for height of the window above the floor, and to restrict it two-thirds with a 5 feet ashlar height is to render usel space which would be valuable for furniture and boxes. still worse provision also obtains where no roof is allow to cut in, and rooms are to be full height. This will ten m certain, to typify the flat roof, and take away character d picturesqueness, for no commercially-minded builder ll put up a decently pitched roof unless it is useful for reasing the accommodation of the house.

Another regulation which I met with is, in my view, ill- ceived. It insists on the ground floor of any building ng 6 inches above the crown of the nearest road. In the vn this would not be any matter for comment, but when is applied to the outlying country which is embraced in administrative area it is absurd. In the case in point, site was the side of a hill, on the top of which was the d. To comply with the by-laws meant the unfortunate ant being 3 feet or 4 feet above his garden at the back, th rods of useless brickwork to get there. This was derated by personal appeal, but only slightly. There are er instances which one could give of the manner in which tain clauses interfere with a rational building, but the mber of occasions is, in comparison with the possibilities, t very considerable. This brings me to the second aspect the question, and the more important—namely, the ministration.

The question of administration is so involved with the ole of our local self-government that it is very difficult make any criticisms or suggestions that have not the dis- vantage of involving more consequences than are relevant the subject of building. The exact relations between the al authority, which is charged with the administration, d their officer or surveyor vary greatly, not only in the per- ality of the surveyor, but also in the degree of indepen- nce presumed by the manner of appointment.

I suppose most of us will admit that the surveyor we have st appreciated is the one we have never met—and who s not even visited the job. These admirable men have lly been most discerning, seeing that their confidence in is so well grounded. There is, however, an element of nething very like the best solution of the supervision of the thorities in this. The aim of the by-laws, after all, is at the buildings in a district are to be well built and althy dwellings. It is *prima facie* the object of a respon- le architect to have the same aim, and I think that the ationship of local authorities to architects would be in ways more pleasant if this identity of aim were to be ognised.

There are ways and ways of exercising supervision, and assumption (which is not unknown) that anyone with y building work is a potential criminal is not only an natural one, but is so annoying that strained relations the inevitable result.

The London Building Act I have not attempted to deal th to-night, because it is altogether too complex, though, in ssing, I feel bound to say that it is a remarkably able, mprehensive Act in most respects, and the administration so different that I do not propose to say much about it, cept that it has some points which are helpful to suggest- g improvements elsewhere, though in suggesting improve- nts one is touching on delicate ground, and it is necessary walk like Agag.

This is one aspect of the supervision of buildings by icials which is of importance to us in connection with the eat and serious responsibilities under which we work.

The responsibilities are so great that it would indeed be satisfaction to have a portion of the burden, at any rate, ared in some degree by someone of capacity. It is here at, on the whole, one finds such support somewhat lacking, d it is difficult to precisely define the cause, and still more fficult to say how far an increase of supervision would not rry with it drawbacks and disadvantages.

In this connection a sharp distinction must be drawn tween London County and outside (and doubtless, again, tween other large towns and the country districts). In ndon there is a much more close scrutiny of actual build- g construction. This is partly due to the status of the strict surveyors, and also, I think, to the fact that the y, being built, the new works are not too numerous to ake such supervision impossible. I know from my own perience several districts where the surveyor pays many sits a week, and the supervision is practical to a large tent—insistence of grouting in brickwork, to quality of otings, bearing of bressumers, &c. There is a considerable xture of "The Act" with some of the visits, however, and ore than one surveyor has confided to me that he did not pect or find the best contractors building under architects ing bad work, but that architects gave a good deal of trouble ing to technical infringements of "The Act." The bad rry builder, on the other hand, knew his Building Act to perfection, and considered that he did his duty to himself and mankind if he knew nothing else about building. I do think, however, that, take it all round, the buildings put up in London are better than they would be without supervision of the authorities in those cases where no architect is in charge.

Outside London and in the country the by-laws seem to me to have more effect on form and dimensions than on quality, and if it happens, as I hope and believe it may, that a better standard of building is demanded by the public, this most desirable result will be achieved, and must be achieved, by the employment of architects. The control of building by architects is steadily growing, and it will depend how this has good results as to whether there will be any future extension of the area of official supervision, an extension which, on the whole, I should deplore, not the least on account of the added work which would fall upon us, without, as I think, any lightening of the load of responsibility under which we work now.

Many a point can be settled by common-sense, and if there were cases which any architect or builder considered to be harshly dealt with there should be somebody to appeal to who could be relied upon to possess such a commodity. Under the London Building Act this body exists in the Tribunal of Appeal. Why cannot there be other Tribunals of Appeal without the cumbersome machinery which takes time to set in motion?

The sort of body that I should like would be a panel of architects who are actually in practice, or recently have been, to whom, when some red tape obstruction has cropped up, one could go and say in effect: I want to do this; the people on the other side say I must not. What is your view? The incident can then be disposed of summarily, and merely technical points waived aside by a man taking a broad view.

Mr. Gilbert Jenkins, who followed Mr. Chesterton, in referring to the necessity for regulations, said that in the case of building work carried on without the supervision of an architect, it seemed to him that the Building Acts should be amended in order that greater—rather than less—control should be given to the authorities. In London all kinds of questions relating to buildings were being left more and more to the discretion of the L.C.C. As a result the architect never knew what his exact position was, and this led to delay and his being given a great deal more trouble than was necessary. Particularly did this apply to new theatres. In one instance within his knowledge the London County Council had the main exits altered five different times, and on the night of the opening they were still not approved, and the building was opened unapproved. In another case, after £3,000 had been expended on alterations to meet the Council's requirements in view of using a building as a theatre, the proprietor was coolly informed that the buildings never could be made to answer their standard, although the whole of the works had been done at their instance to meet their views of fire protection. He himself had been fortunate, as he had generally found that the officials were very amenable if dealt with nicely. In dealing with local authorities in the country the surveyors were often rather afraid of the architect, as he generally had greater knowledge of good work than they had themselves. It was sometimes rather difficult to make them see improved methods in sanitary science and construction. For instance, under the old by-laws it was allowable to discharge a bath into a rain-water head. This now is considered to be absolutely bad. There used to be also considerable difficulty in convincing local surveyors and sanitary inspectors that rain-water pipes should be disconnected from the main soil drains as far as possible. There was another point worth noting. When a client was carrying out a large building in the country, he was liable to be victimised over the question of abnormal traffic on the roads. Various cases had come under his notice where there were four or five contractors at work on the same estate, and the authorities complained that the roads in the neighbourhood had been cut all to pieces, and that large sums of money had had to be spent upon the highway afterwards. If no precautions were taken beforehand the authorities were enabled to convert a bad local road into a first-class county road, and make good the neglect of the previous twenty years at the unfortunate private owner's expense. In one case where that happened there could be no denying that the traffic had been abnormal for that particular country road. And although there were clauses in the contracts that each was to make good the road, the owner found it impossible, without several expensive legal actions, to bring the responsibility home to any one of the firms engaged, and he only recovered a small proportion of what he was advised to pay in order to settle the matter. He suggested that it was a very good method for the architect to insist on the contractors going to the local or county authority before they commenced the works and arranging to pay so much per ton (he had heard of 3*d*. being offered and accepted) to cover any damage which might be caused to the highway. Quite probably the whole amount would prove to be under £100, and a claim of £500 or £600 be thus avoided. Mr. Chesterton had alluded to roads with grass borders in garden cities. He would instance Bournemouth, where roads without kerbing or channelling were general, and the ratepayer was saved thousands of pounds. The addition of wide grass borders would give an extremely picturesque appearance, and, moreover, decrease the cost of maintenance. There could be no doubt that there was a considerable call for the revision of by-laws with a view to permit buildings of ferro-concrete in London. There were, indeed, all sorts of provisions in the London Building Act which are becoming antiquated. In the erection of the Ritz Hotel, for example, although it was a steel-framed structure, the walls had to be made of the full thickness required for external walls, and the existence of the steel frame was entirely ignored. He did not agree with the suggestion that a varied form of Tribunal of Appeal with easier access and shortened procedure should be set up, as in his opinion the Acts and by-laws should be made perfectly clear and no discretion be left to the authorities as to enlarged ideas to be read into them. It would then be easy for the architects to settle all points with the surveyors, and no appeals would be necessary.

Mr. Noel D. Sheffield remarked that he did not think Mr. Chesterton could have been quite serious when he suggested that things ought to be left in a state of anarchy. The matter of building regulations must not be looked at entirely from an architect's point of view. In speaking of housing in the country it had to be recognised that it was impossible to get high enough rent out of an agricultural labourer for an ordinary rate of interest to be secured on the outlay. There seemed to be no reason why right away from busy centres weather-board dwellings should not be allowed, and why the height of buildings should be made to comply rigidly with the existing regulations. The drainage now insisted upon for country cottages was fit for a palace. He himself felt in sympathy with the "Garden City" idea that they did not want 40-foot roads. It would be, he believed, a very good thing if some new provision were made in the regulations as to party walls; the provision might be somewhat on the lines of the present clauses in the London Building Act. In the country districts the ideas as to party walls are in a state of chaos. It was to be deplored that so many of the officials charged with the administration of the by-laws are without an intimate knowledge of architecture in practice. That fact produced a tendency to take a purely official view of the administration of the Acts. If possible, they wanted to restrain the London County Council from appointing district surveyors in the future. There was an idea abroad that eventually these surveyors will become the paid servants of the authorities, instead of depending on their fees, as now. Such a possibility was to be deplored. Under the present conditions, district surveyors in London possess a big discretion under the Building Act; but it is sometimes rather difficult for them to get rid of their obsessions. Particularly does this discretion seem too much in respect of public buildings like theatres. It was possible to meet with district surveyors with views actually contrary to those of the London County Council.

Mr. Adams alluded to the difficulties sometimes experienced in London where one had to run the gauntlet of the L.C.C. and all its branches and of the district surveyor. Sometimes rural by-laws could show good points to the London Building Act. The existing Tribunal of Appeal was a most cumbersome affair. If only it were possible to get points settled quickly it would be very much to be desired.

Mr. Edwin Gunn mentioned that the ancient Egyptians had by-laws, one of which was to the effect that if any builder builds a house and the house shall fall, that builder shall die. It seemed to him the London Building Act was a model in so far as everyone could know where they stood. Such was not the case with rural by-laws, which all look the same as being based on the same model, but which really often contain some verbal alteration making them entirely different on those particular points. Sanitary by-laws changed with fearful rapidity. He quite agreed that the Cottage Exhibition at Letchworth showed there was nothing to beat bricks and mortar. In an absolutely rural district, however, there was much to be said for the use of weather-boardin Country by-laws were certainly open to objection; one of th most stupid regulations was that prescribing window fram to be 4 inches from the face of the wall, as was also th insisting on the ground floor of any building being 6 inch above the crown of the nearest road. The by-laws, of cours represented the extremely small amount of control whi the authorities can have over public health. In this count the extraordinary number of drawings which are required the authorities to be sent in is becoming an awful tax architects. In America one set of plans were passed fro committee to committee or authority to authority, and d for them all.

Mr. Stanley Hamp, the Chairman, after remarks Mr. A. G. Tickle, Mr. A. E. Bullock and Mr. T. L, Dal said that after what had been said that evening he cou not help feeling that there ought to be no by-laws at a It seemed to him that the best by-law would be that eve man who built should employ an architect.

Mr. F. S. Chesterton, in replying to the vote of thank said that he was all against cheap buildings being allow in the country, for he considered that part of the obligati attaching to land-owners was to house the country peop What he had to complain about the London County Coun was that they could not be got to see that a delay of s weeks or so in considering and approving plans was serious matter. With regard to Mr. Jenkins's advice as coming to terms with the local authority as to compensati for abnormal traffic on roads, he could not see the justice paying for damage before it was done. In a job which w just about to be commenced, and for which he was arch tect, the local authority had approached him with some su proposal; but he had no intention of paying a rate per in advance. In consequence of the discussion he had son what altered his views as to discretionary powers for distr surveyors.

ARTS AND CRAFTS.

IN opening an arts and crafts exhibition at Bradford Saturday last, Mr. J. Cobden Sanderson, of Lond strongly repudiated the belief that the three great arts w painting, sculpture, and architecture. He said that one of first aims of the Arts and Crafts Exhibition Society was to volt against the academic conception of art as consisting of production of painting, sculpture, and architecture. Th were not the three great arts. His view was that the full c ception of art embraced the whole of life. Whilst those gaged in the minor arts could not compete successfully w the great industries, they could transfer some of the touch imagination to the great industries which would make th appear to be what they really should be—works of art.

Correspondence

[The Editor will not be responsible for the opini expressed by Correspondents.]

King Edward Memorials.

Sir,—May I ask for the usual hospitality of your colu to enable me to state that, by desire of her Majesty Qu Alexandra, I have undertaken to collect particulars, publication in due course, of all memorials, of whatever scription, at home, in the colonies, and abroad, to his Majesty King Edward?

I shall be much obliged, therefore, if those connected w the furtherance of such memorials will, as they are c pleted, kindly communicate with me, when I shall be g to send particulars of the information required.

James Gildea (Colonel).

11 Hogarth Road, London, S.E.: November 30.

Port of London Offices Competition.

Sir,—In view of the date—the 16th inst.—by wh queries are to be forwarded, may I—by your kind permiss —ask all competitors to join in a request that the perspec view be postponed to the final competition, and that the th elevations and the two sections be reduced to one each? am, &c.,

FORTHCOMING EVENTS.

Friday, December 15.

Trades Training Schools : Distribution of Prizes at Carpenters' Hall by Lieut.-General Sir Robert S. S. Baden-Powell, K.C.B., K.C.V.O., &c., at 8 P.M.

Birmingham Architectural Association : Paper on "Art in Cheshire as expressed in Old Churches and Houses," by Mr. A. W. Hennings, at 6.45 P.M.

Saturday, December 16.

Institution of Municipal Engineers : Paper on "The Electric Trolley Omnibus System," by Mr. Horace Boot, at 3 P.M.

Monday, December 18.

Royal Institute of British Architects : Paper on "The Newer Responsibilities of Architects," by the Practice Standing Committee.

Tuesday, December 19.

Illuminating Engineering Society : Paper on "Some Aspects of Railway Station and Goods Yard Illumination," by Mr. Haydn T. Harrison, at 8 P.M.

MANCHESTER LIBRARY AND ART GALLERY.

THE ten sets of drawings prepared by the architects selected from the first competition are now on view, and the amount of work submitted by these men certainly shows the wisdom of the Manchester Corporation in arranging the first competition to one-sixteenth scale and in pencil only. The ordinary mind would be staggered if the whole 230 or thereabouts had prepared the drawings to one-eighth scale, and inked them in too. In such a case not one corridor would have been required, but greater part of the municipal buildings, big as they are. The architectural profession therefore owes the Council a debt of gratitude for their consideration.

The first impression of the drawings is the high level to which both design and draughtsmanship have risen during the past generation. Such a set would be creditable to any nation, not for the niggling exactitude once thought to be the be-all and end-all of an architect's work, but for the vigour and directness by which the various ideas are expressed.

The next impression is not quite so favourable—there is a certain sameness of treatment and grouping in all. This may possibly have arisen from the assessor's selection, but it may also show that there is a danger in following the "grand manner," that it tends to cripple originality and may after all turn out to be a Procrustean bed.

The selected design by Messrs. Crouch, Butler & Savage, of Birmingham, is remarkable for the direct simplicity of its plan, and in this is stands apart from all the rest. The problem was not an easy one to solve, and the severe limitation of space added to the difficulties. This restriction has forced the authors to pack the rooms so tightly together that their adequate lighting by natural means is open to grave doubt. For instance, the centre of the reading room is 64 feet from the walls on either side, and although a top light is shown on section it is very narrow and has to come down from a height of 56 feet above the floor and through an internal roof light some 20 feet below the outer glass. The sections have angle lines ruled to show how the light would fall, but such a device is like ventilation by little arrows—not an accurate guide as to what will happen. The vestibule in the centre has very small windows over the doors, but the large entrance hall beyond will be very dim. True, four large windows are shown, but these are in small areas—the opposite walls so few feet away that they are not much value for light. The grand staircases also light into these little areas and are aided by a borrowed light from the reading room and sculpture gallery on the first flight. Above they have a dome light, and will be satisfactory.

From the large entrance hall the reading room and sculpture gallery are approached from under the stairs, surely by no means a dignified manner, the best entrance and the one opposite the doorways being to a subordinate room—the lecture gallery.

Corporations frequently have functions, and a favourite one is a reception at the opening of a picture exhibition. The natural place for this would be the large central hall—but what of the library users? Are these supposed to filter through the arriving guests or to use the two tiny entrances and staircases at the Portland Street end? This is one of the faults consequent upon so much being put on a restricted site—library and art gallery must inevitably clash with each other.

The authors have cleverly got out of the difficulty involved in locating the book-store at the back as requested in the conditions by putting it in the basement; but is a basement a proper place for books? Is the bicycle-store for staff only? The conditions state it was for the public as well, but as it is placed the staff only can use it.

The picture gallery on the second floor is very well arranged, but so much area being asked for, the authors have had to put four reserve galleries, each 90 feet long and 20 feet wide, overhanging the reading room and sculpture gallery. This is a very clever idea, but how much better both reading room and sculpture gallery would be lit if these galleries were omitted. They supply about 800 yards of area, but the building would be 800 times better without them.

The elevations are severely treated with a distinctly Greek feeling, but this, whilst admirable in itself, is not the thing for Manchester dull weather; the windows are far too small for necessity, although they are right for the Greek feeling, which calls for plenty of wall space. Certain windows in these large wall spaces are shown on the plan, but do not clearly appear in the elevations; the outline is there, but they are not blacked in. If they had been so treated, they would spot and mar the powerful mass of stonework and injure the design. Again, in the basement what is the use of putting large windows under the flight of entrance steps? These are supported by a wall some 6 feet away from the windows, but if this wall had been blacked in the absurdity of their position would be seen. The huge windows shown on either side of main entrance, reaching from plinth to cornice, have no indication of the fact that two floors cross them. Those

ST. CLEMENTE, ROME.

in the end pavilions show the crossing of the first floor, but the perspective disagrees with the geometrical elevation by showing a crossing to the before-mentioned centre ones and ignores the mezzanine floor.

Still, with all these faults, this design is certainly the best of those sent in, and the authors are to be congratulated on their success.

Mr. Atkinson's design is very monumental, but the plan seems involved—the wisdom of putting the reading room on the first floor is certainly to be questioned. The back elevation to Parker Street is very pleasing and strikes a note of originality that is lacking in all the rest. It would be interesting to see this treatment consistently carried out on all four elevations—it would certainly be most suitable for the Manchester dull atmosphere. The detail drawing is a masterpiece of draughtsmanship.

Messrs. Bradshaw, Gass & Hope submit a design cleverly drawn, but it has the glaring fault of putting an additional storey of picture galleries over part of the main series. Was this not contrary to the conditions as to circulation, and, if so, should this design have been placed in the second competition? The stack-room has been a trouble in planning, and some of the stacks are placed in galleries, inside the magazine and technical rooms. These could not be isolated in case of fire.

Messrs. Fielding & Farrer show a totally different scheme to any of the others. The buildings are clearly divided into two sections, the art gallery being entered from Portland Street and the library from Piccadilly. The elevations are not as pleasing as the other designs.

Space forbids a detailed criticism of all the schemes, but that of Messrs. Adams & Holden must be noted for the fact that the entrance to all the rest of the building is through the sculpture gallery.

Mr. Worthington's design is a very severe and scholarly treatment of Greek; but the same remark as to smallness of window openings applies to this design. It is perhaps the most monumental of any of the ideas submitted, but it would require the brighter light of South Europe to be of practical use.

Messrs. Warwick & Hall's design is very refreshing in its detail, but their plan does not compare favourably with the others, nor indeed with many of the designs this firm have submitted in other competitions. The detail drawing is admirable.

Mr. Simon's idea pleases the ordinary non-professional man more than the others—the colonnade to the front and the two towers balancing the design make a pleasing composition. The scheme is clearly divided into two sections, each with equally important entrances in the main front to Piccadilly—the large reading room connecting the two blocks; but the picture galleries above do not circulate well.

On the question of grouping, the monumental style chosen by all the competitors except Mr. Simon would be very effective so long as the material keeps bright and clean—all cornices would give their full value; but Manchester weather and atmosphere would quickly blacken the buildings, the resulting effect being a black mass only and all refinement lost, and then the omission of an interesting skyline would be keenly felt.

"THE ARCHITECT" STUDENTS' SKETCHING AND MEASURING CLUB.

A VERY interesting set of drawings has been sent in by our contributors in measured illustrations of eighteenth century fireplaces.

"Malaya" has chosen his example from Micklegate Hill House, York, which is possibly one of the works o John Carr. "Malaya's" work is well drawn with a sufficiency of detail, but it would be worth his while to ink it in, to preserve it for future reference.

"Jock" has found a sumptuous example of a chimney piece in the board room of George Heriot's Hospital Edinburgh, which he has drawn quite satisfactorily to incl scale with quarter full size details.

Mr. E. H. Gibson sends a good drawing of a chimney piece from Markington Hall, Yorkshire, which shows distinct evidence of French rococo influence on a decidedly

ST. MARIA IN TRASTEVERE, ROME.

English craftsman. The example is interesting therefore, ather than admirable.

Mr. C. B. Chadwick has measured and drawn a rather small wood mantel-piece from Kirkstall Grange, Headingey, which is one of the many existing instances of design not by the Brothers Adam but influenced by their work. Mr. Chadwick is mistaken in describing the chimney piece as based on Greek principles and comprising the decorative treatment of the Greek Ionic order. The foundation of this type of design is the late Roman work as found at Pompeii, which is marked by a refinement that uggests and is possibly due to the influence of Greek spirit. Mr. Chadwick's pencil drawing has a nice touch, but would be more distinct if the drawing were finished.

"Alpha" has drawn the chimney-piece in the hall of he Trinity House, Newcastle-on-Tyne, which is adorned with carvings of seahorses, mermaids and other marine emblems that are more quaint than beautiful, the composition of the ornament being lacking in good distribution. The drawing is well executed in pencil but would be better and more complete with more details.

Mr. G. C. Styles contributes a drawing of a simple arly eighteenth century oak chimney-piece in the Merchants' Hall, Fossgate, York. Mr. Styles has done well to give full-sized details which add value to the simplicity of the example he has selected.

We have awarded for this month prizes of half a guinea each to "Malaya," "Jock," Mr. E. H. Gibson, and "Alpha."

EARLY ROMAN CHURCHES.*

THE Early Roman churches hold an important position in the history of Christian Art, and in the art of Architecture in particular. They form the earliest buildings specially erected for the Christian religion, and which have survived to the present age in Europe. It is true that in practically every case the buildings, as they appear at the present day, have been repeatedly repaired and restored.

Some, indeed, have been rebuilt, but in most cases the econstructed church was of the same type as the one it replaced and upon the same site, and not infrequently includes some portions at least of the earlier structure.

Many buildings have suffered less severely from the effects of time than from the ill-judged additions and modifications introduced to a great extent in the later days of the Italian Renaissance, and entirely out of harmony with the buildings.

It is somewhat remarkable that among the early Roman churches the finest and largest buildings of which any remains exist belong to the earliest period, and that the buildings of a later date are smaller in scale and often inferior in construction. The circumstance is accounted for, however, by the history of the early days of the Church in Rome.

Throughout the first three centuries of our era, from the time of the first preaching of Christianity in Rome, the new religion, though often tolerated for long periods, was at various epochs subjected to persecution, often of a fierce description, and one of the most severe was in the closing years of the third century under Diocletian, when a determined effort was made to stamp out Christianity, and all Christian churches were ordered to be destroyed and Christian documents burnt. The destruction of the churches was rigorously carried out, and there is no building of any importance still standing that was used for Christian worship in or near Rome before this date.

Signor Lanciani states that during this early period "the Christians took advantage of the freedom accorded (by the laws of Rome) to funeral colleges, and it was largely through the adoption of these well-understood and respected customs that they were enabled to hold their meetings and keep together as a corporate body through the stormy times of the second and third centuries."

They had their own cemeteries, and in these, excavated in the soft rock outside the walls of Rome, chambers were formed originally for burial, but which in times of persecution were capable of being used for meetings.

In connection with Roman cemeteries, Pagan as well as Christian, it was customary to erect above ground a chamber or schola, in which the funeral ceremonies were held, and which, in the case of Christian communities in less troublous times, were available for Christian worship. Examples of this type of building remain above the catacombs of Soter and above those of St. Calixtus; the latter takes the form of a square hall open on one side, and having an apse in

ST. MARIA IN ARACŒLI, ROME.

each of the other three. It is believed to have been built by Pope Fabianus between 236-50, but was afterwards nearly destroyed and reconstructed in the time of Constantine, who added a façade and vaulted the building.

It is important to note that even in times of persecution and in the case of Christians who had been publicly executed, the privileges of burial were not, as a rule, denied to the friends and relatives of the victim. The bodies of such martyrs were buried in their own catacombs, and the grave of a notable martyr became an object of veneration; and when more peaceful times arrived a church was often raised above it.

The tomb was under no circumstances disturbed, and the church, when erected, was so placed that the centre of the apse—the site of the altar and the place of honour—was immediately above it, while the body of the church, excepting in the case of an insuperable obstacle, was placed on the east of it. In the case of these earliest churches, therefore, the system of orientation was different from that which became general in the fifth century. At this time the priest or bishop stood behind the altar, facing the congregation, and also facing east, and the apse was therefore at the western end of the building, and the principal entrance and atrium at the east end.

Early in the fifth century the general arrangement of the building was reversed, the apse being placed at the east end and the entrance at the west end, so that the congregation faced east as they were turned toward the apse, and the priest also faced east, but stood now between the congregation and the altar, instead of the altar being placed between them.

In cases where the original tomb was at no great depth from the surface, the floor of the church was approximately at the ground level, but cases occurred in which the tomb had been deeply excavated, and the church in such cases was sunk below the ground level, the rock being cut away for the purpose, as at the church of St. Agnes. Many of the great churches of Rome were founded in this way, as, for example, St. Paul's-without-the-Walls, St. Peter's, St. Agnes, St. Lawrence. The catacombs were formed in all cases outside the walls and bordering on the great public roads leading out of Rome, and the churches erected on these sites were all outside the walls.

At a later date the term "confessio" was given to this chamber containing the tomb, and it developed into a regular crypt, which at first was small, and confined to the area of the apse, but in some cases was extended forward into the nave.

Soon after the opening of the fourth century the circumstances of the Church were entirely changed. Up to this period it had at best been tolerated. But by the Edict of Milan it was fully recognised and protected, and the Emperor Constantine accepted the Christian religion. From this time the Church, which, in spite of periods of persecution, had made many and important adherents, rapidly increased; and, all fear of persecution being at an end, every effort was made not only to replace the buildings destroyed by Diocletian, but to provide increased accommodation for the enlarged congregations. And the emperor took his full share in this enterprise.

It was, therefore, with the approval of the emperor, and assisted by Imperial example, that the early part of the fourth century saw great activity displayed in the erection of Christian churches, many of them large and noble buildings.

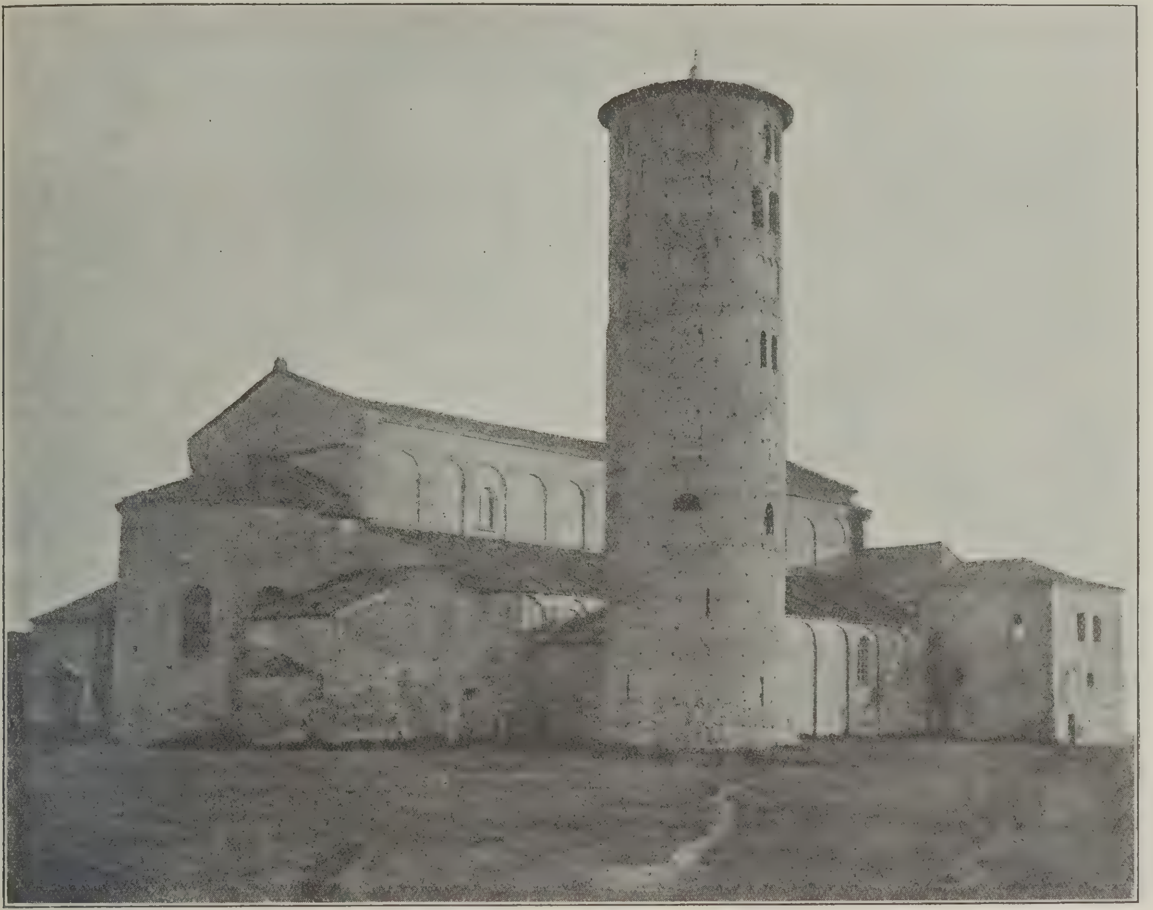
They were inferior, however, in point of construction to the vaulted structures of the late Imperial period, with which they were almost contemporary.

No church in Rome can be considered both externally and internally to be in its original condition, and the best impression of the appearance of an early basilica is probably to be obtained at Ravenna, where the buildings have been less interfered with than in the more important centre of Rome.

Professor Lethaby, in referring to the various theories that have been put forward as to the origin of the type of church termed "basilican," as erected in Rome in the time of Constantine, and which continued to be the type of building that was erected for several succeeding centuries, did not pronounce in favour of any one theory, but rather expressed the view that in all probability more than one factor contributed to the actual form of these early churches—a view which seems to be an entirely reasonable one. It is unnecessary, therefore, for me to refer again to this subject at any length.

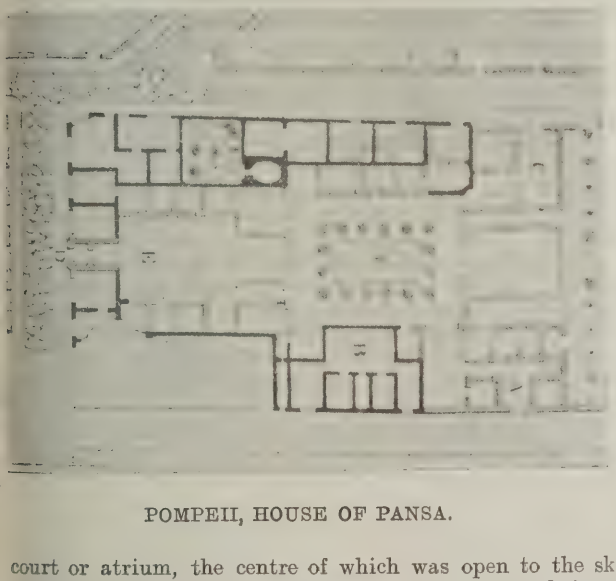
It is, however, an established fact that in the early days of the Church the Christians did meet in private houses, and the planning of such houses has in some respects such a close resemblance to the arrangements of a typical and complete Christian basilica that it seems impossible to ignore the correspondence between the two, or attribute it to a mere coincidence.

The owner of such a house, in placing it at the service



ST. APOLLINARE IN CLASSE, RAVENNA

of his fellow-Christians, would naturally make use of the largest and most important room. In all Roman houses of any importance this room was approached through a court or atrium, the centre of which was open to the sky. Round this court there was at least a roof, and in all except small courts the outer edges of this roof were carried by a row of columns forming a covered wall or peristyle, and in the centre of the open space was an impluvium, or tank, to receive the water from the roof.



POMPEII, HOUSE OF PANSA.

The room itself was placed at the opposite end of the court to the entrance, and even at the provincial town of Pompeii, where the best preserved examples of Roman houses exist, this chamber was of considerable size and importance.

It is known that in the palaces of the wealthy Romans a basilica was by no means an unusual feature, and that many of them were large and richly treated. Vitruvius speaks of them as rivalling in some cases the public buildings in their extent and magnificence and as used for public business, the meetings of councils, and as halls for legal judgments and arbitrations.

It is known, too, that quite early in the Church's history some of the more important of the Romans were included in the Christian ranks. In the time of Domitian, before the close of the first century, these even included near relatives of the emperor. It is stated by Eusebius that in the reign of Commodus, near the close of the second century, the Church was enlarged by the adhesion of persons of all conditions, and in Rome by the conversion of whole families among the noblest and richest. It is, therefore, almost certain that some of these adherents would possess basilicas as part of their palaces, and open them for the meetings of the Church.

The Christian basilica with its atrium differs in certain respects from any example of a Roman house or palace that has actually survived as such. The basilica is on a larger scale, and the court which in Roman houses gave access to rooms on all sides in the Christian church is the approach to the church alone, and the central area of the court is of much greater extent than in the private house. But the combination of the court and the basilica under the circumstances can hardly be a chance coincidence.

In order that we may get as clear an idea as possible of the arrangement of one of these basilicas, it will be desirable to examine the plan and aspect of an example in Rome which most closely approaches in its present state to the early form of this type of Christian church.

The church of St. Clemente as it appears to-day is, it is true, a comparatively late structure, the result of a restoration following a disastrous fire in 1084, but the original church is considered to have been in existence as early as 308, and to have then formed part of a private house. It was afterwards enriched and possibly enlarged, and at the time of the fire was wider than the present church, the nave and narrower aisle of which cover the old nave. The old walls and columns were used to carry the later church, the floor of which is about 12 feet above the old floor.

The present church retains the atrium complete, and is the only perfect example of this feature in Rome, though portions of several others exist. This stands in front of the church, and is slightly wider than the present building. It is entered externally by a small porch, and a covered wall runs round the atrium; the roof is carried on the

[TORCELLO CATHEDRAL, APSE.

entrance side by square piers, and on the other three sides by Ionic columns, and the church is entered by a single door from the atrium.

The plan of the church is a simple rectangle, broken only at the far end by the projection of the apses. The whole width in this instance is divided into three parallel compartments separated from each other by rows of columns; in this example each row is divided into two groups by a rectangular pier. The triple division of the plan is usual, though in some of the larger examples there is a fivefold division, there being two aisles on each side of the central nave. There is, however, an unusual difference in the width of the side aisles, due to the fact that the church had to be contrived so as to make use of the earlier foundations. The use of columns to form the divisions is also usual, but the subdivision into groups is comparatively rare. It is found also in St. Maria in Cosmedin and St. Prassede.

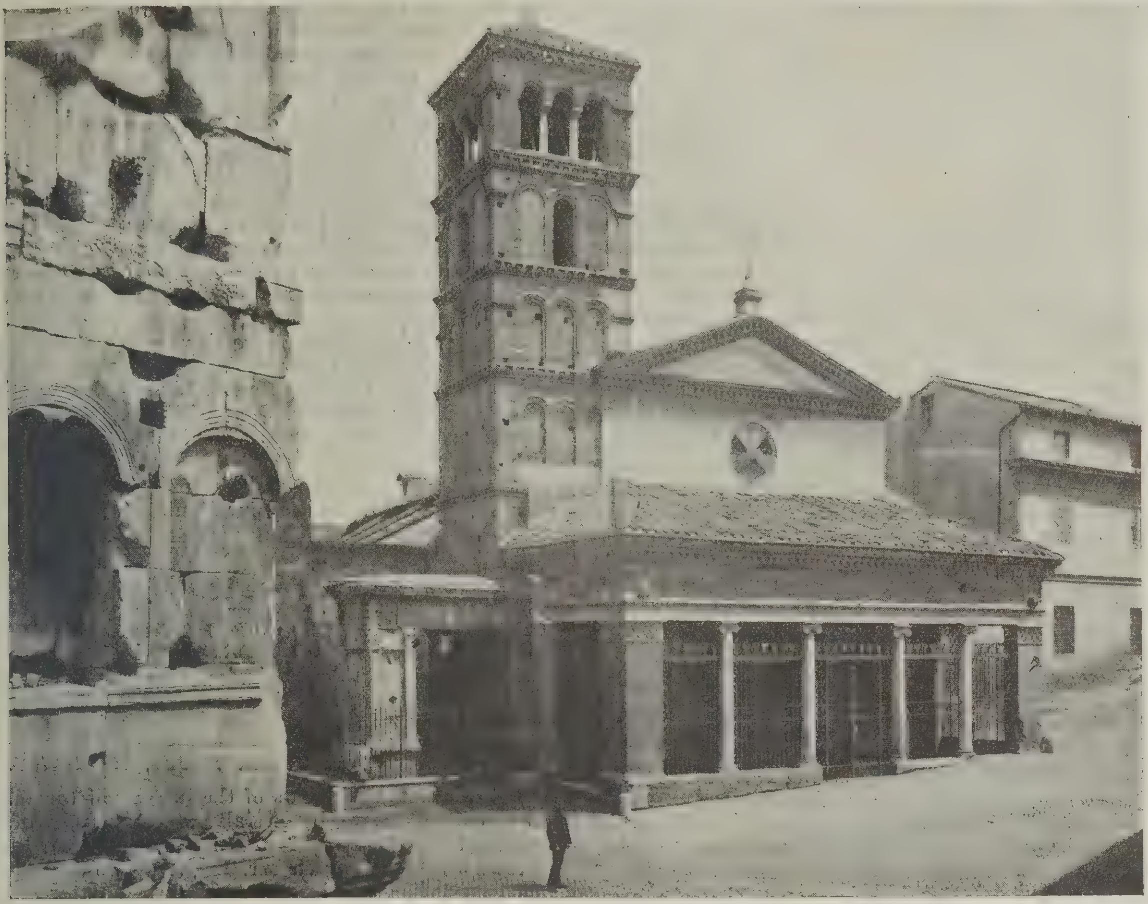
The nave is terminated by the apse—a semicircular projection beyond the end wall of rather smaller diameter than the width of the nave, and the floor of which is raised somewhat above the nave floor. This is an universal feature, and recalls the similar feature which occurs in the majority of secular basilicas. The side aisles also each terminate with an apse, which occurs beyond a short prolongation of the aisle; the wider one is hexagonal in plan. The narrower one is semicircular, and each provides accommodation for an altar.

The central apse has in the centre against the wall a raised seat or throne for the bishop, and round the wall ran a bench or benches concentric with it for the lesser clergy. The altar stands at the centre of the front of the apse, and is here, as usual, surmounted by a ciborium or baldachino. The choir projects forward into the body of the church, extending as far forward as the piers in the centre of the colonnade, but it is considerably less in width than the nave. This was enclosed with a low wall of marble, and on either side of it was a raised platform or ambone, from one of which the Gospel for the day and from the other the Epistle were read.

Turning from the plan to the superstructure, we find that the rows of columns forming the internal division are monoliths of marble, each standing on a moulded base and surmounted by an Ionic capital. The columns used in most of the basilicas have been removed from Classical buildings, and in many examples they are much less regular, both in height and diameter, than in this example. In such cases both bases and capitals show much variety, and sometimes the capitals are not even all of one order. At St. Maria in Trastevere, for example, both Ionic and Corinthian capitals occur in the same arcade; and in the church of Aracœli, while most of the capitals are composite specimens of Corinthian, Ionic and even Doric all occur in the one arcade. The capitals in many cases do not fit the columns on which they rest with any accuracy, but this extremely careless work occurs rather in the later than in the earliest basilicas.

At St. Clemente the columns carry an arcade springing directly from the capitals, and above this runs a cornice, which is continued round the apse at a level considerably below that at which the semi-dome which covers the apse springs, giving it the appearance of being stilted. This use of arches is very frequently met with in basilican churches, but in not a few examples a purely trabeated treatment is adopted, and the columns carry an entablature, which in some cases, like the column, is obtained from Classical examples, and is by no means all of one type. Above the cornice at St. Clemente the walls are plain except for windows pierced on either side sufficiently high for the sills to be above the aisle roofs. These walls offered a splendid field for decorative treatment, and in some examples they were enriched with mosaic work, as at St. Apollinare Nuovo, at Ravenna, one of the best preserved interiors of the basilican type, and in other cases with coloured decoration. But in almost all cases the existing colour decoration is of very much more recent date, and sometimes the decoration is entirely absent.

At St. Apollinare, the nave of which is practically in the same state as when first erected, the entire height of the wall is divided into three well-marked divisions—firstly, the main arcade of columns and arches; above this a perfectly plain wall enriched with a splendid frieze in mosaic, and corresponding in depth with the height of the sloping roof over the side aisle—the space that in Gothic buildings is occupied by the triforium arcade: finally, we have the range of



ST. GIORGIO IN VELABRO, ROME.

windows by means of which the interior is lighted, known as the clerestory, and occupying the same relative position and performing the same office as in Gothic naves.

The nave of St. Clemente is covered by a timber roof. Framed principals are used at short intervals to carry the external roof covering, and below them, at a much later date a richly coffered and ornate Renaissance ceiling has been constructed; but originally they were exposed to view, as is still the case in the nave of St. Lorenzo. The side aisles are each covered by a sloping roof, the tops of which reach up to below the sill of the clerestory windows, and the slope extends down to the top of the side walls.

At the end of the nave a great arch is pierced through the wall, and beyond it, and containing the soffit of the arch, comes the apse. The opening is known as the arch of triumph, and here and in the vault of the dome the richest surface decoration of the building is usually concentrated.

At St. Clemente the dome of the apse is encrusted with mosaic, starting from the level of the cornice already described. This is a typical treatment of the apse, which is invariably covered by a dome, and usually enriched with mosaic; it formed the most solidly-constructed part of the building, and in early examples is usually the only part covered by an incombustible roof. Largely owing to this fact, no doubt, the apse and its decorative treatment are usually comparatively well preserved. This is even the case with St. Paul's-without-the-Walls, the apse of which survived the fire which destroyed the rest of the building early in last century. The cathedral at Torcello, which dates from the middle of the seventh century, and is of the basilica type, shows the original arrangement of the apse with its seating better than any other example, though it has been considerably restored. The central throne is still in its original position, raised high above the other seating, which is formed in a series of concentric steps right and left of the throne, and these are still complete, though almost entirely stripped of their original marble casing. But the walls of the apse above the highest step still retain the marble lining formed of thin slabs with strongly-marked bands of colour, every alternate slab being reversed so as to give the effect of a zigzag pattern carried all round.

The exteriors of most of the basilican churches contrast remarkably with the interiors. In later times many of the exteriors have been modified and enriched, but that of St. Agnes still presents an example of extremely plain external treatment. Little attempt was made at first to enrich them or give them any striking architectural character, but they express very faithfully the arrangements of the church itself. Many of them, like the buildings of Imperial Rome, had an external facing of brick; but, in contrast with such buildings, this material formed the actual external face or was merely plastered, and not treated with any degree of richness.

St. Apollinare in Classe, at Ravenna, which still retains externally its original appearance, may be referred to as giving at the present time the best idea of the simple treatment of the exteriors of these early buildings, as most Roman examples have been much altered. It is faced externally with brick, and consists of a rectangular nave roofed with a low-pitched roof, and terminating at either end with a gable. The walls above the aisle roofs are treated with an arcade corresponding with the internal colonnade, and for the most part blank but pierced at intervals with windows with semicircular heads. The entrance is covered by a narthex extending across the whole front, and equally plain in character. The apse is roofed externally with a sloping roof, and is lighted by similar but longer windows; the walls are in other respects perfectly plain, but the aisle walls are again treated with an arcade in brick, carried up close to the eaves of the roof and pierced at intervals with windows. A striking feature of the exterior is the detached campanile, which is circular in plan and devoid of any attempt at decoration. It looks even plainer than in its original state, as many of the openings that formerly existed have been bricked up. Other circular examples occur at the Baptistery of St. John and at the cathedral at Ravenna, and these appear to be the earliest towers existing in Italy.

The Roman churches do not appear to have had campaniles at so early a date as those Ravenna towers, but in most cases campaniles were erected at a later date, and these are usually detached; but in Rome they are not circular in plan, but square. Their erection seems to have commenced in the first quarter of the seventh century, and a large number were built during this and the succeeding centuries. Such towers were added to the early basilicas of Constantine's time, as to others. The tower of SS. Giovanni e Paolo is one of the earliest referred to in contemporary documents, and is mentioned in 726; that of St. Agnes is of about the same date, and St. Giorgio in Velabro also belongs to this century, while those of St. Lorenzo-without-the Walls, the Lateran basilica, St. Peter's and St. Maria in Cosmedin among others, were erected in the following century.

Many of these campaniles have a strong resemblance to the Lombardic type of tower, and this feature is almost the only one in Roman churches that at this period shows any trace of such influence.

It was not till the beginning of the seventh century that a bell was employed to call the worshippers to church; at an earlier date a trumpet had been often used for this purpose. With the introduction of the bell some lofty structure to raise it high above the building, so that its sound might spread in all directions, was essential, and as the occasion for such towers, therefore, was only experienced at a comparatively later date, and there was, as far as is known, no feature in Rome to serve as a prototype, the influence of the Lombard builders is easily understood.

The early towers were in many cases of quite moderate height, and were afterwards raised at some later period. That of St. Maria in Cosmedin, which is one of the tallest and most graceful in Rome, was originally much less lofty; it consisted only of a ground floor storey of considerable height and two stages above it, each having two round arched openings. In its present state it has five additional stages, each with its openings arranged in groups of three, but this part of the work is a century later in date. In these towers the stages are distinctly marked by strong horizontal string-courses, and are often numerous; the arcades are very usually carried by single shafts placed in the middle of the wall, and supporting a capital resembling a dosseret in form, and sufficiently extended to support the whole thickness of the wall, but with small lateral projections. These features, with the general form of the tower, are suggestive of Lombardic influence; but the use of pilasters and the marking of the stages by arched corbel tables, which are both characteristic of Lombard treatment, are absent. These towers are uniform in width throughout their entire height, the outline being only broken by the slightly projecting string-courses, and the whole tower is finished, as a rule, with a cornice, and covered by a low-pitched pyramidal roof.

(*To be continued.*)

LEEDS AND YORKSHIRE ARCHITECTURAL SOCIETY.

A GENERAL meeting was held on November 30 in the Society's room at the Leeds Institute, the President (Mr. Sydney D. Kitson, M.A., F.R.I.B.A.) in the chair.

A very interesting paper was read by Mr. Alfred Mattison on "Old Leeds." He described its growth and development from a village up to the city of the nineteenth century, illustrating his text with many slides of old documents and engravings, &c.

Mr. W. H. Thorp, F.R.I.B.A., in proposing a vote of thanks, deplored the loss of many of the historical fabrics so reminiscent of the early days, and remarked upon the Red Hall, Guildford Street, which is at present undergoing drastic changes in the way of renovation and alteration.

The motion was supported by Mr. C. B. Howdill, A.R.I.B.A., who spoke of the lack of civic spirit shown in Leeds, especially with regard to architectural development.

SCOTTISH ECCLESIOLOGICAL SOCIETY.

AT a meeting of the Society held on Saturday in the Lecture Hall of the National Portrait Gallery, Edinburgh—Professor Cooper presiding—Mr. James Ballantyne gave a lecture entitled "A Short History of Church Stained Glass." After briefly describing the enthusiasm displayed in the mediæval days for church stained glass, the lecturer proceeded to examine in detail the different types and characteristics of each century. Beginning with the earliest church stained glass of the eleventh century, he showed slides of windows at Le Mans, Chartres, and Canterbury. The simple direct manner in which the early artists worked, and their thorough appreciation of the inherent qualities of the material was clearly indicated. After reference had been made to the influence stained glass had upon church architecture in the fourteenth century, to the extent of creating a distinct style and method of building to suit its own needs, examples were given from York, Gloucester, Oxford, and Rouen. The influence of Flemish artists on the stained glass of the fifteenth century in England was suggested by slides of the windows at King's College, Cambridge, and at Fairford, and the actual work brought from Belgium being instanced by the glass at Lichfield and St. Margaret's, Westminster. Going on to describe the effect of picture-painting on the designs of stained glass of the sixteenth century, Mr. Ballantyne closed with an extract from Emile Male's "L'Art Religieux," the most comprehensive study in recent years of the art of the mediæval church. The lecture was illustrated by about seventy slides, and was followed with much interest.

Among others present at the above were Sir James Balfour Paul, C.V.O., LL.D., Lyon King-of-Arms; Sheriff Scott Moncrieff; Mr. Thomas Ross, LL.D.; Mr. W. Traquair Dickson, W.S.; and Mr. James Wilkie, S.S.C., Honorary Secretary. The Rev. Percy Herford opened the meeting with prayer.

Mr. Ballantyne was thanked on the motion of Dr. Ross, seconded by Sir James Balfour Paul.

ILLUSTRATIONS.

COMPETITION DESIGNS FOR MARYLEBONE MUNICIPAL BUILDINGS.

IN accordance with our promise, we now give reproductions of the detail drawings accompanying the designs placed second, third, and fourth.

THE LONDON OPERA HOUSE, KINGSWAY.

WE this week give views of the interior of the auditorium from photographs specially taken for us, with those we published last week, by Mr. Ernest Milner. A description of the building, of which Mr. Bertie Crewe is the architect, was included in our last week's issue. In this we omitted to mention that the asphalte work was entirely carried out by the well-known firm of asphalte manufacturers and contractors, Thomas Faldo & Co., Ltd., of Effingham House, Arundel Street, Strand, W.C.

LONDON HOMŒOPATHIC HOSPITAL.

THIS hospital was erected about eighteen years ago on a site facing Great Ormond Street.

Owing, however, to the demands of the district, it was found necessary to very much enlarge it, and we to-day give a view of the west front of the extension facing Queen Square.

The frontage is about 86 feet, and the building is seven storeys in height.

The ground floor is occupied by the new Board room and offices; the first, second and third floors consist of large wards with day-rooms attached, and each ward has a balcony towards the square.

The fourth floor contains ten wards for private patients, and the fifth floor isolation and other wards.

There is also an operating theatre, with anæsthetising and sterilising rooms on the fourth floor.

At the north end is a staircase for use of the staff and for exit in case of fire. There is a large lift to take patients to their beds.

The roof has been formed so that patients may be treated in the open air. The remainder of the hospital has been in many respects modernised and extended. The out-patients' department has been entirely remodelled, and several new consulting-rooms, with an operating theatre and its accessories and a surgical dressing-room, gymnasium, &c., have been added.

A new boiler-house and fitters' shop, disinfector, destructor and pathological department have been constructed. A mortuary chapel has also been erected, the walls being lined with Spanish and other tiles; the floor is of glass mosaic; the windows and lantern light have been filled with pictorial glass by Mr. Archibald K. Nicholson; the embroidered altar frontal was made by Mr. Stalman from the architect's designs.

The old staff home in Powis Place has been remodelled to form a museum, lecture-rooms, &c.

A great many other minor alterations have been made.

The architect is Mr. Edwin T. Hall, F.R.I.B.A., F.R.San.I., of 54 Bedford Square, W.C., and the contractors Messrs. Holliday & Greenwood, Mr. A. Turner and Mr. C. Cornes having been clerks of works.

PRIZE DESIGNS AT THE ROYAL ACADEMY.

THE gold medal and travelling studentship has been very easily won by Mr. Alan Binning, his design for "The Hall of a City Company" having no really serious competitor. Mr. Binning is a Londoner, educated at the City of London School, served his articles with Messrs. Wallace & Gibson, and is now in the office of Mr. Leonard Stokes. The City company's hall is arranged in all the designs around three sides of an open quadrangle, and the chief feature is a grand banqueting hall on the first floor in the main *corps de logis* at the rear of the site. Mr. Binning has arranged a good entrance hall centrally on the ground floor; on the left are the waiting room and drawing room, with a grand staircase leading to the grand dining hall; on the right are a coffee room and the court room, with the clerk's offices conveniently near. The plan is sensible, workable and yet sufficiently dignified and architectural. The banqueting hall is well proportioned and the staircase stately. In his external treatment Mr. Binning has rightly made the banqueting hall the dominant feature of his composition, and the two side wings, which on the upper floors contain the clerk's residence and the kitchen and offices, markedly subservient. There is a suggestion of study of François Mansart in the design, which is shown in well-executed drawings shaded in wash with a coloured detail of the mural decoration of the banquet hall, of which a coloured interior perspective is also given.

The author of design 137 has spent much time in designing and drawing the plan of his marble floors, which would have been better devoted to planning. He makes the mistake of giving the same size and plan to the court room and the drawing room, whilst his clerk's office is inconveniently placed with reference to the court room. A meaningless tetrastyle Doric portico with varied intercolumniation ruins his exterior treatment, and his attempt at the modern Franco-American Beaux-Arts type of design shows lack of knowledge.

No. 138 has a great deal of hall and corridor, with a big assembly hall on the ground floor leading to the drawing room at one end and the main staircase at the other. A fatal fault of plan is the placing of the ladies' cloak room on the first floor. There is a lack of architectural sense both in plan and elevation, the latter having the solecism of two main cornices, one over the order and the other crossing the attic.

No. 139 has a good entrance hall but poor grand staircase, the first flight of which is between two walls. This plan also contains the mistake of a drawing room and court room of the same size. The banquet hall is badly proportioned, being too long and narrow. The elevation is spoilt by the author's fear of making his principal windows too big, and therefore putting circular bull's-eyes over the windows of his banquet hall.

No. 140 has gone for originality both in plan and elevation; the former is eccentric and rambling from the curious entrance to the colonnaded banquet hall, with columns breaking up the high table; the latter is an ill-digested concoction of discordant motifs from Egyptian to New Art.

No. 135 is a mad, wild dream of rococo out-Heroded.

The medals for a set of architectural measured drawings are awarded to renderings of the east end of the church of St. Martin-in-the-Fields. The silver medal is taken by Mr. Walter Llewellyn Clark for a set in pencil and dirty colour, which show better feeling and better drawing of detail than the more carefully finished but lifeless set that gain the bronze medal for Mr. Augustus Gaffett Bryett.

The silver medal and prize of £20 for a design made in the School go to Mr. James Mitchell Whitelaw for his drawings of a concert hall in a large town, part of a good scheme of town planning, showing study of French manner in detail.

For a set of drawings of an architectural design Mr. Verner Owen Rees earns the silver medal and first prize of £15 for a design for a Place on the south side of the Thames, of which the chief features are a terminal station, a hotel and the river. Mr. Cyril Farey takes the bronze medal and second prize of £10 for a design for a winter garden, which, if less grandiose, has much merit for a quietly conceived rendering of rusticated Doric.

Two competitors only submit perspective drawings in outline of "The 'College' at Westminster School," and Mr. James Gough Cooper easily wins the silver medal for a not very excellent drawing by reason of the inability of his only competitor to draw a perspective with circular lines.

One cannot but be struck with the very low standard of achievement shown by present-day students of the Architectural School of the Royal Academy. There is much ambition to attack grand schemes, but there is a marked slovenliness of draughtsmanship, a lack of comprehension of the elements of architectural design, an ignorance of detail and an unhappy striving for originality that prove the error of the present system of letting the students have a free hand. It would seem that in a fear of developing an "academic" character of design, the instructors have not sufficiently realised the importance of training and discipline for embryo students of architecture. What the President said in his address, more particularly with regard to students of painting, that it had been hoped "that candidates for the Academy Schools would come well grounded," applies with peculiar force to the Architectural School. It is precisely the lack of a good grounding in design that fills the school with ambitious aspirants who require taut leading-strings, if not strait-waistcoats.

PRIZE DISTRIBUTION AT THE ROYAL ACADEMY.

THIS is gold medal year at the Royal Academy, and consequently more interest and excitement characterised the prize-giving last Saturday, when the following awards were made:—

Historical Painting, "The City of Refuge."—Gold Medal and Travelling Studentship (£200), Margaret Lindsay Williams.

Landscape Painting, "Storm Clearing off on the Skirts of a Wood."—Turner Gold Medal and Scholarship (£50), Gladys M. Clark Kennedy.

Landscape Painting, "A Lock on the River or Canal."—Creswick Prize (£25) and Silver Medal, Joan Joshua.

Design for the Decoration of a Portion of a Public Building, "Winter."—First prize (£30) and Silver Medal, Margaret Lindsay Williams; second prize (£10) and Bronze Medal, Florence Margaret Walden.

Design in Monochrome for a Figure Picture, "Samson pulling down the Pillars in the House of Dagon."—Armitage Prizes: First (£30) and Bronze Medal, not awarded; second (£10) and Bronze Medal, Katherine Frances Clausen.

Composition in Colour.—Prize (£10) and Silver Medal, James Williams.

Cartoon of a Draped Figure, "Agrippina Carrying the Ashes of Germanicus."—Prize (£25) and Silver Medal, Madeline Emily Green.

Painting of a Figure from the Life.—First prize (£10) and Silver Medal, Horace Edward Quick; second prize, Bronze Medal, Alice Adrienne Nash.

Painting of a Head from the Life.—First prize (£5) and Silver Medal, not awarded; second prize, Bronze Medal, Madeline Emily Green. Charles Vincent Holder, who tied with Miss Green, had won the prize before, and was therefore disqualified.

Perspective Drawing in Outline (open to Painters and Sculptors only), "One of the Piers near the Queen Victoria Memorial in the Mall."—Prize (£5) and Silver Medal.—No competition.

Set of Four Drawings of a Figure from the Life.—First prize (£15) and Silver Medal, Frank Crown Mitchell; second prize (£10) and Bronze Medal, Horace Edward Quick.—He tied with Leopold Lemage Swain.*

Set of Three Studies of Drapery.—Silver Medal, Grace Mary Hawkins.

Composition in Sculpture, "Rescued."—Gold Medal and Travelling Studentship (£200), John Angel.

Model of a Design, "An Act of Mercy."—First prize (£30) and Silver Medal, Gilbert Ledward; second prize (£10) and Bronze Medal, Newbury Abbot Trent.*

Model of a Bust from the Life.—First prize, Silver Medal, Robert Peter Baker; second prize, Bronze Medal, Charles Randle Jackson.

Design of a Medal to Commemorate the Coronation.—Prize (£5) and Silver Medal, Edmond T. Wyatt Ware.

Set of Three Models of a Figure from the Life.—First prize (£15) and Silver Medal, Robert Peter Baker; second prize (£10) and Bronze Medal, James Booth.*

Design in Architecture, "The Hall of a City Company."—Gold Medal and Travelling Studentship (£200), Alan Binning.

Set of Architectural Drawings.—First prize, Silver Medal, Walter Llewellyn Clark; second prize, Bronze Medal, Augustus Gaffett Bryett.

An Architectural Design.—Prize (£20) and Silver Medal, James Mitchell Whitelaw.

Set of Drawings of an Architectural Design.—First prize (£15) and Silver Medal, Verner Owen Rees; second prize (£10) and Bronze Medal, Cyril Farey.

Perspective Drawing in Outline (open to Architects only), "The 'College' at Westminster School."—Silver Medal, James Gough Cooper.

Original Composition in Ornament (open to Architects only).—Prize (£5) and Silver Medal, Thomas Pentburthy Bennett.

Architectural Design with Coloured Decoration, "The East End of a Memorial Chapel."—Silver Medal.—No competition.

Landseer Scholarships in Painting and Sculpture, of £40 a year each, tenable for two years, have been awarded—in painting, to Archibald G. Barnes and Katherine F. Clausen; in sculpture, to Robert P. Baker; and for one year in sculpture, to James Booth and Alfred Wilkinson.

* Disqualified owing to having received the same prize before.

After the distribution of prizes the President, Sir Edward Poynter, delivered the following address to the students:—

In my discourses I have always tried to follow the example of my great predecessor, the first President of this Royal Academy, and to put before you in one way or another an ideal to which it should be the object of the student to attain; and I have tried to convince you that without steady and serious study such natural talents as you have will never attain their proper development.

No idea more foolish, more preposterous I may say, more opposed to the dictates of reason and common-sense, was ever put forward than that instruction in the study and practice of your art will stifle originality, and that the more helpless and crude the efforts of an artist are in the exercise of his art the better he is equipped for displaying his natural genius; a theory which, though not so baldly expressed, is certainly at the bottom of much that is written about art at the present time, and is apparently, to judge from some exhibitions which we have lately seen, in high favour with a school, if we may call it a school which professes to learn nothing, on the other side of the Channel—a school which, I may say, is as much repudiated among the saner spirits in France as it is by those in this country.

I am much afraid that the mind of the student of to-day is only too apt to be led astray by specious arguments that there is no need for study. I do not refer specially to the students in these schools; the mere fact that you come here is evidence that you believe a knowledge of your craft to be part of the equipment of an artist necessary for the expansion of his natural gifts and the proper expression of his creative faculties. But the idea that patient study can be dispensed with is catching, and there is an epidemic of slovenly work abroad fostered by ill-considered criticism and an advertising spirit. It is so easy to cover a canvas with paint if you can persuade yourselves that it does not much matter if a figure is out of drawing, if troublesome details are slurred; that if the difficulties of a hand or a foot are shirked it is really unimportant, that very few people know how they ought to be done, and that there are plenty of examples of such neglect to be seen in the works of men who have achieved a popular success. If in a landscape the beautiful forms of nature, the characteristic shape of rocks and mountains, the growth of trees, the tufted masses of foliage, the spring of the branches, the elegance of the sprays of blossom, the infinite variety of cloud form, all the wealth of detail which makes nature lovable and beautiful are represented by coarse and meaningless smears of paint, such as we often see them in exhibitions, are there not the "values" to fall back upon?—a famous word to conjure with, for it is of delightfully indefinite meaning. Or if the head of your Madonna or your Venus is out of drawing, badly painted, devoid of character, beauty, or expression, you have only to explain that the "tone" of the head against the sky or background is so subtly observed that the rest does not matter —and as nobody can tell whether the "value" is right or wrong, you can always meet objections by affirming that that is how you saw it. No word has been more abused by those who do not understand the real place in painting of "values" and "tone," who have learnt it as a catchword and talk about them as if they were the only thing to be considered in a work of art. It is not that you are not to study tone and values—they are of the highest importance—it is that the study of them (when they really are studied) is with a certain school made the excuse for not studying anything else. The tone of a painting is not one of the objects for which a picture is painted, it is one of the essentials which must enter into the composition of any picture. It is a means to an end, not an end in itself. If your "values" are wrong, and by that I mean if they are not in harmony and accordance with the general scheme of light and colour, one of the most important elements in your picture is neglected, and it can never be a complete work of art. They must be right or you show yourself incompetent in a particular direction, just as the perspective must be right; but correct values no more make a good picture than correct perspective makes a good picture. I dwell on this particular point because such vague generalities are part of the epidemic of slackness which is so prevalent and for which it is so convenient to find excuses. It is so easy to neglect the study of accuracy, and to be indefinite—to have no method, to try for qualities which make no demand on industry; if there is no necessity to learn, if it does not matter how a thing is done, anyone can be an artist and the scrawl of a child of seven has equal value with the work of a Titian or a Raphael. In all the discourses which it is my duty to deliver on these occasions, I have tried to impress on you that good work is the stamp of the artist. In one of the first of those which I read before you I quoted a little saying from an Italian treatise on painting of the fourteenth century, which seems to me so pregnant with the spirit of true art that I will now repeat what I then said. As it was twelve years ago it is not likely that any of those students who heard it then are present to-night. I said: "Art means above all things good workmanship . . . the simple words of Cennino Cennini with which he sums up his instructions for the proper execution of a picture perhaps best express the feelings which should be awakened by a work of art; he says that 'when you have done these things' (that is mastered all his careful methods for the execution of a painting) 'you will have made a design which will cause all men to fall in love with your work.' He says nothing about their admiring your genius or being astonished at your dexterity but refers to the work alone as stamping the artist." Thu far twelve years ago. The perils that beset the course of th student are greater now than they were then. I note tha in that discourse I dwelt on the dangers of giving an undu place to dexterity and the love of display of a facile tec nique. The danger now is different and more subtle— danger arising from the strange pretension to which I ha already alluded, that education stifles genius, and that it therefore an advantage to learn nothing. I have dwelt some length on this because I want you to shut your ea to the plausible theories that would draw you from th earnest and assiduous study without which the greatest geni cannot reach its full development. To state such genera ties as that art must be free and untrammelled, that t splendid achievements of the great men of the past are sta and played out, that the spirit of the age demands somethi new, something that shall not be taught; that the mov ment of the time is against academic instruction and pudiates it is easy enough. But if the spirit of the age detrimental is it not a spirit to battle against? Listen the view of one of the greatest sages and healthiest min of the eighteenth century on the spirit of the age—the view the great Goethe: "What you term the spirit of the tim is at bottom only your own spirit in which the times a reflected—a miserable spirit, too, it frequently is." present the spirit of the age seems to tend chiefly to sla ness in all things, and as such is a spirit to be resisted rat than encouraged and submitted to. Goethe's observation profound—those who most talk of the spirit of the age those who wish to see in it their own tendencies. Academ instruction is irksome to the idle and incompetent, theref they would have no instruction at all. Let me give y another quotation, which I translate from an essay by French author—he is alluding to those who advocate t same spirit of intolerance towards all instruction in ar-

"Not feeling in themselves the capacity for study they look upon it as a degradation, and humiliating to genius." Is not this at the bottom of much that is said and written about what are considered new tendencies in art?—tendencies which are only new because they would leave out what has always been considered most worth doing? It has come to this that the term academic is used as a term of reproach to stigmatise all work which shows evidences of serious study, all accomplishment which goes beyond sketching the superficial aspects of nature. Apparently it is wrong to study the works of the great masters in the sense of Sir Joshua Reynolds's dictum that "the daily food and nourishment of the mind of an artist is found in the great works of his predecessors. There is no other way to become great himself"; and further, to be taken in connection with the expression of this view—constantly inculcated throughout his discourses—"I should hope, from what has been lately said, that it is not necessary to guard myself against any supposition of recommending an entire dependence upon former masters. I do not desire that you shall get other people to do your business or to think for you. I only wish you to consult with, to call in as counsellors, men the most distinguished for their knowledge and experience, the result of which counsel must ultimately depend on yourself." While such principles as these are condemned as academic, the slavish imitation of the latest extravagance of a decadent clique is applauded as evidence of an original and independent spirit. I am not pretending that all criticism * of modern work is conceived in this vein, but there is a large coterie of writers whose noisy asseverations cannot but reach the ear of the student and have a most deleterious influence upon him. A copy of the discourses of our first President is given with each of the prizes, and I would recommend you to read them again and again and master their wise precepts as an antidote to such frothy outpourings.

There is no more original painter than Reynolds—no one can accuse him of imitation; he always strikes out a line for himself; every picture is a separate conception—but you can trace everywhere the influence of his study of the great men; he aspired to rival them and in many cases he proved himself their equal, but he never copied them. I remember a portrait in one of our winter exhibitions which for profound rendering of character and masterly execution (masterly in its simplicity with no effort at display) was equal to Titian himself; but it was no copy, no trick of imitation of a manner (Titian in fact has no manner, he is nature itself); it was a splendid illustration of his own advice to students and the students of this Academy of his foundation: "Study nature attentively, but always with the great masters in your company." I could enlarge at length on this theme, but it is one which I have tried to impress on you in all my discourses, and I should only repeat myself by going further into it.

The main object of academic instruction should be to direct the student towards the best way of expressing himself, the impressions he will receive from nature and the thoughts which arise from them and from his own inherent predilections. Again and again I repeat what I have said before, that it is only by assiduous study that an artist's original gifts can be developed. What we who arrange the courses of study in the schools have to consider is how this can best be done. I touched on this point in my discourse of two years ago, a discourse which an untimely illness which kept me to my bed prevented me from completing. There are no doubt students here who may remember some of what I said on that occasion, but there are many who have come into the schools since then, and I may be excused if in some of my remarks I go over the same ground again.

Some eight years ago a serious change was introduced in the system of instruction hitherto pursued in the Royal Academy. It was considered that the schools of the Academy should be what may be called a finishing institution; that there should be a higher standard for admission, and that by omitting the more elementary stages of instruction, subjects of study could be introduced for which up till then there had not been sufficient time or opportunity. We hoped that the necessary preliminary instruction might be obtained from schools of art outside the Academy, and that candidates for admission would come here well-grounded and be able to take up at once the higher class of study which was the curriculum of the upper school. The lower school was in fact abolished. I myself was not greatly in favour of the change. I have a great belief in the wisdom of our predecessors, who evidently thought that if the Academy was to have an influence on the career of its students it should be exercised early; but the reasons for the change were in themselves good if the premises on which they were founded were substantial.

This experiment proved a failure, and at the time when I read my last discourse the new regulations were in preparation. They are now in force, and the lower school has been re-instituted on the old system. The truth is that the foundations were not substantial; the system of instruction given in most of the schools of art whose students came up as candidates was unsound, more unsound than it used to be, and is daily becoming more so under the influence of irresponsible and ill-considered talk. Sketching (for frequently it is no more) from the life in charcoal, a medium by which a pretty and illusory effect can easily be produced, has taken the place of that searching study of form and modelling from the antique and from life which was carried out (sometimes, no one will admit it more readily than I do, to excess) under the old system of instruction which has been the foundation of all good teaching in all times. That such a system may at times lead to an academic style, using the word in its disparaging sense, cannot be denied; but everyone, I think, must agree that the academic painters of Italy and France in the seventeenth and eighteenth centuries had a complete mastery of their style; their failing was in what they did with their accomplishment, not how they did it. The spirit in which the great artists of the Renaissance worked was gone—only the letter remained; but no one can deny that the handwriting was excellent. I have often envied the power of painting, the mastery of modelling, and even the fine drawing of the extremely uninteresting paintings on our staircase in this building; it is complete, harmonious, and done with consummate ease and command of material; the fault is that it all means nothing when it is done beyond a conventional treatment of nymphs and gods and goddesses in conventional attitudes under conventional conditions. But the work is the work of a man trained to absolute mastery in his craft. If the artist had anything better to express he was at least in the position from his training to express it admirably.

I suppose that there never was a time when there was less danger of art being hampered by traditional conventions than the present; the spirit of independence is too strong, so strong as almost to amount to what would be called anarchy in a State. There is rebellion not only against convention, but against guidance of any kind, either of tradition or authority. A spirit of independence is no doubt an admirable thing—indeed, when the tradition of a great art is effete it can only be revived by fresh and vigorous minds shaking off the trammels of convention. But it is a spirit which not seldom shows itself in a refusal to learn what experience has shown to be necessary and good, and under the dread of being academic finds an easy excuse for shirking the difficulties and drudgery which are inseparable from education in art as in other things. I have made use of the term drudgery in connection with the process of learning, but I do not believe that any student who feels an enthusiasm for the art which he has taken up and who loves his work has the feeling that there is drudgery in it. Whatever the work may be, the true artist enjoys doing it as well as he can; certainly there is no drudgery in the study of painting comparable to that which a musical virtuoso has to go through with wearisome reiteration in practising scales and exercises.

I believe, however, that drawing from the antique has been considered a form of drudgery; it is difficult to say why, except that the spirit of independence to which I have referred and which refuses to descend to accuracy and thoroughness condemns it as requiring too much painstaking. Be this as it may, drawing from the antique has fallen into disfavour of recent years. I have in former times expressed myself with some vehemence against the antique as a means of study; but never against the use of it as a means of acquiring a knowledge of the human figure, nor have I ever advocated its omission from the course of study; but it was against the misuse of it which was then prevalent—a misuse against which I battled strenuously when I was first appointed Slade Professor at University College some forty years ago, not only in my lectures and by the practice in my own school, but later when I was made Director of the National Art Training Schools at South Kensington. Briefly, it had then come to this, that the antique was not used so much to give the student an adequate knowledge of the human figure, its proportions and its capacity for beauty as developed by

---

* I use the word criticism as convenient, but its application to much of what passes under that name is unjust, as criticism means considered judgment, and neither extravagant eulogy nor vituperation can be considered as criticism.

the Greek sculptors, but by the method of elaborate stippling then in vogue led rather to the acquisition of an agreeable but unintelligent sort of lithographic shading. But I have always considered, and still consider, the study of the antique figure an absolutely necessary preliminary to study from the living model. Intelligently taught and intelligently practised, there is no drudgery in drawing from the antique. I distinctly remember that a drawing which I made of the Apollino in the Ecole des Beaux-Arts at Paris was a source of great delight to me, not only from the pleasure of making a thorough and conscientious study, but in rendering the elegance and grace of the forms and the subtle delicacy of the modelling. This drawing was, I believe, quite complete in every detail, and was done in six evenings of two hours—the time for which the cast was placed in the school; at the end of that time it was removed and another statue put in its place.

Doubtless the reaction against such a prolonged and laborious system as that to which I have just referred has something to do with the discredit into which the use of the antique as a means of study has fallen; possibly, also, the impatience of teachers and examiners, tired of seeing the same figures—for the number of those from which the student can draw is limited—coming forward year after year, and forgetful of the fact that to each student it is a fresh object of study; but still more the anxiety of the student to "get into the life," which seems to him more attractive, and possibly less exacting in its demands for steady accuracy, the shifting of the living model affording an excuse for loose work and want of completion of the more troublesome details.

As I have said, I have never allowed that studies from the antique are a negligible quantity in an academic course. The mere fact that the figure is before the student without change, and that his drawing can be compared with it point by point, requires a correct rendering of its outline and modelling on the part of the student; it facilitates the attainment and habit of accuracy, which could only be acquired by a long process from the living model; if, indeed, it can ever be acquired without some such preliminary study. It is certain that work done from life, without the previous acquisition of habits of defined and accurate rendering of form, is answerable for much of the loose work which is now so prevalent, and which taints so much of the work sent up for exhibition. The leading forms are also expressed in the antique with the simplicity and definition which the Greek sculptors knew to be typical in their various characteristics, and are therefore more readily understood and show the student what to look for when, as is often the case, unless the life-model is exceptionally good, they are ill-defined or mis-shapen. He learns, in short, the normal forms which are common to the human race, and learns them in their best expression; and he acquires not only a knowledge of the correct proportions of the human figure, but a general sense of proportion which becomes instinctive and is indispensable, especially if his aims extend beyond the commonplace and are directed towards the nobler forms of art. Add to this that he learns at this stage of his studies, under proper direction, the habit of good workmanship, so essential to the artist, much more easily and rapidly than he could gain it when before the constantly changing living model, when his faculties are engaged in getting at the correct form under much more difficult conditions. Again, he is not puzzled and distracted from the study of the forms by the discolorations and deformities which so often obscure them, especially the lower limbs and extremities, in the common model, and are so disturbing to the tyro in working from the life. Further than this, I look upon drawing from the antique as a most valuable test of the student's capacity for his art; if he is incapable, after a sufficient course of practice in drawing, to render correctly and with feeling a figure which remains unmoved for as long as he requires it, and is definite and distinct in its outline and does not vary in its light and shade, he is not likely to obtain a happier result from the more subtle and less defined forms of the life-model. If he is too impatient to devote his attention to his work in this stage, if he looks upon it as drudgery, and is so vain as to consider it a "degradation and humiliating to his genius" to have to put his best work into such studies, I can only repeat that impatience and vanity are no signs of genius or talent, and can only hamper the development of his powers.

These remarks on the subject of the antique I have repeated from my last discourse, as the antique has now become again an important part of the school curriculum, and is used, as of old, as the test for admission as a probationer; and I think it desirable to give our reasons for this reintroduction, and I hope that these may appeal to you, and
if you have any idea that there is drudgery in such studies,
to consider what I have said and endeavour to take an
interest in the work; you will find that it repays you.

I have sometimes in these discourses entered at some
length into the consideration of the works sent up in competition for the prizes. I do not propose to go far into these
matters on the present occasion, but there is one point to
which I cannot help making some reference, nor can it have
escaped your own observation. Last year I gave no address
to the students—this rather serious duty falls on me only
once in two years. The rapidity with which those years come
round is somewhat disquieting, the "anni fugaces" slip
away with painful swiftness; but I think I held up a warning to the male students after I had distributed the prizes
that they must look to their laurels, as so many of the prizes
had fallen to the female students. This year I regret to say
—I regret it not because the young ladies have been successful, but for the tarnished honour of my own sex—*all* the
principal prizes in the painting school, except the painting
from the nude model, beginning with the gold medal, have
gone to the women. I ask why this is. The answer,
think, is obvious—the female students are in earnest an
work hard, the men are slack and either do not know how t
work or do not sufficiently care. The men, I suspect, ar
more under the influence of the "spirit of the times" an
listen to that deadly, irresponsible chatter about geniu
being independent of study, and become slack in their attend
ances, slack in their work in the schools and out of it.
have no other way of accounting for it. Whatever th
"spirit of the times" may have to say about the relativ
positions of man and woman, the *capacity* of men to exce
has shown itself from the beginning of the world, and
believe that while the men talk and believe themselve
superior the women are working patiently and steadily an
with an energy which is imbued with the love of their work
and through their devotion to it is rapidly gaining for the
a power which, unless the men stand to it and show mor
determination, will slip from them. I admire particularl
the energy of action and expression which the winner of th
gold medal has put into her picture, and the rigorous an
searching study of form, and, most of all, the strenuo
grappling with the excessive difficulties of figures groupe
together in violent action. It is these qualities which ha
gained her this the highest distinction which the Academ
has to bestow, with something like enthusiasm on the pa
of the members; and it is for these qualities that certa
faults which come of inexperience are not counted again
her. Here is a neglect of those important "values" with
vengeance; the black shadows of the studio under the op
sky, a white sidelight on the groups, with a deep red suns
sky in the background, and other failings of the sa
character, but these have only to be pointed out to
mended. She has let her poetical feeling for the sinist
impressiveness of the blood-red sky run away with her,
the detriment of the unity of effect which must govern
parts of a picture. But I will guarantee that these fau
will not be repeated, and I prophesy a successful career
this young lady if she has strength and health to pursue
course with the courage and devotion which she now sho

I must not leave my subject without a word of high co
mendation for the groups done for the gold medal in scu
ture. They struck me as being of unusual excellence. T
preposterous abnegation of form and definition wh
characterises a certain class of decadent work, now perh
not so much in vogue as it was, has not penetrated into
schools. None of our sculptor members have ever given
to it, and their admirable influence is shown in the ex
lence of the students' works. They at least know that wi
out definition of form sculpture is meaningless—in paint
great qualities of colour and masterly rendering of ef
may condone want of definition, not want of knowledge
form; but sculpture exists by that and that alone, and i
a pleasure to see the thoroughness with which the groups
studies in this section of the school are carried out. I
glad to see a great advance in the studies of drapery in
painting school, which is shown by an unusual excellence
the competition for the cartoon of a draped figure. S
of these show a genuine understanding of drapery as s
as of value in expressing the lines and movements of
figure and limbs, and are not mere studies of stuffs thr
anyhow on to the figure. Drapery, says Reynolds, is perh
the most difficult part of the art, by which he means not
painting or drawing of it, but the arrangement, w
should not only be beautiful and harmonious in its
and masses and contrasts of slender and broad in the fo

but must express movement, and can even convey what the previous movement of an impersonation in a picture has been. You have only to watch any woman walking in the street to see how the folds of the skirt—that is, when the skirt has folds; I will not say it of the hobbled skirt—how gracefully they follow and express every movement, falling in and falling out as the limbs move alternately, to see what possibilities there are in drapery to help you in the action of your *dramatis personæ*. Raphael, above all artists, is supreme in this respect. His draperies are of exquisite beauty in their lines and masses; there is never an ugly break or a poorly composed assemblage of folds—they are supple and clothe the figure with ease. The reason of this is that they are founded on the study of figures in action and have no suspicion of the lay-figure about them. Though they are consummate art they are entirely free from artificiality. By these remarks, which are somewhat parenthetical, I hope to induce you to study the beautiful draperies of the great masters as you may see them everywhere in the National Gallery, and still better in the engravings from them, of which there is an ample store in our library. I do not want at this stage of my discourse to go into details, but I would recommend you to look at the picture of St. John the Baptist seated with six saints, by Filippo Lippi, in the National Gallery, in which to my thinking the draperies fall with a grace incomparable. But similar examples from the Florentine school might be multiplied indefinitely.

With these remarks, which I was led into making and which only touch on the fringe of this important section of the art, I will conclude my address. I have spoken frankly to you where I have thought you have not done your best. I want you to consider it a privilege to work in these schools, and to make the very best out of the instruction which you get here and which you can obtain nowhere else; and I especially want you to take to heart what I have said about that spirit of the time which shows itself in indolence and the desire for notoriety at any cost, and to consider whether there is not truth in it, and how far you are yourselves influenced by it. Good work *can* be done—many of the works sent up in this competition show it; but I should like to see it more universal in these schools.

THE ARCHITECTURAL ASSOCIATION.

A COMBINED ordinary general and Camera, Sketch, and Debate Club meeting of the Architectural Association was held on Monday, December 11, at 18 Tufton Street, S.W. Mr. Gerald C. Horsley, President, occupied the chair.

It was stated that the next meeting of the Camera, Sketch, and Debate Club will be held on January 18, when Mr. C. G. Boutcher will read a paper entitled "Architectural Perspective." The first spring visit is to take place on January 6. Three new members were elected, viz., Mr. A. Harris, Mr. R. Sheppard, and Mr. R. S. Wilshere, all of London. A vote of thanks was passed to Mr. Arthur T. Bolton for presenting diagrams of Jacobean plans to the school. Mr. Theodore Fyfe was nominated to serve on the Council to fill the present vacancy.

Mr. Alan E. Munby, M.A., A.R.I.B.A., then read the following paper, entitled

Is the Texture of Materials a Fetish?

When I mentioned the title of this paper, which your Secretary has been good enough to select for me, to an eminent official of the Institute in the hope that he would supply me with many volumes dealing with the subject, unable to do so, he remarked, "Well, I suppose all you can say is 'No.'" My rejoinder was that, although he had gauged my literary powers with more severity than kindness, I felt a doubt as to whether so terse a paper would be exactly what was expected of me, and whether it was the best preparation for a discriminating discussion.

To begin with, what is texture? One's first impulse is to appeal to Dr. Johnson and digest his definition, but the understanding of terms is not really synonymous with the defining of them, and it is the understanding with which we are now concerned. We probably all understood the feelings of the artist recently depicted in *Punch* who, on being asked in a restaurant by the amazed Phyllis whether he were really going to take brown sugar with an ice, replied, "I am, though; it gives it a texture." We all know that a vanilla ice, with its absence of life and its unvaried surface, would be vastly improved in appearance by the addition of brown sugar, reflecting light in various directions and presenting irregularities of surface which must add interest and thus tempt investigation. It is with this question of variety that, I take it, texture is mostly concerned. Why is a Tube station built of glazed faïence wholly unpleasing to the senses, when a dilapidated plaster cottage, stained and weathered with age, is able to charm our vision? Does it not depend upon the variety displayed by the latter? Select any particular feature of the plastered wall, say, a brown stain, on a sufficiently minute scale to deprive it of variety, and repeat it as the whole wall; the effect is dull and devoid of interest; the surface would lack texture owing to repetition. We are, be it observed, speaking of repetition of featureless surfaces, not repetition of architectural forms; few, indeed, would criticise the view that repeated architectural features, if these are initially good, make for repose and stateliness in buildings more than anything else.

If, then, we attempt a definition of texture, it should perhaps be variety on a minute scale. And we have now to inquire as to the nature of this variety. Has it a real existence as a physical entity, and, if so, does it appertain to the material itself, or to the conditions of our inspection as regards light and atmosphere; or is it a thing merely of artistic cultivation or inborn feeling; or result of mental training, whereby some and not others are affected?

Perhaps these questions are best answered by taking some individual substances and considering their physical properties and conditions of inspection.

Let us take the material which forms the external surface of the vast majority of buildings in this country—brick. There are some hundreds of varieties of bricks, but we will confine ourselves to the consideration of two. If we go north of the Trent and examine some of the important brick structures we shall find that the pressed bricks of Accrington have a great vogue. They are a dull red, with a semi-vitrified face, and therefore are non-retentive of dirt and not subject to surface erosion; moreover, they are large, being a full 3 inches thick, like most North-Country bricks. Very little variety is to be observed in them, and the mellowing hand of time offers to such materials in vain the insidious germs of decay. As they are built up so will they remain in tone, character, and semi-sheen.

Now turn to the little hand-made, sandfaced bricks, such as those obtained from Clare, in Suffolk, rough, rich in purple patches, and bubbling with variety. Why do they charm us? Is it not their irregularity? A sand ripple here, a flint there, a purple header to the right, a brown one to the left; it is surely variation which produces upon certain minds a sense of artistic satisfaction and a quiet feeling of repose and harmony. This state of mind, however, is not universal. I remember a builder who had much admired an architect's work express his disapproval in no measured terms at the (to him) inartistic effect of mortar joints an inch thick; and I have heard the exclamations of approbation from a clerk of works on viewing a tiled roof of hard-pressed tiles laid with a mechanical precision worthy of a dividing engine. Whether such approbation came from a well-ordered mind or from one untutored is for your decision. Brick architecture is, indeed, capable of an immense variety of expressions according to the size and nature of the component bricks, quite apart from architectural treatment, and Nature lends further aids with her soft touches of vegetation. One of the most beautiful pieces of brickwork I have ever seen is that composing the Almshouses at Audley End. There is nothing very striking in the design of the buildings, two brick string courses, brick mullioned, circular-headed, leaded windows, very irregularly spaced, and running out of the main line of roof; gables in brick, some of them unwindowed.

But the rich mellowness of the whole building bemossed and lichened, as I recently saw it, in the full glory of a sinking sun, left a most vivid impression on my mind.

It is curious to note withal that, whether texture be a fetish or not, the forces of Nature seem to treat more kindly those materials which possess the charm of irregularity of surface than those which attempt to exclude her weathering and eroding agencies. The hand-made tile, rough and aborbent, which makes a home for the seedling and the moss spore, is oftentimes when removed found to be as hard and durable as though made yesterday instead of a century ago; whereas the pressed tile and the terra-cotta block, unless made with consummate care, soon flake and shell, giving an appearance of dilapidation which is anything but pleasing, because it is the direct result of purely mechanical disruption. But even bricks and tiles are to some extent artificial, and what texture they possess is the result of mechanical treatment. Let us now turn to some materials of Nature's own composing and see whether this quality of texture is really a thing to be found in the mineral products of the earth.

What of stone? We must dismiss from our minds the lofty Gothic spire, with its delicate outline laid against a blue vault of sky, or the civic dignity of a Renaissance façade, and only think of the flat surface of an individual piece of stone.

In our big cities we are apt to employ stone from too purely an architectural standpoint—*i.e.*, to utilise it for the expression of conventional features more than for what it can do of itself. Perhaps the unequal struggle between the material and the enveloping effects of city grime is an excuse for this attitude, but away from the town the material may be given scope for its own efforts unaided by form, which, on the score of cost, often proves its only possible use. Would, indeed, that it were more often so employed, and that the speculative designer would stay his hand on the production of his fretful and pretentious ornament, and retain his masons' wages in exchange for a little thought in the selection of his material. That stones differ in texture is a proposition which hardly requires proving, but how much they differ is perhaps not generally realised. Again, we find that when we rely on the material itself for effect, coarseness of grain provides, at least, to the possibly disordered brain of the artistic, the greatest sense of charm. A plain window dressing in Ham Hill stone is delightful; the same treatment in York stone is dull and mechanical. In London we all use Portland stone, but whether it is because we have been brought up on the pabulum of successive repetition in the matter of specifying, or because the builder has a sacred horror of anything outside the oolite formation, has never been quite clear to me. I do not wish to degrade the theme of my discourse to a mere lecture on building stones, but, since texture is intimately connected with minute physical properties, I will venture to show you with the aid of the lantern a few specimens of enlarged photos of actual stones.

Now let me turn to another material of Nature's own production—timber.

For nearly all purposes for which timber is required in situations in which its characters can be observed, it is wrought, and therefore any texture it possesses must be due to the porosity and markings of the material. No timber to my mind is more attractive than that left clean from the plane and innocent of paint or varnish. Such absence of treatment is not always possible, however, nor desirable in all situations, but where protection is required beeswax rubbed into the pores of the wood in a suitable solvent will still allow the texture of the surface to remain, and will not prevent the timber from toning. Naturally, wood which is figured and which is cut to display the figure to the best advantage presents more attraction than unmarked timber, but even a piece of yellow deal will, after a few years of exposure, assume a tone which has much individuality. That woods, even of the same class, differ considerably in structure and hence in texture will be evident in viewing the sections of a few timbers.

Compare the effect of an old chair possessing the hand polish which continual use can alone afford with the same piece of furniture varnished after leaving the cabinetmaker's shop. The wood is the same, but the texture is, in the former case, brought out and the tone of the wood mellowed; whereas in the latter such variety as the wood possesses is at least partly concealed by the unbroken gloss of the varnish, which reflects much of the light falling on it direct from its outer surface. In this connection it is of interest to note the growing public appreciation of flat as against bright surfaces. A flat surface allows the penetration of light, and hence admits of a truer appreciation of the nature of the substance, more especially when viewed obliquely. The more the light is reflected from the surface of a body without penetrating into it the less will the particular characters of the substance on which the light falls be transmitted to the observer's eye, till in an extreme case we get a mere mirror, itself a characterless thing, returning the light exactly as it receives it. We may therefore take a perfectly reflecting surface as the antithesis of wood texture, which leads us to a mental reflection on the metals which perhaps of all our materials show the least texture, and, apart from cases of imposed form, a surface of metal is not usually regarded enthusiastically for architectural treatment. Yet metals are not textureless, and all have in reality a crystalline structure, which may be brought out by etching their surfaces. Our dependence on texture is well illustrated by reflecting on the distress we should experience did a client insist on his house being faced externally with sheet-iron plates; but new methods of construction are constantly calling upon us, and, should means be found to circumvent the atmospheric oxidation of iron, such a problem might be assigned to any architect. The economical treatment of a façade comprising only textureless materials might well form a subject for a prize essay. Where a metal is soft and easily oxidised it is naturally amenable to assuming a texture through irregularities of surface. Old lead, particularly if cast, even in a plain water-pipe, may be very attractive to those possessing a certain mental attitude. Yet that roughness of surface does not constitute effective texture even in a metal seems to be proved by the (at least to some of us) horrible appearance of metals applied in the form of powder to surfaces. Aluminium paint, for example. It is possible that in such cases the sense of unreality causes in honest minds a feeling of revulsion similar to that produced by 5-inch by 1-inch stained deal—garden-city oak, half timberwork—but the psychological dissection of one's feelings and the expulsion of bias in the matter of one's attitude towards so complex a thing as texture is beyond my mental capacity. I have endeavoured to deal with some more prominent materials individually, but the conditions of their inspection must not be overlooked. The question of atmosphere in connection with texture was raised at the beginning of this paper, and undoubtedly atmospheric influences do affect the feeling which materials display. I have never seen a Tube station nestle even in a London fog at sunset, but undoubtedly the hardness of its lines is lessened and its enamelled surface is deadened. Distance does, indeed, often lend enchantment, because of the softness it imparts, and possibly more owing to the inventive scope it gives to the mind, which mentally fills out the picture in a manner best suited to the timbre of the observer.

Atmosphere is not, however, merely an abstract artisti expression; a definite absorption of light takes place between its reflection from the object in its passage to the eye of the observer, so that objects viewed through vacuous space would not have quite the same appearance as those viewed through air, more especially if that air contains, as it generally does, floating solid particles.

The irregularities of a surface are interpreted to us by means of light and shade. It is the shadow cast by the projecting pebble which makes its projection apparent, and the strength and sharpness of that shadow will depend upon the nature of the light and the distance of the object. The sharp black shadow such as is cast by an arc-lamp is not wholly pleasing; its contrasts are too violent, and deprive the subject of that continuity which is essential to artistic effect. Atmosphere, by toning down the shadow effect, gives in the beautiful half-tones the soft, almost inimitable graduation of light upon a rounded surface, which forms so essential factor in repose.

        Eve's golden rays
    Falling on glade and stream,
    Flecking the forest path with slanting beam
    Made glorious by her minister the shade,
    Sinking through the distant air
        The purple haze.

There is still one great factor in connection with textu which I have not touched upon, and that is colour. It wou be impossible to trespass upon your patience by attemptin to give any details on this subject. Physically, howeve colour is due to two things—the composite nature of mo sources of light, which are really made up of coloured ray and the power of most bodies upon which such rays fall absorbing some of these colours more than others, and th reflecting a mixture of rays dissimilar to those falling up them. Ordinary sunlight and some artificial lights (such acetylene) are composed of the various colours seen in t rainbow, which mixed together produce the sensation of whi When such light falls on a red brick most of the blue ra are absorbed and converted into heat; the reflected ligh therefore, contains such a preponderance of red rays that t object appears red. It is obvious from these consideratio that the further light penetrates into a light-selecting coloured body the deeper will be its colour, since the less w be the amount of unaltered light merely reflected from external surface. This is well illustrated by the fact th transparent coloured bodies in large pieces are deeper in ti than the same substances in the form of powder. Colour not an innate property depending upon the material, h depends upon light and other conditions. As it can har be denied that texture is affected by colour, this quality m then be influenced by the nature of the light in which t body is viewed. If proof is wanted, it is only necessary repeat the make-believe ghost stories of our children's da and enter a darkened room with a flame tinted with sodi vapour from salt.

The wonderful play of colours which we value so much many materials; the beautiful veins of marble giving greens, reds, and yellows; the warm, cheering tint of H

Hill stone; the blending of purples, browns, and reds on our sand-faced bricks are all due to the wonderful variety of absorptive properties possessed by bodies of slightly different chemical compositions. Further, be it noted, nearly all colours in materials are due to that, at least in artistic circles, much-abused metal, iron, in an oxidised form.

I have endeavoured to show that the texture of materials, the existence of which, I think, it is not proposed to deny, depends upon various factors operating in various degrees. Some of them are certainly psychical, and are thus amenable to the application of scientific investigation; others are, no doubt, temperamental, and hence are hardly reducible to distinct terms in the present state of psychological research. I take it that you have not called upon me to answer the question which forms the title of this paper. It may be that the correct attitude towards texture is that of the mechanically-trained mind, which makes symmetry of form down to the last mathematical detail a fetish, and that the worship of these irregularities which constitute texture are the outcome of a disordered brain distorted by long hair and a velveteen coat. The decision I leave to you.

(*To be concluded.*)

NOTTINGHAM ARCHITECTURAL SOCIETY.

THROUGH the kind invitation of Lieutenant-Colonel Brewill, F.R.I.B.A., the Nottingham Architectural Society spent an interesting hour inspecting the new Territorial headquarters on Monday afternoon, December 4. Lieutenant-Colonel Brewill conducted them over the building.

As the Society had paid a visit during the early stages of construction, it was especially interesting to note the finishing of the work.

The building is to house the five branches of the local Territorials, and the architect (Lieutenant-Colonel Brewill) has very cleverly arranged separate accommodation for each branch, while fitting them into one whole scheme. An electric lift is provided for carrying the heavy equipment to the upper floors, and a system of telephones will be installed, whereby every room can be put into instant communication with every other portion of the building. The stores will accommodate at least 1,000 rifles and 600 saddles. Stables are provided for sixteen horses, and in the sick bay is an arrangement for slinging a sick horse if necessary. The imposing front on Derby Road has been built in red sand faced bricks and Hollington stone. Perhaps the part which impresses the visitor most is the large drill hall, 130 feet long by 80 feet wide. This large floor space is entirely free from columns, and is covered with a light steel roof of 80 feet span, with a glass skylight the length of the hall. In this the Keith gas light has been substituted for electric light, being, in the architect's opinion, more suitable and economical. But even then it will require eight large lamps of 300 candle-power each to light it at night. The ventilation is through louvre boards in the roof always open. All floors are in Hennebique reinforced concrete, and average 3 inches thick.

Lieutenant-Colonel Brewill was heartily thanked by Mr. E. R. Sutton and Mr. A. W. Shelton, on behalf of the visitors, for his interesting description.

Some of the party afterwards visited the site of the explosion on Derby Road, by invitation of Mr. Calvert, the consulting architect, and were much impressed with the havoc wrought.

The afternoon concluded with an inspection of Mr. Mitchell's new garage in Toll Street. In the absence of the architects (Messrs. Booker & Shepherd), Mr. Shelton kindly pointed out the interesting features, which are, briefly, solid steel columns in the garage on the ground floor, a reinforced concrete first floor, and a very interesting arrangement of the steel roof trusses due to the peculiar formation of the site, and a suspended lift for motor-cars.

In this form of lift there are no guides to obstruct the floor space, which is a very important point in planning a garage.

The second meeting of the Designing Club was held the following evening at the Society's rooms, under the chairmanship of Mr. E. R. Sutton, F.R.I.B.A., Vice-president.

There was a very good attendance. Four carefully thought out designs were submitted for an "Approach to a public park."

The visitor, Mr. H. G. Watkins, A.R.I.B.A., who had set the conditions, gave an interesting criticism, and placed them as follows:—(1) Pro Bono Publico, (2) Dorian, (3) Carbon, (4) Member for Sark.

The Chairman, in proposing a vote of thanks to Mr. Watkins and the students who had submitted drawings, urged the importance of the students not only sending in designs but also attending and criticising them.

MANCHESTER SOCIETY OF ARCHITECTS.

AT the Sessional Papers Meeting of the Society, on December 6, Mr. Paul Ogden, F.R.I.B.A., read a paper entitled "Science and Proportion." Mr. Ogden's paper has been awaited with great interest by those who know how thoroughly he has investigated the subject he dealt with, and at the conclusion of the paper there was keen discussion on the points set forth.

The following quotation from the Greek teacher Epictetus, said Mr. Ogden, though not exactly a text, was of value to his present purpose as evidence of the Greek attitude of mind, and, with other quotations that would follow, shows how modern discussions of art and architecture might be regenerated.

". . . Seeming doth not for every man answer to Being; for neither in weights nor measures doth the bare appearance content us, but for each case we have discovered some rule. And here, then, is there no rule above seeming? And how could it be that there were no evidence or discovery of things the most necessary for men? There is, then, a rule. And wherefore do we not seek it and find it, and having found it, henceforth use it without transgression, and not so much as stretch forth a finger without it? For this it is, I think, that when it is discovered cureth of their madness those that mismeasure all things by seeming alone; so that henceforth, setting out from things known and investigated, we may use an organised body of natural conceptions in all our several dealings."

Few architects there are who do not use the word "proportion." Some few have given us diagrams setting out buildings on interaxial lines, but none have given reasons that the employment of such lines is the essence of the matter. Interaxial lines spaced a unit apart on plan, forming equal squares, have been used for the plan; and, further than this, horizontal lines for the elevations and the spacing corresponding to the ratios of the musical scale. These will be found to give an harmonious, and therefore satisfactory result. The skeleton of interaxial lines would be something like a well-tuned musical instrument on which you may play harmonious compositions should your knowledge of consonance, which to the architect means proportion, be equal to the task. Scientists assert that the ear and the eye, which are only media to the intelligence, are both affected by the same law—*i.e.* by vibrations. If rhythm and proportion are common to all objects worthy of the name of excellent, and if we could infuse rhythm and proportion into such objects we should have objects which, to the Greek view, would be what we term "the beautiful." An ancient Greek would not understand our use of the word "beautiful." "That which is excellent"; "That which is for the chief good," are the Greek views. Greek art is based on scientific reasoning. Proof may be found in Plato's "Republic," Aristotle's "Ethics," and many other works (from which Mr. Ogden quoted passages at length).

After quoting a passage from Combarieu's work "Music, its Laws and Evolution," to establish his point that music is based on science and law, and after pointing out that the same laws of proportional numbers are at the basis of chemistry and of the spectrum, the lecturer said that we must find one common rule applicable not only to architecture, but to music, dancing, painting, poetry, and all objects. The one rule is harmony, which springs from rhythm, which in turns springs from measurable and synchronous vibrations. Buildings raised upon a skeleton of lines of proportional spacing, sub-divided in measurable proportions down to the smallest ornament, might be the solution that would bring us unity and harmony. Objectors ask, "Should all the buildings in one street be on one unit?" The reply was, "It is desirable that they should have proportional units." He had that night brought before them, by means of extracts from unusual sources, theories, and principles, the result of reading outside the beaten track. Further investigation is necessary before the true principles could be gathered together.

He had not yet put up a building without using the method of interaxial lines, and the work is set out by rods cut to the length of the unit. For cottages he used a unit of 3 ft. 3 in.; houses, 4 ft. to 5 ft.; schools, 5 ft. 3 in.;

works, 10 ft., 15 ft., and 20 ft.; furniture and ornament, some measurable unit of the main unit.

Diagrams would not be given that night. They would be useless unless that which was adduced had been enough to justify continuing the work. We have lost the nature of Greek practice. Can we regain it? The law of numbers rules the world; the properties inherent in vibration, measurable, synchronous, harmonious, rhythmetic, and in consonance, are the essence of the chief good in life.

Prof. Capper, in moving a vote of thanks to Mr. Ogden, said that they were grateful for the patient research that the paper was evidence of, and admired the way the lecturer had brought his wide reading to bear upon architecture. He suggested that French Gothic partakes largely of Classical unity and proportion, in contrast to the northern Gothic.

Mr. Sellars, in seconding, suggested that beauty depended on fitness as well as proportion, and the two were not always compatible. To a sailor a ship, perfect in all her points, was beautiful because she was fittest for her work. In building, beauty was again fitness; when we have fitness we could reduce it to rule, but with new habits and methods of construction growing up, what becomes of our rules? Rules may be good for the weak, but the strong will drive his coach and six through them.

Mr. Corbett thought that a general rule would be either too wide to be definite or too narrow to be universally applicable. Greek conditions were different to modern conditions, but even their exactness was more to please their mathematicians than their artists. We must trust our trained sense.

Mr. Oldham felt that art was joy in life; but Mr. Ogden's conclusions were in contradiction to this.

Other speakers were Messrs. Hindle, Harris, Worthington, Wood, and Halliday, and after the discussion the vote of thanks was heartily accorded to Mr. Ogden.

THE INSTITUTION OF CIVIL ENGINEERS.

At an ordinary meeting of the above Institution, held on the 12th inst., a paper by Mr. T. E. Stanton, D.Sc., M.Inst.C.E., and Mr. J. R. Pannell was read describing a series of "Experiments on the Strength and Fatigue Properties of Welded Joints in Iron and Steel."

These experiments were undertaken at the suggestion of Sir John Wolfe Barry in 1908, the object being to obtain a comparison of certain properties of welded joints—made by different processes and by different makers—with the corresponding properties of the unwelded material from which the joints were made. It was hoped that by this means some estimate of the general reliability and efficiency of modern welding processes might be arrived at. In order to obtain material for the work a circular letter was sent from the National Physical Laboratory to various engineers, inviting them to submit specimens of welded joints for testing. Sixteen firms responded to this invitation, and the total number of welded joints received was 167. The method of welding and treatment of the joints was left entirely to the makers, the only condition being that all specimens should be made from bars 1¼ inch in diameter. The tests to which the joints were subjected were: first, a tensile test, and secondly, a fatigue test by the Wöhler method. The former included determinations of the elastic limit, the yield point, the maximum stress, the total elongation, and the general and local elongations.

For the rapid carrying out of the fatigue tests a machine was constructed in which the specimen was rotated at a speed of 2,200 revolutions per minute. Owing to the results of a previous investigator with another type of machine having shown a decided reduction of fatigue strength with increased rapidity of stress-alternation, preliminary experiments were carried out to determine the amount of this effect for the particular type of machine used. The results showed that for speeds of 200 and 2,200 reversals per minute there was practically no difference in the fatigue strength. The assumption was therefore made that the apparent reduction of fatigue strength with rapidity of alternation in the case referred to was a characteristic of the machine used.

The mean results of the tensile tests on the welded joints, expressed as a percentage of the strength of the original material from which the joints were made, were:—

Hand-welded iron	89.3 per cent.
Hand-welded steel . . .	81·6 ,,
Electrically-welded iron . .	89·2 ,,
Electrically-welded steel . .	93·4 ,,

Joints made by the oxy-acetylene process were also submitted by two makers, but the results were not comparable with those obtained by the hand or electric processes.

The various determinations made in the tensile tests showed a distinct want of uniformity in the material in the region of a weld, but the results of the fatigue tests proved that this does not materially affect its resistance to reversals of stress. When failure under alternating stresses of low value takes place, it is invariably due to a defect in the actual weld itself. The number of defective joints which were discovered in the whole investigation, however, leads to the broad conclusion that in important work, where the failure of any particular welded joint may involve serious damage to the structure, the subjection of each joint to a proof-load is still desirable.

COMPETITION NEWS.

Glasgow.—The Glasgow Provincial Committee for the Training of Teachers have had under consideration the question of the appointment of an architect for the new trainin college buildings. After advertising, the committee hav selected six architects, and they will be invited to send in competitive designs for the proposed buildings.

Sheffield.—The limited competition recently held for the Woodseats U.M. Church has been settled in favour of Messrs. George Baines & Son, architects, 5 Clement's Inn, Strand, London, W.C.

Correspondence

[The Editor will not be responsible for the opinion expressed by Correspondents.]

Registration of Architects.

Sir,—I beg to be allowed a few remarks on the registration of architects. Many professions and trades already posses registration, from doctors and lawyers down to chimney sweepers, so that the practical operation of different forms o registration can and ought to be well studied by architect before placing themselves under a rule they may afterward regret. I would suggest that the qualifications, examination, and fee for placing on the register should be light, an there should be several degrees depending on heavie examinations, greater practice, &c., so that the highest degre would include all, or nearly all, the F.R.I.B.A., and th lowest assistants and others who had worked and studied fo say, two years. Some such arrangement would really an not only professingly protect the public from mixing grea architects with what may be called small artistic builder and would be no hardship on anyone, since those exclude would be necessarily incompetent, the dignity and conten ment of the profession would be enhanced, and by striving t attain high degrees, or high degrees being given as a mark long practice and many and great works, credit and remunera tion being justly distributed, the superior architects wou become more and more learned and specialists in their ar and architecture in consequence would advance.

December 11. Pontifex, C.E.

The London County Council on October 17 sanction the appointment of a full-time principal of the L.C. Central School of Arts and Crafts, Holborn, at a salary £1,200 a year. Forty-nine applications were received response to the advertisement for the position, and aft careful consideration of the qualifications and experience the candidates, seven were selected for interview. Next, t choice was narrowed to Mr. F. V. Burridge, principal of t Liverpool School of Art; Mr. R. A. Dawson, headmaster the Municipal School of Art, Belfast; and Mr. B. Fletcher, headmaster of the Leicester School of Art. accordance with an order of reference, the Education Co mittee appointed Mr. Burridge as principal of the Centı School of Arts and Crafts, but as the appointment is one importance, they reported the fact for the information of t Council, the more so as Mr. Burridge was one of the can dates for this post in March last, when the Council h advertised the position at a salary of £1,000 a year. It however, pointed out that no candidates were, at that tin interviewed. The appointment was confirmed by the Cour Council on Tuesday. Mr. Burridge was born in London 1869. He was trained at King's College and at the Roy College of Arts, South Kensington, where he won the Trav ling Scholarship in 1893. He was assistant master at t Royal College, whence he passed to Liverpool.

HYDROFUGE-CASTOR.

THE EDITOR'S CANDID OPINION.

(All Rights Reserved.)

WHEN Hydrofuge-Castor was first brought to my notice as a waterproofing material for concrete and plaster the claims made on its behalf appeared to me quite extravagant unless the material is unique in its superiority to other waterproofing substances for cement. The principal claims made for Hydrofuge-Castor are that, in addition to being absolutely waterproof, it does not affect the strength, setting, hardening, or colour of concrete and plastering. These claims cannot be substantiated by any other material for the same purpose with which I am acquainted, and I have given some considerable study to the subject.

It therefore seemed to me that in place of the ordinary newspaper notice based upon, and often a mere transcript of *ex parte* statements by vendors, it would be only fair to readers of *The Architect* to give the results of a series of real tests of the substantiality of the claims made for Hydrofuge-Castor.

In order that the tests applied might be in consonance with the usual conditions in practical work, the Portland cement and sand were obtained from the ordinary stock of a London suburban builder, and were thus representative of material in everyday use. The cement had been supplied by a merchant to the builder as "best English Portland cement" and as complying with the requirements of the British Standard Specification; but the maker's name was unknown to the builder. It had been in stock some time, and my tests showed that it was a slow-setting cement, with a tensile strength of 470 lb. on a seven-day briquette, and expansion, by Le Chatellier's test, of 2 m.m. The sand was a rather fine pit sand of moderate quality.

To test the effect of Hydrofuge-Castor on the strength of Portland cement I made several batches of briquettes, some with neat cement and some with cement and sand, taking as much care as possible to eliminate the effect of personal equation. In each batch the cement or cement and sand were mixed for the whole together and half of it filled into the moulds without Castor, which was then at once added to the other half and filled into moulds. The Castor was used in the proportion of 5 per cent. by weight of the dry cement. The cement and sand briquettes were composed of one part by weight of cement to three parts of sand. As many waterproofing substances decrease the strength of cement, some permanently and some temporarily, the batches of briquettes were kept for varying periods before breaking. The results showed that the Hydrofuge-Castor in no case diminished the strength of the cement, either in the neat or the sand test. Indeed, the average breaking stress of the briquettes with Hydrofuge-Castor was slightly higher than that of those without. I am not, however, at present prepared to state that the material increases the strength of the cement, but I am confident that it does not decrease it.

Most cement waterproofing substances slow the setting action of cement, some to a considerable extent. Under the standard test I found that the setting time of the cement I used was increased 10 per cent. by the addition of 5 per cent. of Castor. This is quite moderate and not serious. To ascertain if Hydrofuge-Castor affected the soundness of the cement I used both the boiling test and Le Chatellier's test and found that the material had no effect on the sound cement used.

Hydrofuge-Castor is supplied as a black bituminous fluid of treacly consistency, and it might, therefore, be expected to affect the colour of cement. In the neat briquettes with 5 per cent. Castor there is a distinct darkening, but in the sand briquettes, one to three, the difference of colour is only just perceptible in dry briquettes, side by side, and, seen apart, it is not possible to tell from the colour whether a briquette contains Castor or not, so that the claim is fairly justified that it does not affect the colour of concrete or plastering.

It is stated that Hydrofuge-Castor is non-inflammable. To test this I first dropped some into a fire, when it blazed up with considerable fizzling. I then tried to ignite some on a palette knife, with a match. This flamed up, followed by a fizzling which extinguished the flame. It appears, therefore, that the material contains inflammable matter, but will not continue flaming without adventitious assistance. To ascertain the effect of fire when the Castor is used with cement, I placed hardened pats of neat cement and of cement with 5 per cent. Castor in the fire so as to partially heat them to redness. No difference of effect was seen from the heating, and both were then plunged into cold water, when a similar crack was developed in each where the redness faded away. We may take it, therefore, that Hydrofuge-Castor has no injurious effect on the fire-resistance of cement.

I now come to the most important question of all, the waterproofing qualities of Hydrofuge-Castor. The material is, as already stated, a fluid of treacly consistency and is added to the cement and sand after these have been mixed with water. It is, therefore, less easy of

ST. MARIA IN COSMEDIN, ROME.

incorporation than those substances which are soluble in water, and as I was restricted to hand-mixing in my experiments, I anticipated some difficulty in proper incorporation. My briquettes of neat cement and Castor, when broken, showed distinctly marked striation, but those with sand showed more even, though not perfect, distribution.

As a sufficient test I considered that if I made a tank or trough in accordance with the directions given for works in contact with water, but not subject to pressure, and found it watertight, I might be satisfied with the waterproofing qualities of the material. For such works the directions are that 100 lb. cement, 200 lb. sand, and 5 lb. Castor are to be applied in three coats, each being not less than one-quarter inch. I mixed the ingredients in these proportions and made a tank with sides and bottom intended to be three-quarters of an inch thick, but owing to a slight inaccuracy in filling the core of the mould one side was only five-eighths of an inch thick. The tank was dried in air and when six days old filled with water. When examined ten hours after filling, the sides and bottom showed penetration of damp. Before condemning the efficiency of the Castor, I realised that the failure of my tank might be due to imperfect incorporation or to non-compliance with the direction to make up the thickness in three coats.

It is evident that if we fashion a considerable mass at one operation, as for the sake of convenience I filled in the three-quarter inch space in my mould, an efficient waterproofing material may be expected to lock up the internal moisture and delay the hardening and drying of the cement, and we have already seen that one effect of Hydrofuge-Castor is to render the setting of cement slower under the standard test. I therefore put my tank on one side till it had dried for fifteen days and then filled it again with water, when it remained without any sign of damp-penetration for forty-eight hours at the time of writing, even through the side that is only five-eighths of an inch thick.

To compensate for a possible imperfect incorporation I made a second and similar tank with twice the amount, or 10 per cent. Castor. This was dried in air for seven days and then immersed in water to within half an inch of the top and the interior remained free from percolation for forty-eight hours. I am therefore satisfied that cement and sand plastering with Hydrofuge-Castor can be made watertight.

It is probable, from the bituminous composition of Hydrofuge-Castor, that the impermeability of cement plastering or concrete waterproofed with this material is likely to be more permanent than when substances soluble in water are used, except when these by chemical reaction form insoluble compounds within the pores of the plaster or mortar.

As the result of my experiments, which I have endeavoured to carry out as fairly as possible, I have come to the conclusion that Hydrofuge-Castor is a highly valuable and efficient material for the waterproofing of concrete and cement plastering.

Frederic R. Farrow.

EARLY ROMAN CHURCHES.

(Continued from last week.)

THE group of churches which were founded between the recognition and adoption of Christianity by Constantine in 324, and the transfer of the seat of government to Constantinople in 330, are the following:—The Lateran basilica, St. Paul's-without-the-Walls, St. Peter's, St. Agnes-without-the-Walls, St. Lawrence-without-the-Walls, and the Sessorian basilica afterwards known as St. Croce in Gerusalemme.

All these were built on the outskirts of the town or outside the walls, and above still earlier catacombs in which the bodies of the saints and martyrs had been interred. They were some of them on a large scale, and were hastily constructed in a manner far inferior to the buildings of Imperial Pagan Rome, and comparatively early began to fall into

ST. AGNES-WITHOUT-THE-WALLS, ROME.

decay. In 410 the city was sacked by the Goths, and has suffered again and again from war and tumult, with the result that while all these early foundations are still in existence the present buildings contain comparatively little work belonging to the first structures; but in their present form they do in some cases preserve fairly closely the general form and appearance of the original structure, while in others they have been so altered as to give no indication of the form of the original church.

The first of these churches to be consecrated was that of the Lateran in the year 324. This building was on the site of part of the palace of the Laterani, which the emperor had given to Pope Sylvester in the previous year. This palace included a secular basilica, which was transformed or rebuilt as a Christian church. But the form and arrangement of this earliest church are mainly conjectural; it was frequently altered and enlarged, and early in the tenth century was rebuilt, though at this time probably the ancient form and proportions were retained; but in the seventeenth century the whole building was rebuilt by Borromini excepting the transept and the apse; and the apse itself was taken down and reconstructed less than fifty years ago. The church has always retained its position as the premier church in Christendom, and the adjoining palace was the residence of the popes until Rome was temporarily abandoned as the Papal city in 1309.

St. Peter's was the greatest of these early basilicas, and, like the Lateran basilica, it has been swept away to allow of a rebuilding, which was commenced in 1506, when the western half was put in hand, and this took a hundred years to complete. The eastern portion was taken down in 1606, and the eastern area completed in nine years. But in the case of this church, the original form and disposition of the building was in the main preserved up till the time of its destruction, in spite of repairs and alterations. Drawings of it showing not merely the plan but the general arrangements and treatment of the interior still exist.

A widely accepted tradition places the martyrdom of St. Peter by crucifixion on the spina of the great circus of Nero on the south side of the ancient Via Cornelia, and his tomb was on the opposite side of the road about due north of the western meta of the circus.

Here Constantine erected his great basilica, the centre of the apse being approximately above the tomb, while the southern wall and the two rows of columns of the double aisle south of the nave were erected on the foundations that had supported the northern range of seats of the circus. The northern side of the basilica was built on new foundations. There was nothing to the east to restrict the size of the basilica, and it was approached through a great atrium stretching across the width of the church. This was entered by three gates on the eastern side; the principal one had doors of bronze inlaid with silver. The centre of the court was occupied by a fountain erected about the end of the fifth century; it consisted of a marble basin surmounted by a canopy supported by eight red porphyry columns carrying an entablature and a dome or vault of gilt bronze. From the western wall of the court, which was the broadest and formed a spacious narthex, the church was entered by seven doors, three leading into the east end of the nave and one into each of the four aisles.

The great church thus erected had five aisles, of which as usual the central aisle or nave was much the widest, measuring 75 feet by 285 feet; the other aisles were placed symmetrically two on the north and two on the south; they were of the same length, and were separated from the nave by two rows of antique marble columns, with twenty-three columns in each row. The outer aisle of each side was at a later date, about the end of the eighth century, covered by a groined vault.

In this church the apse, which as usual with early foundations, is at the west end, did not open directly out of the nave, but another broad hall or transept (little less in dimensions than the nave itself) was placed at right angles to it, and projected north and south beyond the outermost aisle; the northern end was at a later date occupied by a baptistery. This transept was entered from the nave by a great semicircular arch, which was occupied by a mosaic in which Constantine, bearing as offering a model of the basilica, is presented by St. Peter to Christ. It was also entered from the aisle by smaller arches. The apse opened out of the west wall of the transept and was somewhat smaller in diameter than the arch of the nave; it was covered by a semi-dome, and both dome and walls were enriched with mosaic.

ST. APOLLINARE NUOVO, RAVENNA.

The columns in this building were collected from various sources, and nearly all the ancient quarries were represented in the collection. The capitals and bases were as diverse as the shafts; the entablature also differed in successive intercolumniations, and many of the blocks which formed it were inscribed with the names of former Roman emperors. Above the entablature was a great expanse of plain wall, which was decorated with a double row of panels, and above these occurred the large range of semicircular headed clerestory windows. The nave was covered with immense trusses of timber, which were exposed to view; one of the tie beams measured in 1606 was 77 feet long and 3 feet deep. At the time of the repairs carried out by Pope Benedict XII., before the middle of the fourteenth century, it is stated that some of the original timber beams marked with the name of Constantine were to be seen.

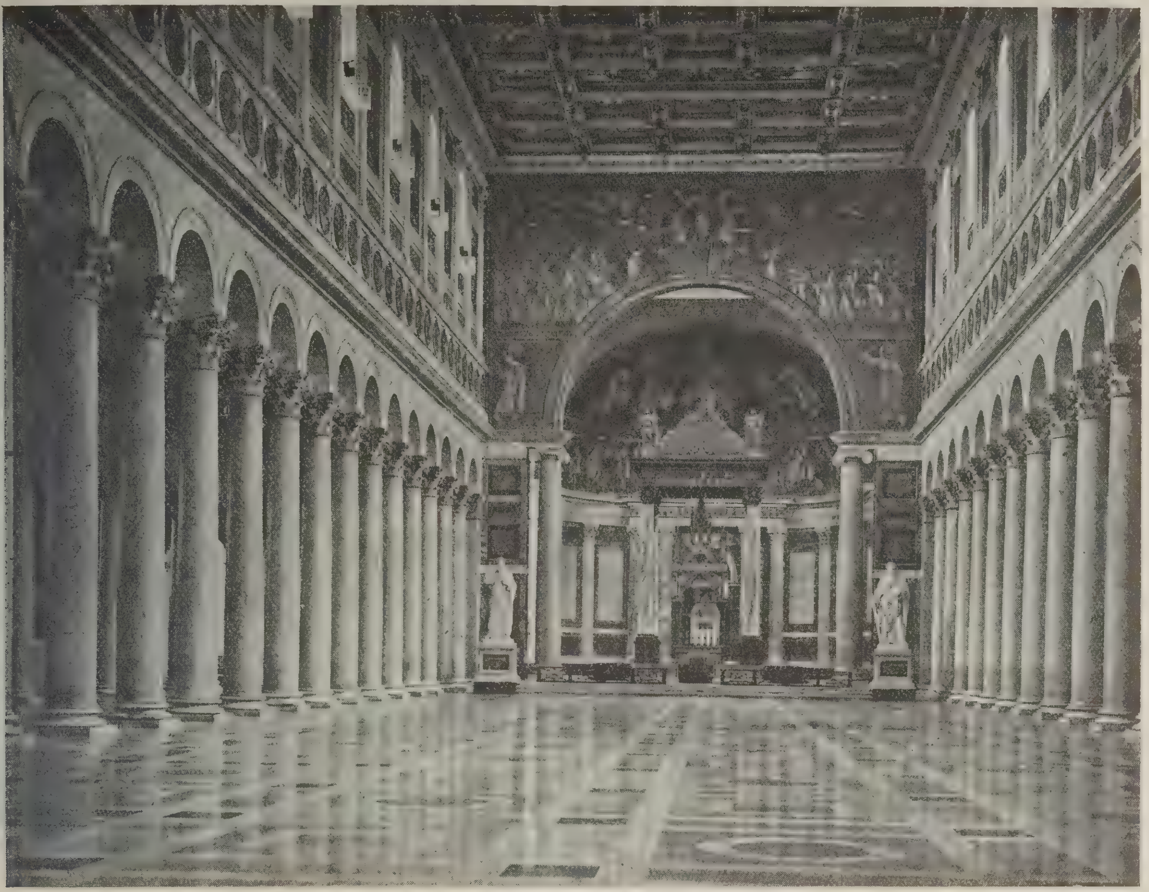
The roof was covered externally with tiles. At the time of its destruction these were of three kinds of material, viz., bronze, earthenware and lead, but all of these were subsequent to the original foundation. The brick tiles bore the seal of Theodore; the bronze tiles were those used for the great Temple of Venus and Rome, and were transferred to the basilica in the seventh century, and the leadwork bore the names of various popes subsequent to the first quarter of the fourteenth century.

The immense area covered by this early church is remarkable; it exceeded 73,000 feet, and though greatly surpassed by the present church, for the erection of which it was deliberately pulled down, there are few mediæval or Renaissance churches that cover a more extensive area. In spite of the variety found in the materials of construction it must not be forgotten that each column was in itself a specimen of some rich marble, for which the ancient quarries of the world had been ransacked in the preceding centuries for the beautifying of the buildings of Imperial Rome, and the effect of the interior must have been one of the utmost richness of splendour, which was enhanced as time went on by the gifts and works of successive popes.

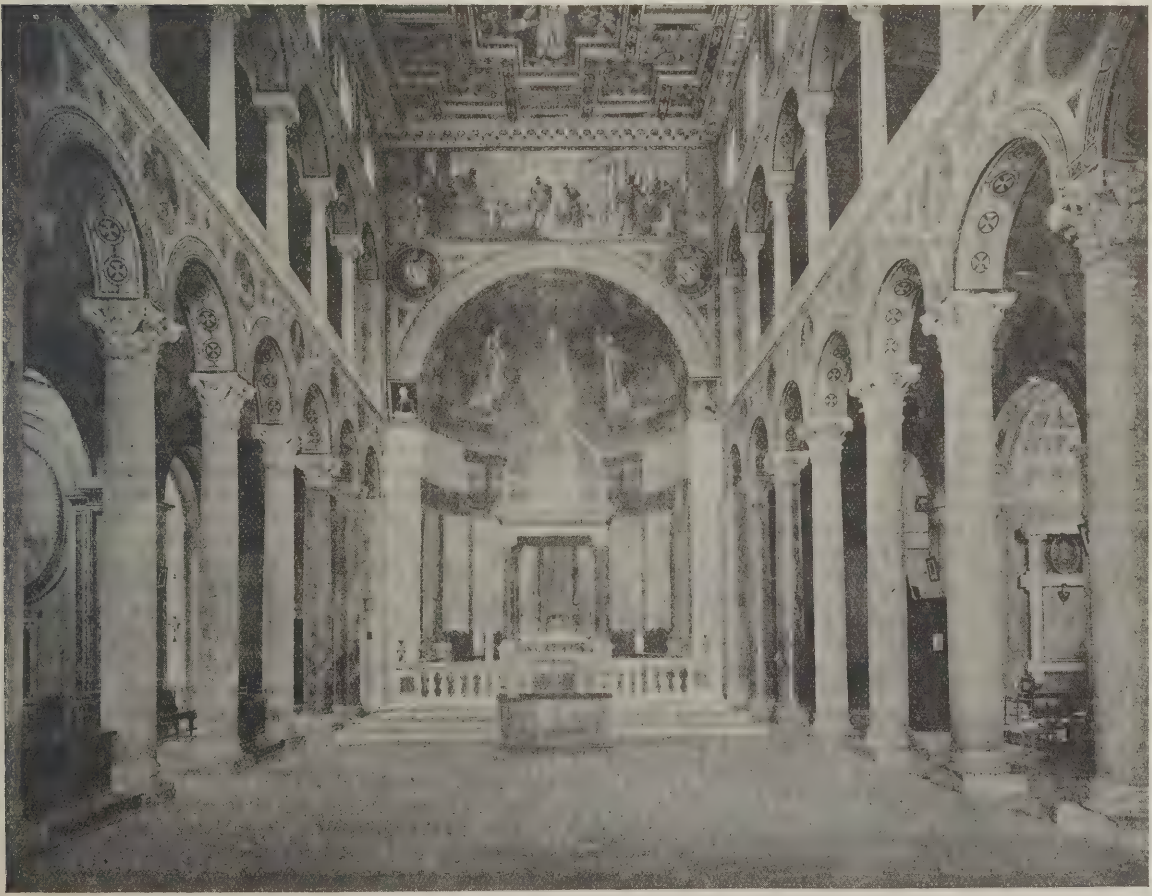
The basilica of St. Paul-without-the-Walls, founded by Constantine in the same year as St. Peter's, was erected on a much smaller scale. This was due to the fact that the tomb of St. Paul lay to the west of the Via Ostia, and that there was not room between it and the road for anything more than quite a small church. Remains of this early foundation still exist below the ground level and were investigated during the rebuilding of last century, and the plan has been ascertained. This church resembled in plan that of St. Agnes, but was considerably smaller. The atrium extended right up to the Via Ostia, and from it three doors led into the nave and two aisles; in this example the colonnade separating the nave and the aisles was returned across the entrance, forming an inner narthex—a feature that occurs also in the other two early churches of St. Agnes and St. Lawrence. At the west end the apse was placed above the tomb, and each aisle is terminated by a small chapel entered through an opening in the west wall in line with the great arch of the apse.

Before the end of the century in which it was founded it was decided to build a more splendid church in honour of the saint, and this was only possible by a reversal of the system of orientation; but this was done and the basilica extended towards the Tiber, with a western facade and entrance, and an eastern apse which was a reversal of the position then customary. The new basilica was constructed on a plan and scale little if at all inferior to that of St. Peter's, and outlived the older church, lasting until the disastrous fire of 1823. The present church has been rebuilt on the same scale and on the same site, and with even greater splendour of material.

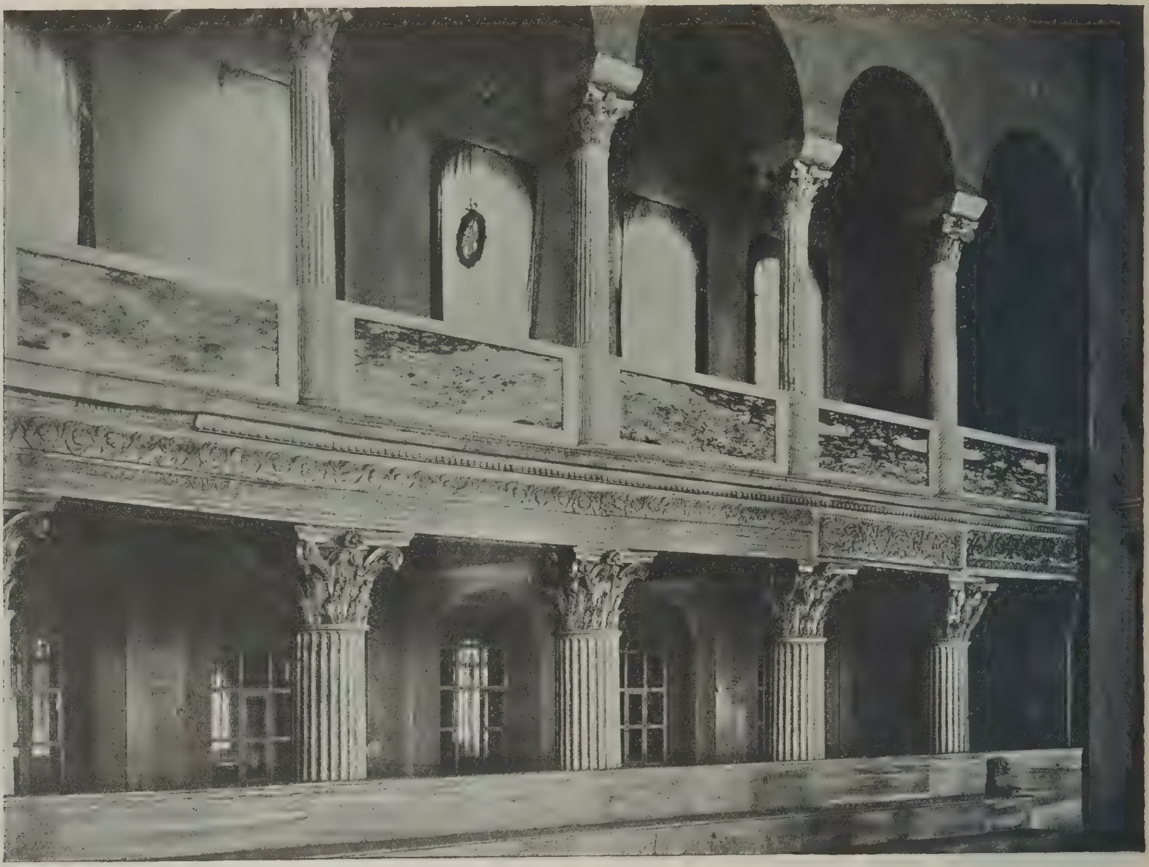
The great basilica had five aisles; the columns were of the Corinthian order, and each row contained twenty columns; of those carrying the arcade next the nave twenty-four were antique and of veined marble with extremely beautiful capitals, the remaining columns showing much the same variety as those of St. Peter's. In place of the entablature referred to in St. Peter's three columns carry an arcade, but the spacing of the columns differs but little from those of St. Peter's; above the arcade was a lofty plain wall, necessitated here as well as at St. Peter's by the height of the aisle roof which spanned the double aisles with a single



ST. PAUL-WITHOUT-THE-WALLS, ROME.



ST. AGNES-WITHOUT-THE-WALLS, ROME



ST. LAWRENCE-WITHOUT-THE-WALLS, ROME.

slope. This surface was broken up by pilasters of small projection and flat horizontal bands, formed in marble, into a series of panels arranged in three rows. The lowest of these contained medallions of the popes, the upper ones pictures. The clerestory windows had semicircular heads, and were filled in with thin slabs of marble, perforated for the admission of light.

The nave is said to have had a panelled wood ceiling, decorated with plates of gold; at the time of the fire no such ceiling existed, the roof being open as at St. Peter's. The transept was as wide as the nave, being about 73 feet, but projected slightly only beyond the aisle on each side; at a date subsequent to its erection, the transept was divided longitudinally by a continuous arcade. The apse had the same diameter as the breadth of the nave, and is the only portion of the structure that survived the fire; the mosaics with which it is lined were severely damaged and have been to a great extent removed. The tomb of the saint over which the altar was placed was not in this case under the apse but in the transept and just behind the great arch which spans the nave, and which is of a considerably smaller span.

The modern church which was reconstructed on the lines of the old one gives a fine impression of the spaciousness and richness of the entire building.

The church originally had a large atrium, which was destroyed by earthquake, and was connected with the Porta Ostiensis by a splendid colonnade nearly a mile and a quarter in length, all trace of which has disappeared.

Both the churches of St. Peter and St. Paul in time collected round them groups of important buildings. Being without the walls they were subject to attacks from marauders, and suffered especially from the Saracens. At a much later date enclosing walls and fortifications were erected beyond them.

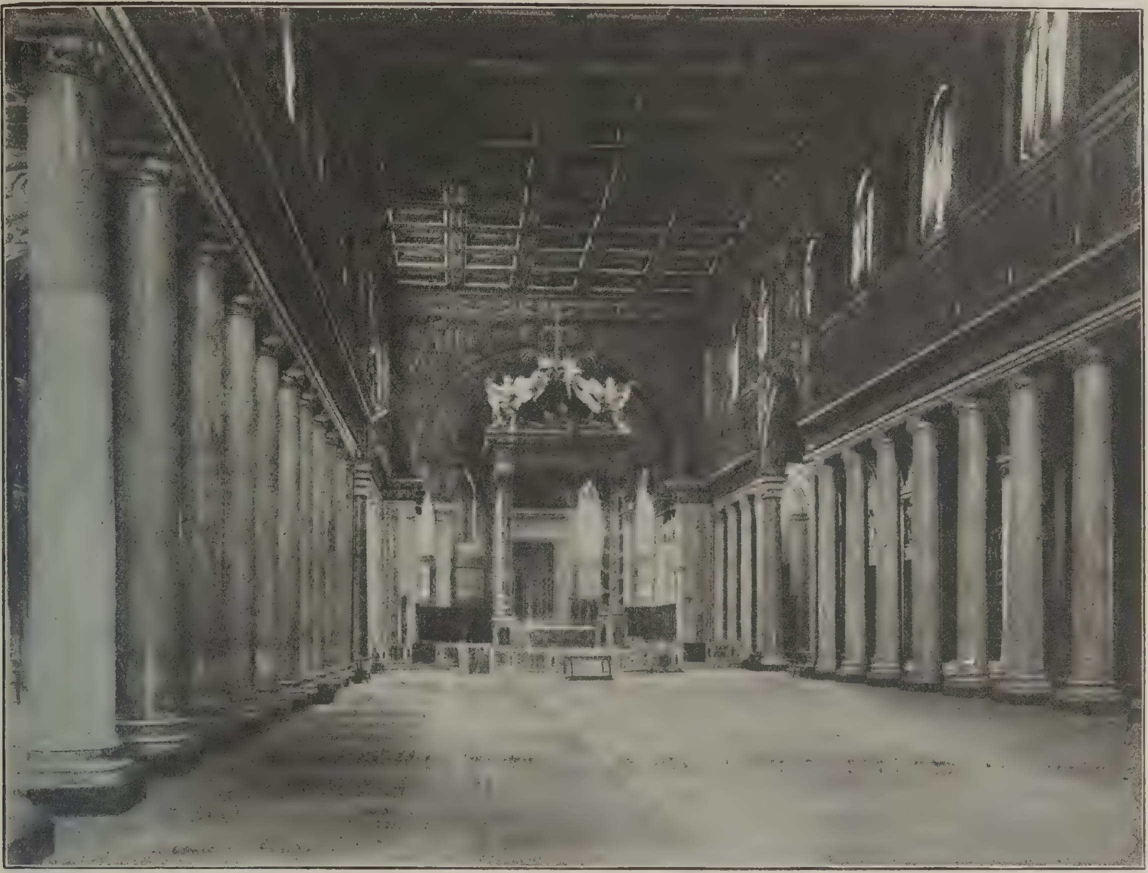
The three great churches that have been briefly described were all of them planned with five aisles and covered enormous areas; the great defect in the internal treatment of these buildings was the immense height of the walls enclosing the central space, which seemed to overload the columns which carried them, in spite of the closeness with which they were spaced. This was most noticeable in St. Peter's, where the height of the columns was less than one-third the height of the building. Though at St. Paul's the proportionate height of the columns themselves was not very different, in this case an arcade rested on them and considerably increased the height of the openings of the lowest storey.

The remaining churches of Constantine's foundation are all smaller. One of these, St. Agnes, has remained to a great extent in its original form. St. Lawrence has been greatly modified, and the Sessorian basilica has been rebuilt on different lines.

The church of St. Agnes, built above the extensive catacombs of St. Agnes, has features of special interest. The plan is very similar to that of the early church of St. Paul, already described, having three aisles and an internal narthex, and, though slightly larger, it is of quite moderate dimensions, measuring 83 feet in length internally, excluding the apse, and 53 feet in width, of which 33 feet is occupied by the nave; there is no transept. It is one of the churches in which the floor is formed at a considerable depth below the ground level, in this case some 25 feet, and it is still reached by a broad flight of steps on the north side.

Internally the most striking difference from the examples we have hitherto considered is the treatment of the upper part of the nave walls. The nave is separated from the aisle by a range of Corinthian or Composite columns carrying an arcade, but above this level, in place of the plain wall, there is here an upper arcade, also of Corinthian columns, but of less diameter and height. They are disposed, however, exactly above the lower columns, with the result that an entirely different proportion is given to the arcade. Like the lower arcade, they are returned across the entrance end, so that the gallery extends over the narthex. In the lower order the materials of the columns are very diversified, and a few only are fluted; the upper shafts are fluted, and between the cap and the springing of the arcade a square, rather shallow dosseret is inserted to receive the impost of the upper arches. Between these shafts a low balustrade occurs, and this upper gallery was allotted to the women of the congregation. The clerestory occurs, a usual, above the level of the aisle roof. Both the aisles and the galleries above are now covered with groined vaults which, however, are not original. Side chapels have been added to the aisles at a much later date.

While it is probable that the general arrangement and features of this church do not essentially differ from it original character, it is quite uncertain to what extent th actual structure can be attributed to the time of Constantine



ST. MARIA MAGGIORE, ROME.

Even before the eighth century it had undergone more than one restoration, and in the siege of Rome by the Lombards it suffered so severely as to necessitate a practical rebuilding. The internal decorative treatment at the present time is due to restorations of last century, excepting only the apse, the vault of which still retains the mosaics, while the wall below it is still faced with an early marble lining divided into panels by bands of darker marble.

The church of St. Lawrence-without-the-Walls in its present state presents a very unusual plan for a basilican church. It has the usual arrangement of the nave, but in place of the apse there is a long chancel raised high above the floor of the nave.

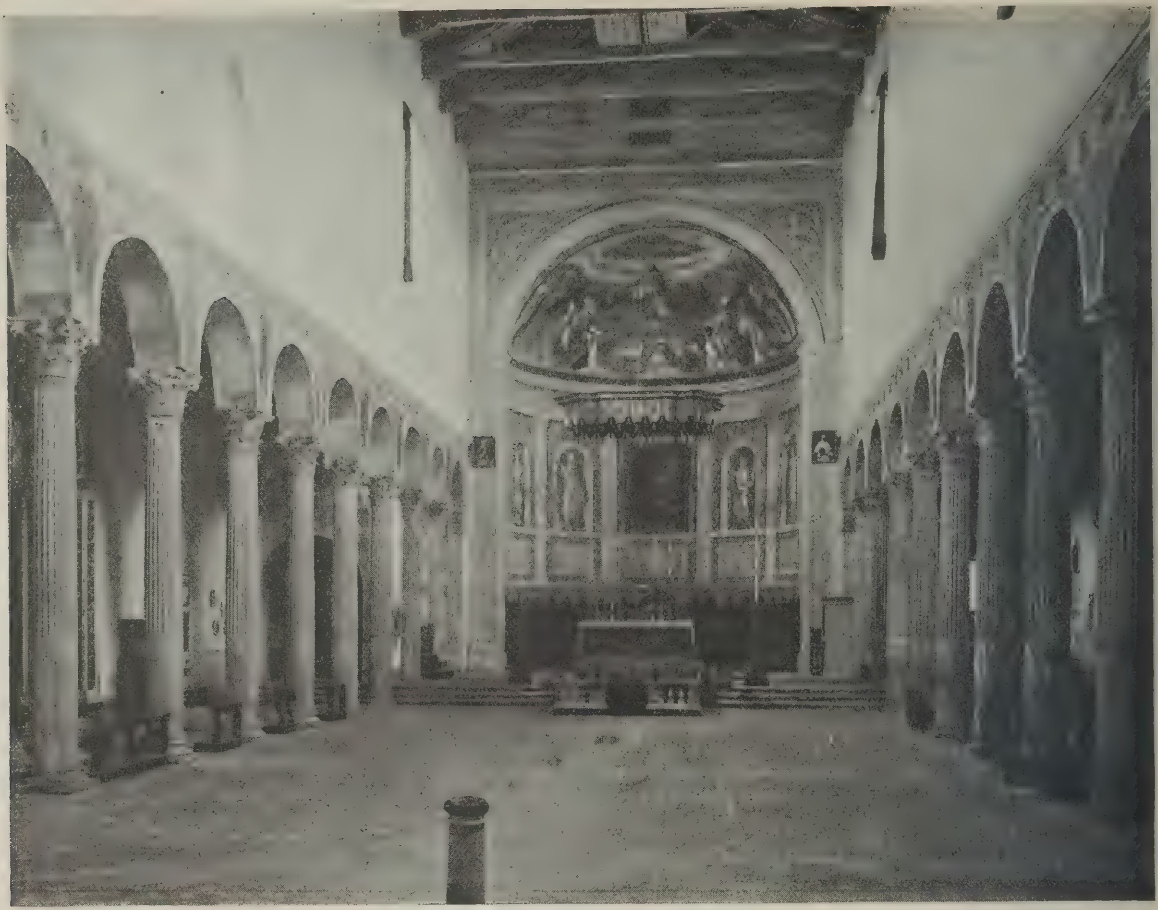
The chancel occupies the site of the Constantinian church, which was originally almost identical in arrangement with St. Paul and St. Agnes, but larger than either. It had an inner eastern narthex and western apse. About 100 years later a second basilica was built on nearly the same axial line, but at a higher level and with the reversed orientation that was then customary, so that the two apses were placed back to back. Near the close of the sixth century Constantine's church was rebuilt, and it is conjectured that the upper gallery, which is a feature of this church as of the church of St. Agnes, may date from this time. Early in the eighth century the abbot, who was afterwards Pope Hadrian I., restored the later church, and the union of the two buildings is attributed to this period, though some authorities put it as late as the thirteenth century when Honorius III. built the large western narthex.

In uniting the two buildings both apses disappeared. The arch of triumph belonging to the older church, with its mosaics, was preserved and the floor of the nave of this church was raised, a crypt or confessio was formed beneath it, and flights of steps up to the new level and down to the old level, which was adhered to in the aisles, were constructed. The raised floor was at a height of about 4 feet above that of the later church, and more than half-way up the height of the columns of the Constantinian church, and the area was enclosed by a screen wall of marble, enriched with panels of porphyry, within which was a marble seat extending along the sides, and at the back a mosaic screen with the bishop's throne in the centre. The columns of the earlier church are almost hidden, but the capitals appear above the screen, and the entablature is a good example of the manner in which fragments from different sources were combined. Above the entablature at the gallery level is an arcade very similar to that at the church of St. Agnes, and above this again a low clerestory.

The last of the basilicas attributed to Constantine is now known as St. Croce in Gerusalemme, and was formerly known as the Sessorian basilica. This church has suffered from a modern and complete rebuilding. But the form of the original church is known; the most noteworthy difference between it and the other plans already described consists in the treatment of the transept, which is narrow in width and does not project beyond the aisle on either side.

Time will not permit of very detailed examination of basilicas founded at a later date, but the type of building described continued to be employed for many centuries in Rome. As has been pointed out, the earliest basilicas were all subjected to repairs and rebuildings, and it is to a great extent the persistence of the type that justifies us in concluding that in such case the original disposition and treatment was adhered to. A study of subsequent buildings displays, however, no advance in design or in construction or in decorative treatment, such as one usually expects to find in the history of any architectural epoch. The very reverse indeed is the case. The earliest buildings are on a larger scale and decorated with greater skill, and generally reach a higher level than the later work, which suffered from the decay of the Roman power following on the removal of the seat of government and the terrible series of disasters that affected Italy, and little signs of progress are manifest till the infusion of new ideas and systems of construction from without revitalised the art of architecture and the sister arts.

It will be well, however, to briefly consider a few of the later examples of this type of building, and among these one of the earliest and probably the most splendid of all the three-aisled basilicas is that known as St. Maria Maggiore. It was built 352-56 while Liberius was pope. The mosaics were executed at this time, and still include some original work. Early in the succeeding century Pope Sixtus III. altered the church, inserting a narrow transept, and at a



ST. SABINA, ROME.

much later date the splendid row of Ionic columns which carry the entablature were broken by an arch on either side. These columns are all of one type, and present the finest range in any basilican church. The frieze of the entablature is decorated in mosaic, and above it occur the mosaic panels from the Old Testament.

St. Sabina has certain features of interest. It is an example of a basilica built on the site of an ancient temple—that of Liberty on the Aventine—and it was erected early in the fifth century. It has, as usual, been repeatedly restored, but it has not been given the appearance of a late Renaissance church by the introduction of a heavy flat ceiling and other decorative work, additions which have so greatly altered the interiors of many basilicas. The raised floor of the apse is in this example brought forward so as to include three bays of the nave and aisles, and extends right across the church. The decoration of the spandrils between and above the arches of the arcade is unusual, and consists of an inlay of coloured marble, the type of work that in Roman Imperial times is known as opus sectile. Above each column is a panel in which occurs a geometrical pattern executed in green marble on a red porphyry ground, while the spandril on either side is filled in with an imitation of masonry executed in white marble with dark joints. The whole arcade is surmounted by a continuous band or frieze of white marble inlaid with figures executed in various coloured marbles.

(To be concluded.)

BRITISH FIRE PREVENTION COMMITTEE.

THE testing operations of the British Fire Prevention Committee of this week comprised two high-temperature tests, *i.e.*, with a thin metal fire-resisting partition and with two tin metal fire-resisting doors, the former for the one and a half hour standard fire test, and the latter for the two hour standard fire test, both followed by the application of water from a steam fire engine.

Considerable interest was evinced in these tests, the object under investigation being of a somewhat novel character.

There was a very large attendance of members and subscribers, including representatives from the Home Office, Admiralty, H.M. Office of Works, London County Council, and other public bodies, and the Americal Consulate was represented by its Vice-Consul, as the object under test was of American origin.

The members and subscribers were received by Mr. Edwin O. Sachs, Chairman, and Mr. Horace Folker, Honorary Treasurer, and the testing operations were conducted by a Sub-Committee, with Mr. Ellis Marsland, district surveyor, as directing member, which comprised Messrs. J. Herbert Dyer, J. W. Brooker, C. T. Cuss, and Bertram Chatterton.

THE British Fire Prevention Committee conducted an extensive series of fire tests on December 6 with flannelette of fine finish with a view of ascertaining the precise inflammability of these materials, which are sometimes incorrectly considered to afford safety from fire.

The tests were applied for by the National League for Physical Education and Improvement, and were conducted under the Fire Prevention Committee's usual procedure, Mr. Edwin O. Sachs, F.R.S.Ed. (Chairman), and Mr. Horace Folker, F.A.I. (Hon. Treasurer), receiving the visitors on behalf of the committee, and the latter included representatives from the Home Office and other public departments, as also Dr. Chapple, M.P., Mr. Chas. Duncan, M.P., Mr. Harry Nuttall, M.P., Mr. George R. Sims, and also Mr. Andrew Clark, F.R.C.S., Dr. Lyster, and several members of the medical profession.

The usual details and illustrated report will be shortly issued by the committee.

WE illustrate this week the design submitted in the recent competition by Messrs. Edwin T. Hall & E. Stanley Hall, which was one of those commended by the Assessor.

PULPIT IN CHAPEL OF TRINITY HOUSE, NEWCASTLE-ON-TYNE.

THE drawing by "Alpha" contains its own description, and was awarded a prize in *The Architect* Students' Sketching and Measuring Club.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

An ordinary general meeting of the Royal Institute was held on Monday, the 18th inst., Mr. Leonard Stokes, President, in the chair.

Mr. E. Guy Dawber, Vice-President, in the absence of Mr. Henry T. Hare, Honorary Secretary, announced the decease of the following:—Mr. James Rawson Carroll, of Dublin, who was for twenty-two years a Fellow of the Institute, and resigned in 1908; and of Mr. George Gordon Hoskins, of Darlington, elected Associate in 1867 and Fellow in 1870, who would always be remembered by the very fine town hall he built at Middlesbrough. The death was also announced of the Institute's distinguished corresponding member Pierre Jérome Honoré Daumet, member of the Institute of France, at the age of eighty-six. He was the doyen of French architects. He was awarded the Grand Prix de Rome in 1855, and no fewer than nine of his pupils have received the same distinction. He was for some years engaged on the restorations of the Châteaux of Chantilly and St. Germain. One of his principal works was the Palais de Justice, Paris. In France M. Daumet was regarded as among the leading men of his profession, and held several positions of honour. In 1906 he attended the International Congress of Architects in London, and many of those then present would remember him for his personal charm and for the deep interest he took in the proceedings. In 1908 the Royal Institute had conferred the highest honour possible on M. Daumet by nominating him for the Royal Gold Medal.

The names of the following candidates nominated for membership were announced (1) as Fellows: Mr. Francis Winton Newman and Mr. Walter Tapper; (2) as Honorary Corresponding Member: M. Victor Alexandre Frederic Laloux; and (3) as Licentiates: forty-one candidates whose names were published in the Supplement to the Journal for October 21.

Mr. Leonard Stokes stated that there would be an alteration in the order of proceedings, as only two of the papers would be read that evening, the other two would be heard on some future occasion. The papers dealt with

The Newer Responsibilities of Architects.

I.—By Mr. W. Henry White, F.R.I.B.A.

The most beautiful design, said Mr. White, would only produce dissatisfaction if it resulted in financial loss and litigation through the fault of the architect, so it was the duty of the Institute to foster the three qualifications of a good architect, viz., that he should be a man of Art, a man of Science, and a man of Business. There were ever-increasing demands upon the architect's skill and business knowledge. The present keen competition had resulted in a great increase in litigation over building cases.

There was a very heated discussion some years ago as to whether architecture was a profession or an Art, and much time was wasted. What really matters to an architect is that his work shall be carried on with due and proper regard to the reason for which he is employed both as artist and man of business. The Practice Committee are constantly being set problems on all manner of professional points, very few of which would arise if the inquirers had been trained to understand and appreciate their responsibilities. Architects should be so educated as to be forearmed against the difficulties which beset them, and be taught to bring logically trained minds to bear upon all their work, so that their decisions may be received with confidence by clients, builders, and others. The R.I.B.A. examinations in professional practice were not sufficiently exhaustive.

Very important is the change in the methods of contractors, who increasingly tend to sub-let their work and to run their business from a counting-house. This system entails an enormous amount of extra work on the architect. This is further added to by specialist's work. Another detrimental influence is the "hurry scurry" of modern times —especially in connection with street architecture.

Does the policy of the Institute, asked Mr. White, in what amounts to withholding the architect's name from the public as far as possible, assist them to a knowledge that there are good, bad, and indifferent architects as shown by their works? In all probability a large majority of the public think the *builder* (whose name is so prominent) is responsible for the design. If the Institute wishes to foster in the public an interest in architecture let them insist upon the architect's name being indicated, and regulate how and what notices as to builders, &c., be shown. It is certain that most work is placed in the hands of architects by influence rather than by knowledge.

Changes from the drawings and specification take place in almost every contract, and herein lies the danger of the "lump sum" contract and the advisability of making the quantities a part of the contract. As regards the varying of materials or allowing a different brand from that specified to be used, great care must be exercised in doing this and advising the client thereon. The average specification that is brought before the Law Courts wants much revision to bring it up to the standard of modern requirements and limitations. Could not the Royal Institute of British Architects in the interest of its members suggest clauses as to the proper specifying of timber, a standard for concrete floors, asphalte, paint, &c.—clauses which could be accepted by the profession and which would prevent so much conflicting expert evidence as is now given in the average building "case"? Architects are now very much divided against themselves, and show a lack of *esprit de corps.*

The architect's position in relation to his client is a most invidious one as regards liability. The builder, after the usual twelve months' maintenance clause has expired, is freed from all further responsibility towards the client, but the architect remains liable up to the period allowed by the Statute of Limitations, *i.e.*, six years. This is too unjust a burden for architects to remain under. The architect should have a clear and definite understanding with his client on the subject of supervision, and the builder should remain responsible for any defective work the faults of which only develop after the ordinary period of maintenance has elapsed.

In conclusion, Mr. White summed up the following grounds on which actions may be brought:—

Variations from the contract and additions or extras ordered without the consent of the client.

The materials not of the particular kind specified.

The work upon being opened up found to be defective.

Water-pipes furred up in an undue space of time.

The contract not completed in time.

Goods ordered under provisional sums by the architect and not paid for by the contractor, although included in a certificate met by the client, who has had to pay twice over owing to the failure of the contractor.

The client declining to pay the architect's fees and the value and interpretation of the Royal Institute of British Architects' schedule of charges.

Payment disputed for work designed and not carried out.

The client claiming drawings from which his building was erected.

The architect's liability for "negligence" in such matters as "dry rot," insufficiency of work and materials, specifying one material and allowing another kind to be used without the client's consent.

Quantities forming part of the contract, or lump sum contract.

The arbitration clause.

Withholding or granting certificates from the client's and the builders' points of view.

The question of sub-contractors and the employment of specialists.

The client's responsibility for injury to workmen if the contractor is unable to pay and not covered by insurance.

II.—By Mr. Edward Greenop, A.R.I.B.A.

The architect, contended Mr. Greenop, has a claim to view his responsibilities from a different standpoint to that of the lawyer, giving a necessarily broader aspect than the training of the legal mind allows. Indeed, he holds an intermediate position between the lawyer and the "layman," while standing himself in a position of extreme vulnerability from the law's assaults.

Mr. Greenop then dealt with leading cases of quite recent date which were concerned with "Alleged Negligence," "The Architect as Arbitrator or Agent," "Agent or Principal," "The Ownership of Drawings," and "Fees."

The principal case under the first heading was Lanning *v.* Davey and Salter (1906). This was an action against architects for negligence. The client, a solicitor, after having paid upon several interim certificates issued by the architects, revoked their authority to further certify. The architects, however, continued to issue certificates. The client refused to honour them, and the builder sued upon them. The client alleged, as his defence to the builder's action, that there was bad work. The builder answered that upon this point the architect's certificate was final. Upon the case coming into Court the client's defence proved to be valueless, and he was compelled to settle the action in Court. He thereupon brought an action against the architects for the recovery of a sum of £600 damages and costs he alleged he had incurred in consequence of the architects having acted improperly in inducing him to enter into a building contract in which they had made themselves sole arbitrators against him, without his expressed or implied authority to do so. The architects contended that the building agreement was prepared in the client's interest, and put forward in the ordinary course of their duty as architects. Notwithstanding a strong direction by Mr. Justice Darling, pointing in the architects' favour, the special jury found against them to the extent of £750. The architects appealed. Mr. Justice Darling reported that in his opinion the verdict of the jury was wrong, The Court of Appeal were strongly in favour of the architects upon the merits of the case, and the Master of the Rolls said he would have liked to enter judgment for them at once, but that he did not think he could withdraw the case from a jury, and that consequently there must be a new trial. The case was thereupon retried before Mr. Justice Lawrence and a special jury, with the result that a verdict was given for the architects upon the question of negligence, and also upon their counter-claim for fees, a miserable £87 odd. The evil appears to lie in the rottenness of a system by which the law allows such cases to be tried by such an incompetent tribunal as a jury. Lanning *v.* Davey and Salter should go down as an unanswered denial of the boasted protection afforded by the laws of this country.

Other cases mentioned under this heading of "Alleged Negligence" were Findlay *v.* Roques and Cavell (1907), Keyser *v.* Trask & Sons and Webb (1907), Raikes *v.* Power and Power *v.* King (1910), Davis Lewis Trust and Levy *v.* Graham and Leicester Board of Guardians (1911).

In dealing with the position of "The Architect as Arbitrator or Agent," Mr. Greenop discussed at some length the case of Robins *v.* Goddard (1904), and C. R. Roberts & Co. *v.* Hickman & Co. (1911). The importance of the latter was, in his opinion, difficult to over-estimate, because the decision in the House of Lords is an entire reversal of Goddard *v.* Robins, and re-establishes architects, probably for all time, in the position they should undoubtedly occupy under a building contract—namely, that of arbitrator, immune, in the absence, of course, of fraud or misconduct, from attack by either client or builder.

The moral to be drawn from Crittall Manufacturing Co. *v.* L.C.C. was that architects should, before instructing builders to accept sub-contracts, obtain a written undertaking from the sub-contractor that he will in no event look to the client for payment.

The law as to the ownership of drawings appears to be established by two cases—Ebdy *v.* Gowan and Gibbon *v.* Pease. The former is an old case in which the building was not carried out, the architect being paid the two and a-half per cent., and claiming to retain the drawings. The Court decided against him.

In the second case, Gibbon *v.* Pease, the previous case was followed, both in the Divisional Court and the Court of Appeal. In the lower Court Mr. Justice Ridley refused to hear evidence as to custom to the contrary. The Court of Appeal supported the Judge below, adding that, even if he had admitted evidence as to custom, it would not have availed, as a custom must be reasonable, and such a custom would be unreasonable and bad. The opinion has been expressed in the profession that the case ought to have been carried up to the Lords. As it stands the retention of the drawings by the architect by special agreement with the client seems the only resource available to us.

In discussing "Fees," Mr. Greenop mentioned two cases. The first was that of Tree *v.* Mitchell (1909). It involved the question of abandoned work, and also of the builder's estimate exceeding the sum originally mentioned by the client as his limit of expenditure. There was also a complaint that the drawings were not prepared by the date agreed, as the result of which the client had to change his arrangements. The original expenditure mentioned by the client was £2,000. The architect advised it was quite inadequate, and suggested £3,000, but was told to proceed. The lowest tender was £5,400, due to the addition of oak panelling, parquet floors, and other luxuries. The client admitted the advice as to £3,000, but said he was not informed the luxuries would increase that amount.

Mr. Justice Walton, in summing up, said he was satisfied that the luxuries were added with the client's knowledge, but that no definite statement was made by the architect about them. He also pointed to the unsatisfactory feature that there were no definite terms drawn up upon which the architect was to act. The architect had claimed upon the Institute scale, namely, three per cent., which amounted to £347, the work being abandoned. The Judge admitted the sum so arrived at was fair "if the scale was adopted," but gave the architect £200 only, as the case was, to use his expression, "a peculiar one."

If there is a moral for architects, said Mr. Greenop, it is this. That the client should be regularly kept informed in writing by the architect of his position from time to time as the various stages of the matter are reached, so that in the event of dispute later he may be able to meet complaints with written evidence. Also that the sooner architects get a schedule of charges which they can safely put into a client's hands as the basis of their contract when accepting a commission the better for them.

The second case was that of Brown *v.* Meckel & Co., tried before Mr. Muir Mackenzie, the Official Referee, in 1909. The details of the case were of an ordinary character, but the learned Referee, in giving judgment, elected to make some observations upon the Institute scale. He said that it had been repeatedly pointed out by the Judges that there was no implied obligation on a client to pay upon the Institute scale, but that an express agreement must be obtained, and that the scale, therefore, could not be considered, except so far as the fact that it was a scale, and had a certain amount of sanction attached to it by the weight of the repute of the persons who prescribed it.

Mr. A. M. Brice (barrister-at-law), in opening the discussion, said that some of the legal points had been raised quite fairly, and some he hoped to dispose of. The relationship of the architect in a contract was twofold. First and foremost, he was the agent of the building owner mainly for the exercise of ministerial acts—that was to say, amongst other things, the giving of interim certificates. Many of the difficulties alluded to arose from a confusion between "interim" or "progress" certificates and conclusive certificates. It was not until the architect gave the latter that he can act as arbitrator or quasi-arbitrator in a judicial capacity. As an employé the architect could at any time be dismissed by the building owner; and if so dismissed, even though wrongly, he could not claim to act in his capacity of architect. His only claim would be for wrongful dismissal. But when one comes to his position as quasi-arbitrator, his position as agent disappears, because the consenting parties of the contract, *i.e.* the building owner and the builder, have in point of fact made a submission under the Arbitration Act. That was the reason why Robins *v.* Goddard had not been put out of Court. The parties thereto came into Court with the express object of obtaining from minds especially trained in this very question the interpretation to be placed upon certain words. If there has been fraud (and of course defective work of any particular extent is undoubtedly put in under fraudulent conditions), the Statute of Limitations runs from the date on which that fraud might reasonably have been discovered. If the builder in the absence of the architect took advantage of that absence to put in bad work—that is clearly fraud which the architect could not have discovered on that day; but when the fraud is discovered later, the Statute of Limitations only then begins to run. The architect might, as Mr. Greenop had remarked, stand in a position of extreme vulnerability to the law's assaults; but he also stood in a position of extreme dependence on the law's protection. While one party thinks he is assaulted, the other party thinks he is protected. It had to be remembered that an architect as a professional man, whether qualified by examination or otherwise, was always subject to the law's control in so far as he holds himself able and willing to carry out certain work.

Mr. Blanco White (barrister-at-law) said that as regards the complaint that a building contract was interpreted in the same way as an ordinary contract, they must remember that not only is an architect and a builder concerned in it, but there was also the building-owner, who is a layman. The Courts cannot therefore be expected to regard a building case from the point of view of an architect, but they must interpret it in a general way. The question had been raised as to whether the architect was an arbitrator. Under some clauses he is the agent, and he is the arbitrator under others. In parts the R.I.B.A. conditions of contract required serious revision.

On the motion of the President, the meeting decided unanimously to adjourn the discussion.

The next meeting, which will be a business meeting, will be held on Monday, January 8, for the election of members and other business. It will be immediately followed by a Special General Meeting to discuss proposals of the utmost importance with regard to the Society of Architects, of which full particulars are about to be sent out to the members.

THE ARCHITECTURAL ASSOCIATION.

After the reading of Mr. Alan E. Munby's paper on "Is the Texture of Materials a Fetish?" on December 11, the following discussion took place:—

Mr. A. R. Jemmett prefaced his observations by remarking that his first trouble was to know what was a fetish. Mr. Munby had carefully defined "texture," but if he had given them a lead as to a "fetish" they would have been able to deal with him. Presumably a "fetish" was a sort of false god, so to speak. If that were so, he personally was inclined to think that the way texture was used in modern work and the amount of importance attached to it showed it to be most distinctly a fetish. In contemporary domestic work one found buildings in which greater importance was given to the materials than to the forms or the proportions. There seemed to be plenty of people who would let their buildings "happen," and their forms and shapes "happen," while trusting to find salvation by the beauty of the brickwork. But if one came to think of it, it would be found that the finer the design was, the less it depended upon the texture of material. In the case of a barn or hut the building might be saved by the material. But, say, in a Gothic cathedral or a Classic temple the finest and most characteristic effects are obtained by the spectator when he is at such a distance away as to be unable to see the texture. In St. Paul's the texture of the stone is of very little importance and has very little to do with the effects from the best view-points. Notre Dame would tell its story though it were of cement. The Parthenon at a distance of some hundreds of yards might have been of cement without loss of effect, for the texture disappears and one sees only the broad proportions, the relations of solids to voids, and so on. There was in modern architecture a very great danger of making texture a fetish. Mr. Munby had contended that a perfectly plain flat surface would have interest for nobody. That was obvious, for people will not look at anything which tells them nothing. From that point of view the production of texture constitutes the whole art of design. The architect uses texture so that the front of his building makes a certain effect. But to look at it merely as imparting variety of surface—a variety which would be hardly noticeable—was a mistake.

Mr. H. D. Searles-Wood, in referring to the use of wide mortar joints in brickwork, said that an architect who uses them ought to go back to his building after some time and see the damage due to the weather on them. It was just a point where texture ceases and the painful begins. It was sometimes very difficult to judge. Small bricks, which are just now such a fetish, do not make good brickwork unless one carried them right through the wall—and that was a luxury. At the recent Motor Show he had been particularly struck by the successful employment for the motor chassis of wood in a natural way without being coloured and varnished out of recognition.

Mr. J. D. Crace said with regard to the comparison made of Accrington and Clare bricks that it appeared to him that the charm of the latter was less a matter of texture than the actual mingling of colours in the softer brick. Texture ought to be confined to the natural colours rather than to the mingling of colours. It did not do to overlook the fact that certain stones are adapted for certain effects. The general employment of Portland stone was not a question of selection for its colour, but for the fact that it stood the English climate better than most materials available. Again, if one was employing Ham Hill stone it would be absurd to try and use the same sort of detail as in Portland. Whereas Ham Hill stone was admirably suited where the structure was extremely simple, it was unsuitable where one wanted to introduce elaborate carving. Therefore one must not regard the desirability of stone merely from the point of view of texture. Figured woods should not be carved, but if one wished to show a bit of wood, it ought to have a high polish on it. Mahogany or satinwood are thrown away unless a high polish shows it up in a way which would be impossible with its natural surface. He did not think that anyone would object to the natural surface of wrought-iron; in fact, there were a great many positions in which anything like a high polish would be out of place. There seemed to him a considerable risk in trusting too much to the adventitious circumstance of building materials. He noticed that whenever he was present at a discussion on colour decoration, people began at once to question whether it was more successful in oil or tempera or fresco. But that was all quite apart from the question of the use of colour.

Mr. T. L. Dale thought it was largely a question of what the architect was driving at as to whether texture was an important thing or not; it was likewise largely a question of scale. If one had a building of sufficient importance to produce a fine effect of itself, the texture was of slight moment; but if one had a small building like the ideal homes which some of them had to perpetrate then texture became a different question. In a very small object like a piece of jewellery or of porcelain the proper texture is necessarily very small. As the size of the object increases one eventually arrives at a texture which is very large in scale, as in the Houses of Parliament, where all the surface decoration is really texture. Then, again, if the architect is relying upon form, as in a Greek temple, he can afford to disregard texture. But, on the other hand, in the ideal villa the texture is perhaps the only means by which it can be made artistic. By too much reliance on texture, however, one might lose form. The Hammerstein Opera House in the Kingsway was in a sense a fine building in so much as the mass of the building is imposing in itself, while the architecture only gives it a texture and gives value to that mass while not competing with it. As the spectator was not interested in the detail the whole effect was obtained by the mass.

Mr. H. W. Brittan said he always felt that the Greeks purposely snubbed material. In their buildings everything was due to form, though the material in itself was fine. Because everything could be abused it was possible that texture might be made a fetish. The natural variations in the colour of brickwork were originally charming; but a demand from architects for such variations resulted in the makers producing them to order, with consequent loss in artistic effect.

Mr. A. E. Bullock spoke of the desirability of a little thought being employed in the use of materials like marble and alabaster if a good effect was desired. Alabaster possessed a much better texture for a small object like a mural tablet than marble. A Hopton Wood pedestal combined well with a marble bust.

Mr. J. B. Scott said he could not see how too much time could be spent upon the consideration of the texture of materials. There was no reason why an architect should go out of his way to carry out a work in an uninteresting manner out of fear that if he did otherwise he would be considered to be playing to the gallery. The materials of to-day were very much better than those of twenty years ago. And so was the domestic work. In a small house in the country a great deal depended upon the materials used. One of the speakers had said that on looking at a building a quarter of a mile away the texture was lost. But why should that be taken into account? The building had to be passed every day by people who almost had their noses against it. It was difficut to understand why design should be affected at all by a feeling for texture.

Mr. A. Horsnell alluded to the necessity of bearing in mind the suitability or otherwise of materials. He would have liked a more decided opinion from Mr. Munby as to whether he was really on the side of those who despised texture or otherwise.

Mr. T. C. Yates pointed out that Mr. Butterfield, who could not leave a yard of brickwork plain, had singularly failed in respect of texture. His weakness was exemplified in Keble College, and particularly in the chapel.

Mr. C. G. Boutcher thought that texture was all a matter for discrimination. The Greeks did not care a straw for it, but aimed at softness and mellowness. As for flat or polished surfaces, if one polished granite it acquired a greater density in tone and colour. A water colour drawing if glazed was deeper in tone than if unglazed.

Mr. A. T. Bolton emphasised the point that colour did depend in some measure upon texture, and was intimately connected with it. He could not agree with one of the speakers that the Parthenon would look as well at a distance if carried out in cement. The marble of which it is composed has a polish of great translucency and is seen under a brilliant sky—two trump cards which are not to be had in this country. Mr. Munby had been extraordinarily interesting in his paper because he had shown how science can help the architect. Many would have noticed the texture often seen on old walls. On one occasion, when he wanted to put up a piece of garden wall to look like old work, he got the necessary old stone and employed three or four labourers to do the work. The result was splendid. The local masons were horrified, however, and when afterwards they put up a further piece of walling they were allowed to do it their own way—with the exception that no pointing was permitted. The new piece looked exactly like a sea-side church. It was very important to work in the material with which the workmen are familiar. He agreed that the size of a building was an important consideration when studying the question. It always seemed to him that Westminster Cathedral would look just as fine, if not finer, if common stocks had been employed for the outside instead of the present expensive bricks. That was an illustration of texture carried too far. He quite agreed that design and scale had a great deal to do with the question.

Mr. Gerald C. Horsley, the president, in closing the discussion, said he agreed with Mr. Jemmett's view that in old times, at any rate, design counted for more than texture. But the old builders had in mind the effect of colour. Nowadays they seemed to have lost sight of it, although some of the speakers had alluded to it. The remark that each material should have its own treatment was most true; but the difficulty was to know what that treatment should be. He remembered a modern church with a roof of plain deal which looked very well; but the effect was destroyed afterwards by the application of horrible varnish. He supposed architects would gradually in their practice find out the best way of treating materials.

The vote of thanks was then carried unanimously.

Mr. Alan E. Munby, in replying to the discussion, said he quite agreed that if one had a big building and viewed it from a big distance one was independent of texture. But the question of architectural form was outside the discussion that evening, during which he had been trying to consider texture apart from it. Architects could now get 2-inch stocks, and there seemed no reason why good bonding should not be obtained if the work was carried right through. Such work was not oppressively expensive. Ham Hill stone was a stone which could be recommended for its own sake and for use where much architectural carving could not be afforded. For the humblest buildings architects must certainly depend upon the character of the materials as such without the help of architectural form. He cordially agreed that there were certain limitations which had to be recognised. Personally he did not think that the worship of materials was overdone by the ordinary architect. They ought to regard it, especially in smaller work.

The next meeting of the Association will be on January 15, when a paper will be read by Mr. E. F. Strange, entitled "Alfred Stevens."

THE SOCIETY OF ARCHITECTS.

THE second ordinary meeting of the Society of Architects for the Session 1911-12 was held at 28 Bedford Square, W.C., on Thursday, the 14th inst.

The President, Mr. Geo. E. Bond, J.P., having taken the chair, it was resolved that the minutes of the previous ordinary meeting, having been printed in the Journal, be taken as read. The minutes were then confirmed and signed. Ten nominations for membership and nine for studentship were announced. The ballot was then taken, and seventeen candidates were declared to be duly elected as members and five as students.

Mr. G. A. T. Middleton, A.R.I.B.A. (Past Vice-President), Hon. Librarian, then read the following paper on

Alexandria: its Place in Architectural History.

On account of its geographical position and fine natural harbours, easily made more safe by artificial means, Alexandria has necessarily been the most important seaport of Egypt for many centuries, while it was for a considerable period one of the very greatest cities of the civilised world. This was during, and extended beyond, the fourth important building epoch in Egyptian history, that known as the Ptolemaic, its greatness lasting from the days of Alexander the Great—say, roughly, from 330 B.C. to the seventh century A.D. Near as it is to Cairo, there seems to be no evidence that it was a place of importance when the pyramids were building, four thousand years before that time, nor even during the Proto-Doric or the Theban periods; but at the later date referred to, when there was a renaissance of Egyptian architecture at Edfou and Philæ so closely resembling the Theban work of Karnack and Luxor as not at first acquaintance to be easily distinguished from it, Alexandria was at the height of its prosperity. It occupied a position where many influences met. It was founded and colonised almost entirely by Greeks at first, these being afterwards augmented if not supplanted by Romans; and it traded with all parts of the Eastern Mediterranean by sea, and simultaneously up the Nile with Egypt, and by caravan even with Assyria and Babylonia.

Thus it was the natural meeting place of many influences, particularly at the time when Greek art was declining and the Roman scarce developed; yet not much is known of it, and the archæologist and the inquirer into the evolution of architectural forms had troubled little about what its ruins might have to tell; for, not once but several times, it has been ravaged and destroyed, and the remains of its former glories are comparatively few, and the actual dates of such fragments as have been discovered can by no means be determined with precision. Even the buildings of which they formed a part can, as a rule, be only guessed at, so complete has the destruction been, and apparently so scant the care taken to record, even approximately, where the remains have been found; the site of the ancient city being now occupied by a modern town, partly Arab and partly European, or submerged beneath the waters of what is called the old harbour (now cased with a sea-wall), while a new harbour with great wharves and quays occupies a large area to the south of it. Excavating and investigation have been unmethodical and spasmodic, and far more frequently undertaken for the purpose of utilising the masonry of former structures for the erection of new ones than for archæological research. Even at the present time a low hill, honeycombed with catacombs, is being quarried away bodily to provide stone for a new quay in the harbour, which is to become the Mediterranean terminus of the Cape to Cairo Railway.

Under such circumstances it is to the museum that a visitor naturally turns first for enlightenment; to be met, to a certain extent, but not entirely, by disappointment. It contains, it is true, numerous objects possessing both interest and beauty, arranged with considerable regard to artistic effect; but it is necessary to make one's own deductions from them. Of orderliness, in the scientific sense, there is little, for though here and there an attempt has been made to collect statuettes or architectural features into groups, there has been scarcely any effort to differentiate with regard either to probable date or to locality of discovery—in most cases probably unknown. The descriptions attached to the exhibits are silent on these points, having been obviously composed by one who was more enthusiastic as an art critic than as an archæologist, and consisting for the most part of eulogies in French upon the beauty of the object, its contour, modelling, and colour, wholly valueless to one in search of knowledge and capable of judging of these things for himself. It is only possible, therefore, to accept the collection as being Alexandrian, and to apply knowledge acquired elsewhere to the double task of first producing some order out of the prevailing chaos, and then discovering in what way and to how great an extent Alexandrian architecture was influenced by what went before it, and how it afterwards influenced what was to come.

The lessons learnt, if not many, are by no means insignificant, but before those of the museum itself can be fully understood it is necessary to pay a visit to the principal catacombs, which are under the control of the museum authorities. The central chamber, reached by a spiral staircase from the surface, and cut in the solid rock, is said (on doubtful authority) to be the tomb of Caracalla and his wife. At any rate, its entrance is flanked by indifferent statues of a Roman emperor and Roman lady; but these are probably of later workmanship than the chamber itself, as are also certain obviously Roman sarcophagi and Roman urns. The architectural and sculptural embellishments of the room and its immediate approach are of the most mixed character imaginable; but they agree in their indications of date, and leave little doubt about the work having been done, most of it, about 200 B.C. There are pilasters with lotus capitals, such as one would expect to find in the purely Egyptian work at Philæ, executed in the Ptolemaic period; before the entrance are two columns, with Egyptian entasis, but capitals of mixed Greek and Egyptian character, having volutes such as those of the well-known capitals of the Choragic monument of Lysicrates, at Athens, springing, by no means incongruously, out of lotus buds and flowers instead of acanthus leaves; round the inside of the chamber there runs an ovolo moulding enriched with the egg and tongue, carved in a manner which suggests late Greek workmanship; while the wall carvings are of Assyrian or Babylonish character, human figures with heads of beasts or birds, executed in low relief, coarser in execution than the wall slabs of Nimroud palaces, because cut in a coarse grained soft stone and not in alabaster, but just as vigorous and a trifle more malignant in expression. Then, in three places, over large semicircular recesses, the shell ornament appears, exactly as it is found in Renaissance work in Italy. This is inexplicable, except upon the hypothesis that the ornament was common when the catacombs were excavated (in other words, when Alexandria was at the zenith of its glory); or alternatively upon the supposition that this decoration is not ancient at all, but fraudulently imitative work of the European Renaissance period. The probability is that it is ancient, for while the shell ornament is not to be found in the museum, it contains examples which suffice to indicate that the other architectural embellishments of the catacomb chamber, such as the carved capitals and the egg and tongue enrichment, were by no means uncommon in Ptolemaic Alexandria. There are, for instance, several small capitals in a fair state of preservation, carved in the soft local stone, of the well-known character of the work at Edfou and Philæ, generally representative of the palm or the lotus flower and bud, purely Egyptian and of Ptolemaic date, displaying no sign of Grecian influence, and only differing from the better known and similar work of Middle Egypt by the more delicate and finer craftsmanship displayed, and to that being carved which at the earlier period would more likely have been merely painted; this being clearly due to the use of a soft stone instead of granite or basalt. It is not exhibited, for instance, in the one Hathor-headed capital which the museum contains, which has been sculptured out of basalt with the usual avoidance of unnecessary detail and emphasis of essential form to be found in Egyptian carvings in hard materials of all dates.

Just as it is not surprising to find purely Egyptian characteristics in the ornament of the catacomb chamber, so is the presence of Greek feeling only what might be expected. Essentially, Alexandria was a Greek colonial settlement, if not at one time the greatest centre of Greek civilisation, and the museum contains more architectural objects of Greek spirit, both in design and execution, than almost any other in the world—all presumably local. Thus the Greek egg and tongue is a common enrichment. It is seen, for instance, on a few Ionic capitals, enriching the echinus in the usual way, while the abacus is similarly enriched with the leaf and tongue, all sharply cut after the typical Greek manner, particularly that of a somewhat late date, such as is found at earliest in the Mausoleum at Halicarnassus (B.C. 350). The shallow character of the volute also suggests late workmanship; it recalls that of the Nereid monument from Lycia, now in the British Museum, which is generally considered to belong to the first century B.C. The Alexandrian examples probably belong to a period between these dates.

So far as the multitude of examples may be taken to indicate anything, however, they give the undoubted impression that the principal Greek work at Alexandria was of the Corinthian Order. It is well known that to the west of Greece, in Sicily and Magna Græcia (Southern Italy), the Doric Order was employed exclusively, while to the east, along the Syrian coast, the Ionic was used as universally. In Greece itself, as at Athens, the greatest buildings were Doric, those of secondary size and importance were Ionic, and only the tiniest and most delicate gems were Corinthian—that is, in the days of independence. Later on, when the Romans ruled, the great Temple of Jupiter Olympius was, it must be admitted, erected in the Corinthian Order.

But the recognised examples of Greek "Corinthian" are extremely few, so few that they can be numbered on the fingers of one hand. The Choragic monument of Lysicrates, very small, has generally been considered the most typical, till the discovery of the more beautiful capitals of the internal order of the Tholos at Epidaurus. Both of these examples have tendril volutes springing from acanthus leaves, and so probably had the elliptical capital, of apparently late workmanship, which was brought from the site of the Temple of Diana, at Ephesus, and is now in the British Museum. As a rule, in the known Roman examples of Corinthian capitals the tendril is stiffened and strengthened till it has more the appearance of a voluted leaf—so much so that the gradual evolution from it, through Romanesque work, of the French "crocket" capital has been traced, in which the leaf is that of the hart's-tongue fern when partly open.

Is it possible that Alexandria was the real home of the Corinthian Order, and that the tendril volute was a mere local variation, beautiful but not essential to it? In the numerous examples in the Alexandrian Museum the tendril volute is never found, but it is replaced by a broad voluted leaf at the corners—though tendrils are used for the caulicolæ. The capital in this form is exquisitely beautiful and structurally strong enough for employment on a large scale—and several of the numerous examples are quite large; while the development from it of the Roman form is natural and easy. Possibly the type persisted for a lengthy period, bridging the gap between the Greek and Roman, for it is found in the Khartoum monument, recently compiled from ancient fragments, of which the capital is Greek (about 200 B.C.), and in the capital of Pompey's Pillar, known to have been erected in 302 A.D., which is Roman. But in almost every instance both the general spirit and the workmanship are Greek. On the other hand, there is at least a possibility that the arch was known and used. One of the largest and most exquisitely designed Corinthian capitals is so contrived as to rest partially upon a semicircular attached column, and partly on the wall to which it was connected, having a pilaster strip upon its flank. This is compatible, perhaps, with trabeation, but much more so with arcuation; yet in the absence of any further records of the building which this capital enriched, or even of where it was discovered, further speculation is vain.

There is only one Doric capital in the museum, and that is of exceedingly late Greek character, and carved in the local white stone, with a shallow abacus and echinus, and with annulets replaced by flat bands, like those found just below true Egyptian capitals of all known types and dates. Again, it is possible that an intermediate form is recognisable between the types of Greece and Rome, but the evidence is insufficient to base a theory on. Certainly there is another similar capital near Alexandria, lying on the beach some half-mile to the south of Nelson's Island and the Bay of Abou Kir, so like this one in size and workmanship, so far as can be judged (for it has suffered much from the action of sea-water), that it might well have been another of the same range as that in the museum. No more than this could be said, if it were not for abundant evidence that here, upon the shore, some fifteen miles from Alexandria itself, there was at one time a place of considerable size, possibly a pleasure resort (Canopus is known to have existed somewhere in this neighbourhood); for the shore-line is broken up into a series of small, well protected and almost land-locked bays, with sandy beaches separated from one another by low headlands of coral rock, forming safe and delightfully picturesque bathing places. Overlying the coral there is a softer rock, little better than compacted sand, which forms a low cliff, nearly vertical, and against this as a backing there have been buildings in the Roman period, extending out towards and in some cases into the sea. For a length of close upon a mile there are constant evidences of this, the escarpment being in some places given a facing of Roman tiles (or bricks), sometimes plastered on the surface, and sometimes of squared masonry; while in other places cross walls of the same materials project from the cliff towards the sea; and in yet others, and much more frequently, the coral bed has been worked in the solid into the shape of rooms with intervening walls, the present level of the floors being sometimes below and sometimes above the water level—which varies little, for there is scarcely any tide. Some of these floors, generally those of small square rooms, are plastered, and the plaster is carried up the sides as high as the coral goes—some eight or ten inches perhaps; but the walls once erected on these coral foundations have almost entirely vanished. Yet in one notable instance at least a mass of squared masonry still exists, surmounted by rubble, raised upon a tiny coral island some twenty yards from shore, but still easily reached by using as stepping-stones the remains of the low coral walls of a series of intervening hollowed chambers, sunk but little below sea-level. When closely examined this masonry is found to be cemented by an exceedingly hard mortar, containing white marble chippings and crushed Roman brick. The presence of a lime-kiln some two hundred yards inland from the cliff edge indicates where the lime may have been obtained from.

Most of these indications of a Roman settlement are fragmentary, and need careful surveying for their elucidation, but upon one of the promontories there is something more, the remains of what was obviously once an important building. Close to it, upon its north, there lies the Doric capital already referred to, having a diameter of 20 inches, and a little further north again is a broken drum of a column, the approximate diameter of which is 22 inches, of a beautiful blue marble veined with white. On the other side of, and almost adjoining it to the south-east, half-submerged in water, are great masses of worked granite, having every appearance of being portions of an attached colossal statue of Ptolemaic Egyptian character. Casual inspection from the shore could determine no more than this, though one fragment looked as if it were reeded; a well-equipped party might spend some time in discovering more among the surf. So, too, it is with the building, of which a few rough dimensions only could be taken by a solitary individual having only a 2-feet rule in his pocket, and but a short hour or two at his disposal. There would even be some danger in making a close examination of the passages through the apse walls, considering how the sea pours through. It is all submerged, it must be remembered, except the "walls," and these are not built, but formed of the solid coral rock, out of which the chambers and channels have been hollowed; and the chambers are cut to a greater depth seawards than towards the shore, where they eventually rise above sea-level, as if they had been the ante-rooms to an enclosed sea bathing establishment.

(To be concluded.)

ENGLISH MEDIÆVAL ARCHITECTURE.—IX.

In his eighth lecture of the course at University College, Gower Street, W.C., Mr. Prior had treated of the fourteenth century decorative element, and towards its conclusion had dwelt on the importance of the local styles which the masons of Bristol and Gloucester produced, because out of the Gloucester style came Perpendicular building.

At Bristol, remarked Mr. Prior in his ninth and semi-final lecture, quite a new idea appears. The most peculiar development is its system of skeleton constructions applied to the spandrils of arches on the same principle that had been used to create tracery under the arches in windows. In the window the result of the thinning-out and simplification of the stone lines had been that the original arch-forms of the lights ceased to be expressed. The skeleton treatment of the spandril was attended by a similar tampering with the constructive arch-forms in construction itself. It is to be noted that fancifulness in arch construction had been specially apparent in the decorative fanes of the fourteenth century masons of the West of England. But the choir of Bristol is distinguished by something more than fancifulness. We see the deliberate purpose of evolving a superficial formula of construction—one that could treat every surface, whether wall, window or vault, with similar spacings. There begins here that system by which wall and window were given vertical divisions, and then by horizontal transoms spaced into a series of exactly similar oblongs. At Bristol the original constructive lines of arch, of pier, and of vault rib underlie and still control this decorative panelling; but as the standard method took hold the constructive arches lost their aspiring curves and grew more and more into relation with level horizontal lines.

Now in this treatment of building form must be recognised the shop-work discovery on which the commercial distribution of decorative art lives—viz., that a rich appearance of decoration may be combined with the expenditure of the smallest executive value. The repetition of similar features is one of the stock devices of trade economy. The extent to which it is carried in the rebuilding at this date of the choir at Wells shows the western mason not only as a clever constructionist prepared to carry out stone-work in any fanciful shape, but as a commercial artist working on an organised system, and gaining custom by supplying rich effects at a small outlay. The western mason in this was developing principles which belong to trade, but not to building. He started, however, a condition for a new architecture, and he is to be credited with the evolution of a new architectural style. It was in the Gloucester rebuilding of 1350 that we see the full establishment of it. Here the panels and cusps represent no structural expediency, but are just a decorative skin effectively spread over and depending on the underlying Romanesque massiveness. But at the east end the Romanesque apse was entirely removed, and here appears the extraordinary technical ability of the Gloucester mason. Nothing so big and so light was ever built by a mason as that great east window. It is a good 100 feet in height, and is some 40 in width on a bayed plan, and built up as light-heartedly as if it were a chantry enclosure 15 feet high. Yet the screen shows no sign of weakness.

Such a screen, however, must not be suspected of coming into existence just as a tour de force of masonry or just to display a method of stone-handling—the meaning of it all lay in the glass-painting craft. The mason had sold his birthright when he ceased to be a sculptor upon his building. During the thirteenth century glass-painting had progressed from symbolic and decorative pattern-work to the pictorial representation of the sacred story. He now began to control the mason style by his demand for oblong uniform spaces. Indeed, all through the fourteenth century the church fabric was becoming more and more a framework or background to be given meaning by the numerous crafts independent of the building instinct. Fourteenth century style must be taken as a combination of the accessories, and out of these conditions came the Perpendicular style.

Up to 1350 style had kept a continual progress of invention in architectural detail. This progress ceases all through England for the 150 years of Perpendicular—there is, broadly speaking, little change in the forms used in church building from 1380-1520. The parallel movement heretofore witnessed in all the countries of West Europe now ceased also, and a separate and distinct mannerism declares itself in each of the principal national architectures. The English Perpendicular was a mannered and a local type.

In a certain sense the Black Death of 1349-50 and its two or three recurrences was an active cause of some of the Perpendicular peculiarities. With the population wiped out wholesale (for in large parts of England two-thirds perished), a stop was put to building through lack of labour and lack of funds. Churches begun with sumptuousness were continued at a later date shorn of decorated profuseness. But there are places where this suggestion of a break in style is less conspicuous. At Gloucester work went on continuously on the same lines all through the period of the plague. As a result when building operations began again to be usual the Gloucester masons and the Gloucester masoncraft were in a position to take the lead.

The two Despencer monuments at Tewkesbury, about 12 miles off, have all the system of Perpendicular style. In the ceilings of these chantries, 1350-75, are found too indications of that ceiling form which is regarded as the chief glory of Perpendicular style—the fan vault. For the small area of a chantry ceiling (some 6 feet across) the construction of a vault has no need to rely on the arch. Corbels or brackets form the piers of the enclosure, and slabs laid upon these made the easiest, cheapest construction of ceiling. The conventions of vault-making indicated that these corbels and slabs should be carved to suggest the ribs and interspaces of building vaults. There was, however, no need in such toy-work to curb the fancy as to patterns. So all kinds of delicate lace-work based upon the suggestions of window tracery appear.

Perpendicular style is distinguished by the elaboration of its vault patterns, which are usually put into two classes—viz., lierne vaulting and fan vaulting; but midway examples are common. The distinction of the forms is that in lierne vaulting there is still the acknowledgment that the arched ribs, transverse and diagonal, make the foundations of vault-construction; while in the fan vault this acknowledgment is disguised, and in the latest examples there appears the profession of hanging the ceiling upon nothing. In reality the diagonal arches are suppressed, and stability is dependent on transverse arches—there being from arch to arch cunningly constructed barrel vaults. But such treatment as in the Gloucester cloister, c. 1380, seemed at first too daring for the high vault, and when, like in the choir of Gloucester, the spans were some 40 feet wide, the vault is made to proceed upon rib structure. Yet all the same there is really a denial of the Gothic construction of arched ribs. There is extraordinary skill in the way this is done at Gloucester, Winchester, and Canterbury, so that the vault sets like a dish-cover upon the walls without exerting thrust on them, and so not needing the support of flying buttresses. But the curves of the "dish-cover" require a good upward spring to obtain such stability. Now economy of height in roof was becoming more and more an object to the fifteenth century builders. So the four-centred type of arch was found to be imperative. The difference between the lierne and fan construction was, in fact, simply one of the generating arch form.

It can be judged what a science of architectural engineering the building of such vaults has become. Its aims are no longer, as in the thirteenth century, to let construction display itself in form, but rather to cover up construction with the appearance of a feathery intricacy. Mathew Paris describes the process of the start in a great building with the words "congregati sunt artifices"; but in the fifteenth century there are detailed specifications and contracts.

The Black Death altered the status of all monastic institutions and marked the beginning of the suppression of the monasteries. They were no longer aristocratic establishments, but were reduced to few inmates or wiped out altogether. Hardly any recovered their importance. In a broad sense there was a dwindling away of that monastic building which had formed the chief work of architecture. There came in the place of it, first, college building; secondly, parish church building. We have to recognise a bureaucratic supervision as conditioning the great fifteenth century building of colleges and chapels and the rebuilding of monastic houses.

Yet this last word of Gothic mechanism was not the chief interest of the latest phase of English mediæval building.

Throughout the breadth of England there was building at the same time a people's architecture reflecting new phases of fifteenth century life. From the Conquest up to the middle of the fourteenth century parish church building had been but an insignificant factor in the creation of style in comparison with those of abbey and cathedral building. In many places the churches were on the traditional Saxon planning; in others they followed the monastic model. In the thirteenth century the long parish chancels with wood roofs made a subsidiary development somewhat outside the monastic lines. The fourteenth century developed churches built strictly on the traditional lines of Saxon planning, yet in area larger than the cross-planned parish churches. The supreme example came in the great church at Boston, with a length of over 200 feet and a width of some 90 feet. Of its type are many churches all over England.

LEEDS AND YORKSHIRE ARCHITECTURAL SOCIETY.

A GENERAL meeting of the Society was held on Thursday evening, December 14, at the Leeds Institute, the President, Mr. Sydney D. Kitson, M.A., F.R.I.B.A., in the chair.

Mr. A. E. Dixon, F.R.I.B.A., of Birmingham, read his interesting paper on the "Early Roman Churches" to a number of members and associates. The lecture dealt with the early Christian churches of between the third and ninth centuries, also mentioning the chapels, tombs, and catacombs. In dealing with the various features of these buildings the mosaics commanded special attention, being illustrated by a number of excellent slides showing the decorations to the apses of many churches. A remarkable feature of the subjects of these mosaics is their peaceful seriousness, humour, and scenes of judgment or retribution are entirely absent. In contrast to this, the lecture was concluded by a few slides showing grotesque capitals from the neighbourhood of Poitiers, where in all cases grim humour was the predominating subject.

An appreciative discussion followed, and Mr. H. S. Chorley, M.A., F.R.I.B.A., proposed a hearty vote of thanks, which was seconded by Mr. A. E. Kirk, A.R.I.B.A., and supported by Mr. C. B. Howdill, A.R.I.B.A.

THE PLUMBERS' COMPANY.

A DINNER was given on Thursday, December 14, by the Worshipful Company of Plumbers at De Keyser's Royal Hotel, E.C., to meet the Lord Mayor and Sheriffs of the City of London. The chair was occupied by the Master, Sir T. Vezey Strong, K.C.V.O., Alderman. Among those present were Sir Thomas Boor Crosby, M.D., Mr. Sheriff George Briggs, Sir Hugh Owen, Sir Thomas Barlow, Bart. (President Royal College of Physicians), Sir Shirley F. Murphy, Sir A. B. Whitelegge, K.C.B., Mr. Leonard Stokes, P.R.I.B.A., Sir R. E. Cunliff, Professor A. Bostock Hill (President of the Incorporated Society of Medical Officers of Health), Dr. A. E. Newsholme (Medical Officer to the Local Government Board), Mr. E. B. Barnard, J.P. (Chairman of the Metropolitan Water Board), Mr. H. Percy Boulnois, M.Inst.C.E. (Chairman of the Royal Sanitary Institute), Professor W. R. Smith, M.D., J.P. (Principal of the Royal Institute of Public Health), Mr. W. D. Caröe, M.A., F.S.A., Mr. Edmund Kirby, F.R.I.B.A., Dr. W. H. Hamer (Medical Officer L.C.C.), and many others.

After the loyal toasts had been honoured, Sir Thomas Barlow, Bart., K.C.V.O., M.D., proposed "The Lord Mayor, the Corporation, and the Sheriffs of the City of London." He said that the profession to which he belonged was proud of the Lord Mayor because they knew him of old, and knew his qualities. They as doctors had always believed that the life of a busy doctor, with its many interests and dealings with all sorts and conditions of men, was no unfitting introduction to the highest civic duties. As for the Corporation, the sanitary arrangements, the administration of justice, and many other things made London the greatest city in the world, and they tended to become more and more admirable.

The Right Hon. Sir Thomas B. Crosby, M.D., the Lord Mayor, in responding, said he had seen no change in the excellence of the work done during the thirty-four years of his membership of the Court of Common Council. The members brought to the business of the Corporation that energy and knowledge which put them at the head of successful businesses of their own. It was undoubtedly a bold stroke for an octogenarian to have entertained the idea of holding the office of Lord Mayor of London.

The toast was also acknowledged by Mr. Sheriff George Briggs, who especially alluded to the high sanitary importance of the Company's work.

Mr. Leonard Stokes, in proposing "The Plumbers' Company, Root and Branch—May it Flourish for Ever," said he felt very diffident in rising to propose that toast. His excuse was that the profession to which he had the honour to belong owed a great debt of gratitude to the Company. As an architect, he always had the greatest dread of plumbers, as for instance that the sheet of lead the workman had before him was not of the proper thickness. However, architects owed a great deal to plumbing, and particularly to the Plumbers' Company. Without the assistance of the Company plumbers would not be half as efficient as they were. Personally, he had always found them most excellent workmen, and had never had any serious fault to find in the plumbing on any building he had been connected with. The plumbers brought the water in and they kept it out. He would like to congratulate the Company on their Worshipful Master, whom he had had the honour of being connected with and whom he had found to be a most extraordinary man with a passion for work. He thought they had done wisely in getting Sir Vezey Strong to be their Master for a second year, for in his hands the Company could not do anything but prosper.

The Rt. Hon. Sir T. Vezey Strong, in reply, said the form of the toast is ancient, its substance is modern—intensely modern. It is not too much to say that every household in the United Kingdom is vitally concerned in what this toast implies. On the efficiency of our sanitary and water systems and services, the health and much of the comfort of the daily life of the people depends, especially that great and growing number of the population which live in the cities and towns. But it is not only in regard to these services that the public are concerned. The great question is raised of the true relations of ancient and modern methods of securing to the craftsman and the citizen their respective equitable rights. In a word, the Plumbers' Company, like many, if not most, ancient institutions, is on its trial. It is called upon, at any rate, morally, to justify its existence. The toast raises the question, are the roots of the old institution in sound ground, and are its branches making healthy growth? Within the last fifty or sixty years the whole relations of the building trade, in which the plumbers play such an important part, to the public have been changed fundamentally. London does not now possess a single firm of plumbers working on the lines of fifty years ago in regard to the training of its craftsmen, and the primary conditions under which their work is carried out.

The root of the Plumbers' Company lies buried in the depths of the unrecorded past. So far back as Edward III. ordinances were granted to the Company. The object is clearly indicated in each rule, and it is expressed in the later Charter of James I. The object is to prevent the trade being "scandalised or the commonalty damaged and deceived," and to do this, it is enacted that "no one of the trade of plumbers shall meddle with works touching such trade except by the assent of the best and most skilled men in the said trade testifying that he knows how well and lawfully to do his work." The "branch" of the Plumbers' Company spreads over the United Kingdom now, and many men holding the Company's certificate are to be found in the Colonies and distant parts of the Empire. The Company seeks to extend the principle on which the Guild was founded—namely, that craftsmanship and citizenship should go hand in hand. The citizen should recognise and respect the craftsman, and the craftsman should remember the duty he owes the citizen, to give him good work. Under modern conditions the craftsman and the citizen are by no means in close relationship, as they were even fifty years ago. Now the general contractor, or other middleman, comes upon the scene. This changes the close connection of citizen and craftsman. The question of middle profit arises. This change may be unavoidable, and may, in some respects, be advantageous. Nevertheless the qualification and the responsibility of the craftsman must remain and be recognised by the citizen, in the shape of adequate payment for good work. There are two great evils in our present industrial system, first that it makes less provision for systematic training, and that the indirect relation between the producer and the consumer tends to reduce the sense of responsibility of the craftsman. The method by which these evils are being met by the Company is unique. A close working arrangement has been made between the representatives of the plumbers of the Kingdom and the Company with the co-operation of the official and professional representatives of the citizen. The root principle of ensuring the proper training of the craftsman and maintaining his personal responsibility to the citizen is thus upheld. By this co-operation provision is made for the technical and practical instruction of apprentices and young men entering the trade, their examination, and the registration of qualified men who are made responsible to the Company for the efficiency of their work. This system has been greatly strengthened by the marking of registered plumbers' work. The Board of Trade, under the powers enabling the Board to allow the registration of special trade marks where the Board deem it to be to the public advantage, have granted to the Plumbers' Company the registration of a standardisation mark to be used in connection with the work of registered plumbers. To ensure the efficiency of the domestic fittings of our sanitary and water services, the Board of Trade have also granted the registration of a standardisation mark for fittings of adequate quality, to be used as far as possible in connection with the work of registered plumbers. This mark is granted to a joint committee of water authorities, to be used under regulations framed by the Board of Trade. The principle of trade marks to distinguish proprietary interests in various articles has long been recognised, and it has no doubt gone far to secure the fair interests of producers and consumers. But the Act of 1905 extended this principle in a most beneficent direction by enabling the Board of Trade to allow marks to distinguish articles possessing certain characteristics which anyone could supply to the public so long as the article complied with the definite standard of quality indicated by the mark. All may well congratulate the Board of Trade alike on this valuable addition to their statutory powers and their early application of those powers to the protection of the public in the important matters of plumbers' work and of water services. In no case could such protection be more needed. Where considerations of health and the importance of avoiding the great waste and contamination of water are concerned, efficiency must be regarded as the first consideration. At present the health and water authorities are not generally sufficiently empowered to enforce safeguards for the efficiency of workmanship and material used in the work of plumbers.

Doubtless further legislation on this subject is long overdue. But in the meantime these authorities and the public may do much to protect themselves by the means which the Board of Trade have placed within their reach. By the proper use of standard marks the old ideals of excellency of workmanship and responsibility of the craftsman are kept steadily in view. By the further co-operation of the authorities with the Company, and the insistence of the public to require these marks, the old ideals may become more widely recognised, not only in the case of the plumber, but in other industries. The progress already attained provides an important practical illustration of the adaptability of the ancient institutions of the City to modern needs. Under the ancient system the relations of the craftsman and the citizen were regulated by rules proposed by the craftsman being subject to approval by the Corporation acting for the citizen—under our modern methods the representatives of the craftsman and of the citizen act in concert. History repeats itself even in the modern mark allowed to be affixed to the work of registered plumbers, as the Charter of James I. grants to the Company the right to use as a sign of quality "the image, impression or sign of St. Michael the Archangel," symbolising the Destroyer of Evil as representing the works and aims of the Company.

The Master then proposed "Our Guests," remarking that they included many members of the medical, architectural, and engineering professions.

Professor A. Bostock Hill, M.D. (President of the Incorporated Society of Medical Officers of Health), replied, and paid a tribute to the work of the Plumbers' Company in promoting public health.

OUR CONTEMPORARIES FROM OVERSEAS.

The *American Architect* (New York) has issued a special number dealing with apartment houses, of which geometrical plans, elevations, and details are given, as well as photographic views and perspectives. Articles are included on the planning of this type of domestic building, and the number is a useful record of its latest development in various parts of the United States. Other recent issues illustrate country houses by Messrs. Albro & Lindeberg, Messrs. James E. Ware & Sons, and Messrs. Bohnard & Parsons, and town-houses by Mr. Arthur B. Heaton. Successful designs in the Public Auditorium Competition, Portland, Oregon, and in the competition for the Vocational High School, Syracuse, N.Y., are also published.

The *Architectural Record* (New York) has a very interesting number, with illustrated articles on the Passing of Madison Square Garden, the Palace of the Popes at Avignon, Some Century-Old Doorways in Rural New England, Early American Churches. In the series of articles on the architecture of American Colleges, Union, Hamilton, Hobart, Cornell, and Syracuse are now dealt with. Illustrations of current architecture in New York and Cleveland are also included.

Der Architekt (Vienna) contains illustrations of domestic work of various kinds in Buda-Pest, designs by Bohemian architects, all of new-art type, and a photograph of the interior of the choir of the church at Dürnstein, a remarkable piece of Rococo architecture.

Arkitektur og Dekorativ-Kunst (Christiania) gives an illustrated description of Hampstead Garden Suburb and Bournville, and reproductions of premiated designs in a competition for a country hotel.

Arquitectura (Barcelona) illustrates several works of the illustrious architect Don Ricardo Magdalena y Tabuenca of Saragossa, and details of some of the remarkable modern Gothic carving in the new cathedral of Vitoria, of which Don Julian Apraiz and Don Francisco Javier de Luque are the architects.

Berliner Architekturwelt (Berlin) is a monograph on the new Stadthaus of Berlin, of which Herr Ludwig Hoffmann is the architect, and a very fine set of illustrations of the building is given.

La Construction Moderne (Paris) illustrates a villa at La Roque, a modern French attempt at half-timber work, and some furniture from the Salon d'Automne, which is far more satisfactory.

Deutsche Bauzeitung (Berlin) has recently published descriptions and illustrations of the new Rathaus at Schöneberg, further views of the new Stadthaus at Berlin, and an illustrated article on the civic architecture of Prague.

Moderne Bauformen (Stuttgart) for its principal subjects gives photographs of the Evangelical Church at Flavil in Toggenburg and a house at Vienna for Herr Director Franz Rauch. Several works of Paul Baumgarten, a Berlin architect with a gift for the picturesque, and the extension of the Museum of Technical Art at Cologne by Franz Brantzky are also illustrated.

The *Western Architect* (Minneapolis) has for the subjects of its illustrations this month the First Congregational Church, Kansas, Missouri; Princess Theatre and Studio Building, St. Louis, Missouri; City National Bank, Mason City, Iowa; Y.M.C.A. Building, La Porte, Indiana; Garage and Sub-station for Minneapolis General Electric Co.; First-prize design for Temple of Justice, Washington State Capitol Competition; a two-storey shop front; an apartment building, St. Louis, Missouri; and detached houses at Chicago, Los Angeles, and Oakland, Missouri—quite a representative collection of modern American architecture of the everyday sort.

The name of the donor of the sum of £30,000 to London University—the gift of which was announced in these columns last week, and which is to be expended primarily on the School of Architecture—must, for the present, remain unknown, but it may be stated that it is a person with a keen interest in architecture who desires "to see the completion of one of the most beautiful buildings in London." The new buildings are to be erected at the north-west of the present building. The gift was accepted with gratitude by the Senate, subject to the formal submission of the matter to the Academic Council, from an educational standpoint, and to the Finance Committee from other aspects. The Senate of the University will, it is expected, be in a position to proceed with the work as soon as the two Committees have formally dealt with the subject. The new buildings will be in keeping with the existing main block, and will occupy a site slightly recessed from, but on the frontage of, Gower Street. With the new chemical laboratories, which are to be built on the north side of the University College property, the premises will, in the near future, form a very important and extensive block, the architectural character of which will be of a notable kind.

Wednesday, January 3.

Cardiff, South Wales, and Monmouthshire Architectural Society : Paper on "Holidays in Normandy," by Mr. J. H. Phillips.

Monday, January 8.

Royal Institute of British Architects : Business Meeting and Special General Meeting at 8 p.m.

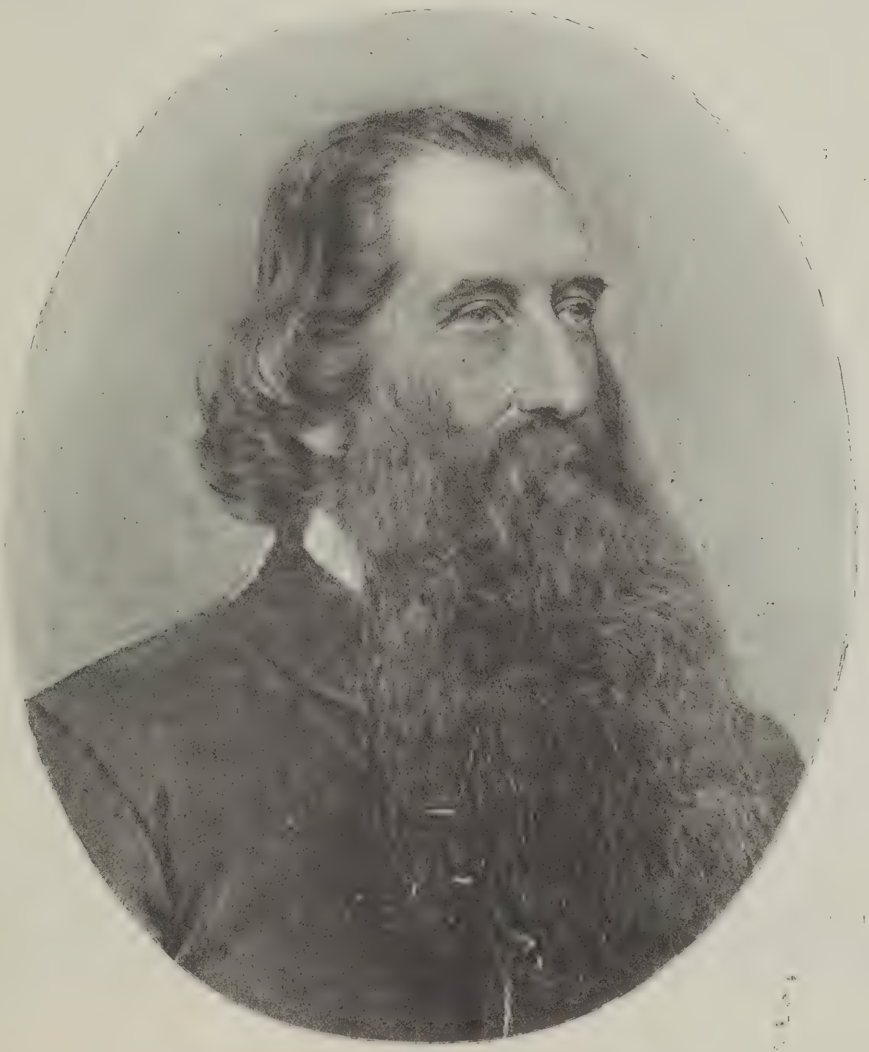
Liverpool Architectural Society : Paper on "Museums and Art Galleries," by Mr. Edwin T. Hall, at 6 p.m.

Tuesday, January 9.

Nottingham Architectural Society : Exhibition and Criticism of Designs, "A Detail of a Facade for Business Premises," at 8 p.m.

Wednesday, January 10.

Northern Architectural Association : Paper by Mr. T. M. Claque, at 7.30 p.m.



THE LATE MR. GILBERT WOOD.

Born April 20, 1833; died December 22, 1911.

Mr. Gilbert Wood, the founder of this Journal, was known personally to many of our readers and advertisers before he retired from business ten years ago. All who knew him then will remember his commanding presence, his sound knowledge of business, and his absolute justice and integrity. The slightest acquaintance with him compelled respect; and a more intimate knowledge inspired affection. A happy accident determined his choice of a career. He wrote a letter to the *Times* upon some topic of passing interest. The editor thought so well of it that he printed it as a leading article, and sent to Mr. Gilbert Wood the first money which he earned as a journalist. Mr. Gilbert Wood soon proved that his capacity for the business side of his profession was no less striking than his capacity for its literary side. In his early twenties he was in sole control of a large firm which printed a great number of newspapers. From his earliest youth, therefore, he was connected with printing, publishing, and journalism; and we can truly say without exaggeration that there was nothing about the business of producing a newspaper—from setting up the type to writing the leading articles and editing the paper—that he could not have done with his own hands and brain. During his life he was engaged in conducting journals and newspapers of many kinds; and no paper in which he was concerned ever failed to be a success under his management. This career of unbroken success is due not only to the fact that he possessed an intimate knowledge of all branches of his profession, but also by reason that his varied interests in many other spheres taught him that thorough knowledge of human nature which is the foundation of success in all walks of life. In the political world he was a strong Conservative. He had advocated the cause of Tariff Reform upon the public platform for thirty years. He was a fine public speaker, and his services to his party were so great that the late Lord Beaconsfield offered him a knighthood and a safe seat in Parliament, both of which were declined, for by him honours were not sought, and a busy journalistic life did not permit him to devote the time required by such additional work. In the religious world he was an elder of the English Presbyterian Church, to which body he rendered many valuable services; and for many years he was an earnest worker for the Sunday School Union. All those who were privileged to hear him talk of his past life in his latter years felt that here was a man who could have truly said of himself the words which Tennyson puts into the mouth of Ulysses:

> "Much have I seen and known; cities of men
> And manners, climates, councils, governments,
> Myself not least, but honour'd of them all."

Just ten years ago—the period at which our portrait was executed—a serious heart attack compelled Mr. Gilbert Wood to retire from the active management of this Journal. For seventeen years before that date his eldest surviving son, Mr. Percival A. Gilbert Wood, had been associated with him and his partner, Mr. Hobart, in the control of the business. For the last ten years Mr. P. A. Gilbert Wood has taken over the entire control. After the retirement of Mr. Gilbert Wood the paper was edited by Mr. Hobart till his death in 1908. The work of his successor, Mr. Farrow, is well known to and appreciated by all our readers. It must, indeed, be admitted that no light task was set to the responsible staff when, on Mr. Gilbert Wood's retirement, they were called upon to maintain his high standard of achievement. But the last ten years have shown, and we doubt not that the next ten years will show even more clearly, that this Journal is still inspired by the example and the memory of its founder—almost, if not quite, the last of the grand old men who adorned the journalistic world of the Victorian era.

To the Readers and Advertisers of this Journal.

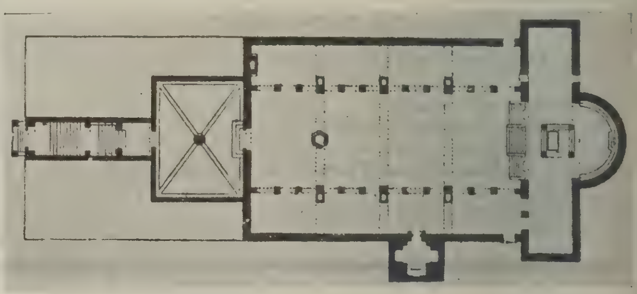
It is with sorrow that I have to announce that my father, Mr. Gilbert Wood, passed away on Friday morning last after some years of suffering. This Journal, which he founded and in which he took so much pride, he has committed to my care, and my constant endeavour will be to conduct it in the same straightforward manner that has characterised the past forty-four years of the paper's existence. Out of that forty-four years I have been associated with my father for twenty-seven years, and I ask the same generous treatment at your hands in future that was accorded in the past to my father, to Mr. Robert Hobart, and to myself. It is my intention, with the aid of the present editor, Mr. F. R. Farrow, F.R.I.B.A., to maintain a high ideal in the conduct of the paper, so that it may always be found helpful to the great profession typified by its name, fair and just in criticism, accurate and full in its news, and, in short, worthy in every way of the traditions of the past and of its honoured founder.—Yours faithfully,

Percival A. Gilbert Wood.
(Gilbert Wood, jun.)

EARLY ROMAN CHURCHES.

(*Concluded from last week.*)

St. Prassede, originally an early foundation, was rebuilt in its present form in the year 817, and possesses features unique amongst churches of this class—viz., a series of transverse arches thrown across nave and aisles. Piers dividing the ranges of columns into two or more groups have been already described at St. Clemente; in this example there are three such oblong piers on each side, but the long dimension of the pier is not, as elsewhere, in line with the columns, but set transversely to them and projects into the aisle, and from the piers spring the transverse arches referred to. This is a feature frequently met with in Romanesque churches, and it is by no means improbable that they are a later addition to the original scheme.

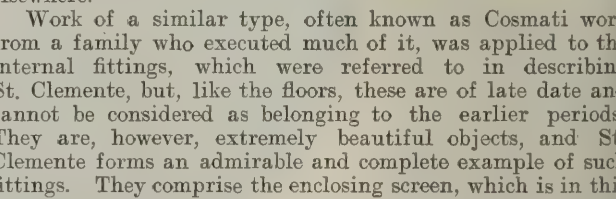


ROME.—PLAN OF ST. PRASSEDE.

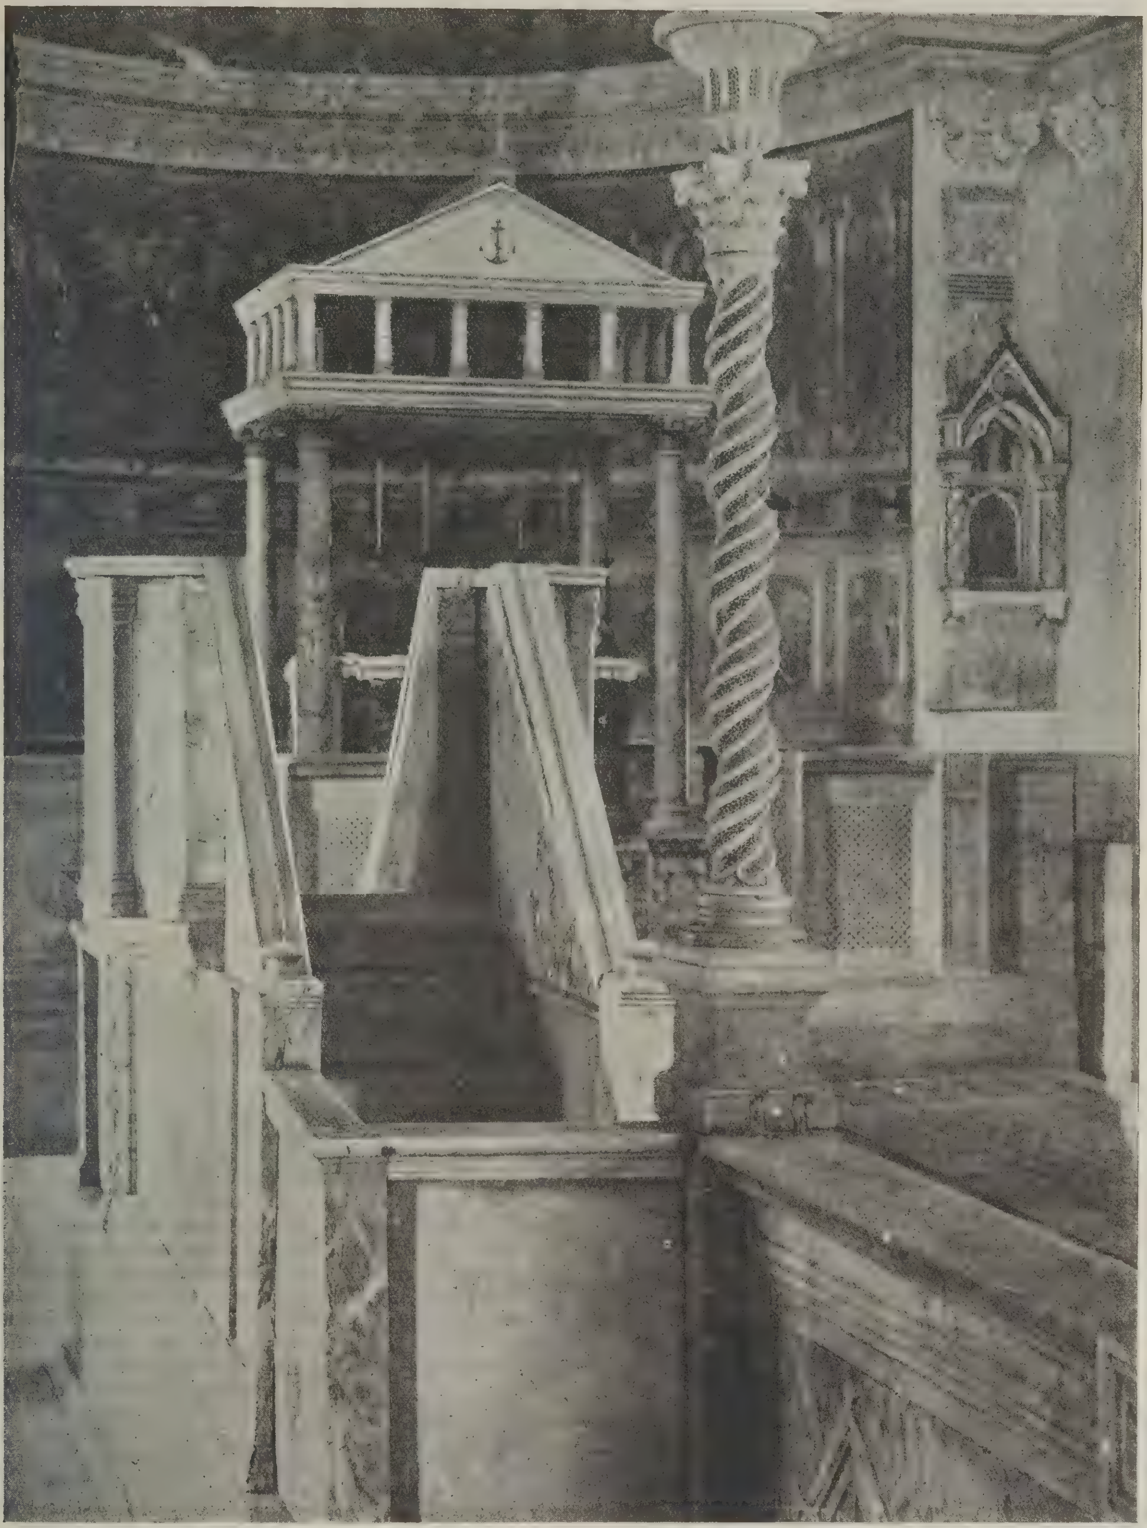
Mosaics played an important part in the internal decorative treatment of the basilican church. A mosaic treatment appears to have been regularly applied to the semi-dome of the apse and to the arch of triumph in front of it, and in some cases also to the side walls above the arcade.

Another important feature in the internal colour scheme was the floor. In the original buildings the floors were probably formed of coloured marbles laid in large pieces and disposed geometrically in the manner employed in Roman public buildings and known as opus sectile. This type of floor has been employed in the reconstructed church of St. Paul-without-the-Walls, and a splendid Roman example remains in the Pantheon. Marble mosaic also was probably used in some examples. But the majority of the pavements which are now to be seen in these basilicas are of much later date and are formed of opus Alexandrinum. In this style of floor large slabs (usually circles of rich coloured marble or porphyry) form the central features of the design, and these are surrounded with bands made up of small pieces of different coloured marbles arranged in pattern, alternating with broad bands of white marble, and producing an extremely rich and harmonious floor. Splendid examples occur at St. Maria in Trastevere, St. Maria Maggiore, and elsewhere.

Work of a similar type, often known as Cosmati work from a family who executed much of it, was applied to the internal fittings, which were referred to in describing St. Clemente, but, like the floors, these are of late date and cannot be considered as belonging to the earlier periods. They are, however, extremely beautiful objects, and St. Clemente forms an admirable and complete example of such fittings. They comprise the enclosing screen, which is in this example complete, the two ambones, reached by short flights of stairs from within the screen, and a candelabrum, in all of which work of this type occurs. There is also an example of the ciborium, which was erected over the altar and consisted of four columns, usually carrying an entablature or merely a light architrave, above which occur on each side a row of small columns supporting a canopy. At St. Lorenzo and elsewhere there is a second tier of these small shafts arranged in an octagonal plan, and the canopy is octagonal and is surmounted by a lantern-like feature, also octagonal, and carried by small shafts. St. Lorenzo also offers a beauti-



ROME.—PLAN OF ST. LORENZO.



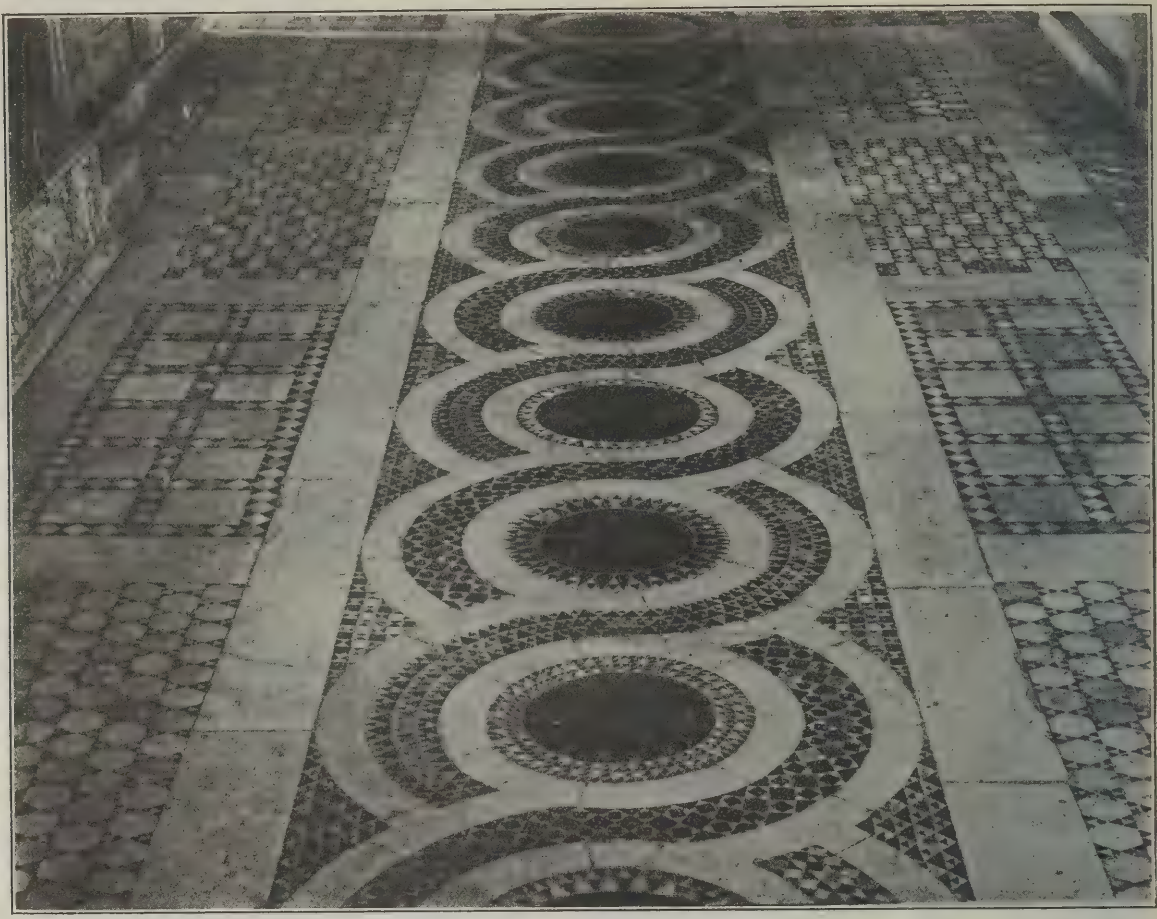
ST. CLEMENTE ROME

ful example of a screen and throne of this character, and also of an ambone, which is placed in the nave.

Another feature that cannot be altogether overlooked, although it did not belong to the early foundation, is the cloisters, which formed part of the aggregation of monastic and other buildings which by degrees were erected in connection with many of the Roman basilicas. Many of these are large and contain some beautiful work. They consist of a large central area, which is open, surrounded by a walk on all sides; this is covered by a sloping roof the eaves of which, near the inner garden, are supported on a colonnade formed of small columns sometimes single, sometimes in pairs, carrying an arcade. The columns are many of them twisted spirally or fluted, and in some examples have bands of mosaic work let into them. The cloisters of the Lateran form a beautiful example. Not only are many of the shafts treated with lines of mosaic, but above the arcade on the outer face there is first a narrow mosaic band or deep frieze treated with a kind of ornament, but with squares and circles alternating.

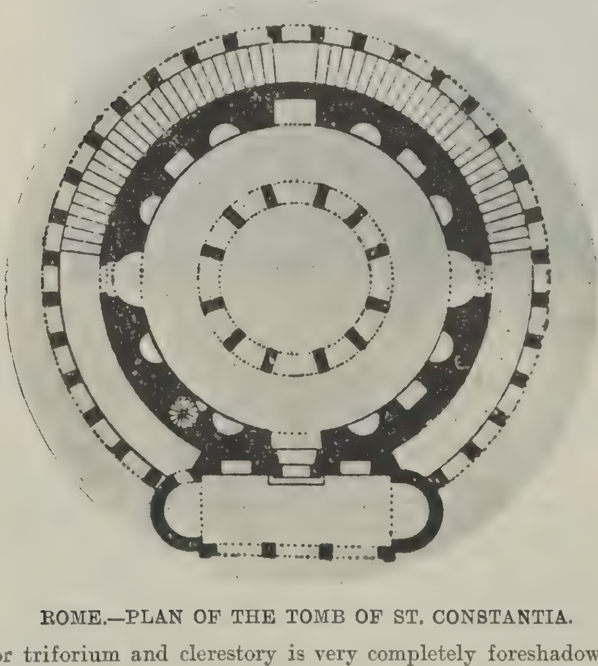
In this short account of the basilicas an attempt has been made to suggest the general arrangements of this class of buildings and the principal variations that are found in their general plan. I claimed for them an important place in architectural history, and do so not merely on the ground of their size or richness or beauty, but also because of the influence they had on later Christian architecture.

In many Romanesque buildings this is very notable, and in later mediæval buildings, though less apparent, it is very real. It is true that in many respects the system of construction was superseded, and also the method of enrichment and the manner in which the supports are distributed and the character of the supports is also changed, but the basilica to a great extent fixed the type of plan that was and still



ST. CLEMENTE, ROME.—FLOOR OF CHOIR LOOKING TOWARDS ATRIUM.

is used not exclusively, but for the great majority of Christian churches in Western Europe. The nave with its single and double aisles and the transepts are found very usually in a great majority of later churches. The eastern projection is of much greater importance than the Roman apse, in many cases rivalling the nave in extent; but, except in our own country, the apse itself is a very usual eastern termination; even the extended choir finds a prototype almost by a kind of chance in that of St. Lorenzo. The internal triple division of the nave into an arcade, gallery or triforium and clerestory is very completely foreshadowed in such a church as St. Agnes. Although the internal effect and the system of construction of a Roman basilica and a Gothic church are widely different, they have much in common in the actual disposition of the parts.

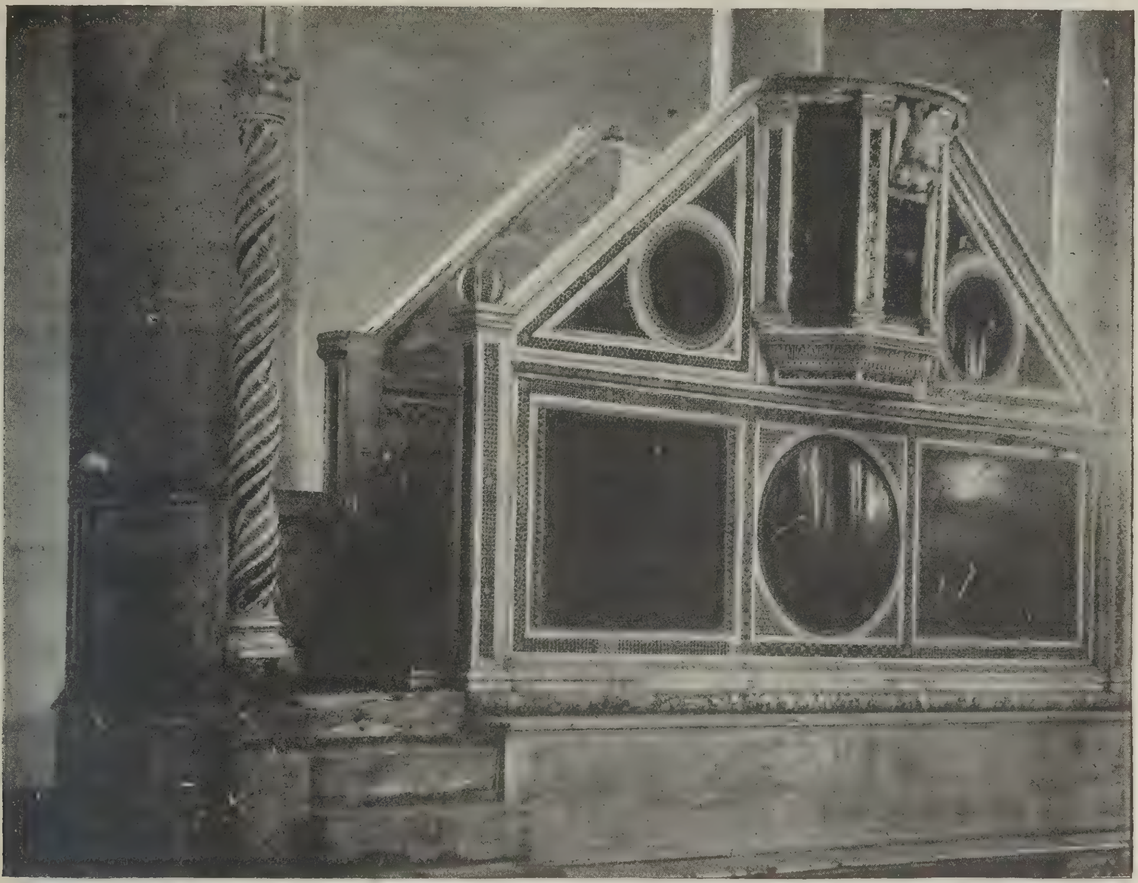


ROME.—PLAN OF THE TOMB OF ST. CONSTANTIA.

Basilicas were not, however, the only sacred edifices that were erected in the early days of Christianity in Rome, and it is necessary to refer to buildings having an entirely different type of plan, one that is based on a circle or in some cases on a polygon.

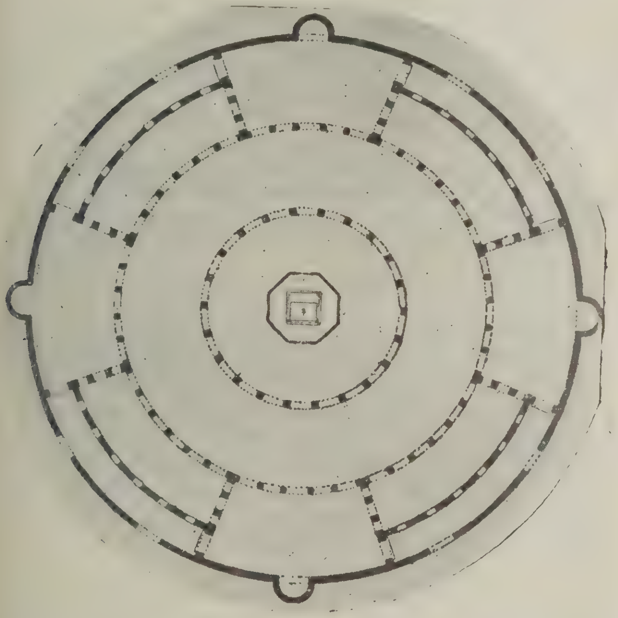
Buildings having a plan of this type had been repeatedly used for memorial tombs by Roman emperors and patricians. One of the earliest and best preserved Christian buildings of this type was originally erected as a tomb for Constantia by her father the Emperor Constantine. This is outside the walls near the church of St. Agnes, and consists of a central circular space, about 35 feet in diameter, surrounded by an aisle; between the two are twelve pairs of columns, the coupled columns being employed in this case to give a wide base to the arcade carrying the upper wall, which was 4 feet thick. This is the earliest existing example of such an arrangement. The spacing of the columns is not uniform, the arches on the four cardinal openings being wider and higher than the others. The aisle is enclosed by a massive wall, in which a series of recesses are formed alternately square and apsidal, and in the square recess directly opposite the entrance stood the sarcophagus of the princess. The aisle is covered by a semicircular vault, which still retains to a great extent the original mosaic decoration. It was entered through a large narthex, having an apse at each end. This building was externally plain, and both the dome and the aisle roof were covered by low-pitched timber roofs; the system of construction is akin to that of the late Imperial buildings rather than to that used for the basilicas.

The other early circular building in Rome—St. Stefano Rotondo—which is ascribed to the latter part of the fifth century, is very much larger and belongs to the basilican type of construction. The central space is enclosed by twenty-two Ionic columns carrying architraves and supporting a circular drum; at some subsequent date this was divided by a cross wall resting on two lofty Corinthian columns and two piers, the latter built so as to include two of the original columns, and from these supports three large arches rise, which carry above them a wall carried up to the flat ceiling. Round the central space runs a double aisle which was originally separated by another range of columns not continuous, but subdivided by eight piers into groups of alternately four columns with Corinthian capitals and five



ST. LORENZO, ROME.

columns with Ionic capitals, the latter being somewhat less lofty. Both kinds are surmounted by dosserets and carry an arcade. For the most part the intercolumniations are now filled in with a wall. The outer aisle was enclosed by a wall and was subdivided, but the original disposition cannot be ascertained with any certainty owing to the numerous alterations and its ruinous state.



ROME.—PLAN OF ST. STEFANO ROTONDO.

An example of an early polygonal building in Rome is the baptistery of the Lateran, originally erected by Constantine, but in its present state little but the general form represents the original arrangement of the building. Originally it had a central space about 30 feet in diameter, in which was a basin of porphyry. This space was octagonal, and at each angle was a porphyry column; the columns carried a marble entablature which supported a gilded dome, which survived till about 800. The surrounding aisle was also octagonal, and was enclosed by thin walls and probably covered by a wooden roof at first, though afterwards vaulted. In later times the building has been raised, lighter columns placed above the lower ones, and a gallery formed over the aisle, so that the internal effect has been completely changed.

This type of building persisted in Italy for a long period for baptisteries, which in the early days of the Church were always distinct from the church itself, and were usually associated with the cathedral church of each district, and such examples as the baptisteries of Pisa and Florence will readily suggest themselves among later examples; but though one cannot illustrate this type of building in its original condition from Rome itself, one may once again turn to Ravenna for an example which, though not an aisled example, is octagonal in plan and retains the central basin and the original rich decorative treatment of the walls in a remarkable state of preservation.

VICTORIA AND ALBERT MUSEUM.

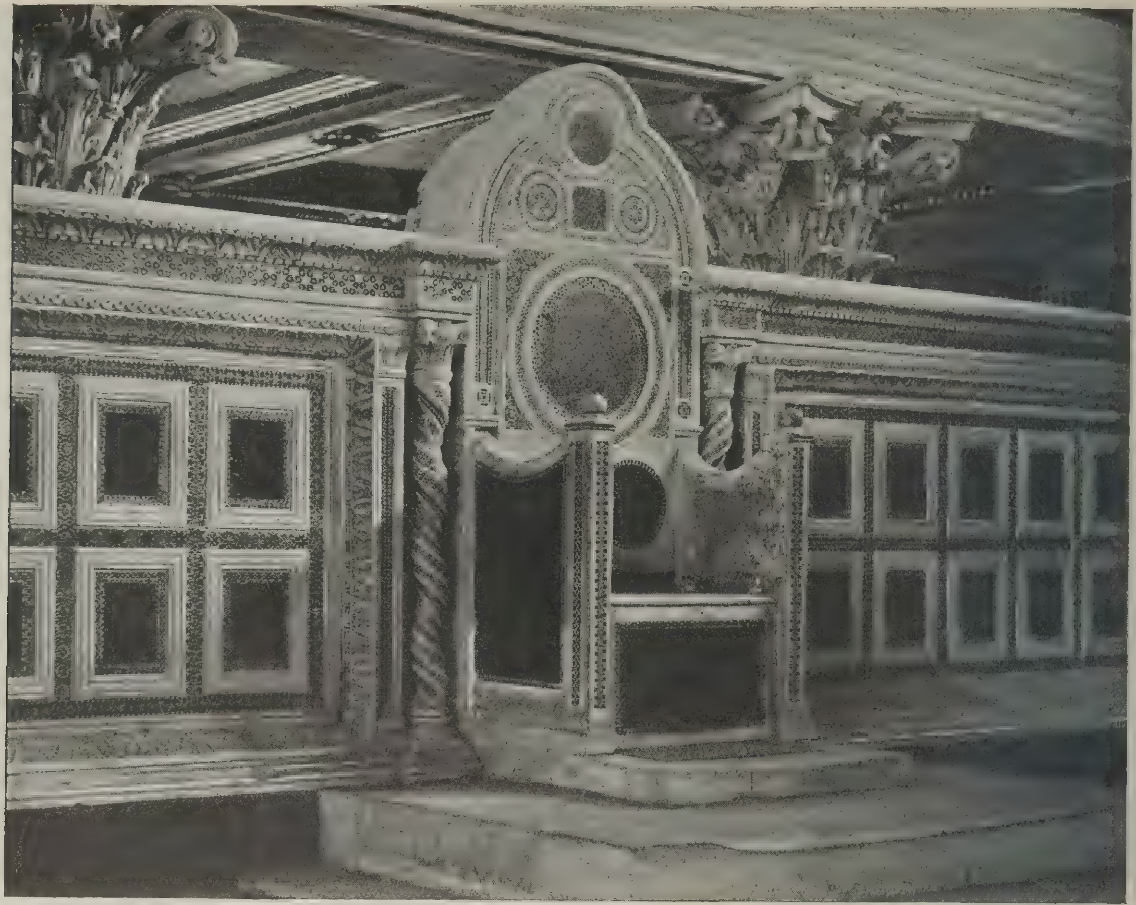
THE following are among the more important examples of old English furniture which have been recently acquired by the Victoria and Albert Museum.

To the collection of English Gothic woodwork has been added a portion of a rood screen of oak, still bearing traces of its original colour. It dates from the late fourteenth or early fifteenth century, and the western front of the screen, of which this portion formed the eastern, is still in situ in Tilbrook Church, Bedfordshire.

The examples of Tudor furniture in Room 6 have been increased by the acquisition of four finely carved bed-posts of the time of Henry VIII., and those of the Elizabethan period in Room 52 by a writing-desk elaborately inlaid with architectural designs of the type commonly known as "Nonesuch," from their resemblance to the façade of the palace of that name built by Henry VIII.

The additions to the walnut furniture of the seventeenth century comprise a Cromwellian armchair, several Charles II. chairs, including one very elaborate example, and a chair of rare form intended for the use of a child (Room 54).

Several important examples have been added to the collection of marquetry furniture of the time of William and Mary in Room 55. Among these is a chest of drawers, with cabinet above, dated 1688.



ST. LORENZO, ROME.

To about 1700 may be attributed a recently acquired complete upholstered bedstead, with curtains and canopy, from Welford-on-Avon, and a corner cupboard or buffet of carved pine bearing the arms of Hicks, lately removed from an old house in Bristol. The latter of these two objects is to be seen in Room 56; the former is being prepared for exhibition.

To the collection of eighteenth century clocks in Rooms 55 and 56 have been added two so-called "grandfather" clocks in dark green English lacquer, both bought in Spain, one of which was given to the Museum by Mr. L. Harris; a similar tall case clock, of later date, in inlaid mahogany of Lancashire make, given by Mr. Emile S. Mond; and a bracket clock of mahogany and olive wood.

The rare furniture of the early Georgian period, previously almost unrepresented in the Museum, is now illustated by a choice carved and gilt mirror, the gift of Sir Edward Stern. This mirror closely follows the style of the well-known architect and designer, William Kent, and was probably designed by him for Frederick, Prince of Wales. It is exhibited in Room 56.

The chief addition to the furniture in the Chippendale manner consists of an historical chair, being the President's chair of Lyons Inn, one of the old Inns of Chancery, the buildings of which dated from the early part of the eighteenth century, and were destroyed in 1862. This important example of mid-eighteenth century woodwork will shortly be placed on exhibition.

ILLUSTRATIONS.

PULPIT, HOLY TRINITY CHURCH, LEEDS.

THIS pulpit is an interesting example of eighteenth century woodwork. The sounding board is a fine piece of work, the curved portions on the sides producing a pleasing effect. The underside of it is overlaid with carefully selected hard woods. The chief rays are in a yellow wood, and show up well on a dark ground. The mouldings of the pulpit are enriched, as are those of the sounding-board. No two of the carved panels are alike. The square panels in the front and sides are overlaid like the underside of the sounding-board. The base and steps to the pulpit are modern. The former does not show very much as it is hidden by the chancel rail, which returns round the pulpit.

MODERN BUCKINGHAMSHIRE HOUSES.

IN our issue of December 1 we gave a view of the exterior of "Uplands," Beaconsfield, together with a description. We now have the pleasure of publishing interior views of this house, of which Messrs. Johnson & Boddy are the architects.

ST. DAVID'S BUILDINGS, ALEXANDRIA.
TAWA'S BUILDINGS, ALEXANDRIA.

THESE photographs illustrate modern English work in Egypt, of which Mr. Robert Williams, F.R.I.B.A., is the architect.

The suggestion of Mr. E. M. Gibbs, F.R.I.B.A., for a viaduct and two-storeyed markets on the line of Sheffield's long-delayed new street from the Great Central Station to the Haymarket is one of those clever ideas that astonish by their simplicity. We fear that the City Council are at present too much engaged in squabbling about the new street for any right decision to be made just yet. Perhaps the contending parties may some day have the good sense to adopt Mr. Gibbs' proposal as a *via media.*

We have received a copy of a photogravure from a drawing by Mr. Leonard Patten, showing the east end of the interior of the Chapel of Henry VII. at Westminster, which, whilst charming in its treatment of light and shade, is wonderfully truthful in its presentation of the intricate detail of the architecture.

In the *Art Journal* for this month is an architectural article in the shape of an illustrated description of Amerongen, the seat of the first Earl of Athlone. Another interesting article is that on "Late Seventeenth Century Work at Drayton," with reference to furniture of that date. The series of papers on "Tapestry weaving in England" concludes the history of the Mortlake manufactory.

THE SOCIETY OF ARCHITECTS.*

(Concluded from last week.)

HERE is a possibility, it must be admitted, that these remains (which can hardly be called ruins, being little more an rock-cut foundations) were of post-Roman origin, with e exception of the colossal statue already mentioned; for en after the fall of Rome, Alexandria retained a great nount of its importance, rivalling Constantinople for a nsiderable period as the centre of the Christian faith—as still is the metropolis, if there be one, of the Coptic branch ereof. Thus the mere presence of Roman bricks regularly ilt up in walls, and of Roman masonry, can be taken as finite evidence only that the work was *not* carried out *before* e advent of the Romans. On the other hand, such evidence there is of architectural work during the period known the Byzantine, is wholly to the effect that Alexandria was en, in an architectural sense, completely dominated by e great city on the Bosphorus. This is seen in the museum, here there are several fine Byzantine columns and isolated pitals, equal in all respects to those of Constantinople, avenna, and Venice, and identical in spirit with such as ould be found in either of those acknowledged Byzantine ntres, of any date between the sixth and eleventh centuries the Christian era. There are, for instance, Ionic columns, ith Byzantine dosserets resting on their capitals, carved ith the Maltese Cross; but with the carving raised above e general surface and not sunk beneath it, as is almost variable in Byzantine work elsewhere; but in the capitals emselves the dart replaces the tongue, and the volutes e crude. Perhaps—it is only a suggestion, with no proof support it—these capitals belonged to one of the earlier hristian buildings, of a date even earlier than that of e foundation of Contantinople; for it is difficult to believe at the Byzantine style sprang into existence, without olution by gradual degrees, complete and perfect, with the ilding of that city and the erection of its great domed urches. And Alexandria, alone of all the great towns of e East, can reasonably be supposed to have been the place here any such gradual change took place—subject, as it as, to many influences itself.

One capital in the museum alone is indicative of Roman irit. It is coarsely carved, a crude attempt at the Composite capital, as it might have been evolved from the typical lexandrian capital, with voluted leaves at the angles, and s echinus has darts cut between the eggs instead of tongues. his, too, may indicate one of the many influences at work t of which Byzantine ornament was developed gradually.

That it was fully evolved at last, and used exactly as elsehere, is shown beyond possibility of dispute by the fine asket capitals of typical form of which the museum contains everal examples, with all carved effect obtained by sinking e background below the retained general surface, and with anels worked on the principal faces of the capitals, as it ere, let into the basket work, and enriched with stiffly esigned foliage.

But such work as this, architecturally perfect as it is, may ell have been imported, in inspiration at least. That for hich Alexandria stands alone is of earlier date and aracter, late Greek or early Roman as some might call it, ut in greater truth Alexandrian, typified by a form of orinthian capital practically unknown elsewhere, but ommon in the Egyptian port, as the numerous examples the museum indicate without doubt. It is, too, one of e most beautiful forms of capital known, beyond the beauty f that generally known as the Corinthian—with little vidence that it was ever used at Corinth—which it resembles all respects except the use of leaf volutes at the angles place of tendrils. Thus there surely is at least a doubt hether Alexandria was not the real home of the order. If , the name of Alexandrian should be given to it in place f Corinthian, and the Alexandrian form should be accepted s the general type. At least its recognition, and its use ith such modifications as might be called for under individual circumstances, is fully justified in modern work which pes the Classic.

Mr. R. G. Lovell, in proposing a vote of thanks, said hat the important discoveries which Mr. Middleton had nade showed how necessary it was for them to keep their eyes pen wherever they went. He had himself passed through Alexandria; but beyond the extremely interesting catacomb o which Mr. Middleton had referred he was not at that ime aware that there was anything of architectural interest in the place. He did not even know that there was a museum until he heard it that evening. The lecturer's deductions with regard to the home of the Corintian order seemed to be exceedingly well founded. The evidence of Egyptian occupation was to be traced a good deal further up the Nile than Alexandria, as he remembered making a sketch of an Ionic capital at Luxor. They had heard something entirely new, and which would strike the archæological world with even more force when it was seen in its true perspective. He expressed his admiration for Mr. Middleton, who at the time was travelling in pursuit of health, for his work in gathering the materials for his lecture.

Mr. H. Freyberg, F.S.I., in seconding, expressed his appreciation of the lecture and the way in which it had been presented to them. Scientists for the most part were so absorbed in their matter that they ignored the fallibilities of their audience. He had never had the opportunity of visiting any part of Egypt, but there was one question which arose in his mind, and that was as to what had become of the remainder of the buildings of which vestiges had been found, and which, if existing at the present time, would be remarkable throughout the whole world. The answer to the question, he thought, might be found in the history of places like Venice, where, at the conclusion of a successful war, the conquerors made their opponents throw in, in addition to the war indemnity, certain shafts of precious marbles, which were carried to the home of the victors. If, therefore, shafts could be taken, people with the tastes of the Venetians were not likely to leave behind the capitals, and in giving the Venetians credit for the west front of St. Mark's they were probably giving them credit for the brains and artistic efforts of a people in far distant countries. No one, he thought, who designed the façade in question on paper would have put in so many shafts and so many capitals, and it was more likely that they were added as they were secured from vanquished foes.

Mr. Robert W. Carden said he was waiting to hear Mr. Middleton refer to the architect who was supposed to have laid out the city of Alexandria on behalf of Alexander the Great. It was extremely hard (although quite usual) to find that his name was left out. So far as he knew the architect was Dinocrates, and the city was founded, he believed. in 332 B.C. The employment of Dinocrates strengthened Mr. Middleton's argument, and the sketch of the Ionic capital, followed by a photograph of the capital from the Temple of Diana at Ephesus, seemed to have some bearing upon the point.

Mr. Geo. E. Bond (President), in putting the vote of thanks, associated himself with all that had been said. Mr. Middleton had made a point of the fact that Alexandria, from an architectural point of view, had been neglected, and he entirely agreed with him. But he thought the reason was that Alexandria had other claims to distinction which were overwhelmingly obvious and to a great extent overshadowed any claim it might have to be an architectural centre. Alexandria during the Ptolemaic period developed the exact sciences and did so much for the establishment and development of what they might call modern civilisation that they were now feeling its effects and were enjoying its results. When they considered the great names which were household words with them, such as Euclid, Archimedes, Hippocrates, and Ptolemy, there appeared to be some reason for people not taking so much interest in it from an architectural point of view. Alexandria was founded just at the time when the imaginative Greek philosophy, which culminated in Plato, was giving way to the more practical and rising philosophy of his great pupil, Aristotle. At the present time they were reaping the benefit and following closely in the footsteps of the scientists, who to a great extent owed their fame to the great museum founded by the second Ptolemy, and to the great library, the collection of which was initiated by the founder of the dynasty. Alexandria has always been noted for its great museum and its great library, both of which had passed away years ago.

A hearty vote of thanks was then accorded to Mr. Middleton.

Mr. G. A. T. Middleton, A.R.I.B.A., in reply expressed his thanks for the way in which his remarks had been accepted, and said Mr. Bond was very likely right as to how it had come about that Alexandria had been thought more of from another point of view than that of architecture. Mr. Freyberg's suggestion with regard to the disappearance of the major portion of what must at one time have been a very fine city was also probable, although it was only surmise. They knew that Alexandria was the centre of a most extraordinary contest between the Christians and Pagans, leading to fight after fight, and eventually the conquering Christians destroyed all evidence of the previous Pagan religion, and so the whole of the great city of Alexandria perished, swept away by fire after fire. The discoveries made in recent years had only come to light through the reclaiming of the foreshore. It was almost incredible that a curator of a museum had placed things of great archæological interest in his museum without letting Europe know. One would have thought that a French curator would at least have notified Paris, and thus ensured its report throughout the civilised world. There was not a word on the labels of any one of the remains in the Alexandrian museum as to where it was found or its probable date. He had not intended to imply that the arch was unknown to the Greeks or the Egyptians, but it was exceedingly rare, and he did not know of a case of a Greek capital being used in connection with the arch, although there was a strong suggestion of it having been used at Alexandria.

---

* A Paper on "Alexandria: its Place in Architectural History," ead by Mr. G. A. T. Middleton on December 14.

The proceedings then terminated.

NOTTINGHAM ARCHITECTURAL SOCIETY.

A GENERAL meeting of this Society was held on Tuesday, December 12, at their rooms.

Mr. L. Y. Harris was elected an Associate.

Other business being disposed of, Mr. W. H. Taylor, Fellow of the Surveyors' Institution, Licentiate of the Royal Institute and Barrister-at-Law, read the following paper on "Some Notes on the Law relating to Building Schemes":—

There are several factors at work at the present time which may eventually give an impetus to the development of land for building purposes, namely,

1. The Finance Acts of recent years.
2. The Housing and Town Planning Act, 1909.
3. The Garden City movement,

in districts where the balance between supply and demand is favourable.

And although the second and third of these factors will doubtless tend towards the production of more comprehensive schemes in the future than have been projected in the past, owing to certain restrictions being removed which hitherto have retarded the work of development, yet I think architects and surveyors in whose hands the actual organisation of the work of development will lie may possibly be in some danger of overlooking the fact, that notwithstanding that the conditions under which development will take place are changing, yet the law relating thereto is in many directions stationary, and more particularly on points which have a deterrent and hampering effect.

The broad general principles of the law affecting development schemes are quite well known and understood. It is when one descends to individual cases that one not infrequently finds these general principles difficult to apply, and also that they are often of a seemingly hampering and vexatious character, restricting the natural rights of the owner and circumscribing the range of the designer's scope; and when one is confronted with such cases one is tempted to a feeling of outraged liberty, forgetting that what appears to be a hardship on the individual is generally for the benefit of the community.

I propose to put before you a few points in relation to development schemes and the erection of buildings which have often been a source of trouble to the architect in the past and most of which will again and again turn up in the future, despite the trend in modern methods of development and building and in legislation relating thereto, more particularly because I think if these points were kept to the front in the pigeon-holes of an architect's memory, both he and his client would be saved much trouble and annoyance.

Speaking for myself, I think one is apt to be so obsessed with the general lay-out of the work in hand as to overlook the small points which not infrequently render the whole scheme abortive, or at any rate involve an entire recasting after much work has been done and time spent.

These points may be considered under three heads, viz.:—

1. Laying out new streets.
2. Building lines.
3. Air space.

1. *Laying Out New Streets.*

Where land is brought into the market and laid out in plots for building purposes it may or may not be necessary to form new roadways where never before the public had any right of passage, but it would be safe to say that in every case there exists on or adjoining some part of the land an existing roadway used by the public: such roadway may be "a street," in the common or garden meaning of the term, or a main turnpike road, a narrow country lane, or even a mere occupation road: and, generally speaking, any such road affords building frontage of which the owner is not slow to avail himself, and is consequently looked upon as an advantage, when in fact it may turn out to be a source of trouble and expense, for when buildings come to be erected abutting on such old roadway the owner and his architect are often confronted with an objection by the local authority to the intended use of the frontage on the score of turning the old roadway into a "new street," which new street does not comply to the local regulations as to width and construction, &c.

This question, as to when an old roadway becomes a "new street," has given rise to a great deal of litigation, all of which seems to me to have ended with no satisfactory results, for one cannot even now say with any degree of certainty when an old lane becomes a "new street."

Barton *v.* Eccles Local Board was for a long time the leading case on the point, and seemed to establish the rule that an old highway repairable by the inhabitants at large became a "new street" within the meaning of the Public Health Acts when buildings were erected along it: so that where local by-laws required new streets to be 36 feet wide and building operations were commenced along a road, say 24 feet wide, the owner must throw sufficient land into the road to make up the width to 36 feet and form and make up the added portion in accordance with local regulations but, in effect, this case left the question as one of fact to be decided in each instance by the local bench of magistrates.

Following this, in several cases magistrates convicted owners of not complying with the local by-laws, which convictions in some cases were quashed by the Divisional and Appellate Courts, who sought to draw a distinction between cases where there were buildings on the opposite side of the roadway in question, and where there were not.

Compare:—

1. Attorney-General and Stourbridge U.D.C. *v.* Rufford.
2. Gozzet *v.* Malden U.S.A.
3. St. George's L.B. *v.* Ballard.

Then followed Devonport Corporation *v.* Tozer, which appears to over-rule the doctrine enunciated in Barton *v.* Eccles L.B., and to decide that the ordinary by-laws as to new streets do not apply to the case of building operations along an existing highway where the latter is not interfered with. It should be noted, however, that this cannot be taken as settled, for this case was really decided against the Corporation because they had omitted to obtain the consent of the Attorney-General to the proceedings.

The case of Smith *v.* Chorley R.D.C. decided that where a local authority have honestly considered plans submitted to them and they have decided that the proposed works amount to laying out a new street, no action for a mandamus to compel them to alter their decision will lie.

The result of this crop of litigation seems to be that where new buildings are being erected at the side of an old road repairable by the inhabitants at large, and there are no buildings on the *opposite* side, such building operations do not amount to laying out a new street: but that if there are already buildings on the opposite side, the reverse may be the case, though this has not been definitely settled. A building owner is therefore left somewhat at the mercy of the local authority, for if they decide that what he proposes to do amounts to laying out a new street, and he is convinced it is not, his only course is to proceed and to allow the authority to take the first step towards what may prove to be an endless piece of litigation, or to fall in with their requirements.

This is eminently a case where the surveyor to the authority could be consulted with advantage as to his views on the point, where there is any doubt, before much progress is made with a scheme, and so avoid waste of time and labour.

Another by-law relating to new streets in force in most districts runs as follows:—"Every person who shall construct a new street shall provide at one end, at least, of such street an entrance of a width equal to the width of such street, and open from the ground upwards."

To the "man in the street" this by-law means that every new street must have at least one end abutting on some other roadway, and that the line of abutment must be of the full width of such new street. And yet this, which is to me a very plain by-law, has been the bone of contention between authorities and owners in several cases, the former having attempted, and not unsuccessfully, to put upon it a strained, and to my mind, an utterly ridiculous meaning.

The earliest leading case appears to be that of Hendon

.B. *v.* Pounce—commonly known as Pounce's Case, where ne Local Board contended that by "entrance" was meant means of access," and that the roadway on to which the ew street joined must be also of the by-law width; so that a ew street could not be joined on to an old road or street nless the latter was of the width required by the by-laws, was widened to comply with them. Unfortunately, the udge in this case adopted this view.

The next case, and probably the most interesting on this oint, is Bromley L.B. *v.* Lloyd.

A more recent case still, where the position was somewhat milar, is that of Barton Regis R.D.C. *v.* Stevens, before ne Divisional Court, who held that Pounce's case must be ollowed, and that Mr. Justice Kekewich's judgment in romley L.B. *v.* Lloyd was right, and Mr. Justice Wills's udgment wrong.

A few moments' reflection will, I think, convince you that his last case reduces the law to an absurdity.

It practically ties up the greater portion of land in ountry districts served by narrow lanes, if the local authorities so will it.

Fortunately, few authorities appear to be taking up an nreasonable attitude on the point, and, in passing, I may emark that the Corporation of this city have a similar y-law so worded that the absurdity does not arise.

Taken in its liberal and proper meaning, I do not suppose there is any reasonably minded person who would object o it, but even then it may in some cases cause great hardhip, owing to the change in other requirements as to new treets.

Again, I may say that it is a by-law which—in whatever vay it may be construed—it is most important an architect vho has a development scheme in hand should bear in mind, therwise if its effect happen to be overlooked, great loss may e occasioned by the oversight.

2. *Building Lines.*

The next point in connection with building schemes vhich almost every architect must run up against at some ime or other, and which often requires very careful consideration, is the matter of the building line.

In entirely new districts where no building has yet been lone, the building line may generally be at the will of the lesigner, subject to compliance with any special local byaws in force. But where buildings are already in existence, he architect may find that the building line is already fixed for him and that such line is in his case a particular uisance, often restricting the general lay-out, and sometimes rendering parcels of land more or less waste and alueless.

Most of the cases which occur in this connection arise under powers conferred upon corporations or urban authorities to define the building line, or under the Public Health (Buildings in Streets) Act, 1888, which applies only to urban districts.

With respect to the exercise of the former, any person aggrieved by the action of the authority is generally entitled to compensation, and although in individual cases the prescribed building line may be obnoxious and detrimental to the owner, still he gets a solatium, whereas the powers conferred by the 1888 Act, especially where they are exercised in an arbitrary manner by the withholding of consent to the building line proposed by the owner for no apparent reason, may result in great inconvenience and loss to him: and should he seek to test the legality of the authority's decision, he will probably learn to his sorrow the really peculiar interpretations which can be put upon the provisions of this Act.

It is commonly thought that any question arising under this Act is one of fact to be determined by the magisterial bench; but when one comes to look into cases, one finds some very puzzling results.

One point is, that the existing buildings and the new one must be "in the same street" within the meaning of the Act, and it has been held in Ravensthorpe L.B. *v.* Hinchcliffe that for the frontage of two buildings to be in the same street they must be "in some degree of proximity."

This point came up for view in Warren *v.* Mustard, where the justices decided that the two buildings were in the same street and convicted, and on appeal the Divisional Court upheld their decision, Mr. Justice A. L. Smith saying that with regard to the question of the buildings being in the same street, that was a matter of fact for the determination of the magistrates, and in this case they had determined that the frontage formed by the line of cottages was in sufficient proximity, and whatever he might think of their decision, and however much he might regret it and regret the hardship it might cause to Mr. Warren, the Court *must* (please note the word) adopt it."

Compare this with the case of Leyton L.B. *v.* Causton, where the magistrates refused to convict, but the Divisional Court reversed their decision.

In the first case, which certainly seems open to argument, it was decided as a *fact*, and being so decided, was held not to be open to review, that the building did infringe the Act, whereas in the second case, which would appear to all ordinary persons a clear case of infringement, the magistrates decided as a fact that it was *not*, and then the High Court interfered with that finding.

It is such cases as these that reduce the law to chaos and give it the characteristics of a "Hass."

In connection with the question of the building line, I should like to draw attention to a case recently reported in the *Manchester Guardian*, and also in the *Builder*, which touches the architect very closely—in fact, touches him in his tenderest part, viz., his pocket.

Shortly, the facts were these. An architect was suing in the County Court for fees for preparing plans for the erection of some shops. He prepared the usual copies for depositing with the Corporation, who, after keeping them six weeks, intimated they could not pass them, as they intended widening the street by 15 feet. The defendant owner had seen the plans and had approved them.

Owing to the decision of the Corporation as to the widening, the plans were rendered useless, and the defendant refused to pay for them, contending that the building line was one of the most important points an architect had to comply with, and that it was the architect's duty to ascertain definitely where that line was before proceeding to draw the plans, and that if he neglected to do this he proceeded with the plans at his own risk; in the end the judge adopted this view.

At first sight I was tempted to regard the result as unjust, but when it appeared that the architect knew beforehand that a widening was in contemplation, but not definitely decided upon, my sense of injustice was lessened, as any careful man would have endeavoured to have arrived at a definite line with the Corporation before proceeding with the complete plans, and would have obtained his client's instructions to negotiate, for which of course he could have claimed payment.

3. *Air Space.*

Having successfully negotiated the obstruction known as the "building line," an architect may in ninety-nine cases out of a hundred fire away with his building without encountering further obstacles, but on the hundredth occasion may be unlucky enough to be caught in a trap with respect to air space. There is no necessity for me to detail the usual regulations as to air space about buildings, for they are pretty straightforward and seldom give rise to much difficulty. Unfortunately, however, the man who first drafted this rule would appear to have belonged to the fraternity of those who believe the world is flat in the literal sense, and to have been unaware that buildings are at times erected on a hillside.

Some years ago I had to deal with the question of air space in connection with a building erected on a hill-side.

The circumstances were as follows:—

Plans of the house were submitted to the local authority, on which a level space of about 7 feet was to be excavated at the back, and then a retaining wall about 4 feet high erected to uphold the garden. The authority refused to pass the plans unless the hill-side were excavated for 15 feet from the back wall of the house, the latter being of such a height that an air space of 15 feet wide was required by the by-laws.

This contention appeared ridiculous, and after considerable delay, filled up by argument with the Council's surveyor, the Council eventually gave way, and I for a long time was under the impression that the Council were legally wrong in their contention. In 1907, however, the case of Holroyd *v.* Healy's Breweries was fought out, where the circumstances were somewhat similar, except that the back wall butted up to the hill-side and that the building was a suite of offices.

The magistrates convicted the owners of a breach of the by-laws: on appeal, by a majority of the Court this decision was upheld. It is curious to note that all three judges described the result as ridiculous, Mr. Justice Darling remarking that as the by-law stood he did not seen any use in the air space at the back, as a privy and ashpit might be erected on it, and there was nothing prohibiting these erections covering the whole space.

I believe the construction put upon the by-laws as to air space I have just described are not generally adopted on the one hand by the Councils, and on the other by owners, and I hope nothing I have said will incite anyone present to attempt to put such construction into practice.

To illustrate the cases he quoted, Mr. Taylor exhibited a number of coloured diagrams.

Invitations had been sent to the surveyors of the local authorities, and several of these gentlemen were present.

The President, Mr. Robt. Evans, invited all visitors to take part in the discussion.

A number of interesting points were brought up in the discussion, in which most of those present took part, and at the close Mr. Heazell proposed, and Mr. Gill seconded, a vote of thanks to Mr. Taylor for his instructive paper. Mr. Maylan supported this on behalf of the visitors, and also thanked the Society for their invitation.

ENGLISH MEDIÆVAL ARCHITECTURE.—X.

HE tenth and final lecture of the admirable course given by Mr. Edward S. Prior, F.S.A., F.R.I.B.A., at University College, Gower Street, W.C., through the good offices of the Carpenters' Company, was delivered on the 14th inst. In the preceding nine lectures Mr. Prior had traced the history of ecclesiastical building in this country from the seventh century until the Dissolution of the Monasteries in 1539, and had copiously illustrated his remarks by remarkable lantern slides. The lectures were distinguished for their deep knowledge, the originality of many of his ideas, and, we may add, for their eloquence.

It was a fitting conclusion that the last lecture of a popular course, given to an audience which was apparently untechnical for the most part, should deal exclusively with parish-church architecture. The salient peculiarities of this parish church style, said Mr. Prior, developed themselves distinctly towards 1350, and may be summed up in two directions—first, as developing from Saxon planning, and, secondly, as developing from chantry addition. The following features had been in evidence in pre-Conquest churches: (1) The projecting square sanctuary with its narrow chancel arch, as at Deerhurst; (2) the broadly oblong nave, wider than the sanctuary, as at Bradford-on-Avon; (3) the side entrances to that nave, as at Bradford; (4) the transeptal chapels placed on either side of it, as at Dover; (5) the tower usually at the west end, but in one type central between nave and sanctuary. The naves, moreover, had been sometimes aisled, though perhaps only in the basilican monastic type.

In the twelfth, thirteenth, and fourteenth centuries these Saxon features had been enlarged. The aisles had become more frequent, the side chapels more abundant, the side porches more conspicuous, and particularly the chancel, like the Lady chapel, grew in length. The pre-Conquest plan developed on its own lines until the thirteenth century. In the fourteenth it became completely transformed by enlargements of a peculiar kind.

One conspicuous peculiarity in parish-church building can be seen to be fundamental—making it diverge constructionally from the great church types. These latter were great erections built more or less to completion on the definite scheme of monastic and canonical accommodation, and show at the most some three or four rebuildings. The parish church, however, begun on the smallest scale, was being continually enlarged and transformed—continually adapted, rather than rebuilt—until it became a confused medley of twenty buildings. Parish church style might be defined as growing up in the habit of makeshift addition. In all monastic building the vault-bay, with aisle, was the originating segment of construction, out of which the fabric grew by reduplication or adaptation. But for the parish church no such originating creative scheme lies at the back of its style. Its principle was only that primitive one of wall building—the removal of one wall and the building of another made its scheme. The originating segment was simply a wall with a window. The aisle itself formed no essential part of its plan, for parish church arcades are merely replacements of wall, and often made with little connection with what has been already built.

The origin of these disconnected enlargements was, in a general way, the building of chantries and special chapels by the feudal aristocracy and the successive dominating families. Such additions always meant that an open arcade took the place of the windowed wall, in order that the church proper might not be entirely deprived of its lighting. Projections east, west, north, and south soon completely smothered the definite ground plan of nave and chancel. However, in this haphazard planning is written generally the story of the parish. Great prosperity meant grateful rebuilding. In such ambitious fifteenth century work the Saxon types were lost. The chancel was no longer the single cell-like sanctuary or the narrow presbytery of the twelfth and thirteenth centuries; it was built, indeed, not for the single mystic rite of religion, but to offer its whole area to the people in various services. So the churches became the experiment of a new masoncraft, one of popular, not monastic, origin.

Beside the chapel enlargement of feudal lords or wealthy clothiers, the parish church plan of the fifteenth century shows the power of the all-pervading guilds. These guilds had sometimes their chapels outside the church fabric. More often they endowed chantries in the churches, so we find them constantly builders of aisles and transepts. The spreading-out of the church originated from guild-building as much as from feudal chapels.

The style of the English fifteenth century parish church may be summed up, in comparison with the great monastic churches, as developing (1) in place of the cross-church, the oblong aisled plan, as at Lynn; (2) in place of the central tower, the west tower, as at Boston; (3) in place of the functioned bay, the unfunctional arcade, as at Southwold; and (4) in place of the ordered symmetry of vaulted nave and aisles, a many-pillared hall, wood-ceiled. However, by the side of this democratic, unorganised building there were in progress the great chapels and other examples of the state-style of Perpendicular building. Furthermore, there were the multitudinous shops of church furniture and stone masonry.

The two districts where the latest church building developed most distinctly were East Anglia and South West England, or Wessex. In both the general prosperity came with a certain suddenness, through the wool industry. Consequently the ambition of the church builders might ignore the small ancient structure hitherto sufficient, and set out a fresh creation. The new buildings faithfully reflect the varying parish church conditions in each locality and the expediency of building under the conditions of place and time.

The eastern counties having no freestone, the walls were made of rubble flint with dressings of imported sea-borne stone in small sizes. Out of such materials grew the flint and stone panelling that gives with the least use of dressed stone an appearance of elaborate texture on a near view. The body of the walls is solid; the towers and porches are square, uncompromising blocks; the windows are flat and finely divided; the carvings and mouldings neat and rendered in low relief. In the west country, however, there was in every valley a big sound stone that invited bold and vigorous carving. The west-country church is sculptured from top to bottom. Its towers and porches are elaborately contoured and richly buttressed, with great battlemented parapets and projecting gargoyles of wonderful devilry. The interiors of the east and west offer similar contrasts. The church of the eastern counties presents to the eye a flat, shallow rendering of internal detail. The western has a coarser big treatment of moulding, and particularly an elaborate use of internal stone panelling for arches. As in masonry, so in carpentry. The ceilings of fifteenth-century churches are quite different things in Norfolk and Devon. And, finally, the local crafts of church furnishing, especially in the screens and pews of the east and west of England, show a varying expansion of style.

The habits of fifteenth-century carpentry specially developed three constructions of roof, viz.: (1) the hammerbeam, (2) the flat, (3) the braced rafter. Of these the east country developed especially the hammerbeam for its main roof, and flat ceilings for the aisles, allowing a clerestory window. The west country developed the braced rafter roof on nave and aisles in the form of a waggon-tilt—such barrel roofs in parallel compartments allowing no clerestory at all. The hammerbeam came as an invention to help the fine scale of the eastern church. With the tie-beam construction a span of 33 feet was as much as could be conveniently given. But at London c. 1370 there was being roofed Westminster Hall with a span of 60 feet by means of great hammerbeam trusses. The hammerbeam was a scientific adaptation of the principle of the trussed rafter adopted for the purposes of a tie-beam. The lightness finally attained was extraordinary. But in the south-west of England we have little of this daring carpentry. There roof construction of braced rafters dispensed with the tie-beam, and made itself the whole basis of construction without use of any principal trusses. The method adopted was to make a succession of arched tie-trusses. The flat ceiling appeared first in the aisles to allow as much clerestory window-space as possible. Then this construction was found convenient for the high have also.

Up to 1350 one must believe that every Gothic tower had been begun with the intention of a stone spire, or at all events of a conical roofing in stone. But in England the conical wood roof of the tower, covered with shingles or lead as a finish, was never entirely abandoned. Now lightning and conflagration, winds and decay, were always bringing these to destruction, and the money to replace them was not always forthcoming. So the habit of a square-topped spireless tower became by custom agreeable to English eyes, and after 1350 the battlementing and pinnacling of that tower was the finish that fifteenth century ambition finally looked to as sufficient. The peculiarity of English tower building was always its insistence on squareness of outline. The variety of local use makes one of the most interesting points of the later style.

Finally, there was a complete surrender to the stress of domestic building craft. The flat ceiling denied all the principles of stone construction conditioned by vaulting. The English were at the Dissolution to throw on one side the motives and the passions which had conditioned the extraordinary mediæval art of building. The last flicker of religious service that seems to have had power enough to make architecture after 1500 was the sport of bell-ringing—which was a symbol of emancipation. It had been a lord's privilege to have a bell. In the last years of the mediæval tradition it became that of the parish.

LECTURES ON HEATING AND VENTILATION AT UNIVERSITY COLLEGE, LONDON.

On Tuesday, November 21, the last of a course of six public lectures on the "Real nature of the problems in heating and ventilation awaiting solution by the Engineer," was delivered by Mr. Arthur H. Barker, B.A., B.Sc., at University College, Gower Street, W.C.

He had previously considered the various factors which contributed to the loss of heat from buildings under quite normal conditions and had suggested means of testing the extent of such loss, in order to revise our present practice in regard to this question. He now proposed to touch upon the real nature of some of the problems which daily confronted the heating engineer, and which he was called upon to solve. He was often required to decide what was the power of a boiler, but it must be remembered that this was not a fixed quantity. It depended upon conditions having no connection with the boiler itself, although these conditions affected its efficiency. The quantity of water available from a tap, or the rate of discharge, depended upon such factors as the pressure of the water, the size of the supply, the length of pipe, the degree of smoothness of, and the number of bends in the pipe, the height of the tank, or source, and also upon the number of other taps supplied by the same service. All these points had some influence on the efficiency of the tap. In just the same way the efficiency of a boiler depended upon such conditions as the quality of the fuel burned, the size and height of flue, the extent of soot and dirt and the number of air leakages and bends in the chimney, the nature of the chimney top, and the direction and velocity of the wind, all of these contributing to, or detracting from, the intensity of combustion of fuel in the furnace.

The essential facts were that in a furnace consuming 20 lb. of coal per hour and yielding 12,000 B.T.U.'s per pound of coal burned, a total of 240,000 thermal units per hour, probably an efficiency of 85 per cent. was possible, whilst in practice 65 to 75 per cent. was all that was obtained, depending upon the draught or quantity of air drawn through the furnace. The size of grate had also to be considered, as a smaller grate meant a larger resistance, which was increased still further by accumulations of ash as the fuel burned away. An increase in the amount of fuel consumed in a furnace would be accompanied by a greater yield in power, and as this had reference to the draught and the nature of the fuel the problem was much complicated. How was the heating engineer to arrive at the power of a boiler even when such conditions were precisely defined? For another factor arose with regard to the stoking and the degree of attention, skilled or unskilled, which a furnace received. A common solution lay in the provision of a boiler larger than an installation really required. The fact was continually recurring, however, that the vital condition which governed the power of any boiler was primarily the size of the chimney; for a smaller furnace having a larger flue produced intense combustion—depending again upon the thickness of the fire, a relatively smaller quantity of air being required by a thicker fire. Normally, 1 lb. of coal requires 250 to 300 cubic feet of air for complete combustion. Should the combustion be allowed to become too intense there was danger of damaging the grate if left unattended.

With our present knowledge it was found impossible to consider all these varying points, and the normal power of a boiler was usually determined by rule of thumb, the value being calculated at about 2,500 B.T.U.'s per square foot of boiler surface. This was known to increase with the consumption of fuel, up to a point which caused a little variation in efficiency. The problem to which heating engineers should devote themselves was the obtaining of a maximum of efficiency for the fuel consumed. This was all that the householder required.

Another problem yet to be solved was the determination of the extent to which fresh air introduced into a building should be pre-heated. Ventilation consisted in the removal or withdrawal of impurities contained in the exhalations of persons using a building and the introduction and distribution of sufficient fresh air to maintain a certain standard of purity. At the same time the public demanded that this should be done without draught. From experiments which the speaker had made upon himself it had been shown that a draught or air current at a temperature of 75° was not perceptible at a rate of 3 feet per second. At a rate of 2½ feet per second it was just perceptible when its temperature was 65°, and when the temperature was 5° lower it was evident at a speed of 2 feet per second. Therefore, the best condition was when it was moving slowly, and this it was impossible to govern over a large space. However, its rate of introduction should not exceed 3 feet per second. Draughts other than those caused by direct air currents, introduced for purposes of fresh air supply, might be divided into three classes: (a) secondary, (b) condensation, and (c) induced draughts. The former were air movements set up by primary draughts and could be remedied by suppressing these direct air movements as hinted above; the second variety consisted of movements set up by increases in density due to contact with surfaces, such as windows or walls, of a low temperature, and were more difficult to deal with; the latter consisted of air currents induced by means such as radiators causing hot air to move upwards, which in turn caused other movements to make good the displacement. In considering the practical application of the supply and extraction of pure and foul air respectively, the problem was how this could be done to secure the best results. The conditions required were that in no part of a room or hall should the proportion of CO^2 exceed a certain fixed quantity, and this implied that the impure air should be diluted at such a rate that this standard should be maintained at every part of the room.

Where any number of people are collected in a room, this became practically impossible in the occupied part.

Several methods of air introduction and extraction were open to objection on practical grounds. Thus, where air was introduced through the ceiling and extracted at the floor the gratings in the latter either became choked with dirt and dust, or, if projecting above the floor level, were thus inconvenient unless used under fixed seats or in risers, &c. Other systems often set up such movements, having regard also to currents induced by radiators, that the centre of a large room was starved of fresh air. The introduction of fresh air through the lower part of walls, the inlets being behind radiators, was satisfactory, provided the heating surface was not maintained at too high a temperature, which in low rooms served to pull down the vitiated air collected at the ceiling.

The unintelligent handling of ventilation plants was a great difficulty, the solution of which would greatly help to produce efficiency and comfort, and until the subject was regarded by persons in charge as being quite as important as the lighting of a building, and as much thought and attention bestowed upon the subject, the most efficient of plants would continue to give dissatisfaction.

The efficient cleaning of air ducts constituted another difficulty, for it was a fact that in many cases the Plenum system necessitated the passage of the fresh air supply through ducts coated with extensive accumulation of dust. Whether any ill-effects were to be feared from this was not clear, it being maintained by some that the breathing of such air is in no way injurious.

VALIDITY OF ARCHITECT'S CERTIFICATES.

In the King's Bench Division on Monday, November 27, and the following day, Mr. Justice Coleridge had before him a claim by Messrs. Ashwell & Nesbitt, Ltd., hot-water engineers, of Leicester, against Messrs. Allen & Co., builders, of Westminster, for £377 for work done and material supplied. In the course of the case several interesting points as to the certificates of architects were raised.

Mr. J. B. Mathews, for the plaintiffs, said that the amount claimed was the balance of a contract for heating apparatus to the amount of £3,320. The sum of £377 had been certified to be due to the plaintiffs by Mr. F. T. Verity, the architect for the building owners. The plaintiffs were the general contractors for shop premises which Messrs. Lewis & Allenby (1909), Ltd., were erecting in Regent Street, W., on land belonging to the Crown. The plaintiffs were sub-contractors, and had received various sums on the architect's certificate, which left a balance due of £377. The defendants denied liability, saying that the work was done under contract, and that it was a term of the contract that payment would only be made on the inclusion of the amount due to the plaintiffs in the architect's certificate to the defendants, and on payment of that amount. The question was, had the defendants received the money from the building owners? A certificate was issued by Mr. Verity for £1,595, and in addition to that the defendants had a claim for extras against the building owners for about £7,500. They settled that and the £1,595 certificate for £5,000, receiving £1,000 in cash and securities for the remainder. The plaintiffs contended that the terms of that settlement were equivalent, as between themselves and the defendants, to a payment in cash, and that they were entitled to stand upon the certificate for £377 and be paid that amount.

Mr. Justice Coleridge: Can the certificate be got over on the ground of mistake?

Mr. Mathews: I think it is impossible to suggest mistake. The defendants had no right to hold over the balance due to the plaintiffs, because they had entered into an arrangement with the building owners.

In answer to his Lordship, Mr. A. A. Hudson, K.C., who appeared for the defendants, said his points were that the amount due to the plaintiffs must be included in the certificate to the defendants, and that they must receive the amount.

Mr. Justice Coleridge: The certificate to the plaintiffs was given before the action was brought; then a certificate was given to the defendants, and a settlement of the latter was arrived at in lieu of it being paid.

Mr. Hudson: Yes.

Mr. Justice Coleridge: It included the plaintiffs' £377?

Mr. Hudson: We say it does not. Disputes were going on as to the number of radiators and hydrants put into the building, and we had given the building owners credit.

His Lordship: Can you go behind the certificate on that ground?

Mr. Hudson: Yes, because the architect, without any notice to my clients, issued the £377 certificate.

His Lordship: He had a right to do that.

Mr. Hudson: I say not, in view of the fact that he must have known that we had already given the building owner large credits in respect of work and goods.

His Lordship: Do you say that the certificate of an architect is bad unless he gives notice to the building owner that he is going to issue it?

Mr. Hudson: Yes; I can give authority for that.

His Lordship: I will bow to it.

Mr. Hudson then quoted the case of Armstrong *v.* The South London Tramway Co., Ltd., reported in 75 Law Times Reports.

His Lordship pointed out, however, that the man (who was not an architect) who gave a certificate in that case was an employé of the Company.

Mr. Hudson: The architect is merely the agent of the building owner.

His Lordship: He is the person who acts between the two parties.

Mr. Hudson: The old idea that a certificate could only be upset on the ground of fraud or collusion is dead. The architect is now in a quasi-judicial position, and it has become more apparent than ever that once an architect is placed in this quasi-judicial position he must act in the same way as an arbitrator, except that he need not swear witnesses. He must be absolutely independent and impartial. There is a case in which the House of Lords said that if an architect did not act independently and with sufficient strength of will an award would be upset. In this case the architect receives an account for work done. On one side is the amount which the plaintiffs say they have received from us, and on the other side is the contract price. How can the architect know without inquiry whether we have paid the plaintiffs one amount or another?

Mr. Justice Coleridge: That does not matter.

Mr. F. T. Verity, F.R.I.B.A., of 7 Sackville Street, St. James's, gave evidence for the plaintiffs. The building surveyor was his brother, Mr. E. G. Verity, and Mr. S. W. Robinson, of Hanover Square, was the consulting engineer. The certificates and figures in connection with the building were checked by the Surveyor of Woods and Forests on behalf of the Crown. The certificate for £1,595 which he issued to the defendants included the £377 due to the plaintiffs.

In cross-examination, he admitted that for the certificate for £1,595 he relied upon the figures supplied by Mr. Ernest Verity.

Mr. Hudson: You merely put your name to whatever your surveyor told you?—Yes.

No evidence was called for the defence.

Mr. Justice Coleridge, in giving judgment, said that the value of the work sued for was proved, and, *prima facie*, that gave the merits of the case to the plaintiffs. Merits, of course, did not always decide questions on building contracts, because very often the building contractor put his name to documents which no wise man would do, and sometimes the terms were almost penal in their character. The final certificate of £1,595 would *prima facie* include the plaintiff's claim, and in the absence of fraud or collusion it would be a certificate which could be sued upon. He found that the work had been executed properly to the satisfaction of the architect, and held that the arrangement by which the defendants had settled their claim against the building owners was equivalent to payment of the certificate.

Then it was said that the plaintiffs' work had not been certified, but he found that the £377 certificate was effective. No fraud or collusion was alleged by the defendants, but they said that the architect was a dummy; and certainly when an architect said in the box "I signed this document [certificate] ignorant of its effect—I simply put my name to it," his Lordship said he hardly knew what to say. He did not know whether that was the usual practice. Mr. F. Verity had said he relied upon his brother, the quantity surveyor, who knew everything, and in whom he had confidence, and who assured him in each case that the work was in order and had been done. If he (the Judge) had seen any serious ground for believing that the action of the architect had resulted in any injustice to the parties he would have seriously turned the matter over in his mind, but when he found that though the work of the architect on the certificate might have been done by a school-board boy it had not resulted in any injustice or loss to the parties, he would not interfere. Although the certificate of £1,595 was not a document of any value to the plaintiffs unless the defendants had been paid—apart from the question of extras—they did get £1,000 in cash, and therefore the plaintiffs must succeed. They had done the work and got the architect's certificate. Judgment for the plaintiffs for £377 and costs accordingly.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

TENDERS, ETC.

⁂ As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

COMPETITIONS OPEN.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l*. A first prize of 800*l*., and a second prize of 320*l*. will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

EGREMONT.—Aug. 8.—The Urban District Council offer premiums of £40 and £10 for a scheme to lay out, under the Housing of the Working Classes Act, building sites at Egremont and Bigrigg. The Egremont site consists of 1 acre, 1 rood, 16 poles, and the Bigrigg site 3 acres, 1 rood, 28 poles. Further information may be obtained from the Surveyor, Town Hall, Egremont, Cumberland.

SCOTLAND.—Aug. 1.—The Committee of the Battle of Largs Memorial Fund invite sketches of a suitable memorial to commemorate the battle of Largs, 1263. The site of the memorial will be on the foreshore of Largs, but the exact position has not yet been determined. The committee have at their disposal the sum of 300*l*., which is the maximum sum to be expended on the erection. A premium of 5*l*. will be paid for the successful sketch. The sketches will be judged by the subscribers. Mr. Peter Morris, Town Clerk, Largs.

YEOVIL.—The Corporation of Yeovil invite competitive designs as follows:—(1) For laying out a site of about 10 acres of land for the purpose of erecting houses for the working class, and (2) for houses to be erected thereon. In respect of each class of design premiums of 20*l*. and 10*l*. will be awarded. Particulars and conditions of site may be obtained upon deposit of 10s. 6d. from the Town Clerk, Yeovil.

THE HALL BROADLANDS FERNDOWN
H·BRYANT NEWBOLD ARCHITECT ~ O NEWBOLD DE

THE BOARD OF EDUCATION AND EXAMINATIONS IN ART.

The Board of Education have for some time past had under their very careful consideration the examinations in art now conducted by them, together with the national competition and the conditions under which teaching certificates are given to qualified teachers of art. In an official circular issued this week they say the plan of applying a separate test to each of the numerous stages of a prolonged course of artistic studies is one which no doubt served a useful purpose during the initiation of a national system of education, but which under present conditions tends in certain respects to restrict unduly the development of Schools of Art, and to bring about a uniformity of method which is undesirable in view of the very different functions which the schools have to perform in different localities. The Board have, therefore, come to the conclusion that such stimulus and control as may be properly applied to the teaching of art by a central authority can best be exercised through the medium of visits of inspection, and that the duty of applying such examination tests as are suitable to the more elementary students should be undertaken by teachers of the schools themselves rather than by external examiners. They intend, therefore, in the near future to terminate the elementary examinations now conducted by them, as well as the minute sub-division of art studies for examination purposes, and to substitute examinations of a more comprehensive character adapted to the needs of students who have reached a fairly advanced level in their studies, and who may reasonably desire to have their individual progress tested in some such way as is open to students of other subjects by means of the various external examinations conducted by Universities and other bodies. The examinations on the present lines will, therefore, not be indefinitely continued, and a new scheme of examinations, of which details will subsequently be announced, will be brought into force in 1913. It is proposed to invite some teachers in schools of art to assist in the conduct of these examinations.

Similarly, the existing series of tests for art class teachers' and art master's certificates will be brought to an end in 1912, and new regulations will be issued for the award in 1913 and subsequently of qualifying certificates for teachers of art, upon conditions which will secure, in addition to high artistic attainments, the advantages of a general education and of a suitable course of professional training at some institution recognised by the Board for the purpose.

The merits and defects of the national competition have been the subject of much discussion in recent years, and the Board are satisfied that it may be capable of becoming more useful than at present for the purpose of affording an opportunity to the public of seeing the best work of which the most advanced students of schools of art are capable. They propose, therefore, to invite some experienced head masters of schools of art and others to consult with them as to the lines upon which a reformed competition can best be established. If a satisfactory scheme can be framed the Board will arrange a suitable place for the exhibition.

It is also hoped at an early date to effect some readjustment of the various scholarships and exhibitions for students of art which are now awarded or aided by the Board, so as to secure liberal opportunities of obtaining advanced instruction in art to intending teachers and other students throughout the country. In this connection the Board desire to give notice that the award of local free studentships will be made for the last time in 1911, for tenure during 1911-12, and that the award of local scholarships in art and the aid given to local exhibitions in art may not be continued, or may be continued under new conditions, after 1911, as may be necessary for the purposes of the readjustment contemplated.

Finally, the Board desire to make it known that, for the purpose of considering the methods whereby the policy indicated above and other reforms in artistic education can best be carried out, they propose to constitute for a term of three years from September 1, 1911, a Standing Committee of Advice for Education in Art, upon which their officers will have the assistance of eminent artists, including those appointed as professional examiners for the new examinations and as visitors to the Royal College of Art, of teachers in schools of art, and of manufacturers and others engaged in the industries most dependent upon art. It will be the first duty of this committee to assist the Board in working out the detailed schemes which will be necessary in order to carry out the changes foreshadowed in the present circular. The President of the Board has appointed the following to be the first members of the committee:—

E. K. Chambers, Esq. (Principal Assistant Secretary to the Board, to be Chairman of the Committee), Sir Edward J. Poynter (President of the Royal Academy), Sir Kenneth S. Anderson, K.C.M.G., Sir Charles Holroyd (Director of the National Gallery), Sir Cecil Smith (Director of the Victoria and Albert Museum), R. Blomfield, Esq., A.R.A. (Visitor for Architecture to the Royal College of Art), F. V. Burridge, Esq., S. J. Cartlidge, Esq. (Chief Inspector of Schools of Art), G. Clausen, Esq., R.A. (Visitor for Decorative Painting to the Royal College of Art), A. S. Cope, Esq., R.A., W. B. Dalton, Esq., R. G. Hatton, Esq. (President of the National Society of Art Masters), Professor Selwyn Image (Chairman of the Chief Examiners for Design, and Visitor for Design to the Royal College of Art), C. Napier-Clavering, Esq., H. J. Powell, Esq., S. J. Solomon, Esq., R.A. (Chief Examiner for Drawing), F. Warner, Esq., and F. Wedgwood, Esq.

A. H. Sidgwick, Esq., examiner under the Board, will act as secretary to the committee. The chief examiners for painting and modelling, and the visitor for sculpture and modelling to the Royal College of Art, who are not yet appointed, will also be members of the committee. Sir Edward Poynter and Mr. Cope have been nominated by the Royal Academy in response to an invitation from the President of the Board.

COMPETITION NEWS.

London.—Marylebone Borough Council are inviting designs for municipal buildings. The successful competitor will receive £300 forthwith, to be deducted from his commission when the work proceeds, and if the scheme should be abandoned or indefinitely postponed he will be paid a further sum of £300, and his drawings will become the property of the council. The other premiums offered are £100, £75, and £50. Mr. H. T. Hare, F.R.I.B.A., will act as assessor.

Salford.—The Board of Guardians decided last week to invite plans for the extension of the present office accommodation at Eccles New Road. Premiums of £20 and £10 will be awarded.

Scotland.—The Clydebank Town Council have adopted the recommendation of Mr. James Millar, A.R.S.A., their assessor, and adopted the plans submitted by Messrs. Gardener, Miller & White, architects, Glasgow, for the proposed public library. There were fifteen designs submitted in the competition.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects, and others are invited to submit particulars for insertion in this weekly list.)

ENGLAND.

Cheshire.
Bickerton.—Baptistery font and stained glass windows to church. Mr. C. H. Minshull, architect.
Ellesmere Port.—Roman Catholic School. Mr. H. Beswick, architect.
Council school.
Hoole.—Council school. Messrs. John Davies & Sons, architects.
Queensferry.—Mixed and Infants' School enlargement.

Durham.
Durham.—Girls' Secondary School. The Education Architect.
Training College.

Essex.
Brentwood.—Girls' School.
Broomfield.—School (£4,470).
Burnham.—House in Brickfield Road.
Chelmsford.—Four cottages in Burgess Well Road.
Six houses in Rosebery and Vicarage Roads and Tower Avenue.
Dunmow.—Bridge over river at Aythorp.
Frinton.—Free Church.
Harlow.—Cookery and Handicraft Centre.
Sewerage scheme (£8,500). Mr. H. Tooley, engineer.
Langdon Hills.—School.
Rochford.—Workhouse extensions.
Romford.—Handicraft Centre.
Roydon.—Sewerage scheme (£6,200). Mr. H. Tooley, engineer.
Springfield.—Council School.
Tilbury.—Handicraft, Cookery and Housewifery Centre and Teacher's House (£2,496).
Tolleshunt D'Arcy.—Workmen's cottages (£1,200).
Witham.—Workmen's cottages.

Gloucestershire.
Ashton Keynes.—Village Hall.
Childswickham.—School enlargement.
Cirencester.—House for Earl Bathurst.
Kingswood.—School enlargement.

Hampshire.
Milton.—Hostel for girls.
Memorial Church (£10,000). Mr. J. Oldrid Scott, F.R.I.B.A., architect.
Portsmouth.—Electric Theatre in Fawcett Road.

Kent.
Bexley Heath.—Clock Tower (Coronation Memorial). Mr. Walter Epps, A.R.I.B.A., architect.
Chatham.—School in Ordnance Place.
Dartford.—Maypole School.
East Farleigh.—Fountain and drinking trough (Coronation Memorial).
Hempstead.—Council School extension (£2,250).
Lenham.—Sewerage scheme. Mr. Howard Humphreys, engineer.

Lancashire.
Haslingden.—Elementary School.
Manchester.—Queen's Theatre. Mr. Charles Swain, architect.
Warrington.—Elementary School.

Monmouthshire.
Llanhilleth.—London and Provincial Banking premises (conversion).
Risca.—Workmen's cottages.

Norfolk.
Aylsham.—Workhouse laundry and kitchen alterations (£2,300).
Barrow.—Village hall.
Cringleford.—Reading room.
Diss.—Water supply (£6,500). Mr. W. H. Booth, engineer.
Norwich.—Lakenham District Elementary School.
Middle School conversion into Council officials' offices (£4,000).
Wensum View Council Schools extension. Mr. C. J. Brown, architect.
Thorpe St. Andrew.—Sewerage scheme (£10,750).
Watton.—Infirmary. Mr. H. J. Green, architect.

Shropshire.
Wellington.—Workhouse additions and alterations. Mr. Marshall, architect.

Somersetshire.
Horfield.—Church and Rectory.
Taunton.—Askwith Memorial Church Day-School (£4,400). Mr. F. W. Roberts, architect.
Holy Trinity and St. Mary's Schools enlargement.

Suffolk.
Ipswich.—Sanatorium (£9,336).
Lowestoft.—Boys' School in Lovewell Road enlargement (£1,800).
Schools, Roman Hill.

Surrey.
Guildford.—Twenty cottages. Borough Surveyor.
Thorpe.—Nine cottages.
Witley Park.—Lodge for Lord Pirrie.

Worcestershire.

Yorkshire.
Barlby.—Council School.
Batley.—Oakwell Hospital extension (£4,000).
Beverley.—Boys' School.
Bridlington.—Christ Church Parish Hall and Offices (£2,500).
Brough.—Police Station.
Golcar.—Knowle Bank School extension.
Ingbirchworth.—House.
Meltham.—Assembly Room.
Mirfield.—Church at Stocks Bank for the Community of the Resurrection.
Newmill.—Reservoir at Hade Edge (capacity, 1,181,250 gallons).
Rotherham.—Public Hall (£10,000).
Northfield Parish Hall (£800).

SCOTLAND.

Aberdeen.—Robert Gordon's College (E. wing) rebuilding (£6,000).
Lord Byron Statue. P. Macgillivray, R.S.A., sculptor.
Cruden.—Port-Errol School enlargement.
Cupar.—Lunatic Asylum extension.
Dalkeith.—Commercial Bank of Scotland (£2,000). Messrs. Mitchell & Wilson, architects.
Dunfermline.—Rosyth area town-planning, 2,461 houses (11.41 to the acre).
Edinburgh.—College of Agriculture extension (£48,000).
College of Agriculture seed-testing establishment.
Hostel.
Scottish National Gallery alterations (£11,000).
Glasgow.—Flats de luxe at Charing Cross.
Royal Exchange extension.
Langholm.—Water supply extension (£6,000).
Perth.—Drill Hall extension.
Strathbogie.—United Free Church.
Strathspey.—Masonic Temple at Grantoun.

WALES.

Abertillery.—Water supply. Mr. Baldwin Latham, engineer.
Great Ormes Head.—Chapel at St. Tudno's Cemetery.
Llandrindod Wells.—Pavilion (£6,000).
Llandudno.—Sewerage scheme (£7,500).
Soar.—Welsh Congregational Chapel.

The Lord Provost's Committee of Edinburgh Town Council approve of a recommendation that the site of the Corn Exchange in the Grassmarket be utilised as the site of the new Central Police Station. The cost of the proposed building is roughly estimated at £45,000.

The Swansea Housing Committee last week considered the question of acquiring 94¼ acres of land on the Town Hill estate, the property of the Duke of Beaufort. The chairman of the committee and the town clerk were empowered to treat with the Duke's agent.

The Electric Lighting Committee of the Dublin Corporation has received sanction of the Local Government Board for an immediate loan of £50,000 to carry out an extension of the Electricity Works. The total application was for £128,129, and the Board will give their decision as to the balance at a later date.

VARIETIES.

Mr. Alfred Drury, A.R.A., has been invited to submit a model for a standing figure of King Edward VII., which will be part of the Sheffield Memorial to his late Majesty.

The Croydon Borough Council has decided to co-operate with Lord Tenterden in his scheme for securing the Crystal Palace as a national memorial to King Edward.

Mr. G. Ogilvy Reid, R.S.A., is to be offered the commission to paint a decorative panel in the City Chambers, Edinburgh, dealing with local history.

The Bournemouth Town Council are considering a scheme for constructing an overcliff-drive at Southbourne. The borough surveyor estimates the cost at nearly £10,000.

The Bradford Town Hall Extension Sub-Committee recommend the Corporation to proceed with the scheme for linking up the new and old town hall at a cost of £6,500.

Messrs. Hukins & Mayell, architects and surveyors, have removed their offices from Bank Chambers, 76a Westbourne Grove, W., to 124 Westbourne Grove, W., after being over thirty years at the first-named address.

It has been decided to build a new mission-house and institute for the parish of St. Saviour with St. Thomas, Southwark, at a cost of about £3,000. The building is to be erected at the corner of Union Street and Red Cross Street.

The Royal Society of Arts have awarded silver medals for papers read during the past session to Mr. R. A. Smith, B.A., F.S.A., "Roman London"; Mr. Frank M. Andrews, "Architecture in America"; and Mr. R. Fellowes Chisholm, F.R.I.B.A., F.S.A., "The Taj Mahal."

A scheme for the extension of the Mill Dam Quay, South Shields, is under the consideration of the Market and Quays Committee of the Corporation. It is proposed to provide an additional frontage of 211 ft., making a total frontage of 346 ft. The estimated cost of the extension is £4,500.

At a recent meeting of the board of management of the Royal (Dick) Veterinary College, Edinburgh, it was intimated that the purchase of a site for new college buildings had been concluded. The cost of the new buildings, which will be commenced without undue delay, is estimated at £50,000.

The church of St. Peter, in Cricklewood Lane, Cricklewood, is to be completed by the building of the chancel, clergy and choir vestries, side chapel, and an addition to the nave at an estimated cost of £3,400. Building operations will be commenced almost at once.

During the past quarter eight new joint stock companies directly connected with building were registered in Scotland, and their combined nominal capital is £53,000. In the same period two companies concerned with plumbers were registered having a total capital of £25,750.

The Society of Proprietors of Royal Exchange Buildings, Glasgow, contemplate very considerable alterations to the Royal Exchange Building. It will, however, be necessary to obtain legal authority to alter the present constitution of the Society.

The Bolton Town Council have received the sanction of the Local Government Board to the borrowing of the following amounts for works in connection with Heaton Reservoir: £2,408 for filter house, mains and connection; £7,300 for mechanical filters; and £660 for Venturi meter and street works.

It is proposed to provide premises in which instruction in special subjects could be given to children attending the Longlands Council, Lamorbey Church of England, Sidcup Church of England, Footscray and Chislehurst Church of England, and Sidcup Hill schools.

The Aberdeen Byron Statue Sub-Committee have entered into an agreement with Mr. Pittendrigh Macgillivray, R.S.A., the sculptor, for the execution of the statue of Lord Byron. The statue, which will be in bronze, is to be 9 feet in height, and will stand on a granite pedestal 12 feet high, on a site within the grounds of the Grammar School.

The Kent Education Committee are going to provide a new department for 250 infants at Welling Council School. Their Works Sub-committee are experiencing great difficulty in obtaining sites for Council schools, and they "consider that it may be necessary to advise the committee to exercise their compulsory powers at Broadstairs, Tonbridge, and possibly in other cases."

The Bournemouth Town Council have been informed by the Local Government Board that they decline to sanction the borrowing of money by the Education Committee for the purpose of erecting a tower for the new science, art, and technical school. The committee consider that the tower is necessary from an architectural point of view, and are asking the Town Council to provide for its cost out of current revenue.

The Warwickshire Education Committee on the 4th inst. decided to give notice of their intention to provide a school accommodating about 100 children to serve the parish of Middleton; a new school accommodating 250, to serve the parish of Southam; a school accommodating 250 children at Wyken Colliery; and additional accommodation for 100 children at Warwick Coton End Council School.

The Birmingham City Council on Tuesday adopted a recommendation to carry out a further extension of the Council House and Art Gallery at an estimated cost of £53,350, and to borrow the sum of £18,377, the difference between the amount already sanctioned, viz. £150,000 and the estimated cost of the entire extension less the £50,000 receivable from the Feeney bequest.

Chester Town Council have decided to call in an expert to advise on a scheme submitted by Mr. Britton, their electrical engineer, for utilising the water power of the Dee for the generation of electricity. It is proposed to install three motor turbines at a cost of £10,000. The Council have also decided to prepare a scheme for the erection of a refuse destructor at the electric light works.

Our contemporary, *The Illustrated London News*, in its pre-Coronation number, dated June 24, has an excellent double-page pen and ink drawing by Mr. Harold Oakley. The drawing is a particularly clever one: the south walls of Westminster Abbey are left out so as to exhibit the interior arrangements and to represent the ceremony of the crowning of their Majesties the King and Queen.

Mrs. Pigott, the last lineal descendant of Sir Christopher Wren, died at Folkestone last week. The family of Sir Christopher ceased in the male line with the death of his great-great-grandson. The latter's daughter married Mr. Hopkins, and their daughter married the Rev. C. F. C. Pigott, who had no children. The deceased lady recently sold the interleaved copy of Wren's "Parentalia" to a group of gentlemen who presented it last week to the Royal Institute of British Architects.

The governing body of the West Cornwall Infirmary, Penzance, have received a cheque for £1,500 from Mr. R. F. Bolitho, of Ponsanooth. The donor says the money is to be devoted "towards the endowment of a bed, to be named 'The Oliver Caldwell bed,' in memory of the architect of the hospital, through whose loving care and supervision the town and neighbourhood generally has so greatly benefited by the eminent success which has followed its erection."

The New South Wales Works Department have accepted an order to supply 100,000 State-made bricks for sewerage works at 26*s.* per 1000, which is nearly £1 per 1000 below the prices asked by the private combine. It is anticipated that when the complete plant it is proposed to set up has been installed a further reduction of 7*s.* per 1000 will be effected, and when the clay, sand, and lime plants are complete the output will amount to 50 millions annually.

At the last meeting of the Stoke-on-Trent Board of Guardians the architect submitted a plan of a proposed fire station to be erected near the chapel at a cost of £300. The plan was passed, and will be forwarded to the Local Government Board. The architect also submitted sketch plan of the proposed children's pavilion, to be erected alongside the tennis court and bowling-green, in front of the school block. The total number of children provided for is 89, and the architect's estimate of the approximate cost is £5,000. The architect was instructed to prepare drawings to be submitted to the Local Government Board.

At the last meeting of the Middlesbrough Corporation Plans Committee, the borough engineer submitted seventy plans, embracing 166 different properties. In several of these very small bedrooms were provided for. The Acting Town Clerk reminded the committee that the Local Government Board had refused to give them power to regulate the size of rooms. Mr. Burgess, the borough engineer, mentioned that he had in preparation a town-planning scheme for the whole of the borough, under which, generally, there would be 100 feet depth of site for every house, and no back streets, the number of houses being limited to sixteen to the acre.

The General Steam Navigation Co., Ltd., are running their new steamer, *Golden Eagle*, or *Eagle* daily from London Bridge Wharf to Southend, Margate, and Ramsgate, and their turbine steamer *Kingfisher* also sails daily from Tilbury for either of those places named or Dover, while it takes passengers to Boulogne on Mondays and Thursdays. The same company have a number of excellent tours arranged with best hotels, full board and first-class steamer and rail for

Bordeaux, Ostend, Hamburg, Edinburgh, &c., and places of interest beyond or within easy reach thereof, at very moderate rates.

A MAN named John Henry Harman was sentenced last week, at Peterborough Quarter Sessions, to 15 months' imprisonment for defrauding builders. His custom was to write from a London address, asking builders to tender for erecting a house, and to send £1 1*s.* deposit for specifications. It was stated that four complaints had been received from Chelmsford, thirteen from Leicestershire, two from Stratford-on-Avon, one from London, five from Peterborough, two from Cambridge, and one from Hampshire. Prisoner in all sent out 186 circulars.

THE Master Masons' Association of Glasgow and Neighbourhood have intimated to the local branch of the United Operative Masons' Association of Scotland that they have resolved to grant the men's request for an increase of ½*d.* per hour on their rates of pay from to-day to June 30, 1912. The employers also intimate that they decline to introduce arbitration as proposed by the men's association into the agreement which has been drawn up between the masters and the men. They point out that any disputes which have arisen hitherto have been settled amicably between the two parties, and they think there is no necessity to depart from this policy. The men's association have signed the agreement.

IT is publicly announced that in consequence of the death of the late Sir John Aird, the businesses of Messrs. John Aird & Sons and the Westminster Construction Company, Ltd. (of which the late Sir John Aird was Chairman from its formation in 1899), have been amalgamated, and will in future be carried on under the registered style and title of "Airds, Ltd." There will be but little change in the management or staff. The Chairman of Airds, Ltd., is the present Sir John Aird, and the Managing Director Mr. Malcolm R. Aird.

THE Stoke-on-Trent County Borough Council are about to apply to the Local Government Board for sanction to borrow the following sums for the purposes specified, namely: Improvement, High Street, Hanley, £440; improvement, Oak Hill, £800; paving, Church Street, Longton, £500; storm-water sewer, Hanley Road, Hanley, £130; wood-block paving, Queen Street, Burslem, £1,575; wood-block paving, Market Place, Burslem, £1,400; reconstruction, Boothen Old Road, Stoke, £1,000; paving, Marsh Street, Hanley, £825; paving, Bethesda Street, Hanley, £1,100; paving, Leek Road, Hanley, £8,000.

A NEW infant school which has been added to the existing buildings in Brighton Avenue, Gateshead, was opened on June 26. The total expenditure on the building was £5,653, of which £1,000 was spent on the department for manual instruction. The expenditure per place was £11 10*s.*, compared with £11 13*s.* for the last similar school. The principal frontage is to Whitehall Road. The eight class rooms are grouped round a spacious central hall, with wing corridors. The building has been carried out from the designs, selected in open competition, of Mr. F. W. Purser, architect and surveyor, Gateshead.

THE Newcastle City Council recently considered the new proposals for the lease of 300 acres of the Corporation's Walker estate to Co-partnery Tenants, Ltd., at £30 an acre. Included is a proposal for the leasing of 50 acres at £250 per annum, the lessees undertaking to lay out and maintain two-thirds of the 50 acres as a park or open space in perpetuity. Other conditions were that the development of the estate should be on town planning lines, to the reasonable satisfaction of the local authorities; the width between front walls of houses being not less than 50 feet. On completion, the lessors to take over and maintain all roads as laid out. The scheme to provide for not exceeding fifteen houses to the acre. After a short discussion a vote resulted in twenty-six voting each way. The Lord Mayor said he had not voted in the first instance, and would not vote on the tie. The proposal was, therefore, not carried.

THE foundation stone has been laid of the chapel in connection with the National Nautical School at Portishead, near Bristol. The plan consists of a nave 63 feet long and 33 feet wide, with a narthex at the end 8 feet wide. The chancel will be 20 feet 6 inches long by 33 feet wide, with apse at east end 9 feet by 22 feet. There will be north and south transepts, organ chamber, and vestry, with heating chamber in the basement. The accommodation consists of sittings for 360 in the nave, 50 seats for visitors in the north and south transepts, and 25 seats for the choir. The height of the nave is 35 feet to the roof beam, the roof being of open timber construction. The materials are local stone for the facings and Bath stone for the dressings. The general contractors are Messrs. Samuel Martin & Co. of Bristol. The design for the chapel was prepared by Mr. Edward Gabriel, architect.

A DEPUTATION of the Beverley Town Council recently visited several places for the purpose of inspecting and obtaining information respecting the filtration of water by mechanical filters. They not only interviewed the water engineers, but obtained where it was possible information from the medical officer of health, so as to have independent information on which to base their conclusions. The subcommittee carefully considered the following processes, "Bell's," "Candy's," and "Mather & Platt's," and were unanimously of opinion that if the water obtained from the present source of supply be properly filtered by means of one of the standard makes of mechanical filters, all harmful bacteria, which might at any time infect the water, would be removed. The Town Council have therefore decided that tenders be invited for the installation of mechanical filters, and that plans and specifications be prepared forthwith, also that the work be carried out with as little delay as possible, and that foundations be provided at the same time in order that a softening plant may be erected in future if necessary.

THE BUILDING TRADE AND THE INSURANCE BILL.

IN the House of Commons on June 30 Mr. Lloyd George received a deputation from the national societies connected with the building trade and the London Building Industries Federation, representing altogether 170,000 operatives, to discuss suggested amendments to the Insurance Bill. The deputation, which was introduced by Mr. George Dew, the secretary of the London Building Industries Federation, asked, among other things, that there should be no deduction of contributions from the wages of workmen already insured through trade unions or friendly societies, that the benefits to workmen in the building trade should be the same as in the engineering trades, namely, 7*s.* a week, that the condition of a membership of 10,000 for an approved society should be modified, and that non-unionists drawing benefits from the Labour Exchanges should be placed in the same relation towards members of an approved trade union as Post-office contributors to a friendly society. The deputation expressed the strongest objection to the recognition of employers' shops clubs. Mr. Lloyd George promised that the points brought before him should be carefully considered.

A MEETING of the Committee of the Building Trades Exchange for Glasgow and the West of Scotland appointed to consider the probable effect of the National Insurance Bill upon the building trade was held on the 15th ult. at 67 Hope Street, Mr. James Goldie, President, in the chair. A statement submitted by the Secretary showed that the Bill as at present drafted would be most injurious to the building trade generally. Coming at a time when the building trade throughout the country was in a most depressed condition, it was believed that the effect of the Bill would be to postpone for many years the improvement that builders had been hoping for. The meeting decided to communicate with the principal building societies in the country with a view to taking joint action in the matter, and if possible to present to Parliament a memorial embodying the many hardships that would be certain to follow upon the passing of the Bill.

TRADE NOTES.

WE are now informed that the Anglo-American Oil Company's Offices in Queen Anne's Gate, which have recently been built by Messrs. Holloway Bros., are constructed in Portland stone partly supplied by the Bath Stone Firms, Ltd., from their famous quarries at Combefield.

THE "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to Cynlais School, Ystradgynlais.

MESSRS. EDEY & Co., electrical engineers, of 25 Warwick Lane, Ely, have registered their business as a limited liability company, the two present partners becoming the first two directors. The same personal attention will thus be given as in the past.

MESSRS. KEITH & BLACKMAN, High Street Foundry, Arbroath, having completed the negotiations for the purchase of property between Applegate and Lordburn for the purpose of extending their works, it is understood that plans are to be submitted to the Dean of Guild Court for the erection of a brass foundry. The extensions will constitute a large addition to the works of the firm, and will mean the employment of over 150 additional men.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

COMPETITIONS OPEN.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l*. A first prize of 800*l*., and a second prize of 320*l*. will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

EGREMONT.—Aug. 8.—The Urban District Council offer premiums of £40 and £10 for a scheme to lay out, under the Housing of the Working Classes Act, building sites at Egremont and Bigrigg. The Egremont site consists of 1 acre, 1 rood, 16 poles, and the Bigrigg site 3 acres, 1 rood, 28 poles. Further information may be obtained from the Surveyor, Town Hall, Egremont, Cumberland.

LONDON.—July 31.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1s., which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All questions must be sent not later than July 31 to Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

SCOTLAND.—Aug. 1.—The Committee of the Battle of Largs Memorial Fund invite sketches of a suitable memorial to commemorate the battle of Largs, 1263. The site of the memorial will be on the foreshore of Largs, but the exact position has not yet been determined. The committee have at their disposal the sum of 300*l.*, which is the maximum sum to be expended on the erection. A premium of 5*l.* will be paid for the successful sketch. The sketches will be judged by the subscribers. Mr. Peter Morris, Town Clerk, Largs.

LEWISHAM.

For constructing a lavatory and making the necessary alterations in forming additional office accommodation at the Town Hall, Catford. Mr. Ernest van Putten, borough surveyor.

F. W. Loasby, Hither Green, S.E. (*accepted*)	£410	0	0

LEYTON.

For constructing a condenser pit foundation for turbo-generators and cooling towers, &c., at the Electric Light and Power Station, Cathall Road. Mr. E. H. Essex, A.M.I.C.E., surveyor, Town Hall, Leyton.

Abbot & Charlton	£1,383	16	3
Lawrence & Sons	1,355	0	0
Luton	1,197	0	0
Moss & Co.	1,150	17	6
Fryd	1,108	0	0
Coxhead	1,018	0	0
Manders & Hill, Leyton (*accepted*)	952	4	5
Surveyor's estimate	1,017	0	6

LONDON.

For providing a weighbridge at the Greenwich Road permanent way depôt for weighing permanent way materials, sand for electric cars, &c., and another in place of an existing weighbridge at the Old Kent Road central stores depôt, in connection with the electric transport vehicles.

	Price of Machine for (1) Old Kent Road Depot.			Price of Machine for (2) Greenwich Road Depot.		
Bartlett & Son	£155	0	0	£139	0	0
Pooley & Son	154	0	0	140	0	0
W. & T. Avery, Cowcross Street, E.C.	142	0	0	122	0	0*
Day & Millward	140	0	0	145	0	0
Ashworth, Son & Co., Dewsbury	133	0	0*	130	0	0

* *Recommended.*

MANSFIELD.

For the provision of children's quarters and offices at the Workhouse, Stockwell Gate. Messrs. Vallance & Westwick, architects, Mansfield.

Ashley	£1,268	0	0
Evans	1,183	5	8
Vallance & Son	1,120	0	0
Greenwood	1,094	0	0
Percival	1,090	0	0
Beckett	1,045	0	0
Vallance & Blythe	1,022	17	6
Perks & Son	1,015	0	0
Moore, Mansfield (*accepted*)	999	0	0

MARKET HARBOROUGH.

For additions, &c., to Fairfield Road Council School.

Palmer	£718	0	0
Chapman	718	0	0
Haycock Bros.	690	5	0
Jarman & Sons	660	10	0
Potter	645	0	0
Fox	615	0	0

NUNEATON.

For extension of plant at the Sewage Pumping Station.

Engine and Pumps.

Waller & Sons	£3,008	0	0
Glenfield & Kennedy	2,175	0	0
Goddard, Massey & Warner	1,982	0	0
Tangyes	1,750	0	0
Galloways, Manchester (*recommended*)	1,723	0	0

Refuse Destructor.

Goddard, Massey & Warner	£905	10	0
Meldrum Bros.	796	10	0
Manlove & Alliott	787	0	0
Heenan & Froude, Manchester (*recommended*)	775	0	0
Dawson & Manfield	695	0	0

Lancashire Boiler.

Danks & Co.	£336	15	0
Adamson & Co.	327	0	0
Galloways	320	0	0
J. Thompson, Wolverhampton (*recommended*)	310	0	0

ROSS.

For restoration of the tower of Ross Church, Herefordshire, Messrs. Nicholson & Hartree, architects, Hereford.

Blackburn, Starling & Co.	£817	12	6
G. & W. Edwards	666	0	0
Lewis & Co.	642	0	0
Morris	598	0	0
Gold & Co., Stratford (*accepted*)	528	0	0

GILLINGHAM.

For carrying out the work of extending the Hempstead Council School. Mr. T. L. Redfern, A.R.I.B.A., surveyor to the Education Committee, Gillingham, Kent.

Phillips	£1,975	0	0
Skinner	1,797	0	0
Gates & Son, Frindsbury (*accepted*)	1,698	0	0
Surveyor's estimate	1,850	0	0

ST. BEES (CUMBERLAND).

For the various trades required in the erection of a house at St. Bees. Messrs. Nelson & Brindle, architects, Whitehaven.

Jas. Smith, Mason work, Egremont.
Jas. Lythgoe & Sons, Slaters, Workington.
R. Gamman, Plasterer, Whitehaven.
Wm. Strathern, Plumber, Whitehaven.
F. Walker, Heating Engineer, Workington.
R. W. Bonsey, Painter, Whitehaven.
T. & W. Robinson, Joiner, Egremont.

STOKE-UPON-TRENT.

For erection of infant school and enlargement of existing buildings at Goldenhill Council Schools. Messrs. A. R. Wood & Son, architects, Tunstall.

Yorke & Goodwin	£5,290	0	0
Ball & Robinson	5,275	0	0
Cooke	5,250	0	0
Godwin	5,250	0	0
Grants	5,184	0	0
Smith	5,177	0	0
Sambrook	5,100	0	0
Colclough & Breeze	4,942	0	0
Pemberton, Tunstall (*accepted*)	4,612	0	0

WALES.

For the erection of three shops, &c., at Abertridwr, for Senghenydd and Aber Valley Co-operative Society, Ltd., Abertridwr.

Hatherley & Co.	£2,719	0	0
D. Davies & Sons	2,530	0	0
Hamilton & Millard	2,375	0	0
Howells	2,357	0	0
Williams	2,300	0	0
Davies & Lloyd	2,289	0	0
Rossiter	2,250	0	0
R. Jones, Caerphilly (*accepted*)	2,089	0	0
Bristow	2,045	0	0

COMPETITION NEWS.

Hastings.—Conditions are in course of preparation for the proposed competition for plans for the King Edward Memorial Hospital.

Japan.—The "Bulletin Commercial" (Brussels) states, on the authority of the Belgian Consulate-General at Yokohama, that the Committee of the International Exhibition to be held at Tokio in 1917 have opened a competition for the general plan of the exhibition installations. One prize of 3,000 yen (about £306), two of 2,000 yen (about £204), and three of 1,000 yen (£102) may be given. Foreigners may compete. Proposals will be received up to September 30 next at the office of the Grand Japanese Exhibition, Department of Agriculture and Commerce, Kobikicho, Kyobashi-Ku, Tokio.

Newton Abbot.—The Seale-Hayne College authorities have received thirty-one plans in competition for the new college building, ranging in estimated cost from £19,000 to £23,000. Four of the plans were selected for further consideration. Mr. C. Steward Smith, J.P., F.R.I.B.A., of Reading, is the assessor. The premiums offered are £100, £50, and £30.

Whitley Bay.—The Whitley and Monkseaton Urban District Council recently invited architects practising in Northumberland and the city of Newcastle-on-Tyne to submit designs for the proposed cemetery buildings. The first premium of £21 has now been awarded to Messrs. Oliver Leeson & Sons, Newcastle; the second of £15 15*s.* to Mr. Edward Cratney, Wallsend-on-Tyne, and the third of £10 10*s.* to Mr. W. N. Scaife, Whitley.

Yeovil.—At the meeting of the Town Council on Monday the Borough Surveyor reported that in connection with the housing scheme there had been sent in for this competition 31 designs for laying out the land, and 61 designs of houses to be erected thereon. He had awarded the prizes as follows: —Laying out site of about ten acres: (1) £20, "Cottager"; (2) £10, "Castor and Pollux." Houses: (1) £20, "Castor and Pollux"; (2) £10, "Cottager." On the sealed envelopes being opened it was found that "Cottager" was the *nom de plume* of Mr. S. Alex. Wilmot, of King's Norton, and "Castor and Pollux" that of Messrs. Petter & Warren, Yeovil. The committee were of opinion that the land should be laid out on a scheme combining the best features of Nos. 1 and 2, and that No. 3 should be adopted for the houses.

THE LONDON HYDRAULIC POWER COMPANY AT ITS NEW PUMPING STATION, GROSVENOR ROAD, S.W.

The mass of those who benefit by the enterprise of this company doubtless give no thought to the labour and expense attaching to the provision of the hydraulic power, which forms such an important feature in the business life of the Metropolis. Not that the whole of this *imperium in imperio* is thus served; indeed, it has been urged upon the company that it should more strictly confine its area of supply—a matter whose decision can well be left to the efficient board of directors.

At present the mains, if laid in a straight line, would reach from London to Exeter; as it is, however, they are circumscribed by an imaginary irregular line, bounded on the north by the City Road, on the south by Vauxhall Bridge, eastwards by Limehouse and westwards by Earl's Court. In this area the company has five pumping stations, three being on the banks of the Thames and severally situated at Vauxhall, Southwark, and Shadwell, a fourth being erected at the City Road basin of the Regent's Canal, and a fifth lying at the Commercial Docks.

The latest station, now to be noticed, takes the place of one formerly situated at Millbank, but required for county improvements; the enforced removal has certainly been to the company's benefit.

The Grosvenor Road pumping station (entered from Pulford Street) is *le dernier cri*, the machinery being of the latest type and everything laid down with the view of obtaining the utmost efficiency, due regard being paid, too, to the use of labour-saving appliances. The responsible engineer is Mr. E. B. Ellington (Pres. Inst.Mech.E.), chief engineer and general manager. He took some pleasure in pointing out that he, too, was responsible for the architectural work (except as regards the foreman's lodge, for which Mr. Conder was the architect). Mr. Ellington deserves recognition for the studied simplicity of the design of the buildings, whose red brick facings with stone dressings have just the quality of constructive decoration that is so far preferable to decorated construction.

The following will serve to describe, not too diffusely, the most salient features of the station. Six large settling reservoirs of an aggregate capacity of 2¼ million gallons are supplied with Thames water at half-tide level (and retained by back-pressure valves) through 20 in. intakes. These reservoirs were built by the structural engineers (the Hydraulic Engineering Co., Ltd., Chester) on the Hennebique ferro-concrete system. But, shades of our ancestors! What would the past generation of architects have thought of reservoir party walls which, being 16 ft. in height, had a base thickness of only 12 in., battering to 8 in. at the top! Reinforced concrete, too, is used for the floor of the filter-house.

The reservoirs are cleaned out fortnightly, a head of water being obtained by gravitation from the overhead tanks to hydrants fixed for the purpose upon the communicating gangways. The wash-out pipes are 14 in. in diameter and discharge by outlet valves in the river opposite the company's wharf.

After the mud has been allowed to settle, the reservoir water is conveyed to three overhead tanks by the action of circulating pumps on the engines and by two auxiliary vertical direct-acting pumps. The tanks, situated over the filter-house, have an aggregate capacity of 900,000 gallons. The clearest water from the reservoirs is obtained by the presence there of swivel action suction pipes (connected to floats) resting at a level 12 in. from the surface of the water.

The unfiltered water gravitates into W.I. spherical filters, 8 ft. in diameter and sixteen in number. These were supplied by the Pulsometer Engineering Company, and space is left in the filter-house (which is situated over the capacious coal-store) for sixteen additional spherical filters. Each is capable of filtering 4,500 gallons per hour. The medium used is crushed quartz and washed and screened Thames ballast, and this is periodically cleaned by means of hydraulic blowers, eight in number. After filtering, the water gravitates to three storage tanks forming the roof of the boiler-house and being 10 ft. deep and of the same capacity as those above mentioned. All six tanks are built up of C.I. plates and are carried on mild steel girders and stancheons.

The water, freed from all undesirable particles (though, of course, far from pure hygienically) is conveyed by one 6-in. bore and two 8-in. bore pressure pipes to the company's network of distributing mains, the present supply being over 21 million gallons weekly, and actuating nearly seven thousand machines and over two hundred hydrants.

But to retrace our steps, mention will now be made of the boilers, four of these (all of the water-tube type) being at present installed, and space being left for an additional two. Each boiler is capable of evaporating 6,000 lb. of water per hour at a pressure of 180 to 200 lb. per square inch, superheated 100° to 120° Fahr. The feed-water, before being supplied to the boilers, is passed through Messrs. Bowes, Scott & Western's water-softening plant. The condensed steam from the engines, after being freed from oil by filtration, is measured in Lea recorders and passed into tanks, whence it is pumped into the boilers by means of horizontal direct-acting hydraulic feed pumps, each capable of delivering 2,000 gallons of water per hour.

The engines were supplied by the Hydraulic Engineering Company, of Chester; five are installed, one acting as a stand-by; space is reserved for an additional three. These engines are of the inverted triple-expansion surface condensing steam-pumping type, each one delivering at the rate of about 28,000 gallons hourly into the mains, at a pressure of 800 lb. per square inch. The steam pressure is 80 lb. They are of 300 h.p., contrasting with those in the Millbank station, which did not exceed 200 h.p. The coal, after being weighed and registered automatically, is discharged by bucket conveyors, either into one of the six compartments of the coal-store (capacity aggregating 1,000 tons) or else direct into the bunkers over the mechanical stokers in the boiler-house, being thence fed into hoppers, all manual labour being dispensed with. The three conveyor sets are driven by Pelton motors; and motors of this make also drive the tools in the workshop.

Exigencies of space preclude further description of a very interesting display of plant.

The Birkenhead Town Council have adopted plans and specifications for a Council school proposed to be erected in Temple Road with an accommodation for 1,092 children. The sanction of the Board of Education will have to be obtained.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit particulars for insertion in this weekly list.)

ENGLAND.

BERKSHIRE.
Lambourn.—Tuberculosis sanatorium.
BUCKINGHAMSHIRE.
Buckingham.—Isolation Hospital.
Linslade.—St. Barnabas' Church memorial font.
CHESHIRE.
Neston.—Council School enlargement.
Northwich.—Outfall works extension and alterations (£4,400).
CORNWALL.
Bodmin.—Children's home for Board of Guardians (£500; 12 children). Mr. W. J. Jenkins, architect.
Camborne.—Wesleyan Conference Chapel (£1,000).
CUMBERLAND.
Penrith.—Grammar school.
DEVONSHIRE.
Dartmouth.—County School.
Ivybridge.—Vicarage.
DORSETSHIRE.
Poole.—Infectious Diseases Hospital additions and alterations (£2,000).
Toller Porcorum.—Water supply.
Verwood.—Conservative Hall.
DURHAM.
Brandon.—Hospital.
Hetton.—Good Templars' Hall.
House and stables in Dorset Street.
Twenty-six houses in Elemore and Murton Lanes.
Eight houses in Houghton Road.
Houghton-le-Spring.—Seven houses in Balfour and Glebe Streets.
Spennymoor.—Cottage at Whitworth Hall.
House in Green Lane.
ESSEX.
Braintree.—Coronation Open-air Swimming-bath (150,000 gallons; £500).
Brentwood.—Isolation Hospital.
Eastwood.—Three dairymen's houses and outbuildings (£1,000).
Rayleigh.—Church repairs, alterations and stained glass windows (£1,500 to £2,000).
Romford.—Sewage farm cottages.
Shoebury.—Waterworks extension (£2,000). Mr. Arnold Goodwin, engineer.
GLOUCESTERSHIRE.
Berkeley Heath.—Cottage farmhouse and several cottages.
Cirencester.—Cookery, housewifery &c. centre (conversion).
Hinton.—House.
HAMPSHIRE.
Milton.—Tuberculin Dispensary.
Tidworth.—R.C. Garrison Church for 500 soldiers (£1,400).
HEREFORDSHIRE.
Hereford.—County and City Asylum extension.
Secondary School for Boys. (Messrs. Wilks & Son, contractors.)
Public Secondary School for Girls.
St. Barnabas Mission Church.
Ledbury.—Handicraft and domestic subjects centre.
Leominster.—Secondary Schools additions (£2,800).
Wellington.—Council Schools additions.
KENT.
Ramsgate.—Lloyd's Banking premises. Mr. S. H. Page, F.S.I., architect.
LEICESTERSHIRE.
Market Harborough.—House in Newcombe Street.
LINCOLNSHIRE.
Woodhall Spa.—Home for gentlewomen.
MIDDLESEX.
Enfield.—Carnegie Public Library (£2,000).
Hanwell.—St. Joseph's R.C. Church extension.
MONMOUTHSHIRE.
Training College. Mr. F. Bond, contractor. (£28,248.)
NORFOLK.
Aslacton.—School alterations.
East Dereham.—Secondary School.
Lingwood.—School enlargement.
North Walsham.—Coronation drinking fountain.
Thetford.—Wesleyan Church enlargement and new vestry.
Tivetshall.—School offices.
SHROPSHIRE.—County Sanatorium.
Albrighton.—Sewerage scheme.
Dawley.—Water supply extension. Messrs. Stewart & Lloyd, contractors.
Ludlow.—House at Tinker's Hill.
Water supply (£3,600).
Wellington.—Co-operative Stores for the Oakengates and District Co-operative Society.
SOMERSETSHIRE.
Montacute.—Ten houses.
STAFFORDSHIRE.
West Bromwich.—Church.
SURREY.
Epsom.—Eighteen cottages.
Guildford.—Girls' County School.
Grammar School Gymnasium (£1,000).
Public Elementary School for 100 scholars in Peaslake District.
St. Martha's C.E. Schools additions and alterations.
Special subjects school centre.
Hersham.—School accommodation.
Leatherhead.—School.
Mitcham.—Central Fire-station.
Sub Fire-station at Collier's Wood.
Waltham-on-Thames.—School accommodation.
SUSSEX.
Bognor.—Artisans' houses.
Chailey.—Arts and crafts school for crippled boys and girls.
Hayward's Heath.—Cottage Hospital. Messrs. F. Wheeler & Godman, architects.
WARWICKSHIRE.
Hockley Heath.—Public Elementary School for 200 scholars.
WILTSHIRE.
Purton.—Drainage scheme.
YORKSHIRE.
Easingwold.—District water supply scheme. Mr. Fairbank, engineer.
Leeds.—G.P.O. structural additions (£15,000).
Middlesbrough.—Parochial Hall, Sunday Schools, Club Gymnasium and Class-room, and Vicar's Parlour at Linthorpe (£4,000).
Mossley.—Drill Hall.
North Newington.—Parsonage.

WALES.

Bedwellty.—Board of Guardians' offices (conversion).
Crickadarn.—Church restoration.
Wrexham.—Outfall works (£40,000).

SCOTLAND.

Arbroath.—Bakehouses for Arbroath Equitable Co-operative Society.
House in Bank Street.
Ballinluig.—Logierait public school additions and alterations (£1,000).
Buckhaven.—School at Aberhill. Mr. G. C. Campbell, architect.
Cardonald.—Double villa in Hillhead Road.
Cathcart.—Six tenements in Tulloch and Rannoch Streets.
Dundee.—Houses in Sandeman Street.
Office, warehouses, &c., in South Road Lochee.
Operating Theatre in Union Terrace.
Dunfermline.—Tenement of dwelling-houses in Townhill Road. Mr. A. T. McLeod, builder.
Carnegie free library extension.
Edinburgh.—Hall for use as childreu's church and juvenile temperance meetings (accommodation for 500 children).
Glasgow.—Deacons' Court of Battlefield United Free Church, beadle's house and offices; five houses in Ravenshall Road, Shawlands tenement of dwelling-houses in Hyndland Drive.
Johnstone.—Public slaughterhouse (£2,400).
Macduff.—Harbour extension [(*a*) £30,000; (*b*) £42,000]. Mr. Douglass, engineer.
Methil.—Customs House.
Peterhead.—Workmen's cottages. Mr. Stuart, architect.
Pollokshaws.—South Shawlands United Free Church and Church House and Hall.
Rutherglen.—Six double two-storey villas.

IRELAND.

Belfast.—Intercepting Hospital.

METAL PARTITION WALLS IN GERMANY.

It appears from a report to his Government by the United States Consul-General at Berlin that most of the inner partition walls used in buildings in that city consist of a heavy iron wire screen, on either side of which are layers of coke-ash mortar. The walls are apt to get out of plumb, and will not hold nails satisfactorily; and, as in making the mortar cattle-hair, jute, and hemp refuse are used, it sometimes disintegrates, causing the wall to crumble and sections to fall out. A good metal partition wall should therefore, says the Consul-General, find a market in Germany, provided that it was not too thick, and that the cost was not very much greater than that of the ordinary wall. Economy of space is looked for by the German builder. The authorities require that all outside and supporting walls shall have a thickness of at least 36 cms. (14.173 in.), and hence partition walls are generally limited in thickness to 10 cms. (3.937 in.), as they are not required to support great weights.

The coke-ash walls cost about 3.20 marks per square metre (about 2*s.* 8*d.* per square yard), but builders would pay more for a wall of satisfactory construction. Prices should be quoted in marks per square metre f.o.b. German port.

VARIETIES.

JOHNSTONE Town Council in committee have agreed to erect a public slaughter-house at the cost of £2,400.

THE Hull Corporation Hospitals Special Committee have decided to ask Mr. Hirst (the City Architect) to design the proposed new sanatorium for Hull.

THE will of Mr. John Wilson, of Osborne Road, Newcastle-on-Tyne, builder and manufacturers' agent, has been proved at £97,774 (net personalty, £3,678).

MR. FRANK BELLIS, architect, Bangor, has prepared plans for a workhouse infirmary to be erected for the Bangor and Beaumaris Guardians.

THE Building Act Committee of the London County Council have approved the plan of the addition proposed to be erected at the Thomas Street Council School, Limehouse, E.

AT the last meeting of the Darlington Town Council plans were passed for seventy-six houses to be erected in Brougham Street.

MR. W. H. BRIERLY, F.S.A., F.R.I.B.A., has been appointed consulting architect to the York Central Diocesan Fund Council in the place of the late Mr. Hodgson Fowler.

THE Wolverhampton Electricity Committee are asking the Town Council to sanction extensions at the generating station in Commercial Road at a total cost of £19,700.

THE Blyth Education Committee have decided to purchase an acre of ground at 5*s.* per square yard for a new school for 1,200 pupils.

MR. W. HAYNE, architect, Frinton-on-Sea, has prepared plans for a Free Church, proposed to be erected at a cost of £2,500 at Frinton-on-Sea, Essex.

THE Baths Committee of the Bristol City Council recommend that a site be purchased in the neighbourhood of Horfield and Ashley Down for swimming and slipper baths, and that the work of erection be undertaken as soon as possible.

THE Master Brick Builders of Glasgow District have granted an advance of a halfpenny per hour. The rate of wages to bricklayers will be 10*d.* per hour on and after to-day.

THE authorities of the University College of North Wales, at Bangor, have decided to proceed forthwith with the erection of the science section, and thus at once complete the whole scheme at a cost of nearly £200,000.

THE Leeds City Council last week defeated a proposal by the Tramways and Electricity Committee to purchase land and the buildings thereon for offices for the Tramway Department to a total of £31,550.

A COMPANY has recently been registered with a capital of £30,000 under the title of The Newcastle-upon-Tyne City Hall, Ltd. The object is to erect a large hall in that city for musical and other gatherings.

THE architect of the Stoke-on-Trent Education Committee has been instructed to prepare a scheme for the provision of a domestic centre in Glass Street, Hanley, and to submit the same at an early date.

A HUGE chimney stack, known as "the wonder," built 113 years ago, was demolished at Mountsorrel brickyard, Leicestershire, on Saturday. Its total weight was nearly 500 tons.

THE York City Council have decided in Committee to adopt a recommendation of the Tramways Committee to extend the system to Bishopthorpe Road and South Bank, at a cost of £16,440, and to Heworth, by way of Lord Mayor's Walk and Monkgate, at a cost of £25,263.

MR. A. CLIFFORD SWALES, of the Leeds City Engineer's Department, has been awarded the "Miller Prize," offered annually, in competition, by the Institution of Civil Engineers, for his paper entitled "Cement and Concrete."

THE "Feuille Fédérale Suisse" of June 28 contains a decree opening in favour of the Federal Council credits amounting to £33,480 for the purpose of enlarging the ordnance factory at Berne, and for its equipment with the requisite additional machinery.

THE Worthing Town Council have accepted the tender of Messrs. Mirless, Bickerton & Day, of Stockport, to supply additional plant at the generating station for £3,965. A Local Government Board inquiry is to be held shortly into the Corporation's application for sanction to borrow £4,950 for the purposes of the electricity undertaking.

THE *Oesterreichischer Zentral-Anzeiger* (Vienna) of June 15 states that plans have been drawn up for entirely rebuilding and extending the railway station at Böhmisch-Trübau. The cost of the undertaking is estimated at 15,000,000 kronen (£625,000), and the work will not be completed before next year.

THE Smethwick Education Committee have instructed the architect to prepare plans and specifications for a three-department school in the northern part of the district to accommodate 400 children in each department, together with manual training centre, dining room, and small room for the use of the school doctor.

PLANS for a new electric theatre to accommodate 1,000 adults have been passed by the Sunderland Building Committee. The building will be erected in South Villier's Street on a site now occupied by an old organ factory and other property. The plans were put in on behalf of Mr. T. H. Johnson.

SKETCH plans have been prepared by the Architects' Department of the London County Council for a proposed fire-station in substitution of the existing St. John's Wood station. The preliminary estimate of the cost of the building work, including electric lighting and incidental expenses is £13,000.

AT the ordinary monthly meeting of Newbigggin Council plans were submitted for ten aged miners' homes on North Seaton Links, sixty houses on North Seaton Links for Mr. J. Bell, a lecture hall behind the Wesleyan Church, fourteen houses on North Seaton Links for Mr. J. Saint, and six semi-detached villas on the Westfield estate for Mr. T. Field. Most of the plans were passed, that for the lecture hall and the six semi-detached villas being postponed.

THE Southport Corporation have entered into agreement with the Hesketh Estate for a right of way on the Hesketh sea embankment. Plans are also being prepared for the development of Ainsdale, and the laying-out of Lord Street under the Town Planning Act. The Borough Surveyor has been instructed to interview Mr. Brodie, the City Engineer of Liverpool, to discuss matters arising out of the Town Clerk of Southport's suggestion for the planning of greater Southport.

THE Manchester Corporation have under consideration schemes for the extension of the Municipal School of Art at an estimated cost of £4,000; the erection of furnished houses in Tebbutt Street, Rochdale Road, at a cost of £8,889; and the erection of cottage flats on the Barrack Street site at a cost of £16,545.

"A Text Book on Sewage Disposal in the United Kingdom," by Mr. H. Lemmoin-Cannon, P.A.S.I., with a foreword by Sir Alexander Stenning, is shortly to be issued. The author exhibits his deep interest in the work of the Benevolent Fund Committee of the Surveyors' Institution by dedicating a moiety of his profits on the sale of this book to the Fund under their charge. The book is intended for the student as well as the practitioner.

AT the last meeting of the Surrey Education Committee the tenders accepted included those of Messrs. J. W. Humphreys & Son, of Godalming, amounting to £162, for the erection of a workshop at Godalming School; of Messrs. Martin, Wells & Co., at £1,250, for carrying out alterations and additions to Lower Abinger School; and of Messrs. Millars Karri & Jarrah Co., at £124 15*s.* 6*d.*, for fencing the site of the Leatherhead School. Sanction was given to raising a loan of £5,320 for a new school at West Molesey.

The Isle of Man Harbour Commissioners have submitted to the Lieutenant-Governor a proposal for widening Victoria Pier, Douglas, to the extent of 15 feet for a considerable distance on the south side from the root of the pier. The idea is to carry out the widening by means of a neck carried on reinforced concrete piles, and it is estimated the cost will be £11,325. The widening will relieve traffic on the pier, which in the holiday season is very congested. The Commissioners have also submitted a scheme for a new pier 160 feet long at Port Erin, estimated to cost £8,500.

A new branch of the London, County and Westminster Bank, Ltd., has been opened in High Street, Maidstone. The general floor façade is carried out in Cornish granite, and the two upper floors in red brick with Portland stone dressings. The contractors were Messrs. Grummant Bros., of Ramsgate, who carried out the work according to the designs of Messrs. Reeve & Reeve, architects, Margate.

The ceremony of laying the four foundation stones of a new out-patients' department of the North Staffordshire Infirmary was performed at Hartshill, Stoke-on-Trent, on the 7th inst. The new extension is in course of erection in front of the existing hospital buildings. It will have two out-patients' entrances from Prince's Road, and will be provided with up-to-date medical, surgical, and ophthalmic departments. The cost of the work will be £35,000.

The Government of India have sanctioned the construction of a new Anglican church for the use of troops at Lucknow at an estimated cost of £8,400. The church is designed to contain 1,047 seats, and will consist of a nave 35 ft. by 108 ft., with north and south aisles, north and south transepts, and sanctuary. There will be a square west tower 73 ft. high. The design has been prepared by Mr. J. Begg, F.R.I.B.A., consulting architect to the Government of India.

A company has been formed for the purpose of constructing and carrying on a curling and skating ice rink in Edinburgh, on the site of the old Cattle Mart of John Swan & Sons, Ltd., Haymarket. The building will be the largest ice rink in the country, and possibly the second largest in Europe. The rink will have an ice surface of about 17,000 square feet. There will be no pillars on the ice surface—the steel girder roof, about 36 feet high, being thrown over the building in one span. The internal measurement of the rink is 220 feet in length by about 120 feet in width. The chairman of the company is Sir Archibald Buchan-Hepburn of Smeaton; the commercial managers, Messrs. R. & R. Anderson, Edinburgh.

The Essex County Council have adopted the report of a special committee which recommended:—(1) That a whole-time county architect be employed, at a net inclusive salary, to include the whole of the architectural work of the Council (including surveying work in connection therewith), and that he be provided with necessary staff, offices, office requisites, &c. (2) That it be referred to the Committee, in conjunction with representatives of the Standing Joint Committee, to carry out the foregoing recommendations, and to make all necessary appointments, including, if they think it desirable, the appointment of an assistant or assistants to undertake the work of quantity surveying. The Committee estimated that the cost of the proposed staff would be £1,600 per annum, in addition to which there would be travelling expenses, which at present amounted to a considerable sum.

Now is the time to see Stratford-on-Avon in all the glory of its natural beauty and visit Shakespeare's birthplace, Anne Hathaway's Cottage, and the many places of interest in the neighbourhood. The Great Central Railway is offering special facilities for an attractive day tour through Shakespeare's country, embracing Stratford-on-Avon, Warwick, Guy's Cliffe, Kenilworth, and Leamington by express train leaving Marylebone at 10 a.m., and on arrival at Stratford-on-Avon by private automobile to the places named. The tour covers 196 miles rail travel and 33 miles motor drive through typical English scenery and most historical country in less than nine hours, and passengers return to London before 7 p.m. The inclusive fare is 11*s*. 6*d*. Such a tour should not only appeal to visitors, but also to those residing in and around London who wish to see the Shakespeare country expeditiously and economically. The Publicity Bureau, 216 Marylebone Road, N.W., will send full particulars on application.

The new church of St. Mary Magdalene in Plymouth is to be erected at the end of Alvington Street according to the designs of Sir Charles Nicholson, of London. The firs
contract will, it is estimated, cost about three or fou
thousand pounds. The new church will abut on the end c
the existing church. The church is to be built of local stone
the floor will be of concrete, and a vaulted roof will b
sprung from granite pillars. Immediately above the scree
will be affixed a large oak crucifix. The dimensions of th
new church, not calculating the existing church, will be
South aisle, 79 ft. 6 in. by 21 ft.; nave, 60 ft. by 23 ft
6 in.; chancel, 34 ft. 6 in. by 23 ft. 6 in. When complete
the church will comfortably seat 700 people.

TRADE NOTES.

The new Isolation Hospital, Conway, is being warme
and ventilated by means of Shorland's patent Mancheste
stoves with descending smoke flues, patent Manchester grates
exhaust roof and special inlet ventilators, supplied b
Messrs. E. H. Shorland & Brother, Ltd., of Failsworth
Manchester. The Frickley Hospital, near Doncaster, i
being supplied with Shorland's patent Manchester stoves
with descending smoke flues. The new church schools
Worksop, are being ventilated by means of Shorland's paten
exhaust roof ventilators.

The Brilliant Sign Company (1907), Ltd., registere
offices, 38 Gray's Inn Road, London, W.C., have so increase
their trade with the Continent recently that, in order t
minimise the cost of production (saving duty, freightage
&c.), they have been compelled to build a factory at 5
Rempart du Lombard, Antwerp, and have recently installe
a large power press for the rapid production of their bri
liant letters in fancy designs, and suitable for the Continenta
trade. It will also enable them to more successfully intr
duce their specialities into France, Belgium, Germany, an
in fact the whole of Continental Europe. They have quit
recently arranged a partnership with a gentleman in Moss
Norway, for the development of their business throughou
the whole of Scandinavia. A stock of brilliant letters
value £500, has been laid down in Norway, and they ar
looking for a big volume of business from this territory a
a very early date. Catalogues are being printed in foreig
languages.

We here illustrate a new Electric Range which has bee
put on the market by the Carron Company after man
experiments carried out with a view to effecting improve
ments on the existing electrical cooking apparatus. Th
range consists of an oven for roasting and baking, fitte
with the "Carron" inner glass door, two hotplates fo
boiling, stewing, &c., a double grill and toaster, an
a hot closet for keeping food warm, warming plates, o
for slow cooking, and is equipped with heating power neces
sary to do the cooking of an ordinary household. Th
hotplates and elements for oven are each provided with tw
heats; thus the temperature can be raised quickly and after
wards maintained at any lesser degree with the minimun
consumpt of current, thereby ensuring the utmost economy
The loss of heat through outward radiation is reduced t
a minimum, and the unavoidable waste from the oven car
be utilised for simmering. The heating elements are s
arranged that they may be easily replaced at small cost
without returning the range to the makers.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC. 8 8

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Athens.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Egremont.—Aug. 8.—The Urban District Council offer premiums of £40 and £10 for a scheme to lay out, under the Housing of the Working Classes Act, building sites at Egremont and Bigrigg. The Egremont site consists of 1 acre, 1 rood, 16 poles, and the Bigrigg site 3 acres, 1 rood, 28 poles. Further information may be obtained from the Surveyor, Town Hall, Egremont, Cumberland.

London.—July 31.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s.*, which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All questions must be sent not later than July 31 to Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Northwich.—Aug. 1.—The Urban District Council are prepared to receive names of architects willing to prepare plans for public baths (cost not exceeding £7,000). A limited number will be selected to compete. An assessor will be appointed and premiums awarded. Send applications, stating experience, by August 1, to Mr. J. Arthur Cowley, clerk, Council Offices, Northwich.

Wales.—Aug. 9.—For erection of a villa residence at Radyr, Glamorgan. Mr. W. H. Dashwood Caple, architect, 2 Church Street, Cardiff.

Walsall.—Aug. 1.—For construction of an underground convenience, The Bridge. Deposit £2 2s. The Borough Surveyor, Council House, Walsall.

Westerham Hill.—July 24.—For the erection of a cottage and other contingent works at Westerham Hill, Kent, for the Metropolitan Water Board. Send £1 deposit to the Accountant, Savoy Court, Strand, W.C. Chief Engineer's Department, Savoy Court, Strand, W.C.

West Kirby.—July 28.—For erection of high school for girls at West Kirby, Cheshire. Deposit £2. Mr. H. Beswick, county architect, Newgate Street, Chester.

Wistaston.—July 27.—For alterations and additions to the school buildings, Wistaston, near Nantwich. Deposit £1. Mr. H. Beswick, county architect, Newgate Street, Chester.

York.—July 26.—For alterations to the White Swan Hotel, Pavement, York. Send names by July 26 to Mr. W. Mortimer, architect, Lincoln.

Mr. T. Roddan Dent, who recently purchased Messrs. Craggs & Sons' shipbuilding yard at Middlesbrough, has definitely decided to dismantle the yard. The site will be cleared very shortly, and extensive alterations will be proceeded with.

Miss Stancomb Wills has intimated her intention of giving to the Bristol Grammar School £10,000 for the building of a science and art wing. Eighteen months ago a ground plan of a new wing was actually prepared, but as there were no funds available, nothing beyond the preparation of that plan was possible. Whether the scheme then drawn up will be carried out is uncertain.

TENDERS.

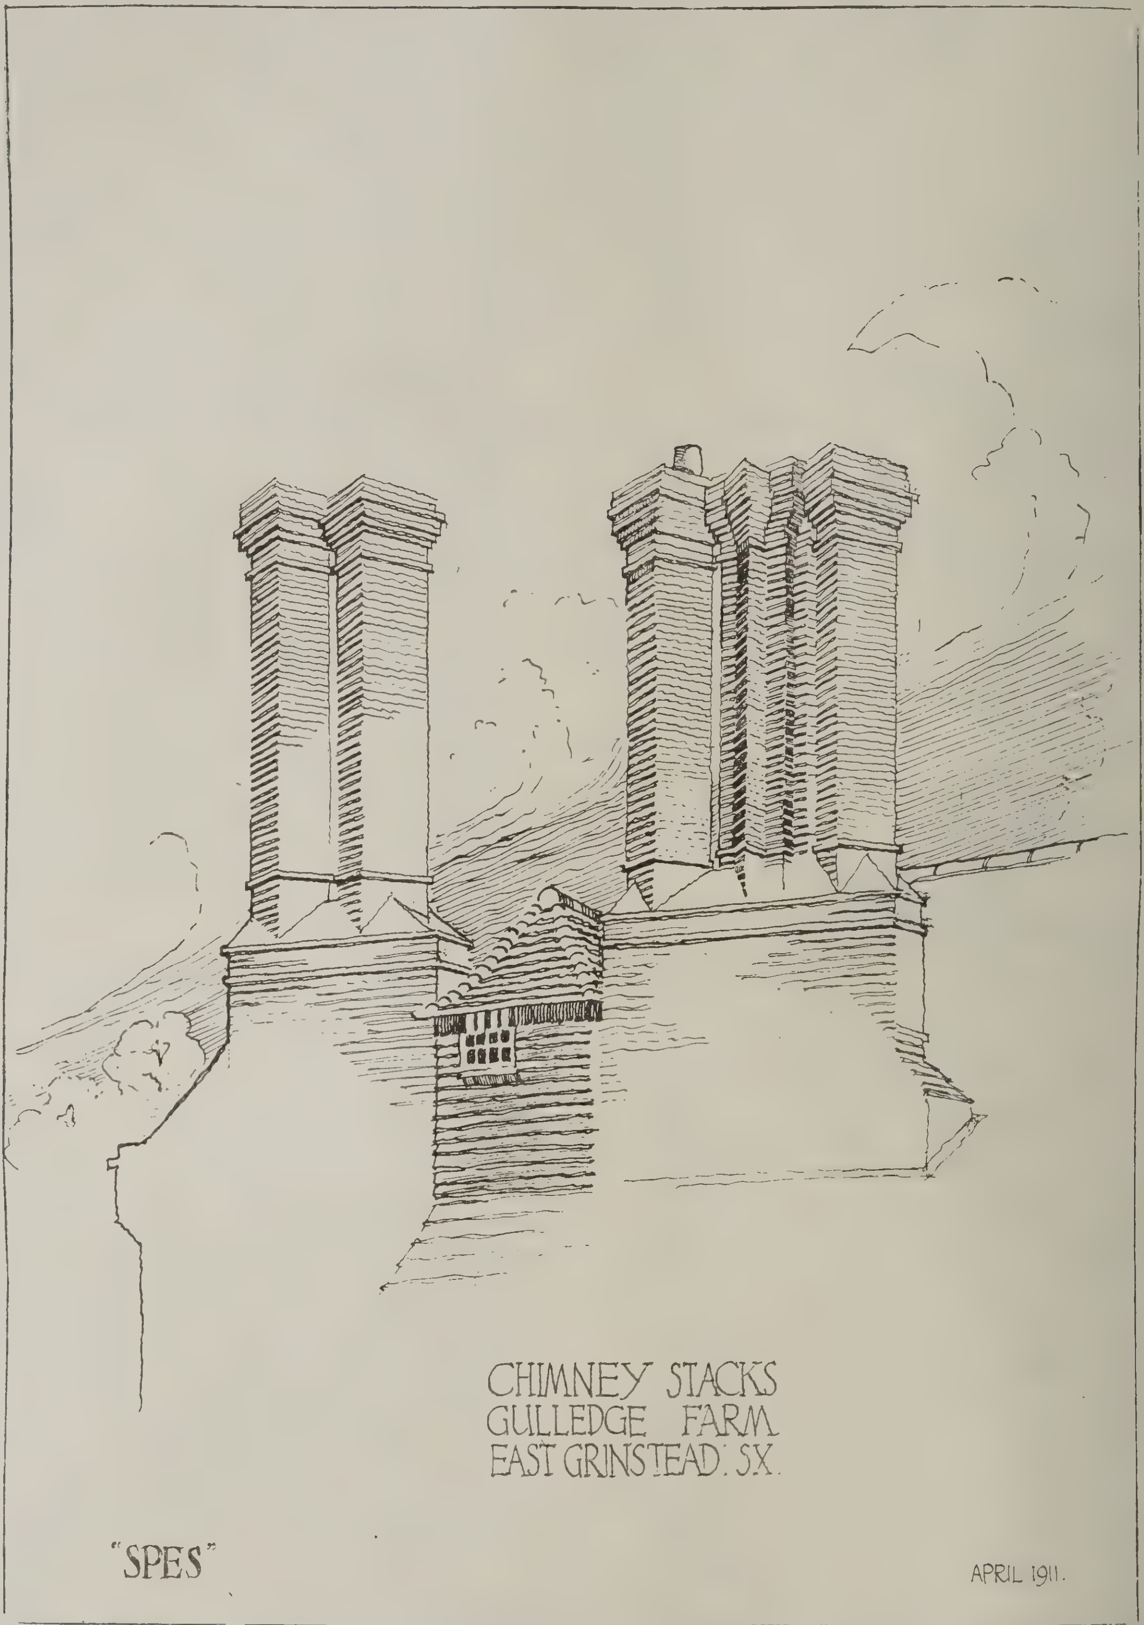
"THE ARCHITECT" STUDENTS' SKETCHING AND MEASURING CLUB.



The sketches herewith show a comparison between the chimney stack designed by an architect for a nobleman's house and a group of stacks by a local craftsman for a more humble dwelling. The stack from Kirby Hall, Northants, attributed to J. Thorpe, was built in 1573, and shows how the stately effect of a building may be enhanced by its stacks. The group of stacks from Gulledge Farm, near East Grinstead, shows the charm produced by the correct massing and distribution of simply treated brick chimneys.

LONDON—*continued.*

For the work of fitting up for seven special cubicles the room at Bruce House having a separate entrance in Kean Street, for the L.C.C.

E. D. W. **Evans**, Cardiff (*accepted*)	160	13	8

A sum approaching £6,000 has been the profit for the past year of the borough of Portsmouth tramways.

Mr. S. A. **Sharper**, of Sleaford, has been selected out of about 100 applicants for the post of sanitary inspector to the Sleaford Rural District Council.

The York Board of Guardians have received a letter from the Local Government Board approving the plans of the extensions and alterations at the workhouse, and stating that they were prepared to sanction a loan of £14,294, to be repaid in 25 years, or they would allow 30 years for the repayment of £12,000, and 15 years for the repayment of £2,294.

The Warwickshire County Council have agreed that the plans of the proposed new buildings to be erected on part of the Hawthorns property, Sutton Coldfield, prepared by the county surveyor, be approved, and be submitted to the Home Office for approval; and that the additions and alterations at the Hawthorns house to make it suitable for a superintendent's house, recommended by the county surveyor, be carried out, the total cost being estimated at about £1,900.

The Government Works Department at Sydney, New South Wales, has in hand, authorised, or immediately contemplated, works valued at £5,652,927, and the building trade generally is very active.

Mr. **John R. Hacking**, junior partner of Messrs. Francis Robertson & Hacking, architects, St. Vincent Street, Glasgow, died on Monday, July 17, at the age of 29, after being operated on for appendicitis. Mr. Hacking, in conjunction with Mr. A. Graham Henderson, another Glasgow architect, was awarded a 100-guinea premium for a competitive design for Manchester Library and Art Gallery.

At Leith Dean of Guild Court on Monday the Rev. E. Callan and others were granted warrant to remove the existing shops and dwelling-houses, 108 to 120 Constitution Street, and to erect a chancel, sacristy, chapels, &c., and to extend the church of St. Mary's Star of the Sea.

The King Edward Memorial Hospital in Matlock Lane, Ealing, was opened last week. The total cost, inclusive of site, furnishing, and architects' fees, is over £25,000. The general contract has been carried out by Mr. W. J. Dickens, of Ealing, from the designs and under the superintendence of Messrs. Hall-Jones & Cummings, of Westminster and Ealing.

The London County Council in December last approved an estimate of £800 and sanctioned expenditure on capital account of that amount in respect of preliminary work in connection with the preparation of plans, &c., for the enlargement of the Crossness pumping station. The preliminary work is nearly completed, and the Main Drainage Committee propose that tenders for the erection of the new buildings should be invited. The total cost of the enlargement of the station, including the supply and erection of machinery, is estimated not to exceed £120,000. The Committee also propose to expend £500 on the preparation of plans, making of borings, &c., in connection with the proposed enlargement of the Isle of Dogs storm-water pumping-station, the cost of which is roughly calculated at £30,000.

With a view of raising money in aid of the King Edward National Memorial Fund, which has for its object the purchase of the Crystal Palace as a national memorial to King Edward, a Progress of Peace Exhibition and Festival will be held at the Crystal Palace in 1912. An honorary Grand Council of the King Edward National Memorial and the Exhibition is now being formed to further the projects. An international Festival of Peace will be held in which all civilised Governments and peoples will be invited to cooperate. In this Festival of Peace it is proposed to exhibit, as far as possible, the progress of industries and manufactures, and the development of sciences and arts under the benign influence of peace, and suggesting by contrast the baneful effects of war and internecine strife. Conferences, thanksgiving days, &c., will be arranged. An appeal is made to manufacturers to give the proposal their support.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit particulars for insertion in this weekly list.)

ENGLAND.

Aberdeen.—John Knox Parish Church.
Forgue.—United Free Church.
Glenmoriston.—Parish Church (£4,000).
Whitehills.—Sewerage scheme (£850). Mr. Barron, C.E., engineer.

The Local Government Board recently informed the Truro City Council that they had mislaid the plans for the municipal housing scheme, and the Board asked that they should be replaced.

Two Durham County Council schools were opened last week. One at New Lambton has been erected by Messrs. Clerey & Charlton, contractors, Sunderland, at a cost of £4,261, and a cost per head, exclusive of the cookery room, of £10 8*s.* 5½*d.* The other is at Haswell, and has cost £9,202. The contractor was Mr. J. W. White. Mr. W. Rushworth, F.R.I.B.A., the county architect, prepared both plans.

THE INSTITUTION OF MUNICIPAL ENGINEERS.

THE Southern District of the Institution of Municipal Engineers held their annual meeting at the offices of the Institution, 39 Victoria Street, S.W., on the 12th inst. Mr. Horace Boot, M.I.E.E., M.I.Mech.E., was re-elected district chairman, and Mr. Ernest W. Veale, surveyor to the Farnham Rural District Council, was re-elected hon. district secretary for the ensuing year. The programme for the year was discussed and a number of meetings and visits, of which due notice will be given, were tentatively arranged.

The annual meeting of the Eastern District will be held at Goode's Hotel, Marine Parade, Yarmouth, on Saturday, July 22, at two o'clock. The following business will be taken: Election of District Chairman and Hon. District Secretary. Programme for ensuing session: A paper, "Construction, maintenance, and repair of highways," by Mr. W. Astley Norris, surveyor to the Swaffham Urban District Council, will be presented for discussion. A copy of the paper may be obtained from the secretary. Mr. Andrew Paterson's paper, "Notes on exhibits in the Royal Agricultural Show of special interest to Road Surveyors," which was presented at Norwich, will also be discussed. Lunch, 2*s.* 6*d.* per head, may be obtained at Goode's Hotel at one o'clock, when a table will be reserved for those notifying their intention to be present. R. G. Coates, Hon. District Secretary, Acle, Norwich; B. Wyand, Secretary, 39 Victoria Street, S.W.

On Saturday, July 29, the Institution of Municipal Engineers will hold a meeting at Edinburgh. At 10.30 the members will meet at Elder's Hotel, 9 South St. David Street (opposite "Jenners"), and proceed to formation of the Scottish district of the institution and election of officers. At twelve o'clock an adjournment will be made for luncheon. At one o'clock the party will leave Waverley Station, arriving at Dalmeny Station at 1.21, and after walking across Forth Bridge, they will join the Forth Bridge launch and sail up to Rosyth Naval Base and back to South Queensferry (by permission of the Secretary of the Forth Bridge Railway Company). At four o'clock the party will leave Dalmeny Station, arriving at Waverley Station at 4.20. Members must give notice to Mr. B. Wyand, secretary, 39 Victoria Street, London, S.W., not later than Saturday, 22nd inst., of their intention to be present, and must also state if they desire lunch or accommodation at Elder's Hotel.

VARIETIES.

MR. ILLINGWORTH HOLMES, of Birstall, has been appointed surveyor to the Salcombe (Devon) Urban District Council.

MESSRS. R. SCRIVENER & SONS, architects, Hanley, have been instructed to proceed with the proposed alterations at the Hanley, Cannon Street, Council School.

THE Princess Alice Memorial Hospital at Eastbourne is to be enlarged at a cost of £4,500; a nurses' home is also to be erected as a memorial to the late King Edward VII.

SIR GEORGE CHUBB, BART., presided a few days ago at the opening of the first house of Farrington's School, Chislehurst. The architect is Mr. Josiah Gunton, C.C.

THE Board of Education have approved of the proposed erection of a Secondary School at Kettering on a portion of the Manor House field. The cost of the site is £2,250.

AN Early English half-timbered dwelling house, dating from 1490, has been removed from Hawstead, Suffolk, and re-erected on Marine Parade East, Clacton-on-Sea.

BOOTS, LTD., have offered the London County Council a rent of £750 a year for a lease of 99 years of a site with an area of 57,500 square feet and a frontage of about 317 feet to Tower Bridge Road.

THE South-Eastern and Chatham Railway Company are carrying out extensive additions to their locomotive works at Ashford, Kent. New erecting, boiler-making and tender shops are to be built and fitted with the latest electrical appliances.

THE Western Lawns at Hove are to be extended seawards at an approximate cost of £5,200, so as to be on a line with the sea-wall from the Hove boundary to the West Pier. About seven thousand square yards of additional promenade will thus be provided.

THE Stockport Guardians resolved on Monday to erect at Stepping Hill new buildings for imbeciles and epileptics, at a probable cost of £26,000. The buildings will accommodate 105 male and 159 female patients, and will include mental wards, epileptic wards, sick wards, and short-period wards.

MR. JUSTICE EVE on Tuesday sanctioned in Chancery a scheme for the acquisition of a site at Burhill between Walton and Weybridge for the establishment of homes for 600 or 700 poor people, in connection with the bequest by the late Mr. William Whiteley of £1,000,000 for the provision of homes for the poor.

MESSRS. LACEY, SILLAR & LEIGH, consulting engineers, Caxton Street, London, have been engaged by the Newcastle-under-Lyme Town Council to advise them in the matter of the proposed electricity works extensions, and with special reference to use of gas engines in preference to steam for the generation of electricity.

CAPTAIN GILMOUR, of Birkenhead, has undertaken to defray the cost of erecting the Central Hall for the New Undergraduates' Union in connection with Liverpool University, at a cost of £5,000. This donor has already promised to provide furniture for the New Union at a cost of £1,500.

OWING to an insufficient response to the Garden City Association's appeal for help the scheme of a garden suburb at Radford, Coventry, cannot be proceeded with. Mr. T. A. Cash, who initiated the movement three months ago, has, however, been able to renew the option on the land for a time.

THE Holme Cultram Urban District Council has adopted the plan of Mr. J. C. Boyd, architect, of Carlisle, for improving the coast protection works at Silloth for a length of 916 yards north-east of North House, and it has been agreed that the plans be sent to the Local Government Board. The cost of the scheme is estimated at £1,853.

THE Chertsey Board of Guardians have adopted a report of their Works Committee, who advised that a house for 12 nurses should be built in the garden on the east side of the workhouse buildings, to contain 12 bedrooms, one general sitting room, one private sitting room, lavatories, two bathrooms, and a pantry.

THE Commissioners of His Majesty's Works have instructed Messrs. Horne & Co. to sell by private contract on July 27 the Coronation annexe to the western entrance of Westminster Abbey. The principal part, the robing hall, is described as being 117 feet by 62 feet by 30 feet high, artistically and emblematically decorated with many suitable arms, shields, mottoes, badges, and quarterings.

THE Board of the Rochdale Infirmary have decided to proceed at once with a portion of a large scheme of extension at a cost of about £16,000. These additions will include a new operating theatre, accommodation for additional staff, provision for ophthalmic treatment, and an enlargement of the in-patients' department, together with an extension of 24 additional beds. The full scheme provides for 48 extra beds.

THE North Riding Education Committee recommend that the undermentioned sums be borrowed to defray capital outlay:—Northallerton Grammar School, for additions to existing premises, £1,200; North Ormesby Council Girls' School, £400 for improvements; Cargo Fleet proposed new school, £4,650; and Huntingdon School, £1,185 for additional land, enlargements, and legal expenses.

A FACULTY was granted on Tuesday at the York Consistory Court for alterations at the parish church of St. Mary, Doncaster. These include the removal of the present apsidal end, together with the east end vestries, building a rectangular chancel extending further eastwards with vestries on the south side and an organ chamber on the north side, the erection of a central door with porch at the west end, and of a new door on the south side.

THE tender of Messrs. E. Taylor & Co., Ebor Works, Littleborough, for the building of the new annexe and incidental works, the County Asylum, Whittingham, Preston, amounting to £117,350, has been accepted by the Committee of Visitors on behalf of the Lancashire County Asylums Board. The whole of the works, according to the *Manchester Guardian*, are to be carried out under the supervision of Messrs. Sykes & Evans, architects, of Manchester and Rochdale. The scheme was approved by the Lunacy Commissioners and the Home Secretary in May, and the buildings will be completed ready for occupation in about two years.

AT the meeting of Sunderland and District Trades and Labour Council held last week a letter was read from the local secretary of the Operative Bricklayers' Society saying they were compelled, reluctantly, to sever their connection with the Council forthwith, as the newly constituted rules of the Council in their political aspect did not harmonise with the views of the executive of the society, nor with the spirit of the society's general rules. The delegate of the union explained that the withdrawal was a result of the Osborne judgment, which did not permit them to pay money out of their funds to the Council now that it was part of the Labour party.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* P.M. *on Thursdays.*

COMPETITIONS OPEN.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

EGREMONT.—Aug. 8.—The Urban District Council offer premiums of £40 and £10 for a scheme to lay out, under the Housing of the Working Classes Act, building sites at Egremont and Bigrigg. The Egremont site consists of 1 acre, 1 rood, 16 poles, and the Bigrigg site 3 acres, 1 rood, 28 poles. Further information may be obtained from the Surveyor, Town Hall, Egremont, Cumberland.

LONDON.—July 31.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1s., which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All questions must be sent not later than July 31 to Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Newcastle-upon-Tyne.—The Education Committee invite competitive plans from architects practising in Newcastle for a Senior Mixed School and a Junior Mixed School, each to accommodate 365 children, at Walker Gate. Mr. Spurley Hey, secretary, Education Offices, Northumberland Road, Newcastle-upon-Tyne.

Northwich.—Aug. 1.—The Urban District Council are prepared to receive names of architects willing to prepare plans for public baths (cost not exceeding £7,000). A limited number will be selected to compete. An assessor will be appointed and premiums awarded. Send applications, stating experience, by August 1, to Mr. J. Arthur Cowley, clerk, Council Offices, Northwich.

Scotland.—Aug. 1.—The Committee of the Battle of Largs Memorial Fund invite sketches of a suitable memorial to commemorate the battle of Largs, 1263. The site of the memorial will be on the foreshore of Largs, but the exact position has not yet been determined. The committee have at their disposal the sum of 300*l.*, which is the maximum sum to be expended on the erection. A premium of 5*l.* will be paid for the successful sketch. The sketches will be judged by the subscribers. Mr. Peter Morris, Town Clerk, Largs.

Skegness.—Sept. 5.—The Executive Committee invite architects to submit competitive designs and estimates for the proposed Cottage Hospital. Building to cost £900. Premium for design placed first, £15 15*s.* Designs to be sent in by Sept. 5 to Mr. W. W. Robinson, hon. secretary, Capital and Counties Bank, Skegness.

COMPETITION NEWS.

Newton Abbey.—The awards have been made in the competition for new buildings organised by the Governors of the Seale-Hayne College. Mr. C. S. Smith, F.R.I.B.A., of Reading, the assessor, has given the first premium of £100 to design No. 17, submitted by Messrs. W. H. Mitchell, Son & Gutteridge, A.R.I.B.A., 9 Portland Street, Southampton. The second prize of £50 has been awarded to design No. 8, Mr. Josias Beare, A.R.I.B.A., of Newton Abbot. The third prize of £30 has been awarded to design No. 31, Messrs. Crouch, Butler & Savage, 39 Newhall Street, Birmingham. The complete building scheme contemplates buildings to cost £30,000.

Northampton.—The Borough Education Committee accepted plans last week for the proposed Girls' Secondary School, which is to be built in St. George's Avenue, at a cost of about £14,000. Twenty-two sets of plans were submitted in the competition, and the assessor, Mr. J. Osborne Smith, A.R.I.B.A., of Westminster, placed five of them in the following order of merit:—(1) Messrs. Sharman & Archer, Wellingborough; (2) Messrs. Talbot, Brown & Fisher, Wellingborough; (3) Messrs. Gotch & Saunders, Kettering; (4) Messrs. H. H. Dyer & Son, Northampton; (5) Messrs. Talbot, Brown & Fisher, Wellingborough. Messrs. Sharman & Archer's plan was accepted by the Committee. The competition was restricted to architects practising in the borough or county of Northampton.

Wallsend.—Messrs. Marshall & Tweedy, architects, 17 Eldon Square, Newcastle-on-Tyne, have been placed first in the competition for a new elementary school by Mr. A. W. S. Cross, F.R.I.B.A., the assessor. Mr. Edward Cratney was placed second. In the winning design the accommodation provided is for 1,440 children in three departments, also cookery, manual, and dining-room for children, caretaker's residence, and three classrooms for domestic subjects. The whole of the schools are single-storey buildings and embody the latest requirements of the Board of Education with respect to central halls and the better ventilation and isolation of classrooms.

SOUTHAMPTON BUILDING TRADE DISPUTE.

The arbitrator appointed by the Board of Trade to settle matters in dispute between the Southampton and District Building Trades Employers' Association and the workmen has now issued his award. He fixed the rates of wages and the conditions as to the notice as follows:—

The standard rate of wages for fully-qualified bricklayers will be 8½*d.* per hour, an extra ½*d.* per hour shall be paid for gauge work and for working in wet or foul drains; the standard rate of wages for fully-qualified plumbers shall be 8½*d.* per hour, an extra ½*d.* per hour shall be paid while working in infected rooms; the standard rate of wages for fully-qualified carpenters and joiners shall be 8½*d.* per hour; the standard rate of wages for spindle four cutters tenon machines, general joiners, and recessing machines 9*d.* per hour; other machinists and sawyers, 7½*d.* per hour; the standard rate of wages for fully-qualified painters shall be 7½*d.* per hour, an extra ½*d.* per hour to be paid for working in infected rooms; the standard rate of wages for builders' labourers shall be 5½*d.* per hour, an extra ½*d.* per hour shall be paid for scaffolders, for men timbering trenches, for men working with sledge hammer and clink, and for men working in wet or foul drains.

The employer to give one hour's notice or one hour's pay (except in case of misconduct); the employee to give the same amount of notice, or forfeit one hour's pay. On termination of engagement all wages due shall be paid at the expiration of such notice, or walking time allowed if sent to the yard. This rule applies to bricklayers, plumbers, painters, machinists, and labourers; but in the case of carpenters and joiners substitute the following:—The employer to give one and a-half hours' notice or one and a-half hours' pay (except in case of misconduct); the employee to give the same amount of notice or forfeit one and a-half hours' pay. On termination of engagement all wages due shall be paid at the expiration of such notice, or walking time allowed if sent to the yard. The employee may occupy the one and a-half hours' notice in grinding and sharpening tools.

No alteration has been made in the overtime rule.

The award comes into operation on August 5, 1911, so that the new rates of wages will commence for the week ending August 12, 1911.

The application made by the workmen was for an advance of 1*d.* per hour in the trades mentioned. The award grants an increase of ½*d.* per hour in all the trades.

THE ELEVENTH L.C.C. ASYLUM.

In May 1906 the London County Council sanctioned expenditure on capital account of £2,000 for the preparation of preliminary plans and approximate estimates of cost of a proposed asylum on the Horton estate. Preliminary general plans have been prepared by the asylums engineer, and have received the informal approval of the Lunacy Commissioners. The plans provide for an institution for 2,168 inmates, designed upon the villa principle, which offers many advantages, particularly in the ability to make a more thorough classification of the patients than the older type of building permits, and in the more home-like surroundings which are provided. It is proposed to divide the asylum into two sections, *i.e.* a hospital section and a chronic section, in connection with which there are to be provided a chapel, recreation hall, administrative centre, stores, kitchen, boiler-house, bath-house, laundry, workshops, staff-quarters, and isolation hospital. The buildings will cover an area of approximately forty acres. The site selected is a part of Greenman Farm on the Horton estate. The total area of the estate available for use in connection with the new asylum is some 234 acres. The asylums engineer's approximate estimate of the cost of the building and engineering work involved (excluding the cost of equipment) is £459,200. This estimate is based upon cubic measurements for the foundations, superstructure and drainage work, upon previous contracts so far as the engineering works are concerned, and for non-measurable items upon the cost of such works at Long Grove and elsewhere. The total is less by £30,320 than the actual cost of Long Grove asylum. The Asylums Committee are advised that a sum of about £50,000 will be required for the equipment of the asylum. The total approximate estimate of cost for construction and equipment therefore stands at £509,200, or £250 a bed.

It is now necessary that a quantitative estimate of the cost of providing the asylum should be prepared, in order that the Committee may be in a position to recommend the Council in due course to vote the necessary capital sum required. Before this estimate can be worked out, the working drawings, which will eventually require the approval of the Secretary of State, must be prepared. The cost of these with bills of quantities and a quantitative estimate will, it is estimated, be £5,250. The Committee, therefore, ask leave to incur that expenditure.

Hitherto the Council, though it has authorised expenditure on the preparation of preliminary plants, &c., has not definitely authorised the provision of further asylum accommodation, and until this has been done the Committee cannot take any of the necessary steps contemplated in section 254 of the Lunacy Act, 1890. The Asylums Committee feel that the time has arrived when the Council should formally authorise them to provide further asylum accommodation on the vacant site at Horton.

Allowing for the time which will be occupied in preparing plans and estimates, in securing the approval of the Secretary of State to the former, in obtaining tenders, and, finally, in actually building and furnishing the institution, it will take at least five years before the asylum is ready for the reception of patients.

THE INSTITUTION OF MUNICIPAL ENGINEERS, EASTERN DISTRICT.

The annual meeting of this district was held at Yarmouth on Saturday, July 22. Among those present were Messrs. W. T. Unwin (district chairman), W. Astley Norris (Swaffham), Andrew Paterson (St. Faiths), Solden Hipwell (Chatteris), A. W. Broker (Wimlington), S. G. Bloy (Mutford and Lothingland), T. Brown (Norfolk), A. W. Hobbs (East and West Flegg), R. Nelson (Norfolk), R. Gibson (Norfolk), R. G. Coates (hon. district secretary), and B. Wyand (secretary of the institution).

The first business to be taken was the election of district chairman and hon. district secretary, and the existing officers, Messrs. W. T. Unwin and R. G. Coates, were re-elected unanimously.

The following paper was then read:—

"Construction, Maintenance and Repair of Highways," by W. Astley Norris (member), surveyor to the Swaffham Urban District Council:—

I have been invited to offer a few observations upon the construction, maintenance and repair of highways, under the conditions of the traffic of the present period. In a paper of this description, addressed as it is to practical men, it is impossible for me to deal with the subject in a manner out of the usual course, and yet of sufficient interest to engage your attention; but I will endeavour to explain as briefly as possible the methods which I believe to be the best.

One of the most pressing questions at the present moment is the change which it is absolutely necessary to adopt in the making of macadamised roads in order to suit the altered conditions of the traffic passing over them. In recent years a more extended use of the highways has been made in this country, and the employment of traction engines, with wagons and heavy motor vehicles for conveying produce and merchandise, and also the greater use of fast-travelling motor cars, demand that some means be adopted for protecting and improving the road surfaces, thus making them more resistent against the greater amount of wear created by the ever-increasing form of new traffic. There is no doubt in my mind that in a great many instances inferior material procured from a local source has been used, with bad results, productive of mud and dust.

It will not do nowadays to apply macadam to a road surface without knowing how that material will wear, and it should be laid and consolidated in such a manner as to obtain the very best results so far as its wearing capacity is concerned.

The different classes of traffic which pass over our roads will have to be considered. It is only common sense that a length of road which carries heavy vehicular traffic near a city or town cannot possibly be compared with another length of road maintained with identically the same material carrying less traffic. There can be no model type of road which can be fitly adopted universally.

My practice is briefly as follows: Before spreading the granite or other material I fill up all potholes or uneven parts, so as to render the old surface as even as possible. The new material is then applied in the ordinary way, care being taken to see that every shovelful is evenly spread and thoroughly dry rolled until every stone is firmly bedded before the binding is put on. Just sufficient of this material is used to bed the stones, after which clean, ½-inch chippings to fill up the interstices, and swept about and rolled. We use good clean, sharp pit gravel for binding purposes.

When patching becomes necessary, as soon as a hollow appears, the roadman fills it with small stone, about 1½ inch, care being taken not to loosen the surface previously in any way.

Dust upon our highways will never be absolutely abolished; but we can and must reduce it. I have laid several dust palliatives, but do not think we have a remedy here sufficiently good, as I find that they answer admirably for a time, but when winter comes there is an increase in the mud on the roadways, and I fear that the wearing properties of the material are reduced considerably. Tar-macadam has been laid as a pavement in many towns and cities, but the cost would appear to make its application to county roads on a large scale prohibitive.

The most successful system is that of tarring furnace slag, introduced by Mr. E. P. Hooley. The method of preparing this road material, as in most cases of tar-macadam, is to thoroughly dry the stone by heating, and then to apply hot tar and mix thoroughly. Limestone was very extensively used at first, and selected for tar-macadam, on account of its absorbent properties, while dense, blast-furnace slag of best quality, a harder and comparatively better wearing material, has since been largely adopted.

Where roads have a good face, and it is possible to tar-wash the surface at least once every four months, tar as a surface binder will undoubtedly be a success. It will not, of course, make a weak road subject to disintegration from below a strong one. A road composed throughout of thoroughly tarred material will do all that surface treatment cannot do. The failure of tar-macadam has been in a great measure due to inability to get the tar to adhere to the material to be tarred. Moisture on the material or cooling of the tar means failure of adherence, and the use of soft materials which would adhere quickly means failure through the road giving way owing to inferior material.

In order to construct a good tar-macadam road it will be necessary to have an ordinary road as a bottom, or to form as good a foundation as possible. If a waterproof road is desired, then it must be of tarred macadam. The bottom layer can be 4-inch gauged material, laid and rolled, with the interstices filled up with finer tar-macadam, and the whole steam rolled. The second layer should be about ¾ inch in thickness of ⅝-inch tar-macadam, and left unrolled; on this should be applied a layer of 2¼-inch gauge tar-macadam, and rolled into the ⅝-inch, and when rolled ⅜-inch tar-macadam should be swept with a brush into every crevice or open joint. As a last coating, in order to join the face, a perfect layer of 1½-inch tar-macadam should be applied, and after the roller has passed twice each way over its face, ⅝-inch tar-macadam should again be swept into each crevice, so that a perfect surface is obtained.

Mr. R. G. Coates (Norfolk) said they all agreed that the use of dust palliatives did not warrant the expense incurred. He had tried surface treatment, but roads so treated required redoing every year, and here, again, the expense was unwarranted. He preferred spending the money which such treatment would cost upon the construction of tar-macadam roads. It was true that a very much smaller area could be dealt with yearly, but small sections of tar-macadam were, in his opinion, better in the end than long lengths of surface treatment.

Mr. A. Paterson (St. Faiths) said that in his district he had purchased tar-macadam at a cost of only 3*s.* per cubic yard over what they paid for ordinary macadam. The extra cost per yard super. of completed work averaged about 3*d.* Tar-painting cost over 1*d.* per yard super., and lasted only one year.

Mr. W. T. Unwin (March) had done in all about twenty acres of tar-spraying work. The secret of successful work lay in making the road good first. Then, when it was dry and had been well cleaned, spraying would be found fully effective and a great saving. Where wear was not excessive, painting work would last more than one year. Some tar-macadam which he had laid fifteen years ago, with the use of a horse-roller only, was practically now as good as ever. He agreed with Mr. Coates that the best thing was to spend in tar-macadam work the money allowed them, adding section by section until a road was completely done.

Mr. T. Brown (Norfolk), in proposing a vote of thanks to Mr. Norris, expressed the opinion that the expense of tar-macadam was against it, while to sectionise was to have pieces of good and bad road alternating. Mr. Coates must agree that tar-spraying enhanced considerably the life of a road. His practice was to paint hot when the surface was quite dry, and he never used chippings or similar material. His roads cost, roughly, £40 a mile per annum, and the saving of a year in their life was a valuable item.

Mr. A. Paterson (St. Faiths) seconded the vote of thanks.

A short discussion on the paper "Notes on Exhibits in the Royal Agricultural Show of Special Interest to Road Surveyors," which was read by Mr. A. Paterson at the Norwich meeting held last month, concluded the day's proceedings.

The next meeting of the district will be held, in conjunction with the North-Eastern District, at Peterborough in September.

THE communal authorities of Vienna have approved the plans for the erection of two tramway stations at a total cost of about £155,000.

THE late Mr. Charles Albert Bold, of Belfast, whose personal estate has been valued for probate at £1,545, left all the estate, after legacies amounting to £225 have been paid, to St. Alban's Church, Waterloo Road, Manchester, for the erection of a tower and spire.

THE Training College Sub-Committee of the Leeds Education Committee recommend the acceptance of the tender of Messrs. H. Atkinson & Sons, amounting to £10,247, for the erection of the hostel for women in connection with the Leeds Permanent Training College. The architects are Messrs. Percy Robinson & W. Alban Jones, of Leeds.

AFTER a Local Government Board inquiry the scheme of main sewerage and sewage disposal prepared by Messrs. D. Balfour & Son, civil engineers, of London and Newcastle-on-Tyne, for the Consett Urban District Council has been approved by the Local Government Board. The work includes the laying of several miles of sewers of cast-iron and fireclay pipes, as well as the construction of tanks and the laying out of a considerable area of land for the treatment of the sewage.

THE following particulars of projected works in Austria-Hungary are extracted by the *Board of Trade Journal* from the "Oesterreichischer Zentral-Anzeiger" (Vienna):—The city authorities of Budapest have decided to proceed with the erection of ten school buildings at a total cost of £257,500. The Budapest Spa authorities have accepted the plans for the erection of an hotel containing 100 rooms; the cost is estimated at £66,700, and work is to be commenced at once. The "Militär-Versicherungsgesellschaft" has decided to commence operations in the autumn of 1913 for the erection of a palatial building in Budapest at the corner of Karlsring and Dohánygasse; the cost is assessed at £208,000.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

BERKSHIRE.
Chaddleworth.—Church of England School enlargement.
Childrey.—Council School.
Coley.—Bathing place (£1,800). Mr. John Bowen, Borough Engineer and Surveyor.
Didcot and Faringdon.—Handicraft and Domestic Training Centres. Messrs. Bosher & Sons, contractors (£787, including centre at *Wallingford*).
Hermitage.—Council School.
Reading.—Wokingham Road School enlargement (£700).
Thatcham.—Council School.
Twyford Polehampton.—Council Schools enlargement.
Wallingford.—(See Didcot and Faringdon.)

CHESHIRE.
Macclesfield.—Industrial School Baths (£350).
Stockport.—Buildings for imbeciles and epileptics at Stepping Hill (£26,000).

CORNWALL.
Camborne.—Premises at Centenary Row.

HAMPSHIRE.
Alton.—Sewerage extension scheme (£1,500).
Portsmouth.—Forty-six Corporation cottages at Portsea.

HEREFORDSHIRE.
Colwall.—Golf links club-house.

KENT.
Ashford.—S.E. & C.R. Co.'s Railway Works. Messrs. Lovatt & Sons, contractors.
Gravesend.—Five houses in Darnley Road.
Ightham.—St. Peter's Church. New organ.
Willesborough.—Council School for 200 boys.

LANCASHIRE.
Bolton.—Lancashire and Cheshire Miners' Central Offices, Bridgeman Place (£6,000).
Chadderton.—Town Hall and public offices. Messrs. Taylor & Simister, architects.
Liverpool.—University Undergraduates' Union Central Hall (£3,500).
Maghull.—Epileptics' Home enlargement.
Townley.—Hospitals extension (phthisical pavilion, &c.). Messrs. William Townson & Sons., Ltd., contractors (£27,250).
Turton.—St. Anne's Church and Schools renovation and alterations (£750).
Wallasey.—Town Hall.

LINCOLNSHIRE.
Bilsby.—Sewerage scheme. Council Surveyor.
Burgh.—Wesleyan Church.
Louth.—Sewerage works.
Pointon.—Houses for the Council.
Scunthorpe.—Congregational Church (£3,500).
Waddington.—Methodist Sunday School.

MIDDLESEX.
Hounslow.—Schools. Education Committee Architect.
Tottenham.—Two schools for the Education Committee (£50,000).

NORTHAMPTONSHIRE.
Daventry.—Council School for 250 scholars.

NORTHUMBERLAND.
Bedlington.—Parish Church restoration.
Newcastle.—London Joint Stock Banking premises. Mr. W. H. Brierley, F.R.I.B.A., architect. Mr. Thomas Lumsden, contractor.
Tynemouth.—Fish quay extension (£6,000). Messrs. J. Watt, Sandeman & Son, engineers.
Wallsend.—N.E.R. Co.'s Station improvements. Mr. William Bell, architect.

STAFFORDSHIRE.
Great Barr.—Council School for 125 children.
Perry Barr.—Council School for 100 children.
Upper and Lower Penn.—Council School for 300 children.

SURREY.
Burhill.—Whiteley Homes for 600 to 700 poor people.
Guildford.—Alterations to 39 High Street. Messrs. Rake & Cogswell, architects. Mr. A. M. Johnson, contractor (£505).
Merton.—Nelson Hospital.
Mitcham.—Proposed Central Fire Station (£2,000, including site).

SUSSEX.
Eastbourne.—Princess Alice Memorial Hospital extension to provide 20 beds (£4,500).
Headley.—Council School at Deadwater.
Lancing.—Sewerage scheme. Mr. Alford, C.E., engineer.
Milland and Rake.—School alterations.
Rustington.—Church Schools enlargement (£1,000).
Shoreham.—Council School alterations for 120 additional children.
Steyning.—Grammar School alterations. Messrs. F. Sandell & Sons, contractors (£1,935).
Upper Beeding.—Council School enlargement.
Westbourne.—Council School.

WORCESTERSHIRE.
Barnt Green.—Police Station. County Surveyor.
Evesham.—Ten cottages for the Duke of Orleans.
Warley.—Police Station. County Surveyor.
Wythall.—Police Station. County Surveyor.

YORKSHIRE.
Maltby.—Mission Church for 500 (£2,500).
Scholes.—Temporary school at Barwick-in-Elmet. The County Education Architect.
Sheffield.—Royal Hospital extensions (£10,000).
Wakefield.—Workhouse Infirmary enlargement for 74 (£8,000).

WALES.

Aberkenfig.—Council School for 150 scholars.
Cilfrew.—Council School for 200 scholars.
Cwrt Sart.—Council School for 750 scholars.
Kenfig Hill.—School enlargement for 150 scholars.
Nantymoel.—School enlargement for 120 scholars.
Pwllheli.—One hundred and twenty houses on the Abererch Road.
Curing sheds on the Glanydon Road.

SCOTLAND.

Dundee.—Church and Hall for the Kirk-Session of St. John's (Cross) Church and others.
Office for the Dundee and District Co-operative Coal Corporation.
Dwelling-houses, Provost Road.
Edinburgh.—Board School for 130 children at Viewforth.
Town Hall for Portobello (£4,000).
Forfar.—Public Baths Recreation Hall.
Glenogil.—Waterworks keeper's house.
Irvine.—Hosiery Manufacturing Co.'s warehouse extensions (£1,500).
Kirkconnel.—Sewerage works. Messrs. Crouch, Hogg & Easton, C.E., engineers.
Linlithgow.—Bridgend School, drill hall, manual instruction, and cookery rooms (£1,000).

IRELAND.

Castletown Berehaven.—Block of three dwellings.
Ennis.—Seventy-six houses.

A GUIDE TO DECORATION.

MESSRS. THOS. PARSONS & SONS, Long Acre and Mitcham, Surrey, have just produced a clever device for enabling architects and their clients to estimate as far as a drawing can do the effect of various schemes of colour decoration. A drawing of an interior in which parts are permanently printed in grey and white has transparent spaces behind which a series of slides can be placed showing a combination of three different tints on each slide, for frieze, filling, and dado. Thus each scheme shows the effect of white woodwork with coloured wall surfaces. The white is intended to be in Endelline enamel and the colours in Endelflat or Endelline enamel. The specimen combinations supplied are well chosen and harmonious, exhibiting some of the walls in bright light and portions in different degrees of shadow. By this means the general effect is admirably shown, but the device could, of course, be readily applied to any other combination that might be fancied. It is easy enough to obtain a harmony of colours; in theory the combined effect is excellent, but when the work is finished there is at times a disappointing result; this ingenious little device will obviate this, and we advise all who are interested to possess themselves of one of these cards.

THE L.C.C. COUNTY HALL.

The London County Council on May 23, 1911, authorised the Establishment Committee to approve the list of firms to be invited to submit, and to invite therefrom, tenders for the construction of the substructure of the new county hall. The Committee have now considered the tenders referred by the Council on July 11, which were received from the firms selected. The particulars of the tenders are as follows:—

	A.				B.
J. Carmichael . . .	£64,587	0	0	...	—
F. & H. F. Higgs . .	62,313	0	0	...	5% above schedule.
H. L. Holloway . .	59,998	0	0	...	—
Holland & Hannen .	59,515	0	0	...	Schedule.
G. E. Wallis & Sons .	59,495	0	0	...	,,
Higgs & Hill . . .	57,668	0	0	...	—
Foster & Dicksee . .	54,526	0	0	...	Schedule.
Kirk & Randall . .	54,000	0	0	...	,,
Patman & Fotheringham	53,960	0	0	...	,,
John Mowlem & Co. .	53,496	0	0	...	,,
Leslie & Co. . . .	52,639	0	0	...	,,
Holloway Bros. (London)	51,720	0	0	...	,,
Charles Wall, Ltd. .	47,738	0	0	...	,,

A.—Amount of tender for substructure of section A, raft foundation work, &c.

B.—Rates for substructure of sections B and C.

Messrs. Trollope & Colls were unable to accept the invitation to tender.

The architect's estimate comparable with the tenders amounts to £56,000.

The tenders have been carefully examined, and the Establishment Committee are of opinion that the lowest, that of Charles Wall, Ltd., amounting to £47,738, should be accepted. Messrs. Wall propose to sub-let certain portions of the work.

The work included in Messrs. Wall's tender comprises the construction for £43,668 of the substructure of the first section (A) of the new building, and the completion for £4,070 of the raft foundation work and retaining wall in Belvedere Road, north of Guildford Street. The form of tender required tenderers to state the prices at which, in the event of the Council accepting their tender for section A, they would be prepared to construct the substructure for the remaining sections B and C, and the Council can, by notice in writing, require the contractors to enter into a contract to carry out the construction of section B or of sections B and C at the prices stated in the tender for section A. It will be seen from the foregoing list that Messrs. Wall are prepared to construct the substructure for sections B and C under the schedule of prices included in their tender for section A. The Committee are advised that this offer is reasonable, and recommend the Council to accept Messrs. Wall's tender for the whole of the work.

The contract with Messrs. Wall will provide that they shall complete the several portions of the work within certain periods specified in their tender. The Committee attach great importance to the work being pressed on with all despatch, and in this connection they advise the suspension of standing order No. 96, which prescribes that the Council shall not vote on a recommendation involving an expenditure on capital account exceeding £5,000 until seven days after the report shall have been laid before the Council. Other work connected with the substructure and not included in the present contract is estimated to cost £32,000. The expenditure of £4,070 in respect of the completion of the raft foundation is provided for in the estimate of £56,900, approved on April 6, 1909. Provision is made in the capital estimates for the current financial year for so much of the expenditure (£24,200) as will probably have to be met before March 31, 1912. The remaining expenditure will probably become due as follows:—£62,700 in 1912-13, £15,200 in 1913-14, and £6,000 (retention money) in 1914-15. The Establishment Committee recommend—

(*a*) That the operation of standing order No. 96 be suspended in order that the following recommendations (*b*) and (*f*) inclusive may be dealt with.

(*b*) That the estimate (No. 6985) of expenditure on capital account of £104,000 submitted by the Finance Committee in respect of the construction of the substructure of the new county hall be approved as an estimate of costs, debt or liability under section 80 (3) of the Local Government Act, 1888.

(*c*) That expenditure on capital account, not exceeding £104,000, be sanctioned for the purposes referred to in resolution (*b*).

(*d*) That the tender of Charles Wall, Ltd., amounting to £47,738, for the construction of the substructure of section A of the new county hall and the completion of certain raft foundation work, retaining walls, &c., be accepted; that the solicitor do obtain the execution of a contract to give effect to the tender, and that the seal of the Council be affixed to the contract.

(*e*) That, on the completion of the contract referred to in resolution (*d*), notice in writing be given to the contractors requiring them to carry out the construction of the substructure of sections B and C at the schedule of prices included in the said contract for section A; that the solicitor do obtain the execution of the necessary contract or contracts, and that the seal of the Council be affixed to the contract or contracts.

(*f*) That consent be given to Charles Wall, Ltd., to sub-let portions of the work referred to in resolution (*b*) as follows—(1) the granite work to Messrs. Freeman & Co. and (2) the asphalting work to such persons or firms as may be approved by the architect under the contract; that the solicitor do prepare the agreement prescribed by standing order No. 269, relative to sub-letting; and that the seal of the Council be affixed to the agreement.

The report of the Finance Committee under standing orders is to the following effect:—

The Finance Committee, having considered in its financial bearings the above-mentioned estimate, submit the same as chargeable to capital (original outlay) account. The approximate total estimated cost of the scheme for the new county hall, approved on April 14, 1908, is £1,412,000, exclusive of any expenditure in connection with the area at present occupied by Messrs. Holloway Bros. Up to the present date, specific estimates have been approved amounting to £745,065, while the actual expenditure incurred has amounted to £654,658 to June 30, 1911.

BANK HOLIDAY ARRANGEMENTS.

Return tickets at reduced fares, available for 14 days, will be issued to Brussels *viâ* Harwich and Antwerp. Passengers leaving London in the evening reach Brussels next morning. For visiting Holland special facilities are offered by the British Royal Mail Harwich-Hook of Holland route. From the Hook of Holland through carriages and restaurant cars are run to The Hague and Amsterdam in the North and South German express trains to Cologne, Bale, Hamburg, Halle (for the Harz Mountains), and Berlin. The Danish Royal Mail steamers of the Forenede Line of Copenhagen will leave Harwich for Esbjerg (on the West Coast of Denmark) on Friday, August 4, and Saturday, August 5. The Central Steam Navigation Company's steamers will leave Harwich for Hamburg on Wednesday, August 2, and Saturday, August 5. The Swedish Royal Mail steamers will leave Harwich for Gothenburg on Saturday, August 5.

The South-Eastern and Chatham Railway will issue special excursion tickets to Paris, *viâ* Folkestone and Boulogne, by the services leaving Charing Cross at 10.0 a.m. and 2.20 p.m. on August 3, 4, 6, and 7, and at 10.0 a.m. and 2.50 p.m. on Saturday, August 5. The tickets will also be issued by the night mail service leaving Charing Cross at 9.0 p.m. each evening from August 3 to 7 inclusive, *viâ* Dover and Calais. Cheap tickets to Brussels by the Calais, Boulogne, and Ostend routes will be issued from August 2 to 7 inclusive, available for 14 days. Cheap return tickets, for Boulogne and Calais, available for 8 days, will be issued at Charing Cross from August 2 to 7, inclusive. Special cheap 8-day return tickets to Amsterdam, Scheveningen, The Hague, and other Dutch towns, *viâ* Queenboro' and Flushing (Royal Mail route), will be issued from August 2 to 7, inclusive, leaving Victoria and Holborn at 9.55 a.m. Cheap tours to the Belgian Ardennes by the Calais, Boulogne, and Ostend routes are also announced. During the holidays the Continental services will run as usual. The company have made elaborate home arrangements. Weekend tickets, available by any express train (mail and boat expresses excepted), to St. Leonards, Hastings, Winchelsea, Canterbury, Sandwich, Walmer, Dover, and many other stations will be issued from London and certain suburban stations, on August 4, 5, and 6, available for return on August 6, 7, 8, and 9. Cheap day excursions on Bank Holiday will be run from the principal London stations. Return tickets (including admission) will be issued from London to the Festival of Empire at the Crystal Palace (High Level) on Bank Holiday. Full particulars of the excursions, alterations in train services, &c., are given in the special holiday programme and bills.

For the many thousands of holiday makers who will take advantage of August Bank Holiday for a desirable change, the Great Central Railway Company have just published a most varied choice of excursion arrangements to all parts of their system. A perusal of their special A.B.C. programme reveals the extensiveness of the facilities offered to over three hundred towns and holiday resorts in the Midlands, Yorkshire, Lancashire, and the North of England. Special trains will leave Marylebone at convenient times on Friday, Saturday, Sunday, and Monday, August 4, 5, 6, and 7, and these express trains are equipped with restaurant cars, enabling passengers to obtain refreshments at the most moderate tariff. For those who wish to spend a pleasant day or week-end nearer home suitable excursions are arranged to many picturesque and historical places in Middlesex, Herts, and Beechy Bucks. This tract of delightful country, with its old-world villages, breezy heights, and peaceful vales, is admirably suited for walking and cycling, and special cheap fares are in operation for both the walker and cyclist.

Copies of this special holiday programme may be obtained at Marylebone Station, or by post from Publicity Department, 216 Marylebone Road, N.W.

TRADE NOTES.

UNDER the direction of Mr. W. A. H. Masters, F.R.I.B.A., Swindon, Boyle's latest patent "Air-Pump" ventilators have been applied to St. Luke's Church, Swindon.

MESSRS. JAMES RITCHIE & SONS, lift makers, inform us that owing to the steady increase in their business they have been compelled to take larger and more commodious premises at 34 Surrey Lane, Battersea, London, S.W.

MESSRS. JONES & ATTWOOD, of Stourbridge, have purchased the business of Messrs. Birch, Killon & Co., hydraulic engineers of Manchester, and the staff has been transferred to Stourbridge. Mr. H. Birch Killon has been appointed consulting engineer and manager of the municipal department of Messrs. Jones & Attwood's business.

MESSRS. THOMAS SKIDMORE & SON, of the Staffordshire Safe Works, Wolverhampton, have just issued a new price list giving full particulars and dimensions with price of their twelve-corner bent steel fire, fall, and thief-resisting safes, They are also makers of bullion chests, strong rooms and strong-room doors, &c.

MESSRS. WM. DUNCAN TUCKER & SONS, LTD., of Laurence Road, South Tottenham, N., horticultural engineers, timber merchants, &c., finding that many of their customers complain of difficulty in telephoning them, have had an extra line fitted. Their telephone numbers are now Tottenham 2 and 3 and 53—three lines.

A NOVEL apparatus, adapted for either cesspool emptying or road-watering, has just been placed on the market by Messrs. Merryweather & Sons. It consists of a cylindrical tank of 300 gallons capacity mounted on a four-wheeled van, on which an air pump is also fitted. For cesspool work a vacuum is created in the tank by means of the air pump, and on suction piping being dropped down the cesspool the contents are drawn up into the tank without contaminating the atmosphere in any way. The water spreader is fitted at the rear of the tank, and the water can be turned on and off from the driver's seat in the usual manner. The vacuum system of cesspool emptying was introduced into this country by Messrs. Merryweather about fifteen years ago, and the apparatus has since met with considerable success. The addition of a water-spreader constitutes a new and useful departure.

VARIETIES.

THE L.C.C. contemplate erecting at a cost of £459,200 a new lunatic asylum at Epsom.

As a Coronation Memorial the ancient porch of Hintlesham Church, Suffolk, has been restored under the superintendence of Mr. J. S. Corder, architect, Ipswich.

COUNT PLUNKETT, Hon.A., R.I.B.A., has been unanimously elected President of the Museums Association for the year 1911-12.

THE Bank of New South Wales, the oldest banking Institution in Australia, has removed from Old Broad Street to its new offices at No. 29 Threadneedle Street, London, E.C.

THE church of All Saints, Highgate, London, N., is to be enlarged by the addition of 205 sittings at a cost of £2,500. A faculty has been granted in the Consistory Court for the scheme.

THE Durham County Education Committee have decided to purchase Glebe Hall, a site containing thirteen acres, at a cost of £1,000, and to erect a school for mentally defective children.

THE District Council of Hendon have applied for powers to borrow from the Local Government Board £14,656 for the purchase of land for provision at Child's Hill of working-class dwellings.

THE *Gazzetta Officiale* (Rome) of July 6 publishes a decree allocating in favour of the Ministry of Public Instruction a sum of £120,000 for the construction of buildings in the Royal University of Rome. The operations will extend over a period of five years.

NEGOTIATIONS have been concluded for the purchase of a site at Cefn Coed for an asylum to be erected jointly by the Swansea and Merthyr Corporations. Mr. G. T. Hine, of London, has been appointed architect for the building.

AMONG the wills recently proved is that of Mr. James Towner, builder, of Brighton, £64,421. Mr. Towner leaves residue of his estate, about £50,000, to Brighton charities (net personalty, £35,051).

AT a meeting of the Governors of the South-Eastern Agricultural College, held at Wye, last week, the plans of proposed new buildings, forming part of a new quadrangle, were passed, and orders were given to commence the work at once.

THE Government Works Department of New South Wales has in hand, authorised or immediately contemplated, works valued at £5,652,927, and the building trade generally is very active.

THE Docks Committee of the Bristol City Council recommend the provision of further cold storage accommodation at an estimated cost of £20,000, and to borrow £30,000 for the equipment of the west wall of the Royal Edward Dock with sheds, sidings, &c.

THE agreement between the Surrey County Council and the Weybridge Urban District Council with respect to the erection of a technical institute has been agreed to by the latter body. The Council will sell to the County Council the approved site at the rear of their offices for £550; and of the total cost of the building, £4,840, the county will contribute £1,300, the cost of the special subjects centre for elementary scholars, and one-half of the balance, leaving Weybridge to find £1,770.

THE Sheffield Electric Lighting Department are about to ask for a further £61,000 to be expended on extensions. The scheme includes £16,800 for three new boilers and accessories, £2,500 for three economisers, £3,800 for pipework, £20,000 for one 4,000 to 6,000 k.w. turbo-alternator, £4,600 for switchboard, £980 for machine cables, and £9,275 for buildings.

SERIOUS defects have recently been noticed in the tower of the parish church, Newdigate. The two southern piers are completely decayed, and the whole structure has worked loose. Dry rot has invaded the flooring and seats, and the roof also needs repair. The Rector and churchwardens, having considered the question with Mr. Creed, the church architect, have decided to put the work of repairing the tower in hand at once.

THE Southampton Harbour Board last week considered the eleven tenders for the reconstruction of the town quay. The highest tender was £19,822, and the lowest, of £14,391 2*s.* 3*d.*, was sent in by Messrs. Henry Lovatt, Ltd., London and Wolverhampton. The Board provisionally accepted that tender, subject to the detail drawings of the proposed reconstruction being approved by the Board's engineer.

THE Galashiels Cycle Parade and Pageant Committee last week considered the designs received for the Braw Lads' Burns Memorial, which it is proposed to erect at the foot of Lawyers' Brae. About thirty different designs and models in wax were sent in by thirteen sculptors resident in London, Glasgow, Edinburgh, Aberdeen, Dundee, Kirkaldy, and Inverkeithing, at estimated prices ranging from £170 to £350. It was agreed to appoint a sub-committee to go more carefully into the matter, and make a recommendation.

THE Mayor of Hampstead on Wednesday last laid the foundation-stone of the new buildings which are to be erected as an extension of the Hampstead Town Hall, with a view to concentrating all the municipal offices under one roof. The cost of the building will be £15,000 and the site has cost £3,500. Mr. John Murray, F.R.I.B.A., is the architect.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Aberystwith.—Aug. 21.—The Town Council invite competitive designs for the proposed conversion of the Militia Barracks, Aberystwith, into "workmen's dwellings." Premiums of £15 and £5 are offered. An assessor is to be appointed by the Council. The premiated designs are to become the absolute property of the Town Council. The first premium will, if the architect be employed to carry out the work, merge into his commission (to be agreed upon), on the cost of any of the works the Council may decide to carry out. Designs are to be sent, carriage paid, to the Town Clerk not later than August 21. Further particulars can be inspected at the offices of the Town Clerk.

Athens.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

THE Electric Lighting Committee of Edinburgh Town Council recommend that the Town Council give from the surplus on the electric lighting accounts for the year ending May last such sum as may be required to meet the deficit on the Building Fund Account of the College of Art. Towards the cost of the building equipment, which is put down at £76,000 or £77,000, there has been obtained from Government £40,000, and by donations £20,000, leaving a sum of about £17,000 to be raised during the present year. On the Electric Lighting Committee's accounts there was a surplus of about £8,000. The Scottish Education Department are prepared, it is believed, to contribute a sum equal to that raised locally, so that if the total surplus on the electric lighting accounts were handed over towards the Building Fund the total cost could be met. It is expected that the building will be completed within the next few months.

THE Town Council of Edinburgh have adopted a recommendation made by the Electric Lighting Committee to vote out of the surplus of £8,430 made by that undertaking such a sum as, along with the cash in hand derived from local sources, will be necessary to meet one-half of the remaining sum required for building and equipment of the Art College.

A LARGE and influential committee was at a public meeting in Edinburgh appointed to inquire into the establishing of industries for Edinburgh and Leith. Owing to the absence of the Lord Provost, Colonel Trotter, Convener of the County of Midlothian, presided. It was agreed to prepare a pamphlet relating to the district—land, locomotion, water, gas, electricity, docks, coal and iron, &c. Mr. Robert Bruce said that if landlords and their advisers could see their way to be moderate with regard to the value of the buildings they required, it would be a manifest encouragement for new industries. The Chairman thought they had arrived at the stage when they could remit the different suggestions to the Committee for consideration to bring up a report as soon as possible.

IT having been decided that the London County Council was the authority to select a site for the proposed new Sessions House for London, and that the Standing Joint Committee should decide as to the building and its accommodation, the justices at the Sessions House, Newington, passed the following resolution at their quarterly meeting last week: "That, in view of the unsuitability of the Court House at Newington for the transaction of the judicial and criminal business of the whole County of London, and the continued delay in the provision of a suitable site and building for such purposes, the Chairman of Quarter Sessions be requested, and is hereby authorised, to take such steps as he may deem necessary." Mr. Clark, one of the justices, said the present accommodation at Newington was a disgrace to London. Mr. E. Smith, L.C.C., said the Council ought to make use of the valuable site upon which the disused Clerkenwell Courthouse stands.

A DUST AND FIRE-RESISTING MUSEUM CASE.

For years scientists have been endeavouring to construct a museum case that would be dustproof, fireproof, and moth-proof. In the old style wooden-glass cases many valuable specimens of various kinds at different museums were destroyed because of inadequate protection. Dr. M. J. Greenman, director of the Wistar Institute of Anatomy and Biology at the University of Pennsylvania, has recently invented a metal-glass case, which (says the *Philadelphia Record*) it is claimed has all the qualities that the old-style cases lack. As rapidly as possible the new cases are being built and installed in the Wistar Institute.

Dr. Greenman constructed the new case after experimenting for twelve years. Already at the Dresden Museum cases of metal-glass have been introduced, but they are different from the American invention. Dr. Greenman's case is so built that it will resist fire. One of the greatest problems in the construction of the new case was to make it dust-proof and at the same time allow the air to enter. In order to do this the grooves into which the door frames of the sash shut are packed with absorbent cotton. In the cases in the Dresden Museum felt is used in place of cotton.

Experiments in the construction of metal cases are expensive, and therefore the majority of museums have not departed from the old methods of wood construction. All the joints of the new cases are cemented shut, and the steel is prepared by being pickled in diluted sulphuric acid to remove the scale. It is then drawn through a die and straightened. The finished product of cold steel is a bar of slightly smaller section and of increased stiffness, having a finish that is easily prepared for electroplating. The base frame of the case is supported upon six cast-iron feet having levelling screws, while at the eight corners of the cases special steel castings are inserted to give stiffness to the entire frame.

The door frames are dovetailed at the corners and brazed, and when the glass is clamped in they never sag, a possibility that has been frequently suggested. The case is polished and heavily copper-plated before it is erected. The copper is then coloured dark bronze by being dipped in a diluted solution of potassium sulphide, is rinsed, dried, and burnished with brass scratch brushes, and finally is given two coats of dip lacquer. The cost of one of the new cases is about the same as that of a similar case constructed of mahogany and plate glass. The supports of the new cases are inconspicuous, yet are sufficiently strong to carry the great weights that are often placed on them.

The Ramsgate Town Council are considering a proposal to build public baths on the site of the aquarium in the pier yard.

Serious damage was done to the workshops by fire on Monday afternoon of Messrs. Thorne Bros., builders and decorators, of the Terrace, High Road, Kilburn, N.W.

The Bristol Docks Committee have instructed their Engineer to prepare specifications and invite tenders for the erection of a shed and cold storage provision.

The new girls' high school at Crediton, which has been erected from the designs and under the supervision of Mr. Percy Morris, architect to the Devon Education Committee, was opened on Saturday last by Lady Audrey Buller.

The Surveyor to the Rowley (Staffs) District Council has issued demolition notices to the owners of a large number of houses damaged through mining subsidences, walls and roofs having been wrecked.

The new premises of the Royal Academy of Music in the Marylebone Road, W., which have been erected at a cost of £60,000, will be finished and ready for occupation in September.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

Berkshire.

Following upon the electrification of the Manchester to ltrincham lines by the Great Central and London and orth Western Railways, it is reported that those companies, ith the Lancashire and Yorkshire Railway Co., contemplate her important electrification projects in the Manchester istrict.

The "Gaceta de Madrid" of July 20 contains a decree uthorising the General Directorate of Posts and Telegraphs arrange for the erection of a general postal telegraph uilding in Pontevedra. The cost of construction is put 289,000 pesetas (about £10,500). The municipal authories of Pontevedra are granted four months to arrange for competition of plans among Spanish architects, and two nd a-half years will be allowed for the completion of the ork from the date of the approval of the plans.

His Majesty's Trade Commissioner for Canada reports hat a proposal is shortly to be submitted to a poll of the tepayers of Winnipeg for the building of an annexe to the own Hall, at a cost of some $500,000 (about £103,000). It anticipated that a new Town Hall will have to be erected the course of a few years, and if the proposal for the nnexe is approved a competition will shortly be opened of lans for both the annexe and the future Town Hall, which gether are to form one complete scheme. Communications this connection should be addressed by British firms to e City Engineer, Winnipeg.

In connection with the principal contract for the conruction of Peterhead waterworks, executed about three ears ago by Messrs. Shanks & MacEwan, contractors, Glasow, considerable differences arose between the Town Coun-l's engineer, Mr. Ironside, and the contractors, when the nal statements showing the value of work executed came to prepared. The contractors claimed £26,407 11*s.* 6*d.*, and e engineer allowed £19,766 19*s.* 4*d.*, showing a difference of 6,640 12*s.* 2*d.* The claim was referred to the sole arbitraon of Mr. W. A. Carter, C.E., Edinburgh, who has issued s findings setting forth that Messrs. Shanks & MacEwan are titled to £644 13*s.* in respect of their claim of £6,640 12*s.* 2*d.*

CANTERBURY AND WHITSTABLE RAILWAY.

An interesting booklet, price 1*s.*, has just been issued by the South Eastern and Chatham Railway Co., entitled "The Coronation Souvenir of the Continental Express and the South Eastern and Chatham Railway." It is a really very interesting account of the rise of railways, and to give some idea of the difficulties overcome, we cannot do better than quote from the number before us:—"During the same year that Stephenson had demonstrated the practical possibilities of his locomotives, the municipal authorities of Canterbury were much perturbed by the advance in prices of foodstuffs and wearing apparel. It was due to the policy of the coach and transport companies, who had combined—as many companies do at the present day—to force up prices. The little port at Fordwich, which had once been the port of Canterbury, had become silted up with sand. It was found necessary to open another port, and accordingly Whitstable was chosen. But it was the success of Stephenson that paved the way to this decision; for it was found possible to connect the town of Canterbury to Whitstable by railway. Several engineers were consulted, but none of their plans appeared practicable; eventually, however, Stephenson himself came to their aid. He planned a viaduct, and a tunnel to run under Tyler's Hill. To approach the gradient some other daring scheme had to be carried out. To overcome the difficulty Stephenson used endless ropes worked by stationary engines. When the train drew near to the gradient it was attached to a windlass and hauled up the incline.

"It was the tunnel, however, that delighted the citizens of Canterbury. For many years it was kept locked and bolted during the night less harm should befall it, for people had a disagreeable habit of removing loose bricks from the interior of the tunnel and using them for building pigsties and other out-houses; traces of the bolts and locks with which the tunnel was once provided can still be seen.

"It was on May 3, 1830, that the line was opened for traffic, amidst great local rejoicings. Special coaches were run from London to Canterbury to celebrate the event; and steamers on the Thames were chartered to convey curious folk in thousands. Church bells rang along the line of route, flags were hung out from many houses, and the millennium of travel appeared to have arrived in the South of England. Unfortunately the line proved a great financial loss to everyone concerned."

The first railway in Kent was opened between London Bridge and Croydon, followed by a line between London Bridge and Greenwich, and with the line via Maidstone to Dover we have the commencement of the important lines now known as the South Eastern and Chatham Railways, the most direct and comfortable route between London and the Continent. This booklet is full of the most interesting illustrations, well printed and on good paper.

Application is to be made to the Local Government Board for sanction to borrow £1,150, the estimated cost of the repairs to the market roof at Tunstall, Staffs.

The Penrith Rural District Council, at their recent meeting, had before them the tenders for the Western Division water scheme, and it was decided to accept Messrs. D. Thomson & Sons' tender of £18,064 10*s.* 6*d.* for No. 1 contract, and Messrs. J. Pickering & Sons', Southwaite, tender of £2,226 7*s.* 0*d.*, for No. 2 contract, making a total of £20,290 17*s.* 6*d.* No. 1 contract is for the supplying and laying of 47 miles of cast-iron mains with the necessary valves, hydrants, &c., and No. 2 contract is for the erection of two service reservoirs, screening chambers, valve chambers, &c. Mr. J. Graham, Carlisle, is the engineer.

The Edinburgh Town Council have adopted the following recommendations by the Lord Provost's Committee:—(1) That the police headquarters be removed from Parliament Square; (2) that new police headquarters be provided at the Old Corn Exchange property in the Grassmarket; (3) that buildings be erected at an approximate probable cost of from £40,000 to £45,000 on the site in the Grassmarket; (4) that a police sub-station be provided in the High Street at an estimated cost of £3,000; (5) that the preparation of the preliminary plans for the new Central Police Station be entrusted to Mr. J. A. Williamson, the City Superintendent of Works; (6) that a remit be made to the Committee to report as to the exact site in the Grassmarket for the new police headquarters, and to prepare and submit plans for the proposed new buildings, with an estimate of the probable cost; and (7) that a deputation be appointed to visit various cities to obtain information in regard to police stations.

TRADE NOTES.

MESSRS. W. J. BURROUGHES & SONS, Ltd., have removed from 143 Queen Victoria Street to Nos. 143-144 Holborn, London, E.C.

THE Aberdare County School is being supplied with Shorland's warm-air ventilating Manchester grates by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

WE are informed that the whole of the restorations and additions carried out at Lympne Castle under the direction of Sir R. S. Lorimer were executed in Chilmark stone supplied by Messrs. T. T. Gething & Co., Ltd., and worked by their staff of masons upon the site, so that the chiselling might be in character with that of the old work.

THE demand for the Champion Chimney Pot, the perfect cure for smoky chimneys, has been, and is still steadily increasing. It is made in salt-glazed fire clay in either buff colour or red terra cotta. The height is 4 feet, the base 14 by 10 inches, and the pot can be fixed on any chimney stack. One of the great advantages in this patent chimney pot is the fact that, as there is no cowl-cap or other obstruction on the apex, this pot can be swept or cleaned as an ordinary chimney pot. The appearance is artistic, the pot is unwearable, as there is nothing to corrode or get out of order, it requires no attention, and the price is reasonable. Agents have been appointed in the principal towns, so there should be no difficulty in obtaining them. Architects are asked to particularly specify "Champion," and builders and contractors should see that the word "Champion" appears on each pot.

VARIETIES.

MR. C. M. SHINER is the architect who is preparing plans for the new school to be erected at Chadwell St. Mary, Essex.

THE Bristol and West of England Exhibition of Arts and Industries is to be opened on September 18.

NEW Roman Catholic Schools and Church are to be erected at Bedminster. The design and plans have been prepared by Mr. John Bevan, 36 Corn Street, Bristol.

THE Newcastle-on-Tyne City Council are about to offer three prizes in an open competition for laying-out 200 acres of the Walker Estate upon model cottage lines.

THE tender of Mr. G. Brown, of Grays, at £1,456 has been accepted for the enlargement of the South Hornchurch Schools, Essex.

THE Chelmsford Public Library is to be extended at an estimated cost of £800. It is proposed to erect a one-storey building 40 ft. long by 20 ft. wide.

THE tender of Mr. A. H. Fryd, of Southend, at £1,695 has been accepted by the West Ham Town Council for erection of the new dormitory at the Harold Wood Convalescent Home.

THE City of New York has awarded the whole work of subway extension, at a cost of £25,000,000, to the Brooklyn Rapid Transit Company, having formally rejected the Interborough Company's counter-proposal.

AT a meeting of the Longton (Staffs) Town Hall Extension Committee, Mr. Beckett, the architect, announced his readiness to advertise for tenders. The Committee decided they should be sent in by the middle of August.

FOR the construction of the new sewer at Marden, Kent, for the Maidstone Rural Council, the tender of £271 by Messrs. Stanley & Sons, of Marden, was accepted. The highest tender was £806 2*s.* 7*d.*

SUBJECT to the sanction of the Board of Education, the pottery and mining schools to be erected for the Stoke-on-Trent Education Committee will shortly be commenced. The estimated cost is £18,000 for the buildings and £3,000 for the equipment.

A SPECIAL meeting of the Council of the Royal Institute of Architects of Ireland was held on July 26, the President, Mr. A. E. Murray, R.H.A., F.R.I.B.A., in the chair. There were also present Messrs. Lucius O'Callaghan, J. H. Webb, H. Allberry, R. Caulfeild Orpen, F. G. Hicks, G. P. Sheridan, A. G. C. Millar, and C. A. Owen (hon. secretary). Some correspondence was dealt with, including two letters from the Royal Institute of British Architects, which were referred to the Examination Committee and Professional Practice Committee. Mr. J. P. MacGrath, of Londonderry, was elected a member of the Institute. Applications for permission to sit for the studentship examination were under consideration. A resolution, proposed by the president, congratulating Sir Thomas Manly Deane on the honour recently conferred upon him by his Majesty, was passed unanimously. A report was read from the Arts Committee relative to portraits of the past presidents.

THE Mayor of Lewisham (Councillor H. A. Baxter) on Saturday afternoon laid the foundation-stone of the new bacteriological and *x*-ray departments which have been added to St. John's Hospital, Morden Hill, Lewisham, as th borough memorial to the late King Edward VII.

THE Education Committee of the London County Counci recommend that a new public elementary school for abou 800 children should be provided in the electoral division o St. George, Hanover Square, to replace the existing Horseferry Road school. The total cost involved is £41,000.

A LOCAL GOVERNMENT BOARD inquiry will be held at the Town Hall, Sheffield, next week, into the application of the City Council for sanction to borrow £20,725 for works o sewerage, and £7,472 for the erection of baths in Corporation Street. The inquiry will be conducted by Mr. W. D. E Meade-King.

THE London County Council have adopted a report of the Improvements Committee on the reconstruction of Lambeth Bridge, recommending that application should be made t Parliament next Session for authority to reconstruct the bridge as a steel arch bridge, 48 feet wide, at an estimated cost of £220,000.

AT the Quarterly Court of the Governors of the Radcliffe Infirmary and County Hospital, Oxford, an estimate of the new buildings at the Infirmary which it is proposed to erec was considered. The lowest tender of £21,137 of Messrs Wooldridge & Simpson, of Oxford, was accepted. The new buildings will include a re-modelling of the out-patients' hall a pathological laboratory, &c.

SEVEN applications had been received for the office of permanent architect and surveyor to the Dorset Territorial Association, rendered vacant by the resignation of Mr. W. T Fletcher on his appointment as County Surveyor. Afte carefully scrutinising the applications the association appointed Mr. F. T. Maltby, A.M.I.C.E., of South Street, Dorchester.

MR. WILLIAM HENRY HILL, who died at Courtmacsherry after an illness of about a week, was senior partner in th firm of Messrs. W. H. Hill & Sons, architects, who hav been prominent in the city of Cork for many years. Mr Hill held some important positions in Cork, and was th architect for a number of large buildings, including the Cor Courthouse, which was rebuilt after its destruction by fire and also several churches. He was a leading member o the Church of Ireland, and was well-known and greatl esteemed.

ON Saturday afternoon last, in the presence of a larg gathering of local residents, including Sir Henry Kimber M.P., Viscount Midleton laid the foundation-stone of th new schools in connection with St. Michael's Church, Southfields, Wandsworth. The schools, which are to accommodat 500 children, are expected to cost £6,500, including £1,500 the cost of the site, which has been given by Dr. G. B. Longstaff. Of the total sum, £3,966 had been subscribed up t Saturday, and it is hoped to raise the remaining amoun before the buildings are completed.

AT West Hartlepool Mr. H. R. Hooper, M.Inst.C.E. inspector to the Local Government Board, has just concluded the inquiry with respect to the Corporation' application for sanction to borrow £35,417 for the purpos of the municipal electricity undertaking. It is proposed b the Corporation to enter into an arrangement with the Seato Carew Iron Co. for the utilisation of the exhaust steam an waste heat at the company's works for the generation o electricity, and to erect a new power station and plant fo this purpose, the existing generating station being retaine as reserve plant. The application was opposed by the Cleveland and Durham County Electric Power Co. and others.

AT the annual dinner of the Master Builders' Association, held at Sydney, New South Wales, the President mad reference to the prevailing scarcity of labour. Accordin to the local report, he said that was the greatest difficult with which master builders were faced. The country and it industries were starving for want of population to develo them. Contracts were really going begging. Many architects could not obtain tenders for their work by reason tha builders could not obtain sufficient men to carry them ou The President of the Chamber of Commerce said that th Government should make the awards of the various wage boards known in the countries from which they were seekin to obtain new citizens. There was no country in the worl where the working man was so well off as in Australia.

ANSWERS TO CORRESPONDENTS.

"Fairplay."—Detailed schedules of prices ought not to be disclosed before tenders are received and opened.—Ed.

TENDERS, ETC.

, *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Aberystwith.—Aug. 21.—The Town Council invite competitive designs for the proposed conversion of the Militia Barracks, Aberystwith, into "workmen's dwellings." Premiums of £15 and £5 are offered. An assessor is to be appointed by the Council. The premiated designs are to become the absolute property of the Town Council. The first premium will, if the architect be employed to carry out the work, merge into his commission (to be agreed upon), on the cost of any of the works the Council may decide to carry out. Designs are to be sent, carriage paid, to the Town Clerk not later than August 21. Further particulars can be inspected at the offices of the Town Clerk.

Athens.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l*. A first prize of 800*l*., and a second prize of 320*l*. will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bristol.—The directors of the Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

South Kirkby: Moorthorpe new school (builder, joiner, tiler, plumber, plasterer, painter, ironfounder and smith). The Education Architect, County Hall, Wakefield. Send 1*l*. deposit in each case by letter to the West Riding Treasurer, County Hall, Wakefield.

The following information is from the report by the British Acting Commercial Attaché at Peking (Mr. H. H. Fox) on the trade of China in 1910, which will shortly be issued:—The sum of £1,203,004 spent by China last year on the purchase of foreign building materials, cement, timber, furniture, window glass, &c., is indicative of another far-reaching change which is coming over the habits of the Chinese people. The dilapidated rows of one-storeyed houses of lath and plaster, dark, insanitary and comfortless, which formerly did duty as Government offices, schools, barracks, &c., are rapidly disappearing before buildings in foreign style of brick and stone, fitted with such up-to-date conveniences as electric light and steam heating; while in all the large cities and trading centres merchants and shopkeepers are replacing the shanties of former days with modern constructions in which the *yanglou* or foreign upper storey, and the plate-glass window, are usually conspicuous features. The style is more often than not atrocious and the work shoddy, but in places like Shanghai and Peking, where the erection of business buildings and Government offices has been entrusted to foreign architects, the results are not unworthy of a European city. As regards such materials as stone and bricks, China is already well supplied, and she is beginning to manufacture her own cement; but good timber is, owing to the reckless disregard of elementary principles of afforestation during the past fifty years, entirely lacking, except in remote and inaccessible parts of the country. For such articles as steel joists and plates, ironmongery and tools, corrugated iron roofing, paints and distempers, window glass, electric accessories, water and heating plants, &c., China should be a good customer for many years to come.

TENDERS.

A garden suburb, containing sixty-eight villas, is to be erected at Woking, Surrey, at a cost of £20,000, by the local Co-operative Society.

The West Ham Guardians have decided to have a scheme prepared for enlarging their Whipps Cross Infirmary at a probable cost of £100,000. A preliminary report has been presented to them by Mr. F. J. Sturdy, F.R.I.B.A.

The *Diario Official* of Brazil publishes a decree opening in favour of the Ministry of Communications and Public Works, a credit of about £36,000 for the construction of a building for the Postal Telegraph Office in Nitheroy, State of Rio de Janeiro.

COMPETITION NEWS.

Barnsley.—The Sanitary Committee of the Town Council recommend that a sum of not exceeding £7,500 be expended on the new public baths. Mr. W. J. Morley, F.R.I.B.A., of Bradford, is recommended as assessor, at a fee of twenty guineas in the architectural competition.

Belfast.—It has been decided that designs for the proposed Art Gallery and Museum which is to be erected in the Botanic Gardens Park, Belfast, be obtained by public competition, and that the following members of the Library and Technical Instruction Committee be appointed to draw up the conditions: The chairman (Alderman Sir James Henderson, D.L.), the vice-chairman (Alderman Samuel T. Mercier, J.P.), Alderman W. J. Moore, C.E., Councillors W. Macartney, Dr. Trimble, W. L. Wheeler, Messrs. J. Horner, A. B. Wilson, C.E., J. G. Crawford, J. Stevenson, and Robert Patterson.

Largs.—About sixty designs for a memorial of the Battle of Largs (1263) have been received. Arrangements have been made to exhibit these in the hall of the Stevenson Institute at Largs, N.B., till the 14th inst., from 12 noon till 8 p.m. The matter of afterward showing a selection of the designs in Glasgow is being considered. The committee say they are still open to receive contributions to the fund for the erection of the memorial, and contributors will have a voice in deciding which design shall be adopted.

CORRESPONDENCE.

Deptford Central Library Competition.

Sir,—Can the award as regards the first premiated design in the above have been made regardless of the conditions attached to the competition? To me it appears undoubtedly so.

For instance, the newsroom in this plan is without supervision of any kind, while it was distinctly required by the conditions that the lending library and the attendant's lobby should both supervise this room. Again, the sub-librarian's room as now planned on this scheme is impossible for the use intended.

Many other conditions have been ignored in a manner which suggests to me that this award is unfair to those competitors who regarded the conditions as governing the competition and submitted their designs in accordance therewith.

There was a distinct clause in the conditions by which any designs not conforming to them would be excluded. Comment is needless.

I may mention that I am not a competitor, nor have I interest with any of those who have submitted designs.
—Yours truly, Nonplussed.

[Our reviewer noted the point as to supervision of newsroom, but presumed that it was due to an accidental blocking in of a window intended in the dividing wall from lending library.—Ed.]

The Spennymoor Urban District Council require an architect to advise them upon the best means of laying out the Market site in High Street, for Council Hall, Market Hall, offices and business premises, &c. Applications must be sent in by August 28.

The Most Rev. His Grace the Lord Archbishop of York has consented to accept the office of President of the 27th Congress of the Royal Sanitary Institute to be held in York in July 1912.

Helensburgh Town Council have agreed generally to the proposal for building a new esplanade extending from a point of about 150 feet down the pier eastwards along the shore to Maitland Street. The amount of foreshore reclaimed will be about three acres. The estimated cost of the scheme, the details of which are yet to be gone into, will be about £5,000.

At a meeting of the London County Council, held on August 1, a resolution as follows was passed by an absolute majority of the whole number of the Council: "That application be made in the session of Parliament of 1912 for powers to enable the Council to develop any part of the White Hart Lane estate on the lines of a garden suburb and not solely for the accommodation of the working classes, and further for authority to lease separate plots of land on the estate for the erection of better-class houses on the condition that the plans of the houses to be erected shall be subject to the approval of the Council; that the costs and expenses of promoting the proposed legislation be defrayed out of the county fund; and that such costs and expenses be regarded as incurred for special county purposes."

BUILDING BOOM IN TURKEY.

It appears from a recent report to his Government by the United States Consul-General at Beirut that building operations in Constantinople have not kept pace with the growth of population. One cause of the increased demand for houses is that the Eastern custom of permitting several generations of a family to live in the same house, often a small one, is yielding to modern requirements, and the son who marries now prefers a house of his own. Immigration from the provinces is now rendered possible by the Constitution, which permits the people to establish their domicile wherever they wish. The fires in the congested quarters seem to destroy more buildings than the people erect.

Various signs point toward an approaching "building boom" in Constantinople. There exists a strong demand for apartment houses, office buildings, and warehouses equipped with modern conveniences. Already many new buildings are planned. Five structures at Robert College, a new bank building for the Bank of Athens, a new hotel, and three or four large buildings, mostly of reinforced concrete. Articles for house construction, including structural iron, builders' hardware, galvanised tin and asbestos roofing, lifts, plumbers' supplies, lavatory fittings, should find a market.

A list of British commission agents established in Constantinople may be obtained by British firms on application to the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

A new Hippodrome at Bedminster, Bristol, was opened recently by the Lord Mayor of Bristol, accompanied by the Lady Mayoress. It has an imposing frontage in East Street, executed in a modern Renaissance of local red brick and white Carrara. The interior is designed in consonance with the exterior, and is decorated in white and gold with a sparing use of a delicate cream colour. Most elaborate provision has been made against fire, and there are numerous hydrants all over the house, also in the flies and on the stage. The dressing-rooms at the back of the stage are well appointed and easily accessible, yet they can be completely cut off by heavy armour doors from the stage. The safety curtain, douched by a sprinkler; a fusible line which automatically opens the lantern lights over the grid; and the fireproof scenery are other devices which conspire to reduce the risk of a panic in the event of an outbreak. The architect of the new hall is Mr. Bertie Crewe, of Shaftesbury Avenue, London.

The Incorporated Church Building Society held its usual monthly meeting on Thursday, the 20th ult., at the Society's House, 7 Dean's Yard, Westminster Abbey, S.W. Grants of money were made in aid of the following objects, viz.: Building new churches at Bristol, St. Ambrose, £50 for the first portion; Harrow-on-the-Hill, St. Peter, Middlesex, £150; and Skirbeck Quarter, St. Thomas, Lincs., £100; and towards enlarging or otherwise improving the accommodation in the churches at Cricklewood, St. Peter, Middlesex, £60; Dinnington, St. Leonard, Yorks., £20; Hendon, St. Paul, near Sunderland, £20; Highgate, All Saints, Middlesex, £50; Hoxton, Christ Church, Middlesex, £50; Luckington, St. Mary and St. Ethelbert, Wilts., £20; Shadingfield, St. John the Baptist, Suffolk, £20; Walton, St. Mary, Suffolk, £15; and Ipswich, St. Bartholomew, £60. Grants were also made from the Special Mission Buildings Fund towards building mission churches at Canford Cliffs, Church of the Transfiguration, near Bournemouth, £25; and Rotherhithe, Clare College Mission, Surrey, £35. The following grants were also paid for works completed: Plumstead, St. Mark, Kent, £500, being balance of a grant of £1,000; Llandrindod Wells, Old Church, £20; Kendal, St. George, £85; Stoke Damerel, St. Andrew, Devonport, £100; Cotleigh, St. Michael, Devon, £25; Swinton, Holy Rood, near Manchester, £65; Woodford Bridge, St. Barnabas, Essex, £150; Kingsway, Holy Trinity, London, £200; Caversham, St. Andrew, Oxon., £100; Gainsborough, Holy Trinity, Lincs., £20; Lydgate, St. Anne, near Manchester, £85; Chesham Bois, St. Leonard, Bucks., £70; St. Mary-in-the-Marsh, Kent, £50; Rodley Mission Church, near Leeds, £20; Picton, St. Hilary, Yorks., £20; and Stockwell, The Epiphany, Surrey, £50. In addition to this the sum of £310 was paid towards the repairs of seventeen churches from trust funds held by the Society. At this meeting the Secretary reported the receipt of an anonymous donation of £800, £600 being for the General Fund and £200 for the Mission Buildings Fund.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

Berkshire.

Caversham.—Four shops in Prospect Street. Mr. E. Ravenscroft, architect.

Cambridgeshire.

Bourn.—Parish Church tower restoration (£900). Mr. S. Inskip Ladds, A.R.I.B.A., architect.

Cheshire.

Broken Cross.—Church School alterations (£450). Messrs. Gorton & Wilson, contractors.

Macclesfield.—Conservative Club.

Hospital in Moss Lane: new disinfecting station and laundry alterations. Mr. Charles W. Stubbs, Borough Surveyor.

Infirmary renovation (£4,000).

Christ Church School renovation (£1,424). Messrs. Frith, contractors.

Cornwall.

Bodmin, Lostwithiel, and Wadebridge.—Isolation Hospital.

Cumberland.

Canonbie.—Parish Hall (400 to 500 seats).

Langwathby.—Church of England schools (alterations). Mr. J. H. Martindale, F.R.I.B.A., architect.

Wigton.—Clothing factory extensions and alterations in Station Road. Mr. Gibbings, architect.

Derbyshire.

Killamarsh.—Endowed School enlargement, High Street.

Hampshire.

Bishopstoke.—Church completion.

Hartley Wintney.—Sewage disposal scheme. Mr. T. J. Moss-Flower, C.E., F.R.San.I., engineer.

Newdigate.—Church tower restoration (£500).

Herefordshire.

Hay.—Sewage Disposal scheme.

Ross.—Free Library alterations. Mr. Arthur Ashton, P.A.S.I., architect.

Lancashire.

Ashton-under-Lyne.—Chapel and Sunday School for Hurst Brook Pr. Meth. Connexion (£2,000).

Bolton.—Sixty-four houses in Deane and Rowsley Avenues, New Hall Lane, Sapling and Wigan Roads, and Bushel Street.

Council school, Wolfenden Street.

Droylsden.—Shops, offices, &c., in Market Street for the Droylsden Industrial Co-operative Society, Ltd. Mr. John B. Thornley, architect.

Heaton Norris.—Public elementary school.

Pendlebury.—School, Cromwell Road. Mr. T. J. Bushell, architect.

Leicestershire.

Leicestershire and Rutlandshire Institution for the Epileptic and Feeble-minded (accommodation for 200; estimated cost £35,000).

Ibstock.—Wesleyan Reform Church.

Leicester.—Dispensary for Tuberculosis.

Houses. Mr. R. W. Bedingfield, A.R.I.B.A., architect.

Museum and Art Gallery alterations.

Lincolnshire.

Alford.—Cottages on Farlesthorpe Road. Mr. H. Robinson, builder.

Crosby.—Water supply. Mr. W. H. Buttrick, engineer (£4,500).

Keadby.—Public carriage bridge over river Trent (£45,000).

Lincoln.—Fifteen houses in South Park Grove.

Twenty-two houses in Monks' and Coulson Roads for the Lincoln Co-operative Society.

Shop fronts in Guildhall and High Streets.

Carnegie Free Public Library.

Metheringham.—Village Cross. Mr. W. Watkins, F.R.I.B.A., architect. Mr. F. W. Baldock, stonemason.

Sleaford.—Police Station additions and alterations (£1,200).

Walesby.—All Saints new Church (£2,000).

Middlesex.

Hanwell.—Free Library extensions. Mr. W. Pywell, A.R.I.B.A., architect.

Perivale.—Church alterations and repairs. Mr. G. S. Valentin, architect.

Willesden.—Two schools with housewifery class-rooms.

Monmouthshire.

Newport.—New bridge (60 feet wide).

Assize and other Law Courts and Police accommodation. Borough Architect.

Northamptonshire.

Badby.—School.

Daventry.—Infectious Diseases Hospital (£8,000).

Higham Ferrers.—Infants' School alterations.

Kettering.—Secondary School.

Silverstone.—Church of England schools. Mr. H. W. Burrows, architect. Mr. R. Marriott, contractor.

Northumberland.

Barrasford, Gunnerton, Oakwood, and Wall.—Water supply schemes. Mr. C. F. Murphy, A.M.I.C.E., engineer.

Weedon.—Sewage disposal scheme. Mr. J. B. Williams, surveyor (£8,000).

Somersetshire.

Wellington.—Isolation hospital. Mr. E. T. Howard, Council Surveyor.

Supplementary water supply (£2,000). Mr. E. T. Howard, Council Surveyor.

Staffordshire.

Newcastle-under-Lyme.—Arcade, billiards-room, picture-drome and shop front. Mr. H. Booth, architect.

Lloyds banking premises extension.

Surrey.

Croydon.—King Edward Memorial Hospital extension (£6,000).

Frimley.—St. Andrew's Permanent Church (accommodation, 250; estimated cost, £2,400).

Guildford.—Twenty workmen's cottages (£3,400).

Corn Market alterations for Council Officials' Offices (£1,000).

Southfields.—Church school.

Sussex.

Chichester.—West Sussex, East Hants, and Chichester General Infirmary, re-construction (£1,500 to £2,000).

Eastbourne.—Home for feeble-minded paupers.

Horeham Road.—Drainage scheme (£13,600).

Mansfield.—Working-class cottages.

Preston.—Mission Church of St. Matthias (£3,500).

Workhouse laundry enlargement (£860).

Waldron.—(See Horeham Road.)

Worthing.—Refuse destructor enlargement. Mr. Frank Roberts, A.M.I.C.E., Borough Surveyor.

Westmorland.

North Westmorland water supply scheme.

Yorkshire.

Bridlington.—Christ Church Parish Hall.

Leeds.—Parish Church at Manston (£7,500).

Tadcaster.—Eighty-six houses.

Church at New Manston.

Yedingham.—Water supply scheme. Mr. Robert Richardson, C.E., engineer.

York.—Public elementary school at Castlegate for 540 children.

York United Gas Company's additional offices.

Messrs. Rowntree's Cocoa Works new dining hall, &c., for 3,500 hands. Mr. Swain, architect.

Working-class dwellings.

WALES.

Ammanford.—Intermediate school.

Caerwys.—School extension.

Furnace, Halfway and Marble Hall.—Schools.

Pontardawe.—Water supply extensions (£5,500). Mr. Morgan, engineer.

Fifty-six houses.

Bontycymmer.—Eighty-six cottages.

Swansea.—Fifty-three houses on Trewaffa Common and fifty houses at Cwm. Education architect.

SCOTLAND.

Achnacarry.—St. Kiaran's Mission Church. Mr. P. Macgregor Chalmers, F.S.A. (Scot.), I.A., architect. Messrs. E. & D. Stewart, contractors.

Alloa.—Public fountain.

Crossford.—School.

Eaglesham.—Sewage purification works. Mr. J. G. Bennett, engineer. Messrs. Wilson, Kimmond & Mair, contractors (£2,000).

Forfar.—Lowson Memorial Church.

Legerwood.—Church hall.

Kilberry.—School extension.
Kilchoman.—Free church.

Kingstown.—Artisans' dwellings (£7,600).
Baths and wash-houses, Kelly's Avenue (£1,000).
Caretaker's house, lavatories, &c., Lower George Street (£740).
Malahide.—Water supply scheme. Mr. P. H. M'Carthy, M.I.C.E.I., Borough Engineer.

TRADE NOTES.

A large clock has been ordered for the parish church at Widford, near Ware, which will strike the hours and show time on a large dial. It is to be fitted with all the latest improvements and generally to the designs of the late Lord Grimthorpe. The makers—Messrs. John Smith & Sons, Midland Clock Works, Derby—guarantee it to keep time with great accuracy. The same firm have also recently made clocks at Saxthorpe Church, Norfolk, and Barton Mills Church, Suffolk.

From the Carron Company we have received two well-bound and well-produced catalogues. One is devoted to kitchen ranges and the other to fire grates. For both classes of goods this company have established a reputation for artistic design and excellence of manufacture which may without the least exaggeration be described as world-wide. The variety of designs in the interior and register grates which are here illustrated is such that they must include something for every taste. Some are restrained to severity, others are decorative, not to say florid; and between the two are a large number which will satisfy the most exacting critic. There is also, of course, a considerable choice among types of fire. "Carron" ranges established themselves in favour more than a century and a half ago, and they have been improving that reputation ever since. This is being achieved by concentration on detail and attention to all the latest improvements which cunning hands and brains can devise.

The "Eau-Sho" boiler is the latest product of Messrs. Robt. Jenkins & Co., of Rotherham, and is put on the market as a hot-water boiler of comparatively small size which is compact in shape, rapid and effective in heating power, and with ample means of access. On plan it is of horse-shoe shape with a flat front. It may be placed in an angle or recess and still be accessible from the front for cleaning out. A special feature is a wedge-shaped water-pocket which projects into the heart of the fire, thereby ensuring rapidity of heating. A No. 1 size boiler (30 in. by 16 in. by 16 in.) in actual use is yielding, we are told, 60 gallons of boiling water per hour, though listed at 55 gallons only. The fire front is recessed so as to remove the risk of incrustation. Three oval mud-holes make the removal of any sediment an easy matter. The "Eau-Sho" boilers (for which a patent has been applied) are made both with and without a waterway bottom, in thirteen sizes for 210 to 720 feet 4-inch pipe. Where the water is soft (off mountain or moorland areas), it rusts an iron boiler and becomes unsuitable for domestic use. Copper boilers are used to overcome this difficulty, but the metal is costly and not durable. Messrs. Jenkins & Co. have therefore designed a wrot-welded boiler containing a copper coil connected to the service pipes, so that the water for domestic use is heated by passing through the coil, and is kept from all contact with iron. The prices compare favourably with those of copper boilers of equal powers. The dual boiler may also be used for combined heating apparatus and domestic supply. For situations where vertical space is limited, a boiler of larger diameter and proportionately reduced height is made.

J. H. Sankey & Son, Ltd., Canning Town, E., have just issued an illustrated catalogue of sanitary goods (Section S.). In a little over twenty pages they deftly give a comprehensive survey of the multitude of articles which they handle as merchants, shippers, and exporters. Pride of place is given to their London-made glazed stoneware pipes as supplied to various public authorities, and in which the 4 in., 6 in., and 9 in. sizes stood an average crushing strain of 4,000 lb. in a test by Messrs. Kirkaldy. Amongst the Sankey patents here given are channel interceptors, clearing eyes, sink traps, draught pots, and gullies. In the Sankey deep intercepting gully or grease trap the foreign matter intercepted in the specially strong perforated iron bucket is retained under water so that no dangerous gases are given off as with some other gullies where suspended buckets are used. Messrs. J. H. Sankey & Son have now been in business for more than fifty years, and in that time have got to know exactly what is required for sanitation on both a large and small scale. Their new catalogue can, of course, only deal summarily with classes of goods which are in themselves well-known and which are fully dealt with in special catalogues.

VARIETIES.

The Kirkcaldy District Committee of the Fife County Council is prepared to receive from engineers competitive designs for a drainage scheme for the special drainage district of Auchterderran, to include works for the purification of the sewage. A premium of £52 10*s.* will be awarded to the design judged to be the best of those submitted, and £26 5*s.* for that awarded the second place.

Owing to large colliery developments taking place in the neighbourhood of Askern, a considerable extension of the property in the town is imminent, and the Doncaster Rural District Council have instructed Messrs. D. Balfour & Son, of London and Newcastle-on-Tyne, to prepare plans for the extension of the sewers and also the sewage disposal works.

In order to arrest the decay in the stonework of Dunfermline Abbey Church, part of the building is being treated with silicate of soda. So pronounced was the erosion that the heritors obtained the advice of Sir Rowand Anderson, who estimated that it would take nearly £1,000 to overcome the ravages of the decay. The present treatment is purely experimental, and before any further work of the kind is undertaken, Sir Rowand Anderson will be asked to pay a visit of inspection.

Gillingham parish church has been further beautified by a stained glass window, erected by his sisters in memory of the late Mr. James George Allen. One of the lights represents the Saviour standing at the mouth of the sepulchre with Lazarus, and the other Mary and Martha, the latter kneeling against the stone in front of the grave. The window was designed and executed by Mr. Reginald Hallward.

Lord Provost Brown, at the Edinburgh Town Council meeting, proposed approval of a recommendation that sanction be given to the erection of a Town Hall in Portobello. This, he said, was the last claim Portobello had under the bond entered into in 1896 under the scheme of amalgamation with Edinburgh. An admirable site—that of Inverey House—had been secured. After considerable discussion the motion was agreed to by a majority.

A new Liberal Club for Ayr and South Ayrshire, situated in Sandgate, Ayr, has been opened for the use of members. The building was erected from designs by Mr. J. R. Johnstone, architect, Troon. The ground floor consists of shops; the reading-room, hall, and other accommodation are on the first floor, and the billiard-room and other accommodation on the second floor, and all the rooms are large and airy. The premises cost about £5,000. They will be formally opened in the autumn.

The Libraries Committee of the Manchester Corporation have accepted a tender for the erection of the temporary library on a part of the old Royal Infirmary site at Piccadilly, to provide accommodation for the work of the Central Free Reference Library after the closing of the present building in King Street, and until the completion of the new Library and Art Gallery on the Piccadilly site. The cost of the temporary building cannot be stated at present, but it is understood that the promise of Mr. Alderman Plummer to the City Council some time ago that it should not exceed £4,000 has been adhered to.

Mr. C. Hamilton Wickes, H.M. Trade Commissioner in Australia, who has recently revisited this country under instructions, is now on his way back to Australia. Any inquiries, says the *Board of Trade Journal*, which British firms may desire to address to him should be sent to his office at Equitable Building, Melbourne. As announced at the time of his arrival, Mr. Wickes returned to the United Kingdom with a view to visiting the principal industrial centres and affording to British manufacturers and merchants an opportunity of consulting him with regard to trade conditions in the Commonwealth. It may be of interest to note that during his stay Mr. Wickes visited twenty-four Chambers of Commerce, and interviewed over 400 firms.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* p.m. *on Thursdays.*

COMPETITIONS OPEN.

Aberystwith.—Aug. 21.—The Town Council invite competitive designs for the proposed conversion of the Militia Barracks, Aberystwith, into "workmen's dwellings." Premiums of £15 and £5 are offered. An assessor is to be appointed by the Council. The premiated designs are to become the absolute property of the Town Council. The first premium will, if the architect be employed to carry out the work, merge into his commission (to be agreed upon), on the cost of any of the works the Council may decide to carry out. Designs are to be sent, carriage paid, to the Town Clerk not later than August 21. Further particulars can be inspected at the offices of the Town Clerk.

Athens.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Barnsley.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

Bristol.—The directors of the Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Coseley.—Plans for Council school for 200 children for the Coseley Education Committee, at Dimmock Street, Parkfield, Coseley, W. Dudley. Conditions, one guinea, returnable on receipt of plans. Mr. Fred. J. C. Poole, Secretary, Education Offices, Coseley, near Bilston.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Conditions and instructions may be obtained (on payment of £1 1s. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1s., which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Newcastle-upon-Tyne.—The Education Committee invite competitive plans from architects practising in Newcastle for a Senior Mixed School and a Junior Mixed School, each to accommodate 365 children, at Walker Gate. Mr. Spurley Hey, secretary, Education Offices, Northumberland Road, Newcastle-upon-Tyne.

Pontefract.—Sept. 9.—The Council of the Borough invite competitive designs from architects practising in the West Riding of Yorkshire for the erection of public swimming and other baths at a cost not to exceed £4,500. Particulars and conditions as to the nature of the buildings, the remuneration of the successful architect, and the premiums for the designs adjudged to be first and second, can be obtained of the Borough Surveyor, Municipal Offices, Pontefract.

Skegness.—Sept. 5.—The Executive Committee invite architects to submit competitive designs and estimates for the proposed Cottage Hospital. Building to cost £900. Premium for design placed first, £15 15s. Designs to be sent in by Sept. 5 to Mr. W. W. Robinson, hon. secretary, Capital and Counties Bank, Skegness.

Wales.—Sept. 6.—The Committee of Visitors of the Joint Counties Lunatic Asylum, Carmarthen, are contemplating various repairs and alterations to the existing asylum, together with the erection of additional buildings, and architects are invited to submit full particulars of their terms and previous experience of asylum work, together with copies of testimonials, to Mr. W. J. Wallis-Jones, clerk to the Visitors, 34 Quay Street, Carmarthen.

CONTRACTS OPEN.

Annfield Plain.—Aug. 29.—For alterations to boundary fence and wall at Annfield Plain Infants' Council School. Mr. W. Rushworth, Shire Hall, Durham, or the Annfield Plain Boys' School.

Warmley.—Sept. 6.—For the re-building of Cowhorn Hill Bridge, near Warmley, and the construction of improved approaches thereto, for the Gloucestershire County Council. Deposit £2 2*s.* Mr. E. S. Sinnott, M.I.C.E., County Surveyor, Shire Hall, Gloucester.

Warwick.—Aug. 30.—For erection of a pair of children's homes and appurtenant buildings to accommodate 30 children and staff at Warwick, for the Guardians. Deposit £2 2*s.* Mr. F. G. Cundall, M.S.A., architect, 4 Parade, Leamington Spa.

Watford.—Sept. 5.—For erection of a bandstand in Cassiobury Park. Mr. D. Waterhouse, engineer and surveyor, Council Offices, High Street, Watford.

Willington.—Aug. 24.—For building 19 cottages. The Willington Co-operative and Industrial Society, Ltd., Willington, Durham.

Worksop.—Aug. 28.—For erection of children's wards, also extension of adult males' ward and new kitchens, &c., at the Victoria Hospital. Deposit £2 2s. Mr. A. H. Richardson, architect, Market Place, Worksop.

Mr. George Boxall, builder and contractor, of Pangbourne, who died on April 10, left estate of the gross value of £24,157.

A special meeting of Gateshead Town Council was held on Wednesday, when they adopted the report of the Asylum Visiting Committee recommending the acceptance of the tender of Messrs. Wm. Moss & Sons, Ltd., of Loughborough. for the erection and completion of the superstructure of the asylum at Stannington for the sum of £76,600. The architects are Messrs. G. T. Hine & H. Carter Pegg.

Mancetter Church, near Nuneaton, which contains memorials of the Warwickshire martyrs, including Robert Glover and Mrs. Lewis, is undergoing restoration, and some interesting discoveries have been made. A second pre-Reformation piscina has been brought to light in the south aisle, and has been refaced. A curious feature about the fabric is the number of large cavities, each 12 in. square, which were found in nearly every direction. These penetrated walls 3 ft. 6 in. thick, and are thought to be the Middle Age mode of ventilation. Various chained books, including an old edition of Foxe's "Martyrs," have been placed in a handy position for inspection by visitors. The Early English font, which for many years lay in the vicarage garden, has been restored to its proper place, and a handsome oak canopy fixed, the cost of which was defrayed by the contributions of the school-children.

In an action brought in the Chancery Division of the High Court of Justice by the Osram Lamp Works, Ltd., against the British Tungsten Lamp Co., Ltd., and another, for infringement of letters patent, an order was by consent made on July 26, 1911, whereby it was (among other things) ordered that the defendants, their servants, agents, and workmen be restrained during the continuance of certain letters patent from importing into, and from making, selling, offering for sale, supplying and using in this realm any illuminating bodies or electric lamps containing illuminating bodies made according to, or in manner described and claimed in the specification of such letters patent, or according to or in manner only colourably differing therefrom, and generally from infringing the rights of the plaintiffs under the said letters patent; and that the defendants do pay to the plaintiffs the sum agreed for damages sustained by the plaintiffs, or to be sustained by reason of the infringement of the said letters patent by the defendants, by the manufacture and sale prior to the date thereof of lamps and filaments, and the sale of the lamps then in stock, or by reason of the user of such lamps and filaments; and that the defendants do pay to the plaintiffs their costs of the said action to be taxed by the taxing master.

The new Council Offices at Newburn are now open. The building, which is of Georgian character, was built from the design of Mr. Edward Cratney, which was placed first out of fourteen in competition. It is faced with red sand stocks, and roofed with green slates from Tilberthwaite. The main entrance forms the principal feature of the frontage to Newburn Lane. The hall, staircase hall, council chamber, and committee room have decorated plaster ceilings to the designs of the architect, and carried out by Mr. John Ferguson, of Newcastle. The architect has taken advantage of the rapid fall in the site by placing the caretaker's rooms and stores on the lower ground floor. The upper ground floor provides accommodation for the surveyor's, rates, and health offices. The upper floor, which is approached by a wide staircase from the hall, is entirely devoted to the council chamber and committee room. The general contractor is Mr. Thos. Clements, of Newcastle. The heating, wrought-iron work, and electric light fittings were carried out by Messrs. Emley & Sons, Ltd., Newcastle. The carving was executed by Mr. G. Hughes, Newcastle. The oak panelling, council chamber seating, and furnishings by Messrs. Robson & Sons, Ltd., Newcastle, all to the designs of the architect. The electric installation is by Messrs. Robson & Coleman, Newcastle.

TENDERS.

CREWE.

For the construction of sewerage and sewage disposal works, for the Town Council. Mr. G. Eaton-Shore, borough surveyor.

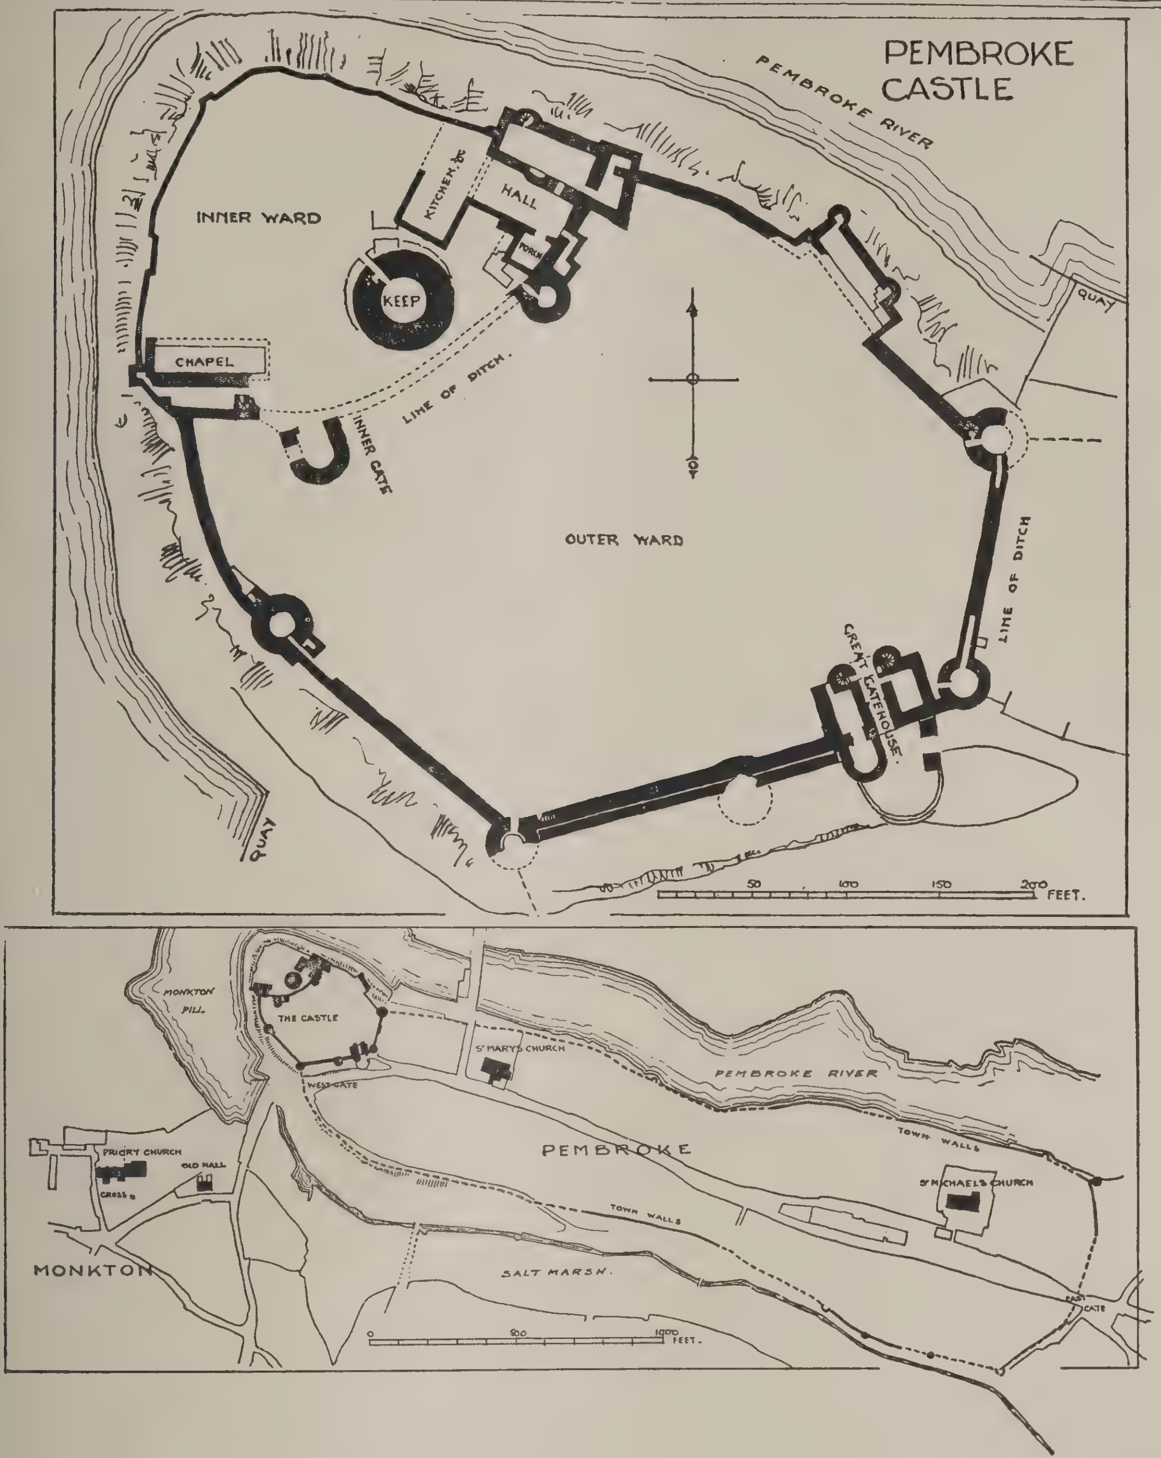
MR. THOS. HUDDLESTON, surveyor to the Grange-over-Sands Urban Council, has been appointed surveyor to the Ulverston Urban Council, at a salary of £200 per year.

THE Middlesex County Council have accepted, subject to the Local Government Board's sanction, the tender of Messrs. James Carmichael, Wandsworth, for the reconstruction of the Guildhall at Westminster. The amount of the tender was £73,360, while the architect's estimate was £80,000. The work must be carried out by the end of twenty-one months, subject to a heavy penalty for its non-completion.

THE Local Government Board has given its decision as to the application of the Dublin Corporation for sanction to a loan of £128,129 for extensions to the electricity works. The Board has decided to authorise the raising of £100,000 (including the £50,000 already sanctioned), and it is of opinion that, before sanction to borrowing beyond that amount is given, a clear statement of expenditure and definite proposals, supported by plans, specifications, and estimates for any further works should be submitted. The Board points out that contracts have been arranged for important works in a somewhat loose manner.



PLANS ILLUSTRATING EXCURSION OF ROYAL ARCHÆOLOGICAL INSTITUTE. (See p. 94.)

CUTLERS' HALL, SHEFFIELD.

The large hall known as the Cutlers' Hall at Sheffield is undergoing an important scheme of decoration from the designs and drawings of Walter H. Brierley, Esq., architect, of York.

One of the features of this scheme is a magnificent marble dado around the entire hall, rising to a height of 9 feet 6 inches from the floor level, formed with a rich "green vert tinos" skirting and frieze, and opened or quartered panels of specially selected Connemara green marble, the architraves and soffits of doorways and bands round the Irish green panels being in richly marked purple "Levanto" or "Porphyry," all the external angles to the marble work being finished in heavy moulded coinage bronze angle beads with wrought leaf ornament at the intersections of mitres to doorways.

At the front of the ladies' gallery the marble is continued above the dado in a soft, mellow cream marble known as "Mezzano" to the height of the handrail, finishing with a heavy moulded coinage bronze capping into which the standards supporting the handrail (all in the same metal) are fixed.

The whole of this work was entrusted by Mr. Brierley to the firm of J. & H. Patteson, marble-workers, &c., of Manchester, who have completed the work in a period of twenty weeks from receipt of instructions.

Above the marble dado, at intervals all round the hall, are massive double columns and pilasters up to the ceiling; these are being carried out in "Cippolino Scagliola." The dado breaks round the bases of these monoliths, standing two feet forward from the wall line, which gives a very fine effect to the scheme of panelling employed by the architect.

The richly-panelled ceiling and walls are being treated in a colour scheme in harmony with the rest of the decorations.

A font canopy of carved oak has been erected in St. Margaret's Church, Ilkley, from the designs of Mr. R. Norman Shaw, who was the architect for the building.

BUILDING PROGRESS IN THE PROVINCES.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

Berkshire.
Earley.—Parish Church choir vestry enlargement. Mr. F. Newberry, contractor.

Cheshire.
Dukinfield.—Town Hall at the Municipal Buildings (£6,000 to £7,000).
Langley.—Council School alterations.
Macclesfield.—Workhouse alterations.

Cornwall.
Gyllyngvase.—Sewerage scheme (£4,000).
Redruth.—Tramps' shelters at the Workhouse (£360).
St. Austell.—Cottage Hospital (£2,500). Messrs. Wheatley & Seddon, architects. Mr. Carkeek, contractor for £1,961.
St. Dennis.—Liberal Club (£300).
St. Ewe.—Parish Church restoration (£250).
Truro.—Seventeen houses at Waterloo, for artisans. Mr. F. C. Barnes, City Surveyor (£3,000). Tender accepted for £2,537.

Cumberland.
Egremont.—Cottage and Outhouses for the County Council.
Water supply. Mr. J. C. Boyd, A.M.I.C.E., engineer.
Wigton.—North-Western water supply scheme. Council surveyor.

Devonshire.
Ilsington.—Water supply scheme (£4,900).

Essex.
Heybridge.—Council School.
Hornchurch.—Parish Council Public Offices.
Leigh.—U.D.C. Offices. Mr. J. W. Liversedge, Council Surveyor. Mr. F. Davey, contractor.
Ockendon.—Sewerage scheme.
Southend.—Synagogue (£2,500). Messrs. Parkes & Evans, architects. Mr. E. Leaney, contractor.

Hampshire.
Alton.—Cottage Hospital (Coronation Memorial) extension.
Eastleigh.—Isolation Hospital (£5,000).
Church extension (£4,000).

Kent.
Canterbury.—Parish Hall at St. Stephen's.
Great Chart, Kingsnorth and Shadoxhurst.—Water supply scheme.
Kemsing.—Coronation Memorial Fountain.
Kingsnorth.—(See above.)
Lydd.—House in New Street. Mr. Thurlow Finn, architect.
Sevenoaks.—Eight cottages in Bradbourne Park Road.
House in Hitchen Hatch Lane.
Shadoxhurst.—(See above.)

Lancashire.
Salford.—House at Buile Hill Park. Mr. W. H. Matley, architect.
Wingates.—St. John's School additions and alterations for 321 scholars.

Lincolnshire.
Bennington.—Canon Disbrowe Memorial in the parish church: stained glass window and brass tablet (£200).
Crosby.—(See below.)
Kirkby-on-Bain.—Parish Room.
Scunthorpe and Crosby.—Sewerage scheme.

Norfolk.
Acle.—St. Edmund's Church: Restoration (£300 to £400).
Heacham.—Water supply scheme (£5,500). Mr. Stevenson, engineer. Mr. R. Shanks, contractor, for £2,975.
Shadingfield.—Church restoration.

Nottinghamshire.
Mansfield Woodhouse.—Mission Church (£1,000).

Suffolk.
Lowestoft.—Two houses near Lake Lothing. Mr. F. G. Robinson, architect.
Four houses, Worthing Road.
Six houses, London Road South. Mr. R. C. Todd, architect.
Sudbury.—Post Office. Mr. Alfred Howard, architect.

Surrey.
Farnham.—Electricity Power Station.
Godalming.—Picture Palace in Station Road (accommodation for 300).
Woking.—Garden suburb containing sixty-eight villas (£20,000).
Technical Institute and Secondary School.

Sussex.
Ashurst Wood.—Sewerage scheme. Messrs. Hutchinson & Co., contractors (£5,467).
Bognor.—Pier pavilion extensions.
Workmen's dwellings in Sheepwash Lane (£2,300).
Brighton.—Four receiving homes and an infirmary at Warren Farm Schools. Messrs. Mark Martin & Son, contractors (£7,745).
Chichester.—High School for Girls: caretaker's house.
Crowborough.—Council school enlargement.
East Grinstead.—Swimming bath (£360).
Wick.—Drainage scheme.
Worthing.—Outpatients' (Edward VII. Memorial) department at the hospital.

Warwickshire.
Coventry.—Housing scheme completion (£31,000).

Westmorland.
Burton.—Sewerage scheme. Messrs. Taylor & Wallin, engineers.

Yorkshire.
Bamford.—Foreman's lodge at the Council filter beds. Messrs. W. B. Starr & Hall, architects.
Holme-on-Spalding Moor.—Parish Church restoration.
Malton.—Workhouse Laundry (£1,000).
St. Deny's-with-St. George.—Parish Church alterations.
Sheffield.—University Applied Science Department buildings in Charlotte and Portobello Streets. Messrs. Gibbs, Flockton & Teather, architects.
York.—Workhouse children's receiving home (£1,250). Mr. J. H. Morton, architect.

WALES.

Carmarthen.—Joint Counties Lunatic Asylum additions and alterations.
Llandudno.—Church at the west shore.

SCOTLAND.

Ayr.—Farm Buildings at Cunning Park (£1,200).
Riverstone Villa, Racecourse Road (£900).
School additions, Green Street Lane (£450).
Langholm.—Additions to warehouse, offices, &c., for Messrs. M'Intyre, Cairns & Co.

IRELAND.

Mullingar.—Ulster Banking premises. Messrs. Blackwood & Jury, MM.R.I.A.I., architects.
Newry.—Picture Theatre. Mr. W. S. Barber, M.R.I.A.I., architect.

Clydebank Town Council met on Monday, when the plans for the new public library were again under consideration. The successful architects were Messrs. Gardner, Miller & White, Glasgow, and their plans were submitted for examination to the librarian of Motherwell, who pointed out what he considered a serious defect in the arrangement of the building. It was agreed to await the return to business of Mr. Miller, of the successful firm, before taking any steps in the matter.

At the first flower show held at the Hull Garden Village last week it was announced that Mr. Fred. J. Reckitt, of Woodgrange, Holderness Road, has expressed a desire to present twelve almshouses to the village similar to those which Miss Reckitt gave two years ago. They would be built in the form of a quadrangle. When these are completed there will be thirty-eight almshouses in this particular district.

The Edinburgh Dean of Guild Court have granted warrant to the Edinburgh School Board for the erection of a new school at Viewforth. The new school will provide accommodation for 1,200 pupils in forty class-rooms, each containing thirty, an allowance of 16 square feet per pupil having been given in all the class-rooms. There will be two gymnasia, each measuring 80 feet by 40 feet, and six large workshops. The total cost of the building will be about £54,000. The removal of the existing buildings on the site has already been begun. The architect of the new school is Mr. John A. Carfrae, 3 Queen Street, Edinburgh.

BOARD SCHOOL PLAYGROUNDS.

The President of the Board of Education has appointed a Departmental Committee to inquire and report

(*a*) Whether it would be consistent with due regard to educational and hygienic considerations that the minimum standard of playground accommodation for new public elementary schools prescribed in the building regulations of the Board of Education, viz. 30 feet per head of accommodation, should be modified or adjusted according to the size, design, or situation of schools, the proximity of recreation grounds or open spaces, the density of population, the cost of land, or otherwise.

(*b*) How far it is possible or desirable to define more precisely the standard of playground accommodation which the Board of Education will require under the code of regulations for public elementary schools in the case of existing schools, or to regulate the practice of the Board of Education in dealing with cases in which the playground accommodation is considered to be insufficient.

The committee will consist of Mr. L. A. Selby-Bigge, C.B., Principal Assistant Secretary of the Elementary Education Branch of the Board of Education (chairman); Sir George Newman, Chief Medical Officer of the Board of Education; Mr. J. C. Iles, H.M.I., Divisional Inspector for the North-Western Division; Mr. F. H. B. Dale, H.M.I., Divisional Inspector for the Metropolitan Division; Mr. A. B. McLachlan, of the Local Government Board; with Mr. L. J. Morison as secretary.

BUILDING IN MELBOURNE.

The following picture of the condition of the building trade in Melbourne is drawn by the *Melbourne Argus*:—

Great difficulty is being found by architects and others who have building contracts to let to find builders who are willing to undertake them. Even for large city jobs, where there is abundant room for high profit, very few tenders are received, while tenders have to be called again and again for important country jobs before anybody can be found willing to execute them. The reason is not that builders are less enterprising or that they are at all unwilling to undertake the work. They are not able to do it, because they cannot obtain tradesmen to man the jobs. The difficulty has reached an acute stage. A week ago the master builders met and considered the whole question. The Master Builders' Association has 110 members. Details of the number of men urgently needed by all of them showed that the trade was undermanned to the enormous extent of 50 per cent. The number of bricklayers, plasterers, painters, plumbers, and so forth requires to be doubled before it will be possible for the builders to cope with all the work which requires to be done.

It is not that there has been any extraordinary boom in the building trade. For years past there has been a steadily increasing activity in the trade. The population of Melbourne and of Victoria has been growing, and people must be housed. Businesses of all sorts have been increasing, and larger buildings will be needed. Hotel and coffee palace accommodation alone has been proved every year to be entirely inadequate. At all holiday seasons the existing accommodation is unable to meet requirements. There has been extension in this direction. Hundreds of thousands of pounds are being spent every year in that branch of business alone. Warehouses, factories, shops, are being rebuilt and enlarged in all parts of the city. Public buildings are being erected to meet the increased requirements of Government institutions. Hospitals and charitable institutions of all kinds require more building accommodation. The growth of population and the increased prosperity of the country are jointly responsible for this, for it is the same all over Australia. In Sydney a great number of very large building operations have been postponed until the builders are able to deal with them. The tradesmen to do the work are not to be found in Australia, and those who want the buildings just have to wait.

At least 500 bricklayers are urgently needed in Melbourne. That number could find employment to-day if they were to present themselves to the various builders. It is a very conservative estimate, for it implies that the 110 builders who are members of the Association want less than five men apiece, whereas every one of them could employ five, and many of the larger builders would gladly engage twenty or thirty if they were obtainable. By "bricklayer" is meant a skilled tradesman. Every man who calls himself a bricklayer does not comply with that description. There are numbers of men who profess to be bricklayers whom no contractor will engage. Their work has to be all pulled down again. But even for these men there is abundance of employment, if skilled tradesmen could be obtained to do the better class work. The bricklayer is the essential tradesman of the building trade. A scarcity of bricklayers means that a great amount of work cannot be attempted, and that other branches of the trade cannot be as fully employed as they would otherwise be. It is estimated, however, that if 500 bricklayers could be obtained there would be room also for at least 150 additional bricklayers' labourers, 150 plasterers, and 200 painters, carpenters, carpenters' labourers, and plumbers.

That means that there is immediate employment waiting for at least 1,000 experienced men in the building trade. In these estimates no account has been taken of the needs of the country districts, though the scarcity of labour there is greater than in the city, for tradesmen have gradually deserted the country to take up the more congenial work in Melbourne.

Wages in the trade are high, while the hours are limited to forty-four per week. Bricklayers receive a minimum of 1*s.* 6*d.* per hour—66*s.* per week. Plasterers are paid 11*s.* 8*d.* per day. Painters receive 1*s.* 3*d.* per hour. Plumbers' wages are 1*s.* 7½*d.* per hour, and tuck-pointers are paid 11*s.* to 12*s.* per day. Carpenters receive from 69*s.* 8*d.* a week for foremen who exercise control over the work of three men or more, to 52*s.* 3*d.* a week for ordinary carpenters' labourers. The working carpenter receives 64*s.* 2*d.* per week. Their hours are forty-four a week. They do not commence work until a quarter to eight o'clock in the morning (double rates are paid for time worked before that hour), and do not work after a quarter past five o'clock on week days and a quarter-past twelve o'clock on Saturdays). All holiday work is paid for at overtime rates. Wages boards control the wages and hours of all the workmen in the building trade, and some of these boards are even now considering determinations which will increase the rates.

Although these rates are fixed by wages boards, they are only the minimum. Builders pay good tradesmen considerably higher rates. An increase of 1*s.* a day is gladly given to retain the services of good tradesmen. They are too valuable to lose, and builders, both in this State and in others, continually find themselves bidding against one another for the services of competent men. Instead of 12*s.* a day—the minimum rate of pay—there are numbers of good men obtaining 13*s.* and 14*s.* Builders resort to the most extraordinary means to retain their men. Often on small contracts tenders are put in at absurdly low rates. The builder wants the contract merely to keep all his hands in his employment, so that he may have them when some large job is to be executed. The constant dread of the builder is that he may lose some of his scanty staff, and be mulct in penalties because he cannot finish his work within the contract time.

A few tradesmen come in as immigrants occasionally. They instantly find employment at wages far above their wildest dreams in Great Britain. In most cases they have come to Victoria to settle on the land, but have found it more profitable to resume their trades. There is abundant need for the importation of tradesmen, all of whom could be assured work almost from the day they landed here. The need is not a passing one. It has gradually grown to its present acute state, and it will become more and more acute as time goes on. There is no sudden access of activity in the trade. On the contrary, the lack of hands in other industries is restricting expansion in them. Any proper increase of industrial immigration would supply operatives to half-a-dozen industries which are now being held back. Capital is ready to be invested in new factories and in extensions of existing factories. All this means continued building activity, and a constant demand for tradesmen.

The North Central Waggon Company are stated to be in negotiation with the object of erecting works at Briton Ferry.

The Crystal Palace, it is officially announced, will be offered by auction by order of the Court on November 28 by Mr. Howard Frank, acting in conjunction with Mr. J. Roy Lancaster.

The Military Hospital at York will shortly be brought thoroughly up-to-date. The alterations will be of an extensive character, and the additions to the main building will include a new ward, operating theatre, stores, and various outbuildings. The works will occupy about a year, and will be carried out in sections. The Secretary of State for War has invited tenders.

L.C.C. SCHOOL CONTRACTORS.

The Education Committee of the London County Council at the last meeting made recommendations dealing with the cases which have arisen since their report of December 14, 1910, involving additions to, and removals from, the list of contractors selected to tender for work at Council schools. Copies of the standing orders relating to contracts, rates of wages, and hours of labour have been forwarded to each of the contractors whose name it is proposed to add to the list, and each firm has signified its willingness to accept the conditions laid down therein. The usual inquiries, except as regards Rowley Bros. and F. W. Fletcher, who have already carried out work for the Council, have been made by the solicitor and architect with satisfactory results. They recommend—

(*a*) That the name of Brand, Pettit & Co., 147 West Green Road, South Tottenham, N., be added to the selected list of contractors to be invited to tender for new schools and enlargements.

(*b*) That the name of Courtney & Fairbairn, Ltd., Marlborough Works, 377 Albany Road, Camberwell, S.E., be added to the selected list of contractors to be invited to tender for new schools, enlargements and structural alterations, not exceeding £20,000 in value.

(*c*) That the name of Rowley Brothers, Westbury Avenue, Tottenham, N., be added to the selected list of contractors to be invited to tender for new schools, enlargements, structural alterations and minor improvements.

(*d*) That the names of the undermentioned firms be added to the selected list of contractors to be invited to tender for new schools, enlargements and structural alterations, not exceeding £5,000 in value, repairs to buildings, cleaning and painting—

(i.) F. W. Fletcher, 4 Maybury Street, Aldis Street, Lower Tooting, S.W.; (ii.) Woodward & Co., 13 Wilson Street, Finsbury, E.C.

(*e*) That the names of the undermentioned firms be added to the selected list of contractors to be invited to tender for cleaning and painting—

(i.) F. W. Dainton, 17 Calabria Road, Highbury, N.; (ii.) A. H. Inns, Camomile Street Chambers, Bishopsgate, E.C., on probation.

(*f*) That the name of H. G. Latham, 14 Catherine Street, Croydon, be added to the selected list of contractors to be invited to tender for heating apparatus, painting, plumbing and drainage work, not exceeding 750*l.* in value.

(*g*) That the name of Watson, Duncan & Co., 62 Berners Street, W., be added to the selected list of contractors to be invited to tender for heating apparatus.

(*h*) That the name of J. & W. Shale, 127 and 129 Rhodeswell Road, Limehouse, be added to the selected list of contractors to be invited to tender for providing and erecting iron staircases.

(*i*) That the name of F. Smith & Co., Carpenters Road, Stratford, E., be added to the selected list of contractors to be invited to tender for small contracts for iron building work.

(*j*) That the names of W. E. Blake, Ltd., Plymouth, and The Building Construction Company, Ltd., Oceanic House, 1a Cockspur Street, S.W., be substituted for those of W. E. Blake and Waring White Building Company, Ltd., respectively, on the selected list of contractors to be invited to tender for works to Council schools.

(*k*) That the names of the undermentioned firms be removed from the selected list of contractors to be invited to tender for the works to Council schools specified in each case—

Repairs to school buildings, cleaning and painting—(i.) Graham & Graham, 2 Weymouth Street, Portland Place, W.; (ii.) W. Gray & Co., 76 East India Dock Road, E.; (iii.) G. H. Rowe, 3 York Street, St. James's, S.W.; (iv.) J. A. Stayner, 208 Bermondsey Street, S.E.

Structural alterations and repairs, cleaning and painting—(v.) Grace & Marsh, 79 Tamworth Road, Croydon; (vi.) W. Eyre, 22 Great Chapel Street, Westminster, S.W.; (vii.) H. Eady, 244 Belsize Road, Kilburn, N.W.; (viii.) M. Calnan & Son, 242a Commercial Road, E.; (ix.) E. Orpin, 92 Anerley Road, S.E.

Repairs to buildings on schedule—(x.) Leslie & Co., Ltd., Kensington Square, W.; (xi.) W. Martin, 55 and 57 Rivington Street, Curtain Road, E.C.; (xii.) A. Black & Son, Perry Vale, Forest Hill, S.E.; (xiii.) E. A. Roome & Co., 36 Basinghall Street, E.C.; (xiv.) W. Akers & Co., Ltd., 13 High Street, South Norwood, S.E.; (xv.) James Smith & Sons, Ltd., Junction Works, South Norwood, S.E.; (xvi.) H. C. Horswill, 182 Green Street, Forest Gate, E.

Cleaning and painting—(xvii.) Pasterfield & English, 51 Sunnyhill Road, Streatham, S.W.; (xviii.) J. J. Richards, 9 Shannon Grove, Brixton, S.W.

VARIETIES.

Messrs. Kerr & Watson, architects, have prepared plans for the erection of a public slaughter-house at Johnstone, N.B., at a cost of £2,000.

The Newcastle Board of Guardians have closed a controversy of two or three years' standing by deciding last week to erect the proposed additional hospital block within the workhouse grounds. The cost of the building is estimated at £18,000.

The borough buildings at Abingdon are about to be renovated. The scheme includes the reconstruction of the Council Chamber roof, the renovation of the large room, and the conversion of the old Grammar School-room into a dining and assembly room connected with the Guildhall suite of rooms. The total cost is about £1,100.

The Plans Committee of the Lower Ward District of the County of Lanark at their last meeting disposed of the following plans of houses and buildings, viz.: Stepps Parish Church, erection of side aisle, extension to church, hall with retiring room and offices adjacent to church, Whitehall Avenue, Stepps; Glasgow Parish Council, Epileptic Colony Buildings at East Muckcroft, Chryston; James Beattie, Chryston, Mission Hall, Chryston.

The Scottish Education Department has approved of plans of the Provincial Training College and Practising School, about to be erected in Dundee at an estimated cost of about £60,000. The buildings are to be erected in Park Place, Nethergate, and the area of the site, which is occupied at present by five villa properties, extends to about 1¾ acres, the main frontage to Park Place being 123 yards. The plans, which have been prepared by Mr. T. Martin Cappon, F.R.I.B.A., architect, Dundee, provide for both buildings being four storeys in height. The College buildings are connected to the practising school by a covered bridge. The practising school will provide accommodation for 400 pupils. It is expected that building work will soon commence.

The Council of the Institution of Civil Engineers have made the following awards in respect of students' papers read during the session 1910-1911: The "James Forrest" Medal and a Miller Prize to Mr. D. Hay, B.Sc. (Birmingham), and Miller Prizes to Messrs. D. A. Howell (Bristol), R. Bonner (Bristol), G. F. Walton (London), R. G. Parrott (Manchester), E. E. Farrant (London), A. C. Dean, B.Sc. (Manchester), H. W. Coales (Birmingham), A. H. Meade (London), A. C. Swales (Leeds), and H. J. F. Gourley, B.Eng. (Manchester).

An extensive block of new buildings at Sutton Valence School has been opened by the Archbishop of Canterbury. The additions comprise a new school planned on the central hall system and two new boarding-houses, each capable of receiving fifty-six boarders. These occupy three sides of a spacious quadrangle overlooking the Weald of Kent, and forming a notable landmark when seen from the South-Eastern Railway between Headcorn and Staplehurst. The centre of the front is dominated by a turret with a clock furnished with the Westminster chimes. From the double range of galleries of the assembly hall radiate the various laboratories, lecture theatres, studios, and classrooms. In the course of his address his Grace remarked that they were assisting in a way of making history which was characteristic of England. Two old foundations, both founded in Queen Elizabeth's reign, had been carried on from age to age with chequered stories—sometimes greater, sometimes less—and had held their own down to the present day. William Lambe in 1576 had founded that school; Lady Dacre in 1594 had founded another school in Westminster. And now these two great channels—two streams parted in the reign of Queen Elizabeth—had joined together in King George's reign. The old had been adapted to the needs of modern times without any rupture with the past, and without any violation of old traditions. He warned his younger hearers that they possessed "the perilous inheritance of a great name." They were proud of their school's past history, and the Elizabethan times were grand. But now, if they would look forward, there were grander times still, and grander opportunities than had existed in any previous age.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

COMPETITIONS OPEN.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l*. A first prize of 800*l*., and a second prize of 320*l*. will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

BARNSLEY.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

BRISTOL.—The directors of the Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Coseley.—Plans for Council school for 200 children for the Coseley Education Committee, at Dimmock Street, Parkfield, Coseley, W. Dudley. Conditions, one guinea, returnable on receipt of plans. Mr. Fred. J. C. Poole, Secretary, Education Offices, Coseley, near Bilston.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s.* deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s.*, which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Murton.—Oct. 4.—The Easington Rural District Council invite plans for three separate types of houses, of which it is proposed to build 100 at Murton Colliery, Durham. The houses to be in streets of twenty with 16 ft. back streets, 18 ft. frontage, and garden ground in front of each house to a depth of 30 ft., an earth closet and outside pantry to be provided for each house. Strict compliance with the Council's by-laws and the Local Government Board regulations will be required. The following are the types of houses:—Type A.—28 ft. gable, three bedrooms, one living room, one sitting room, scullery (offshot), with kitchen range and bath. Type B.—25 ft. gable, three bedrooms, one living room, scullery, with kitchen range and bath. Type C.—Two bedrooms, one living room and scullery, with kitchen range and bath. Appearance and economy of structure will be considered. The successful candidate will receive 2½ per cent. commission upon the net cost of buildings when erected. No other remuneration will be paid. Mr. J. M. Longden, Council Offices, Easington, Castle Eden.

Newcastle-upon-Tyne.—The Education Committee invite competitive plans from architects practising in Newcastle for a Senior Mixed School and a Junior Mixed School, each to accommodate 365 children, at Walker Gate. Mr. Spurley Hey, secretary, Education Offices, Northumberland Road, Newcastle-upon-Tyne.

Pontefract.—Sept. 9.—The Council of the Borough invite competitive designs from architects practising in the West Riding of Yorkshire for the erection of public swimming and other baths at a cost not to exceed £4,500. Particulars and conditions as to the nature of the buildings, the remuneration of the successful architect, and the premiums for the designs adjudged to be first and second, can be obtained of the Borough Surveyor, Municipal Offices, Pontefract.

Skegness.—Sept. 5.—The Executive Committee invite architects to submit competitive designs and estimates for the proposed Cottage Hospital. Building to cost £900. Premium for design placed first, £15 15*s.* Designs to be sent in by Sept. 5 to Mr. W. W. Robinson, hon. secretary, Capital and Counties Bank, Skegness.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—The Cardiff Education Committee invite designs and estimates in competition for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s.*, which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

Wales.—Sept. 6.—The Committee of Visitors of the Joint Counties Lunatic Asylum, Carmarthen, are contemplating various repairs and alterations to the existing asylum, together with the erection of additional buildings, and architects are invited to submit full particulars of their terms and previous experience of asylum work, together with copies of testimonials, to Mr. W. J. Wallis-Jones, clerk to the Visitors, 34 Quay Street, Carmarthen.

CONTRACTS OPEN.

Worksop.—Aug. 28.—For erection of children's wards, also extension of adult males' ward and new kitchens, &c., at the Victoria Hospital. Deposit £2 2*s*. Mr. A. H. Richardson, architect, Market Place, Worksop.

A Local Government Board inquiry was conducted last week at the Wallasey Public Offices into applications by the Corporation for the approval of the Board of the retention and use of public walks and pleasure grounds of certain lands adjoining Virginia Road and the Marine Promenade, New Brighton, acquired for purposes of a promenade. Powers were also sought to borrow £9,000 for the purposes of the construction of the same, which will include the provision of a pavilion, bandstand, shelters, conveniences, &c. The scheme was strongly opposed by a local pier company.

Lismore.—Public Hall.

Prinlaws.—Parish Church extension.

Wemyss.—Baptist Church.

School Board Infant School, College Street.

Yoker.—Parish Church hall (accommodation for 600). Mr. H. D. Walton, architect (£1,800).

TRADE NOTES.

Under the direction of the Norfolk Education Committee, Boyle's latest patent "air-pump" ventilators have been applied to North Lopham schools.

Messrs. Patman & Fotheringham, Ltd., have been successful in securing contracts for two works of importance in the West End of London, viz., alterations and additions to His Majesty's Theatre, Haymarket, W., and additions and alterations to the Savoy Theatre, Strand, W.C.

Messrs. William Potts & Sons, Ltd., clock manufacturers, Leeds and Newcastle-on-Tyne, have received instructions to make and fix a new hour striking clock and bell, with four external dials, for Scotland. Also an hour striking clock with three dials for the Grammar School, Ashburton, Devon; new illuminated clock with two external dials for Huddersfield; fix two clocks in Lincolnshire; new clocks for North Yorkshire and co. Durham, with Cambridge chimes; new clock and bell for Scarborough; new large clock to strike on a 20 cwt. bell, with three large dials, for St. Paul's Church, Colwyn Bay, North Wales; also just finishing a Cambridge quarter-chime clock for St. Oswald's parish church, Guiseley, West Yorkshire, and other important work in hand. The clocks are generally on the plans laid down by the late Lord Grimthorpe.

THE "MAZDA" LAMP.

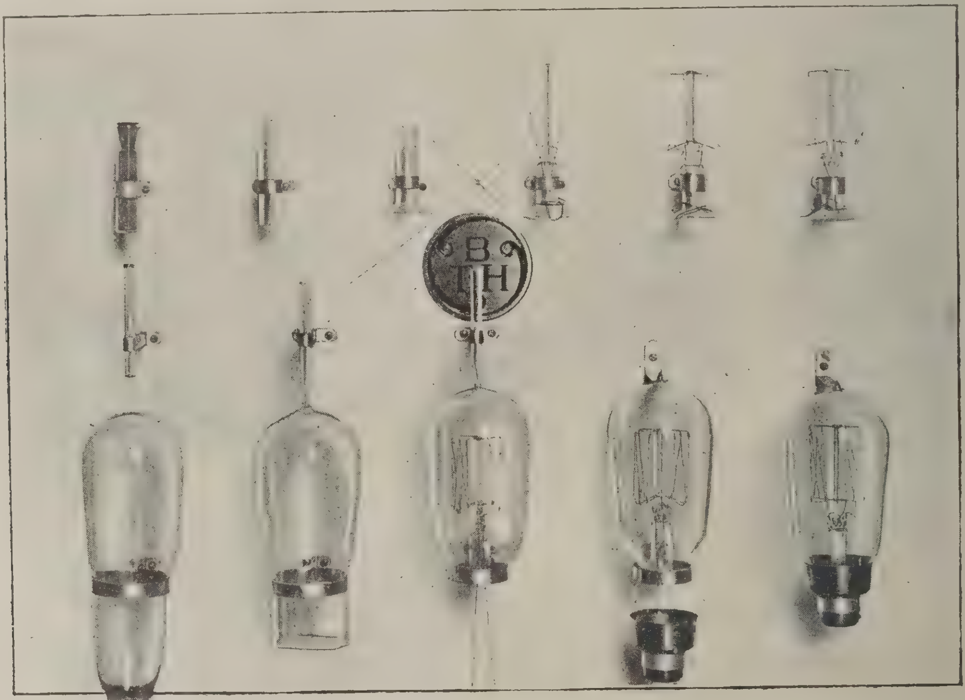
Although only a comparatively short period has elapsed since the introduction of the metallic filament lamp, with its attendant advantages to electric-light consumers over the older type of carbon lamp, it would appear that important developments have matured as the result of research and experiment on the part of the British Thomson-Houston Company, Ltd., at their laboratory.

The firm purpose placing on the market a new type of their metallic filament lamp called the "Mazda." It is well known that the tungsten filament lamps at present in use are not able to withstand ordinary rough usage. This difficulty has been overcome in the development of the "Mazda" by the method of constructing the filament of pure drawn wire, which is superior to the pressed or *squirted* filament in exactly those essentials which are necessary to the most perfect type of electric incandescent lamp. Great ingenuity had hitherto been expended to improve the pressed tungsten filament of the lamps now in use, in order to obtain the desired strength, uniformity in cross-section, and flexibility in mounting, but without success.

The introduction of the drawn-wire method of "Mazda" lamps therefore heralds a great advance, inasmuch as these lamps are proved to be several times stronger than the pressed-filament type at any point in their life. The risk of breakage is substantially reduced and longer life is ensured. In support of this contention, it is necessary to compare "Mazda" filaments and their construction with those of the "pressed" type.

It is important to note that the drawn wire is of one piece; thus it is not subject to the variations in size and consequent shortening of life which are apt to occur with the ordinary or pressed-filament lamps which have many loops in series. An incandescent-lamp filament, like a chain, is obviously only as good as its weakest part. In "Mazda" lamps there is no weak link. For in the "Mazda" the ends of drawn-wire filaments are not narrow and pointed, but well rounded, to prevent short circuits. Early failures are said to be less frequent. An important item to consumers when purchasing "Mazda" (British-made) lamps is that they are rated by the British Parliamentary Standard candle, which should not be confused with the Hefner (a lower) standard used in the rating of Continental lamps. It is not without interest, when contemplating the cost of electric light at the present day, to go back to 1882, when the first incandescent lamps were made. The best lamps then obtainable gave 16 candle-power and consumed 100 watts of electricity per hour. Reckoning the cost at 6*d.* per unit, this would work out at one halfpenny per hour. The "Mazda" 16 candle-power can be secured from 20 watts (one-fifth of what the lamps first required), at a cost of one-tenth of a penny. The cost of electricity per unit is now, of course, much less than 6*d.*, that figure being quoted solely for the purpose of illustration. By the use of th Mazda-Holophane unit, increased illumination to the extent of 100 to 150 per cent. can be obtained than if the lamp were used alone or with ordinary glass shades. The Mazda-Holophane unit is a combination of the "Mazda" lamp with a special type of prismatic glass reflector known as the Holophane. Rooms so lighted present practically the same appearance as by daylight, an obvious advantage for shops restaurants, warehouses, banks, clubs, and places where people congregate.

Our block shows the successive stages of evolution whic occur in the delicate operation of producing a "Mazda" lamp. Two pieces of the new drawn tungsten wire filamen which promises to play such an important part in the electr light of the future will be noticed crossed in the centre. may here be mentioned that the British Thomson-Houst Company, Ltd., is a British concern which now employs m than 3,000 people, a number six times as many as were quired when their Rugby factory was opened in 1901.



A "MAZDA" LAMP IN THE MAKING.

The Governors of the Glasgow School of Art, authoris by the Scotch Education Department, have granted travelling bursaries of the aggregate value of £325. T winners of the two bursaries awarded in the architectu section are Mr. James Bennett and Mr. Alfred G. Lo head. Each is of the value of £25.

Dunfermline Dean of Guild Court last week sanction the erection of properties estimated to cost in the aggreg £15,000. Among the plans were those by the Carnegie Du fermline Trustees for the erection in Bath Street of a wome institute, the cost of which is expected to reach betw £8,000 and £9,000, and for the erection by the Fife Cou Territorial Association of a drill hall for the Highland F Royal Garrison Artillery, at a cost of £3,000. The Carne Trustees obtained warrant to erect, at a cost of £650, a bo house for the bowling green which they are at present layi out in Nethertown Broad Street. Other plans passed were: David Hutton, merchant, for the reconstruction of Masonic Arms, Townhill; Alexander Hutton, spi merchant, Townhill, for the erection of a cottage on bu land in the village; George Anderson, joiner, Townhill Ro for the erection of dwelling-houses at Townhill Road; Jo Rintoul, merchant, for the erection of two three-sto dwelling-houses at Baldridgeburn; and the Townhill (Du fermline) Colliery, Ltd., to erect a motor-house, worksho sub-station for electricity transformer, &c., at their colli at Townhill.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 P.M. *on Thursdays.*

COMPETITIONS OPEN.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

BARNSLEY.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

BRISTOL.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Coseley.—Oct. 12.—Plans for school for 200 children for the Education Committee, at Dimmock Street, Parkfield, Coseley, W. Dudley. Conditions, one guinea, returnable on receipt of plans. Mr. Fred J. C. Poole, Secretary, Education Offices, Coseley, near Bilston.

Evesham.—Oct. 7.—The Rural District Council invite designs, with estimates of cost, for laying out a building site at Broadway and the erection thereon of 30 cottages, under the Housing and Town Planning Act, 1909. The architect whose design is accepted will be appointed to carry out the work at an inclusive fee of 5 per cent. Deposit £1 1*s.* Mr. E. H. Wadams, Clerk, Union Offices, Evesham.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s.* deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s.*, which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Murton.—Oct. 4.—The Easington Rural District Council nvite plans for three separate types of houses, of which it s proposed to build 100 at Murton Colliery, Durham. The houses to be in streets of twenty with 16 ft. back streets, 18 ft. frontage, and garden ground in front of each house to a depth of 30 ft., an earth closet and outside pantry to be provided for each house. Strict compliance with the Council's by-laws and the Local Government Board regulations will be required. The following are the types of houses:—Type A.—28 ft. gable, three bedrooms, one living room, one sitting room, scullery (offshot), with kitchen range and bath. Type B.—25 ft. gable, three bedrooms, one living room, scullery, with kitchen range and bath. Type C.—Two bedrooms, one living room and scullery, with kitchen range and bath. Appearance and economy of structure will be considered. The successful candidate will receive 2½ per ent. commission upon the net cost of buildings when erected. No other remuneration will be paid. Mr. J. M. Longden, Council Offices, Easington, Castle Eden.

Newcastle-upon-Tyne.—The Education Committee nvite competitive plans from architects practising in Newcastle for a Senior Mixed School and a Junior Mixed School, each to accommodate 365 children, at Walker Gate. At a special sitting of Greenock Dean of Guild Court Mr. W. Strachan was granted permission to erect five fourstorey tenement buildings in Mearns Street, Greenock, providing in all 40 houses—24 of three apartments and 16 of two apartments.

Stirling Town Council last week considered an application asking the burgh to feu or sell a portion of the old town wall, in order to erect a tenement of dwelling-houses near it. The Council, after some discussion, agreed that the proposal be not entertained. The Town Council agreed to drop the scheme for dealing with St. Mary's Wynd, one of the slum areas in the town, and also a proposed housing scheme.

The Leeds Corporation have hitherto levied a charge for admission to the spring and other special exhibitions, but for several years past the attendances have fallen off, with, in consequence, diminished receipts. It has, in consequence, been decided that all Corporation exhibitions shall henceforward be free. The total attendance in the Art Gallery for the year ending in March last was 310,729, or a daily average of 1,006.

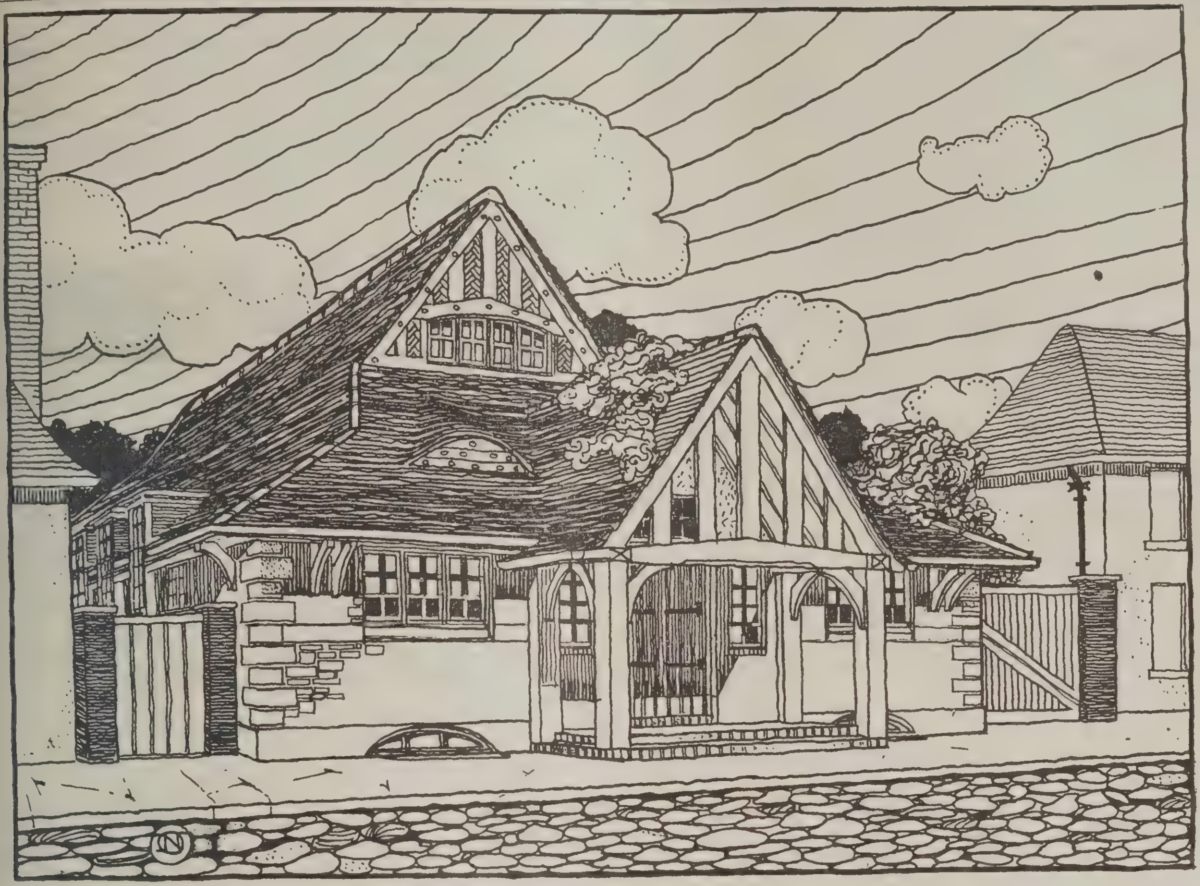
THE RISE OF SAO PAULO.

The remarkable growth of Brazil's wonder city, Sao Paulo, is described in a report on the trade of the State of Sao Paulo in 1910 by His Majesty's Consul, Mr. O'Sullivan-Beare. In 1887, he says, Sao Paulo was a quiet, rather sleepy town of the usual up-country Brazilian type, with a population of some 47,000 inhabitants. When the great tide of immigration into the State of Sao Paulo commenced in the year 1887, a considerable proportion of the new-comers established themselves in the capital, with the result that the population increased by leaps and bounds during the ensuing years, rising last year to 350,000. At the present time Sao Paulo ranks as the second city in Brazil. The appearance of the new city of Sao Paulo, which has sprung into existence within the past twenty years, is a matter of surprise to visitors. Sao Paulo now resembles one of the great cities of Europe. The principal business streets are lined with shops, which, in outward appearance and in the variety and richness of their contents, vie with those of Paris or of London. The city has been planned with much taste; the various streets and avenues are wide and straight, all well paved, and planted with shade trees. Throughout the city exist a number of public gardens, admirably laid out and beautiful with their wealth of tropical verdure. The private residences are remarkable, on the whole, for the originality and beauty of their architecture, while many are of great size and magnificence. The bustle and activity and



DESIGN FOR A VILLAGE HALL.—By Mr. O. Newbold.

he ever-increasing traffic which prevail throughout the city luring business hours make it difficult for new-comers to ealise that they are in a Brazilian town. The municipality pend money liberally with a view to improving and beautiying the city. There is just being completed a municipal heatre, which vies in magnificence with that of Paris, upon vhich it is modelled. It is estimated that the total cost of his opera house will exceed £1,500,000. Within the past ew months the municipality have voted a sum of £400,000 or the purpose of constructing a new avenue of communication. A scheme is under discussion for the carrying out of an immense project, estimated to cost some £3,000,000, amely, the construction of a series of main boulevards to raverse the city in different directions. The progress of he city at the present time may be gauged from the great ctivity which prevails in the building trades. On all ides are to be seen houses in course of construction, and houses are immediately occupied as soon as finished. New houses are being built at the rate of 3,000 per annum.

Penzance Town Council have decided to increase their water supply by boring an artesian well at the foot of Hendra to a depth of 90 feet and connecting it with the present well by an adit 120 fathoms in length.

Plans have been submitted to the Birkdale District Council, on behalf of Mr. C. J. Weld Blundell, for an important development of the land on the seaward side of the Birkdale Esplanade. Altogether the erection of about a hundred houses, detached and semi-detached, is contemplated.

The value of the Portland cement manufactured in New South Wales during 1910 was £251,110—an increase of £48,910 over the figures for the preceding year. The quantity of lime produced during 1910 was 30,113 tons, which had a value of £30,189.

The Dartford Town Council will at their next meeting consider the following resolution: "That a Public Hall be erected upon the vacant land belonging to the Council, adjoining the grounds of the Acacia Hall, and shown upon the plan now laid before the Council. That the Surveyor be instructed to take levels and prepare a site plan, that the preparation of the plans of the building be let out to public competition, and that premiums be offered for the three best designs."

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

Cheshire.
Macclesfield.—St. Paul's Church: tower restoration.

Cornwall.
St. Blazey and Tywardreath.—Water supply scheme (£1,000).
St. Dominick.—Church restoration.
St. Gorran.—Church restoration.
St. Juliot.—Church pulpit.
Tywardreath.—(See above.)

Cumberland.
Penrith.—Grammar School. Messrs. Harrison & Ash, architects.
Silloth.—Coronation memorial shelter, Skinburness Road. Mr. H. H. Hodgkinson, architect. Mr. T. W. Underwood, contractor.

Derbyshire.
Bakewell.—Workhouse steam laundry (£355).
Repton.—Sewerage scheme. Messrs. Shaw, Son & Fuller, engineers (£5,500).

Devonshire.
Ideford.—Water supply scheme.
Northmolton.—Water supply scheme.
Paignton.—Railway Hotel alterations. Mr. W. G. Couldrey, architect.
Stoke Canon.—School alterations.
Totnes.—Cattle and sheep markets improvements (£1,000).

Dorsetshire.
Dorchester.—County offices: boiler house. County Surveyor.

Durham.
Consett.—Drill Hall, Victoria Street. Mr. Bolam, contractor.
Durham.—Presbyterian church hall (£1,000).

ESSEX.
Earls Colne.—Water supply scheme. Messrs. Sands & Walker, engineers.
Grays.—Drill Hall, Instructor's quarters, &c.
Great Baddow.—Covered reservoir (£550). Council Surveyor.
Ingatestone.—Cottages.
Rochford.—Guardians' boarding-house for babies. Nurses' Home. Mr. W. J. Wood, architect.
Romford.—Drill Hall, Instructor's quarters, stabling, &c.

HAMPSHIRE.
Walton.—Additions to Messrs. F. Sage & Co.'s factory. Mr. Alan W. Ruddle, A.R.I.B.A., architect.

HEREFORDSHIRE.
Ross.—Free library.

HERTFORDSHIRE.
Hertford.—Public Elementary School (accommodation for 200).
Hoddesdon.—Sewerage scheme (£700).
Willians.—Alterations to the "Three Horseshoes" public-house.

ISLE OF MAN.
Douglas.—Home for the Poor (Asylums Board): alterations and additions. Messrs. James Cowle & Son, architects.
"Murray's House," Mount Havelock: alterations. Messrs. James Cowle & Son, Government architects.
Maughold.—Church room (for 100 persons) for the Dhoon. Mr. B. W. H. Brameld, F.R.I.B.A., architect. Mr. Comaish and Messrs. Callow & Sons, contractors.
Rushen.—Parish church restoration.

ISLE OF WIGHT.
Carisbrook.—Castle Chapel: Cochrane memorial stained-glass window.

KENT.
Gillingham.—Naval and Marine Orphanage (£3,000).
Halling.—Sewerage works. Mr. A. J. Martin, engineer. Messrs. Hardy & Co., contractors (£7,315).
Maidstone.—Messrs. Dennis, Paine & Co.'s premises in High Street (additions).
Motor garage, &c., at Ensinge House.

LANCASHIRE.
Bolton.—Church at Heaton. Messrs. Austin & Paley, A.R.I.B.A., architects.
Lytham.—Lytham and St. Anne's Golf Club-house (£3,100). Mr. G. H. Willoughby, F.R.I.B.A., architect.
Rochdale.—Workhouse infirmary: nurses' home (£5,500). Mr. H. H. Clough, architect.
St. Helens.—Thatto Heath Council School extension. Messrs. Biram & Fletcher, architects.
Warrington.—Council school. Mr. T. A. Buttery, architect.

LEICESTERSHIRE.
Market Harborough.—Church spire restoration. Messrs. Stockdale Harrison (F.R.I.B.A.) & Sons (AA.R.I.B.A.), architects (£250).

LINCOLNSHIRE.
Brigg.—Alterations to the Old House at Messrs. Spring & Co.'s factory.
Grammar School extension.
Lincoln.—County Hospital: alterations to the Dispenser's House. Mr. W. G. Watkins, A.R.I.B.A., architect.

NORFOLK.
King's Lynn.—St. James' Infant School additions.
Norwich.—St. Barnabas' Parish Hall. Messrs. Lacey & Upcher, architects (£650). Mr. H. C. Greengrass, contractor.

NORTHUMBERLAND.
Newbiggin.—Group of ten miners' cottages.
Newcastle.—Drill-house for Territorials (£3,500).

NOTTINGHAMSHIRE.
Carlton.—Central Offices for Urban Council (£2,000).
Office for Inspector of Nuisances.
Baths (£5,000 to £6,000).
Nottingham.—Territorial Headquarters, Derby Road.

SHROPSHIRE.
Admaston.—Sewerage scheme (£2,700). Messrs. Wilcox & Raikes, engineers. Messrs. Nevitt, contractors.
Church Stretton.—Tramp cells at the Workhouse.

STAFFORDSHIRE.
Tipton.—Sewerage works. Mr. W. H. Jukes, engineer and surveyor.

SUFFOLK.
Hollesley.—Elementary School enlargement (£575).
Leiston.—Council Elementary School (£665).
Mutford.—Elementary School (£1,345).
Reydon.—Council Elementary School enlargement (£372).

SURREY.
Byfleet.—Water supply scheme.
Chertsey.—Children's Home at the Workhouse.
Surbiton.—Sewerage scheme. Messrs. Dick, Kerr & Co., contractors (£33,500).
Thorpe.—Nine working-men's houses. Mr. W. Beauchamp, contractor (£1,823).
Wimbledon.—Tuberculosis dispensary.

WARWICKSHIRE.
Bordmere and Wylde Green.—Conservative and Unionist Club, Highbridge Road.

WORCESTERSHIRE.
Dudley.—St. Paul's Church mission hall.
Evesham.—All Saints' Church restoration. Mr. F. Bligh Bond, F.R.I.B.A., architect (£160).
Kempsey.—Sewerage scheme.
Pershore.—Coronation memorial swimming bath.
Powick.—Water supply scheme (£1,300).
Shipston-on-Stour.—Sewerage scheme (£6,100). Messrs. Willcox, Raikes & Reed, engineers.

YORKSHIRE.
Bradford.—Branch library, Great Horton. City Architect.
Bridlington.—Water supply scheme (£2,000).
Doncaster.—Church at Woodlands. Messrs. Mullins & Richardson, contractors (£7,000).
Easingwold.—Two cottages at Bohemia Park, Huby.
Edlington and Warmsworth. — Sewerage schemes (£5,500).
Huddersfield.—Tenements.
Leeds.—Training College, Women Students' Hostel. Mr. W. P. Schofield, A.R.I.B.A., architect.
Warmsworth.—(See above).

WALES.

Abergele.—Bungalow at Pant Glas.
Builth.—Museum.
Denbigh.—Two houses in Lenton Pool.
Market, town hall, and municipal buildings (£18,000). Messrs. Porter & Elcock, architects.
Llanddewi'r Cwm.—Church restoration.
Llandudno.—Church at West Shore.

SCOTLAND.

Banff.—Asylum superintendent's residence (£1,000).
St. Andrew's Episcopal Church additions.
Broughton Ferry.—Alterations to Harecraigs House, Garage and motorman's house at Corona.
Buckie.—Property in Cluny Terrace (additions and alterations). Messrs. Sutherland & George, architects.
Cavedon.—Four cottages. Mr. D. W. Galloway, architect.
Dumbarton.—Lodging house (215 beds), Risk Street. Mr. J. Bell, architect.

IRELAND.

Pembroke.—Sewerage works.

H.M. CONSUL at Buenos Aires (Mr. A. C. Ross, C.B.) has furnished the Board of Trade with the name of the successful tenderer for the erection of a new General Post Office at that place, at a cost of about £630,000. The name and address of the contractor may be obtained by British purveyors of material on application to the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

THE Glasgow Corporation Tramways Sub-Committee on Extensions last week considered a report by Mr. James Dalrymple, the general manager. The most important of the various schemes was that for relieving the congested traffic on Glasgow Bridge by the construction of another bridge across the Clyde from Portland Street on the south side to St. Enoch Square on the north side. This scheme will probably involve the removal of St. Enoch Church and the laying of a line of tramways along Buchanan Street, linking up the present routes at the junction of West Nile Street and Cowcaddens.

LIVERPOOL BUILDING TRADE.

The annual report of Mr. John T. Alexander, the City Building Surveyor, states that during the year 1910 there were 1,710 houses erected in Liverpool. This number is 439 less than the previous year's figure, and 396 below the average for the past 12 years. The greatest number of houses built in any one division of the city has again been erected in the Walton Division where the high figure of the preceding year has been almost maintained. The number of houses in the city at the end of 1910 was 154,681. In the report for 1909 attention was called to the fact that there seemed a disposition to bring into being residential flats chiefly by the conversion of old and large houses in the central part of the city. The movement has not progressed to the extent anticipated, and few of such conversions have been carried out, whilst the only new flats erected have been six in Upper Parliament and Percy Streets, which are partly an existing house altered and adapted for the purpose and partly a new building.

The last year has, however, seen the beginning of an experiment of great interest and possible value to the City and the entire community. The Liverpool Garden Suburb Tenants, Ltd., being the local branch of the Co-Partnership Tenants, Ltd., has commenced the building of a Garden City in Wavertree and Childwall, the Wavertree portion being within the boundary of Liverpool. The erection of houses tasteful and varied in design and provided with open spaces affording some opportunity for the cultivation of flowers and trees will add considerably to the appearance of the suburbs, and may be influential in inducing the more commercial landowners to lay out streets and estates in a similarly attractive manner.

The beneficial effect on the character and well-being of the people who will live in such delightful surroundings, in the provision of which sunlight and pure air and other sanitary necessities of healthful living are so admirably secured, must be incalculable. Another and very important consideration is that the erection of these Garden City houses in a manner which makes it possible to lay out only a very limited number of houses to the acre has accentuated the fact that the existing bye-laws may operate somewhat needlessly in respect of such houses. It is probable, therefore, that the Corporation will during this year obtain powers to modify or relax in some respects the bye-laws, the purposes of which are fully achieved in a Garden City without the actual requirements being observed in every literal particular. Certainly, when a little time has elapsed, and trees, shrubs, and hedges have grown sufficiently, the appearance of this Liverpool Garden Suburb should be very pleasing, and should afford an excellent example of artistic and picturesque laying-out of streets, houses, and open spaces.

The newer methods of construction, whether of steel framing or reinforced concrete, still continue to be used, and will doubtless be increasingly used in the future. The extension of the Adelphi Hotel, seven storeys high above ground, and the buildings of which when completed will cover an area of 1½ acres, is a splendid example of a steel frame building, and most admirable in design from a constructional point of view, whilst a new oil mill in Kent Street is a very good example of reinforced concrete applied to the purposes of a heavy building.

Places of public resort are periodically visited in order to ensure that the requirements of the Health Committee are being maintained. Owing to new methods of construction, buildings now call for more attention and closer supervision than formerly, whilst dangerous structures have necessitated a large expenditure of time in inspection and in following up the many notices served. The "Dangerous" notices actually served in 1910 were 619 in excess of the number of such notices in 1909.

There are only eight district building surveyors for the whole of the city, and consequently the average size of a single district is over 2,000 acres, and the average length of streets in such districts is over 65 miles. With regard to the matter of dealing with dangerous structures, it is worthy of remark that in connection with the 3,594 "Dangerous" notices served last year the duty of attending fires and of dealing with the dangerous portions is highly important, and sometimes leads to a great expenditure of time, the greater part of several days having sometimes to be spent at the building which has suffered from fire, whilst dangerous portions are taken down by order of and under inspection by, the building surveyor.

Another grave matter is that of seeing, as far as possible, that warehouses are not overloaded. Warehouses have not unfrequently been found to be overloaded to a dangerous extent, and the building surveyor has been compelled to require the loads on the various floors to be reduced. In this way a number of possible disasters have been avoided.

On the completion of thirty-four years' continuous service as building surveyor, Mr. Corkhill intends to retire. He was for many years the senior district building surveyor, and for some years past has been an assistant surveyor, whose special duties have been concerned with the means of escape from factories and workshops, and the means of egress from places of public resort.

Houses Erected During 1910.

District.	Number of Houses Erected.	Rentals. £12 to £18.	£18 to £25.	£25 to £35.	£35 and Over.
Walton	723	55	556	73	39
West Derby	335	17	256	27	35
Wavertree	354	—	280	29	45
Old City	48	42	—	3	3
Garston	81	5	32	28	16
Toxteth Park	138	—	124	8	6
Fazakerley	31	—	31	—	—
	1,710	119	1,279	168	144

No houses under £12 rental were erected.

The other buildings erected in Liverpool last year were:—Workshops and stables, 100; public buildings and manufactories, 38; warehouse, 1; additions and alterations totalling 639.

The demolitions were:—Houses, 595; workshops and stables, 54; public buildings, offices, and manufactories, 4.

RUBEROID DAMP-COURSE.

It may be said without the slightest fear of exaggeration that "Ruberoid" can be used from basement to roof, from the footings to the eaves. During the past twenty years it has been employed in numberless places as a roof covering, a damp-course in walls, as a damp-proof backing for dadoes, and as a damp-proof layer in flooring. But it is on "Ruberoid" as a damp-course that we want to speak now.

What is it? "Ruberoid" damp-course is composed of a fibre base saturated and coated on both sides with "Ruberoid" compound, which is time, water, acid and alkali proof. The stock is in rolls of two thicknesses and in widths from 4½ to 36 inches. The makers recommend that the 2-ply should be specified for horizontal and 3-ply for vertical damp-coursing.

Its waterproof qualities and permanency have been demonstrated both in theory and in practice, in the laboratory and on the job. That it will not squeeze out may be inferred from the fact that in a test it withstood a pressure of 2,688 lb. to the square inch. Furthermore, up to a temperature of 300° Fahr. it will remain unaffected. A conspicuous feature of "Ruberoid" is the elasticity which enables it to adjust itself to any settlement or other unexpected trouble even in such trying positions as bridges and tunnels. The Ruberoid Co., Ltd., have works at Brimsdown, Middlesex, where the most modern equipment has been installed to ensure the production of a high-grade uniform-quality damp-course. A damp-course may be put out of sight, but it should never be put out of mind by those architects and builders possessed of the genius of taking pains. On it a great deal may depend, and it behoves architects and builders to run no possible risk by specifying any but the best.

COMPETITION NEWS.

Coseley.—All designs submitted in competition for the proposed Council school for 200 children must be delivered at the offices of the Education Committee not later than October 12. Any questions must reach the Secretary not later than September 8. No site plan is furnished.

The Sunderland Education Committee are considering a recommendation that steps be taken to purchase 12 acres 36 square yards of land on the Ford Estate, Hylton Road, for the purpose of a training college at a cost of £7,818 5*s.* 3*d.*

Winnipeg stands first in the list of building permits issued in Canadian cities during June. The total value is put at 2,790,250 dollars. The second place is taken by Toronto with 2,384,400 dollars, and the third by Calgary with 1,826,250 dollars.

VARIETIES.

A new church is about to be built at Borth-y-Gest, Portmadoc, the site for which has been given by Lord Harlech. The plans of the building have been prepared.

Messrs. Hadfield, architects, Sheffield, have prepared plans for a church to be erected at Woodseats, at an estimated cost of £7,000.

Blyth Education Committee last week decided to proceed with the erection of a school at the subway between Blyth and Newsham to accommodate 1,200 scholars in three sections of 400 each. The cost will be £11 10*s*. per head, or a total of between £13,000 and £14,000.

The Hoyland Urban Council have been in correspondence with the Local Government Board on the question of the proposed development of part of Earl Fitzwilliam's estate at Elsecar. On Tuesday the Council decided, in order to facilitate the scheme, to apply for permission to add to the by-laws a proviso for new streets to be made with grass borders of not less than 36 feet wide with building lines 66 feet apart, provided that not more than a given number of houses be built per acre.

The Banffshire District Lunacy Board have agreed:—(*a*) That a separate house be erected for the superintendent within the precincts of the Asylum property; (*b*) that the accommodation on the male side be extended; (*c*) that a verandah be erected on the male and female sides to provide for the feeble and sick; and (*d*) that an architect be appointed to prepare plans and specifications with probable estimate of cost.

At Dumbarton Dean of Guild Court on Monday a petition was submitted on behalf of Mr. James Bell, architect, Motherwell, for lining to erect a lodging-house in Risk Street. The Burgh Surveyor approved of the plans, except that the air space was inadequate and the stair landings were of combustible materials. He reported, however, that the plans were being amended to this extent, which would reduce the accommodation from 227 to 215 beds. The case was continued for a fortnight.

Definite arrangements have now been made for the union of the Amalgamated Society of Carpenters and Joiners and the Associated Society of Carpenters and Joiners. The union will take place as from September 1, and the name of the organisation will be the Amalgamated Society of Carpenters and Joiners. Mr. F. Chandler, general secretary of the present Amalgamated Society, will be general secretary of the new organisation, and a post equal in salary to that which he already holds will be found for Mr. Alex. Stark, secretary of the Associated Society.

The Norton (Malton) Urban District Council, by five votes to four, resolved on Monday to go back to the use of gas, instead of electricity, as the motive power for the pumping at the town's waterworks. Recently the Council asked for a five years' tender for pumping from the Malton Gas Company and from the Northern Counties Electricity Supply Company (who had the last contract). The latter sent in a tender of £171 per year (based on the units of electricity used on the last contract), and the Gas Company one of £96 per year. The latter tender was accepted, after a division.

The Sheffield Education Committee recommend that a plot of land containing about 2,800 square yards, adjoining Western Road Council School, be purchased from Gillatt's Trustees for the sum of £750, for the purpose of erecting additional public elementary school accommodation. The Buildings Sub-Committee have also had under consideration the question as to school accommodation in the Hillsborough, Owlerton, Malin Bridge, and Wadsley districts, and they recommend that the City Architect be instructed to prepare plans for the erection on the site at Wharncliffe View, Lower Wadsley, of a two-storey building to accommodate 420 infants and 420 older children, together with provision for cookery, laundry, and manual work, and a caretaker's house. The Board of Education have approved the plans for the provision of a laundry centre at the Lancasterian Council School, Sheffield.

At the meeting last week of the Edinburgh Dean of Guild Court twenty-six petitions were considered. Six warrants were granted, and eleven petitions were remitted to the Burgh Engineer. The Edinburgh Ice and Cold Storage Co., Ltd., were granted warrant for the erection of an ice rink at Fountainbridge. The building, which is to be attached to the premises of the Cold Storage Co., is to consist of a rink, 160 feet long by 80 feet broad, with a broad corridor extending round the ice surface. Along the north side there will be tea and smoking rooms, and the usual cloakrooms and storage accommodation. The ice floor is to be maintained in a frozen condition by a series of pipes arranged in grids on the floor, and connected with the Company's freezing machinery. There are 22,000 feet of pipes. In the case of Messrs. John Swan & Sons, Ltd., who applied for warrant for an ice rink at Haymarket, the plans were found to be incomplete in some respects. The Court continued the case so that the plans might be completed. An interim warrant was granted to allow the petitioners to take down any existing buildings and to make excavations.

The strike in the brick and tile manufacturing trade of North Staffordshire was settled at a conference of masters and men at Newcastle-under-Lyme on Tuesday. About 1,000 workmen, employed by over thirty firms, were concerned. Three hours' discussion produced a basis of agreement upon which work will be resumed at once. A resolution, which was unanimously passed, provided for the recognition of the men's union, all the men engaged on piece work to return to work at the old rate of wages, men in the marl hole and general labourers 5¼*d*. per hour, gangers 5½*d*., and youths wheeling clay 2*s*. advance. It was hoped that the men would return to work after the holidays, but instead all the employers were served with a notice, bearing the signature of Mr. John Ward, M.P., Secretary of the Navvies and General Labourers' Union, demanding an advance of wages, to the extent in some cases of as much as 35 per cent. The employers state that in the first instance there was only dissatisfaction with the wages paid by two firms, and that the wider development of the strike has been influenced by intimidation. It is claimed that the wages paid by the following firms are well up to the average of the trade in any district, viz. Messrs. George Woolliscroft & Co., Messrs. Wheatly & Co., Messrs. Caddick & Sons, Messrs. Timmis & Son, Mr. Thomas Peake, and the Non-Porous Tile Company, and that but for the interference from outside and intimidation their workpeople would have returned to their employment before now.

TRADE NOTES.

The statutory meeting of Samuel Blow, Ltd., was held on Tuesday, August 22, at the registered office of the Company, 34 and 35 Upper East Smithfield, E. Mr. G. Samuel Blow was in the chair.

The new Council schools, Swindon and Claybrooke, have been supplied with Shorland's warm-air ventilating patent Manchester grates, by E. H. Shorland & Brother, Ltd. The Woodford Church, Cheshire, is being ventilated by means of Shorland's patent concealed extract ventilators and inlet ventilators; and the John Coupland Hospital, Gainsborough, is being supplied with Shorland's double-fronted patent Manchester stoves, with descending smoke flues, patent Manchester grates, exhaust roof ventilators and inlet ventilators, by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

Among that class of patent smoke-cure chimney-pots which have no loose or moving parts is the Perfect Draught Pot of Messrs. J. H. Sankey & Son, Ltd., of Canning Town, E. This pot is made throughout in red and buff terra-cotta or in a brown glaze. There are three heights—viz. 30 inches, 42 inches, and 48 inches, while the stock width at the base is 12 inches. The principle is that of three superimposed cones supported on perpendicular divisions in such a manner as to form broad mouth-like openings or louvres completely round the pot. These catch the wind coming from any quarter and direct it upwards, causing a powerful up-draught in the chimney. For exceptionally difficult cases an ornamental pierced cap or cover has been designed to fit over the pot. But the internal combustion of the pot prevents ordinary down-draught. Messrs. Sankey & Son offer it as a cheap and effectual pot which has nothing to get out of order in any way. They are supplying them all over the country and find they give the greatest satisfaction.

ANSWER TO CORRESPONDENT.

Fixtures (Perplexed).—A tenant may remove a shed or conservatory which simply rests on the ground and leans against the wall, provided it is removed before the expiration of the tenancy and without injury of any importance to the landlord's property. The tenant must repair any injury to the premises caused by the removal. Ornamental stones may also be removed, as well as any rustic woodwork that is not imbedded in the earth or nailed or cemented to the landlord's property in such a way as to cause substantial damage by its removal.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* P.M. *on Thursdays.*

COMPETITIONS OPEN.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

BARNSLEY.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

BRISTOL.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Coseley.—Oct. 12.—Plans for school for 200 children for the Education Committee, at Dimmock Street, Parkfield, Coseley, W. Dudley. Conditions, one guinea, returnable on receipt of plans. Mr. Fred J. C. Poole, Secretary, Education Offices, Coseley, near Bilston.

Evesham.—Oct. 7.—The Rural District Council invite designs, with estimates of cost, for laying out a building site at Broadway and the erection thereon of 30 cottages, under the Housing and Town Planning Act, 1909. The architect whose design is accepted will be appointed to carry out the work at an inclusive fee of 5 per cent. Deposit £1 1*s*. Mr. E. H. Wadams, Clerk, Union Offices, Evesham.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s*. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s*., which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Murton.—Oct. 4.—The Easington Rural District Council invite plans for three separate types of houses, of which it is proposed to build 100 at Murton Colliery, Durham. The houses to be in streets of twenty with 16 ft. back streets, 18 ft. frontage, and garden ground in front of each house to a depth of 30 ft., an earth closet and outside pantry to be provided for each house. Strict compliance with the Council's by-laws and the Local Government Board regulations will be required. The following are the types of houses:—Type A.—28 ft. gable, three bedrooms, one living room, one sitting room, scullery (offshot), with kitchen range and bath. Type B.—25 ft. gable, three bedrooms, one living room, scullery, with kitchen range and bath. Type C.—Two bedrooms, one living room and scullery, with kitchen range and bath. Appearance and economy of structure will be considered. The successful candidate will receive 2½ per cent. commission upon the net cost of buildings when erected. No other remuneration will be paid. Mr. J. M. Longden, Council Offices, Easington, Castle Eden.

Newcastle-upon-Tyne.—The Education Committee invite competitive plans from architects practising in Newcastle for a Senior Mixed School and a Junior Mixed School, each to accommodate 365 children, at Walker Gate. Mr. Spurley Hey, secretary, Education Offices, Northumberland Road, Newcastle-upon-Tyne.

Pontefract.—Sept. 9.—The Council of the Borough invite competitive designs from architects practising in the West Riding of Yorkshire for the erection of public swimming and other baths at a cost not to exceed £4,500. Particulars and conditions as to the nature of the buildings, the remuneration of the successful architect, and the premiums for the designs adjudged to be first and second, can be obtained of the Borough Surveyor, Municipal Offices, Pontefract.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—The Cardiff Education Committee invite designs and estimates in competition for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s*., which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

The Coleraine Rural District Council have just approved of a new improvement scheme for the erection of 66 labourers' cottages, at an estimated total cost of £11,291.

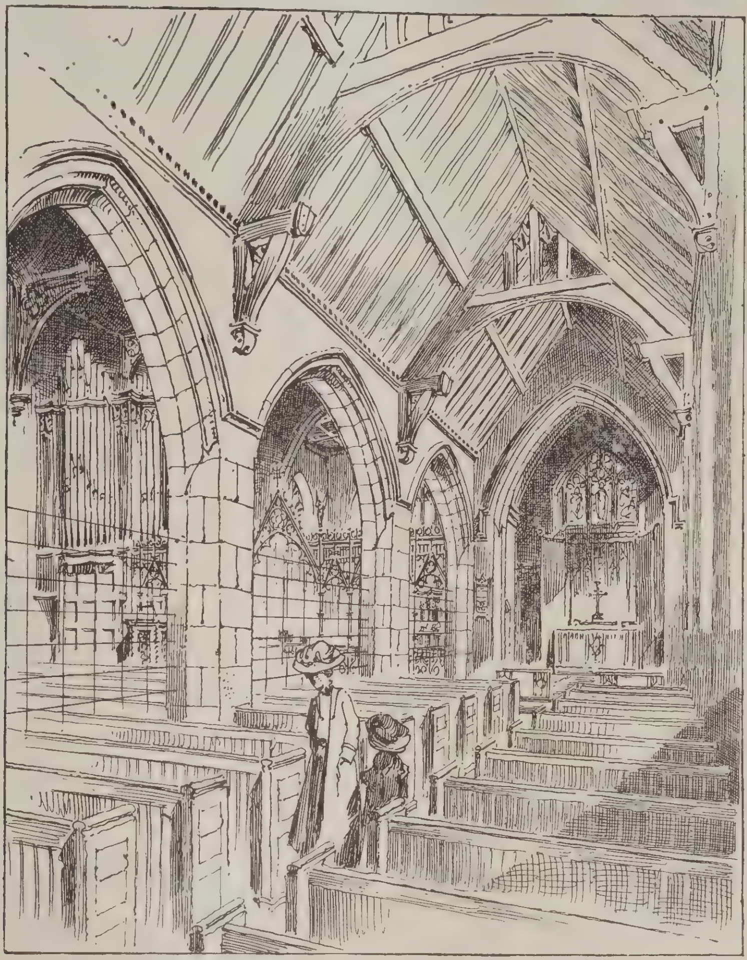
ST. MARY'S PARISH CHURCH, WALTON-ON-THE-HILL, LANCASHIRE.



WALTON-ON-THE-HILL PARISH CHURCH.—NEW SIDE CHAPEL.

ST. MARY'S PARISH CHURCH, WALTON-ON-THE-HILL, LANCASHIRE.

This church ranks as the mother-church of Liverpool, and in the baptistery stands an interesting Saxon font belonging to the church, recorded in Domesday Book, and certainly existing in 1080, though probably for many years earlier. In 1094, Roger of Poictou made a grant to the Monastery of St. Martin-de-Sees, in Normandy, of the tithes of Walton parish, which then included the present parish of Liverpool, comprised ten townships, and extended over an area of forty square miles, West Derby being under its jurisdiction. The first rector whose name has been preserved to us was William de Kirkdale, 1240 A.D., succeeded by Richard de Wynwyck, 1350; St. Nicholas Church, Liverpool, being built in 1360. The presentation of the church was for a long period vested in the Monastery of St. Peter and St. Paul at Shrewsbury; but in the reign of Edward IV., 1461 A.D., the right was sold to the Molyneuxes, of Sefton, the first rector of Sefton of that name being one Richard, 1316 A.D., and again by them in 1739 to Thomas Clayton, for £540. The dates of the erection of the second and third churches are unknown but the nave was rebuilt in 1742, the chancel in 1810 and again in 1843, and the tower in 1831. The north and south galleries were pulled down, the oak rood-screen removed, and the church reseated in 1887. The present building is probably the third erected on the site. The plans—which have been accepted by the church council and confirmed by a vestry meeting also, for which the faculty has been obtained—are those of Messrs. Nagington & Shennan, in competition with two other selected architects. They include (*a*) a side chapel, opening through arches with a light iron grille into the main church, and affording accommodation for 100 persons as additional seat room, which is urgently needed, owing to the crowded state of the church; (*b*) clergy and choir vestries, with proper lavatories; (*c*) ambulatory, external to the east wall of the church and connecting the old clerk's vestry with the new; (*d*) an oak and glass screen separating the choir passages into the church from the chancel (the walls are of Woolton red stone, the material being used in the Liverpool Cathedral); (*e*) a reredos; (*f*) a new organ (in course of construction by Messrs. Henry Willis & Sons), to be placed on the north side of the choir instead of in the present position, with console in the choir stalls; (*g*) two new lancet windows in the sanctuary, north and south, to take the place of the stained glass removed from the windows which will be blocked by the new organ. These lancet windows will materially help to brighten the sanctuary, though with a subdued light. A lych-gate is also proposed and two more bells in the tower, making the peal eight in number.

The general contractor for the work is Mr. W. A. Gale, Ibstock Road, Bootle.

The following four candidates have been selected out of a large number of applicants for the position of borough engineer and surveyor of St. Helens in place of Mr. Broome, resigned, to appear before the Highways Committee:—Messrs. A. W. Bradley (Bury), S. H. Morgan (Prestwich), E. Harrison (Wellingborough), and A. E. Jackson (Manchester). The salary is £600 a year.

A special meeting of the South Shields Education Committee was held last week with reference to the tender for erecting school buildings at Stanhope Road. A letter was read from Mr. John L. Miller, of North Shields, asking for an additional sum of £156 5*s*. 6*d*. in connection with his tender. After discussion the committee rescinded their resolution accepting Mr. Miller's tender at £8,453 18*s*. 8*d*., and decided to accept the tender of Messrs. Sheriff & Sons, of South Shields, to do the work for the sum of £9,044 15*s*. 3*d*., this being the next lowest in the list.

Mr. J. Mackie Watson, Edinburgh, the architect chosen by the trustees to carry out the restoration of St. Magnus Cathedral, Kirkwall, for which a large sum of money was left by the late Sheriff Thoms, met with Kirkwall Town Council last week. Mr. Watson anticipates the work will be completed in the course of four years. The nave, which will first be dealt with, will take about two years to complete, and the parish congregation will meantime continue as hitherto to worship in the choir. Once the nave is completed, the congregation will occupy that part of the building pending the completion of the repairs on the choir, in which is embraced the more important part of the works.

SCOTLAND.

For the various works in connection with Aberhill new school. Mr. G. C. Campbell, architect.

R. Durie & Son, mason, Methil	£3,590	0	0

Chadwick	5,495	0	0
Bowles & Son (*accepted*)	5,400	0	0

The Halifax Corporation Improvement Committee have decided to schedule Illingworth and Ovenden, and Warley and Pye Nest, areas under the town-planning scheme.

It is proposed to build a new parish church at Potter's Bar, to cost about £8,000. The scheme provides for accommodation for 400 persons, and an extension for 760. The site of the new church is on the vicarage land.

Mr. Alexander Walker, city assessor, has prepared a statement as to the number of unlet dwelling-houses in Glasgow. The total, 19,055, is below that of 1910, which stood at 19,715. Unlet shops, offices, &c., total 4,608, as compared with 4,289 last year.

The Wallasey Education Committee are considering proposals for the provision of 2,600 extra places. It is recommended by the Director of Education that a site of at least 1¾ acres be secured in the Liscard area, and that a school should be erected as soon as possible for 500 junior and 400 senior scholars, and capable of extension. He further recommends that, as a school must shortly be erected to take the place of the Wesleyan School at Egremont, one for 1,000 children should be built, together with a building for 600 higher elementary scholars. A site for a new school has already been obtained in Mount Pleasant Road, New Brighton, and it is advised that further sites should be secured at Seacombe and in the area between St. George's Road and Poulton Schools.

The Italian Government propose to expend nearly two millions sterling on the erection of Government offices at Messina, Reggio, Calabria and Palmi, during a period of ten years from 1912. The *Gazzetta Ufficiale* (Rome) also contains a notice to the effect that tenders will be received at the office of the "Direzione del Genio Militare," Turin, up to September 21, for the construction of a building for an artillery and engineering school. The upset price is put at £100,000.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

BERKSHIRE.

Hungerford.—Coronation Memorial Hall (£600).

IX CONGRES INTERNATIONAL DES ARCHITECTES.

THE following is the official programme of the Congress:—

Lundi 2 octobre, 9 heures à midi.—Séance du Comité permanent et du Comité général d'organisation pour la nomination de la présidence et pour ordonner les travaux du Congrès.

2 heures à 3.—Visite de tous les congressistes au tombeau des Rois d'Italie et de Raphaël au Panthéon.

4 heures à 7.—Visite au monument de Victor Emmanuel II.

7 heures ½.—Dîner offert par le Comité d'organisation aux Délégués des Gouvernements étrangers et aux membres du Comité permanent.

10 heures.—Réception offerte par les Associations artistiques de Rome, d' accord avec le Comité d'organisation, aux congressistes dans les salons de l'Association Artistique Internationale.

Mardi 3 octobre, 10 heures.—Réunion des relateurs des divers thèmes au Château S. Ange.

De 9 heures à midi.—Visite aux monuments et aux expositions.

Midi ½.—Déjeuner offert par le Comité d'organisation aux Délégués des Associations étrangères et nationales.

De 3 heures à 5.—Séance d'inauguration au Capitole, dans la salle des Horaces et des Curiaces.

10 heures.—Réception offerte par le Syndic au Capitole.

Mercredi 4 octobre—de 9 heures à midi.—1ère Séance du Congrès au Château S. Ange, pour les discussions des thèmes.

midi ½.—Invitations privées éventuelles.

de 2 heures à 7.—Visite aux monuments et aux expositions.

Jeudi 5 octobre—de 9 heures à 11.—2ième Séance du Congrès (suite des discussions).

De 11 heures à midi.—Conférence de Mr. le professeur Corrado Ricci, directeur Général des Antiquités et des Beaux-Arts sur les Forums Impériaux.

2 heures à 5.—Visite aux monuments et aux expositions.

5 heures à 8.—Garden Party.*

Vendredi 6 octobre.—Excursions facultatives dans les environs (voir la liste qui s'y rapporte).

Soirée libre pour les éventuelles réceptions des Ambassades étrangères aux Architectes de leurs pays.

Samedi 7 octobre, de 9 heures à 11.—3ième Séance du Congrès (suite des discussions).

De 11 heures à midi.—Conférence du professeur Stübben sur les plans régulateurs.

2 heures à 7.—Visite aux monuments et aux expositions.

10 heures.—Réception.*

Dimanche 8 octobre.—Ottobrata avec déjeuner lunch offert par le Comité d'organisation à tous les congressistes.

de 4 heures à 9 heures.—Réception.*

Lundi 9 octobre, de 9 heures à midi.—4ième séance du Congrès (suite des discussions et des conférences).

de 2 heures à 7.—Visite aux monuments et aux expositions.

Mardi 10 octobre,—de 9 heures à midi.—Séance de clôture du Congrès.

de 2 heures à 7.—Visite aux monuments et aux expositions.

8 heures.—Banquet final (à cotisation maximum du prix 20 fr.).

Mercredi 11 et jeudi 12 octobre.—Excursions facultatives dans les environs.

(voir la liste qui s'y rapporte).

Excursion facultative à Venise (Départ de Rome le 12 au soir).

Vendredi 13 octobre, 2 heures.—Réunion des Congressistes au palais des Doges, visite au Campanile di S. Marco.

Samedi 14 octobre.—Excursion à l'Estuario veneto offerte par le Municipe de Venise.

Dimanche 15 octobre.—Visite aux monuments.

On donnera les indications relatives aux autres fêtes, au commencement du Congrès.

Les invitations seront toutes personnelles, cependant messieurs les Congressistes qui voudront en jouir devront avoir soin de se faire remettre les cartes d'invitations en même temps que leur carte d'identité.

The following excursions have been arranged:—

I., Ostia (from 25 to 105 persons); II., Subiaco (from 25 to 80 persons); III., Orvieto (from 25 to 50 persons); IV., Tivoli and Villa Adriana (from 25 to 150 persons); V., Anagni and Ferentino (from 25 to 50 persons); VI., Corneto (from 25 to 50 persons); VII., Castelli Romani (from 25 to 80 persons); VIII., Viterbo (from 25 to 200 persons); IX., Cori, Fossanova, Ninfa (from 25 to 50 persons).

The programme gives the following "avvertissements":—

I. Les excursions sont confiées aux soins de la compagnie Chiari-Sommariva de Milan qui en répond directement.

II. Messieurs les Congressistes sont vivement priés d'envoyer à notre Comité (et cela pas plus tard que le 15 septembre) le montant de la cotisation pour les excursions auxquelles ils veulent prendre part, et en indiquant avec précision le nom et le jour des excursions qu'ils auront choisies, ainsi par exemple:

1.° Je vous prie de m'inscrire aux excursions suivantes:

6 octobre	11 octobre	12 octobre
Ostia	Anagni	Castelli Romani.

2.° Je vous prie de m'inscrire aux excursions suivantes:

6 octobre	11 octobre	12 octobre
Viterbo	Cori	Corneto

Les demandes qui arriveront en retard ne seront admises que s'il y aura encore des places disponibles.

III. La cotisation payée ne sera rendue que dans le cas où le Comité devrait supprimer l'excursion relative.

IV. La compagnie Chiari-Sommariva (Agence officielle des chemins de fer de l'Etat-Bureaux: Piazza Venezia et Castel St. Angelo), sur demande des Congressistes et en dehors de toute organisation du Comité du Congrès, se charge d'organiser les excursions suivantes:

1. Roma—Napoli—Pompei—Sorrento—Capri.
2. Roma—Napoli et alentours.
3. Roma—Firenze—Venezia—Lago di Garda—Milan et Laghi Lombardi.
4. Roma—Pisa—Genova—Torino.

La durée, l'itinéraire détaillé et les prix de ces dernières excursions seront établis en temps opportun.

(*) Les détails de ces réceptions seront indiqués à l'ouverture du congrès.

FESTIVAL OF EMPIRE AWARDS.

THE following are a few of the jurors' awards to exhibitors at the Festival of Empire and Imperial Exhibition at the Crystal Palace, 1911:—

Arts and Crafts Section: Gold Medal to Messrs. Walker & Hall (silver and electro-plate); Silver Medal to Quadruplex, Ltd.

Building Trades Section: Three Grand Prix to Mr. H. W. Mathews for (*a*) design of grand band stand in Empire Avenue and arrangement of kiosks adjacent thereto; (*b*) general laying-out of grounds of the Crystal Palace as an exhibition, and the disposition of the buildings, &c.; and (*c*) general planning of interior of Crystal Palace for the purposes of an exhibition. Gold Medal to Messrs. Sissons Bros.

Sports Section: Grand Prix to E.C. Powder Co. (smokeless sporting powder).

Engineering Section: Gold Medal to Messrs. Parsons & Sons (Endelline Enamel).

Horticultural Section: Diplome d'Honneur to the Bromsgrove Guild (garden ornaments). Gold Medal to Messrs. Barford & Perkins (rollers).

Chemistry Section: Grand Prix to Messrs. Newton, Chambers & Co., Ltd. (Izal disinfectant specialities), and Jeyes Sanitary Compounds Co., Ltd. (disinfectants, soaps, &c.).

THE plans for the reconstruction of the Glasgow Corporation Galleries in Sauchiehall Street came before the Glasgow Dean of Guild Court last week, on a petition by the Corporation for a lining to erect new buildings in Renfrew Street. The petition was granted. It is not expected that the operations will be completed before the beginning of 1913. The reconstruction was sanctioned some time ago by the Corporation, who purchased property in the adjoining streets to permit of the extension.

THE Association of Italian Artists intend holding their seventh exhibition of pictures, statuary, &c., at the Strozzi Palace, Florence, from November 1911 to June 1912. Artists desirous of being represented should note that the latest date on which intimations will be accepted is October 1 next, and works may be forwarded from that date till October 15. For conditions of admission and further information, application should be made to the Director of the Association of Italian Artists, Palazzo Strozzi, Florence.

NEW PATENTS.

This list is specially compiled for *The Architect* by Messrs. Rayner & Co., Registered Patent Agents, of 37 Chancery Lane, London, from whom all information relating to patents, designs, trade marks, &c., can be obtained gratuitously.

Latest Patent Applications.

18,757. Richard Wehse. Device for securing hinge-windows in open position, August 21.

18,826. Charles William Adey. Window-sash fasteners, August 22.

18,857. Wilhelm Simonsson. Measuring instruments, August 22.

18,860. John Cosstick. Roof tile for verges and gables, August 22.

18,883. Humphrey Thomas Logan & Phillip Egerton Hubbard. Ferro-concrete structures, August 22.

18,951. Arthur George Grice and George Anderson & Co. (1905), Ltd. Apparatus for stone and marble cutting, and for like purposes, August 23.

19,041. Richard Henry Hillman. Automatic closing apparatus for doors, gates, casements, and the like, August 24.

21,655. King. Glazing or supporting bars for glass pavement prisms, and the like.

8,581. Stoye. Scaffolding frames.

Printed copies can be obtained from Messrs. Rayner & Co. at the published price of 8*d*.

OPENINGS FOR BRITISH TRADE IN AUSTRIA-HUNGARY.

The following notices which appear in the *Board of Trade Journal* are extracted from the "Zentral-Anzeiger für das öffentliche Lieferungswesen" (Vienna) of August 24 and 27:—

The communal council of Mostar, Bosnia, has decided upon the construction of a new water supply aqueduct at a cost of £25,000, and also the erection of a market hall.

The city authorities of Budapest have decided to erect a water tower, with a cubic contents of 200,000 cubic metres, at Istenhegy, and to bore two wells and construct a cistern and a syphon conduit in connection with the Ujlak water works. Tenders will be received by "Dr. Johann Buzáth, IV. Városház-utca 16," Budapest, up to September 15. Plans may be seen at the office of the Water Works Directorate.

A syndicate, with a capital of 1,600,000 kr. (about £66,700), has been formed at Pilsen, with the Prague advocate Svoisik at its head, for the purpose of erecting a large brewery at Tremoschna, near Pilsen.

The Budapest Commission for the construction of municipal dwellings has decided upon the erection this year, at a cost of 5,000,000 kr. (about £208,000), of eight five-storied buildings, to contain 850 two- and three-roomed dwellings. Schools are also to be erected at a cost of 5,000,000 kr.

A hydropathic establishment, with 100 rooms, is shortly to be constructed at Budapest. According to the plans prepared by Eduard Dvorak, the cost will be about £66,700.

A company under the name of the Helenenhof Imperial Hotel Company, has been formed at Carlsbad by Lord Westbury, of London, Alfred Schwalb, of Carlsbad, Messrs. Wayss and Freytag, Meinong, and Portois & Fix, of Vienna, for constructing and managing an hotel at Carlsbad, and for obtaining concessions for the construction of light railways. The company has a capital of 4,000,000 kr. (about £167,000), which can be raised to 11,000,000 kr.

CORRESPONDENCE.

Fire at Park Royal.

Sir,—With reference to the destruction by fire of our works at Park Royal on the 29th ult., as reported in the Press, we desire to inform you and all inquirers that we have transferred our staff to a large and fully equipped factory at Highgate, where we are already at work, and our contracts will only suffer a very slight delay.—Yours faithfully,

Berners Street, London, W.: H. C. Cleaver, Ltd.
September 6, 1911.

VARIETIES.

The will of Mr. Frederick Goddard, aged 63, of High Street, Eton, plumber, has been sworn under £32,771.

The Carnoustie Town Council have agreed to borrow £5,500 for the construction of a main outfall sewer.

The Guardians of the York Union have applied to the Finance Committee of the City Council to lend them the sum of £14,294, which they are authorised to borrow for building extensions at the York Workhouse.

The Local Government Board have informed the Billericay (Essex) Rural District Council that they were prepared to consider proposals for the erection by the council of timber-built cottages for the working classes, provided such proposals were in accordance with local by-laws.

Mr. Thomas Henry Johnson, architect, Doncaster, summoned on the 4th inst. for a breach of the town's by-laws, said a new clerk of his sent the wrong plans to the contractor. A fine of 50*s*. and costs in each of two cases was imposed by the Doncaster magistrates.

Messrs. W. H. Dorman & Co., Ltd., engineers, Stafford, are negotiating the purchase from the Stafford Corporation of five and a-half acres of land at the Lammascotes on which to erect new works. The necessary plans are in course of preparation.

Messrs. Waters & Coombes (successors to Chancellor & Sons), auctioneers and estate agents, who disposed of the Star and Garter Hotel at Richmond at a very satisfactory figure for the freehold, have been instructed to prepare designs for alterations and additions. It is anticipated that the hotel will be open early next year.

The Sunderland Education Committee on Monday decided to recommend the purchase of a site on the Ford estate, comprising over twelve acres, at a cost of £7,800, for a new Day Training College. It was reported that the Board of Education would consider the question of a withdrawal of the proffered building grant unless a definite scheme were submitted.

The Estate and Property Committee of the Newcastle Corporation on Monday received an application from a builder for 8½ acres of land east of the Model Cottages at Walker, and agreed to grant it, subject to the approval of the City Council and the observance of certain conditions. The maximum period of development is four years. Semi-detached dwellings are to be erected on the site.

It has been found necessary to undertake extensive repairs to the spire of the parish church of Market Harborough. Messrs. Stockdale Harrison & Sons, architects, Leicester, report that the summit of the spire is in a dangerous condition for some twelve or fifteen feet down, the stonework having bulged out and caused this length to be thrown out of the perpendicular. This reconstruction and other essential work will cost £160.

The City Council of Newcastle declined on Wednesday the provisional bequests of the late Mr. J. A. D. Shipley, a Newcastle solicitor, of £30,000, to build an art gallery, which, it was prescribed, should contain pictures collected by the testator. The expert advisers reported that the collection did not contain a single work of first-class merit. If the bequest had been accepted a portion of the land immediately to the north of the Laing Art Gallery in Higham Place, purchased for Public Library extension, would have been appropriated as a site for the proposed Shipley Gallery.

For the man whose business takes him from London to Doncaster for the whole of the race week, special arrangements have been made by the Great Central Railway Company enabling him not only to accomplish the journey in comfort, but at a very cheap fare. On Monday, September 11, a special luncheon car express will leave Marylebone at 1.15 p.m.; return fares, 1st class, 32*s*., 3rd. class 16*s*. On Wednesday and Friday City men and others wishing to see the St. Leger and Cup races may journey to Doncaster and back for 34*s*. 6*d*. first class, and 19*s*. third class, including table d'hote luncheon on the outward journey and dinner on the return. To secure accommodation on the train early application should be made to Marylebone Station Booking Office. The trains are timed to leave Marylebone on St. Leger day at 8.40 a.m., and Cup day 8.25 a.m. Cheap excursion tickets are also available by these trains, 28*s*. first class, 14*s*. third class. For the convenience of passengers, and to avoid the crowd at Doncaster Station, these trains will arrive at and depart from St. James's Bridge Station, from which place electric cars run direct to the course. In this outing the railway company provides everything contributing to the enjoyment and comfort of the visitor from London.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* p.m. *on Thursdays.*

COMPETITIONS OPEN.

Athens.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l.* A first prize of 800*l.*, and a second prize of 320*l.* will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Barnsley.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

Bristol.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Coseley.—Oct. 12.—Plans for school for 200 children for the Education Committee, at Dimmock Street, Parkfield, Coseley, W. Dudley. Conditions, one guinea, returnable on receipt of plans. Mr. Fred J. C. Poole, Secretary, Education Offices, Coseley, near Bilston.

Evesham.—Oct. 7.—The Rural District Council invite designs, with estimates of cost, for laying out a building site at Broadway and the erection thereon of 30 cottages, under the Housing and Town Planning Act, 1909. The architect whose design is accepted will be appointed to carry out the work at an inclusive fee of 5 per cent. Deposit £1 1*s*. Mr. E. H. Wadams, Clerk, Union Offices, Evesham.

Halifax.—Oct. 7.—The Tramways Committee invite designs and tenders for tramway shelters. Particulars, with tracings of sites, can be obtained on application to the Borough Engineer, Town Hall, Halifax.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s*. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s*., which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Murton.—Oct. 4.—The Easington Rural District Council invite plans for three separate types of houses, of which it is proposed to build 100 at Murton Colliery, Durham. The houses to be in streets of twenty with 16 ft. back streets, 18 ft. frontage, and garden ground in front of each house to a depth of 30 ft., an earth closet and outside pantry to be provided for each house. Strict compliance with the Council's by-laws and the Local Government Board regulations will be required. The following are the types of houses:—Type A.—28 ft. gable, three bedrooms, one living room, one sitting room, scullery (offshot), with kitchen range and bath. Type B.—25 ft. gable, three bedrooms, one living room, scullery, with kitchen range and bath. Type C.—Two bedrooms, one living room and scullery, with kitchen range and bath. Appearance and economy of structure will be considered. The successful candidate will receive 2½ per cent. commission upon the net cost of buildings when erected. No other remuneration will be paid. Mr. J. M. Longden, Council Offices, Easington, Castle Eden.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—The Cardiff Education Committee invite designs and estimates in competition for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s*., which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

CONTRACTS OPEN.

Aspatria.—Sept. 26.—For erection of two dwelling-houses in Station Road. Mr. J. Henney, architect and surveyor, 39 Senhouse Street, Maryport.

Bawnboy (Ireland).—Sept. 22.—For erection and fencing of 45 single labourers' cottages at Bawnboy. Mr. Townsend, architect, Carrickboy, Ballyshannon.

Bempton.—Sept. 22.—For erection of a Council school for 112 children and teacher's house, for the East Riding of Yorkshire County Council. Deposit £1 1*s*. The Building Surveyor, County Hall, Beverley.

Biggleswade.—Sept. 30.—For erection of new hall and Liberal Club premises in High Street. Deposit £1 1*s*. Mr. W. C. Owen-Jones, architect, Biggleswade.

Birmingham.—Oct. 3.—For the Finishings (second) Contract at the Telegraph Stores, Block C. Deposit £1 1*s*. Mr. J. Tosh, H.M. Office of Works, Pinfold Street, Birmingham, or H.M. Office of Works, Storey's Gate, London, S.W. (See advertisement.)

Bradford.—Sept. 21.—For the construction of a chimney shaft 200 feet high, built of brickwork, with a sandstone masonry face, at the Esholt Sewage Disposal Works. Deposit £1 1*s*. Mr. J. Garfield, A.M.I.C.E., Esholt Hall, near Shipley (station, Apperley Bridge, Midland Railway).

Brentwood.—Sept. 18.—For the inside repairing and repainting of cottages, for the Brentwood Urban District Council. Mr. A. J. Meeson, Town Hall, Brentwood.

Bridlington.—Sept. 19.—For improvements at Bridlington Station, for the North-Eastern Railway Co. Mr. W. Bell, the Company's architect, at York, or the Station Master's Office, Bridlington.

Bristol.—Sept. 25.—For the construction and maintenance for twelve months after completion of a single floor transit shed on the west wall of the Royal Edward Dock, Avonmouth, for the Docks Committee. The contract includes timber piling, concrete foundations, timber floor, steel stanchions and roof principals, and galvanised corrugated iron covering. Mr. W. W. Squire, engineer, Engineer's Office, Cumberland Road, Bristol. Send a deposit of £5 to the Secretary of the Docks Committee, Docks Office, 19 Queen Square, Bristol.

Chipstead Common.—Sept. 27.—For alterations and additions to the Children's Homes (recently known as The Rock), Chipstead Common, near Sevenoaks. Deposit £1 1*s*. Mr. Ernest Pawley, architect, 86 High Street, Sevenoaks.

Darlington.—Sept. 21.—For the erection of additions to the Corporation Road school. Deposit £2 2*s*. Mr. G. Winter, borough surveyor, Town Hall, Darlington.

Durham.—Sept. 19.—The County Council invite sole tenders for (1) alteration, &c., at Ford and Blaydon Council Schools, Mr. N. Richley, Shire Hall, Durham; (2) caretakers' houses at South Moor and Dawdon, Mr. W. Rushworth, Shire Hall, Durham.

Edinburgh.—Oct. 4.—The Commissioners of His Majesty's Works and Public Buildings are prepared to receive constructional schemes and tenders based thereon for the erection of reinforced concrete floors, roofs, beams, columns, staircases, &c., in connection with the Royal Scottish Museum New Administration Offices. Any system or systems of construction may be adopted for the whole or any part of the work. Full details must be furnished immediately for examination, if necessary. Deposit £1. The conditions of contract may be inspected at H.M. Office of Works, 3 Parliament Square, Edinburgh; or at H.M. Office of Works, G.P.O., Glasgow.

Ellesmere Port (Cheshire).—Sept. 21.—For new elementary school at John Street (accommodation 450), for Bebington and Neston area. Deposit £1 1*s*. Apply after Sept. 9 to Messrs. Deacon & Horsburgh, architects, 12 St. George's Crescent, Liverpool.

Elworth.—Sept. 25.—For erection of proposed Wesleyan Chapel and school at Elworth, near Sandbach. Messrs. A. Price & Son, architects, Sandbach.

Epsom.—Sept. 26.—For erection of an operation ward at their workhouse infirmary at Epsom, for the Guardians. Deposit 10*s*. Mr. A. C. Williams, architect, 53 Doughty Street, W.C.

Glanton.—Oct. 2.—For alterations and improvements to the church and manse, for the Presbyterian Church of England at Glanton, Northumberland. Mr. G. Reavell, jun., A.R.I.B.A., Alnwick and Morpeth.

Glasgow.—Sept. 25.—For the extension of Glasgow General Post Office, for the Commissioners of H.M. Works and Public Buildings. Tenders are required for the whole work and not for separate trades. Deposit £1 1*s*. His Majesty's Office of Works, General Post Office, Glasgow, and H.M. Office of Works, 3 Parliament Square, Edinburgh.

Ireland.—For the rebuilding hotel and licensed premises, Cushendall, County Antrim, for Mr. P. M'Alister. Messrs. Connolly & M'Avoy, M.R.I.A., architects, Oxford House, 35 Oxford Street, Belfast.

Ireland.—Sept. 18.—For building offices in Barrack Street, Dundalk, for Messrs. Lockington & Co., Ltd. Mr. J. F. M'Gahon, architect, Exchange Buildings, Dundalk.

Ireland.—Sept. 20.—For erection of 46 cottages, for the Kinsale Rural District Council. Mr. J. Murphy, clerk, Council Office, Kinsale.

Isle of Man.—Sept. 20.—For alterations to the house and premises known as "Murray's House," Mount Havelock, Douglas, for the Committee of Tynwald. Messrs. J.

Cowle & Son, Government architects, St. George's Street, Douglas.

Isle of Man.—Sept. 23.—For alterations and additions to the Home for the Poor, Douglas. Deposit £1 1*s*. Messrs. J. Cowle & Son, architects, Douglas.

Keighley.—Sept. 19.—For the masons' and plasterers' work required in connection with the repairs to purifying houses and sheds at the Thwaites gasworks, for the Gas Committee. The Gas Offices, Cook Lane or Thwaites.

Kempston.—Sept. 16.—For erection of additions to the Bedford Road Council School, Kempston. Deposit £1 1*s*. The County Surveyor, Shire Hall, Bedford.

Leeds.—Sept. 19.—The Commissioners of H.M. Works and Public Buildings are prepared to receive tenders for the demolition of the buildings on the site of the proposed Leeds New Telephone Exchange. H.M. Office of Works, Infirmary Street, Leeds, or H.M. Office of Works, &c., Storey's Gate, London, S.W.

Leek.—Sept. 16.—For erection and completion of a Council School for about 356 older pupils and 100 infants. Send application and £1 1*s*. deposit by Sept. 16 to Mr. Graham Balfour, Director of Education, County Education Offices, Stafford.

Liverpool.—Sept. 26.—For slating at the cottage homes, Wavertree, for the Select Vestry. Mr. G. W. Coster, vestry clerk, Parish Offices, Liverpool.

London.—Sept. 18.—For erection of a chimney shaft at the refuse destructor works, East Ham. Mr. J. Birch, borough engineer, Town Hall, East Ham.

London.—Sept. 18.—For the erection of a cinematograph enclosure at their Goulston Street baths, for the Stepney Borough Council. Deposit £1. Mr. M. W. Jameson, A.M.I.C.E., borough engineer, Municipal Offices, 15 Great Alie Street, Whitechapel, E.

Wayland.—Sept. 22.—For the new infirmary buildings, for the Guardians of Wayland Union, Norfolk. Deposit £5 5*s*. Mr. H. J. Green, architect, 31 Castle Meadow, Norwich. Send names by Sept. 22 to Mr. F. Robinson, clerk, Watton.

Whitehaven.—Sept. 20.—For the joiner-work, slating, plastering, and plumbing in connection with the erection of a new hall at Scilly Banks. Mr. J. J. McBain, Duke Street, Whitehaven.

Widnes.—Sept. 28.—For the erection of drill hall and fencing, for the West Lancashire Association Territorial Force. Send names at once to Mr. J. P. Fraser, architect, 14 Elliot Street, Liverpool.

Wilts.—Sept. 25.—For carrying out certain repairs and renovations at the following County Police buildings, for the Standing Joint Committee of the County Council, viz.:—Police cottage, Chitterne; central police station, Devizes; police station, Fisherton, Salisbury; police station and cottage, Ludgershall; police station, Malmesbury; police station, Pewsey; police cottage, Shrewton; police station, Tisbury; police station, Trowbridge; police station, Warminster; police cottage, Yarnbrook. Mr. J. G. Powell, county surveyor, Trowbridge.

A weaving-shed, to accommodate 1,500 looms, is to be erected in the Walverden district of Nelson.

Messrs. Anderson, Sons & Hedley, auctioneers, Newcastle-on-Tyne, last week presented plans to the Town Improvement Committee of the Newcastle Corporation for a large block of buildings in New Market Street. The premises of four storeys will include a large warehouse and two commodious salerooms. The plans were passed.

The Winchester Corporation have received a letter from the Local Government Board sanctioning loans as follows: Site for elementary school, £1,015; erection of new school, £4,757; furniture and fittings, £215; tennis courts, £200; bathing place, £280.

TENDERS.

ATTLEBOROUGH.

For erection of gas manager's house, Attleborough, Norfolk. Mr. Herbert J. Green, architect and diocesan surveyor, Norwich, King's Lynn, and Lowestoft.

H. Smith	£439	9	0
Barnard	431	0	4
Peake-Vout	430	0	0
Harrison	421	1	4

GIDEA PARK EXHIBITION.—NO. 265 MEADWAY.—Mr. A. P. Starkey, Architect.

INSTITUTE OF METALS AUTUMN MEETING.

The annual autumn meeting of the Institute of Metals will be held at Newcastle-on-Tyne on September 20, 21, and 22.

The Hon. Sir Charles A. Parsons, K.C.B., F.R.S., LL.D., is acting as Chairman of the Local Committee, and Dr. J. T. Dunn, F.I.C., as Honorary Secretary.

The meeting will open at 10 A.M. on Wednesday, September 20, when the members will be welcomed at Armstrong College by the Rt. Hon. the Lord Mayor of the City, Sir W. H. Stephenson, D.L., D.C.L., and the local committee, after which a series of papers will be read and discussed, Sir Gerard A. Muntz, Bart., President, being in the chair. In the afternoon members will have the opportunity of visiting shipbuilding, engineering, metallurgical, and electrical works in the neighbourhood. In the evening there will be a reception of the members and their ladies, followed by a conversazione, in the Laing Art Gallery, by invitation of the Rt. Hon. the Lord Mayor.

On Thursday papers will be read and discussed at a morning session of the Institute, and in the afternoon there will be further visits to works.

For September 22 the Tyne Improvement Commissioners have placed a steamer at the disposal of the Local Committee for a voyage to the mouth of the river and back.

His Majesty the King on Sunday last unveiled the communion table and screen which he has had erected in Crathie Parish Church as a memorial to his father. The table is of white Iona marble with beautiful veinings in green and black. Standing between 6 and 7 feet in length, 3 feet in height, the table is arranged in front in three panels, and one at each end, while the top is formed of a single solid slab. The carved oak reredos rises against the east wall to a height of 8 feet. The wood, which was obtained from a country house in Leicester, is three hundred years old and is unpolished. The carving is in the late Scottish Gothic style after the manner of the specimen at King's College Chapel, Aberdeen. The memorial was designed by Messrs. A. Marshall Mackenzie & Son, of Aberdeen, the architects of the church. The communion table was the work of Messrs. Galbraith & Winton, 185 St. Vincent Street, Glasgow, and the carved oak screen that of Messrs. J. & A. Ogilvie, Aberdeen.

WATER SOFTENING PLANT AND HOT WATER SERVICE AT STOKE-ON TRENT WORKHOUSE.

A water softening plant and centralised hot water supply was recently installed at Stoke Workhouse by the Brightside Foundry and Engineering Co., Ltd., Messrs. Edwards & Shaw, of Birmingham, being the consulting engineers for the scheme.

The water supply is obtained from three different sources, viz. the Potteries Water Works Co. and two wells, each supply being of quite a different character to the others, but all containing a considerable quantity of incrustating material, resulting in active precipitation of scale in the steam boilers and domestic hot water service mains. The water used was so hard that the boilers had to be taken off duty for cleaning every six weeks, while the water pipes in calorifiers, &c., had to be renewed at very frequent intervals, owing to their complete stoppage with sediment.

To overcome this difficulty the scheme was designed, firstly, to chemically treat and soften the water in order to remove the scale-forming elements, and, secondly, to centralise and operate the whole of the heating and domestic hot water supply from one central source, with a view to effecting the maximum economy in fuel and attendance.

The softening plant was made by Lassen & Hjort. Each water is conducted into a separate measuring compartment of its own, where the proper amount of reagent is added. The waters are kept separate until they have passed the first filter, at which point they can be tested to see whether the reagent is being used in correct quantities. This is quite a special feature of the plant, and it works admirably. This plant is capable of dealing with 4,000 gallons of water per hour. While passing the water to the softener, the opportunity is taken of weighing the water, and a correct and automatic record is thus kept of every gallon of water softened and heated, thus affording the master valuable information from day to day, which enables him to estimate the cost of softening and to detect any abnormal consumption or waste.

Exhaust steam from the dynamo engines is utilised for heating the water to a temperature of 180 degrees Fahr. This heat also assists and hastens the chemical reaction of the water. In several other similar institutions where water-softening has been tried for a domestic supply it has been found that there has been considerable deposit of mud in the

ervice pipes, but the consulting engineers foresaw that ouble, and avoided it by the method we have indicated.

The softened water is then circulated by means of a eam-driven Tangye Duplex pump through a 5-inch ring ain about 4,000 feet long round the Workhouse. The eturn water discharges into a storage and reheater tank near e softener from which the pump draws its supply.

It is so arranged that the return water can either be assed through the Green's economiser at the back of the oilers or direct into the storage tank. In this way the mperature of the water is raised again to 180 degrees Fahr. y the flue gases of the steam coil fixed in the reheater tank. he loss of temperature in passing all round the main is bout 40 degrees. The pipes are all coated with Haackes' ossil Meal Composition.

The ring main round the Workhouse is divided into several ections, so that in case of breakdown it is possible to isolate ny portion without interfering with the working of the maining section. Provision has been made by coupling up the ring main a Cornish boiler previously used as a hot ater boiler for domestic service, so that in case of any ossible breakdown at the electric station the water can still heated and circulated.

Also a stand-by Tangye pump has been fixed at the treme distant part of the ring main to enable the water be circulated through the hospital portion of the buildings ould any accident arise which necessitated the stoppage of e remainder of the service.

Branch supplies are taken from the main ring and connected up to all baths and lavatory basins, care being taken at there is a circulation up to each bath-room and lavatory order to avoid loss by drawing off cold water to waste. All th-rooms and lavatories, and also the children's wards of e hospital, are heated from the service by radiators.

The whole of the water of condensation from the steam traps, cooking apparatus, and drains from the engine cylinders is collected into a receiver and discharged back into the softener by means of a small motor-driven rotary pump. The softener effectually gets rid of all oil in the exhaust steam, there being no trace of it in the water pumped round the main.

It is found that in normal times there is sufficient exhaust steam from the engines to heat up all the water required for the Workhouse, but provision has been made, of course, for using live steam for this purpose when the engines are not running.

THE Douglas Town Council on Wednesday voted the first prize of £200 to Mr. Percy Robinson, architect, of Leeds, for plans of a pavilion to be erected on the Villa Marine Estate, which is to be converted into public pleasure grounds. For the erection of the pavilion there is a tender of over £16,000.

A COMMITTEE has been formed to collect donations for one of the ten buttresses in course of erection against the south aisle wall of Winchester Cathedral as a memorial to the Rev. John Keble, author of "The Christian Year" and vicar of Hursley. The erection of the buttresses will mark the completion of the work at this cathedral.

THE Boundaries Committee of Dunfermline Town Council on Saturday agreed to recommend that Messrs. Crouch, Hogg & Easton, civil engineers, Glasgow, who were responsible for the mapping of the route and the fixing of the levels of the Rosyth drainage scheme for presentation to the Houses of Parliament in connection with the Boundaries Extension Bill, should be entrusted with the engineering work. The scheme is to cost fully £100,000. Messrs. Douglas & Wright, of Dunfermline, were instructed to carry out the necessary measuring work.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars to Room 6, Imperial Buildings, Ludgate Circus, for insertion in this weekly list.)

ENGLAND.

Berkshire.
Wokingham.—Bakehouse, Goodchild Road.

Cheshire.
Higher Bebington.—Council School.
Malpas.—Council houses.
Stockport.—Police courts and buildings (£30,000). Messrs. J. T. Halliday & C. Patterson, A.R.I.B.A., architects.

Cornwall.
Padstow.—A dozen workmen's dwellings. Mr. Magor, builder.
Trevanson.—Two houses.
Veryan.—Church repair and new organ (£800).

Cumberland.
Langholm.—Water supply scheme (£6,000). Messrs. Wallin & Taylor, engineers.

Devonshire.
Plymouth.—Devon and Cornwall Ear and Throat Hospital (£2,000). Messrs. Thornely, Rooke & Barton, architects.

Essex.
Benfleet, South.—See below.
Braintree.—King Edward Memorial swimming bath.
Hadleigh.—See below.
Hawkswell.—See below.
Heybridge.—Council School.
Hockley.—See below.
Hornchurch.—Sewerage scheme (£350). Romford R.D.C. Surveyor.
Rayleigh.—See below.
Rochford.—Water supply scheme for Rochford, Rayleigh, Hadleigh, South Benfleet, Hockley and Hawkswell (£11,000). Messrs. Beesley, Son & Nichols, engineers.
Southend-on-Sea.—Parish Hall for St. Helen's R.C. Church (accommodation for 250).

Hampshire.
Bordon.—Officers' quarters at the Camp (£15,000).
Emsworth.—Primitive Methodist Church renovation.
Drainage works. Mr. A. J. Martin, engineer; Messrs. Johnson & Langley, contractors.
Portsmouth.—Swimming bath (£3,000).
Workhouse Infirmary extension.

Herefordshire.
Ledbury.—Swimming baths.

Hertfordshire.
Bishop Stortford.—St. Michael's Schools extension (£700).

Kent.
Bromley. — Workhouse additions and alterations (£31,000). Mr. F. J. Smith, F.R.I.B.A., architect.
Frindsbury Extra.—Chattenden Council School.
Halstead.—Open-air shelters for consumptives.
Sevenoaks.—Children's Homes additions and alterations, Chipstead Common. Mr. E. Pawley, architect.
Swanscombe.—Knockhall Council School.
Wrotham.—Borough Green Council School.
Wye.—S.E. College addition for E. Ashford R.D.C.

Lancashire.
Great Lever.—House in Green Lane.
Heaton.—House in Green Mount Lane.

Leicestershire.
Lutterworth.—Cottage Hospital extension (£700).
"Stow House" alterations for the Sisterhood of "Poor Clare."

Lincolnshire.
Alford.—Houses, Farlesthorpe Road.
Croft.—Free Church Schoolroom (£400).
Horncastle.—Additions to house at Belchford.
Stable and cartshed at Mareham-le-Fen.
Spalding.—Public swimming baths.

Monmouthshire.
Abercarn.—Two tin-plate mills for the Newport Tinplate Company, Ltd.

Norfolk.
Yarmouth.—Council School at Cobholm.
School of Art, Trafalgar Road.

Northamptonshire.
Grendon.—Union Chapel restoration.
Staverton.—Daventry Council Isolation Hospital for 20 patients (£1,700).

Oxfordshire.
Henley.—Villa at Sonning Common.

Somersetshire.
Bath.—Cattle market improvements.
Bridgwater.—St. Saviour's Parish Mission Church and Institute.
Taunton.—Public Library extension.
Twerton.—Bakery. Messrs. Erwood & Morris, contractors (£2,740).

Staffordshire.
Cannock.—Premises in Mill Street.
Hednesford.—Houses.
Parish and Mission Churches: improvements.
Technical Institute. Messrs. H. Dorse & Son, contractors.
Lichfield.—Sewerage scheme (£10,000).
Longton.—Town Hall improvements (£7,500).
Newcastle-under-Lyme.—General Post Office.
Rugeley.—Alterations to premises, Albion Street.
Stafford.—Messrs. W. H. Dorman & Co.'s (Ltd.) new engineering works.
Wimblebury.—School additions and alterations.

Suffolk.
Lowestoft.—Parish Hall (£4,000).

Surrey.
Chertsey.—Children's Home, Ottershaw.
Chobham.—Council Surveyor's house and Council depôt.
Epsom.—Workhouse Infirmary: operation ward. Mr. A. C. Williams, architect.
Farnham.—Gas and Electricity Company's generating station.
Haslemere.—Church room (£1,000).
Molesey, East.—Council School.

Sussex.
Bognor.—Victoria Convalescent Home: alterations.
St. Michael's Schools: alterations.
Cuckfield.—Workhouse: alterations to isolation wards to provide Nurses' Home.
Westbourne.—Free Church Sunday Schools.

Wiltshire.
Odstock.—Church Tower repair (£200).

Worcestershire.
Claines.—Water supply scheme (£1,700). Mr. Fiddian, engineer.
Malvern, North.—Girls' School additions.
Worcester.—Cherry Orchard School. Messrs. J. J. Bray & Son, contractors.
Hound's Lane School. Mr. H. J. Probert, contractor.

Yorkshire.
Barnsley.—Holyrood R.C. School enlargement.
Crossgates.—Two villas. Mr. E. V. Wimpenny, architect.
Woodscats.—Church.

WALES.

Cardiff.—Cavalry Barracks.
Clydach.—Hundred houses on the Ynyspenllwch estate.
Merthyr Vale.—Infants' School at Mount Pleasant (£4,500). Mr. A. J. Colborne, contractor.
Pontardawe.—Municipal houses.
Twenty-eight residences on the Ynisdarren estate.
Pontsarn.—Sanatorium (Merthyr Guardians).
Pontyeates.—Church for 400 people. Mr. William Griffiths, F.S.I., architect. Mr. G. Mercer, contractor.
Swansea.—Council School at Cwmbwrla.
Sewerage scheme (£200,000). Mr. Wyrill, Borough engineer.
Ystalyfera.—Fifty houses on the Yniscedwyn estate.

SCOTLAND.

Aberfeldy.—Woodwork, laundry and cookery accommodation at the school.
Arbroath.—Infirmary reconstruction (£8,000).
Ardincaple.—Public School enlargement and repairs.
Benderloch.—Church.
Cambuslang.—Board School.
Cardonald.—Two double cottages in Lennox and Westfield Roads.

Clarkston.—Cottage in Stewart Drive.
Clydebank.—Morison Memorial Church: reconstruction.
Connel.—Public hall. Mr. J. MacDougall, contractor.
Dundee.—Bungalow, Strathmartine Road.
Cinematograph theatre.
Semi-detached villas, Clepington Road.
Warehouse, &c., Douglas and Brown Streets.
Duror.—Chancel for the Episcopal Church.
Easdale.—Public School and offices: alterations.
Edinburgh.—Five houses at Portobello.
House, Mayfield and Esslemont Roads.
Four flatted villas, Mayfield Road.
Ice rink at Haymarket.
Fort William.—Public School additions and alterations at Roy Bridge. Mr. J. G. Falconer, architect.
Kirkintilloch.—Board School enlargement, Lairdsland (£1,800).
Kirkwall.—St. Magnus Cathedral restoration. Mr. J. M. Watson, architect.
Yoker.—Church halls and rooms, Harvey Street.
Four double villas, Mill Road.

WELL WATER SUPPLY IN THE CITY OF LONDON.

The heavy increase in the charges made by the Metropolitan Water Board for the water service has of late years resulted in the sinking of a large number of artesian wells. In June 1910 Dr. Wm. Collingridge, Medical Officer of Health for the City of London, submitted the result of an investigation into the nature of the water derived from such sources in the city. In his annual *résumé* of the year's work he again refers to the conditions and circumstances affecting the citizens' supply of an indispensable element. His report is as follows:

While there is no reason to take exception to the quality of the water supplied by the Metropolitan Water Board, the heavy charges levied have stimulated many property owners to seek relief from what they consider an unjust taxation by sinking wells.

The city supply of water is derived from (*a*) The New River District (formerly the New River Company), the sources of supply being the Chadwell Spring, the River Lea, and eighteen chalk wells; (*b*) the Eastern District (formerly the East London Water Company), the source of supply being from the River Lea, the Thames at Sunbury, and chalk wells and springs.

With the exception of a few supplies in the parishes of St. Botolph, Bishopsgate, and St. Botolph, Aldgate, which are in the Eastern District, the New River District embraces the whole of the city.

I do not wish to condemn the methods of the Water Board at all, but it must not be overlooked that both of these districts are, to some extent, dependent upon the River Thames and the River Lea, both of which are navigable rivers flowing through densely populated areas, and doubtless receive their due share of filth and other objectionable matter. When the sixth report of the Rivers Pollution Commission, dated 1874, was issued, it was scarcely known that filtration removed anything more than suspended impurities, and that only to an imperfect extent, and the use of water for domestic purposes from both the Rivers Thames and Lea was unsparingly condemned by the Commission, but very soon after that report was written it became quite evident from things that occurred in connection with the London water supply that organic matter in solution, as well as suspended impurities, was removed by filtration. The Water Board, moreover, take every precaution to ensure that the water supply under their control is free from impurity when it reaches the consumer, and, taking all these circumstances into consideration, I am in entire accord with the conclusions arrived at by the Royal Commission on Metropolitan Water Supply of 1892: "That the water as supplied to the consumer in London is of a very high standard of excellence and purity, and that it is suitable in quality for all household purposes. We are well aware that a certain prejudice exists against the use of drinking water derived from the Thames and the Lea because these rivers are liable to pollution, however perfect the subsequent purification, either by natural or artificial means, may be; but having regard to the experience of London during the last thirty years, and to the evidence given to us on the subject, we do not believe that any danger exists of the spread of disease by the use of this water, provided that there is adequate storage, and that the water is efficiently filtered before delivery to the consumers.

The method of obtaining a water supply in the city by means of well sinking is by no means a new one, since an artesian well sunk at No. 20 Old Broad Street (formerly the site of the Excise Office) is described in the Transactions of the Institute of Civil Engineers, vol. 1, page 155, published in 1836. This well became subsequently contaminated with polluted surface water, and in 1908 a new boring was made on the old site.

There are now thirty-six wells established in the city, fourteen of which were sunk during the seventy-one years 1836-1907, the remaining twenty-two, or 61 per cent. of the total number, being made in 1908-1909.

Samples of the water from all these wells were taken and submitted to Dr. Teed for chemical analysis.

With regard to their purity, Dr. Teed reports that: "The waters are highly pure as far as organic contamination is concerned; they are soft, but on the other hand they are somewhat saline. The total solids average 49 grains per gallon, whereas London water runs about 20 grains to the gallon. The London deep well waters contain fair amounts of bi-carbonate of soda and sodium sulphate, which I have known to be a source of considerable trouble to steam-raisers. Lead and copper were absent in all cases."

In this connection, and for comparative purposes, it may be interesting to again quote from the report of the Rivers Pollution Commission previously referred to: "Of the different varieties of potable water, the best for dietetic purposes are spring and deep well waters. They contain the smallest amount of organic matter, and are almost always bright, sparkling, palatable, and wholesome, whilst their uniformity of temperature throughout the year renders them cool and refreshing in summer and prevents them from freezing readily in winter. Such waters are of inestimable value to communities, and their conservation and utilization are worthy of the greatest efforts of those who have the public health under their charge."

With regard to the uniformity of temperature referred to in the above quotation, such is demonstrated in its completest sense by the chemical analysis. Although the samples were taken during both the summer and winter months, the variation in temperature never exceeded 6 degrees, the lowest recorded being 54 degrees and the highest 60 degrees; the average temperature being 57.4 degrees Fahrenheit.

When it is realised that the water obtained from this source is of undoubted purity and wholesomeness, and that, moreover, the fact of its being "soft" renders it more suitable for domestic and manufacturing purposes than that delivered by the Metropolitan Water Board, it is not surprising that the adoption of a well water supply is gaining ground so rapidly, especially when one takes into consideration the fact alleged by experts that great economy can thereby be effected.

An example of this economy which may be quoted is that of a large West End hotel which was paying 900*l.* per annum water rate. A well and pumping plant were installed at a cost of 800*l.*, and the total cost of running this plant, including repairs, has been found to be 200*l.* per annum. Thus a saving of about 700*l.* per annum appears to have been effected on a capital outlay of 800*l.*

The fact, however, must not be overlooked that there is a possibility, undoubtedly remote, that the yield may eventually prove insufficient, and this would necessitate the reinstatement of the Water Board's supply, with the subsequent loss of money spent in sinking the well. In the city alone there are thirty-six of these wells in use, and with the exception of four all are within about 2,000 feet of the Merchant Taylors' Hall in Threadneedle Street. All these wells are deriving their supply from the same source, and, moreover, the Water Board largely tap the water supply before it reaches the city, there being no less than forty-nine wells belonging to the Board drawing upon the water in the chalk.

This depletion cannot be expected to continue indefinitely without seriously affecting the interests of well owners, and already there is evidence that the continual drainage is having its effect upon the supply. The fall of the water level in the London Basin, which is the geological formation upon which the city is situated, is undoubtedly due to the increased demands made upon it.

Considerable difficulty was experienced in obtaining reliable information in the city upon the question of water levels. That the normal rest level of water in wells is falling is generally admitted, but the rate of fall does not appear to be uniform, varying from 2 to 3½ feet per annum. The discrepancy is doubtless accounted for by the difficulty in accurately determining the normal rest level.

Of course, the falling of water levels is not so disquieting as it may at first appear. The simple expedient of lowering the pump will give the well a new lease of life, and then the abandonment of the well is at least postponed.

It is obvious, therefore, that there is a certain element of speculation in investing money in well-sinking in London, as in addition to the possibility of the supply becoming inadequate there is the risk of unforeseen circumstances arising that may involve the expenditure of large sums of money. Our own experience in connection with the well at the Artizans' Dwellings, Stoney Lane, is a case in point. Commenced twenty-three years ago, costing no less than 5,610*l.* before ready for use, the cost of pumping, allowing for all contingencies except interest on capital expenditure and depreciation of plant, reaches 5½*d.* per 1,000 gallons. It must be pointed out, however, that this is an exceptional case, as the methods then adopted have since been considerably improved. Further, the progress of the work was at times very slow, at one time 110 working days being spent in boring through 5 feet 10 inches of conglomerated rock. In all, four years were occupied in its construction.

I know of two cases at least in which when the well was completed the yield was so scanty as not to be worth pumping, labour, and maintenance, and the wells were accordingly abandoned.

There does not appear to be any reason whatever why property owners, if they feel oppressed by water taxes, should not seek relief by the sinking of a well, the water derived from which is equal in purity to that supplied by the Metropolitan Water Board.

The economical advantages that may be derived from this method hardly fall within my province, the only persons qualified to authoritatively decide this point being geologists and hydraulic engineers who have made a special study of the subject.

TRADE NOTES.

Messrs. Roberts, Adlard & Co., of 26 Bermondsey Wall, are offering for sale about 100,000 old roofing machine-made tiles, which can be seen in London.

The Sheffield Corporation Waterworks Department have just placed a contract for thirty-two patent mechanical pressure filters and auxiliary plant capable of dealing with a flow of 6,000,000 gallons per day with the well-known firm of Mather & Platt, Ltd., of Manchester.

At Hartshorne, Burton-on-Trent, a large clock with two 5-feet dials and striking the hours has just been erected upon the parish church. The work was carried out by John Smith & Sons, Midland Clock Works, Derby, to the general designs of the late Lord Grimthorpe.

Last week a slight fire occurred at the Arkwright Spinning Company's mill, Rochdale, in the wheel-race of a small engine which drives the scutching-room. One "Titan" sprinkler operated and had the fire out immediately. The cause is supposed to be due to the overheating of a shaft gearing.

We are informed that during the present year there has been a steady increase in the use of "Ceresit" for waterproofing purposes. A large number of repeat orders have been received from Government departments, railway companies, and other public bodies. At the moment "Ceresit" is being employed by the London and North-Western Railway Company for the waterproofing of two passenger subways at Stonebridge and Bushey; and Messrs. Vickers, Ltd., are about to use it for a large tank at St. Albans. The tank, which will be of concrete, will be rendered with "Ceresit" mortar varying in thickness from 1½ to 2 inches, the total area of the rendering being 2,022 square yards, for which 500 gallons of "Ceresit" will be required.

Messrs. H. Elliott & Co., County Bank Chambers, Ealing, W., have sent us a sample of their "Khala" hard porcelain wall tiles. These tiles are guaranteed to be free from all glazing fissures. They are produced in four colours and as many quarter sizes, with bevelled or sharp edges, and of three qualities. Special moulds have been made for such shapes as external and internal angles, bull-nose plinth or top-course tiles, cornices, corner returns, &c. "Khala" tiles are said to be acid-proof and absolutely unaffected by changes from sudden heat to great cold.

The London and Glasgow Shipbuilding Company have been granted lining by Govan Dean of Guild Court for the erection of large new workshops in their yard at Govan.

VARIETIES.

The Sheffield City Council have given formal notice of their intention to erect a public elementary school for 840 children at Wharncliffe View.

The North Riding Education Committee on Tuesday accepted the tender of Mr. T. Willoughby, of Northallerton, amounting to £3,481, for the erection of a Council school at Loftus.

The Cheshire Education Committee contemplate the erection of schools for West Kirby, Higher Bebington, and Ellesmere Port. The committee has received the consent of the Local Government Board to the borrowing of £350 for the provision of a caretaker's house, and of £1,102 for the equipment of the High School for Girls, West Kirby.

The Society of Architects will be officially represented at the forthcoming International Congress at Rome by Mr. Percy B. Tubbs, F.R.I.B.A., vice-president, and Mr. R. G. Lovell, member of Council. At the Crystal Palace Mansion House Conference, Oct. 23, the Society will be represented by Mr. Geo. E. Bond, J.P., president, and Mr. Percy B. Tubbs, F.R.I.B.A., vice-president.

At Dumbarton Dean of Guild Court on Monday a petition and plans were submitted on behalf of the Sisters of the Order of Notre Dame for considerable extensions to Clerkhill, a residence overlooking the Clyde on the Cardross side of the town, which they have acquired for scholastic purposes. The extension will consist entirely of class-rooms. Plans were also passed, on the petition of Mr. Jas, Bell, architect, Motherwell, for the erection of a lodging-house in Risk Street, which will accommodate over 200 persons. Mrs. Janet F. Buchanan, Church Street, was granted lining to erect additional dwelling-houses at her premises at 11 Strathleven Place.

Messrs. Roberts, Adlard & Co., Bermondsey, have published a revised edition of "Customary Rules of Measurement of Slating and Tiling." These are based on the standard system of measuring slating and tiling which was adopted by the Surveyors' Institution and the Quantity Surveyors' Association in 1909. The revision is made in accordance with an agreement arrived at in December last between the London Master Builders' Association and the London Association of Slate Merchants and Master Slaters on the subject of certain allowances. The pamphlet includes information about some of Messrs. Roberts, Adlard & Co.'s goods.

Easington Rural District Council last week passed plans for twelve aged miners' homes at Murton, for the Durham Aged Mine-Workers' Homes Association. Other plans passed included a temporary chapel at Easington Colliery for the United Methodists, and a temporary church at Black Hall Rocks, for the Horden Collieries Company, Ltd. The committee having charge of the proposal to build 100 houses at Murton, under the Housing of the Working Classes Act, recommended that a block plan be prepared, and, if necessary, furnished to the competing architects.

The Fife Coal Company have decided to proceed at once with the laying out of a new village at Valleyfield in connection with their mining developments. In all 192 houses are to be erected at the present time. Of these 176 will be of two apartments and 16 of three apartments, and all are of one storey. The houses are to be erected in four groups, there being in each group 44 houses of two rooms and four of three rooms. Each house is to have scullery, containing washing boiler, enamelled sink, water-closet, and coal-house, while each of the three-roomed houses have in addition a bathroom with hot and cold water. The company undertake to make the road between the houses 50 feet wide. The plans have been approved by the Dunfermline District Committee.

ANSWER TO CORRESPONDENT.

Terrazzo Floor.—The first step in laying terrazzo flooring is the provision of a firm bed. This is usually of Portland-cement concrete, six inches thick, but terrazzo could be laid over old stone, brick, or tile paving. The concrete bed is finished with a floated and level surface of cement. When this has set the terrazzo is laid down, consisting of small marble chippings of irregular size and usually of varied colours in Portland cement grout. This is spread and laid evenly, being flattened down to a fairly smooth surface. When this has set hard it is rubbed down with stone rubbers to a perfectly level and dull polished face. The work is usually done in this country by Italians, who are experts in the technique of rightly proportioning the cement and marble and regulating the thickness of the finished terrazzo.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* P.M. *on Thursdays.*

COMPETITIONS OPEN.

ATHENS.—Sept. 25.—An international competition of plans is invited by the Greek Ministry of the Interior (Public Works) for the erection of a Court of Justice at Athens. The cost of the building must not exceed 160,000*l*. A first prize of 800*l*., and a second prize of 320*l*. will be awarded. The Greek *Official Gazette*, containing particulars (in Greek and in French) may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

BARNSLEY.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

BRISTOL.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

The Principles of Architectural Design

By PERCY L. MARKS, Architect,
Author of "The Principles of Planning."

With 165 Full-plate and other Illustrations, Royal 8vo, 10*s.* 6*d.* net.

This work embodies not only a series of articles on Exterior Design, that appeared in the columns of The Architect, but includes also a similarly detailed treatment on the principles affecting Interior Design.

There cannot be any dogmatism on the subject of Art; but there are certain underlying *principles*, and the object of this book is to propound these in an easy and argumentative manner on the lines so successfully pursued by the author in his now standard work on Planning.

The study of the principles referred to is aided by illustrations which are for the most part of a diagrammatic character; in which light they are to be regarded, and not as finished illustrations exemplifying the Perfect Design.

The book has been well received and sympathetically reviewed during the short period that it has been issued; and with a view to fostering the growing interest of the general public in the art of Design, it has been kept free from any undue use of technicalities. It should appeal, therefore, to the layman as well as to the architectural student and designer.

ORDER FORM.

ART COMPETITIONS AT OLYMPIAD, 1912.

The Fifth Olympiad (which will be held at Stockholm next year) will include competitions in architecture, sculpture, painting, music and literature.

The jury can only consider subjects which have not been published or exhibited before, and which have some direct connection with sport.

To the winner of each of the five competitions will be awarded the prize medal of the Fifth Olympiad. The exhibits selected will, as far as possible, be exhibited, published or performed during the Olympic games.

Competitors must notify their intention to enter for one or more of these competitions before January 15, 1912, and the exhibits themselves must be in the hands of the jury before March 1, 1912.

No limitations of size or form are laid down for manuscripts, plans, drawings or canvases, but sculptors are required to send in clay models not exceeding 80 centimetres in height, length and breadth.

For further information as for forms of entry application should be made to M. le Président du Comité, International Olympique, 20 rue Oudinot, Paris; or to Olympiska Spelen, Stockholm.

LABOUR CONDITIONS IN THE UNITED STATES.

The latest report received from His Majesty's Consul-General in New York with special reference to affairs in the States of New York, New Jersey, Rhode Island, and Connecticut, contains an amount of interesting information about the state of the country in general. Additional importance attaches to it from the fact that many of the matters dealt with are also prominent in the minds of employers in this country.

On the subject of an eight-hour day, Mr. Consul-General Bennett writes:

Under section 2 of the New York Law of February 17, 1909, amended by the Act of January 1, 1910, it is enacted: "Eight hours shall constitute a legal day's work for all classes of employés in this State except those engaged in farm and domestic service, unless otherwise provided by law. This section does not prevent an agreement for overwork at an increased compensation, except upon work by or for the State, or municipal corporation, or by contractors or sub-contractors therewith." In the case of Ellis *v.* United States, 1907, the operation of section 2 was held to be limited to public works. Broadly speaking, the law in question is now limited by legal decision to all labour performed on public works by labourers, workmen, and mechanics, and is effective upon work done by or for the State and any or all of its sub-divisions. The courts have held that its provisions do not extend to cover supplies purchased in the open market for use upon such public works, nor to manufactured material used in connection therewith, unless such material is manufactured by the principal engaged upon such work.

The doctrines of property in labour and freedom of contract, which are held to be inalienable rights, have prevented the law from being otherwise generally applied in a compulsory manner, except in cases where, as a measure of public power, the work is held to be of a character detrimental to public interests, such as the use of dangerous chemicals, &c.

The fact, however, that a man who has a Government contract can only work his men for eight hours a day on that contract, whilst he can work them ten hours or more, by consent, on any other work carried on at the same time, reacts upon his men who are not engaged in contract work, and, in practice, brings about a reduction of their hours. The same is noticed in all callings. The tendency is to reduce hours, and there is no doubt that the eight-hour day is more generally observed than formerly. Hours of labour in brickyards, on steam, surface, and elevated roads and bakeries, are reduced, under the law, to ten hours a day.

Eight certain legal holidays are fixed for each year, and there are others, generally about four on a yearly average, on days fixed by the President or by the Governor of the State, all, of course, exclusive of Sundays.

It is said that some years ago an Englishman who had been courteously conducted over a large American manufacturing establishment asked, on his return to the manager's office, "And where do you put your elderly men?" The manager grimly replied, "Take a cigar and get your hat. We'll go down to the cemetery." This story is recalled by another part of the report, dealing with the effects of the climate on labouring men. The climate of New York State, says Mr. Bennett, is one of almost tropical heat in summer, with extremely low temperatures in winter. Added to this there is at times an extreme dryness of the atmosphere. The dry air has a marked effect upon the system. It vivifies and stimulates energy. This fact has been noticed by British athletes who have competed in the States. At the same time the energy developed urgently calls for a different diet. Meat three times a day is taken to equalise the energy put forth, and, incidentally, a craving is created for fatty foods, such as butter, and especially for iced water. It may have been noticed that although Americans, and indeed foreigners in the United States, drink iced water largely when in the States, the habit is usually dropped when in Europe.

Every worker in America contrives to put more energy into his work than does the European labourer in his own country. "Speeding," perhaps, is partly responsible for this. But the reserve of energy in a man is no greater in an American than it is in a European. The stock of American energy, consequently, is exhausted more rapidly. At between forty and fifty, when a European workman is at his best, the American frequently breaks down, physical exhaustion, dyspepsia, or nervous prostration follow, and the man's life as a worker is done. His place is taken by a younger man, and, so long as an abundant supply of labour comes in through the stream of foreign immigration, the vacant places can be easily filled. If that stream stops there will not be so much heard of the superiority of the American working man, for America would then have to depend upon her own children, whose stock of vitality and energy is no greater than that of their parents, whether American or foreign.

Unskilled labour is generally left to the Hungarians, Italians, and Russians, who are frequently worked through "gangers" of their own nationality.

The wages continue to get higher and the hours shorter. But, as it is pointed out, whatever the justification for a demand for higher wages may be, in the result the consumer pays for the increase. And the increased price of production reacts upon the workman's wages. As he has to pay more for his rent, his food, his clothing, it is doubtful whether the purchasing power of his higher wage is as great as was that of the lower wage earned when expenses were less. There is apparently no escape from the clutch of this endless chain except by securing increased efficiency in manufacturing processes, and thereby cheapening production, and, at the same time, creating a similar result by lessening the cost of the raw material.

In all branches of the building industry the usual number of hours of labour per day is eight, it being in this respect unique among those mentioned in the report. And it is likewise unique in having no low-grade wages. The weekly wages for the different branches are as follows: Bricklaying from 33 to 60 dollars, plastering 33 dollars, painting and decorating 21 to 24 dollars, carpentry, tile-setting, steam and hot-water fitting, plumbing and gasfitting are all 30 dollars, electrical contracting 24 dollars, and structural ironwork from 15 to 27 dollars.

There is in the United States as a whole considerable unrest in labour circles. So far as the State of New York is concerned, there have been nearly twice as many strikes and lock-outs during the second quarter of 1910 as there were in the corresponding period in 1909. Thirty-five strikes were won by the workmen, 46 by the employers, 33 were compromised, and 7 were pending at the last report. The disputes resulting in favour of the employers involved 10,544 employés, while those won by the workmen or compromised involved 12,504. Thus there is no great balance in favour of either side.

A new Workmen's Compensation Act of the State of New York came into operation on September 1 of last year, and its constitutionality was at once attacked in the courts. The issue was first raised before the Supreme Court of Erie County, and the decision was a sweeping affirmation of its constitutionality, the defendants' plea on the grounds of deprivation of liberty and property without due process of law, denial of equal protection of laws, violation of right of trial by jury, and limitation of amount recoverable for injuries resulting in death, being unequivocally denied on all points. The principal attack was made upon the Act on the ground that it imposes liability without fault. The court admits that it is "not clear beyond peradventure" that the Legislature "has the power to deal with the question of employers' liability on a basis other than fault," but "every presumption is in favour of the constitutionality of the Act."

Three decisions concerning the legality of the closed shop have recently been delivered.

In the first Mr. Justice Gough, of the Supreme Court, in connection with the cloakmakers' strike, where the question as to whether a strike for a closed shop against an employer by his own employés was lawful, held that such a strike, at least under the circumstances in the cloakmakers' strike, where the strike extended to the whole trade in the locality, constituted an illegal conspiracy "to deprive other men of the opportunity to exercise their right to work."

In the other two cases referred to the question involved was the legality of a strike against an employer for handling goods made by another employer employing non-union hands. One of these arose in connection with the shirt-waist makers' strike of last autumn, and resulted in a decision by Mr. Justice Gerard, of the Supreme Court, holding that such a strike is an unlawful interference with the right of the employer to pursue a lawful trade or calling. The third case grew out of a strike of union carpenters on the new cathedral of St. John the Divine, in New York city, against the use of building material manufactured by a non-union firm in Massachusetts, and injunction proceedings in this case called forth a decision by Circuit Judge Ward, of the United States Circuit Court, holding such a strike illegal.

Mr. J. S. Rubinstein will read a paper entitled "The Land Transfer 'Scandal'" at the annual provincial meeting of the Law Society to be held at Nottingham next week.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.

(N.B.—Local authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

BERKSHIRE.
Sunningdale.—Workmen's Institute (Coronation memorial).

Additions to Gordon Villa.

Glasgow.—Buildings in Park Street and Sussex Street.

Greenock.—Six-storey building addition for the Glebe Sugar Refining Company, Ltd.

Rosyth.—Pumping station, power station, boat-house and sub-electric station (£70,000). Sub-let by the naval base contractors, Messrs. Easton, Gibb & Son.

BUILDING SUB-CONTRACT AT ROSYTH.

For the erection of the permanent buildings at Rosyth Naval Base, the principal contractors in the country were invited by Messrs. Easton Gibb & Son to submit offers for a sub-contract. These were received some time ago, and have been checked on behalf not only of the firm but of the Admiralty. Samples of stone were also submitted, and tests applied to them. Inquiries were likewise made as to the producing capacity of the quarries from which the samples were taken. Though missives have not actually been signed, it has been learned on good authority, says the *Scotsman*, that the successful offerers are Messrs. Robert Thorburn & Sons, Edinburgh. No definite figures are available, but it is stated that the execution of the work will involve an expenditure of £70,000. The buildings will consist of a pumping station, an electric power station, a boat-house, and an electric substation. It is understood that the conditions attached to the sub-contract are such as will necessitate the utmost expedition being observed in the execution of the work. The construction of the four buildings will call for the employment of a large number of workmen, both skilled and unskilled, but, if one may judge from the daily appearance of the Labour Exchange at the Ferry Toll, near Rosyth, the sub-contractors should experience no difficulty in finding an ample supply of men of all classes associated with the building industry. Even with the completion of this great establishment, the work on shore will not be nearly finished, as administrative buildings have to be provided for the Admiralty staff, a limited number of whom have been accommodated in temporary premises near Eastlandhill.

VARIETIES.

The Governors of the West of Scotland Agricultural College are considering three alternative schemes for new buildings.

It is proposed to erect a County Council secondary school at Whitley Bay which will accommodate 125 boys and 125 girls, at a probable cost of £14,000.

The death occurred at Southport on September 15 of Mr. R. H. Crabtree, who resided at Southport. A representative of the Bath Stone Firms, Ltd., formerly quarry manager at Portland, Dorset, Mr. Crabtree was much esteemed in the professions both in the North and South of England.

A deputation of the Featherstone Urban District Council to the Wakefield City Council Waterworks Committee report that the committee propose to replace the present main pipes by larger ones, at a cost of about £20,000, and also to make new storage reservoirs at a cost of about £160,000.

The Gosforth Urban District Council have decided to apply to the Local Government Board for a Provisional Order to acquire one acre of land in the vicinity of the old Regent Pit workings as a site for the erection of a refuse destructor. That portion of the land not required for a destructor should be used, it is suggested, as a council store yard.

The Newcastle Education Committee have agreed, subject to the consent of the Board of Education and of the City Council, to accept an offer of Mr. W. D. Cruddas, to sell for £4,200 a piece of land bordering on Scotswood Road and George's Road, comprising 2,062 square yards, as a site for a public elementary school to accommodate 1,000 children.

The South Manchester Board of Guardians, in consequence of representations by the Local Government Board, propose that two two-storey blocks to provide room for 100 children should be erected; that there should be an extension of the male lunatic wards; that two new wings should be added to the present nurses' home to provide accommodation for 100 nurses.

Mr. Arthur W. Bradley, A.M.Inst.C.E., of Bury, has been recommended out of a large number of candidates for the position of borough engineer and surveyor of St. Helens at a salary of £600 per annum. Mr. Bradley has been borough engineer and surveyor of Bury for twelve years, and for seven years prior to that he was the Bury deputy borough engineer.

The Highways Committee of the Mansfield Town Council have conditionally approved the plans of a building estate proposed to be laid out in the vicinity of the new Rufford Colliery near the town. The condition is that the owners undertake to throw out land to make the streets 36 feet wide, without cost to the Corporation, if required at any future time, subject to the roadways being made 20 feet wide at the present time.

The Rev. F. Rothwell Dean, rector of St. Elisabeth's Church, Reddish, referring to harvest festival services, warns church decorators of the dangers of vandalism. Many beautiful churches, he says, have been utterly spoilt by the intervention, on these occasions, of lady amateur decorators, who, armed with hammer, tacks, and wire, destroy the most beautiful wood carvings, as well as stone and marble decorations, through their appalling ignorance of what is already too artistic to be touched.

The Garden Cities and Town Planning Association, 31 and 32 Birkbeck Bank Chambers, Holborn, London, W.C., is prepared to arrange for lectures, with or without lantern slides, in any part of the country, illustrating the progress of the town planning movement at home and abroad and the great development in the adoption of garden city principles. A number of well-known authorities on town planning generally and upon the Town Planning Act have consented to lecture for the Association, and arrangements are now being made for the winter months. Applications will be considered from any public body or any institution or society taking interest in the subject, and dates will be allotted in order of priority. Applications for particulars should be made to the secretary, Mr. Ewart G. Culpin, as above.

The School of Art Wood-Carving, 39 Thurloe Place, South Kensington, which is under royal patronage, has been reopened after the usual summer vacation, and we are requested to state that some of the free studentships in the evening classes maintained by means of funds granted to the school by the London County Council are vacant. The day classes of the school are held from 10 to 1 and 2 to 5 on five days of the week, and from 10 to 1 on Saturdays. The evening class meets on three evenings a week and on Saturday afternoons. Forms of application for the free studentships and any further particulars relating to the school may be obtained from the Secretary.

VARIETIES.

THE Bothwell (N.B.) School Board on Monday agreed to erect a manual workshop, wash-house, and laundry at Uddingston, at an estimated cost of £2,250.

THE Essex Territorial Force Association has decided to embody in future contracts for buildings and ranges a clause to the effect that none but British workmen be engaged.

THE Whitley and Monkseaton Urban District Council last week passed plans for the laying out of four fields on the Red House estate, Monkseaton, showing 750 semi-detached villas.

THE Stockport Board of Guardians are considering a recommendation that a competition be organised in order to obtain plans for the proposed mental wards, which are expected to cost about £30,000.

THE Directors of the Arbroath Infirmary have instructed a special committee to obtain plans and estimates of the proposed reconstruction of the Infirmary buildings. The cost is expected to be between £7,000 and £8,000.

THE activity in the building trade which characterised the whole of last year and a portion of 1909 continues in Johannesburg. Several big works are nearing completion, but numerous large buildings are still on order.

A SITE has been purchased in Poyser Street, Wrexham, for the erection of a new church to replace the present building in the old Ruthen Road Cemetery. A sum of £3,600 is being collected by the organisers of the church extension scheme inaugurated three years ago.

THE Streets and Sanitary Committee of the Exeter City Council recommend that the surveyor prepare detailed plans and specifications for eight houses, with gardens, on the vacant land belonging to the Council in Willey's Avenue. The accommodation of each house is to consist of two living rooms, with scullery and three bedrooms.

THE Devon Education Committee have accepted the following tenders in respect of improvements and repairs:—Axminster School, J. Bazley, £221; Culmstock School, W. Andrews, £133; Dawlish School, F. Friend, £283; Ide School, Nicks Bros., £265; Marwood School, £208; Curledge Street School, Paignton, H. Drew, £745.

AT a recent meeting of Sleaford Rural District Council the tender of Mr. J. T. Barnes, of Sleaford, to construct the Burton Pedwardine waterworks for £1,450 was accepted. Messrs. Pattinson & Co.'s (Ruskington) tender of £1,414 for the Scopwick waterworks was also accepted. A tender was also accepted for building a bridge at Osbournby.

A LOCAL Government Board inquiry was held at Bourne last week relative to the Rural Council's application for sanction to borrow sums of £1,500, £1,030, and £700 for schemes under the Housing of the Working Classes Act at Dowsby, Baston, and Pointon. The loans in the three instances aggregate £3,230 for a total of 18 houses.

MR. E. L. LUTYENS is the architect for the new headquarters of the Theosophical Society to be erected in London. It is proposed to erect a large building on the vacant land between Tavistock Square and Burton Street, and the site of Nos. 1, 2, and 3 Crescent Place, 12 Burton Street, 1 Upper Woburn Place, and 19 and 19a Tavistock Square. The cost is estimated at between £30,000 and £40,000.

THE Committee of the Glasgow City Improvements Trust recommend the Corporation to apply for Parliamentary powers to borrow £100,000 for the purposes of the Trust. Among the objects for which the proposal is made are the completion of the buildings being erected in Bell Street and High Street, and the reconstruction of the Old Tontine buildings in Trongate destroyed by fire on the 4th inst.

THE Stockport Corporation have decided to apply to the Local Government Board for sanction to borrow £30,000 for the erection of new police buildings and courts. The Corporation, it will be remembered, recently held a competition for this work, and the first place was awarded to the design of Messrs. J. Theo. Halliday & Claude Paterson, AA.R.I.B.A., of Stockport and Manchester.

MR. C. ORME BASTIAN, the well-known electrician, has invented an entirely new principle of electric heat storage by means of which a small, portable thermal storage chamber or "hot-box" can gradually be charged at an infinitesimal cost with electrical heat, which can then be utilised for the heating of rooms or for cooking purposes. The apparatus forms the subject of a special article in this week's *Electrical Engineer*, which also describes the inventor's method of generating electricity by means of a small wind turbine and dynamo in localities where no power station supply is available. The complete apparatus can in such cases be set up in a country house for about £25, while the "hot-box" for use either with the ordinary mains or the wind turbine can be sold for £1 and upwards, according to size.

THE London County Council invite applications before October 7 for the position of a full-time principal for the L.C.C. Central School of Arts and Crafts, Southampton Row, W.C., at an annual salary of £1,200. In addition to high qualifications as a practical artist it is expressly stated that administrative and organising ability is essential. The principal must also be in touch with the industrial application of the work of the school.

THE Works Committee of the Dundee Town Council on the 20th inst. approved of the following plans:—Cobden Street—Semi-detached cottages for Dr. Williamson; East Haddon Road—Semi-detached cottages for Thos. C. Stocks; Park Place—Training College and School for the St. Andrews Provincial Committee for the training of teachers. The architect for the last-named work is Mr. T. Martin Cappon, F.R.I.B.A., of Dundee, and the estimated cost is £60,000.

A COMPETITION has been opened by the Cuban Government for the erection at Havana of an equestrian statue of the Cuban General Maceo. Plaster models should be sent to the "Comisión Ejecutiva, Monumento al General Antonio Maceo, Secretaría de Instrucción Pública y Bellas Artes," Havana, before January 20, 1912. The sum of 100,000 pesos (about £20,600), has been voted for the work. British sculptors proposing to compete should first put themselves into communication with the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C., where also further particulars (in Spanish) may be seen.

AT a recent meeting of the Water Sub-Committee on Finance of the Glasgow Corporation there was submitted a statement by the treasurer showing that the unexhausted borrowing powers under the Glasgow Corporation Water Acts as at May 31 last amounted to £185,000, and that a sum of £479,200 would be necessary to meet the requirements of the department in the next few years. The sub-committee, having considered the statement and heard the engineer in regard thereto, agreed to recommend that application be made to Parliament, in the ensuing session, for authority to borrow a further sum of £300,000 for the completion of the works in progress and for extensions of the existing works.

THE proposals of the Post Office authorities as to the erection of a new General Post Office for Rochdale have now been submitted to the Corporation. The plans provide for a spacious building, the estimated cost of which is £20,000, and the Department state they are prepared to erect the building on a site nearly opposite the Town Hall, on condition that the Corporation extend the covering over the river in order to provide a proper frontage, and contribute £200 towards the cost of additional stone work, which will be necessary to bring the building into harmony with the Town Hall. Although no official estimate has been prepared as to the cost of further covering the river, it is expected to be about £5,000.

TRADE NOTES.

UNDER the direction of Messrs. N. W. Harrison, F.R.I.B.A., & G. A. Harrison, M.S.A., Oxford, the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to George Street Congregational Church, Oxford.

THE judges appointed to examine and report on the exhibits at the Festival of Empire have now announced their awards. Messrs. Newton, Chambers & Co., Ltd., of Thorncliffe, near Sheffield, have secured a Grand Prix for their Izal disinfectant preparations, thus adding one more to the remarkable series of highest possible awards obtained by them at international exhibitions at home and abroad. Their exhibit at the Crystal Palace reveals the multifarious purposes—medical, surgical, veterinary, horticultural and domestic—for which Izal is offered to the public.

A FINE tower with clock and bell showing the time on four illuminated dials has been placed in the Holbeck Gardens, Scarborough, by a donor. The clock was made and fixed by Messrs. Wm. Potts & Sons, Ltd., Leeds. This firm are making a clock for Sir Tatton Sykes, Bart., for Sherburn Church, near York; a clock and bells for Darwen; and an illuminated clock for Clayton Conservative Club, Lancashire.

MESSRS. GEORGE MILLS & CO., LTD., engineers, Radcliffe, near Manchester, have received the following letter from John Leigh, Ltd., cotton waste merchants, Oldham:—"We are pleased to inform you that in a fire which broke out on the 11th inst. at our Brighton mill the 'Titan' sprinklers you installed for us some time ago acted very satisfactorily indeed. We are convinced that had it not been for their prompt action the mill would have been gutted."

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Barnsley.—Oct. 7.—The Town Council invite competitive drawings for a proposed extension of public baths, including a swimming bath, Russian and vapour baths, and slipper baths, in connection with the existing public baths in York Street and Race Street, Barnsley. The Town Council offer premiums of £50, £30 and £20. Mr. J. H. Taylor, M.I.C.E., borough surveyor, Manor House, Barnsley.

Bristol.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Evesham.—Oct. 7.—The Rural District Council invite designs, with estimates of cost, for laying out a building site at Broadway and the erection thereon of 30 cottages, under the Housing and Town Planning Act, 1909. The architect whose design is accepted will be appointed to carry out the work at an inclusive fee of 5 per cent. Deposit £1 1s. Mr. E. H. Wadams, Clerk, Union Offices, Evesham.

Coseley.—Oct. 12.—Plans for school for 200 children for the Education Committee, at Dimmock Street, Parkfield, Coseley, W. Dudley. Conditions, one guinea, returnable on receipt of plans. Mr. Fred J. C. Poole, Secretary, Education Offices, Coseley, near Bilston.

Halifax.—Oct. 7.—The Tramways Committee invite designs and tenders for tramway shelters. Particulars, with tracings of sites, can be obtained on application to the Borough Engineer, Town Hall, Halifax.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s.* deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—Oct. 31.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s.*, which will be refunded on receipt of a bona-fidé design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Murton.—Oct. 4.—The Easington Rural District Council invite plans for three separate types of houses, of which it is proposed to build 100 at Murton Colliery, Durham. The houses to be in streets of twenty with 16 ft. back streets, 18 ft. frontage, and garden ground in front of each house to a depth of 30 ft., an earth closet and outside pantry to be provided for each house. Strict compliance with the Council's by-laws and the Local Government Board regulations will be required. The following are the types of houses:—Type A.—28 ft. gable, three bedrooms, one living room, one sitting room, scullery (offshot), with kitchen range and bath. Type B.—25 ft. gable, three bedrooms, one living room, scullery, with kitchen range and bath. Type C.—Two bedrooms, one living room and scullery, with kitchen range and bath. Appearance and economy of structure will be considered. The successful candidate will receive 2½ per cent. commission upon the net cost of buildings when erected. No other remuneration will be paid. Mr. J. M. Longden, Council Offices, Easington, Castle Eden.

Rochdale.—The Board of Management of the Rochdale Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Uruguay.—Jan. 30.—The Ministry of Public Works nvite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial ntelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—The Cardiff Education Committee invite designs and estimates in competition for a technical institute proosed to be erected in Cathays Park. Mr. J. S. Gibson, rchitect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s.*, which will be returned to all architects submitting ona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

The Usher Hall Committee of Edinburgh Town Council met on Saturday in the City Chambers to consider the scheme of internal decoration of the Usher Hall. The architect of the new hall (Mr. Howard H. Thomson, Leicester) was present, and after a discussion the committee approved of the proposal that the decorative scheme should be in Sienna marble, Roman stone, and bronze. With regard to the outside decorative scheme the committee agreed to ask selected sculptors to send in competitive models.

On June 12, 1899, a prominent medical man wrote to the Berkefeld Filter Company as follows:—"I have just returned from a journey in the interior of China, and occasionally the only water that I could obtain was so turbid that one ould not see through it. You will be glad to hear that your Travellers' Pump Filter worked very well, and gave entire atisfaction, affording my companion and myself a constant upply of pure drinking water under circumstances where boiled water was unobtainable. I can heartily recommend the ilter as simple in construction, standing wear and tear, and affording under the most adverse circumstances pure water, afe to drink and free from any objectionable taste. And he fact that we were both in perfect health at the end of ur journey, although travelling in rain and living in native houses, speaks for itself." On September 5 last the same writer of the testimonial called at 121 Oxford Street and olunteered the following unsolicited endorsement of his previous letter:—"After more than ten years' experience of his filter and other filters supplied by the same firm in South China I heartily endorse every word written in my letter f June 12, 1899." The Berkefeld Filter Company are ustly proud of such an emphatic testimonial.

A. H. Fryd, Southend-on-Sea (*accepted*)	1,695	0	0

It is proposed to form a company to erect swimming baths in connection with the Millbay Rinkeries at Plymouth. The cost is put at £4,000.

The Leicester Education Committee have accepted plans for the proposed school on the Hinckley Road, which will require an outlay of £18,500. For the present only the infants' department will be erected, at a cost of £6,000.

The Southampton Borough Engineer recently submitted to the Housing Committee plans for the enlargement of St. Michael's House by the addition of fifty-four cubicles, at an approximate cost of £2,440. The committee recommend that the Council approve the scheme, and make application to borrow the sum mentioned.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF BUILDINGS PROJECTED OR RECENTLY COMMENCED.
(N.B.—Local authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

CAMBRIDGESHIRE.

Willingham.—Ten cottages for the R. D. Council.

CHESHIRE.

Ellesmere Port.—School. Messrs. Dryland & Preston (of Littleborough, near Manchester), contractors (£5,927).

Macclesfield.—Technical School premises, Old Park Lane, and alterations to adjoining premises.

CORNWALL.

St. Agnes.—Bungalow Residence at Mithian.

CUMBERLAND.

Allonby.—Council School additions.

Blackwell.—Semi-detached house. Mr. Higginson, architect.

Carlisle.—Technical School.

Cummersdale.— School additions. Mr. Forster, architect to the Cumberland Education Committee.

Etterby.—Four semi-detached houses, St. Ann's Hill.

Stoneraise.—Council School: Master's House. Mr. Forster, architect.

Upperby Road.—Two semi-detached houses, York Place. Mr. Foxall, architect.

Wetheral.—New house; and additions and alterations to existing houses. Messrs. Oliver & Dodgshun, architects.

DERBYSHIRE.

Bolsover.—Twenty-six houses at Langwith.

Darley, North.—Mixed School.

Derby.—Factory for Messrs. Moore, Eady & Goode, Ltd.

Library for the Mechanics' Institution.

DEVON.

Laira.—Church of St. Mary-the-Virgin. Mr. T. Rogers Kitsell, A.R.I.B.A., architect (£5,000). Messrs. Pethick Brothers, contractors.

Weston Mill.—Church of St. James.

ESSEX.

Bulpham.—Homestead, Church Lane, for the Smallholding Co-operative Colony. Mr. J. W. Dunford (of London), architect. Messrs. W. T. & J. Cooper, contractors.

Epping.—Cottage Hospital for the district.

Leigh-on-Sea.—Mixed Infants' School. Mr. P. Brocklebank (of Southend), architect.

Woodford Bridge.—Swimming-bath for the Barnardo Boys' Village (£1,000).

HAMPSHIRE.

Gosport.—Workshop for Messrs. Camper & Nicholson.

KENT.

Ashford.—House at Goods Hill.

House at Silver Hill.

Tunbridge Wells.—Shops, Mount Pleasant.

LEICESTERSHIRE.

Leicester.—School, Hinckley Road: infants' department for 448 (£6,000). Mr. W. M. Cowdell, F.R.I.B.A., architect.

LINCOLNSHIRE.

Ashby.—Church for 500 persons. Sir Charles Nicholson, Bart, F.R.I.B.A., architect.

Barton-on-Humber.—School for 1,000 children.

Bourne.—Four houses.

Lincoln.—Carnegie Library.

St. Thomas.—Church at Skirbeck Quarter.

MIDDLESEX.

Acton.—Thirteen houses in Derwentwater and Newburgh Roads.

Houses in Summerlands Avenue and in Cowper and Pierrepoint Roads.

MONMOUTHSHIRE.

Risca.—Houses in Clyde and Commercial Streets: additions and alterations. Messrs. T. E. Richards & Kaye (of Pontypridd), architects.

NORFOLK.

Norwich.—Castle Museum alterations. Mr. A. Collins, M.I.C.E., city engineer. Messrs. T. Gill & Son, contractors (£1,464).

Council Schools for 370 seniors and 320 juniors, City Road, Lakenham.

NORTHAMPTONSHIRE.

Oundle.—Isolation Hospital. Mr. H. Trayler, architect.

Wellingborough.—Workhouse: Baths extension.

NORTHUMBERLAND.

Newcastle.—Picture Hall, corner of Clayton Street and Westgate Road.

Shop premises, corner of Heaton Park and Shields Roads.

SOMERSET.

Bath.—Hetling House; restoration. Mr. S. S. Reay, F.R.I.B.A., architect. Messrs. Hayward & Wooster, contractors.

STAFFORDSHIRE.

Leek.—Railway Station alterations.

Council School, Ashbourn Road.

Stafford.—Board of Guardians' Receiving Home for thirty children.—Mr. T. Jenkins, architect.

SURREY.

Chertsey.—Workhouse Infirmary: Nurses' Home for twelve nurses. Mr. T. Allen, architect.

Reigate.—Victoria Almshouses (two additional almshouses).

Woodbridge Hill.—Factory for Messrs. Dennis Brothers, Ltd.

SUSSEX.

Hove.—Sanatorium: ward block for twelve beds (£2,500).

WARWICKSHIRE.

Chilvers Coton.—"George Eliot" memorial stained-glass window (£250).

Coventry.—St. John's Rectory (£1,500).

Rugby.—Extensions to Baths; also Superintendent's House (£750).

WORCESTERSHIRE.

Broadway.—Sixty cottages for artisans.

Worcester.—Infants' Church School, St. George's. (Accommodation for 200.)

YORKSHIRE.

Bradford.—Conservative Club, Old Lane: additions and alterations. Mr. T. L. Dixon, architect.

Clifton.—Church Institute, Water Lane (£880).

Foston.—Iron church at Thornton (accommodation for 100 persons).

Harrogate.—St. Wilfred's Church: chancel, sanctuary, and tower (£10,000).

Hepworth.—Slaughter-house alterations for the Co-operative Society.

Hillsboro'.—Shop and office buildings, Holme Lane. Mr. J. W. Winter (of Sheffield), architect.

Hollingreave.—Four houses.

Huddersfield.—Additions to Lane Mills, Leeds Road. Mr. J. Berry, architect.

Sheffield.—Lodge Moor Infectious Hospital extensions (£1,200).

Windhill.—Church Schools: additions and alterations. Mr. T. L. Dixon (of Bradford), architect.

WALES.

Abergele.—Two semi-detached villas, St. George Road Offices, Water Street.

Clydach.—Schools.

Colwyn Bay.—Cottage in Eirias Dingle.

Four houses in Francis and Holyrood Avenues, and Nantyglyn Road.

Alterations to Maenan House, and workshop in rear.

Groesfaen.—Thirty houses for the Rhymney Iron Co., Ltd. Mr. J. Ll. Smith (of Aberdare), architect.

Pentrebach.—Fifty-two workmen's cottages (£11,250).

Porthcawl.—Women's Convalescent Home.

Rhos.—Four houses in Church and Marine Drives and Abbey Road.

Ysguborwen.—Cottage and farm buildings at the Cottage Holding.

Farm buildings, &c., at Croesdy Cottage Holding.

SCOTLAND.

Capinsay (Orkney).—Lighthouse and fog-signal station. Mr. H. M'Dougall, contractor.

Coatbridge.—Five houses and a printing workshop at the rear of property in Main Street (£450).

Edinburgh.—Eight villas, Blinkbonny Crescent.

Villa, West Barnton Terrace.

Falkirk.—Conversion of Olympia Skating Rink in Hope Street into an electric and variety theatre.

Fort William.—School, teacher's house, and offices at Blarmachfoldach. Mr. J. G. Falconer, architect. Separate contractors.

Camesky Lodge: additions and alterations.

Glasgow.—Epileptic Colony.
(See also Port Glasgow.)

Inverness.—Northern Meeting Rooms. Dr. Marshall Mackenzie, A.R.S.A., F.R.I.B.A. (of London and Aberdeen), architect (£3,000 to £4,000).

Kinglassie.—Board School.

Paisley.—Post Office extension.

Port-Glasgow.—Parish Church Halls. Mr. A. F. Duncan (of Glasgow), architect (£2,000). Messrs. M'Bride & Co., contractors.

Stonehouse.—Board School, Townmead: infants' department for fifty children.
Infant School, Greenslade: conversion into cookery, laundry and manual instruction centre.

Waterside.—Railway station.

IRELAND.

Shankill.—Carnegie Library. Mr. G. Bower (of Ballybrack), contractor (£856).

THE HEATING OF BUILDINGS.

The question of heating buildings, domestic and otherwise, is one that has engaged the active attention of architects in general for many years, and particularly in London—the "City of Fogs"—where the damaging effects of the "smoke nuisance" are so manifest. This activity is now largely being devoted to studying the question from a more scientific aspect than hitherto—*i.e.*, not merely from the standpoint of obtaining heat, and that only, but of obtaining it in its most convenient and hygienic form.

Of late years, in this country especially (where the vagaries of the climate have been so marked at all seasons of the year) a system of heating that is always instantly at the will of the user is becoming more widely known and adopted day by day.

We refer to the gas fire.

The enterprise of the manufacturers of gas heating stoves and the gas supply companies in perfecting the stoves from a hygienic as well as a practical point of view has led to this means of heating finding favour.

The work that the largest metropolitan gas company have undertaken in offering to architects the free fixing of gas fires for a trial period should induce members of the profession who have not had personal experience of modern gas heating to take this opportunity to study the subject more closely, and should lead to their advising the still wider adoption of this excellent system of heating, with great advantage to the general public and the ultimate preservation of our buildings.

COMPETITION NEWS.

The Special Infirmary Site Committee of the Manchester Corporation met on Monday at the Town Hall. The report of Mr. Reginald Blomfield, A.R.A., on the subject of the final selection from the ten selected sets of plans for a new art gallery and reference library on the site was received. After it has been printed a copy of it will be sent to each member of the Council. The ten sets of plans are by the architects who were selected out of the large number that submitted competitive designs in the first instance. When the selection was made the authors of these plans were asked to adapt their plans to meet the particular requirements of the committee. Having complied with the committee's request their designs were submitted to Mr. Blomfield, who is joined with the city architect as adviser.

We regret to announce the death of Mr. Samuel Putney, which took place on the 19th inst. at his residence, 2 Park Avenue, Willesden Green, N.W., after a short illness. Mr. Putney was born in London on November 3, 1824, and was the founder of the firm of Samuel Putney, Ltd., of Harrow Road, Paddington Green, W., with several branches in London. The firm is well-known and respected in the timber trades, but better known to architects and builders in connection with the system of wood flooring described as Putney's Pavodilos. Mr. Samuel Putney retired from active work in connection with the business in 1903, and since that time his sons, who were associated with him in the management, have conducted it. The firm's customers include their late Majesties Queen Victoria and King Edward VII., his Grace the late Duke of Westminster, the Right Hon. the Earl of Jersey, and the Right Hon. Joseph Chamberlain, M.P., &c. Their floorings and wainscottings have been largely adopted for use in hospitals, schools, libraries, and other public buildings.

THE EVOLUTION OF THE DWELLING-HOUSE AND SOME REFLECTIONS THEREON.*

Necessity has been said to be the mother of invention, and certainly necessity for protection from the inclemency of the seasons was the mother of architecture and the science of building.

The ages that have elapsed, and the distance which separates us from the nations amongst whom the art of building was first practised, deprive us of the means of examining the degrees of difference resulting from climate, productions of the soil, the precise spots upon which the earliest societies of men were fixed, with their origin, number, mode of life, and social institutions; all of which would influence them in the selection of one form in preference to another.

The original classes into which mankind was divided were, we may safely assume, those of hunters, shepherds, and of those occupied in agriculture; and the buildings, or dwellings, which each would require for protection, were characterised by their several occupations.

The hunter and fisher, finding all they required in the clefts and caverns of rocks, and the indolence which those states of life induced, made them indifferent to greater comfort than these naturally formed dwellings gave. That such tribes thus lived there is ample testimony from Eastern travellers and explorers (and for Biblical confirmation see Jeremiah, chap. 49, v. 16).

To the shepherd, the inhabitant of the plains wandering from place to place, as the needs of pasture for his flocks compelled him, another type of dwelling was necessary, one which he could remove with him in his wanderings: this was the tent, still the standard dwelling of all nomads.

For the agriculturist portion of the race a fixed abode was necessary, not only for the personal comfort of the husbandman but for the preserving of the fruits of the earth from one season to another; solidity was required, hence the hut, assumed generally by authorities on architecture to be the type of Grecian architecture.

The earliest dwellings constructed after the dispersion of mankind from the plains of Sennaar were proportioned to the means which the spot afforded, and to the nature of the climate to which they were to be adapted. Reeds, canes, the branches, bark, and the leaves of trees, clay, and such material would be first used. The first houses of the Egyptians and the people of Palestine were of reeds and canes interwoven. At the present time the same materials serve to form the houses of the Peruvians. According to Pliny, the first houses of the Greeks were of clay, for it was a considerable time before that nation became acquainted with the process of hardening it into bricks. The Abyssinians still build with clay and reeds. Wood, however, offers such facilities of construction, that still, as of old, its use prevails in those places where it abounds, as in the wooden dwellings in the forests of the northern parts of Germany, Poland, and Russia.

The construction of the early dwellings of mankind required little skill and knowledge; a very limited number of tools were at his disposal. The method of felling timber, still used by uncivilised people, *i.e.* by fire, would serve at first; following this method would come the shaping of hard and infrangible stones into cutting tools; these, as metals became known, would give way to tools made of those materials. The saw, nails, hammer, and other instruments of carpentry were unknown. The industry and perseverance of man overcame in the end the difficulties of construction, for wood, the earliest material, was supplanted by brick, stone, marble, and like substances; and in the course of ages edifices were erected of unparalleled magnificence and solidity. It is most probable that bricks were in use long before stone was employed in buildings; after being moulded, they were merely subjected to the heat of the sun's rays to acquire the necessary hardness. Of such materials was the Tower of Babel constructed.

The introduction of the use of bricks to any great extent in domestic buildings in England was probably between the years 1300 and 1450, although instances of their use in ecclesiastical buildings and chapels were more common. An old writer, Leyland, says:—

"Michael de la Pole, merchant of Hull, came into such favour with King Richard II. that he got many privileges for the towne. And in hys tyme the towne was wonderfully augmented yn building, and was enclosyd with ditches, and the waul begun, and in continuance, endid, and made all of brike, as most part of the houses at that time was. In the waul four principal gates of brike."

---

* **A Paper read at the annual conference (26th) of the Sanitary Inspectors' Association at Great Yarmouth by Mr. H. Johnson, chairman of General Council.**

After enumerating twenty-five towers "M. de la Pole," we find from Leyland,

"Builded a goodlie house of brike, against the west end of St. Mary's Churche, lyke a palace, with goodly orcharde and garden at large, also three houses besides, every one of which hath a tower of brike."

This was the first instance of so large an application of brick in England.

The period at which wrought stone was brought into use for building purposes is unknown; as is that at which cement of any kind was first employed as the medium for uniting masonry. But that both were inventions of that race of land cultivators, already mentioned, there can be little doubt, to whom solid and durable edifices were necessary when they had fixed upon a spot for the settlements of themselves and families.

But no country could have been compelled earlier to adopt it as a building material than Egypt, because the climate does not favour the growth of timber; hence stone, marble, granite were forced into use.

The time at my disposal will not permit of my dealing but lightly with the methods of building dwellings in other lands; but in all Southern European countries the stages of the different types of material used appear to have been in order —*i.e.* the flexible, the plastic, the moulded, and the solid.

Two types of the elementary houses of the Pelasgi are described by Duc in his "Habitations of Men." The habitations consisted of a low circular wall formed of large stones, on which was erected a cone of branches of trees, covered with reeds or twigs; the fire was made in the middle, and the smoke issued through the top of the cone. Another type, rectangular in shape, was built by heaping up stones to form the walls; the door was formed by large stones tilted towards each other, with another stone across them, forming a lintel, the roof being made by means of tree poles laid side by side and covered with turf, leaves, and grass. Neither type gave any protection against dampness or soil emanations. Some cottages in rural England to-day are very little in advance of these early Pelasgi dwellings—very pretty possibly, but very insanitary—the healthy outdoor life of the occupants alone counteracting the evils of the occupancy.

At the time of the invasion of Britain by Julius Cæsar, in the year 55 B.C., the inhabitants dwelt in houses resembling those of Gaul; and in Kent and other southern parts of the country their houses were more substantial and convenient than those in the north. Caves or earth dwellings appear to have been their original shelter, which had been preceded by the wicker enclosure, the sides of which were encrusted with clay. These were thatched with straw.

The wooden houses of the Gauls and Britons were circular, with high, tapering roofs, at the summit of which there was an opening for the admission of light and the emission of smoke. These, where the buildings were on a grander scale, were placed upon a foundation of stone, and much resembled those of the Pelasgi before mentioned.

In Great Britain, as also in many parts of Europe, the evidence is convincing that the earliest form of dwelling —worthy to bear the name of house—was round. In this country charcoal burners, whose occupation is an ancient one, build and occupy round huts at the present time. They are composed of a number of thin poles laid together in the form of a cone, the feet are placed about a foot apart, and then interlaced with brushwood and long grasses, and covered with turfs.

(To be continued.)

St. Wilfred's Church, Harrogate, is shortly to be extended by the erection of chancel, sanctuary and tower.

It is proposed to erect a pavilion at the shore end of Worthing pier.

The Sunderland Town Council have agreed, after a discussion protracted over a considerable period, to the purchase from the owners of the Ford estate of 12 acres 136 square yards of land as a site for a day training college, at a cost of £7,818.

Alderdale Hall and estate, which is within half a mile of Clayton Bridge station, near Manchester, has been sold to the Alderdale Estate Co., Ltd. It is proposed to convert the estate into a garden city, with houses of the modern semi-detached type, and with gardens both back and front. It is expected that the building work will commence very shortly.

POLISH HOUSES.

The following information in the *Board of Trade Journal* is from the report by H.M. Consul at Warsaw (Mr. C. Clive Bayley) on the trade of Poland and Grodno in 1910, which will shortly be issued:—

The houses built for the occupation of the richer classes are all on the flat system, while those for the poorer classes are similar in design to the British model dwellings, only perhaps a little more ornate. All buildings are supervised by a large committee of engineers and architects appointed by the municipality, and generally the construction is strong and good.

Fireproof buildings are the fashion, and all fireproof materials are in demand. Reinforced concrete floors, staircases and partitions are being slowly adopted, but at present hollow bricks are principally used for floors and partitions.

The external finish of the houses is much less ornate than formerly, but the internal fittings—door handles, hinges, locks, window fittings, &c.—are much superior to those previously used, and consequently should attract the attention of the British manufacturer.

THE FUTURE AUSTRALIAN CAPITAL.

Although the Australian Federal capital territory was only transferred to the National Government on January 1 last, and the city site has not even got a name yet, enormous progress has (writes the Melbourne correspondent of the *Manchester Guardian*) been made. Within the last financial year over £113,000 has been spent on the territory by the Labour Ministry. A military college has been established on the basis of an old homestead, dozens of miles of new roads have been made, and over one hundred remade and cleared, dozens of cottages have been erected to house workmen, in addition to a big "bachelors' barracks," rivers have been bridged, a National Observatory has been initiated, a central electric power station has been erected, and designs for great water supply, sewage, drainage, and brick-making works have been approved and tenders prepared. At Jervis Bay, the future Federal port, the national area has been extended by 5,100 acres, and the sites for docks and shipbuilding yards have been reported on. Already 500 Government workmen are engaged in different parts of the territory, and by the end of next year the employees will number thousands.

This advance army of workers awaits the award in the world competition for the laying out of the national city—a capital before whose glories, it is hoped, even Washington will take second place. Certainly nothing but a succession of severe droughts or an overwhelming "national economy" campaign can now stay the progress of one of the most important experiments in town-planning the world has ever seen.

TRADE NOTES.

The Isolation Hospital, Acton, is being supplied with Shorland's double-fronted patent Manchester stoves with descending smoke-flues by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

The Brilliant Sign Co., Ltd., have secured an order for their Brilliant letters from Messrs. Frosts, Ltd., of Liverpool. The sign will measure 255 feet by 2 feet 6 inches.

The Corporation of Ryde are about to make application for a loan of £8,500 for the purpose of increasing the water supply.

The Athenæum and Choral Societies at Southend-on-Sea are much handicapped owing to the lack of a suitable hall. A winter garden at this popular watering-place should be a paying proposition.

Mr. T. G. Abercrombie, architect, Paisley, is preparing plans for a large church and suite of halls to be erected on the site of the Abercorn foundry at North Croft, Paisley, by a benefactor.

The borough engineer of St. Helens has been instructed to prepare the plans necessary for an extension of the present cemetery, for which the Corporation are empowered to expend £3,400.

Mr. Jowett Kendall, architect, of the firm of Messrs. Jowett Kendall & Co., of Pudsey, died suddenly on the 24th inst. at Morecambe, at the age of sixty. Mr. Kendall formerly carried on business in Leeds as a member of the firm of Kendall & Bates.

VARIETIES.

A NEW school to accommodate 1,000 children is to be shortly erected at the Hampstead Garden Suburb.

THE London County Council are to apply for Parliamentary powers to enable them to purchase sites for seventeen new schools.

COPSEWOOD GRANGE, Warwickshire, the late Sir Richard Moon's estate, will shortly be cut up for building purposes. Some 2,000 houses are likely to be built upon it.

A WALLED village of the late Stone Age has been discovered a few miles from Otley, Yorkshire. The remains include those of a smelting furnace, crematorium, and place of worship.

THE Barry Education Authority are recommended by a committee to dispense with the services of their architect and to entrust in future all architectural work to the surveyor's department.

THE *Diario Official* of Brazil publishes a decree earmarking, in favour of the Ministry of Justice and Home Affairs, an extraordinary credit of about £158,000 for the purpose of completing the building of police cavalry barracks in the Avenida Salvador de Sá, Rio de Janeiro.

MESSRS. GEORGE MORGAN & SON, architects, Carmarthen, have been selected to prepare designs for a proposed extension of the West Wales Asylum at Carmarthen. Forty acres of ground contiguous to the present building have just been purchased in connection with the scheme.

THE Birmingham Board of Guardians have empowered the Finance Committee to arrange for a loan of £1,500 to cover the erection of pathological, bacteriological, and X-ray departments, and extensions to the accommodation for nurses at the infectious block.

SEVERAL new shops are about to be erected at Tunbridge Wells. The South-Eastern and Chatham Railway Company have been carrying out extensive alterations and improvements at the station.

THE Holyhead Town Council last week considered a scheme prepared by the local surveyor for drainage works estimated to cost £30,000. It was agreed to carry out the proposals piecemeal as necessity arose.

THE Bridlington Town Council have decided to commence at once the construction of a new shelter and public lavatories on the South Marine Drive. It is hoped to complete the work before the commencement of next season. They also propose to borrow £4,400 for further street improvements in St. John Street in order to make a wide and commanding thoroughfare between old and new Bridlington.

THE *Electrical Engineer* signalises its twenty-ninth year of issue by a reduction in price to 2*d.* weekly and by a simultaneous increase in the number of its pages. The current number, which is abundantly illustrated, describes the leading features of the great electrical exhibition at Olympia, and among other features describes and illustrates Dr. Nikola Tesla's new turbine, which, it is believed, is destined to revolutionise all existing methods of fluid propulsion.

THE Glasgow and West of Scotland Slaters' Association has received a message from the United Slaters' and Tilers' Society of Victoria, in which they state:—"It has been reported to our Society by tradesmen coming from the British Isles that it is advertised in the papers offering constant work for slaters and tilers at 10*s.* per day. On behalf of the slaters and tilers of Victoria we beg to say that this is impossible, as the members here do not average 30*s.* per week, taking the year round, owing to wet weather, slackness of trade, and the large amount of galvanised iron used for roofs."

THE Local Government Board have approved of the scheme of the Doncaster Corporation to erect sixty workmen's dwellings at Warmsworth, fifty at Carr House and Elmfield, and a certain number not yet determined in Wheatley Lane, in place of those demolished in the building of the Marshgate Bridge. The first site submitted was one in Marshgate, near the river, and near the sites of the houses demolished, but there was a good deal of opposition to the scheme, and finally the Board refused to sanction it. The scheme now sanctioned will cost between £36,000 and £40,000, and application will be made to the Board for powers to borrow the money.

THE Local Government Board have approved of a scheme of main sewerage and sewage disposal extensions for Consett. The works comprise the laying of two main additional outfall sewers composed of iron and earthenware pipes, also the construction of sedimentation tanks at the disposal works, and the laying out of an increased area of land for sewage irrigation as an extension to the present sewage farm. The Council have instructed the engineers, Messrs. D. Balfour & Son, of London and Newcastle-on-Tyne, to obtain tenders for the carrying out of the work.

THE members of the Manchester, Salford and District Building Trades Employers' Association met on Tuesday to discuss the demands made on behalf of the labourers for increased wages and revised working hours. The meeting was private, but the opinion was expressed that the difficulties to be overcome are not serious, and that the reply to the Labourers' Union, which has to be made by the beginning of next week, will be satisfactory.

MR. A. G. DRURY, M.Inst.C.E., held an inquiry at Sutton-Sea, Lincs., on Tuesday, into the application by the Spilsby Rural District Council to the Local Government Board for sanction to borrow £7,200 for purposes of sewerage and sewage disposal at Sutton-on-Sea. For the Rural District Council it was stated that all past schemes had broken down, and the new scheme would involve a cost of £7,712. Mr. H. Walker, of Nottingham, the engineer, explained the scheme.

THE project for erecting memorials to the late King Edward VII. in Sheffield was advanced a stage on Tuesday, when a meeting of the sub-committee in connection with the proposed Crippled Children's Home was held at the Town Hall. It was reported that the amount received or promised for the erection of the statue and the provision of the Crippled Children's Home was £16,764, and that other amounts were expected, making a total of upwards of £19,250. A small sub-committee was appointed to report as to the accommodation in the proposed home, as to the cost of the building, and also as to its future maintenance.

THE new building by-laws for the city of Sheffield, which have been under discussion for the past three years, have at last reached a final form. The special committee which has had charge of them held its last meeting on the 26th inst., when it was reported that the by-laws had been provisionally approved by the Local Government Board, and it was decided to recommend them to the City Council for formal adoption at the next meeting. The committee have had before them objections and representations from the Sheffield Society of Architects and Surveyors, the Chamber of Commerce, the Sheffield Engineering Trades Federation, the Master Builders' Association, and other bodies. The views put forward have been met as far as possible. The committee also decided upon amendments of the regulations as to architectural projections, which will be submitted to the Council for approval along with the by-laws.

A COUNCIL meeting of the London Master Builders' Association was held at Koh-i-Noor House, Kingsway, W.C., on Thursday, September 21, with the President (Mr. G. Bird Godson) in the chair. The minutes of the last ordinary Council meeting, together with those of the special Council meeting held on the 23rd ult., of the special Committee meeting, the report of the Conciliation Board meeting, and the report of the Finance Committee were read and confirmed. Several matters from the National Federation were considered, and the question of national insurance and unemployment was discussed. Attention was drawn to instances of intimidation during the late strike and to the obvious evils attending peaceful picketing. The following new members were elected and nominated:—Elected: Ordinary member: Messrs. W. Moss & Sons, Ltd. Associate members: Messrs. Smeed, Dean & Co., Ltd., Messrs. Lawford & Sons, Ltd. Nominated: Associate members: Messrs. The Metropolitan Asphalte Co., Messrs. Loosley & Son, Messrs. F. A. Clark & Sons.

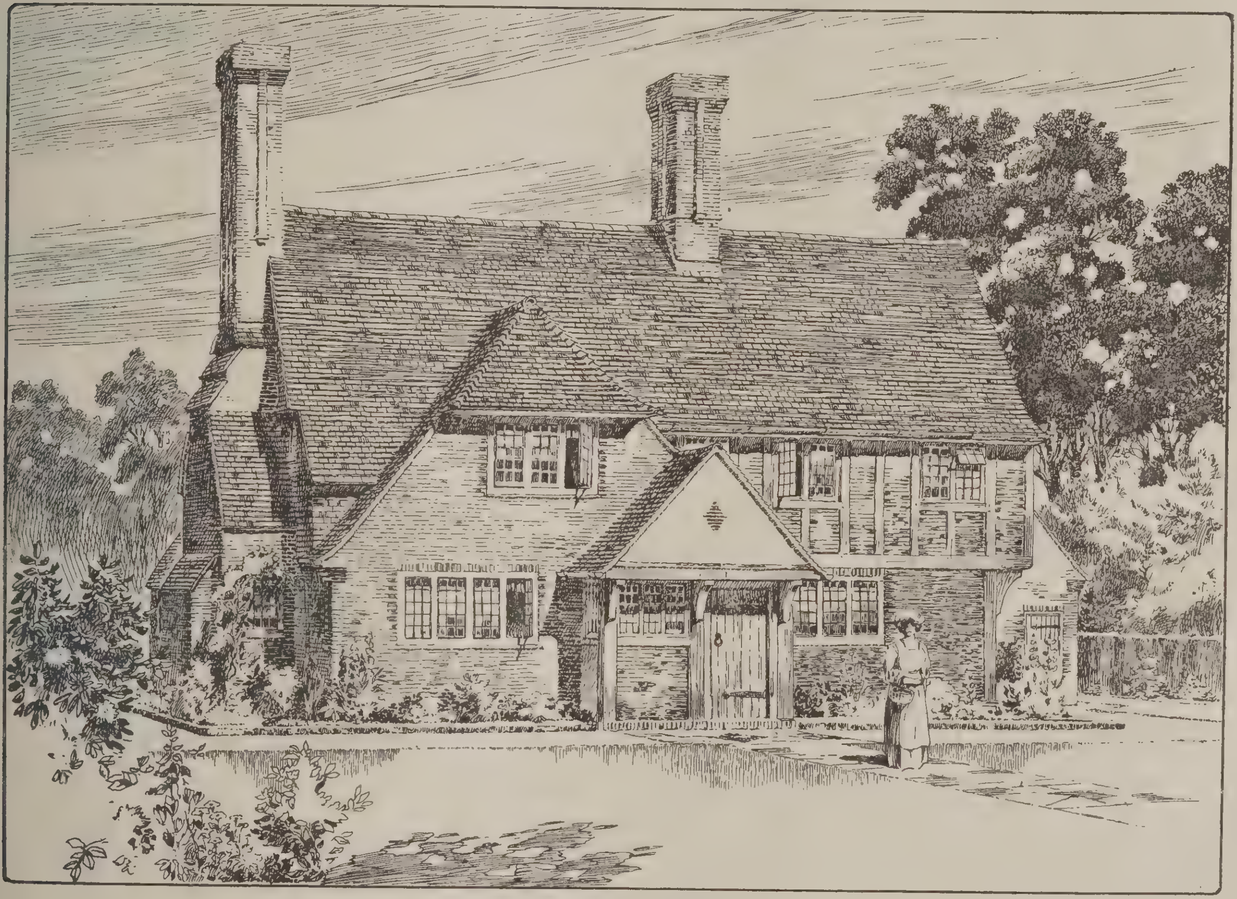
THE Rhymney Valley Joint Sewerage Board last week discussed an extensive sewerage scheme. The engineers, Messrs. Wilcox & Raikes & Reed & John S. Alford, submitted their scheme for a sea outfall. The report stated that a careful survey had been made of the route of a trunk sewer from Tyn-y-Coed to the sea, and they had assumed for the purpose of calculation that the population of the Rhymney Valley would ultimately be 180,000. Reference was made to an estimate by Messrs. Willcox & Raikes & Reed for a scheme proposed by the Gelligaer Council, with disposal works at Tyn-y-Coed, and it was stated that the sum allowed for the construction of a trunk sewer to the north of Tyn-y-Coed was £50,000. This amount had been included in the estimate for the sea outfall scheme. The engineers had prepared two alternate estimates, amounting to £222,000 and £206,000. After discussion it was decided to adopt a sea outfall scheme, and also to instruct the engineers to make the necessary preparations for submitting the entire scheme to Parliament in the next Session.

WEEK-END COTTAGES, BUNGALOWS, AND OTHER SMALL HOUSES.

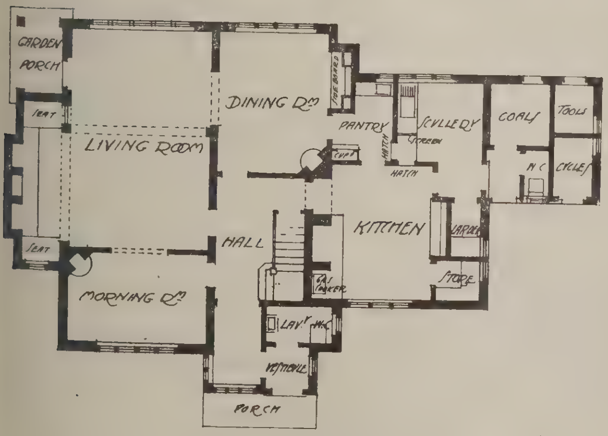
In this Supplement we publish a number of original and unexecuted sketch designs by architects of ability, principally as a guide to those who desire to possess a small sized house which shall form a home in the country for holiday or week-end residence. The designs have been made by different architects and show a variety of treatment, both in arrangement of plan and in elevation. The amounts which are quoted as approximate prices are reliable in average cases, but the cost of the same house will necessarily vary in different localities according to local circumstances. The architects who have made these designs are, however, sufficiently skilful and businesslike to be able to give their employers full value for money spent.

The Editor of *The Architect* will be pleased to introduce the authors of the designs published to any one who may wish to have a house built in accordance with the plans.

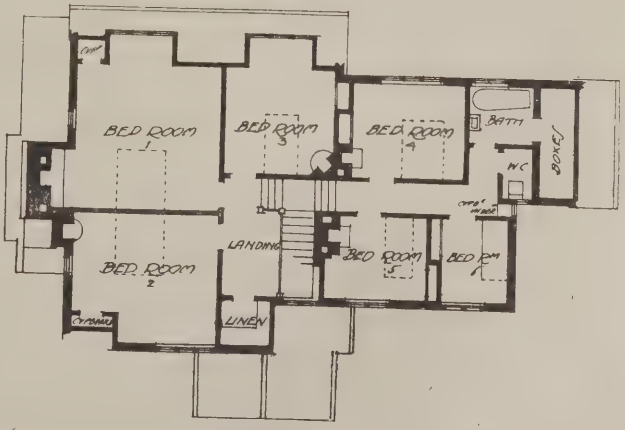
DESIGN NO. 1.



THE ENTRANCE FRONT.



GROUND FLOOR PLAN.

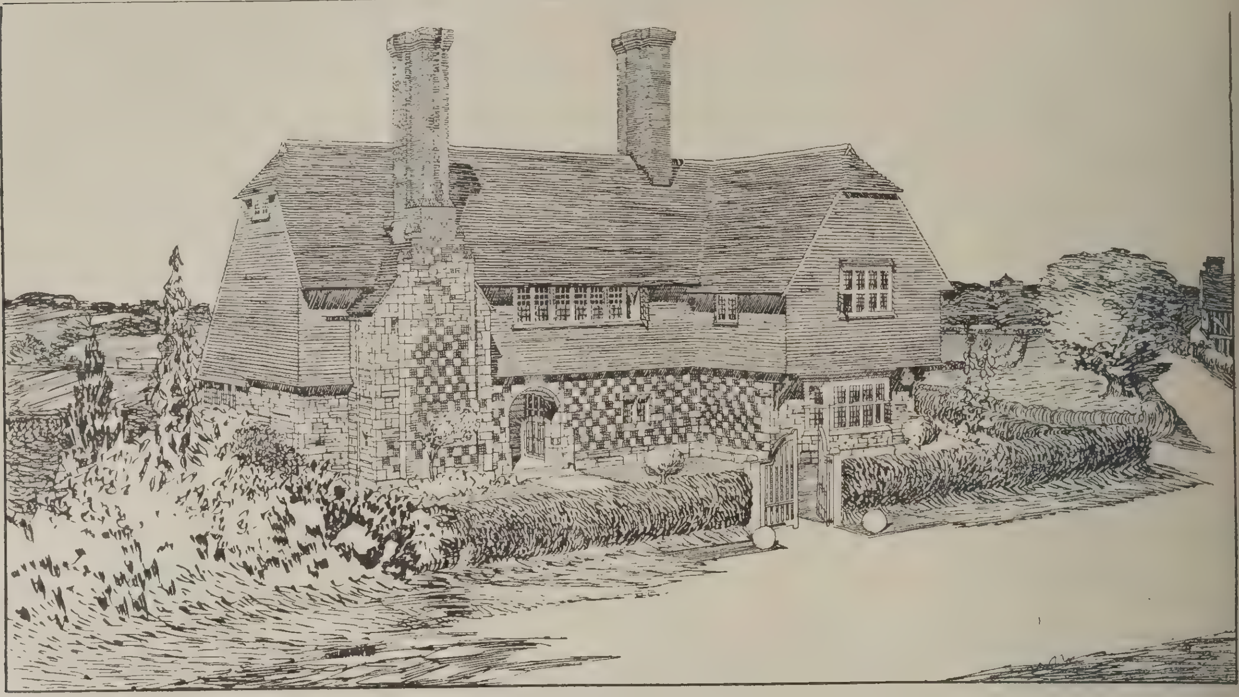


FIRST FLOOR PLAN.

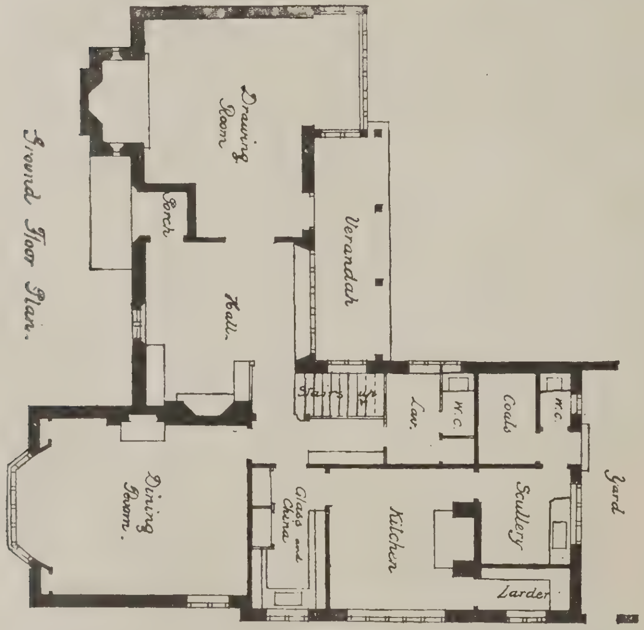
This design is particularly well arranged for a week-end or holiday residence. It possesses what should always, in our opinion, be the chief feature of such a home, a large living room, a convenient and moderate-sized dining-room and a small room which can be kept quiet and used as a morning room, boudoir or study. There are six bedrooms and the house is most economically planned.

The exterior is intended to have brick walls and tile roofs, whilst relief is given by the introduction of half timber walls and a plastered gable over the front door. The design is both picturesque and refined and is redolent of the feeling of old English homes in the southern counties of England. The cost of such a house would be about £1800.

DESIGN NO. 2.



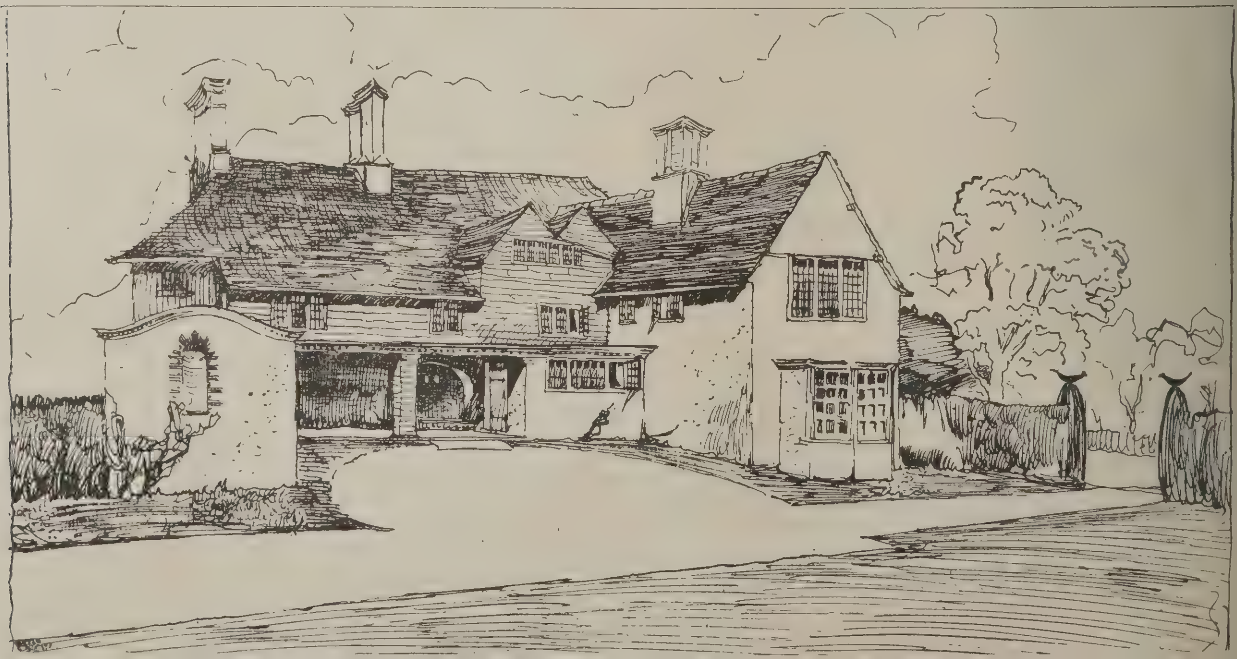
THE ENTRANCE FRONT.



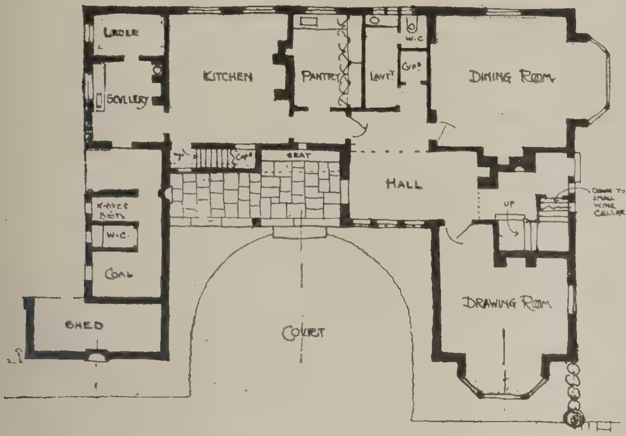
Here we have a house of a different type. The chief feature of the plan is the provision of a large hall, useful for a sitting-room, and a good dining-room and drawing-room. The latter would be a particularly comfortable room in the winter evenings, whilst the verandah opening from it would be very pleasant for summer use.

The house is intended to be built with stone walls, chequered with knapped flints, on the ground floor, and tile hanging to the upper storey, with tile roofs and red brick chimney-stacks. The design has much of the feeling of the old Sussex manor-house. This house could be built in the South of England for about £1800.

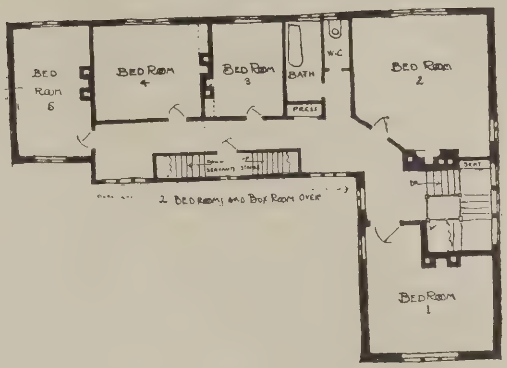
DESIGN NO. 3.



DESIGN NO. 3—*continued.*



GROUND FLOOR PLAN

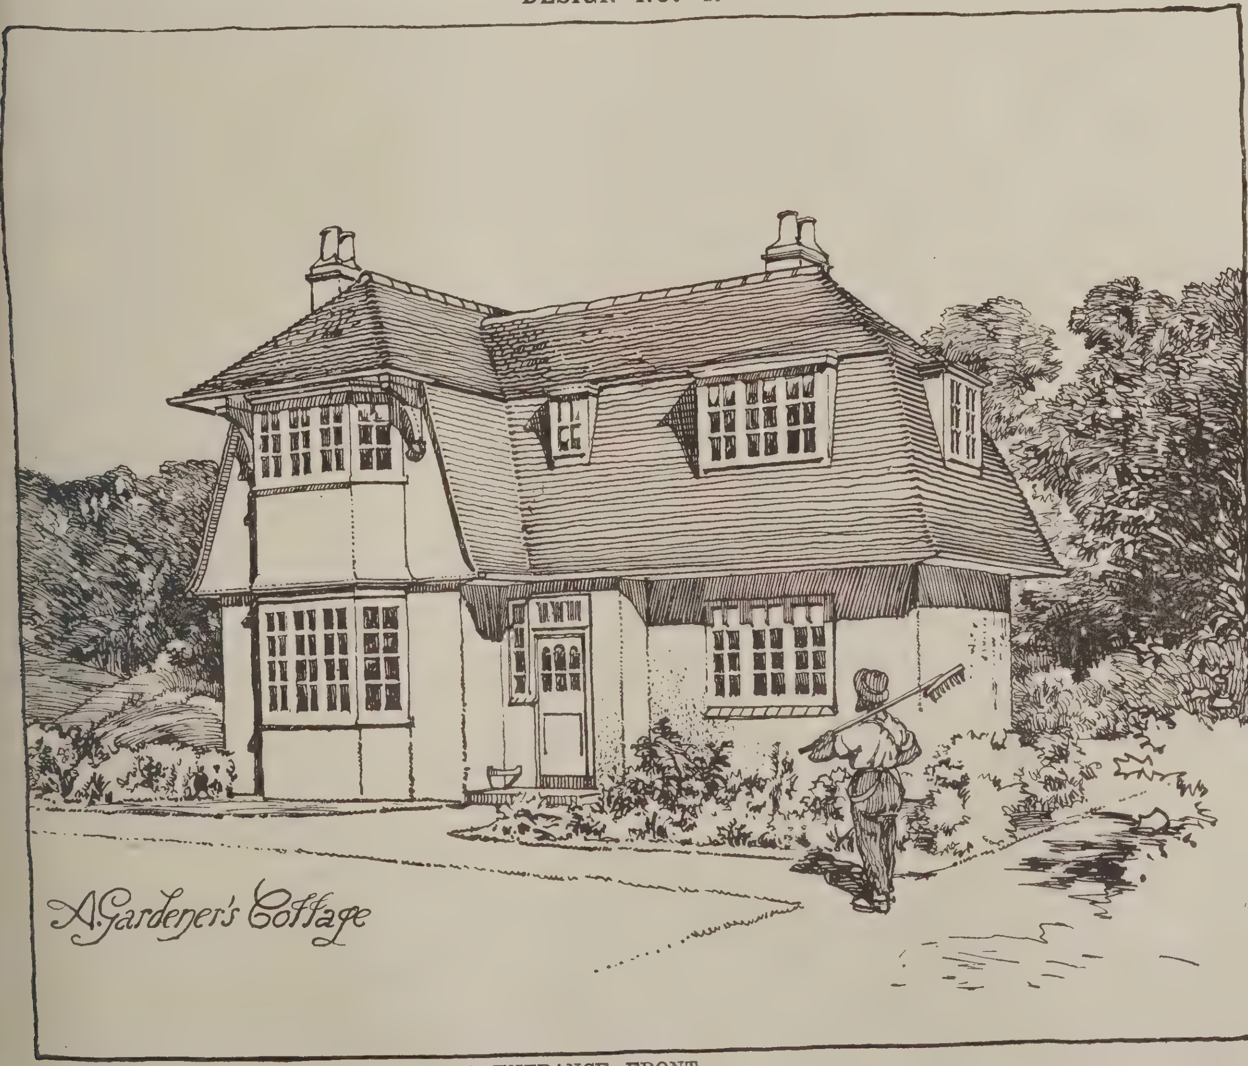


FIRST FLOOR PLAN.

This house is planned for a situation in which the entrance is supposed to be on the west side, so that the kitchen, which faces east, and the kitchen offices are at the north end of the house and reception-rooms at the south, the dining room at the south-east corner and the drawing-room at the south-west. All the bedrooms, of which there are seven, have east or west aspect, thus every living room in the house receives sunshine at some part of the day. The entrance to the house is through a large covered verandah or loggia, leading to a good-sized hall.

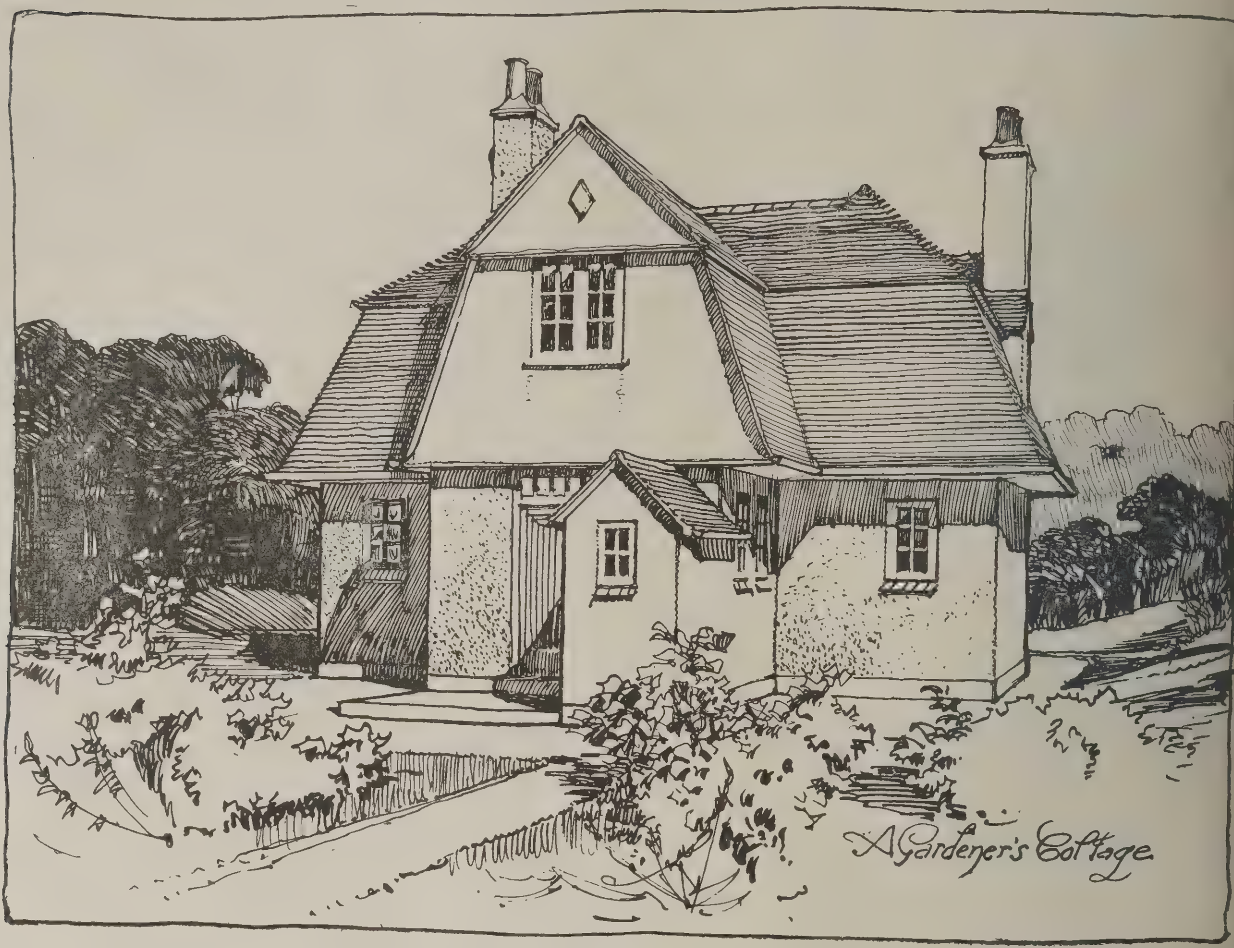
The picturesquely grouped exterior is intended to have the walls covered with rough-cast, except the front wall above the flat roof over the hall and porch, which would be covered with sawn weather-boarding, treated with Solignum. The beams supporting the bearers to flat over porch and the bearers themselves would be in sawn fir treated with Solignum. The chimney-stacks would be faced and enriched with red sand-faced bricks. The roofs generally would be covered with red, hand-made sand-faced plain tiles. The windows on ground floor would be filled in with wood casements in small lights with solid frames, those on first floor having metal casements and leaded glazing. The finishings internally would generally be of simple character; the principal stairs, the panelling and finishings in hall, and the flooring in hall, staircase, dining-room, and drawing-room would be in oak, if possible. The probable cost would be a little less than £2000.

DESIGN NO. 4.



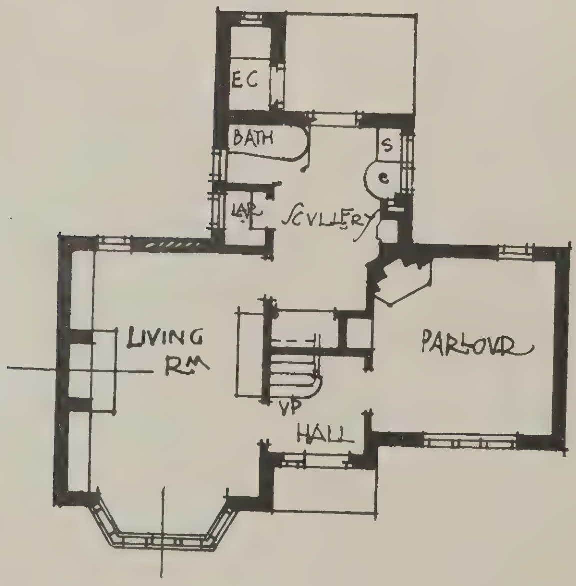
THE ENTRANCE FRONT.

DESIGN NO. 4—*continued.*

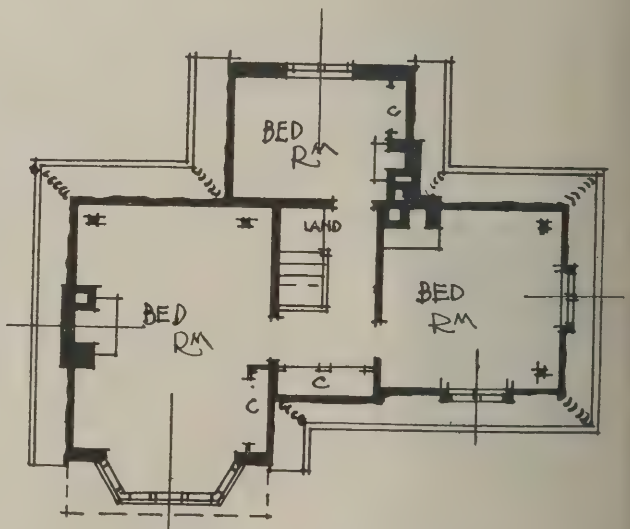


A Gardener's Cottage.

THE GARDEN FRONT.



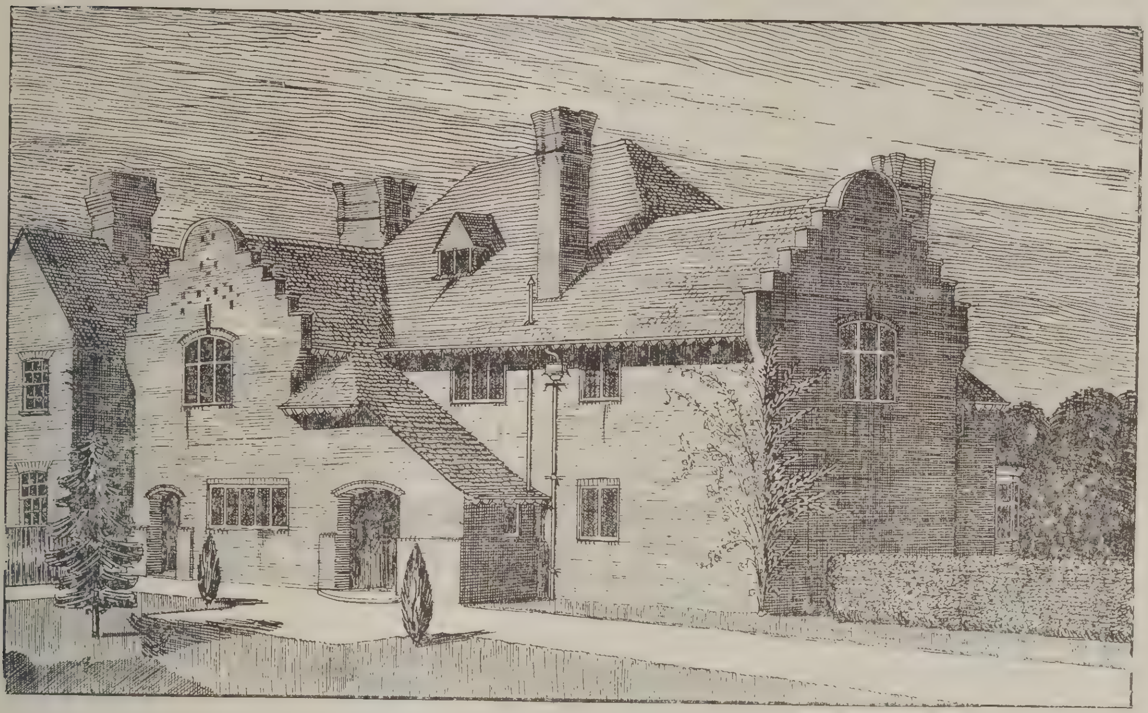
GROUND FLOOR PLAN.



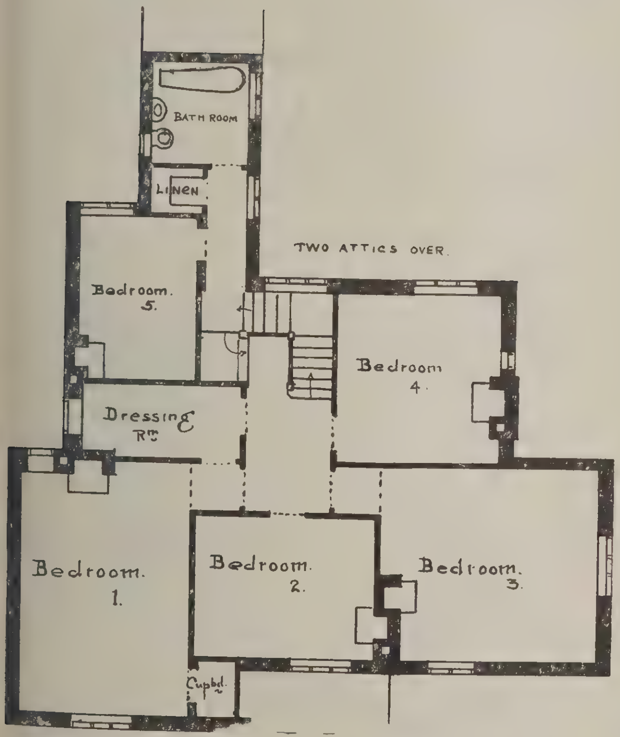
FIRST FLOOR PLAN.

This little dwelling, though designed as a gardener's cottage, would be very suitable for a small and inexpensive week-end residence. The roof would be covered with pantiles or ordinary red roofing tiles and the chimney-pots and plinth tarred black. The drainage would be to a cesspool, and rainwater collected to tank would be pumped up over sink with extension supply to bath. Under ordinary circumstances, it is estimated that this little cot could be erected for about £250, the walls being built with bricks rough-cast in grey cement up to the level of eaves, and above that level where showing in gables to be in smooth white cement.

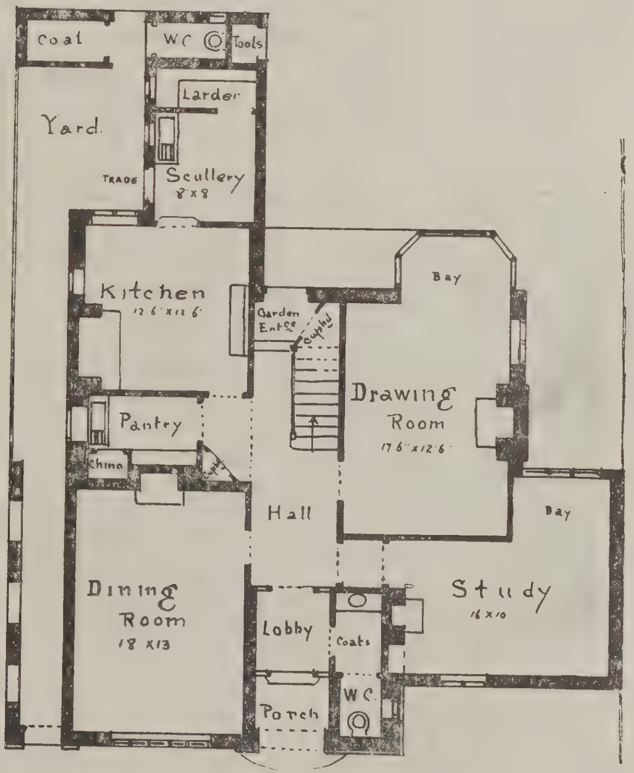
DESIGN NO. 5.



THE ENTRANCE FRONT.



FIRST FLOOR PLAN.



SECOND FLOOR PLAN.

This design is an example of economical building in plain brick, covered with a tile roof. The windows are wood-framed, divided by leaded lights. The crow-stepped gables give a Flemish air to the design, which is often reflected in old houses in East Anglia and in Kent. The house contains accommodation as shown on the plans suitable for a family of six persons and two servants, and could be built on quite a narrow plot of land. The cost of the house, including all fittings shown, is approximately £1250.

The Berkefeld Filter.

DR. ANDREW WILSON says:
"No house or office, hospital or school, should be without one of these efficient 'Berkefeld' Filters."

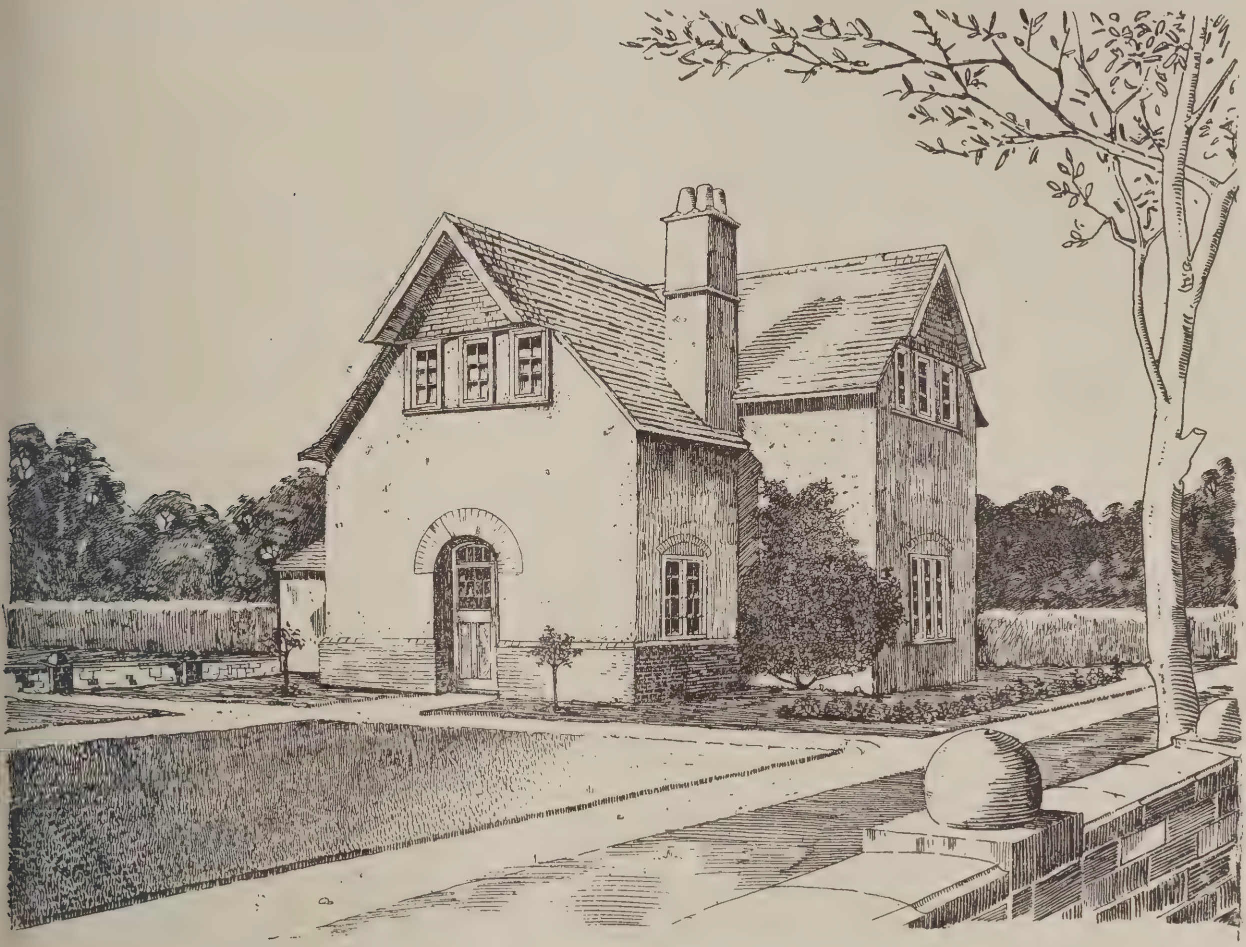
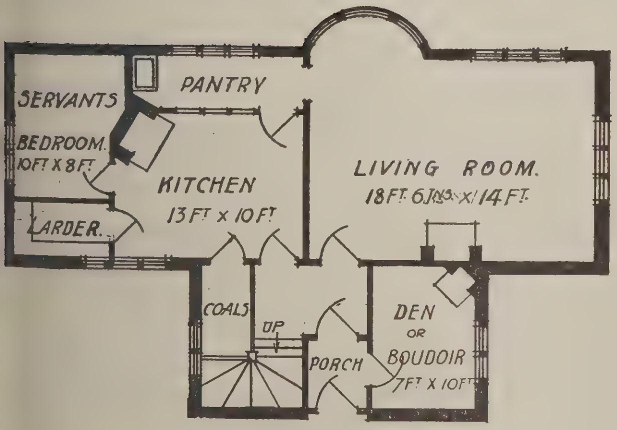
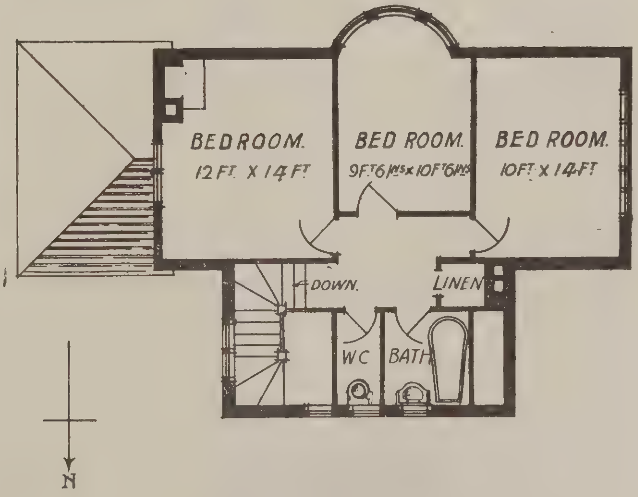
DESIGN NO. 6.



THE ENTRANCE FRONT.



GROUND FLOOR PLAN.



FIRST FLOOR PLAN.

This simple little house is intended for a week-end cottage or one servant residence. It has a large living-room for he size of the house and a small room where one can be quiet. Four bedrooms are provided and all the necessary offices.

The walls would be built of brick, faced with red to the plinth and arches, and whitewashed above. The roof would e covered with tiles, and the small gables above the windows would have vertical weather-boarding stained with Solig- um. The cost would be about £450.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—The Lancashire and Cheshire Miners' Federation invite architects in practice on their own account within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton.

Bristol.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Evesham.—Oct. 7.—The Rural District Council invite designs, with estimates of cost, for laying out a building site at Broadway and the erection thereon of 30 cottages, under the Housing and Town Planning Act, 1909. The architect whose design is accepted will be appointed to carry out the work at an inclusive fee of 5 per cent. Deposit £1 1s. Mr. E. H. Wadams, Clerk, Union Offices, Evesham.

Villa, Octavia Terrace.
Limekilns.—U. F. Church belfry reconstruction. Mr. Hyppolite J. Blanc, F.R.I.B.A. (of Edinburgh), architect.
Muirhead of Liff.—Board School.

GLASGOW BUILDING TRADE.

The Dean of Guild, Mr. Francis Henderson, at a sitting of the Dean of Guild Court last week reviewed the business of he Court for the past year. He pointed out, says the *Glasgow Herald*, that great depression had marked the condition of the trades most closely connected with the work of the Court. While during the past year the number of linings howed no material decrease, the valuations were less by £140,000 than in the preceding twelve months, and both as egards linings and valuation it was the lowest in the past wenty years.

The Dean of Guild said he regretted to say that the figures for the year which ended on August 31 did not give any cause for congratulation. They indicated only stagnation. His predecessor at the close of his tenure of office said that he had to regret the fact that the two years during which he had presided over the Court were marked by a serious and regrettable depression in the trades most closely connected with the work of the Court, and that he was sorry to think that there eemed to be no indications of a removal of that depression. The figures of the year which had just closed confirmed these forebodings. In the twelve months there were 367 linings, involving a total valuation of £737,679. The number of linings was not materially less, but the valuations showed a ecrease of not less than £140,000 upon the previous year, which was itself a lean year. This last year had been the lowest for linings and for valuation since 1890-91. From that date there was a great boom in the building trade, which reached its height in 1897-98. A slight depression followed, but the record year of 1901-02 came, and from that time there had been a gradual decline, until now they reached a point which was the lowest during the last 20 years. He hoped that they had now got to their lowest point, and that they would soon see a growing activity in the building trade. But he hardly saw how they could expect any substantial increase for some time to come while the Tramways Committee of the Corporation continued their present philanthropic policy of providing the citizens with such cheap and frequent opportunities of going outside the city, thus facilitating the settlement of the inhabitants in districts which were as yet beyond the jurisdiction of that Court. The only event likely to occur which would bring about any material change would be the enlargement of their civic borders so as to include those districts where at present building operations were principally carried on. It must not be overlooked also that there were, according to the latest statistics, something like 19,055 unlet houses and 4,608 shops, &c., within the city boundary.

The work of the Court was in nearly every case really important work affecting the interests of the city and its great population in many ways, and affecting the convenience and welfare of future generations in a manner that only those who were gifted with the prophet's vision could possibly realise. The statutory powers conferred upon the Court were many. They were framed for the good of the city and its people. Occasionally they might bear with undue weight upon particular cases. Their aim had been to administer these statutory provisions in such a way as to be, as far as possible, fair to the individual and for the general good, and he did not think they had been altogether unsuccessful. There had been several visitations during the year. Some of these had been in connection with buildings in what were known as hollow squares. One of his predecessors—Lord Inverclyde—speaking in 1903, said that in a general way the feeling of the Court was greatly against the granting of linings for the erection of buildings in hollow squares, and that it seemed to the Court desirable that in the more thickly populated districts of the city there should be the greatest possible amount of open space within the bounds of hollow squares, not only for sanitary reasons, but for the general wellbeing of the large population who were in many instances thronging the buildings on the four sides of the squares. That still expressed the feeling of the Court. The Dean of Guild, in conclusion, thanked the lyners for the attention they had bestowed on the examination of the plans and their valuable technical advice; the assessor for placing at his disposal his great knowledge of the law and his long experience of the work of the Court; the Master of Works, the Procurator-Fiscal, and the Clerk of the Court for the care they had taken in the preparation of the cases so as to facilitate the work; and he expressed to all the members of the legal profession whom they had seen there his high appreciation of their invariable courtesy and consideration and readiness to carry out the wishes of the Court. Since occupying his present position he had made several alterations and improvements in the details of the procedure of the Court which he ventured to think had been to the advantage of all concerned.

The New Town Hall Committee of Newcastle Corporation has expressed itself in favour of the ground on which the Northumberland baths stand as a site for a new town hall. It was resolved that the sub-committee should make inquiries as to the probable cost of the erection of such a building, and also the cost of making new baths on the opposite side of Northumberland Road.

Mr. Charles Swain, architect, Manchester, has prepared the plans for the theatre now in course of erection in Great Bridgewater Street, Manchester, and to be known as the New Queen's Theatre. The laying of the foundations was begun in July last. The total cost of building and equipment is estimated at £20,000.

The Chelmsford Town Council have adopted a scheme prepared by Mr. P. T. Harrison, the surveyor, for the erection of thirty-eight cottages at a cost of £7,338. Eight cottages will be built to let at 6*s*. a week, fourteen at 5*s*. a week, and sixteen cottages at 4*s*. per week. The full scheme shows provision for 143 houses at an outlay of £23,000.

Considering the size of London, says an American Consular report, the fire losses appear to be very small. This is accounted for by the fact that there are practically no frame buildings in London, that the warehouses and business premises generally are of slow combustion construction, and that the dwelling-houses are usually built of stone or brick, with a minimum amount of inflammable wood material. The humidity of the climate also tends very materially to keep down fire losses.

PUBLIC WORKS IN SOUTHERN ITALY.

It seems impossible to arrive at a criterion as to the real extent of the commercial development of Naples, says the British Consul, in a recent report on Naples and district for the past year. New streets with handsome up-to-date piles of flats—the rents of which are in advance of anything hitherto heard of in this city—are occupied as soon as they are licensed for letting; and yet rents are continually rising, showing unmistakably that there is a demand for more housing space. In the more densely populated quarters of the town there are no tenement houses with vacant rooms. Tramway lines are being extended in order to bring the outer suburbs into closer relation with the town, so that the labouring classes may be able to find lodgings there, and cheap workmen's services have been instituted at certain hours of the day in order to enable the labouring classes to avail themselves of housing in a larger radius from the city proper. In order further to find a solution for the burning question of housing an ever-growing population, the Government is projecting a law to encourage the building of cheap dwellings which shall be exempted from property tax for a period of ten years, whilst houses for the better classes are to be exempted from taxes for half the period mentioned. These remedies are to be general all over Italy.

The Civic Council of Naples, in order to cope with its own local problem, has granted the sum of £12,000 a year for the space of fifty years, free of interest and reimbursement, to an institution created for the construction of popular dwellings, the first payment to begin with 1911. The object of the municipality is to enable the construction company to borrow money cheaply in order that the work may be proceeded with expeditiously. The Civic Council require the popular dwellings not to exceed a stipulated rent.

The neighbouring town of Castellammare has been authorised to hold a lottery not to exceed £40,000, free of taxes, for the benefit of the company which is to construct workmen's dwellings there.

The very limited Custom House accommodation was the source of serious complaints to the metropolitan authorities. In consequence, after an inquiry, the central authorities consented to amplify the available warehousing, and provision to that effect has been included in the law for the benefit of Naples recently laid before the Italian Parliament.

The new law just mentioned provides for the completion of the new express railway between Rome and Naples now in course of construction being considerably accelerated. In 1906 contracts for 11,000,000 lire of the line were given out. In 1910 work for 15,000,000 lire was further put out to contract. The section from the Amsena River-Formia includes two big tunnels. One of these—the Montorso, 7,750 metres long—was to be completed towards the end of 1910. In 1911 the section from Naples to Minturno, extending from 13,142 to 27,717 metres and including the Messico Tunnel between the proposed station of Mondragone and Sessa Auranca, will be put up for tender in two lots.

Progress is being made for the appropriation of the land for the Naples section of the line and for the station. It is proposed to complete this as soon as possible, in order to bring it into use as a metropolitan line. This urban section is 8,900 metres in length, of which 3,150 metres are in the open, and the rest consist of tunnelling, mostly under the city of Naples. The main station is to be at Fuorigrotta, with subsidiary stations in the town. During 1910 the Minister for Public Works promised that the Naples-Rome express line should be completed much in advance of the original time estimated for its termination, and made special provision for extra credits for this purpose.

The most important work in South Italy is that connected with the provision of drinking water for the Puglian provinces. The contract for this work provides for its completion by August 1916, within eleven years of its commencement. The first estimated cost was about £5,000,000. The canalisation was to extend to about 3,500 kiloms., and some 4,000 workmen were employed on the work. The main aqueduct was to be 219½ kiloms. in length, of which 90 were to be through tunnels, 114 in trenches, 6 in bridging, and 6 of elevating syphons, besides 1,668 kiloms. of primary and secondary canalisation and about 800 kiloms. of workings in the different municipal districts. No less than 150 reservoirs are required, as well as other masonry work. To date the work done consists of 30 kiloms. of tunnelling and about 5 kiloms. of trenching; the work was begun in 1906. Great dissatisfaction is expressed with the way the work is progressing, and there is some prospect of the Government itself assuming the continuation of the work, which, when completed, should give 1,100 gallons of water per second. It is proposed alternatively to increase the price to be paid for the work to nearly £6,000,000, to allow an increase in the annual grant from 7,000,000 to 14,000,000 lire, in return for which the contractors are to deliver the work completed by 1914 as far as Bari, and the entire work by 1916.

The port of Bari being unprotected against the northern currents, continuous dredging is required to prevent silting. To remove this inconvenience the construction of a breakwater from San Cataldo eastwards has been proposed. An expenditure of about £33,000 has been sanctioned for quays now in course of construction between the Pizzoli mole and San Cataldo lighthouse. Part of the space that becomes available will serve for the erection of bonded warehouses; another part will be used as a coal wharf. For the widening of the Pizzoli mole about £17,000 will be expended, and some £13,000 for deepening the water basin alongside. As soon as the new harbour works are sufficiently advanced port and railway station will be connected with each other by a special line.

An additional expenditure of £11,000 has been authorised for the completion of the great tobacco factory at Bari. The construction of artillery barracks on the actual drilling ground (Campo San Lorenzo) has been decided upon; the contribution of the town towards the total expense is to be £6,000. The restoration of the municipal theatre (Teatro Piccini) will be started forthwith, and contracts for the masonry work have already been placed. Projects for the construction of the new prison are still under study. The ancient castle of Bari, which is now used as a prison, is to be completely restored, and will probably be converted into a museum. The semaphore, now on the castle tower, will be removed to the top of the neighbouring Santa Clara church. A scheme has been submitted for the restoration of the Castel de Monte (near Corato), one of the finest historical castles in South Italy, at an expense of about £4,000.

The London County Council are applying for Parliamentary powers to purchase sites for seventeen new schools.

The Rotherham Higher Standard School in Moorgate, Rotherham, opened last week, was erected from the designs of Mr. D. B. Jenkinson, A.R.I.B.A., who was placed first by the assessor in a local competition held in 1908. The total cost of the scheme is £17,550. The general contractors for the work were Messrs. Ash, Son & Biggin, Ltd., of Sheffield.

Mr. Douglas Strachan, of Aberdeen, has received a commission from the British Government to supply designs for two stained glass windows which are to be provided by this country towards the embellishment of the Palace of Peace at The Hague.

The Swansea Sewerage Committee have engaged Mr. Midgley Taylor, C.E., to report on a comprehensive scheme for the drainage of the town and the adjacent area, which it is proposed to absorb by a borough extension scheme. In the report due consideration will be given to the borough engineer's proposal for an outfall in the Bristol Channel off Bracelet Bay.

The Swansea School Building Sub-Committee last week discussed in camera a report by the architect (Mr. Laurance) as to the provision of further school accommodation. It was decided that on the old Training College site an elementary school be erected to accommodate 800 children, and the architect was directed to prepare plans. The officials were instructed to open up negotiations for a site for a new girls' secondary school. Mr. Laurance, the architect, was instructed to prepare plans for additional departments at Cwmbwrla and Brynmill schools, which will provide altogether for 800 more children, and in both cases provision is to be made for rooms for medical inspection and meals.

Mr. Paul R. Montford, London, the sculptor chosen to execute the statue of the late Sir Henry Campbell-Bannerman, to be erected in Stirling, has addressed a letter to the secretary of the local committee on the subject of the best costume for the statue, to which Mr. Montford says he has given a lot of thought. The question is whether the statesman should be represented in the robes of a Knight Grand Cross of the Bath, as shown in the model, or simply in a frock coat. Mr. Montford thinks it impossible to make a frock-coated statue look so well as one in robes, and he thinks that if Stirling wants to have the national statue, and take the opportunity to keep for itself that which some day Edinburg or Glasgow may want, robes will have to be used. A meeting of the committee is to be held shortly to settle this point.

THE EVOLUTION OF THE DWELLING-HOUSE AND SOME REFLECTIONS THEREON.

(Continued from last week.)

The next form which the cottages and humble houses took was rectangular. In whatever parts of the country we look for examples of the smaller domestic house or cottage, we find an old method of construction prevails—namely, the erection in "bays," the simplest form of house being of one "bay." The principle of construction of the house of one "bay" was simple. Two pairs of bent trees, in form resembling the lancet-shaped arch of a Gothic church, were set up on the ground, and united at their tops by a ridge tree. The framework so set up was strengthened by two tie beams and four wind braces, and was fastened together by wooden pegs. The bent trees or arches were placed at a distance of some 16 feet apart, and the space between them was known as a "bay." Thus the "bay" formed a sort of unit of construction, for the building of one "bay" might be increased indefinitely by adding other "bays." The couples or pairs of bent trees were originally known as "forks," also as "gavels," or "gavelforks," but this latter term can only be strictly applied to the "forks" at the two ends of the building, which thus took the name of "the gable end." The forks were also known by other names, and now familiarly as "croks," "crucks," or "crutches." The oldest buildings of this type had only the ground floor, the walls were of wattlework, and covered with a rough plastering of mud and clay; the door was placed in one of the gable ends. An excellent example of this type of dwelling (cruck) exists at Scrivelsby, near Horncastle, Lincolnshire, and is known as the "Tea-Pot Hall," and is thus described by Addy in his "Evolution of the English House":—"It is built of two pairs of straight 'crucks,' which extend from the four corners of the house to the ridge-tree, and which support the ridge-tree, the framework being further strengthened by the addition of wind braces. The length, breadth, and height of the building is 19 feet respectively. The doorway is in the south gable end, and a small 'outshot' building, whose roof is considerably below that of the main building, projects from the opposite gable end. This 'outshot,' built of wood and with the house, contains the buttery and scullery, the buttery being, as is usually the case, in the north-west. From the floor of the 'outshot' a ladder goes up to the bedroom above. The walls, which are about six inches thick, are composed of wooden studs, with twigs or branches of trees interwoven, the whole being overlaid with mud and plaster. The sides are thatched with straw down to a point a little below the bedroom floor. From this point grey slates extend to the ground. The roof of the 'outshot' is rounded, and thatched with straw. The fireplace, which may be in its original position, is of brick, and it, as well as the chimney, is of more recent date than the rest of the house."

In order to get more accommodation, the next step was to make the walls straight, still retaining the original form of construction. This was obtained by carrying the ends of the tie-beams, which braced the "crucks" together, outward, so making the tie-beam equal in length to the base of the arch formed by the leaning trees or pieces of timber known as the "crucks." Then at the ends or upon the tops of these extended tie-beams were placed long beams, known as "pans" in Yorkshire and "pons" in Lancashire (the original of the timber now known as the wall plate), and then the rafters are laid between the "pans" and ridge tree. Lastly, a side wall is built up from the ground to the "pan," so that the "pan" rests on, and is carried on, the top of this wall, the walls being built after the wooden framework had been constructed.

The change from the ancient way of supporting the roof by pairs of arches springing from the ground, to the modern way of supporting it by "pairs of principals," was made very slowly indeed. To us, the modern roof, resting on upright walls of stone or brick, seems too simple a thing to regard as a triumph of human skill, but such it was.

A house consisting of one "bay" would be but a poor place for a family to live in, but this form of construction permitted of its size being increased by the addition of more "bays" to either end, or by the building of additional rooms at the ends or sides. When the latter form was adopted, the additional rooms were known as "outshots," or "outshuts," this name being still recognised in the "outshot" kitchen (or outhouse) often built at the back of a small dwelling.

The first means adopted for obtaining access to the upper rooms from the ground floor was by the simple rung ladder, which is still the method used in many country cottages. An advance on this was made by enclosing a space on the ground floor from the floor up to the ceiling, and by fixing inside this enclosure a series of solid blocks, triangular in shape, fixed so as to be almost perpendicular, and arranged like the rungs of a ladder; the lowest step was usually of stone, the first four or five perpendicular, and the remainder slightly inclined towards the top. This method may fairly be described as one midway between the original rung ladder and the present staircase.

In the early, cone-shaped house there was neither chimney nor window. At a little later period, in the wooden homes of the Gauls and Britons, an opening was left at the top for the admission of light and the emission of smoke, an open hearth stood in the middle of the floor, on which the fire would be laid, and, having regard to the central position of this hearth, it is most likely that the fireplace of the house of the middle ages did not adjoin an outer wall, as is usual now, but stood at some distance from the walls. It is not certain of just what materials the chimneys were constructed, possibly wicker-work made of rushes and covered with mud; but there is evidence that in the city of London chimneys were built of wood up to the 15th century, for Ordnances of the city of London in 1419 declared that "Henceforth no chimney shall be made unless it be of stone, tiles (bricks), or plaster, and not of wood, under a penalty of being pulled down." Windows now used for the admission of light were in the early days known as "wind eyes" or "mind holes," their object being more for the admission of air than light. The costliness of glass, and the consequent limitation of its use, prevented, to a great extent, windows being made of sufficient size. In the 16th century, however, when it became cheap in comparison with earlier times, a great impetus was given to its use, and it became the fashion in large houses to make the windows as large and numerous as possible.

I cannot, in the time at my disposal, carry this further. It is an easy matter to see how the modern cottage is but an extension and elaboration of the primitive dwelling I have traced, and that but an extension of the same principles is used in the building of the town house, the manor house, and the public building.

In order to measure the progress made by man in the art of building, one has only to compare the cave dwelling with the cathedral. The foundations of the long chain of progress thus seen were laid by the men mentioned at the beginning of my remarks, who tilled the ground and watched the flocks. It was they who originated and maintained the forms which, for such long ages, have prevailed, not only in the humble cottage, but also in the stately halls and palaces.

Inseparable from the dwelling is the dweller, and hereafter, as, in the earlier portion of my paper devoted to the evolution of the cottage or small dwelling, my remarks will apply principally to the dwellings of those in the humbler sphere of life—*i.e.*, the working classes; those of the higher sphere can, by reason of their position in life, look after themselves, neither needing the help of the philanthropist nor the State in planning or choosing their dwellings.

(To be continued.)

The Glasgow Provincial Committee for the Training of Teachers have decided to acquire the Woodend site on the Jordanhill estate for the proposed Training College. The site extends to forty acres, with an option of a further ten acres.

The Carnegie Dunfermline Trustees have decided to proceed with the erection of premises for school clinics and college class-rooms in accordance with a plan prepared by Mr. David Barclay, F.R.I.B.A., Glasgow. It is estimated that the cost will be about £16,000.

The Whitstable Urban District Council invite engineers to submit schemes for the treatment and purification of the sewage of the urban district of Whitstable, together with the estimated costs of such schemes, the purification works to be situated in the district, and the scheme to include the diversion of the sewage from the Stream Dyke.

The trustees and governors of the Richard Murray Commemoration and Memorial Hospital at a meeting held at Benfieldside decided to proceed with the work for the erection of the hospital forthwith. Mr. Jos. Eltringham, Blackhill, and Mr. Thos. H. Murray, Consett, architects, were asked to prepare the necessary plans and specifications.

The partnership between Messrs. C. R. Field & W. Glazier, auctioneers, surveyors, &c., Southwark, S.E., has been dissolved by mutual consent. Mr. C. Roland Field (Fellow of the Surveyors' Institution) will carry on the business at 54 Borough High Street, S.E., under the name of Field & Sons. Mr. William Glazier's future address will be 17 Pall Mall East, S.W.

UNIVERSITY COLLEGE COURSE IN HEATING AND VENTILATION.

The want of instruction in the higher branches of heating and ventilation has been felt in this country for many years by architects and heating engineers. The result of the want has been that these allied sciences have not made the progress in this country which has been observable in some Continental countries, notably Germany.

The Institution of Heating and Ventilating Engineers for some considerable time has been endeavouring to promote the interests of the scientific study of these branches of engineering in some of the centres for higher technical education in this country. With the help of a grant from the London County Council, a lectureship has been instituted at University College, London. A laboratory has been equipped, and it is hoped that the work will receive the whole-hearted support of those interested. Mr. A. H. Barker, B.A., B.Sc. (Lond.), Whitworth Scholar, has been appointed the first lecturer.

There are many questions in heating and ventilation which have not been investigated, and very little knowledge is available on some points, and the work to be done at University College will therefore be of very great value to the community.

Germany has long been provided with very elaborate and extensive buildings for the study of this subject, the funds having been provided by the Imperial Government; some of the greatest living authorities have been for many years solely engaged in investigating the many obscure matters connected with heating and ventilating.

The Government of this country is not in such close touch with the requirements of technical education as the Government of Germany is, and in consequence this important branch of engineering has hitherto suffered severely from neglect.

The thanks of the community are therefore due to the London County Council for their public-spirited action. It is hoped that the success of the department and the interest shown in it by the heating engineers will justify the Council in aiding the institution of this lectureship.

The session is to be opened by a series of public lectures at University College, in which the present position of the knowledge of this science will be discussed, and reference made to the paths along which development is to be expected. This is a very important aspect of the matter for engineers and architects who wish to be progressive.

A complete course of instruction, designed for architects and heating engineers, has been provided. The arrangements will include:—(1) A course of six public lectures on Tuesdays at 5 p.m., beginning on October 17, especially addressed to architects; (2) a course of lectures on the application of scientific principles to this branch of engineering in the second term, on Tuesdays, at 5 p.m.; (3) drawing office work, comprising courses of practical instruction in designing and calculating installations; (4) instruction in the laboratory, which has been fitted out so as to provide for research and means of testing and investigation.

For full particulars, including syllabus of lectures, application should be made to Mr. Walter W. Seton, M.A., Secretary, University College, London (Gower Street, W.C.).

TRADE NOTES.

Messrs. Frank Staines & Co., Ltd., domestic kitchen engineers, &c., who exhibited at the recent Building Exhibition at Olympia, have removed from 38 Buckingham Palace Road to 88 Victoria Street, S.W.

The use of the "Ceresit" waterproofing medium for concrete, stone and brick buildings was successfully demonstrated last year at the Brussels Exhibition, where the highest award was secured. It is interesting to note that a similar success has been achieved at the Turin Exhibition running during this year, and that the Grand Prix has there been awarded to "Ceresit."

The Derwent Joint Smallpox Hospital, Cumberland, is being supplied with Shorland's patent exhaust roof ventilators and special inlet ventilators by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester. The new electric theatre is being fitted with Shorland's patent exhaust roof ventilators, and the New Hospital, Atherstone, is to be equipped with Shorland's warm air ventilating patent Manchester stoves.

The Sun Life Office are able to show a progressively satisfactory report for each year since 1900. Last year, for example, more than five thousand new policies were issued, assuring upwards of £2,000,000—about twice as much as in 1900. This expansion is largely attributed to the introduction of Life Assurance Without Medical Examination, which at the time came in for considerable criticism. Another of the causes of prosperity is the dissemination of specially written literature (notably the sixty-page booklet entitled "Scientific Saving") explaining the principles and practice of Life Assurance in general and the methods of the Sun Office in particular. A new edition of "Scientific Saving" may be obtained post free on application to the General Manager, Sun Life Office, 63 Threadneedle Street, E.C.

One of the interesting features at the exhibition held last week at Derby in connection with the annual convention of the National Association of Master House-Painters and Decorators was the first public demonstration by Messrs. Thos. Parsons & Sons, 8 Endell Street, W.C., of their "Trans-ol" transfer process. For this the designs are executed in reverse upon a special paper in successive layers of oil colour. The paper is attached to the wall by a thin coat of a special paste, and carefully pressed down. When the paste has become almost dry the back of the "Trans-ol," after being thoroughly damped, is peeled off, leaving the pattern firmly adhering to the ground. Instead of the lifelessness of an ordinary stencilled pattern the effect of the transfer is practically the same as if hand-painted. In price the "Trans-ols" are approximately equal to a high-class wall-paper frieze; in durability they are far superior, as the decoration can be washed without fear, provided that the ground is itself washable. "Trans-ols" may be applied either to glossy or "flat" surfaces. The most suitable of all grounds, however, is Messrs. Parsons's "Endelflat" enamel, this being perfectly washable, and possessing the fineness of texture requisite to show best the delicacy of the designs. Further, the choice of surface is not limited, since "Endelflat" is equally applicable to a wooden or plaster partition wall.

VARIETIES.

The Stretford Urban District Council give notice of their intention to provide an elementary school for about 400 children.

The Lancaster Town Council have received sanction to borrow £2,000 for the purchase of a site for the Girls' Secondary School and £12,000 for the building.

Messrs. Newman & Newman, who have for many years carried on their practice at 31 Tooley Street, S.E., have removed their offices to St. Thomas's Chambers, 24 Railway Approach, London Bridge, S.E.

Mr. Roland Clarkson, assistant surveyor to the Jarrow Corporation, has been appointed surveyor to the South Shields Rural District Council out of 170 applicants. The salary is £200 per annum.

The Essex County Council are advertising for six whole-time officials to work in the office of the County Architect at Chelmsford. Full particulars may be seen in our advertisement columns.

The Windsor Rural District Council are about to ask the sanction of the Local Government Board for a loan of £55,000 required to carry out the Sunninghill and Sunningdale sewerage scheme.

The Manchester City Council on Wednesday last approved the city architect's plans for the provision of dwellings for 450 people, at a moderate rental, on the Barrack Street site, Hulme. The proposed houses are to be in the form of cottage flats. Application will be made to the Local Government Board for sanction to borrow £16,105 to carry out the scheme.

Messrs. Bell will publish next week the History of Renaissance French Architecture on which Mr. Reginald Blomfield, A.R.A., has been engaged for many years. It will be a companion to the same author's work on English Renaissance. The book will be issued in two volumes, and will be profusely illustrated from drawings by the author, scarce engravings, and other sources.

The Superior Jury of the Festival of Empire have issued a further list of diplomas in respect of the exhibits at the Crystal Palace. In the Arts and Crafts Section, Grand Prix have been awarded to Chubb & Son's Lock and Safe Co., Ltd., 128 Queen Victoria Street, E.C.; Messrs. Gibson & Sons, Ltd., Albany Potteries, Burslem, and Mr. W. Ault, Swadlincote, near Burton-on-Trent (pottery and faïence). Among the gold medals awarded are those to Hofler, Ltd., Soho Square, W., for architectural metalwork; Quadruplex, Ltd., 88 Goswell Road, E.C., for office furniture; and Houghtons, Ltd., for the Ensignette Camera.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

he Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

**** As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—The Lancashire and Cheshire Miners' Federation invite architects in practice on their own account within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton.

Bristol.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1s. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

GLASGOW INSTITUTE OF MEASURERS.

The thirty-first annual meeting of the Glasgow Institute of Measurers was held on the 4th inst. in the Christian Institute, Mr. Anthony Purdie, president, in the chair. The report of the council for the past year was submitted. It stated that the membership was 81, besides one honorary member and six associates. It was reported that a petition had been lodged with the Privy Council for the grant of a Royal Charter in favour of the proposed Society of Ordained Surveyors in Scotland, and that it was expected the Privy Council would deal with the matter shortly. A grant of £2 2*s.* had again been made to the Technical College for prizes in the classes of building construction. The treasurer's statement showed the funds to amount to £739 8*s.* 3*d.* Office-bearers for the ensuing year were elected as follows:—President, Mr. Archibald B. Watson; vice-president, Mr. John H. Allan; secretary and treasurer, Mr. William Johnstone, B.L., 150 St. Vincent Street; auditors of professional accounts, Messrs. James Smellie and Anthony Purdie; council, Messrs. John Baxter, Farquhar Matheson, Archibald Anderson, John S. Stewart, Anthony Purdie, George B. Walker, James P. Dansken, and William Howatt.

A company has, it is understood, been formed under the title of "The Blackburn Mill-Building Company," with a registered capital of £25,000, for the erection of a mill at Hastonlee Farm, near Blackburn.

The Foreshore Committee of Kirkcaldy Town Council have received a report from their engineer regarding the cost of a sea wall along the foreshore. Two schemes were submitted, one to cost £21,692, and the other £35,052.

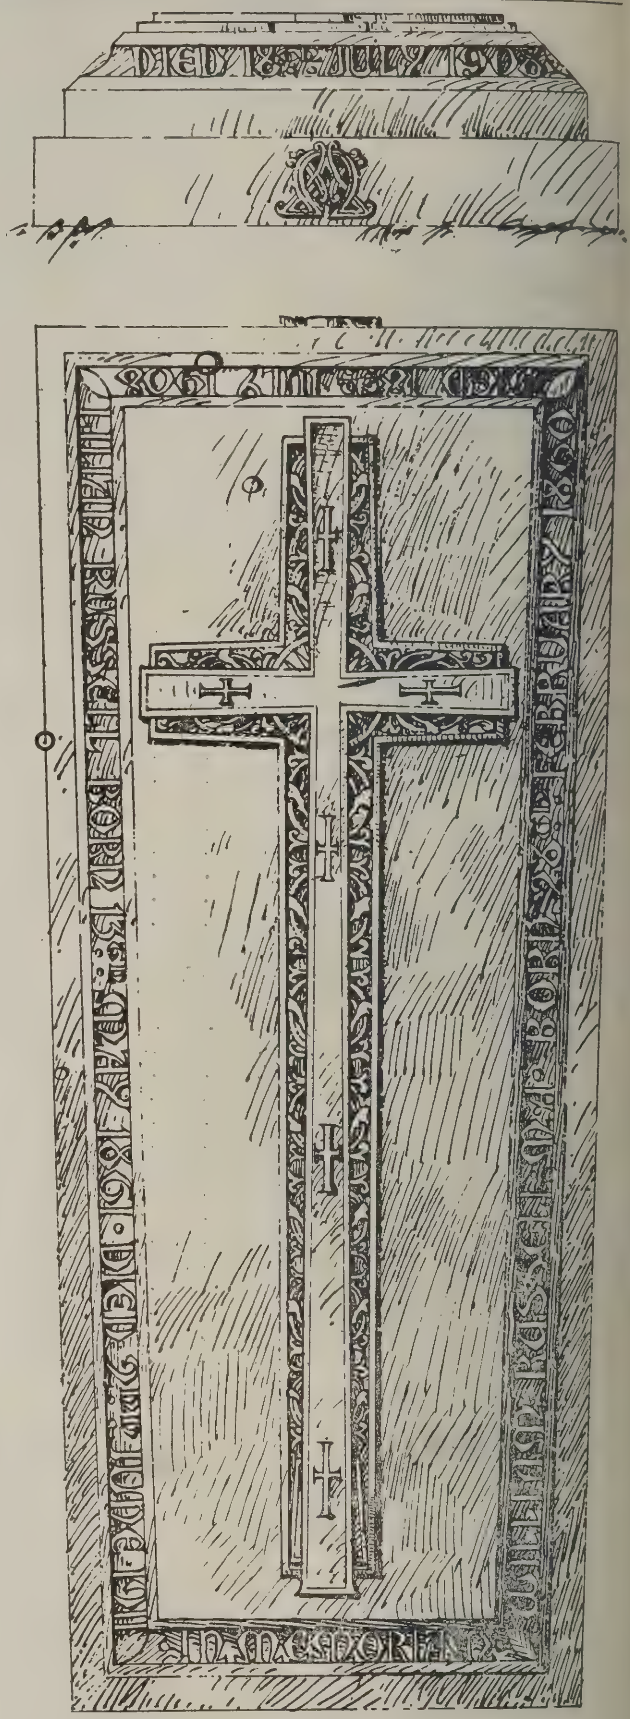
The Durham County Council and the Chester-le-Street Rural and Urban District Councils have arranged to erect a new main road bridge over the Wear between Chester-le-Street and Lumley. The total cost will be £17,726 15*s.*

The York Board of Guardians are recommended to apply for a loan of £14,294, being the estimated cost of the proposed alterations and extensions at the workhouse. The Local Government Board have already approved of the plans.

The Nelson Town Council has received sanction from the Local Government Board to borrow £6,000 for the purchase of the Marsden Hall and estate. The Hall, which for over forty years served as a private lunatic asylum, will be converted into a museum and art gallery. The wooded grounds of 44 acres will be laid out as a public park.

The question of the pulling down and rebuilding of the Hull Town Hall was recently discussed by the Corporation Property Committee. It has been decided to rebuild on a scheme to harmonise with the Law Courts. It was reported that Messrs. Quibell, Son & Greenwood had submitted an estimate of £25,378 for the work, and the Town Clerk was authorised to enter into a contract at this price.

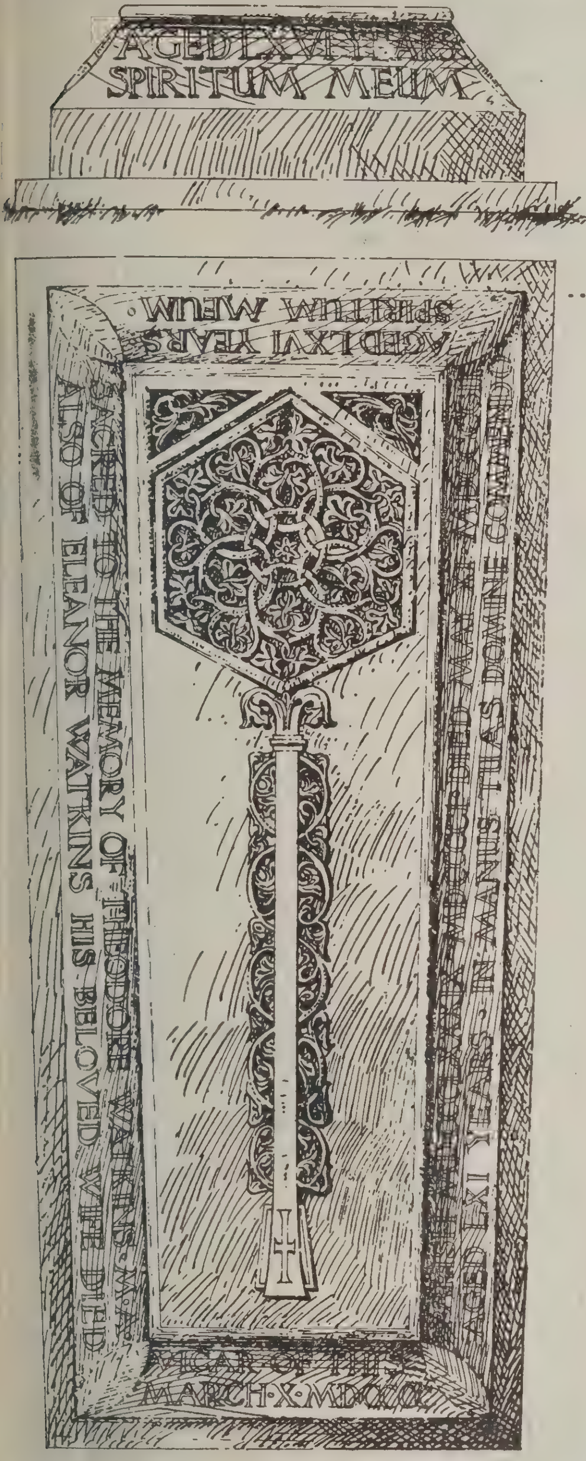
A bronze tablet has been erected at Exeter on the site of the old south gate, which was demolished 92 years ago. The tablet stands on a granite pedestal at the wall fronting Holy Trinity Churchyard, and bears the following inscription:—"Site of south gate; King Henry VI. here entered the city; 16th July, 1452; for centuries a prison; demolished 1819." The tablet has been erected by the Exeter Chamber of Commerce, who were also responsible for placing memorials at the sites of other gates in the city.



Sepulchral Slab designed by Mr. A. Borrowdale for Messrs. Borrowdale Bros., Sunderland.

Mr. W. T. Lockwood, architect, Chester, has prepared plans, after consultation with Mr. Paul Waterhouse, M.A., for the proposed reconstruction and enlargement of Chester Infirmary at an estimated cost of about £25,000. Half that amount has been received from a single donor.

The foundation stone has been laid of the extensions of the Applied Science Department of Sheffield University. The expenditure now proposed on land, buildings, and fittings is £37,848. The architects are Messrs. Gibbs, Flockton & Teather, of Sheffield.



AGED LXVI YEARS
SPIRITUM MEUM
SACRED TO THE MEMORY OF THEODORE WATKINS M.A.
ALSO OF ELEANOR WATKINS HIS BELOVED WIFE DIED
VICAR OF THIS
MARCH X MDCCC

pulchral Slab designed by Mr. A. Borrowdale for Messrs. Borrowdale Bros., Sunderland.

Messrs. Gordon & Gunton, architects, Finsbury ouse, London, E.C., have prepared plans for the erection Bishop Auckland of a new church and Sunday Schools. ie plans, which have been approved by the trustees of the o local Wesleyan bodies, are estimated to cost £12,000.

The Bradford Corporation Sewerage Committee decided Tuesday that plans and specifications for the construction a tunnel 5,124 yards long to convey effluent from Frizingll to the new sewage works at Esholt Valley should be mpleted. The work, which is expected to cost £170,000, ill be commenced early next year.

The Health and Sanitary Committee of the Gateshead wn Council have been considering the question of providing rther permanent means of disposal of town refuse, in ldition to that already afforded by the Redheugh refuse aith. The committee report that they are satisfied that e most efficient and economical method was by bringing e refuse to a ferro-concrete staith, as at Redheugh, and ence conveying it out to set. The committee have selected r the purpose a site extending from High Level Road to e river Tyne. A complete scheme will shortly be presented.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

Bedfordshire.

Luton.—Workhouse Infirmary alterations (£5,700).

Buckinghamshire.

Slough.—Parish Church: west end completion, also tower and spire (£6,000).

Cheshire.

Alderley, Nether.—Council School: alterations.

Birkenhead.—Council School, Temple Road. Mr. W. H. Forde, Ltd., contractor (£13,786).

Chester.—Infirmary extension and renovation (£21,000).

Marple.—Business premises for Compstall Co-operative Industrial Society, Ltd. Mr. F. E. L. Harris, A.R.I.B.A. (of Manchester), architect.

Stoak.—Parish Church restoration.

Cornwall.

Falmouth.—House opposite Gyllyngdune Gardens.

Newquay.—Pavilion (for 750 persons) on the Promenade. Mr. J. Ennor, jun., Council surveyor.

Cumberland.

Maryport.—Post office, High Street.

Penrith.—London City and Midland Bank premises, Market Square. Messrs. Nicholson & Sons (of Leeds), contractors.

Waverton.—House for Mrs. Fishwick.

Derbyshire.

Lunatic Asylum for 800 patients (£240,000).

Ilkeston.—School, Bumerby Street (£3,600).

Devon.

Newton Abbot.—Secondary school.

Durham.

Felling-on-Tyne.—County Police Station. Mr. W. Crozier, A.M.Inst.C.E. (of Durham), county architect.

Wearside.—Queen's Hotel alterations.

Essex.

Braintree.—Five houses, Cressing and Grenville Roads.
Picture Palace, Fairfield Road.
Workshops, New Street.

Romford.—Council Offices: alterations. Mr. T. Turvey, Council surveyor.

Springfield.—House. Messrs. C. & W. H. Pertwee (of Chelmsford), architects.

Hampshire.

Aldershot.—Royal Pavilion: additions and re-building (£6,000). Messrs. Caesar Brothers (of Hale), contractors.

Alverstoke.—House for Captain Durmaze. Messrs. Gale & Son (of Lyndhurst), contractors.

Winchester.—Council School (£4,800).

Hertfordshire.

Watford.—St. Michael's Church.

Kent.

Canterbury.—Church of St. George the Martyr: new organ and increased vestry accommodation (£235).

Chipstead.—Rock House: additions and alterations for the Sevenoaks Board of Guardians. Mr. W. J. Zealey (of Sevenoaks), contractor (£630).

Elham.—Nurses' quarters at the Workhouse Infirmary (£5,200). Mr. Bowles, architect.

Erith.—Municipal Offices.

Platt.—Church of England infants' school.

Sidcup.—Fire Brigade Station. Mr. J. W. Ellingham (of Dartford), contractor (£980).

Lancashire.

Lancaster.—Council School (£12,900).

Rumworth, New.—Six houses, Willows Lane.

Leicestershire.

Leicester.—Presbyterian Chapel.

Lincolnshire.

Brigg.—Grammar School extensions. Mr. G. H. Allison (of Grimsby), architect.

Lincoln.—Three houses, Burton and Massey Roads.
Fourteen houses in Frederick, Kingsley, Peel and Scorer Streets.
House, Charles Street West.
Altering old cottages for Mission Room, 3 and 4 St. Nicholas Square.
Gymnasium, St. Hugh's Home, Newport.

Sleaford.—Church Hall (£650).

MIDDLESEX.
Brentford.—Workhouse Infirmary extensions for children's infectious cases.
Workhouse Schools for babies and little boys.
Hendon.—Mortuary (£800).

MONMOUTHSHIRE.
Newport.—The "Anchor" Brewery: extensions to Bottling Stores and Stables. Messrs. Swalwell & Havard, architects.

NORTHAMPTONSHIRE.
Creston.—Tuberculosis Sanatorium enlargement (Edward VII. Memorial).
Rothwell.—Special instruction centre (£2,500).
Whiston.—Mission Room.

NORTHUMBERLAND.
Newcastle.—Workhouse piggeries (28 styes and 5 stalls) (£500).

SHROPSHIRE.
Shifnal.—National Schools enlargement.

SOMERSET.
Pitminster.—Council Elementary School.
Bradford-on-Tone. — Village Hall, Messrs. Samson, F.R.I.B.A., & Cottam, A.R.I.B.A. (of Taunton), architects.

STAFFORDSHIRE.
Audley Halmerend.—Council School.
Cannock.—Four houses, Western Avenue.
Twelve houses, Mount Street.
Coseley.—Council Senior and Junior Schools: additions and alterations. Mr. A. Ramsell (of Sedgley), architect.
Fulford.—Council School.
Goldenhill.—Council Schools: extensions (£5,600).
Penn, Upper.—Council School.
Stoke-on-Trent.—Central School of Science and Technology.
Wolverhampton.—District and County General Hospital (Edward VII. Memorial) Wing. Mr. A. W. Worrall, architect.

SURREY.
Bookham, Great.—Chrystie Memorial Hall.
Camberley.—Schools enlargement (£5,000).
Carshalton.—United Methodist Free Church, Ruskin Road (for 350 persons) (£3,000).
Farnham.—(Supplementary to September 22) Infirmary maternity ward additions. Mr. Adams (of Alton), contractor (£1,081).
Hascombe.—Village Hall (for 150 persons). Messrs. Underwood & Co. (of Dunsfold), contractors.
Haslemere.—Church Schools additions (£300).
Redhill and Reigate.—L. and S.W. Bank branches.
Thornton Heath.—Carnegie Public Library.

SUSSEX.
Eastbourne.—St. Andrew's Church.
Portslade.—Council School.
Worthing.—Fire Brigade cottages (£1,100).
Refuse destructor additions (£1,100).

WARWICKSHIRE.
Marston Green.—Guardians' Cottage Homes for Infants (two homes). Mr. P. W. Cox (of Handsworth), contractor (£2,840).

WORCESTERSHIRE.
Droitwich.—Territorials' Drill Hall and House.

YORKSHIRE.
Bempton.—Council School.
Hull.—Town Hall: front portion rebuilding. Messrs. Quibell, Sons & Greenwood, contractors (£25,378).
Nether Green.—United Methodist Free Church (£3,600).
Redcar.—Police Court.
Scarborough.—Refreshment room and shelters at North Bay, and enlargement of Floral Hall (£4,400).
Walkley.—Church.
York.—Workhouse alterations (£14,000).

WALES.

Aberdare.—Training School conversion into Guardians' Home for Workhouse aged and infirm. Mr. T. Roderick, architect.
Cornelly.—Council School additions.
Gilfach Fargoed.—Infants' and Old Schools: additions.
Hafod.—Presbyterian Chapel: rebuilding. Messrs. A. Ll. Thomas & G. S. Morgan (of Pontypridd), architects.
Llandrindod Wells.—Three new shops and a tea-room near the Common.
Oakdale.—100 workmen's cottages for Oakdale Navigation Colliery Company, Ltd. Mr. A. F. Webb (of Blackwood), architect.
Porthcawl.—Thirty-six houses.
St. Bride's-super-Ely.—Two cottages, also adaptation of farm buildings, at St.-y-Nyll.

SCOTLAND.

Armadale.—Town Hall for 1,000 persons (£2,500).
Dundee.—Cottage, Kirkton Road.
Cottage, Frederick Street.
Johnstone.—R.C. School for 440 pupils.
Leith.—Additions to engineers' works, 157 Leith Walk.
Lenzie.—Cottage, off Alexandra Road.
Muirhead.—Double villa, Lilybank Road.
Partick.—Tramway depot alteration. City architect.
Renfrew.—Darnley Hospital extension (£2,650).
Sorbie.—Garlieston School additions (£800).

THE British Vice-Consul at Libau, Russia, reports that a cathedral is to be built in that town as a memorial of the late Emperor Alexander III.; also that a new theatre i shortly to be erected.

AT the Waverley Market, Edinburgh, the new heating system to be installed will consume oil-fuel in preference t coal. The tender of Messrs. Mackenzie & Moncur has bee accepted for the purpose.

MR. ARTHUR TAYLOR, the Arbitrator appointed by th Local Government Board in connection with the Belfas improvement scheme, resumed his inquiry in the City Hall Belfast, on the 9th inst. The object of the scheme is to clea away several insanitary areas in the city by pulling dow the present houses, and the erection of up-to-date workmen' dwellings. The total cost is expected to be over £80,000.

THE Institution of Municipal Engineers will hold thei third annual general meeting at Windsor on the 21st inst The proceedings will open at noon with a reception by th Mayor and Corporation in the Guildhall, to be followed b the general meeting. After lunch a visit will be paid t Windsor Castle and such of the various works of the Cor poration as the members may desire to inspect.

THE Exeter City surveyor has prepared specifications estimate and detailed plans of the proposed extension of th Council's sanatorium. These provide for enlargement of th existing administration block; an observation and discharg block containing nurses' duty room and four single be wards; scarlet fever block containing two ten-bed wards an two single-bed wards with nurses' duty room, bathroom, hea ing chamber, and sanitary annexes; a diphtheria block con taining two six-bed wards and two single-bed wards; typhoid block containing two four-bed wards. &c.; a laundr block with disinfecting rooms for infected articles; mortuary stables, harness room, ambulance shed, and van shed. Th cost is estimated at £15,500.

THE Stafford Town Council have authorised the layin out of four sections of land on the Lammascote estate f the erection of houses, plots to be sold at 3*s*., 2*s*. 6*d*., 2*s*. 3*d* and 2s. per square yard, according to the situation, th Estates and Works Committee being empowered to procee with the construction of roads and sewers after sales of plo had been effected. A recommendation of the Estates an Works Committee was approved, with respect to the layin out of the remainder of the Coton Field Estate in 186 buil ing plots of varying frontages, the streets to be 36 feet wi with 6 feet footpaths on each side, and back roads of 12 fe wide. It was estimated that the cost of constructing t streets, including sewers, but excluding gas and water main would be £2,510. It was decided to have the main stre wholly illuminated at night with electric arc lamps, t present gas standards to be removed.

THE Clerk to the Stepney Board of Guardians describes his annual report the methods employed for giving work able-bodied inmates of the workhouse. A certain numb have recently been engaged in distempering and redecorati the interior of the building, under the supervision of t master, and in connection with this the report states: "Ma inmates who, on entering the workhouse, appeared to ha been furnished at birth with two left hands, have been taug to use the paint and the distemper brush in a dexterous ma ner, and have become really good workmen, who could ea their living outside if they would refrain from looking t long on the wine when it is red. The most expert of the men, the artist of the group, who mixes the paint and pr duces some startling effects in colour, is a bibulous chimne sweep."

THE EVOLUTION OF THE DWELLING-HOUSE AND SOME REFLECTIONS THEREON.

(Continued from last week.)

That which is known as "The Housing Problem" has reached in this country, as on the Continent, an acute stage, and the need of solution is more pressing than ever. That unhealthy houses and insanitary surroundings are unfavourable to the growth of healthy and good citizens needs no proof now; it is an accepted fact. But it is only of late years that this has been recognised by the nation as a whole. It has often been truthfully said that we, as a nation, are very slow to move; but there is no denying, also, that once public opinion is aroused, energetic action follows, and the result of an awakening in connection with the housing of the poor has been the demand that local authorities should put into force all their powers, and, if these are insufficient, that the Legislature should provide new and more adequate measures to effectively deal with this problem, which arises in both town and country.

The housing difficulty first manifested itself in the middle of last century, when the factory system was working out its significant changes in the condition of the working classes of Great Britain. Up to this time industry was domestic and agricultural; spinning and weaving were done at home in the cottages. The man worked the loom, working such hours as he pleased, and his wife and children spent the long evenings, when it was too dark to work in the fields, spinning yarn. There were no factories, no workshops, no machines. Then an industrial revolution was brought about by such inventions as Hargreaves's "spinning jenny," Arkwright's "water frame," Cartwright's "power loom," and the wonderful development that took place in the use of steam as a motive force. These, and the great increase in population, which doubled itself each century after the fifteenth, caused a marked exodus from the country, and resulted in the enormous growth of towns, and created all the acute sanitary difficulties attendant upon a high density of population within a limited area. This exodus from the country to the towns continues. Is it possible to stop this tide of the pick of the rural population to the big towns, and if so, is it advisable? I think all will agree that if it is possible to stay this efflux from the rural districts it would be wise to do so. No doubt the attractions of town life have a great deal to do with the drawing of young men away from the country, yet this is but one of many factors, and it cannot be denied that there is no hope of independence during their working years, or of a sufficiency for old age if they remain in the country. If the agricultural labourer could only be given some "stake in the soil" he tills—he has none now—a different aspect would be open to him. In Denmark during the last fifty years not only has the exodus from country to town been checked, but the tide has been turned in the opposite direction. This was accomplished by a great national effort, shown in a remarkable system of agricultural education and co-operation, and the establishment of a system of small holdings in all parts of that country; no less than five-sixths of the land in Denmark is now held by freeholders and peasants in this way.

In my mind there are great possibilities in England for the agricultural peasantry if some well-devised system of small holdings on similar lines, or such others as the requirements of country might demand, could be brought about. Not only would it keep the countrymen from assisting to overcrowd the towns, but it would be a means of producing in this country an enormous amount of dairy and other produce, for which we are now dependent upon other countries. Contrast Denmark, where five-sixths of the land is held by small holders, &c., and our own country, where four-fifths of the land is held by some 7,000 landowners.

Mr. Rider Haggard, in an article in the *Garden City* in 1904, spoke of small holdings as one of the means of gradually raising a peasantry and attaching them to the soil, and so pave the way for the "breeding of a healthy, industrious, and contented people." The Rural Housing and Sanitation Association pointed out in one of their annual reports "that where a system of small holdings has been adopted, and where sufficient cottages have been built to meet the demands, there the exodus from the villages has been arrested."

Another cause of the depopulation of the villages is the lack of cheap house accommodation, akin to the lack of small holdings. Cottages at cheaper rents and in greater numbers must be available, or the process of depopulation will continue. The evil of this lack is intensified by the shockingly insanitary state of much of the existing accommodation. Whilst the standard of living throughout the country has steadily risen during the last century, that of rural housing appears to have just as steadily fallen. The reasons for this lack of house-room may be attributed, amongst other causes, to:

Landowners ceasing to build cottages.
Demolition of much insanitary property rather than the owners putting it into a sanitary condition.

The results of this house famine press very hard on those who reside in villages, and in no way are its effects worse felt than in the overcrowding caused in the existing cottage.

This is as real an evil as is the overcrowding in many of the large cities to-day. And just so long as it lasts, just so long shall we have young couples about to marry drifting towards the towns, forced by the impossibility of finding house accommodation in their own village.

Let us now look at the large towns and cities, where all the worst features of defective and inadequate housing accommodation appear to concentrate themselves, and see what provision is made for the housing of persons of the poorer working classes. Speaking broadly, there are:

The common lodging-house.
The block dwelling.
The tenement house.
The cottage flat.
The separate dwelling-house.

The Common Lodging-house.—Those who have experience in this class of residence in our large, or even small towns, know that, especially when in the hands of the ordinary lodging-house keepers, it is not a desirable place of abode for respectable people, however poor they may be. Notwithstanding the more or less regular inspection by the officers of the local authority, there is a lack of cleanliness, an amount of rough and bad company, and few of those influences which can be coupled with the word home. Every credit is due to the religious agencies and philanthropists who have made provision for the poorer population in this way. In London we have the Night Shelters of the Salvation Army, the Labour Homes of the Church Army, and, for single men, the Rowton lodging-houses. Many municipalities have built model lodging-houses, amongst them being those of London, Manchester, Liverpool, and Glasgow. In these the inmates have a clean bed, and at some of the houses, particularly the Rowton houses, a separate cubicle, also provision for a bath, whilst food may be obtained from the kitchen. This class of accommodation only serves a comparatively small number of workers. In some few towns in late years common lodging-houses have been provided for women.

(To be concluded.)

The Harrogate Town Council have resolved to make application to the Local Government Board for sanction to borrow £1,765 for the improvement and widening of a portion of East Parade; and £5,000 for the carrying out of a portion of the cemetery scheme at Stonefall.

An important freehold site in the heart of the City of London, having an area of 12,700 superficial feet, is to be put up for auction on Wednesday next. The site is at present occupied by the New Synagogue, Great St. Helens, two houses, and a block of offices. It is approached from Bishopsgate through Crosby Square and from Leadenhall Street through Shaft's Buildings. With the exception of the private houses and the offices vacant possession will be given on completion of the purchase. The sale will be at the Auction Mart and will be under the auspices of Messrs. Edwin Fox, Bousfield, Burnetts & Baddeley. Full particulars may be obtained at the auctioneers' offices in 99 Gresham Street, Bank, E.C.

Messrs. John Train & Taylor have been awarded the contract, at a price of £56,679, for the construction of a granary at Meadowside, Partick, for the trustees of the Clyde Navigation. The granary is to be 320 feet long by 80 feet wide, inside dimensions, and 11 storeys in height. The building will comprise two portions, viz., grain bins or silos to contain 20,000 tons of grain, and the floor warehouse to store 11,000 tons of grain. Tenders for the construction of the granary were invited in the following methods, viz. (*a*) Entire building of reinforced concrete; (*b*) entire building of reinforced concrete, but with brickwork facing the external walls; (*c*) silos of reinforced concrete with external walls of brickwork; floor warehouse having external walls of brickwork, internal columns of cast-iron, and floors of rolled steel beams and concrete. The last method has been adopted. The time allowed for the completion is eighteen months.

VARIETIES.

At Torquay improvement schemes are to be carried out at an outlay of about £150,000.

The Pontefract Town Council have postponed consideration until the December meeting of the proposed erection of municipal workmen's dwellings, at a cost of about £20,500.

The Home Office have taken a portion of a building in Victoria Street, London, S.W., to be utilised as a permanent Museum of Safety Appliances for industries within the jurisdiction of the Home Office.

A new church is to be erected at Neasden on a site at the corner of Dollis Hill Lane and Dudding Hill Lane. The first portion of the building will cost £5,500, of which amount over £3,000 has been collected.

The directors of the London and Lancashire Fire Insurance Company have decided to pay on the 1st prox. an interim dividend of 10*s.* per share, less income tax, as compared with last year's interim dividend of 8*s.* per share, free of income tax.

The Wrotham Urban Council are about to apply for a loan of £10,000 for the proposed sewerage scheme. Mr. Elliott, the surveyor, estimates the chief items to be sewers £6,669 and works £2,760.

The Rector of Slough has received a gift of money sufficient to complete the west end of the parish church, and also to build a tower and spire. The work is estimated to cost about £6,000.

The Derbyshire County Council have appointed a sub-committee to select a site in the northern portion of the county suitable for a lunatic asylum. The cost must not exceed £15,000. It is believed that the projected new building will ultimately cost £240,000, accommodation being provided immediately for 400 patients, and eventually for 800.

The Birmingham Baths Committee recommend that the existing baths in Kent Street should be enlarged in order to provide much-needed exclusive accommodation for women. An adjacent site could be purchased for £4,000, and the total cost of the new buildings is estimated at a further £11,169.

The Rhyl Urban District Council last week adopted the recommendation of Mr. Baldwin Latham, M.Inst.C.E., to provide increased pumping power at the sewage pumping station. The relaying of the Marsh Road sewer is also to be carried out by the town surveyor at the earliest possible moment at a cost of £5,000.

A joint deputation representing the Conservative and Liberal members of the Leeds City Council waited upon Mr. William Nicholson, contractor, of Hunslet, at the Leeds Town Hall on Tuesday, formally requesting his consent to nomination as Lord Mayor of the city on November 9. Mr. Nicholson (of Messrs. William Nicholson & Son (Leeds), Ltd., of Hunslet, and South Brook Street, Leeds) accepted the nomination.

The Scarborough Town Council have approved plans for the extension of the promenade in the North Bay and the erection on the undercliff of twenty shelters, forty bathing huts, and refreshment rooms, at an estimated cost of £3,500. It was decided that £1,400 should be spent in enlarging the Floral Hall. Application has been made for the necessary loan.

The Asylums Committee of the Essex County Council report that the amount expended on the new asylum at Colchester up to September 4 was £210,251 16*s.* 2*d.* The tender of Messrs. Arnold & Son for the erection of detached buildings, including acute hospitals, consumptive hospitals, idiots' block, nurses' home, attendants' recreation block, private patients' block, &c., for £82,967 8*s.* 4*d.* has been accepted.

The City of London Guardians last week adopted a scheme for alterations at the Bow Infirmary estimated to cost about £11,000, of which £8,150 represents the structural work and £3,000 the engineering scheme. The Board have decided to enter into a contract with Mr. G. R. Dolby, consulting engineer, to supervise the engineering scheme at a fee of 250 guineas—no extras of any kind to be paid; and that a contract should be also entered into with Mr. A. E. Pridmore, the architect, to supervise the building scheme at a fee of 5 per cent. on the certified amount of work done, and that 50 guineas should be paid to him for preliminary plans and schemes submitted but not carried out.

A committee representative of the various educational bodies in Scotland is considering the question of carrying out a comprehensive scheme of residences to meet the needs of the women students attending Edinburgh University, the training centre for teachers, and other institutions in Edinburgh. It is estimated that the women students to be provided for under the proposed joint scheme number 350, and that the capital outlay in the purchase of a site and the erection and equipment of buildings will amount to about £89,000. This sum will require to be met by Treasury and Education Department grants, and by contributions from other sources. It is understood that the Carnegie Trust are prepared to give assistance.

TRADE NOTES.

Mr. R. Borlase Matthews, Wh.Ex., M.I.E.E., informs us that he is relinquishing his present work as a consulting engineer to become manager to Messrs. Ozonair, Ltd., 96 Victoria Street, Westminster, S.W.

Under the direction of Messrs. Jeffery & Lacey, architects, Ashford, the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to the Picture Palace, Ashford, Kent.

Messrs. Wm. Potts & Sons, Ltd., clock manufacturers, Leeds, have got instructions to restore the clock and large illuminated dials of St. Ann's Church, Limehouse, E. They also erected a large clock with three external dials at the Grammar School, Ashburton, Devon. The firm, we may add, made the Ashburton parish church clock and chimes over twenty years ago, which have given satisfaction. The firm are also making clocks for the Coronation Committees at Brough, in Westmorland, and Abbey Town, near Carlisle. Amongst their other recent orders are railway clocks for South America.

The Machine Gas, Limited (Cox's Air-Gas System), of 14-15 D'Arblay Street, Oxford Circus, W., have received instructions from the Lyminge (Folkestone) Guardians to supply an additional plant of 200 lights. The importance of this order is enhanced by the fact that for the past twelve months there has been running at the workhouse one of Cox's patented air-gas plants. No better testimonial to the efficiency of Cox's system could be offered than this repeat order.

The Yale and Towne Co., 6 City Road, Finsbury Square, E.C., with all their customary alertness are prepared to materially help the ironmonger who purchases their products towards finding a quick market for them. This is achieved by a loan of a Yale window display, which should be sufficient to arrest the attention of any passer-by and interest him in the inner mechanism of a Yale cylinder lock as shown by a large poster showing a Yale lock with all the works exposed. Once his attention is caught it is merely a question of temperament as to how soon the man-in-the-street will purchase. The Yale and Towne Co. expedite the conquest by providing a generous supply of booklets and leaflets to instruct and amuse. Any ironmonger or dealer who wants to push the sale of Yale products—and they are eminently a safe line—should communicate with the company regarding their window display.

"Self-Aid in Fire" is the title of a well-written booklet issued by the "Citex" Fire Extinguisher Co., Ltd., which deals with chemical extinguishing machines in general and the merits of the "Citex" hand machine in particular. A Citex machine consists of three parts: (1) an outer shell of solid-drawn steel to contain water and a cartridge; (2) a brass screw cap with plunger; and (3) a cartridge containing acid in its inner cylinder and a concentrated solution of alkali in its outer. Upon the plunger being bumped upon the floor the two lead foils separating the acid and alkali chambers are perforated, and the chemicals mix gradually, so as to bring about the generation of the gas which projects from the nozzle a stream of a powerful chemical extinguishing fluid a distance of some 35 feet. The first occasion when the "Citex" was exhibited was last year at the Japan-British Exhibition at the White City, London, when the award of a gold medal was made. In November 1910, at the International Railway Exhibition at Buenos Ayres, "Citex" obtained the highest award in competition with firms of old standing from all over the world. Two hundred "Citex" were installed at the White City Exhibition in 1910, and again for the Coronation Exhibition. In the present year a highly successful demonstration was given at the White City before the Association of Professional Fire Brigade Officers, when a fierce fire was extinguished in a few seconds. It is important to know that besides many striking merits in construction the "Citex" costs nothing whatever to use, as the cartridges are replaced free of cost in exchange for empty ones used in a fire.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—The Lancashire and Cheshire Miners' Federation invite architects in practice on their own account within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton.

Bristol.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1s. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.—N.B. The time for sending in applications and designs has been extended until December 30.

The Holborn Board of Guardians have been authorised to extend part of the Infirmary, at a cost not exceeding £4,700, in order to provide accommodation for the nursing staff.

Mr. G. T. Brown, F.R.I.B.A., has, at the request of the Sunderland Education Committee, amended the plans of the proposed alterations and extension to the Bede Collegiate School buildings, so as to meet the requirements of the Board of Education.

Mr. Albert Monk, of Edmonton, builder and contractor, whose successful tender of £178,000 was accepted for the new model dwellings for the Sutton Trust at Chelsea, died on Thursday, the 9th inst. We understand that his death will make no difference in the carrying out of the contract.

At a meeting held at the chapter-house of Salisbury Cathedral is was decided that the memorial to Bishop Wordsworth should consist of a recumbent figure of the Bishop in the Cathedral, and that any surplus funds should be devoted to the completion of the choir by canopies to the stalls.

The Whickham Council have decided to make application to the Local Government Board for sanction to borrow £2,600 for purchasing land for a public cemetery. The surveyor is to prepare plans and estimates for the erection of boundary fencing, chapels, entrance lodge, &c.

BIRMINGHAM ARCHITECTS AND THE CORPORATION.

IE General Purposes Committee of the Birmingham City uncil, at their meeting on Monday, received a deputation om the Birmingham Architectural Association, who pre- nted a memorial relating to the question of the execution of rks of architecture in Greater Birmingham. In their emorial the Association pointed out that the town planning ction of the Housing and Town Planning Act will involve estions of great importance from an architectural stand- int, and, therefore, they asked that a certain number of chitects of eminence in the city should be co-opted on the wn Planning Committee. They also pointed out that in e outside areas now included in the Greater Birmingham neme it has been the custom to employ practising architects, oecially for school buildings, and surveyors to prepare the antities for obtaining builders' tenders, and that it will a serious financial loss to the profession if this practice re discontinued. The memorial contended that the work ecuted hitherto in the outside areas, where proper care had en taken in the selection of suitable architects, would com- re favourably in expert planning, artistic aspect, and onomy of execution with those erected by official architects, d that it would be a loss to the general community if such thods were discontinued. They further requested in this rection that where buildings of special character were un- rtaken, such as training colleges, teachers' centres, or schools an unusual type, that the practice followed by many her authorities should be observed, and the work put out competition among architects practising in the city. urther, the memorialists asked that the standing order in gard to competitions for all buildings above the value of 0,000 should be observed in all suitable cases, and that, in ecial cases, the amount should be reduced. In view of the ct that in the past officials of the Councils, who had had no chitectural training, had advised various committees as the conduct of competitions, the memorialists submitted iat such a course was not in the best interests of the com- unity, from the standpoint of good architecture, sound anning, or economy, and suggested that in future the ser- es of a suitable architect should be employed to assist the mmittees in the preparation of the conditions of the com- tition, and in adjudicating upon the various designs sent . Finally, the memorialists pointed out that in the past tain buildings had been designed and carried out by officials the Corporation who had not had the training of an chitect, with the result that the artistic aspect of build- gs was apt to be overlooked or misunderstood.

Building operations in the city have, of course, principally ncerned the Education Committee, and they have employed e architect to supervise the erection of all new schools. In e districts to be added, however, the practice has been to row every new school open for competition, and the mem- rs of the Architectural Association are not only anxious at this system should be maintained in the added districts, t applied also to the present city area.

The memorial was discussed at considerable length, and entually the deputation were informed that, while the mmittee could not decide upon any definite action, as their riod of office was expiring, full consideration would be ven to the Association's proposals, which would also be ought to the notice of the other committees of the City uncil.

The *Birmingham Daily Post*, in a leader on the above emorial, makes the following comments:—

The memorial presented by the Birmingham Architectural ssociation to the General Purposes Committee of the City uncil contains points deserving of the serious considera- on which we have no doubt they will obtain. The chief oposition submitted to the committee was that in the out- le areas now included in Greater Birmingham it has been e custom to employ practising architects, especially for hool buildings, and it will be a definite financial loss to the ofession if such a practice is discontinued. The Education ommittee of the city have their own official architect, and if e architectural work in the added areas is given into his nds it will constitute a deprivation to local architects, who ight have secured it if put out to competition. Corres- ndence has appeared in our columns on this subject con- nding that the school buildings in the outside areas will mpare favourably in planning, artistic aspect, and economy execution with those erected by the city official architect. he memorialists likewise challenge comparison. There is no ecessity at this juncture to enter into the relative merits the school buildings of the inner and outer parts of the enlarged city. Something can be said in support of the official architect for specialised work like that of school designing. Whatever merits the system may have must be put against the obvious advantages of open competition. The decision turns upon the advantage to the community. Birmingham had already determined the method it regarded as the better; but, having absorbed areas not wedded to that method, in obvious fairness the views of the representatives of those areas ought to be consulted. In the readjustments involved by the enlargement of the city the Corporation have scrupulously, so far as we know, postponed where possible final decisions on matters that will affect the new wards until such time as the representatives thereof in the enlarged Council can express their views. This course can very properly be followed in the present instance. The existing General Purposes Committee will go out of office in a few days, and even if they had been in a position to take definite action upon the architects' memorial it was right they should leave the decision for their successors. But, while the question of school architecture represented the main ground of the memorial, there were other matters fittingly brought under the notice of the municipal authority. Architecture, as Mr. Unwin recently reminded us in his University lecture on Civic Design and Town Planning, must play a foremost part in improving the amenities of urban life. It is of prominent importance in the carrying out of schemes under the Housing and Town Planning Act. Consequently, the Architectural Association have weight in their request that a certain number of architects of eminence in the city should be co-opted on the Town Planning Committee to assist with their special knowledge in the discussion of any town-planning schemes that may be undertaken.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

CORNWALL.
Truro.—Two houses, The Crescent.

GOODRICH HOUSE, HATFIELD.

Through the agency of Messrs. Braund & Oram the sale h been effected of Goodrich House, an interesting Queen An building immediately facing Hatfield Parish Church, a surrounded on three sides by Lord Salisbury's property, Ha field Park adjoining its northern boundary. The purchas is Mr. F. W. Speaight, of Morton House, Hatfield, and it understood that the new owner intends entirely reconstru ing the property in such a way as to preserve all the featu that may be of either antiquarian or architectural intere

The house derives its name from Bishop Goodrich, the la of the Bishops of Ely who resided in the old episco palace that adjoins the property, and it was he who ga Henry VIII. that property in exchange for the site of I lington Priory and other lands nearer to his Ely palace.

The contract for the reconstruction, which will start Monday next, has been secured in open competition by M Newton, of Hitchin, and it is being carried out under t supervision of Mr. A. Winter Rose, architect, acting in c laboration with the owner, and who so successfully last ye carried out the reconstruction of Morton House.

AUSTRALIAN MARBLE.

There are to be seen at the office of the Victorian Age General, Melbourne Place, Strand, specimens of mar from Australia. These are specimens obtained from a quar situated in Gippsland, Victoria. The deposits occupy space of about forty acres, showing, as they do, an endl variety of constitution, texture, colour, and marking. The specimens may be seen at any time. Mr. Gair, of M bourne, who brought the specimens, will be in London fo few weeks, and will gladly give any information to perso requiring the same. Specimens of white marble will short arrive and be on exhibition at the Agent-General's office.

The Lurgan Town Council (Ireland) are prepared receive from competent architects their terms for designin planning, and carrying out all work incidental to the buil ing of about fifty artisan dwellings under the Housing the Working Classes Act. Applications must be made October 28.

THE EVOLUTION OF THE DWELLING-HOUSE AND SOME REFLECTIONS THEREON.

(Concluded from last week.)

The Block Dwelling.—This covers a large variety of buildings, the essential feature of which is a many-storeyed house with common approach (in the less modern ones, common conveniences), providing accommodation for a large number of separate families. By earlier housing reformers this form of dwelling was thought to provide a remedy for all our housing ills, and especially for two difficulties facing all designers of buildings in large towns—namely, the extreme scarcity of land for building sites and the lack of quick and cheap means of transit from the suburbs to the centre where the dwellers have to work. Therefore, this type of building was largely resorted to in London and other large cities. In London alone nearly one-third of a million of people live in them.

There is now a growing feeling against the "block dwelling"; first, on account of the fact revealed by vital statistics that they are seriously detrimental to the health of the occupants. This is proved by many well-known authorities, amongst others, in the report of the proceedings at the annual meeting of the Glasgow Dwellings Company (October 1906), where, in a total number of inhabitants in houses, most of which are blocks, "The average death-rate for the whole of the houses was 27.6, whilst the average for Glasgow was 17.9."

Similar testimony is given by several eminent medical officers of health. The reason for this bad bill of health is attributed to the lack of sunshine and fresh air, especially in the lower storeys of the block dwellings, the many stairs which have to be climbed up and down before work or recreation can be reached, and the difficulty of efficient isolation of the serious infectious but non-notifiable diseases, such as consumption, whooping cough, measles, &c. Another objection is that the block dwellers do not get the comfort and decency which the separate home gives its occupants. A writer recently said "Privacy is impossible for those who are forced to occupy block dwellings." Little affection seems to gather round them. The common staircase, the common dust-shoot, the common wash-house reveal to the general public the manifold secrets of domestic life.

It is in vain that a mother, careful for the training of her children, attempts to screen them from the influences around. The offensive habits and abusive language of the neighbours cannot be shut out; the children encounter the drunkard on their common stair. The street or the common courtyard is the only playground, and, consequently, they become ruder in manner, coarser and noisier in their habits than the boys of the same grade in smaller houses.

Another very serious drawback to the block dweller's health is the absence of quietude until late at night; there is no rest until all the family have retired, and no quiet until the neighbours have done likewise. Disturbance comes early in the morning. To the consequent loss of sleep may be accounted a large amount of nervous weakness, and when sickness comes these conditions must have a very bad effect. Can we imagine what it must mean to a woman attempting to nurse a delirious husband or attend to the wants of the family of six or seven in two rooms opening out on to a common stair or passageway?

The Tenement House.—In large towns many houses which formerly were the private residences of well-to-do people have, in consequence of the removal of their late owners or occupiers to more genial surroundings in the suburbs, or more distant places, on account of the district becoming more industrial in character, become tenement houses; which means that the house built to accommodate persons of one family has become a house let in lodgings for a number of families. The history of such a house is generally a dismal record of deterioration. It is often overcrowded, ill-ventilated, with insufficient sanitary accommodation, and inadequate provision for washing and water supply—in fact, everything tending towards every kind of domestic insanitation—the worst form of insanitation. The absence of pantry accommodation necessitates the bringing into use of all kinds of unsuitable receptacles for food, such as a cupboard under the stair, a portion of the coal store, or some old box. The majority of the occupants are without cooking ranges in their quarters other than a small open range, which makes the proper cooking of the food available quite impossible; in fact, this class of dwelling is but little improvement, if any, on the older class of block dwellings. In London no less than one million people reside in such dwellings. What chance in such surroundings is there for the proper development of that home life on which so much depends for the children?

The Cottage Flat.—This is another type of working-class dwelling; it is a two-storeyed building, containing on the ground and first floors a complete self-contained flat, each built for one family only, with a separate entrance for each from the street. This type of dwelling gives the privacy of a real home, and all the sunshine and fresh air which the site can receive are secured to the occupants. Next to a separate cottage for each family this arrangement is best, but in large towns and cities, if the cost of land, &c., is prohibitive, surely it might, where insanitary areas are cleared be adopted even if it did involve a charge on the community through the rates; better to pay it in poor, general, district, or borough rates, as the case may be, than in high sick- and death-rates. In the city of Birmingham, since 1892, cottage flats have been built by the Corporation which let at 5s. 6*d.* to 6*s.* 6*d.* per week. It is a suitable type of building for erecting in the inner suburbs of towns, and successful schemes are in operation at Hornsey, Richmond, and other places.

The most desirable type of dwelling for the worker and his family is the separate house; its advantages are too apparent to need enumerating.

Apart from, yet frequently along with, the defects of structure, there exists the very great evil of overcrowding. This may be measured in two ways—namely, either by the number of houses built upon an acre of ground, or by the number of persons living in a single room. The former method of measurement is misleading if applied to areas where the houses are unevenly distributed. In York, where the average number of persons per acre for the whole city is less than in the standard laid down by the late Sir Benjamin Ward Richardson (25 persons per acre), there are specific districts where the number of persons per acre rises to ten and twelve times the standard number. York is not exceptional in this respect; there are areas in many large towns where the standard is exceeded twenty-fold, and in Edinburgh it is even worse than this.

Using the latter method of measurement we find that at the Census of 1901 in London there were some 150,000 one-room tenements, 17,000 of which were occupied by four, or more than four, persons.

The effect of overcrowding is shown in the following table taken from the annual report for 1906 of the Medical Officer of Health for Finsbury:

FINSBURY, 1903 TO 1906.

Death-rates per 1,000 *Persons from All and Certain Causes in Houses or Tenements of Several Sizes.*

		All Causes.				Phthisis.			
Size of Tenements.	Census Population, 1901, 101,463.*	Death-rate per 1,000 1903.	Death-rate per 1,000 1904.	Death-rate per 1,000 1905.	Death-rate per 1,000 1906.	Death-rate per 1,000 1903.	Death-rate per 1,000 1904.	Death-rate per 1,000 1905.	Death-rate per 1,000 1906.
One Room Tenement	14,516	38·9	40·6	32·7	39·0	4·5	4·5	3·5	3·4
Two Room Tenement	31,482	22·6	21·9	19·5	22·5	2·8	2·2	2·1	2·3
Three Room Tenement	21,280	11·7	14·7	12·3	14·8	1·2	2·3	1·3	1·4
Four Room Tenement and upwards of 4 Rooms...	33,185	5·6	7·5	6·6	6·4	0·63	1·2	0·81	0·93
The Borough Death Rates	—	19·8	21·1	18·9	20·7	2·2	2·5	2·1	2·3

* For the purposes of this table it has been necessary to use the Census population (1901) for all four of the years included in the table. It should not, however, be forgotten that the population is declining, and the death-rate for each year in this table are, therefore, approximate only.

The question naturally arises: Why does all this overcrowding of dwellings exist? Well, primarily, the answer must be poverty—due to many causes, true; in fact, the Royal Commission of 1884 classified the "unquestioned causes" as follows:

(1) Poverty, the relation borne by wages to rent.
(2) Demolition of houses inhabited by the working classes.
(3) Relations between owners and tenants.
(4) Remissness of local authorities in the administration of the law.

Added to their report was the following statement: "What at the present time is specially required is some motive power, and probably there can be no stronger power than public opinion."

Twenty years later similar conclusions were arrived at by the Physical Deterioration Committee, who said "that it is not so much the instrument that is at fault as the impulse behind it." Let us hope that public opinion has been or will be so aroused that local authorities anxious to carry out the powers they possess may be assisted to do so; and that those local authorities who are remiss may be compelled to take what action may be necessary.

VARIETIES.

Mr. John Douglas, architect, of Chester, who died recently, left property valued at £32,088.

The Reigate Board of Guardians are considering a recommendation to provide a new hospital for seventy-two beds at the workhouse.

Mr. E. C. Poole, surveyor to the Southampton Harbour Board, has prepared alternative schemes for re-decking the Royal Pier at a cost of from £1,000 to £4,000.

The Lymington Town Council have instructed their borough surveyor to prepare plans for converting Nos. 117 and 118 High Street into municipal offices. A proposal that the work should be put out to competition was lost.

Mr. J. M. Dick Peddie, architect, Edinburgh, has prepared plans for new county offices proposed to be erected in English Street, Dumfries, at a cost of £21,000. These plans have been approved by the Dumfries County Council.

The Turton Urban District Council have appointed a sub-committee to consider the plans and estimates of a proposed extension at the Eagley Sewage Works at a cost of £7,000.

The City Council of Leeds give notice of their intention to provide (1) a new public elementary school for about 600 children in the neighbourhood of Harehills Lane and York Road, and (2) an enlargement of the Bramley Council School accommodating about 400 extra children.

Mr. Frederick Braby, the head and founder of the well-known firm of Frederick Braby & Co., Ltd., of Fitzroy Works, Euston Road, London, and also at Deptford, Glasgow, Liverpool, Bristol and Falkirk passed away on the 9th instant, at his residence, Bushey Lodge, Teddington, after a short illness, aged eighty-two.

The Hull Corporation Property Committee recommend the Parliamentary Committee to include in the next Parliamentary Bill power to construct a new North Bridge, 65 feet wide, at a cost of £56,000. The plans were prepared by the City Engineer.

Mr. R. Catterson-Smith has been appointed by the Museum and School of Art Committee of the Birmingham City Council director of art education to control all art education for which the Museum and School of Art Committee is responsible. The salary is said to be £1,000 per annum.

A scheme to sewer the populous areas in Sutton and Bridley Ward, and those properties on Hook Heath which cannot be drained into the present gravitation sewer, at an estimated cost of over £10,000, was brought before the Woking Urban District Council at their last meeting. The plans had been prepared by the surveyor (Mr. G. J. Wooldridge).

The Streets Committee of the Bolton Corporation last week resolved that the draft bye-laws with respect to new streets and buildings be approved, and a copy be furnished to the Master Builders' Association for any observation they may wish to make thereon, and also to a nominee of the architects and surveyors practising in Bolton.

Mr. Joseph Norris, cabinet and chair manufacturer, Smeaton Street, Hull, supplied his tip-up chairs (a speciality) in the Corporation Baths, Walthamstow; in the gallery of the Peter Street Wesleyan Church, Canterbury; and in the Primitive Methodist Sunday Schools, Brightside, Sheffield.

The Warrington Education Committee have agreed that application be made to the Local Government Board for sanction to the purchase of about two acres of land in Lovely Lane as a site for a public elementary school. The committee will shortly have three or four new schools in course of erection.

At this week's meeting of the Doncaster local authority the tender of Messrs. Arnold & Son, of Doncaster, amounting to £10,464, for carrying out the sewerage schemes at Adwick-le-Street, Owston, and Skellow, was accepted; also the tender of the Combined Concrete Constructive Co., Ltd., for raising the water reservoir at Conisborough in reinforced concrete, for £794.

At the half-yearly meeting of the National Association of Master Plasterers, held at Manchester on the 14th inst., it was decided, in view of statements that the National Insurance Bill was to be passed during next Session practically unaltered, to recommend all the members to decline to give any assistance to work the Bill.

The Government recently acquired a six-storey block of buildings with a frontage in Basinghall Street, Leeds, as a site for the first telephone exchange to be provided by them after taking over the National Telephone Company on January 1, 1912. The work of demolition began this week. It is understood that the new exchange is to embody the latest ideas in that class of building.

Fritwell Manor, Banbury, the residence of the late Mr. Thomas Garner, is to be sold by auction. The manor goes back to Saxon times, but the existing building dates from the late sixteenth century. In 1892 Mr. Garner secured a lease of the house, which he described in "The Domestic Architecture of England during the Tudor Period." Considerable time and money was expended on its careful restoration.

A sum of £1,300, which remains over from the Liverpool Coronation Celebrations Fund, is to be spent on life-size portraits of King George and Queen Mary, which are to be hung in the Town Hall. The King and Queen have consented to the proposal, and named two artists to carry out the work—Sir Luke Fildes, R.A. (a Liverpool man), to paint the King's portrait, and Mr. W. Llewellyn, A.R.C.A., the Queen's.

Quantity surveyors practising in Newcastle who are desirous of having their names submitted to the Education Committee for appointment in connection with the proposed new school at Walker Gate must apply to the Secretary, Education Offices, Northumberland Road, not later than October 23, stating their charges for: (*a*) taking out the quantities; (*b*) lithography.

The death is announced of Mr. Robert Hamilton-Paterson, ordained surveyor, architect, and valuator, Edinburgh, of the firm of Messrs. Hamilton-Paterson & Paterson, York Place, at the age of sixty-seven. Mr. Hamilton-Paterson set up in business as an ordained surveyor in Edinburgh forty years ago, and later became best known as an architect for breweries and maltings.

Plymouth Town Council Special Works Committee last week had before them the amended plans of the Education Committee for the erection of school buildings on the site of the Public School in Cobourg Street, the original plans having been disapproved, inasmuch as they were not in conformity with the by-laws. The amended plans were now approved, subject to the adjustment of certain details.

Mr. J. S. Beaumont, B.A., who graduated at Manchester University with first-class honours in architecture last July, has been awarded a Gilchrist Studentship; the nomination is made by the Committee of the British School at Rome, and the Gilchrist Trustees have approved this nomination. The studentship is an open one for competition among all suitable candidates who have pursued a sufficient course of preliminary study. It is tenable for one year, and is of the value of £75. The holder of the studentship is enrolled as a student of the British School at Rome and is expected to spend a period of at least five months in Rome or in Italy pursuing an approved course of architectural and historical study.

The foundation-stone of the new church of St. Mary, Horden Colliery, was laid last week. The church, which is the gift of Colonel Burdon, is to seat 600 people. It will stand on a commanding site in Blackhills Road, and will be cruciform in style, with a tower 65 ft. high at the crossing of the nave and transepts. There will also be a side chapel. The total length of the church will be 160 ft., and the nave will be 28 ft. 6 in. wide. The material to be used for the exterior is rock-faced artificial stone, and internally the nave and chancel will be spanned by a waggon roof. The contractors for the church are Messrs. William Pearson & Son, West Hartlepool, and the architects, Messrs. Joseph Potts & Son, Newcastle and Sunderland.

To-day (Friday) the foundation-stone is to be laid in Edinburgh of a new college for the training of teachers. The site is that of the old Moray House Training College, which has been enlarged to a total area of 2.7 acres at a cost of over £20,000. This area will also suffice for the demonstration school to be erected later. The main or central building is now in course of erection. The plans show a building three storeys in height, occupying an area of about 40,000 square feet, and arranged in the form of a hollow square, with an interior court measuring 92 feet by 92 feet. The frontage is towards the South Back Canongate, and is about 200 feet in extent. When it is completed the new building will provide classrooms for 800 students, offices for the administrative staff, and meeting-rooms for the committees. A hall for the accommodation of the whole of the students at one time is provided for, and in addition to the ordinary classrooms provision is also made of a department of school hygiene, which includes lecture theatre for 150 students. The cost of the building is estimated at about £50,000. The architect of the new training college is Mr. A. K. Robertson, 29 Hanover Street, Edinburgh, and the contractors are Messrs. G. & R. Cousin, Edinburgh.

VENTILATING FANS.

One of the sections of the Factory and Workshop Act deals with the regulation of laundries; and, among many other requirements, it sets forth that in the case of every laundry worked by steam, water, or other mechanical power, "a fan or other means of a proper construction must be provided, maintained, and used for regulating the temperature in every ironing-room, and for carrying away the steam in every washhouse in the laundry." The problem is a familiar one to laundry engineers and others who have to cope with conditions under which saturated steam is passed into a confined space before it can be extracted. There have been in the past many attempts at its solution, with widely-varying results. It would seem as if at last means have been devised capable of completely coping with the problem.

Some months ago the authorities of a county asylum were considerably exercised by the fact that when their washhouse was in operation the big room became filled with steam. Not only did it impede the vision of the workers, but it also condensed on the roof principals and other surfaces, and this was felt to be highly detrimental to the well-being of the building and its fittings. Under these circumstances several firms were invited, on the advice of a consulting engineer, to prepare and submit in competition to the county authorities a scheme or schemes for overcoming the difficulty. One of the most important conditions was that the plant should be capable of clearing the washhouse (which is a large one with a great number of machines) of all steam in two and a half minutes.

After full consideration it was decided to accept the scheme sent in by Messrs. John Gibbs & Son, of 72-76 Guke Street, Liverpool. This firm are warming, ventilating, electrical, and consulting engineers, who may be said to have made a specialty of air-propelling and ventilating fans, and who were therefore especially suited to cope with troubles of the sort above mentioned. The installation advised consisted of several of their patent open-bladed fans and one of their "Peerless" blowing and exhaust fans, together with their patent entirely-enclosed dustproof motor. Hot air is taken from the top of the drying chambers (where it was previously wasted) and blown through graduated ducts into the washhouse. The "Peerless" blower carries the hot air to the far side of the room, where it is discharged from a number of openings in the graduated tube. The waste steam is removed by three fans—two of which are belt-driven and the third is fixed in the roof.

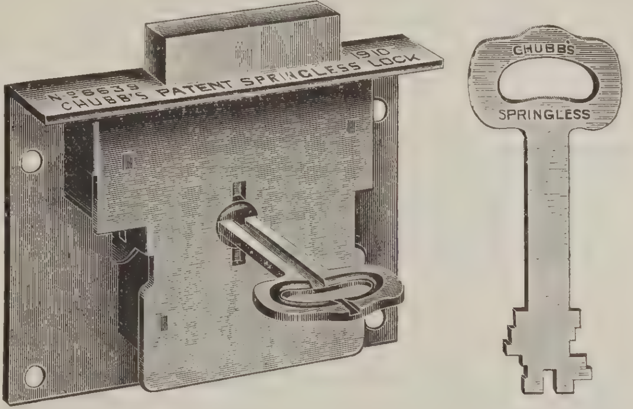
After the plant had been installed it was subjected to a special test in accordance with the conditions of contract in the presence of the asylum officials. The results were completely satisfactory. At the expiration of two minutes fifteen seconds all steam had been completely cleared from the far side of the big washhouse, and in a further fifteen seconds no trace of steam remained anywhere. This success should mark the end of a trouble which has too long attended the use of laundry machinery on a large scale. We understand that the Lunacy Commissioners, after inspecting the installation, made a special and laudatory reference to it in a report.

CHUBB'S PATENT SPRINGLESS LOCK.

There is about to be put on the market by Chubb & Son's Lock and Safe Company, Ltd., 128 Queen Victoria Street, E.C., a lock designed on a new principle. Not only is it without springs, but without substitutes for springs such as weights. The chief use of springs is to press the tumblers or their equivalents in one direction so that they may be in contact with the key as it is being used, and return to rest when the key is removed.

In this new Chubb's Lock the detainers are not tumblers, levers, pins, or discs, but pieces shaped something like the letter U with arms at right angles to the sides of the U. These pieces slide in a channel fixed to the bolt, and when locked one arm of each piece is in front of the end of the rim to prevent the inward movement of the bolt.

The key, made of flat metal, is stepped on both edges (as shown in our illustration), and the distance across any pair of opposite steps is equal to the distance between the parallel sides of the U. The key enters between the sides of the U, and as it is turned the longer steps move the U pieces their required distances, one way or the other, from the centre of the key.



When the key is at right angles to the sides of the U pieces all the steps on both sides of the key are in contact with the sides of the U, and all the ends of the U pieces are just clear of the ends of the rim, so that they form no obstacle to the inward movement of the bolt. If the key be further turned the bolt begins to move by the action of the carrier which is taken round by the key. Just before the movement of the key is completed, when the bolt is in and the key steps are leaving the U pieces, the scatterer begins to act. This scatterer is a part of the carrier, and is so shaped as to move the U pieces in both directions into positions very different from those at which the lock will open.

When locking the movements are in the reverse direction but otherwise the same as when unlocking.

The important factors of security are present. Underlifting and overlifting are possible as in all good locks, and take place when an attempt is made to pick the lock or a wrong key is used. If underlifted a U piece catches at one end on the rim, and if overlifted on the other.

Messrs. Chubb & Son have produced a lock which is both strong and cheap without sacrificing excellence of finish. It may specially be recommended for tills and cupboards. The firm are makers both to the King and to the Bank of England; but they do not overlook humbler requirements. In their latest production they should score another great success.

It is proposed to erect a new concert hall in Piccadilly for Mr. T. Arthur Russell, the well-known concert agent. The estimated cost is £85,000.

Owing to the demand for the Series of Articles

By Prof. C. A. M. SMITH, M.Sc.

The Leading Welsh Slate Quarry Owners

Architects are asked to specify Welsh Slates, the finest in colour and durability. The following are the leading firms:

The PRECELLY GREEN SLATES
— and —
The PRECELLY RUSTIC SLATES
Made in Randoms and Peggies.
A Welsh Slate of unique appearance.
For particulars apply to
DAVIES BROS., Portmadoc, N. Wales.

MAEN OFFEREN
SLATE QUARRY CO., LTD.
OLD VEIN and other **BLUE SLATES** from their own quarries at Blaenau-Festiniog.
— *Address:* —
Portmadoc, N. WALES.

THE ALEXANDRA SLATE CO.,
CARNARVON. [Ltd.,
Manufacturers of high-class
ROOFING SLATES
machine dressed, uniform in thickness & free from faults.
Telegrams: "ALEXANDRA, CARNARVON."
National Telephone: No. 23.
Managing Director—A. W. Kay-Menzies.

THE LLANBERIS SLATE CO.,
CARNARVON, [Ltd.,
Manufacturers of strong and durable **ROOFING SLATES,** are always in a position to supply large orders at short notice for **BLUE PURPLE, RED and GREEN, — and WRINKLED SLATES. —**
Telegrapnic address:

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bristol.—Oct. 31.—The Grand Hotel Company (Bristol), Ltd., are prepared to receive from architects and surveyors plans for proposed alterations in the hotel to provide additional bedrooms. Three premiums will be awarded. The architect in submitting his plans and designs must give the approximate cost of the proposed additions, as it will be taken into consideration. Mr. Frederick A. Jenkins, secretary, 44 Corn Street, Bristol.

Glasgow.—Nov. 6.—The Glasgow Provincial Committee propose to erect at Jordanhill, Glasgow, a Training College to accommodate 1,200 students, and to aid them in selecting a limited number of architects to compete for the intended work, they invite architects willing to take part in the competition to send in their names by Nov. 6, with twenty copies of a statement containing such information as they may think likely to advance their claims. Canvassing will be a disqualification. Mr. D. Macleod, Director of Studies, Technical College, Glasgow.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1s. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.—N.B. The time for sending in applications and designs has been extended until December 30.

London.—Oct. 31.—The Metropolitan Borough Council of St. Marylebone invite designs for new municipal buildings in Marylebone Road. Deposit £1 1*s*., which will be refunded on receipt of a bona-fide design or return of conditions within one month of receipt. All particulars from Mr. James Wilson, Town Clerk, Town Hall, Marylebone Lane, Oxford Street, W.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Sale.—Nov. 4.—The Sale and Ashton-upon-Mersey District Administrative Sub-Committee for Education invite architects practising within a radius of 20 miles of Manchester to make application for entry to a limited competition for designs for the proposed Council schools at Sale and Ashton-upon-Mersey, each of which is intended to accommodate 300 children. The county "regulations for the remuneration, &c., of architects engaged to design and superintend the erection of school buildings in the county" will be observed in appointing an architect. Applications should be sent on or before Nov. 4 to Mr. Walter Taylor, clerk to the Sub-committee, Public Free Library and Technical School, Sale.

Stockport.—Nov. 6.—Architects who would be willing, if invited by the Guardians of the Stockport Union, to submit competitive designs of new buildings for mental patients (about 250 beds), to be erected in connection with their infirmary at Stepping Hill, near Stockport, are requested to submit their names not later than Nov. 6, together with such information as they may consider likely to advance their claims to be admitted to the competition. Premiums of £100, £50, and £25 will be awarded, and a professional assessor will be employed. Mr. Charles F. Johnson, clerk to the Guardians, Union Offices, Stockport.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—Nov. 30.—The Cardiff Education Committee invite designs and estimates for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s*., which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

CONTRACTS OPEN.

Alderman's Green.—Oct. 30.—For erection and completion of three blocks of houses, four to each block, at Alderman's Green, near Coventry, for the Coventry Perseverance Co-operative Society, Ltd. Mr. W. H. Hattrell architect, 23 Hertford Street, Coventry.

Windermere.—Nov. 4.—For the construction of a public sanitary convenience at Bowness Bay, for the Windermere Urban District Council. Deposit £1 1*s*. Mr. J. T. Bownass, clerk, Windermere.

Wokingham.—Oct. 31.—For erection of cottage homes, Oxford Road, for the Guardians. Mr. J. F. Sargeant, clerk, Shute End, Wokingham.

The will of Mr. John Nickson, of 220 Liscard Road, Liscard, Cheshire, builder, has been proved at £106,394.

A public meeting has been formally called by the Lord Mayor of Manchester for November 6, when a vote will be taken with regard to the utilisation of the old Infirmary site.

An action has been called before Lord Cullen in the Court of Session at the instance of the Lord Provost, Magistrates, and Council of the City of Edinburgh against the Lord Advocate as representing the Commissioners of H.M. Works and Public Buildings. The action has arisen out of the decision of the Commissioners to increase the buildings of the Botanic Gardens facing Inverleith Row. The Corporation seek declarator that the Commissioners have no power to erect such buildings contrary to the desire of the Local Authority.

Group II.—Physical, optical, surveying and astronomical instruments.—Grand Prix to Messrs. Chance Brothers & Co., Ltd., Negretti & Zambra, and W. F. Stanley & Co., Ltd.

Group II.—Meteorological instruments.—Gold Medal to Messrs. W. F. Stanley & Co., Ltd.

Group IV.—Steam plant, heat, and other engines. Transmitting, lubricating, regulating, and indicating apparatus.—Grand Prix to Messrs. R. Hornsby & Sons, Ltd., and The National Gas Engine Co., Ltd.; Diploma of Honour to Messrs. C. C. Wakefield & Co.

Group IV.—Lifting, hydraulic and air machinery. Fire and safety appliances and submarine apparatus.—Grand Prix to Messrs. Merryweather & Sons, and White, Child & Beney, Ltd.; Diploma of Honour to The British Vacuum Cleaner Co., Ltd., and Watson, Laidlaw & Co.

Group IV.—Machines, appliances, and tools for working metals in general, for forging, &c.—Hors Concours: Carbic, Ltd.

Group V.—Generation, distribution, and mechanical applications of electricity.—Gold Medal to Ozonair, Ltd.

Group V.—Electro chemistry.—Grand Prix to Ozonair, Ltd.

Group VI.—Building materials, methods of construction, machines, appliances, models, plans, and drawings.—Grand Prix to Hadfield's Steel Foundry Co., Ltd., Pilkington's Tile and Pottery Co., Ltd., and Messrs. Ruston, Proctor & Co., Ltd.

Group VII.—Road transport.—Gold Medal to Messrs. Barford & Perkins.

Group VII.—Railways and tramways.—Hors Concours: Carbic, Ltd.

Group VIII.—Sanitation and provisioning. Provisions for comfort and safety.—Gold Medal to Ozonair, Ltd.

Group IX.—Gas production.—Hors Concours: Carbic, Ltd.

Group XI.—Sporting industries.—Grand Prix to The "E. C." Powder Co., Ltd.

Group XII.—The Modern Town.—Grand Prix to Messrs. Merryweather & Sons, and Ozonair, Ltd. (two).

Group XIII.—Materials and appliances for erecting, decorating, and finishing buildings.—Grand Prix to Mr. T. W. Camm, and Pilkington's Tile & Pottery Co., Ltd.; Gold Medals to the Bostwick Gate & Shutter Co., Ltd., and Mr. A. J. Dix.

Group XIV.—Furnishing, upholsterers' work, decorative bronzes, art candelabra, glass and china.—Grand Prix to The British Vacuum Cleaner Co., Ltd., Messrs. Doulton & Co., Ltd., Pilkington's Tile & Pottery Co., Ltd., and Messrs. Josiah Wedgwood & Sons, Ltd.

Group XIV.—Heating appliances, cooking ranges, and articles for domestic use.—Diploma of Honour: Ozonair, Ltd.

Group XIV.—Economics of forestry and forest management.—Grand Prix to Venesta, Ltd.

Group XIV.—Hunting.—Grand Prix to The "E. C." Powder Co.

Group XIV.—Pisciculture, fishery schools and associations.—Grand Prix to Ozonair, Ltd.

Group XVI.—Meteorology, agricultural geology, and study of soils.—Grand Prix to Messrs. W. F. Stanley & Co., Ltd.

Group XVII.—Food industries and products.—Grand Prix to Messrs. Watson, Laidlaw & Co., Ltd. (two), and Ozonair, Ltd.; Diploma of Honour to Ozonair, Ltd.

Group XVIII.—Metallurgical plant.—Grand Prix to Messrs. W. F. Stanley & Co., Ltd.

Group XVIII.—Chemical apparatus and products.—Hors Concours: Carbic, Ltd.; Grand Prix to Messrs. Fletcher, Russell & Co., Ltd., and The Gas Light and Coke Co.; Silver Medals to Ozonair, Ltd. (two).

Group XVIII.—Destructive distillation.—Grand Prix to The Gas Light and Coke Co.

Group XX.—Machines for hosiery manufacture.—Hors Concours: Carbic, Ltd.

Group XXIII.—Appliances for the Graphic Arts.—Grand Prix to Roneo, Ltd.

Group XXIII.—Advertising.—Hors Concours: Carbic, Ltd.

In making the awards as mentioned above, the International Juries for the respective classes accompanied the award by a record of their special congratulations in Classes 35, 36, and 37 (building materials, methods of construction, machines, appliances, &c.) to Pilkington's Tile & Pottery Co., Ltd., and Messrs. Ruston, Proctor & Co., Ltd.

LONDON MASTER BUILDERS' ASSOCIATION.

A Council meeting of the London Master Builders' Association was held at Koh-i-Noor House, Kingsway, W.C., on Thursday, the 19th instant.

The Finance Committee's report was read and approved, and the report of the Carpenters' and Joiners' Conciliation Board meeting was reported.

The Council gave its consideration to matters relating to the Industrial Council appointed by the Board of Trade, to a petition that had been lodged against the Trade Disputes Act (1906), and to various other trade matters, to the report in the Press of the annual meeting of the London Association of Slate Merchants and Master Slaters, and to the next issue of the Hand-book.

The following were elected as Associate members of the Association:—Messrs. the Metropolitan Asphalte Co., C. Loosley & Sons, and F. A. Clark & Son. The following were nominated for membership:—As ordinary member, Mr. A. E. Symes; as Associate member, Messrs. J. Russell & Co., Ltd.

The foundation stone of the Church of St. John the Baptist, Great Meols, in the parish of Hoylake, was laid on Saturday. It is proposed to build the nave alone, with a temporary chancel, and add the rest as the financial position allows. The cost of this first portion will be about £5,500. To add the chancel will mean about £1,750, and the tower a further sum of £1,500. The architects are Messrs. E. Kirby and Sons, Liverpool.

MODERN CARAVANSERAI.

It is always a pleasure to be able to record steady progress in an English industry. The firm of Spiers & Pond, Ltd., the caterers and hotel proprietors, have passed through a difficult time during the last few years; and it is particularly satisfactory to be now able to report that after earnest endeavour and collective hard work the directors have been enabled to restore the company to its old position as preeminently the leading firm of caterers and hotel proprietors. In connection with these efforts the board have been carrying out a systematic improvement at all their principal hotels, bringing them thoroughly up-to-date in decorative repair and sanitation, and in many cases making large alterations and additions. The hotel proprietor who desires to succeed must be always on the look-out for improvements which may add to the comfort of his guests. Messrs. Spiers & Pond, Ltd., have devoted particular attention in consequence to the lounge at each hotel. At one time the lounge was hardly used by guests staying in the house—in fact, it was ignored excepting perhaps by the younger people; to-day it is the living-room, if such a term is permissible, of the hotel, and most especially a cosy place for the afternoon tea. The directors of this company have been particularly careful that every possible comfort shall be given to their clientèle. The following details will convey some idea of the works of improvement which have been carried out under the supervision of the company's architect, Mr. F. Legg:—

Metropole Hotel, Blackpool.—Within the year extensive alterations have been made, consisting of taking down the wall between the Moorish lounge and the reading and billiard-rooms, which not only increases the accommodation, but gives a good view of the sea from the lounge itself. The entrance also has been altered and is now facing south, and has a spacious inner hall and hotel offices in a far more convenient position. Gentlemen's lavatories and cloak-rooms have been constructed under the inner hall, which are larger and much more convenient than in their former place.

Empire Hotel, Buxton.—A large sum was spent this spring in repainting and decorating. The garage, which can accommodate 60 cars, is the largest for miles round.

Empire Hotel, Bath.—Extensive alterations are being made in the kitchen and services and adding a lift and apparatus to the existing plant, which will mean that the service to the coffee-room will be better. Ladies and gentlemen's cloak-rooms have been much enlarged and made more convenient. Some bathrooms have also been added. There are two large houses opposite to the entrance which obstruct the view of the gardens and abbey. The lease of these expires at the end of the year, and by arrangement with the Corporation these houses will be pulled down and not rebuilt, so that there will then be an uninterrupted view from the hotel windows of the Abbey, the gardens, and the surrounding hills.

Palace Hotel, Hastings.—Extensive alterations have been schemed which will greatly improve the comfort of the visitors. The kitchens will be removed from the upper floor and the space converted into bedrooms, so that visitors occupying that part of the hotel will not be disturbed by noise which at present cannot well be avoided. The kitchen department will be moved to the basement, where there is far more accommodation, and a lift will be put in for service purposes. This will add comfort to the coffee-room, as the service will then be outside instead of opening into it as at present. The restaurant, which is patronised by people not staying in the hotel, will be made double its size and a spacious lounge provided in the rear, with a billiard-room over the lounge. The Hastings Corporation are about to make many valuable improvements in the town, and included in these are alterations to the baths under the parade in front of the hotel, where advertisements are lavishly displayed. All these advertisements are to disappear and the parade made much more attractive, which will notably improve the view from the hotel windows.

Bailey's Hotel, London.—This is one of the most comfortable of London hotels, and will be rendered even more so. The lounge is to be much increased in size, and several additional bath-rooms have already been added. The larders have been extended, and the kitchen has been re-modelled, and new apparatus fixed.

Criterion, Piccadilly Circus, London.—Many of the public and banqueting rooms have lately been entirely redecorated, notably the east room, which is one of the most luxurious rooms in London.

South-Western Hotel, Southampton.—This hotel has been quite recently taken over by the company from the L. and S.W. Railway, and has been brought quite up-to-date. Many alterations have been made here for the comfort of visitors, especially those going to and coming from the Continent and other parts. It is just outside the dock gates, and adjoins the station. It is one of the very few hotels where white wines are kept at an even and cool temperature by means of special bins controlled by a refrigerating plant, which has recently been installed for this and other purposes.

Furness Abbey Hotel, Furness Railway.—This hotel is built within the grounds of the famous Furness Abbey, and of some of the materials from the ruins. It has some relics of the past mounted in the walls. One in particular from the Abbot's House, is very fine, and is now in a room called the Abbot's Room. The coffee-room windows look upon the Abbey, as well as many of the bedrooms. There is now a good garage attached to the hotel. The whole place is nestled in a most lovely spot, which is sometimes called "the valley of the deadly night shade."

Victoria Hotel, Manchester.—This is a commercial as well as a family hotel, in the busy part of the city, and near the Corn Exchange. Many improvements have been made of late, including converting the smoking-room, which was a narrow room, into a large and commodious lounge, greatly adding to the comfort of those using the hotel.

The company also owns the Empire Hotel, Lowestoft; the Holborn Viaduct Hotel and South Kensington Hotel, London, and the South-Western Hotel, Surbiton. While executing alterations in the structural portions of their many hotels, Messrs. Spiers & Pond have not overlooked the no less important side of management and cuisine.

THE LATE MR. BEDFORD LEMERE.

We deeply regret to have to record the death of our old friend Bedford Lemere on the 17th instant after a short illness. He was the pioneer of specialism in the photography of architecture, and has continued to the last the foremost and most able exponent of that branch of art not only in technical skill, but in judgment of selection for his points of view and patience in waiting for the best effect of lighting for every particular subject that came before his camera. For students of architecture his collection of views of old work, and for practitioners his able presentment of their work, have earned a lasting debt of gratitude from the whole world of architecture. We are glad to know that his son, Mr. Henry Bedford Lemere, who has been thoroughly trained in his father's methods and has assisted him for several years, will continue to carry on the business of Bedford Lemere & Co.

It is proposed to hold an industrial exhibition on Newcastle Town Moor in the summer of 1914, to last six months. The previous exhibition at Newcastle-on-Tyne took place in 1887. A meeting of the promoters is announced for the end of next month.

The Committee of the Huddersfield Town Council, dealing with the provision of a new public library and art gallery, report that Mr. J. Frecheville Ramsden, of the Ramsden estate, was prepared to grant a site free of rent, subject to certain streetage charges. Three sites, all of fairly central position, have been offered.

Paddington Borough Council have adopted new public health by-laws, making it compulsory, under a penalty of £5, for the occupants of tenement houses to sweep the floors of their rooms once a day and wash them once a week, also to open the windows of sleeping apartments for at least one hour each day.

The Manchester City Council on Wednesday adjourned until their December meeting the adoption of the Royal Infirmary Old Site Special Committee's report. The Town Clerk stated that the report recommended the adoption of Design No. 4.

The Court of Common Council have decided to seek Parliamentary powers for the construction of a subway for pedestrians beneath Cannon Street, opposite Mansion House Station. The estimated cost is stated at £16,000, exclusive of land that might be required for openings on the public way. At the same meeting of the Common Council a plan was submitted of the proposed passenger subway communication between the Moorgate Street Station of the Metropolitan Railway Company and the Great Northern and City Railway Company's station on the eastern side of Finsbury Pavement. It was agreed that, provided satisfactory intercommunication was arranged with the City and South London Railway, no objection should be offered thereto.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

CHESHIRE.

Macclesfield.—Conservative Club House (£6,000).
Motor Garage, Chestergate.
Over.—Darnhall Endowed School: additions and alterations (£2,000).
Port Sunlight.—Council School for 1,000 children, New Chester Road.
Stockport.—Mental wards at Stepping Hill Infirmary.

CORNWALL.

Bodmin.—Scattered Homes, Beacon Road. Mr. C. F. Hain (estimate, £435; accepted provisionally).
Plantation.—Wesleyan Chapel.
Truro.—Seventeen working men's houses, Waterloo (£3,000). Mr. Barnes, City Surveyor.

DERBYSHIRE.

Borrowash.—Church (and Sunday) Schools (£1,000).

DEVON.

Newton Abbot.—Workhouse additions. Mr. S. Segar, architect.
Taunton.—Endowed School: rebuilding.
Torrington.—Police Station additions. Mr. E. H. Harbottle, F.R.I.B.A. (of Exeter), architect.

GLOUCESTERSHIRE.

Tewkesbury.—Public Baths, Wyatt's Meadow.

HAMPSHIRE.

Bournemouth.—Elementary School at Stourwood.
Shirley.—Council School.

HEREFORDSHIRE.

Leominster.—Secondary School extension (£3,000).

ISLE OF WIGHT.

Parkhurst.—Four prison-blocks (accommodation for 200).

KENT.

Bexley Heath.—Clock tower. Messrs. Friday & Ling (of Erith), contractors (£450).
Maidstone.—Four houses, Dover Street.
Margate.—Cottage Hospital enlargement.
Canterbury.—Cathedral S.W. tower restoration (£5,500).
Guardians' Nurses' cottage. Mr. C. Mount, contractor (£949).
Ightham.—Voluntary School.
Rochester.—Post Office.
Willesborough.—Two houses, Earlsworth and Gladstone Roads.

LANCASHIRE.

Ashton-under-Lyne. — Sunday School, Hurst Lane (£1,100).
Ashton-upon-Mersey.—Council School.
Bolton.—St. Barnabas Church. Mr. Mark Freeman, architect.
St. Margaret's Church. Messrs. Austin & Paley, A.R.I.B.A. (of Lancaster), architects.
Nine houses in Lee Avenue.
Two houses in Albert Road.
Two houses in Kenilworth Square.
Twenty-eight houses in Arnold and Primula Streets.
Breightmet.—Two houses in Within's Lane.
Radcliffe.—Electricity Sub-station. Mr. W. L. Rothwell, engineer.
Sale.—Council School.

LINCOLNSHIRE.

Grimsby.—Cattle spice factory.
Soap factory.
Oil and colour mill.

MIDDLESEX.

Stanwell.—Isolation Hospital. Mr. G. W. Manning, L.R.I.B.A. (of Ashford), architect.
Willesden.—Board of Guardians: institutional buildings for children, homes for aged poor, buildings for consumptives (£25,000).

MONMOUTHSHIRE.

Newport.—Drill hall, riding school and instructor's quarters.

NORTHAMPTONSHIRE.

Northampton.—St. Andrew's Church: exterior restoration (£1,000).

NOTTINGHAMSHIRE.

Nottingham.—Alterations to stores, Woodborough Road, for the Gas Committee.

STAFFORDSHIRE.

Eccleshall.—Police Station and Court House, High Street. Mr. W. J. Nevett (of Stafford), County architect.
Lichfield.—Council Chamber and Public Offices next the Guildhall.
Two houses, Gaia Lane.
Eight houses in Stafford and Trent Valley Roads.
House (additions), Trent Valley Road.

SURREY.

Epsom.—Technical Institute enlargement (£1,950).
Guildford.—Twenty cottages for the Corporation, in Cline Road (£4,200). Mr. T. J. Capp, architect.
Motor Factory, Woodbridge Hill.
Haslemere.—Council Slaughter-house.

SUSSEX.

Chichester.—Caretaker's quarters at the High School (£300).
Eastbourne.—Primitive Methodist Church.
Alexandra Cottage Homes: Edward VII. Memorial Wing.
Lancing.—Infants' School (Council).

WARWICKSHIRE.

Coventry.—Working-men's houses (£30,000).

WILTSHIRE.

Amesbury.—(Supplementary to July 21) Police Station. Messrs. Parsons Bros. (of Westbury), contractors (£5,200).
Devizes.—Hospital extension (Edward VII. memorial). Mr. A. J. Randell, architect. Mr. H. Ash, contractor (£2,198).
Winsley.—Sanatorium extension. Mr. Skinner, architect.

WORCESTERSHIRE.

Barnard's Green.—House.
Wythal.—Sessions Court House.

YORKSHIRE.

Acomb.—Primitive Methodist Chapel (£1,600). Mr. J. H. Rickman (of York), architect. Separate trade contractors.
Barlby.—Pumping station. Messrs. Parker & Sharp (of York), contractors (£885).
Guisborough.—Laundry, Northgate.
Halifax.—Workhouse additions (accommodation for 13 beds), £370.

WALES.

Clydach Vale.—St. Thomas Church: transept and classrooms, &c. Mr. J. W. Rodger (of Cardiff), architect.
Herbrandston.—Parish hall. Mr. J. B. Gaskell (of Milford Haven), architect.
Maesteg.—Town Hall additions and alterations. Mr. S. J. Harpur, M.Inst.C. and M.E., architect.
Ogmore Vale.—100 houses for the Lewis-Merthyr Consolidated Collieries, Ltd. Messrs. H. D. Williams & Son (of Blackmill), architects.
Penrhiewtyn.—Neath Guardians' Workhouse Graded Infirmary (£27,858).
Pontsarn.—(Supplementary to September 15) Sanatorium for Consumptives. Messrs. John Morgan & Son (of Aberdare), contractors (£7,177).
St. Asaph.—Workhouse Casual Wards accommodation. Mr. James Hughes (of Denbigh), architect.
Trelewis.—26 houses on the Bontnewydd Farm. Mr. T. Roderick (of Aberdare), architect.

SCOTLAND.

Bo'ness.—Picture Palace, Hope Street (accommodation for 700), £1,500.
Canonbie.—Public Hall.
Dundee.—Training College. Mr. J. H. Langlands, architect.
Metal-breaking house, Session Street.
Jute warehouse, Mid Street.
Johnstone.—Public slaughter-house (£2,000).
Kingussie.—Three large villas, Speyside (£5,100).
Leith.—Infants' Board School, Elbe and Pattison Streets.
Liff.—Board School for 160 children, Coupar Angus Road (£2,000). Messrs. Thoms & Wilkie, FF.R.I.B.A. (of Dundee), architects.
New Cumnock.—U.F. Church for 520 persons (£4,000).
Paisley.—Church Halls (five), North Croft (accommodation for 550).
Nurses' Home, buildings for Parish Council at West Mount.
Pitlochry.—Post Office.
Central School extension for cookery, laundry, woodwork, and gymnasium (£900).

Troon.—U.F. Church, corner of St. Meddans Street and South Beach.

IRELAND.

Crumlin.—National Schools. Mr. G. L. O'Connor, F.R.I.A.I. (of Dublin), architect.

Dublin.—Cycle factory, Pleasants Street. Mr. T. J. Cullen, M.R.I.A.I., architect.

Killarney.—International Hotel re-building. Mr. G. T. Moore, M.Inst.C.E., &c. (of Dublin), architect.

Tralee.—Convent and Chapel for the Sisters of the Presentation Order. Mr. S. F. Hynes, F.R.I.B.A. (of Cork), architect.

MINTER *v.* WALDSTEIN.

On Friday, October 20, Mr. Muir-Mackenzie, High Court Official Referee, gave judgment in the action in which Mr. F. G. Minter, a contractor, whose head offices are at Putney, sued Mr. Charles Waldstein, Professor of Fine Art at Cambridge University, for the recovery of money due, he said, to him under a certificate of Mr. Foster, an architect, in connection with alterations, enlargements, and additions to Newton Hall, Harston, near Cambridge. The defendant pleaded that Mr. Foster was no longer in his employ as architect when he granted a certificate for £2,750, the principal item claimed, the Professor alleging that he had revoked Mr. Foster's power. The Professor raised other defences, alleging bad workmanship and materials and non-fulfilment of the contract by the plaintiff. He presented a counter-claim. The plaintiff denied breach of contract and alleged in effect that he had had to make variations to meet the aesthetic requirements of the Professor. The hearing of the action occupied thirty-eight days, during which leading architects gave evidence on both sides.

In the course of a very lengthy judgment the Official Referee decided that the Professor had not effectively determined Mr. Foster's authority to give a binding certificate for work done, and he held, therefore, that the Professor's letter of January 11, 1911, did not operate to revoke Mr. Foster's authority. Regarding another allegation as to defective timber Mr. Muir-Mackenzie said he found that with the exception of the Archangel timber, the other timber was not of the description specified. He also arrived at the conclusion that the acquiescence of the architect in the wider spacing joists and his permission for the supply of timber of inferior quality did not absolve the plaintiff from his obligation to fulfil the contract in regard to the timber, or prevent the disregard of specifications.

The Referee dealt at length with the many items in the claim, allowing some and disallowing others, and finding that certain of the Professor's complaints were not proved. Mr. Muir-Mackenzie added that he had seen the house in July, and his finding was that the condition of the house was substantially as described by the defendant's witnesses. The weakness of the floors had produced numerous fissures and cracks, some of which were serious, and he found that it was necessary for the stability of the house that remedies of the kind proposed by some of the defendant's witnesses should be adopted. He had come to the conclusion that the remedies proposed in evidence for the plaintiff were insufficient to obviate the defects, but, on the other hand, he was of opinion that suggestions advanced on behalf of the Professor covered a good deal more than the plaintiff was responsible for. In conclusion, having disallowed certain extras claimed for, the Referee said there must be judgment for the plaintiff for £3,283 in all and for the Professor on the counter claim for £2,116 14*s.* 3*d.* The result would be that the plaintiff received £1,166 5*s.* 9*d.* Plaintiff would have the costs of the claim and the defendant the costs of the counter claim. As regarded issues or parts of claim on which either party had failed he could not have the costs of those issues, and the other party was entitled to the costs of those issues.

On the application of Mr. Clavell Salter, K.C., for the Professor, a stay of execution was granted upon terms.

In a case at the Wandsworth County Court, under the Workmen's Compensation Act, the applicant, a builder's labourer, stated that since his fingers were crushed in November last year he had not tried to get work. The medical referee, who examined the man, said that if he had gone to work when apprised by the doctor he would now be perfectly well. The Judge thought the applicant had behaved very unreasonably, and made an award for one penny a week, without costs.

GLASGOW INSTITUTE OF ARCHITECTS.

A quarterly general meeting of the Glasgow Institute of Architects was held on the 18th inst. at 115 St. Vincent Street, Mr. Alexander N. Paterson, M.A., A.R.S.A., vice-president, in the chair. Reference was made to the death of Mr. W. F. Salmon, F.R.I.B.A., who was one of the original members of the Institute, his father having been the first president. It was reported that the council had minuted an expression of regret at Mr. Salmon's death, and an appreciation of his work as an architect, with which the meeting associated itself. Messrs. Charles James Halley, Clydebank, and John Scotland, Airdrie, were unanimously elected Fellows, and it was reported that Messrs. Eoin Montgomery, Netherburn; William M. Bishop, Motherwell; and William S. Gibson, Wishaw, had been elected Associate members. The Secretary submitted a report on the matters which had been dealt with since last meeting. The sum of £7 7*s.* had been granted to the Glasgow School of Architecture for prizes, and the proportion amounting to £2 2*s.*, granted to the Technical College Section of the School of Architecture, had been awarded to Mr. John M. Venters, Port-Glasgow. The important subject of architectural education had been carefully considered, with special reference to the co-relation of office apprenticeship with the course of study provided by the Glasgow School of Architecture, and a scheme combining the training received in the office with attendance at the classes leading up to the certificate and diploma granted by the School of Architecture had been issued to members of the Institute. The matter of the better regulation of architectural competitions had also received consideration, and a scheme approved by the Council was in the hands of the R.I.B.A. for approval before being brought before the Institute. The R.I.B.A. Council had been authorised to continue to elect licentiates until the end of June 1912, and all applications required to be lodged before May 31, 1912. At the request of the R.I.B.A. Committee on Architectural Education, the Council appointed a committee to examine designs which it had been agreed that students in the R.I.B.A. final examination should submit in place of the testimonies of study now required. A revised scale of professional charges proposed by the R.I.B.A. had been considered and approved of. It was intimated that the president had arranged with Messrs. Henry T. Hare, James S. Gibson, and Maurice B. Adams to give papers before the Institute in the course of the coming session.

NOTTINGHAM ARCHITECTURAL SOCIETY.

The opening meeting of the winter session was held at the Society's Room in St. James Street on Tuesday, October 24.

An important letter was read from the Nottingham Building Trade Employers relative to "specialists" in contracts, which was deferred to a future meeting for full discussion.

Messrs. A. Hendy and W. Shepherd were elected members, and Messrs. C. W. Hasledine, T. H. Daumsley, N. H. Pratt, and J. Darburton were elected Associates of the Society.

After light refreshments had been served, the members adjourned to the lecture room, where Mr. Harry Gill, M.S.A., a member of the Council, gave a most interesting lecture entitled "Holiday Rambles in Norfolk." This was fully illustrated by a large number of his own lantern views of the buildings and churches in Norwich, King's Lynn, Cromer, and the small villages in "Poppy Land." The lecturer pointed out the special architectural features of each view, and in the short time at his disposal gave a lot of useful and interesting information. The lecture was fully appreciated, and at its conclusion the president and vice-president expressed the thanks of those present to Mr. Gill for the very enjoyable hour he had given them.

The Chartered Surveyors' Golfing Society held a very successful meeting at the Bramshot Golf Club's course on October 14, when bogey and stroke competitions were held, prizes being presented by the society. The course was in excellent condition and afforded most enjoyable golf. The meeting was well attended, members having travelled from as far as Wolverhampton and Horsham in order to be present. Fifty cards were taken out. The annual general meeting of the Society will be held at the Surveyors' Institution on Tuesday, November 14, at 5.30 p.m. The annual dinner will be held at the Trocadero Restaurant, Piccadilly Circus, W., on November 23, at which Mr. Leslie R. Vigers will preside.

DAYLIGHT RODS.

One of the essentials of a satisfactory building, be it warehouse, office or place of residence, is that all the interior should be well-lighted by day and by night. There are problems of daylight illumination just as there are of artificial illumination, and very many of both these classes are of modern growth. Up to the present the new science has scarcely received the attention it merited, though there is now a growing earnestness to understand it. In the case of daylight illumination the defects and shortcomings are sometimes due to lack of forethought on the part of the architect when preparing his design or plan, and sometimes to the adjacent buildings, which obstruct the entry of light through even the best spaced windows. For some few years now the architect and house-owner have been able to introduce prismatic and other forms of patent glass to increase the amount of daylight in rooms which were previously more or less always dependent on artificial illuminants. The success was in most cases instantaneous and complete, dark rooms being made light even to the furthermost corner. In some especially bad cases, however, there was only a qualified improvement.

The ingenious minds which had evolved the varieties of patent glass were therefore set upon developing their ideas. And one of them has hit upon a new form which should go far to meet all difficulties: that one was Mr. E. J. Dobbins. Mr. Dobbins is a specialist, and as the proprietor and patentee of the ubiquitous "MAXimum Daylight Glass" he was in a position to intimately understand all requirements. The MAXimum Light Window Glass Co., 26 Victoria Street, S.W., have fitted innumerable sheets of prismatic glass, canopies, and reflectors with most gratifying results. Nevertheless Mr. Dobbins had to admit that in some cases the conditions were almost too much for him. This only acted as a spur. The result of much consequent thought and experiment is a new patent called "Dobbins' Daylight Rods." By means of these rods daylight may be controlled and placed where most required and diminished where the light is too strong or too direct. This is possible because the rods are a combination of shapes embodied in a practically solid round glass bar. The rods are usually arranged horizontally across a window opening and flush with the wall face in the manner of a Venetian blind and as simply. The control of light is achieved by simply turning the rods into the position where they throw the light in the desired direction. A most important claim for the rods is that when turned in one certain position they effect an increase of illumination in every part of the room where they are visible instead of illuminating only in predetermined lines dependent on the approaching light. This new patent should go far to give despairing property owners a lawful right to describe their premises as "well-lighted."

VARIETIES.

The Oxford City Council this week declined to sanction the adoption of the overhead wire system in connection with the proposed tramways.

The Chertsey Rural District Council have received a letter from the Local Government Board sanctioning a loan of £10,050 for carrying out sewerage and sewage works at Pyrford in conjunction with the Byfleet scheme.

The Willesden Board of Guardians propose spending £25,000 on the erection of institutional buildings for Poor-law children, homes for the aged poor, and buildings for the treatment of consumptive cases.

The Aberdeen University Court have accepted tenders for a new class-room block at King's College. The tenders, which amounted to about £9,700, were all by local contractors. Building operations will be commenced without delay on the site of the Old Aberdeen Brewery, adjoining King's College.

Acting on the report of the Medical Officer of Health, the Pembroke (Ireland) Urban District Council have passed a scheme for dealing with the problem of overcrowded and insanitary dwellings. The proposal contemplates the erection of a large number of dwellings in Ringsend, Irishtown, Ballsbridge, Donnybrook, and Clonskea at a probable cost of £100,000.

At the annual meeting of the Cardiff Society of Architects Mr. G. A. Birkenhead, Cardiff, was re-elected on the council, and Mr. Reginald R. Fearnside, Cardiff, was elected a member. The annual report stated that during the year local hon. secretaries had been appointed in the following centres:—Cardiganshire, Carmarthenshire, Denbighshire, Glamorganshire, and Monmouthshire.

The *Zentral-Anzeiger*, Vienna, of October 8 states, according to the *Board of Trade Journal*, that a company has been formed in Debreczin, with a capital of 1,000,000 kronen (£41,600), for the erection of an hotel and theatre at Debreczin (Hungary); also that a company, presided over by Dr. Friedrich Párkány, of Budapest, has been formed with a capital of £33,300, for the purpose of building an hotel at Siófok (Hungary).

During the year from October 1, 1910, the estimated value of the buildings, alterations, and additions made under warrant of Greenock Dean of Guild Court was £114,486, as compared with £59,509 in the previous twelve months, this being about the average of the past ten years. The buildings included twenty-two tenements and thirty cottages or villas, and accommodation was provided for 285 families, or a population of 1,140.

The Lord Provost's Committee of the Edinburgh Town Council are considering the advisability of recommending the Town Council to adopt a resolution that in future all the city building contracts containing more than one of the recognised separate building trades and exceeding a gross value of 500*l*., be tendered for separately and directly by individual firms belonging to the different recognised building trades, and so discountenance as far as possible the practice of sub-contracting in important city contracts.

The Scarborough Corporation have decided to exercise the right of purchasing the southern portion of Mr. Beeforth's Belvedere Grounds at once, instead of waiting and exercising their option. It is understood that Mr. Beeforth is willing to sell at once for £2,000. The Corporation will then be the possessors of the whole of the undercliff from the Spa to Wheatcroft. They have a scheme on hand for developing it at a cost of £35,000. It is not, however, proposed to carry out all the work at once, the scheme being divided into three sections.

Mr. Courtenay Clifton held on Monday an inquiry at Coventry, on behalf of the Local Government Board, into an application of the City Council to borrow £29,345, for the erection of working-class dwellings on land in Narrow Lane. It is proposed to build ninety three-bedroomed houses, at a cost of £200 each, and forty-six two-bedroomed, costing £190 each, part of the original scheme of 1907, which had been carried out and the houses erected. The experience of the Corporation, in regard to the forty-eight dwellings in existence, has encouraged them to proceed further. The demand for houses was stated to be as great now as it was four years ago, and it was estimated that the scheme would continue to be self-supporting.

The Technical Education Sub-committee of the Birmingham City Council recommend that provision be made for a central school of commerce in connection with the contemplated extension of the Municipal Technical School, and that a suite of at least twelve class-rooms be reserved in the new portion of the building for such purpose. The Sub-committee also submit details of proposals for the extension of the Municipal Technical School, and recommend that as possession can be obtained of the whole of the premises on the site of the proposed extension by June 24 next, authority be given for tenders being obtained for clearing the site as soon as practicable after that date.

At a special meeting of the Edinburgh, Leith, and District Building Trades Association the subject of sole contracting was considered. The practice was unanimously condemned, and a resolution in the following terms was passed:—"That building contracts containing more than one of the recognised separate building trades and exceeding a gross value of £500 should be tendered for separately and directly by individual firms belonging to the different recognised building trades." The Executive Committee were empowered to take steps to secure united action in order that effective results may be obtained.

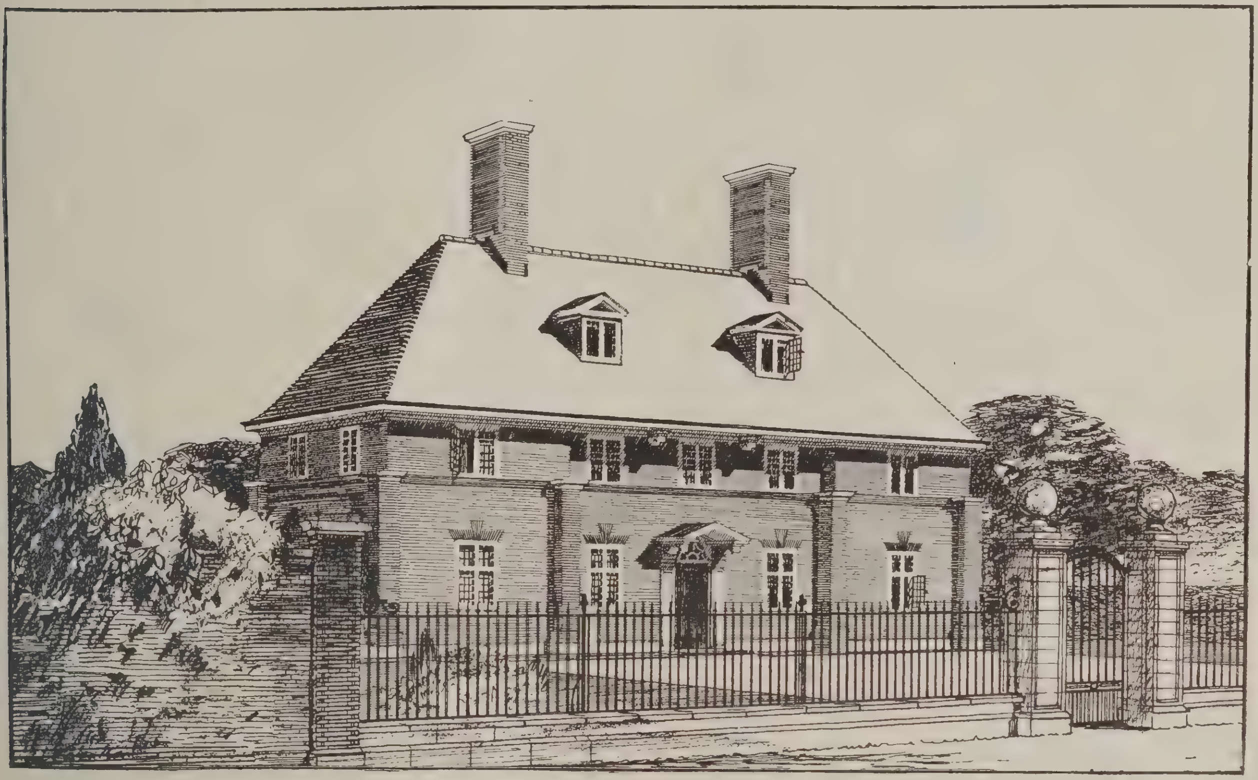
Building permits in Canada for August record the remarkable gain over the same month last year of over 41 per cent. Only seven cities in Canada show decreases as compared with the same month last year; four of these, it is interesting to note, are in the western provinces. Winnipeg takes the first position in total permits issued—with a total of nearly 2,000,000 dols., while Vancouver reports the largest gain of any of the big cities, its figures being 105 per cent. in advance of its last year's total. In the cities of the next grade, Edmonton reports a remarkable gain of 356 per cent., while Calgary and Victoria also have increases of over 100 per cent. Medicine Hat, in Southern Alberta, one of the smaller but promising cities has the largest gain of all with 734 per cent. Several old cities in Ontario, such as Stratford and Kingston, also show big gains.

WEEK-END COTTAGES, BUNGALOWS, AND OTHER SMALL HOUSES.

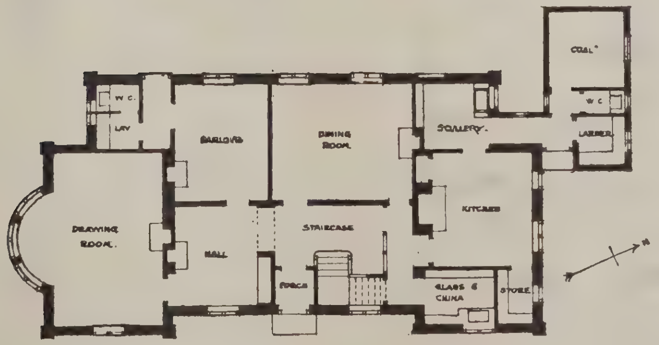
CONTINUING our series of monthly supplements, of which the first appeared on September 29, we now present further examples of original and unexecuted sketch designs by able architects. The amounts which are quoted as approximate prices are reliable in average cases, but the cost of the same house will necessarily vary in different localities according to local circumstances.

The Editor of *The Architect* will be pleased to introduce the authors of the designs published to any one who may wish to have a house built in accordance with the plans or a modification of them.

DESIGN NO. 7.



THE GARDEN FRONT.

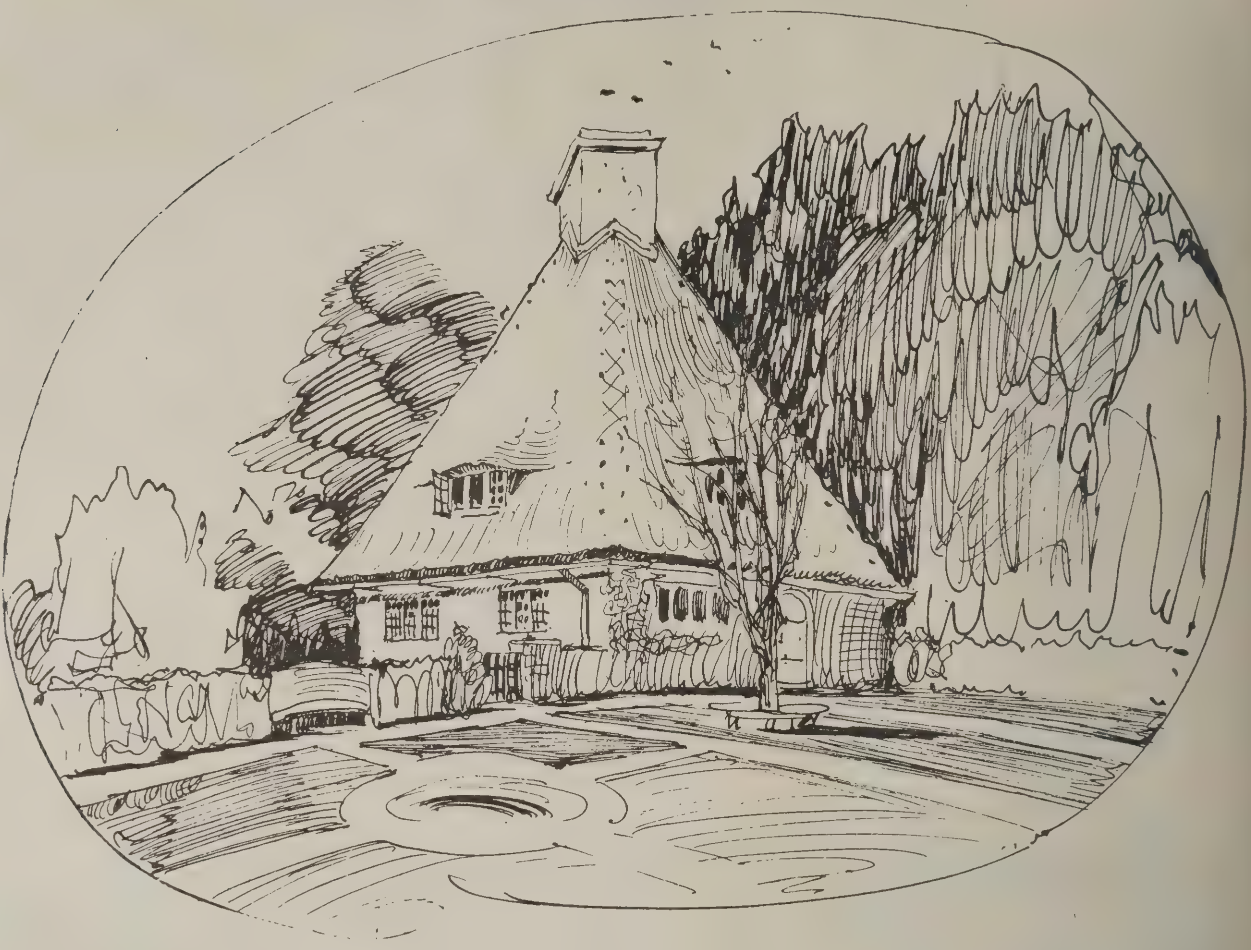


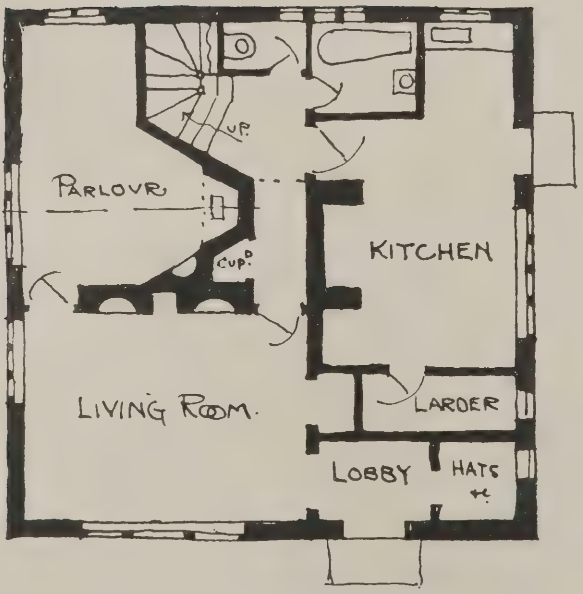
GROVND FLOOR PLAN

Here we have an example of an interior skilfully planned to produce a symmetrical exterior of the character that was so generally given to eighteenth-century English houses, which with their severe simplicity in external treatment united with excellent workmanship, particularly in their internal woodwork, were eminently suggestive of quiet and dignified home life.

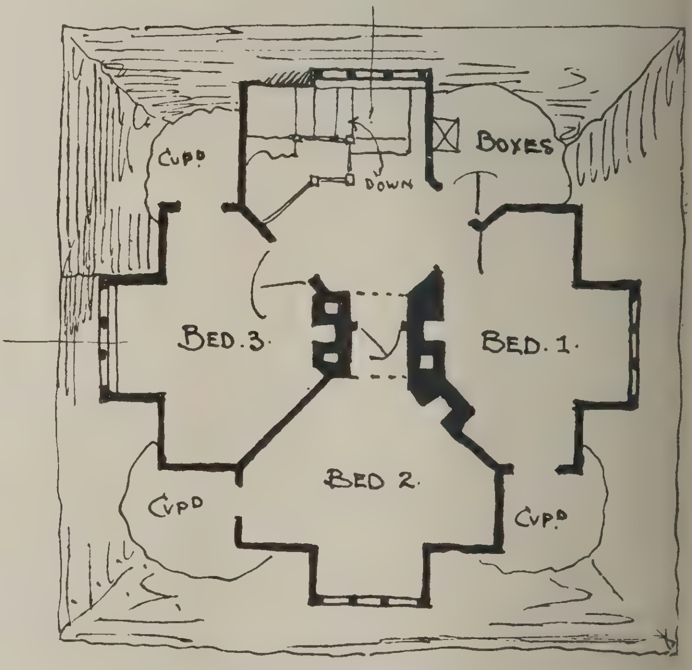
This house is intended to be built with walls of blue-grey bricks with red brick angles and arches, the roof being covered either with tiles or green slates and the woodwork painted white. The cost would be about £1700.

DESIGN NO. 8.





GROUND FLOOR PLAN.

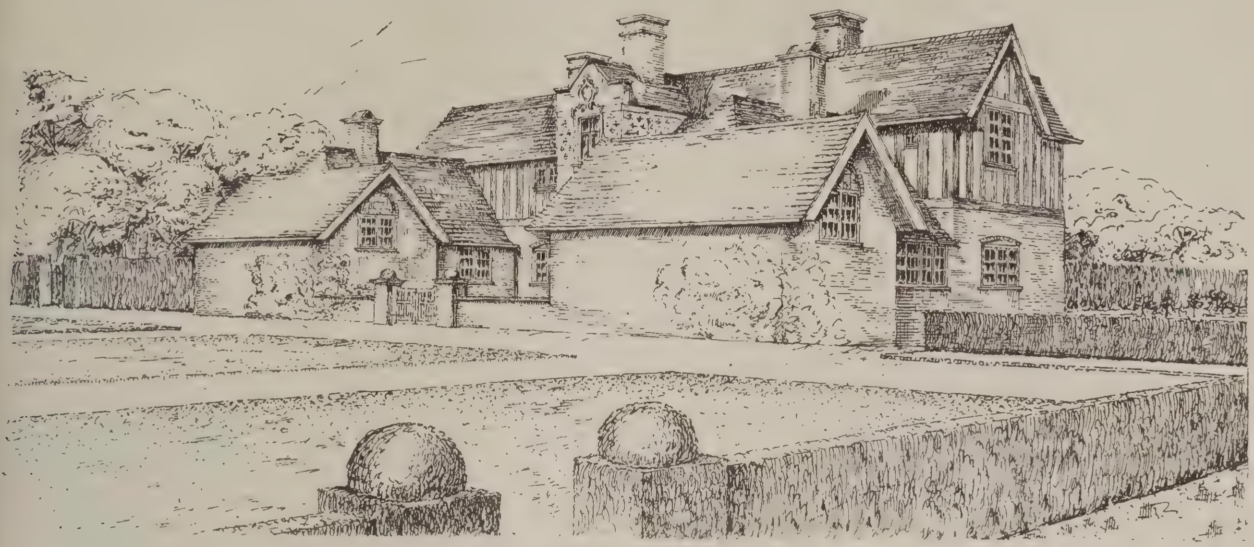


FIRST FLOOR PLAN.

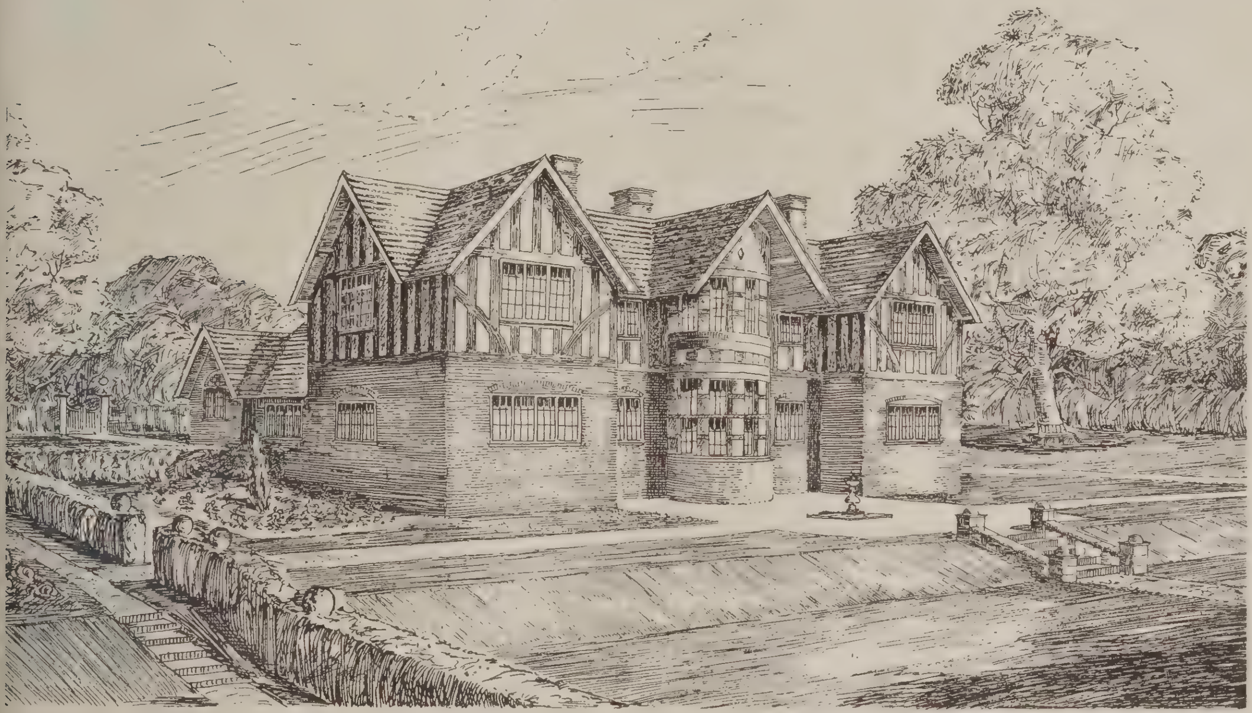
The planning of this cottage is somewhat unusual, a living room, parlour, kitchen, and three bedrooms being contained within a square of twenty-eight feet on two floors, a central chimney-stack taking all the flues.

The walls externally would be covered with rough-cast and the roof with straw or heather thatching. The windows would have wood frames and casements glazed with leaded lights. The internal fittings and finishings would be designed to be in keeping with the somewhat unusual character of the cottage. The probable cost of the cottage complete would be about £850.

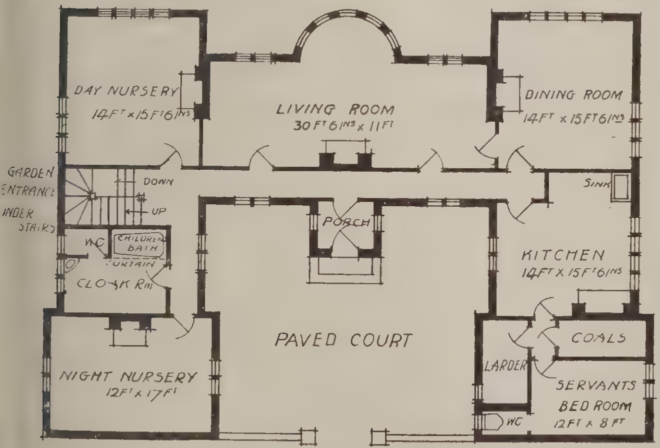
DESIGN NO. 9.



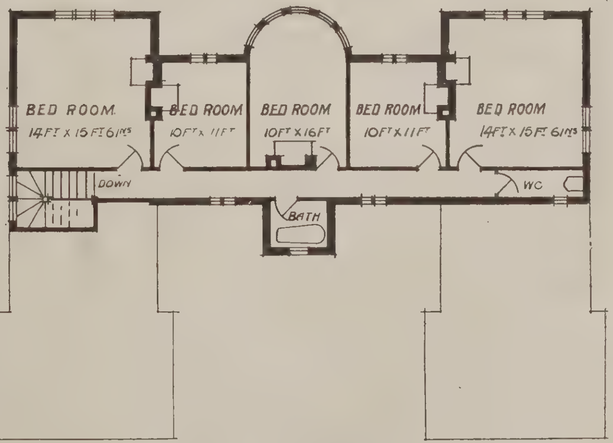
ENTRANCE FRONT.



GARDEN FRONT.



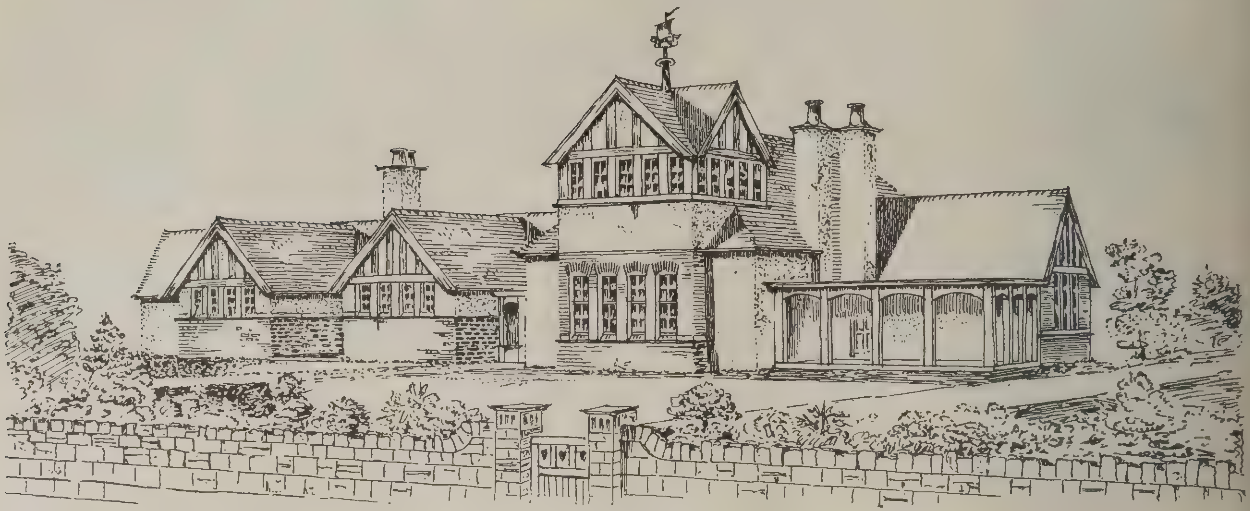
GROUND FLOOR PLAN.



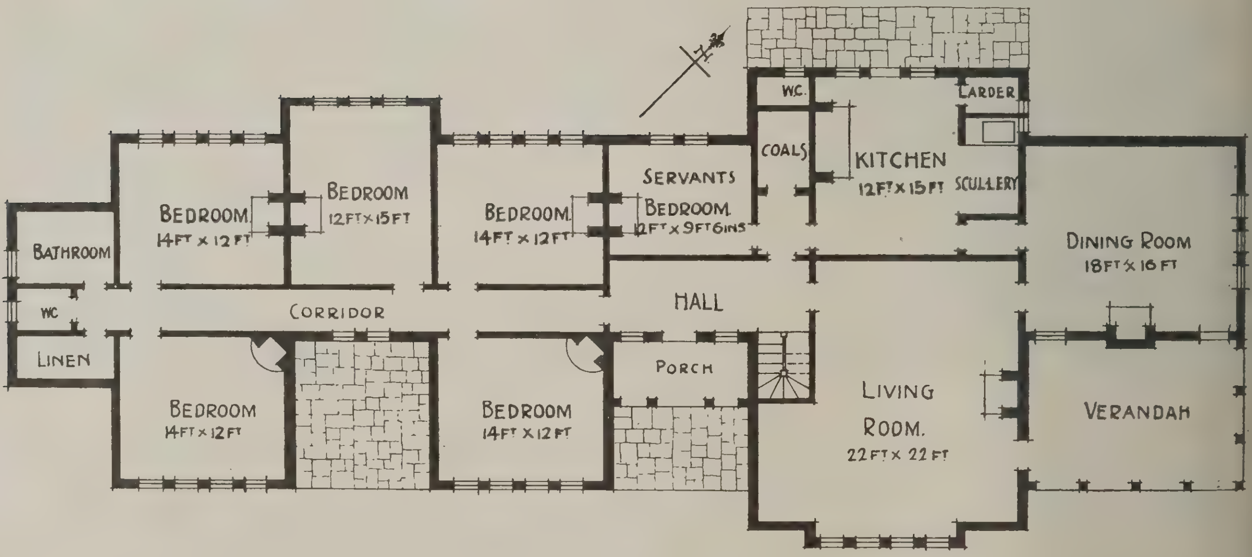
FIRST FLOOR PLAN.

This house is designed especially for family life, with a day and a night nursery and five other bedrooms besides ervants' room. A large living room and a dining-room are provided instead of the usual reception rooms. If nurseries vere not required these two rooms, on the ground floor, could be used as drawing-room and library. The house is inended to be built of old red bricks mixed at random with old stocks, but the porch projection would be in new bricks iapered in dark and light. The circular bay to be in red and yellow stone from plinth to head of first floor windows nd above in rough-cast. Half-timbering in jarrah with cream plaster panels. The tile roofs in broken tints with old and rindled tiles. The cost of this house would be about £1000.

DESIGN NO. 10.



SOUTH EAST VIEW.

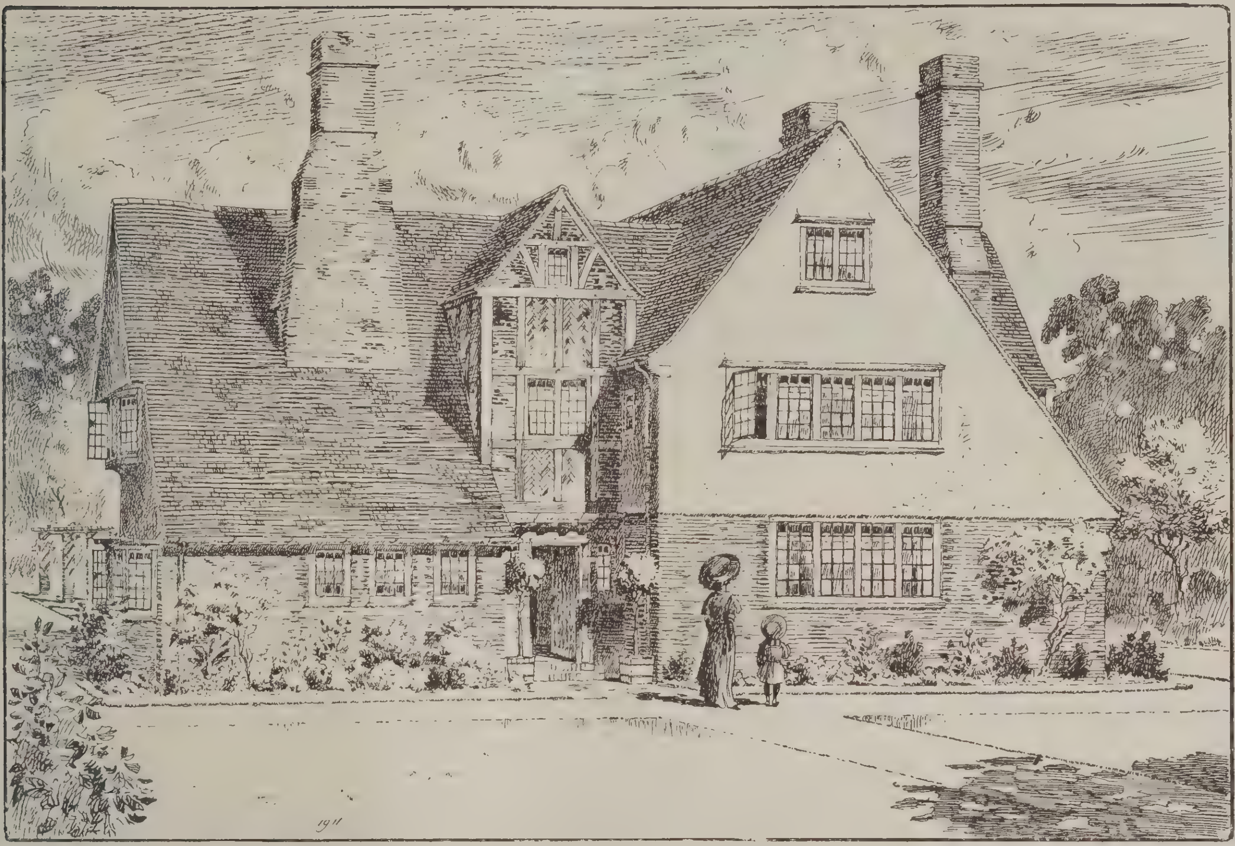


GROUND FLOOR PLAN.

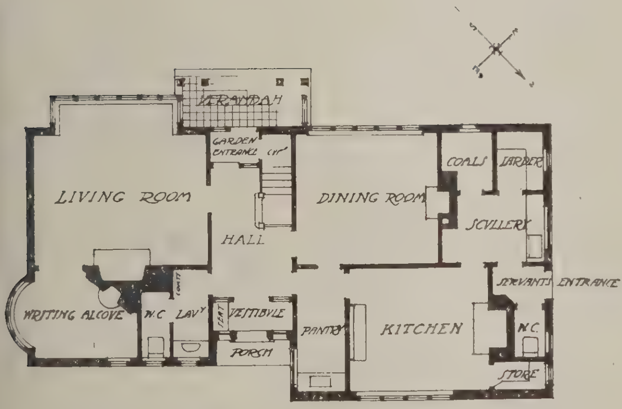
By a bungalow is usually understood a house of unpretentious character, with the accommodation mainly arranged on the ground floor. Occasionally the term is loosely used to include small houses with most, if not all, the bedrooms upstairs. In this case, the stricter interpretation of the name is preserved and all rooms are on the ground floor level, with a gazebo above the main roof. There are six bedrooms, living room and dining-room, as well as a large verandah or open-air sitting-room.

The design is intended to be carried out in red brick and rough-cast with half-timbering above and tile roofs. The cost of this bungalow would be about £1200 with the rooms of the fairly large size shown, but could be reduced to £1000 with smaller rooms.

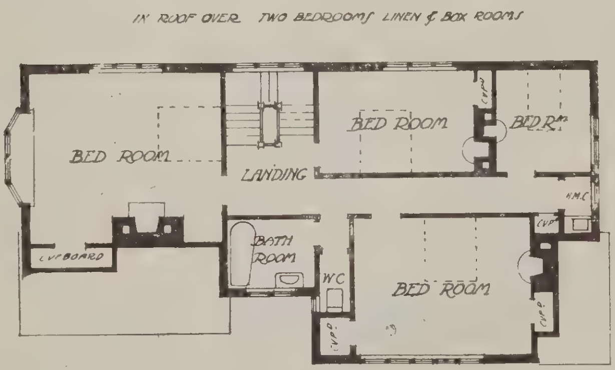
DESIGN NO. 11.



ENTRANCE FRONT.



GROUND FLOOR



FIRST FLOOR

This picturesque little house is economically and conveniently planned with a good-sized living-room, having a small writing alcove or sanctum opening from it, dining-room and six bedrooms, besides well arranged kitchen offices. The house is intended to be built of brick with rough-cast in the upper storeys and tile roofs, and the cost of erection would be about £1000.

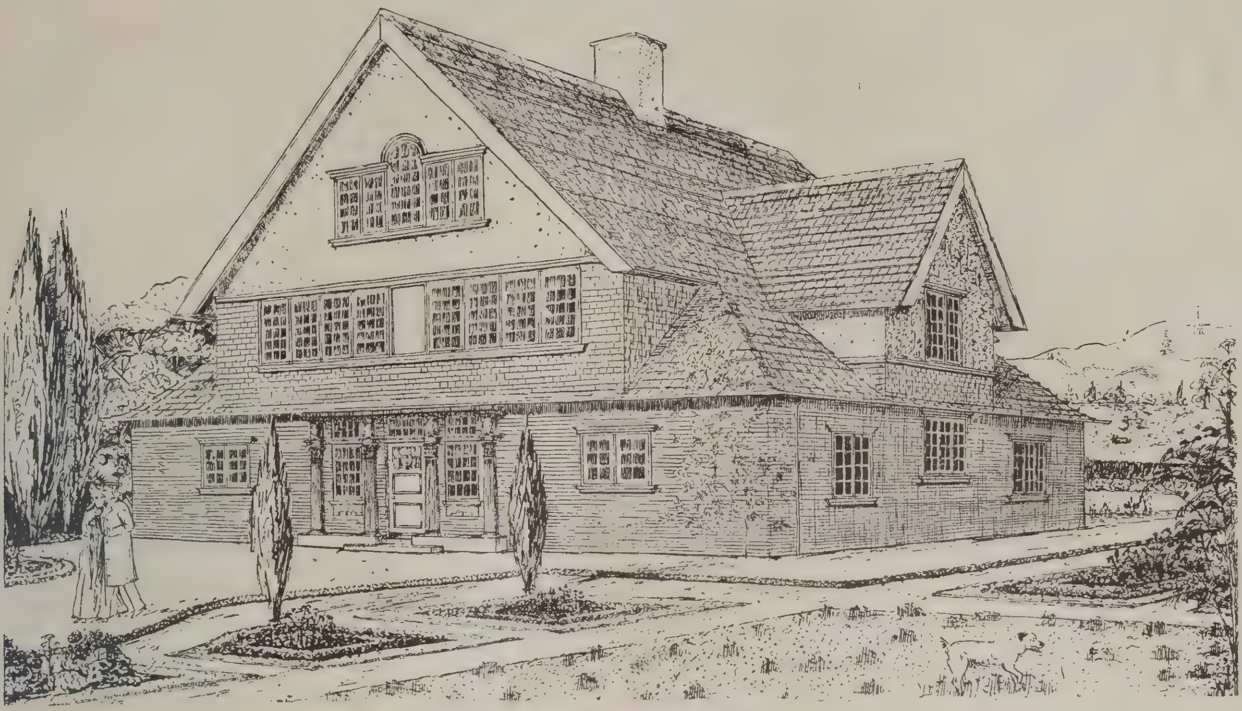
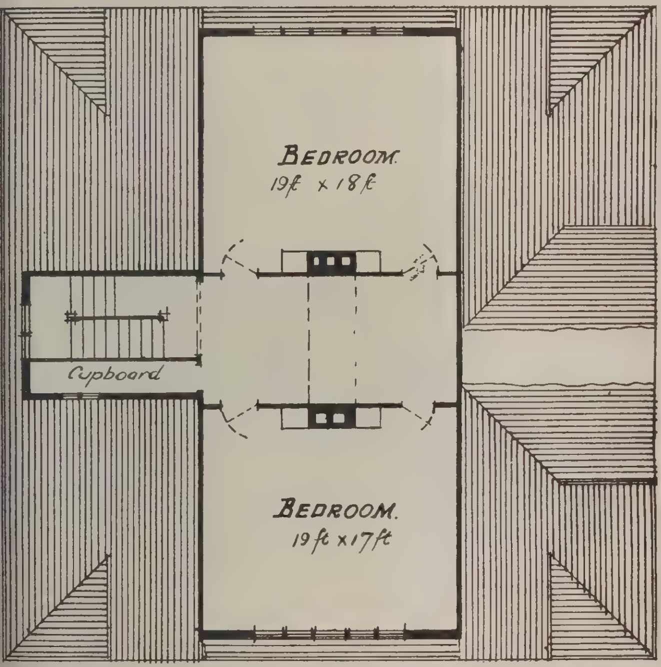
121 OXFORD STREET, LONDON, W.

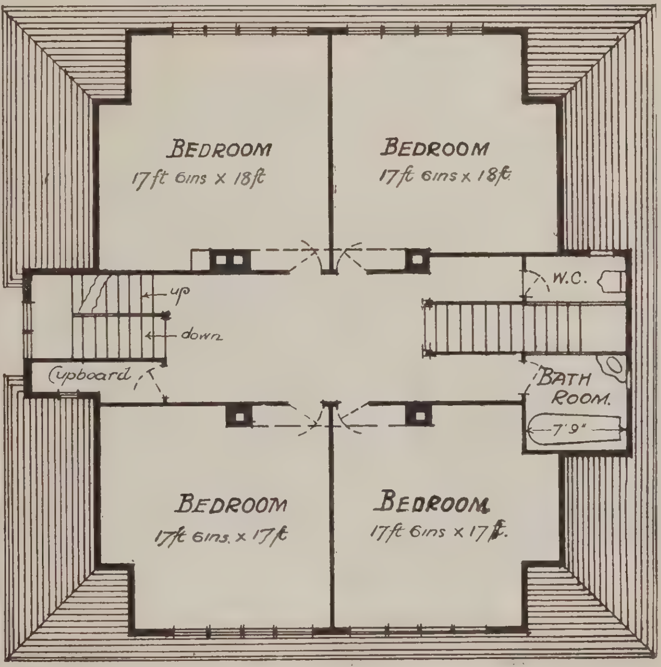
DESIGN NO. 12.



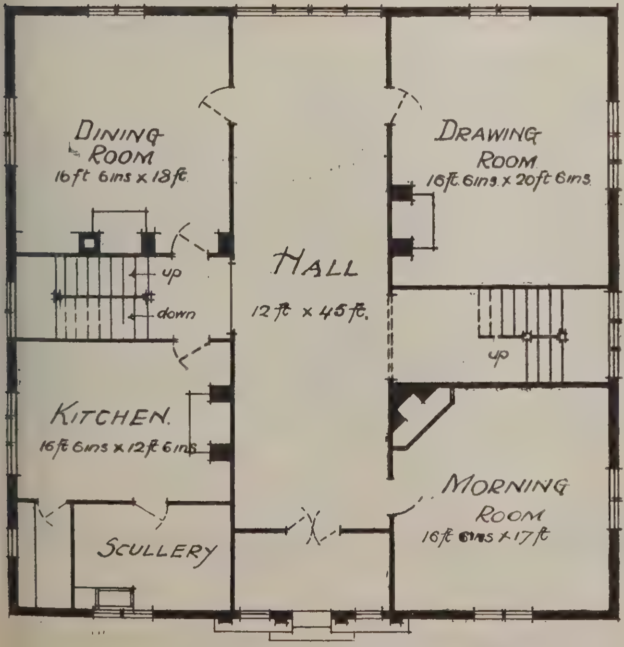
THE ENTRANCE FRONT.



TOP FLOOR PLAN.



FIRST FLOOR PLAN.



GROUND FLOOR PLAN.

This is a modified form of bungalow in that the bedrooms are arranged in the roof so that the building has the one storey and roof which characterise the bungalow type of house. This is a cheap type of house to build, and with three reception rooms, a large gallery-hall and six bedrooms, all of good size, could be built for about £1500.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Glasgow.—Nov. 6.—The Glasgow Provincial Committee propose to erect at Jordanhill, Glasgow, a Training College to accommodate 1,200 students, and to aid them in selecting a limited number of architects to compete for the intended work, they invite architects willing to take part in the competition to send in their names by Nov. 6, with twenty copies of a statement containing such information as they may think likely to advance their claims. Canvassing will be a disqualification. Mr. D. Macleod, Director of Studies, Technical College, Glasgow.

22891. Oct. 4, 1910. H. R. Prosser, of Woodstock, Poplar Road, King's Heath, Birmingham. Improvements in or relating to Gas Burners.

22892. Oct. 4, 1910.—Thomas Piggott & Co., Ltd., and T. P. Barker, Atlas Works, Western Road, Birmingham. Improvements in or relating to the Method of Jointing Steel Pipes, Tanks, or the like.

22906. Oct. 4, 1910.—E. M. Potter, 3 High Street, Thame, Oxon. Metal Hoseclip for Repairing Holes or Bursts in Hosepipes.

23039. Oct. 5, 1910.—G. N. Sperryn, 25 Wye Cliff Road, Handsworth, Birmingham, and S. R. Barrett, Valentine Road, King's Heath, Birmingham. Improvements in Pneumatic Control Devices for Gas and other Fluid Systems.

23089. Oct. 6, 1910.—John & A. F. R. Dobbie, of Waverley Works, 24 Elbe Street, Leith. Improvements in the Construction of Bolts.

23265. Oct. 7, 1910.—John Schwab, 274 Selkirk Avenue, Winnipeg. Improvements in and relating to Systems for Heating a Plurality of Boilers.

23288. Oct. 8, 1910.—J. S. Owens, 47 Victoria Street, S.W. An Improved Mixing Machine for Concrete, Mortar, Tar-macadam, and the like.

23346. Oct. 8, 1910.—Carl Laudi, 407 Grafenberger, Allee, Dussesdorf-Grafenberg, Germany. Improvements in or relating to an Automatic Grab.

23364. Oct. 8, 1910.—F. P. Hughes, Heathfield, Priory Lane, Blackheath, and P. R. Davison, 42 Cobham Street, Gravesend. Improvements in Transporters.

23754. Oct. 13, 1910.—C. L. Newland, Victoria Villa, Cavendish Road, Merton. Improvements in and relating to Flushing Cisterns.

23962. Oct. 17, 1910.—James Richardson, 127 Ormeau Road, Belfast. An Improved Fire Escape.

25003. Oct. 27, 1910.—Septimus Catchpole, 28 Masons Hill, Bromley. Improvements in and relating to Road Dust Collectors.

25333. Nov. 1, 1910.—Charles Ogden, 53 Trafford Road, Salford. Flexible Detachable Screw Joints.

25482. Nov. 2, 1910.—L. C. Krummel, Clinton, Middlesex, Conn., U.S.A. Improvements in and relating to Multiple Double Seamers for Cans and the like.

25511. Nov. 3, 1910.—Fawcett, Preston & Co., Ltd., 17 York Street, Liverpool, and W. C. Critchley, 68 Pard Road, North, Birkenhead. Improvements in or connected with Hydraulic Controlling Valves.

27110. Nov. 22, 1910.—Walter Blakeborough, Woodhouse Works, Brighouse, York, John Smith, Bradford Road, Brighouse, and J. Broadhead, Wellholme, Brighouse. Improvements in or appertaining to Reducing Valves.

27691. Nov. 28, 1910.—D. M. Bowyer-Smyth, 9 Dumfries Place, Cardiff. An Improved Safety Hook.

28299. Dec. 6, 1910.—R. A. Blakeborough, of Woodhouse Works, Brighouse, and Colonel John Vickers, Grooves Villa, Crowtrees Lane, Rastrick, Brighouse. Improvements in Revolving Sewage Distributors.

28353. Dec. 6, 1910. Jan. 6, 1911.—Prof. Dr. Robe Gans, 12 Parkstr., Pankow, near Berlin. Process for Clarifying Water and for Purifying it from Germs.

28763. Dec. 10, 1910.—L. D. Carroll, 38 Victoria Street, S.W. Improvements relating to the Manufacture of Carburetted Water Gas.

330. Jan. 5, 1911.—Martha Harrison, 12 Leopold Road, Ealing. Improvements in and connected with Gas Cooking Stoves.

1088. Jan. 16, 1911.—W. S. Duggan, 67 Great Britain Street, Dublin. Back Draught Preventing Chimney Pot and Ventilator.

1174. Jan. 17, 1911.—J. D. Prior, 197 Holliday Street, Birmingham. Improvements in and relating to Domestic Fire Grates.

1808. Jan. 24, 1911.—A. W. Mathys, 43 Chancery Lane, W.C. Improvements in and relating to Faucets.

4270. Feb. 20, 1911.—H. G. Geissinger, 203 Greenwich Street, New York. Improvements in and relating to Valve Control Mechanisms.

4284. Feb. 20, 1911.—C. M. March, 19 Bramhall Street, Portland, Maine, U.S. Improvements in or relating to Slide and Swinging Windows.

4895. Feb. 27, 1911.—Prof. Victor Henri, 82 rue Claude-Bernard, Paris, and Dr. Andre Helbronner, 49 rue St. Georges, Paris, and Max von Recklinghausen, 4 rue Auber, Paris. Improvements in Apparatus for Treating Liquids with Ultra Violet Rays.

4979. Feb. 28, 1911.—A. C. Sluyterman, 12 Javastraat, The Hague, Holland. Improvements in connection with Fire Extinguishing and Fumigating or Disinfecting Apparatus.

5261. March 2, 1911.—Convention application, March 3, 1910. Mrs. J. E. Robinson, Ruskin Manor, Denmark Hill. Improvements in or relating to Smoke Consuming Furnaces and Stoves.

6262. March 13, 1911.—Pierre Haerst, of 1409 Clark Street, Chicago, Cook, U.S.A. Improvements in Sweeping Machines.

8884. April 10, 1911.—Adolf Muller-Deutschmann, of Eltville-on-Rhine. Improvements in Glass Frames for Gardening Purposes.

9913. April 24, 1911.—Convention application, June 4, 1910. Franz Kanis, 27 Idastrasse, Griez, Reuss. Improvements in or relating to Folding Garden Furniture, such as Sofas, Benches, or the like.

11548. May 12, 1911.—Convention application, June 9, 1910. Ferdinand Schneider, Fulda, Germany. Improvements in Thermostats.

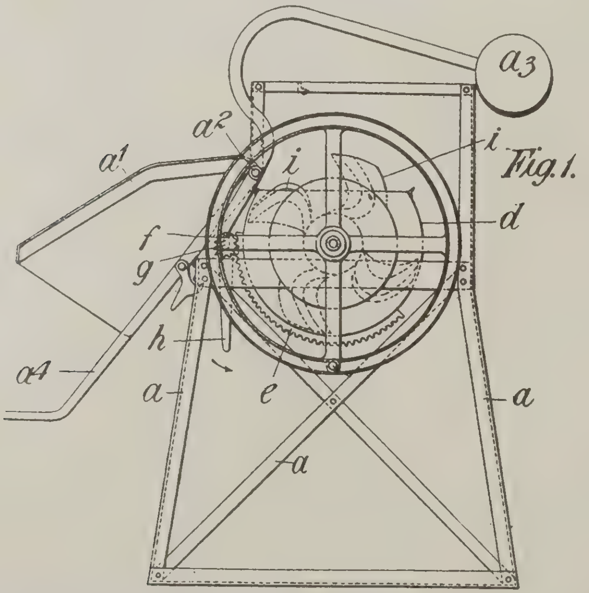
12562. May 24, 1911.—A. E. Towell, 10 Haywood Road, Bromley. Improvements in Flushing Cisterns.

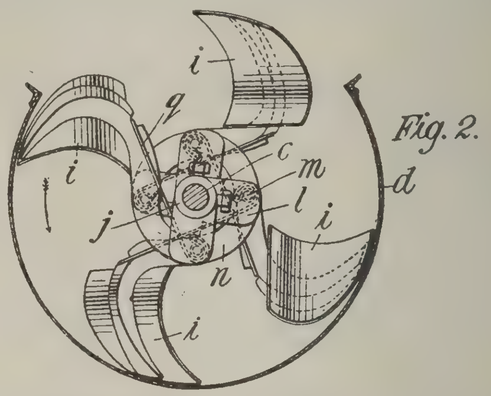
BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the complete specification.

No. 23288. October 8, 1910.—Improved Mixing-Machine for Concrete, Mortar, Tar-macadam, and the like. John S. Owens, 47 Victoria Street, S.W. This invention has for its object to provide an improved mixing-machine of the moving beater type, in which arms, or beaters, revolve in a normally fixed container or mixing vessel. One of the chief difficulties heretofore encountered in the practical operation of this type of machine when mixing hard granular materials has been the jamming of hard particles in the working parts of the apparatus, with a consequent increased consumption of power in driving and wear and tear of the machine. Fig. 1 is a side elevation of the mixing-machine. Fig. 2 is a view of the mixing drum, one side or wall being removed to show the arrangement and mounting of the blades or beaters therein. The machine frame is constructed of angle irons A rivetted together to form a support for bearings B, in which rotates a shaft C passing axially through the drum D, which is open at its upper part, and is supported by trunnions engaging in the shaft bearings in such manner that it may be inverted to discharge its contents when desired. For this purpose the drum D is provided with a segmental rack E, engaged by a pinion F, mounted on a spindle G, operated by the handle H, so that when this latter is turned in the direction of the arrow fig. 1, the drum D will be inverted, so shooting its contents into a receptacle placed beneath it. In order that the drum may be prevented from swinging during the mixing operation a stop-pin is arranged to slide freely in holes formed in the lugs of the bracket supporting the pinion F, so that it may be inserted between the teeth of the pinion to prevent its movement. The mixing blades or beaters I are mounted upon the shaft C, which is surrounded by a sleeve J, rigidly secured to the shaft by means of set screws. The sleeve J carries projecting lugs L, two for each blade I, and between each pair of such lugs is pivotted at M an arm N, to the opposite end of which the blade I is secured. The arm N is formed with an abutment or projection engaging with a stop formed by a web cast between each pair of lugs L, the parts being so adjusted that in the normal position of the arm N, as shown in fig. 2, the point of the blade I will be just out of contact with the interior surface of the drum D. On the pivot M is a spring Q bearing upon the arm N, thus holding it in operative position nearly in contact with the drum D during part of their revolution. The steel blades I are curved to deflect all material towards the centre of the drum during the mixing operation, and also to scrape the whole internal surface of the drum clear when this latter is inverted. Thus each of the mixing blades is resiliently suspended from the operating shaft at a point in advance of the point of the blade in the direction of rotation, so that any excessive pressure upon the point of a blade due to jamming of hard particles between it and the drum will cause the point of the blade to move on the arc of a circle struck from the point of suspension of the blade, which, being eccentric to the shaft and in advance of the point of the blade, will cause the blade to be lifted clear of the obstacle. The curvature given to the mixing blades will allow them to enter and pass through any material in the drum at an oblique angle, thus contributing to the more efficient mixing of the material with a minimum expenditure of driving power. The gear employed for rotating the shaft C is of the enclosed epicyclic type. To readily feed the material into the drum D, a tilting hopper A1 is pivoted at A2 upon the frame A, having counterweights A3 and a handle A4 for operating the hopper by hand. October 11, 1911.





No. 11548. Date claimed under International Convention, June 9, 1910. Date of application in the United Kingdom, May 12, 1911.—Improvements in Thermostats. Ferdinand Schneider, of Fulda, Germany.—This invention relates to electric thermostats with mercury thermometers adapted to close the circuit of an electric device that actuates a ventilating valve, and has for its object an improved means for preventing sparking at the mercury contact when the circuit is opened. In this invention the thermometer is first short-circuited, by means of a secondary contact circuited parallel to the thermometer, which is positively closed, and is opened after the mercury contact has been separated. In fig. 1, A is the bed-plate, which has a segmental opening at B, in the centre of which the bearing-pin E is inserted. On the bearing-pin E a disc C, with a segmental hole D, is rotatively mounted, this disc being also notched at G, and provided with a toothed rim F. The teeth of the rim F engage with the worm H, which, by means of its spindle I, is seated between the bearing blocks L K fixed to the bed-plate A. On the shaft I is the pulley M, which is connected through the cord N with the pulley O of an electro motor P fixed on the bed-plate. On the bed-plate A the contact springs P Q are fixed, and are insulated from one another by means of the insulating piece S. The battery T that stands on the bed-plate is coupled up on the one hand with the electromotor, and on the other with the contact spring R through the conductor W. From the contact spring Q the conductor V runs to the second terminal of the electromotor P. The contact thermometer X U is connected in parallel circuit with the contact spring R Q through the secondary conductors V W. The action of the apparatus is as follows: The bed-plate A is utilised for shutting off a space or room that is to be heated, the temperature of which, for example, is to be kept below a certain degree. The mercury thermometer U X is arranged in this space or room. When the column of mercury comes in contact with the contact pin X the circuit X U W T P V is closed. Thereupon the electromotor acts, transmits its rotary motion through the gear O N M to the shaft I, which actuates the wheel F in the direction from left to right by means of the screw H. The disc C is thus rotated, whereby the bent contact spring Q is pressed out of the notch G, and in conjunction with the second contact spring R closes the circuit Q R W T P V, and the thermometer is short circuited. With the continuing movement of the disc C the two parts B D (fig. 2) come one above the other, whereby the warm air in the enclosed space or room is released. The column of mercury then drops and separates from the contact pin X without any spark being formed, because the secondary circuit V X U W has been meanwhile deprived of current through the contact closing device R Q. The disc C continues rotating until the contact spring Q, by dropping into the notch G, again breaks the circuit, whereupon the space to be maintained at a given temperature is again closed. October 11, 1911.

Fig.1.

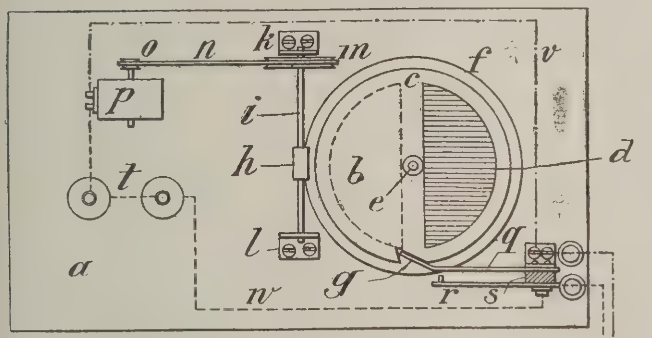


Fig.2.

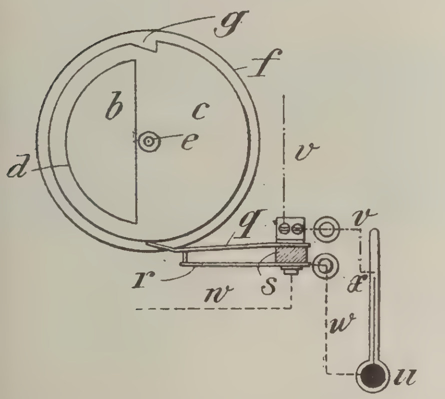

TRADE NOTES.

MR. L. MARSHALL, late of Lumby, Son & Wood, has been appointed manager of the firm of J. Ashton Riley & Co., of Huddersfield.

MESSRS. KEMP, DURANT & Co., LTD., manufacturers of fine stuff for mortar, and dealers in mortar, hardcore, sand, ballast, &c., have removed their office from 7 South Wharf, Paddington, to their depôt, G.N. Railway Depôt, Frederick Street, Caledonian Road, London, N., where all communications should be addressed.

WE have received from Messrs. Young & Marten, of Stratford, their catalogue of "The Hue" adaptable fire. The fireplace, known under the registered title of "The Hue," is a barless stove, with the fire low down on the hearth. The special features claimed are adaptability at very small cost to existing fireplaces, cleanliness, and minimum of attention.

MESSRS. OETZMANN & Co., LTD., are holding a great autumn sale at their showrooms and galleries at 67-79 Hampstead Road, W. Goods to a total value of some £60,000 are offered to the public at "bargain prices" to effect speedy clearances.

THE Building Trades Exhibition, organised by Mr. Walter Cawood, of the City Hall, Deansgate, Manchester, we are informed, promises to be a bigger success than ever. It is supported by the whole of the trade organisations in the North of England, prominent amongst whom are the Manchester, Salford, and District Building Trades Employers' Association, Manchester and District Branch National Registration of Plumbers, and the Institute of Plumbers, Ltd., together with the leading borough architects, sanitary inspectors, &c. The list of exhibitors is far ahead of what it usually is at this period of the year. The Blue Hungarian Band has been engaged at the special request of the exhibitors at the last Exhibition, and everything points to a record success.

THE Carron Company have issued a small illustrated pamphlet dealing with their "Abbey" series of gas fires. This series comprises eight distinct dignified designs, which, with their different sizes, afford a selection of twenty-one varieties, supplied in many pleasing and artistic finishes. All parts of the "Abbey" series are interchangeable, and gas connection can be made either right or left hand, as desired. Several of the patterns can be fitted (at small extra cost) with boiling burner on top, which greatly increases their utility. These fires are also fitted with specially-designed "Carron" pillar fuel, affording the greatest possible radiation, besides considerably enhancing the appearance of the fire.

MESSRS. FENLON & SON, "Tudor" and "Calda" Works, Tudor Street, E.C., have sent us an abridged list of their hot-water apparatus. The firm have illustrated several apparatus, including the "Lorne" gas boiler; the "Ephaness" hot-water apparatus; the "New Era" and "Unique" radiators; the "Triad" gas-circulating boiler; the "Fleet," "Tudor," "Calda" and "C.C. Fleet" geysers, as well as bath-room fittings. A special feature is made of the safety of Messrs. Fenlon's appliances. In price they are as low as is possible consistent with good workmanship.

SIR GEORGE FRAMPTON, R.A., was on Tuesday elected President of the Royal Society of British Sculptors.

MR. T. D. RHIND, architect, Edinburgh, has prepared plans in connection with a proposed nursing home in Edinburgh for persons of small means. A block of three large houses in Chalmers Street has been purchased, and these will be altered where necessary for their new purpose.

MR. W. S. SKINNER, architect, Bristol, has prepared plans for the proposed extension of the Winsley Sanatorium, at a cost of £9,000.

MESSRS. HOMER & LUCAS, architects, 35 Bucklersbury, E.C., have prepared a scheme for pulling down Nos. 7, 8, and 9 Little Turnstile, Holborn, W.C., and the erection on the site of shops with offices over. The contract has been let to Messrs. Spiers & Sons, St. John's Wood, N.W.

THE Local Government Board have sanctioned an application by the St. Helens Education Authority for permission to borrow £4,666 for the erection of an infants' department to the Thatto Heath Council School, and £234 for the furnishing of the same.

INTIMATION has been received in Dundee of the death at Montreal of Mr. H. E. East, F.R.I.B.A. Mr. East received his early training in the office of Mr. T. M. Cappon, architect, Dundee. Afterwards he went to London. There he was in the service of the London County Council. In a competition in connection with a housing scheme in Bermondsey the plans of Mr. East were successful. The housing scheme involved an expenditure of between £40,000 and £50,000. The deceased was for a time in practice in London, but early this year he went to Canada. He latterly occupied an important post in the service of the Canadian Pacific Railway Company. He was thirty-four years of age, and unmarried.

THE Farnham Rural District Council have approved of plans and estimates amounting to £47,000 for sewerage of Ash, Farnham Rural, and Seale, or £18,000 less than the amount of the original scheme. The amount was made up as follows:—Main and branch sewers, manholes, &c., £25,124; sewage disposal and outfall works, £11,763; easements and compensation, £3,500; engineering, £2,000; legal, £300; clerk of works, £400; contingencies, £3,912. The scheme has been prepared by Messrs. Willcox & Raikes.

THE Great Central Railway IS The Line for Winter Travel.

Express Restaurant Car Trains LONDON (MARYLEBONE)
AND
RUGBY, LEICESTER, NOTTINGHAM, SHEFFIELD, YORK, LEEDS, HALIFAX, BRADFORD, HUDDERSFIELD, MANCHESTER, &c.

☞ CROSS COUNTRY EXPRESSES ARE A DISTINCT FEATURE OF THE GREAT CENTRAL SERVICE.

NEWCASTLE, SUNDERLAND, DURHAM, YORK, MANCHESTER, BRADFORD,
HUDDERSFIELD, ROTHERHAM and SHEFFIELD
are provided with through Luncheon Car trains
Via NOTTINGHAM, LEICESTER and BANBURY,
to and from
OXFORD, SOUTHAMPTON, BOURNEMOUTH, and the SOUTH WESTERN LINE,
also to and from
GLOUCESTER, CHELTENHAM, NEWPORT, CARDIFF, BARRY and SOUTH WALES.

BATH and BRISTOL
(with direct connections for the West of England)
are reached by through Breakfast and Luncheon Car
Trains from
LEEDS, WAKEFIELD, HALIFAX, HUDDERSFIELD,
SHEFFIELD, NOTTINGHAM, and LEICESTER.

— *Via MARYLEBONE is LONDON'S POPULAR ROUTE for STRATFORD-ON-AVON.* —

THE CONTINENT is reached by Express Boat Trains to GRIMSBY and regular sailings to HAMBURG, ROTTERDAM, and ANTWERP.

EXPRESS TRAINS are VESTIBULED, and include BREAKFAST, LUNCHEON, or DINING CARS.

For particulars of Train Service, Special Travel facilities and other information apply at any Great Central Station or Agency, Dean and Dawson's Offices, or send postcard to Publicity Dept., 16 Marylebone Road, London, N.W.

SAM FAY, General Manager.

"THE ARCHITECT"
Students' Sketching and Measuring Club

With the view of encouraging amongst architectural students the sketching and measuring of old work, the Proprietors of "The Architect" have decided to establish a Students' Sketching and Measuring Club in connection with this journal.

A separate subject will be set and a money prize given each month, and in July a Travelling Studentship will be awarded to the student who has submitted the best aggregate of work during the year.

SUBJECT FOR NOVEMBER, 1911.

A measured drawing or drawings of a chimneypiece of eighteenth century date, either British or Continental work.

Conditions.

1. There is no restriction on the size or number of the drawings.
2. The subject drawn need not necessarily be in its original position, but may be in a museum or elsewhere.
3. The drawing is to be accompanied by a short historical and architectural description.
4. A prize of Two Guineas will be given to the author of the drawing considered best by the Editor, or at his discretion the amount may be divided between the contributors. All drawings will be returned to their authors.
5. The drawing to which the prize is awarded will be published in *The Architect*, but the Editor reserves the right of publication without payment of any other drawing sent in.
6. Drawings are to be delivered at the office of *The Architect*, addressed to the Editor, and marked outside "Sketching and Measuring Club," on or before Thursday, November 30, 1911
7. Each drawing is to be accompanied by a coupon (which will be found below) properly filled up.
8. A student may send in more than one drawing.
9. A criticism on the drawings sent in will be published in *The Architect*, and reference will be made to each under the name of the author or a *nom de plume*. (*See coupon.*)
10. Every reasonable care will be taken of drawings sent in, but the Proprietors of *The Architect* will not be responsible for any injury or loss that may occur.
11. The decision of the Editor of *The Architect* shall be final and without appeal in all matters connected with the Students' Sketching and Measuring Club.
12. The winners of the Travelling Studentships, 1910 and 1911, will be *hors concours* for future competitions of the Club.

SUBJECT FOR DECEMBER, 1911.

A freehand drawing executed in monotone, brush-work or crayon, of a piece of mediæval carved ornament, either British or Continental.

SUBJECT FOR JANUARY, 1912.

A measured drawing or drawings of an internal doorway of eighteenth century date, either British or Continental.

The conditions relating to the subjects for December and January will be published during those months.

Conditions of the Travelling Studentship.

1. The Travelling Studentship will be awarded in July 1912 to the author of the best work sent in during the months of July 1911 to June 1912 (inclusive). In the case of students who send in more than one drawing or set of drawings in any one month, the Editor will in making his award select one only from the work of each month to count in the competition for the Studentship.
2. The value of the Studentship will be Ten Pounds, and the holder will be required to make a sketching tour of a fortnight's duration in a district to be approved by the Editor.
3. The sum of Ten Pounds will be paid in two instalments, half before the student starts on his tour, and half when after his return he shall have submitted to the Editor satisfactory work executed during the tour.
4. The proprietors of *The Architect* shall have the sole right of publication of the whole or any part of the work executed by the student during his tour.
5. The decision of the Editor of *The Architect* shall be final and without appeal in all matters connected with the Travelling Studentship.

"THE ARCHITECT" SKETCHING AND MEASURING CLUB.

COUPON TO BE SENT IN WITH DRAWING.

To the Editor of "The Architect."

I herewith submit for November, 1911, the drawing described below, and I declare that the same has been entirely executed by myself. I hereby agree to the conditions published in "The Architect," both as regards the subject for this month and as regards the Travelling Studentship.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

**** As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bristol.—Messrs. H. J. Packer & Co., Ltd., chocolate manufacturers, invite designs for a pavilion proposed to be erected on the recreation grounds. A premium of £10 will be awarded to the architect whose design is accepted. Apply to Messrs. H. J. Packer & Co., Ltd., Greenbank, Bristol.

Hastings.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s.* deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.—N.B. The time for sending in applications and designs has been extended until December 30.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Sofia (Bulgaria).—Dec. 15.—H.M. Minister at Sofia reports that the "Commission Permanente de l'arrondissement de Sofia" invite the submission of designs for a municipal building which it is proposed to erect at that place. Four prizes to the value of 7,000 fr. (£280), 3,000 fr. (£120), 2,000 fr. (£80), and 1,000 fr. (£40) respectively will be awarded. Architects desirous of competing must submit their designs at Sofia by Dec. 15. Copies of the programme, &c., may be obtained on application to the "Commission," as above. A copy of the programme, together with a drawing, may be seen at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Stafford.—The Corporation invite designs for a public library. A professional assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—Nov. 30.—The Cardiff Education Committee invite designs and estimates for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s.*, which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

Watford.—Nov. 23.—For alterations and additions to the existing grammar school for boys to adapt same for a higher elementary County Council school. Deposit £2 2*s*. Mr. U. A. Smith, county surveyor, Hatfield.

The Surrey Education Committee have decided to provide a new school in the district of Hythe, Egham, for 600 scholars, capable of future extension to 1,000. The plans are also to be prepared for a County School for Girls (accommodation 200) to be erected in Farnham Road, Guildford, and a new school at St. John's, Woking (accommodation 200).

At Ayr Dean of Guild Court last week the Burgh Surveyor reported that the estimated cost of buildings for which plans were passed during the year was £54,368, an increase of £1,795 as compared with last year and of £20,803 as compared with the total of two years ago. Of this year's total only £5,500 applied to dwelling-houses, £36,821 applied to business premises, and £12,047 to alterations and minor warrants.

LANCASHIRE.

Aintree.—Lancs. and Yorks. Railway Station buildings. Engineer, Hunt's Bank, Manchester.

Liverpool.—Six-storey and four-storey mill, Glasgow Street: reinstatement. Mr. J. H. McGovern, architect; Messrs. Jones & Sons, contractors (£1,460).
Four villas, Liverpool and Myers Roads (£1,800). Mr. J. H. McGovern, architect.

Radcliffe.—County Police Station: new Court House and cells. Mr. H. Littler (of Preston), county architect.

Westhoughton.—Council School. Mr. H. Littler (of Preston), county architect.

LEICESTERSHIRE.

Leicester.—Public Hall (£17,000).

Melton Mowbray.—Twenty-nine houses, Woodlands Avenue.

LINCOLNSHIRE.

Caistor.—Isolation Hospital enlargement.

Immingham.—Church Schools (Day and Sunday) (£2,800). Mr. W. Bond (of Grantham), architect. Messrs. Arnold & Sons (of Doncaster), contractors.

Little Steeping.—Parish Church restoration (£1,500).

Potterhanworth.—(Supplementary to November 3) Eight working men's houses. Mr. T. R. Howitt, surveyor.

Spalding.—Public Baths (£3,000).

MIDDLESEX.

Brentford.—Workhouse: educational block for 200 children.

Ealing.—Police Court, Northfield Lane.

West Drayton.—Two houses, Brandville Road.

NOTTINGHAMSHIRE.

Pleasley Hill.—Church completion.

Mansfield.—Council Schools, Moor Lane. Mr. F. P. Cook, borough surveyor.

Worksop.—Parish Church.

STAFFORDSHIRE.

Forsbrook.—Parish Church: enlargement (£1,500).

Hanley.—Electricity sub-station: rebuilding. Borough Electrical Engineer.

Leek.—Council School for 454 children (£5,450). Mr. T. Godwin (of Hanley), contractor (£4,999).

Longton.—Pallissy Works: extensions. Mr. T. Tindal, architect.

Newcastle-under-Lyme.—Villa residence, Clayton Road. Messrs. E. Jones & Jackson (of Hanley), architects.

Stafford.—Laboratories and class-rooms, &c., Cherry Street.
New hall, Crabbery Street.
Eight houses, Friars Road.

Wolverhampton.—Electricity Works extensions, Commercial Road (£11,000).

SOMERSET.

Montacute.—Twelve workmen's houses. Messrs. Petter & Warren (of Yeovil), architects.

Weston-super-Mare.—House, Cecil Road. Mr. E. T. Gillmore, architect.

SURREY.

Chertsey.—Workhouse: children's home (£1,255).

Ewell.—County School, Old School Lane.

Guildford.—Royal Grammar School: gymnasium (£950).

Haslemere.—St. Christopher's Memorial Hall (£1,000).

Purley.—Commemoration Hall: conversion into boys' secondary school (£10,500).

SUSSEX.

Brighton.—Headquarters for the Imperial Service Cadet Corps (£2,000).

Eastbourne.—Princess Alice Hospital: enlargement (King Edward VII. Memorial).

WARWICKSHIRE.

Birmingham.—Homeless Working Girls: New Hostel, St. Mary's Row (accommodation for 108 girls), £7,000.

Coventry.—Market extensions (£1,850).

Wolston.—Church Schools: enlargement.

WILTSHIRE.

Winsley.—Sanatorium extension. Mr. W. S. Skinner, architect (£13,000).

WORCESTERSHIRE.

Malvern, Little.—St. Giles' Church: enlargement and restoration. Mr. W. Tapper, A.R.I.B.A., architect.

YORKSHIRE.

Barnsley.—St. Mary's Church Day School (£4,000).

Carleton.—House. Mr. W. J. Tennant (of Pontefract), architect.

WALES.

Cardiff.—House at Penylan. Mr. R. B. Batchelor, architect.

Llanarmon.—"The Crown Inn": additions and alterations.

Llanystumdwy. — Village Institute. Mr. T. Rees, F.R.I.B.A. (of Liverpool), architect.

Pontypridd.—"The Danygraig Arms," Treforest: alterations. Mr. T. F. T. Jarvis (at the Brewery, Pontypridd).

SCOTLAND.

Broughty.—Board School.

Dundee.—King's Cross Hospital extension (£16,000).
School Board Academy.

Dunfermline.—Twenty-four houses, Townhill Road.
Eighteen houses, Main Street, Townhill.
School Clinics and College Class-rooms for the Carnegie Trustees. (£20,000.)

Glasgow.—Training College, Jordanhill, for 1,200 students.

Hamilton.—Board School, Hope Street, for 1,000 children. (£11,000.)
Infant School, Woodside, for 250 pupils (£2,720).

Inverness.—Science and Art School (£3,000).

Largs.—Five double cottages, Brisbane Street. Mr. Kay (of Hamilton), architect.

Five self-contained two-storey houses, Irvine Road.

Elderslie Pension: extension for billiard-room and fifteen bedrooms.

Leith.—Six cottages, Seafield Avenue.

Paisley.—Drill Hall for the Renfrewshire Fortress Works Company, R.E. Messrs. Craig, Barr & Cook, architects.

Refrigerator for the slaughter-house in Greenock Road.

Double villa, Thornleypark. Messrs. Uric & Sons, builders.

Rathen.—Public School: alterations. Mr. W. E. Gauld, A.R.I.B.A. (of Fraserburgh), architect.

IRELAND.

Tralee.—Convent and Chapel for the Sisters of the Presentation Order. Mr. S. F. Hynes, F.R.I.B.A. (of Cork), architect.

PATENT SPECIFICATIONS PUBLISHED NOVEMBER 2, 1911.

Selected and abridged by James W. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

23085. Oct. 6, 1910.—Ezra Hatton, 110 Sackville Street, Manchester. Improvements in reflectors and other lamp parts exposed to the destructive action of the combustion products.

23092. Oct. 6, 1910.—B. A. Slade, 27 Charles Street, Berkeley Squàre, architect. Improvements in caravans or movable cottages.

23124. Oct. 6, 1910.—William Summers, 3 Townsend Street, Old Kent Road, Southwark. Improvements in apparatus for controlling the flow of liquids.

23144. Oct. 6, 1910.—H. M. Brigwood, 22 Clark Road, Wolverhampton, and T. H. Hill, Astrea Works, Thomas Street, Wolverhampton. Improvements in hooks or clips for securing spouting, piping, and other articles to brickwork, woodwork, or the like.

23448. Oct. 10, 1910.—John Gunning, 100 Holdenhurst Road, Bournemouth. Communicated from Couaillet Freres, St. Nicholas d'Aliermont, near Dieppe. Improvements in apparatus for lighting and extinguishing gas burners at pre-determined hours.

23516. Oct. 11, 1910.—H. T. Gosling, 7 Holly Street, Smethwick. New or improved lock mechanism for safes, strong-rooms, and the like.

23526. Oct. 11, 1910.—August Eckstein and A. C. Heap, Waverley Mills, St. Simon Street, Manchester. Improvements in and relating to spring contacts for electric switches, fuses, and the like.

23561. Oct. 11, 1910.—F. J. Ruse, 109 Melfort Road, Norbury. An improved chamber for hydrant pits and for other purposes.

23621. Oct. 12, 1910.—H. R. Turner, Hillcrest, Rochdale. Improvements in insulating sheets or slabs.

23696. Oct. 12, 1910.—W. J. Russell, 17 Park Road, Wallington. Improvements relating to gas and other stoves for warming and ventilating rooms and the like.

23735. Oct. 13, 1910.—E. B. Koopman and The Pontelec Welding Patents, Ltd., 231 Strand, W.C. Improvements in and relating to electric welding.

23826. Oct. 14, 1910.—Henry Kupper, 29 Cartwright Gardens, St. Pancras. Improvements relating to door fasteners.

23835. Oct. 14, 1910.—Convention application Oct. 19, 1909. H. J. Molinder, Kopmangatan 29, Soderhamn, Sweden. Improvements in or relating to moulds for casting tubes and the like.

23894. Oct. 15, 1910.—August Eckstein and A. C. Heap, Waverley Mills, St. Simon Street, Manchester. Improvements in and relating to electric switchboards.

23977. Oct. 17, 1910.—Alfred Ferguson, 6 Templemore Avenue, Belfast. Lead lap joint for connecting lead flush pipes with horn or earthenware or metal basins.

24451. Oct. 21, 1910.—P. J. Ilott, 41 Park Crescent, Clapham, S.W. Improvements in or relating to slam locks for carriage doors or the like.

24754. Oct. 25, 1910.—F. L. Cross, 1233 Sherman Avenue, Madison, Wisconsin, U.S.A. Improvements in regulators for controlling the flow of gas or air.

24959. Oct. 27, 1910.—John Hallsworth, 9 Ashton Road, Denton. Improved fastener for windows, doors, and the like.

25049. Oct. 28, 1910.—Thomas Thorp Franklin & H. T. Thorp, of Victoria Works, Narrow Lane, Besses o' the Barn, Manchester. Improvements in apparatus for the combustion of mixture of gas and air in enclosed spaces.

25120. Oct. 29, 1910.—Geo. Hookman, 7 New Bartholomew Street, Birmingham. Improvements in the manufacture of matting and stair treads.

25175. Oct. 29, 1910.—Convention application November 5, 1909. Alcock & Co. Proprietary, Ltd., 155 Elizabeth Street, Melbourne, Victoria. Improved electric process for drying timber.

25547. Nov. 3, 1910.—W. E. Parkes, Union Works, Willenhall. Improvements in locks and latches.

25956. Nov. 8, 1910.—Charles Pooley, 190 Fleet Street, Dick Burge, 197 Camden Road, N., and W. R. Pether, 124 Chancery Lane, E.C. An apparatus for cooling air and the like.

26724. Nov. 17, 1910. A. G. Burrell, Silverdale, West Port, Lanark. Improvements in and relating to the locking or securing of sash windows.

26790. Nov. 17, 1910.—H. J. Bebauche, Gilly, Belgium. Improvements in processes for moulding briquettes and the like.

26909. Nov. 19, 1910.—A. J. Chapman, 194 Ebury Street, Pimlico, S.W., and H. E. Mason, 40 Park Place, Bayswater. A universal angle grip for flexible electrical cords.

27508. Nov. 26, 1910.—Clement Heath, 18 York Street, Basford, Stoke-on-Trent. An improved combined bell push and temperature alarm.

27818. Nov. 30, 1910.—J. A. Hill, Ordnance Works, Bernard Road Park, Sheffield. Improvements in and relating to stone drying stoves for tar macadam manufacture.

28381. Dec. 6, 1910.—J. B. Fesler, 256 West 23rd Street, New York. Improvements in or relating to fountain brushes.

29276. Dec. 16, 1910.—C. W. Trotman, Avonside, Cumberland Road, Bristol. Improvements in and relating to domestic fireplaces.

30123. Dec. 28, 1910.—Paul Leist-Wettler, Schonenwerd, Canton Solothurn, Switzerland. Improvements in fastening devices for casements and other hinged shutters.

30266. Dec. 30, 1910.—C. B. Hoare, Croft Lodge, Highgate Road, N. Improvements in or connected with appliances for cutting circular apertures in boiler and like plates.

68. Jan. 2, 1911.—Fred Wilkins & Brother, Ltd., and R. H. Hutchinson, 27 Duke Street, Liverpool. Improvements relating to fire-resisting screens, curtains, and the like.

444. Jan. 7, 1911.—T. W. Twyford, Cliffe Valve Potteries and Enamelled Fireclay Works, Hanley, Stafford, Improvements in flushing valves.

592. Jan. 9, 1911.—A. & D. Weikel, Middletown, Butler, Ohio. Improvements in or relating to safes, vaults and other compartments or receptacles.

659. Jan. 10, 1911.—Convention application Jan. 13, 1910. E. K. H. Borchers, Friedenau, Prussia. Improved apparatus for testing gases, steam or other vapours, and recording the solid and liquid admixtures therein.

1195. Jan. 17, 1911.—D. J. Falconer, 6 West Park Road, Southampton. Fastenings for window and similar sashes.

1399. Jan 19, 1911.—J. H. Cartland & E. J. Teale, 68 Constitution Hill, Birmingham. Improvements in the manufacture of door closing springs.

2030. Jan. 26, 1911.—M. B. Mountain, C. R. Heron & W. F. Hobdell, St. John's House, 124 Minories, E.C. Improvements in roller shutters.

2564. Feb. 1, 1911.—S. H. Adams, A.M.I.C.E., White House, Fulford, York. Improvements in or relating to adjustable syphons applicable for the supply of liquid to filters.

2898. Feb. 4, 1911.—C. M. Burrell, 7 Wickstead Place, Wanganui, N.Z. Improvements in and relating to domestic and the like baths.

3684. Feb. 14, 1911.—Robert Charlton, Manors Brass Works, Newcastle-on-Tyne. Improvements in storm valves.

3918. Feb. 16, 1911.—M. J. Railing and A. J. D. Krause, of the G.E. Company's Engineering Works, Witton, Birmingham. Improvements in electric fans.

4794. June 1, 1911.—J. E. Squires, 24 Hambro Road, Streatham. Improvements in or relating to cleaning and sifting apparatus.

7260. March 23, 1911.—W. H. Tonks & Walter Sparks, of 201 Moseley Street, Birmingham. Improvements in opening and closing mechanism for hinged windows or fanlights.

7488. March 25, 1911.—Max Mannesmann, Remscheid-Bliedinghausen, Germany. Improvements in or connected with the construction of buildings.

7489. March 25, 1911.—Max Mannesmann, Remscheid-Bliedinghausen, Germany. Improvements in or connected with staircases of reinforced concrete.

7490. March 25, 1911.—Max Mannesmann, Remscheid-Bliedinghausen, Germany. Improvements in or connected with the construction of buildings.

7672. March 27, 1911.—Convention application March 28, 1910. Albert Goldstein, 114 Liberty Street, New York. Temperature alarm device.

7786. March 29, 1911.—Joseph Southall, Worcester Foundry, Worcester. Improvements in machines for washing sand.

9249. April 13, 1911.—Jacob Pfeiffer, of the firm of Gebruder Pfeiffer, Kaiserlautern, Germany. Improvements in rotating drum apparatus for drum grinding mills.

10235. April 27, 1911.—Mitsui & Co., Ltd., 34 Lime Street, and A. C. Chapman, 8 Duke Street, Aldgate. Improved packing material and the processes for making the same.

11557. May 12, 1911.—Edgard Frankignoul, 196 rue Gretry, Liege. Improvements in or appertaining to foundations.

13623. June 7, 1911.—Convention application July 2, 1910. August Schaeffer, 40 Moselstrasse, Frankfurt a/M. Air propeller driven by electric motor.

18120. Aug. 10, 1911.—E. von Seidlitz und Ludwigsdorf, Ranzow, Rugen, Germany. Improvements in door stops.

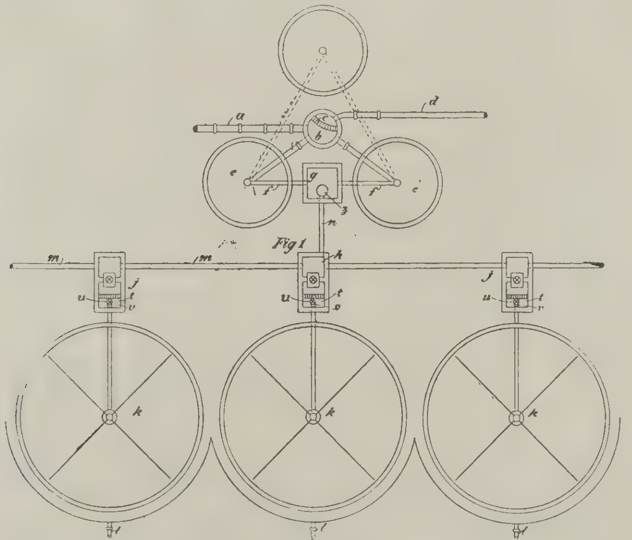
19170. Aug. 26, 1911.—Convention application Aug. 27, 1910. J. F. Bjurlund, 1331 Napier Avenue, Ozone Park, Richmond Hills, Long Island, N.Y. Improvements in sash holders.

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the complete specification.

No. 2,564. February 1, 1911.—Improvements in or relating to Adjustable Syphons applicable for the supply of Liquid to Filters. S. H. Adams, A.M.I.C.E., White House, Fulford, York. The object of this invention is to divert or to separate the supply of sewage which is to be filtered or treated in such a way that the proportions delivered to any of the filtering areas shall be equal, so that in work, assuming that two filtering areas are in operation then the sewage would be divided equally between the two, and if three were in operation then the sewage would be divided equally among the three. This division is effected by means of syphonic weirs which are in effect syphons, but they are carried in a suitable frame just as a penstock door is carried, and they rise and fall just as a penstock door would rise and fall, operated by a hand screw or other means. It is evident that if one of these syphonic weirs is set at a low level and another at a high level, the one at the low level only will pass the sewage through it until the sewage has risen to such a height that it will overflow the syphonic weir which is placed at the high level, and then this syphonic weir will come into operation as a syphon, and the two together, each working and each discharging to its separate area, will deliver practically equal volumes to these areas. Fig. 1 is a general plan of the tanks and filters. Fig. 2 a cross-section to a larger scale showing the syphonic weir, and Fig. 3 a plan of same. *a* is the supply pipe to the chamber *b*, the overflow from which passes over the weir *c*, to the storm-water outlet *d*. The sewage enters tanks *e*, *e*, and from thence passes through pipes f f_0 to the dosing tank *g*, and through syphon *z* (through pipe *n*) to the chamber *h*, which is connected by the pipe *m* to similar chambers as shown at *j*, *j*. The liquid from these chambers is distributed by revolving distributors upon the filters *k*, *k*, *k*, passing through and being discharged to the effluent outlets at *l*, *l*, *l*. Each of these distributing chambers is fed by the supply pipe *m*, to which they are connected. The incoming pipe is shown at *o*; this discharges into the small chamber *p*, from which sewage passes through the syphonic weir *q* to the weir chamber *r*, being thence discharged over the weir *s* to the chamber *t*, in which is a draw-off valve *u*, with a bell-mouth overflow *v*, discharging to the supply pipe *w* the sewage to the filters *k*, *k*, *k*. At *x* is a hand wheel, by means of which the syphonic weir *q* is raised or lowered in its frame. It will be seen that these syphonic weirs may be raised or lowered to any desired height, and that whatever number of weirs may be in operation they will deliver an equal volume of sewage to the distributors or to the filter-beds or land. October 18, 1911.



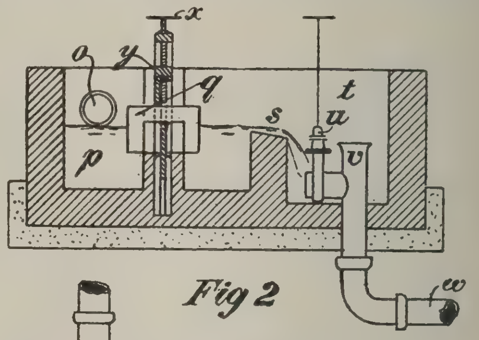


Fig 2

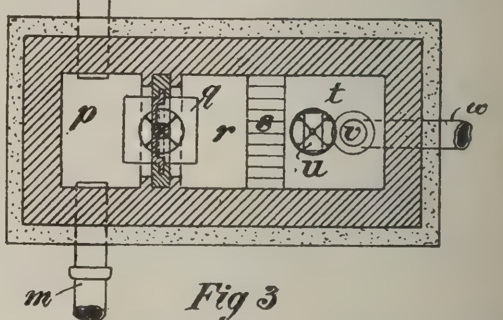

Fig 3

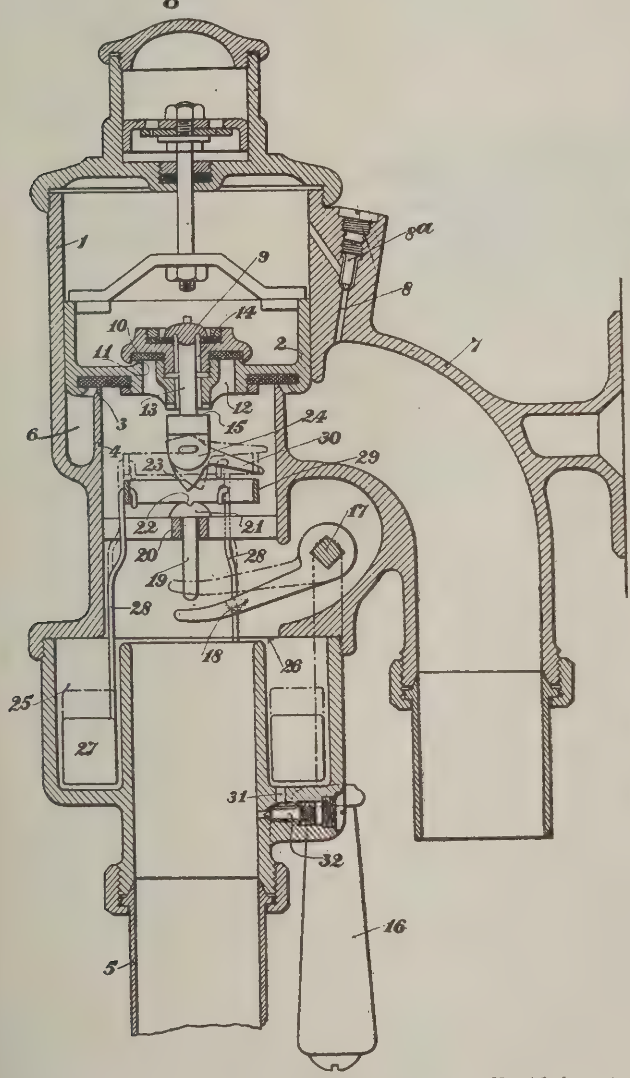
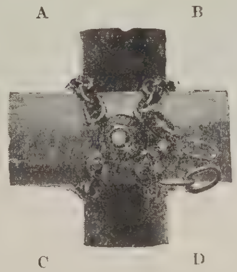
No. 444. January 7, 1911.—Improvements in Flushing Valves. T. W. Twyford, Cliffe Vale Potteries and Enamelled Fireclay Works, Hanley, Stafford. This invention relates to flushing valves employed in connection with water-closets, urinals, slop sinks, and for other uses, for the purpose of giving a direct flush without the use of a flushing cistern. The type of appliance to which the invention relates comprises a main valve, adapted to rise and fall within a chamber, and having a portion of its underside subjected to the pressure of the main supply of water, the chamber being normally filled with water through a by-pass leading from the main pipe upon the inlet side of the valve so that the pressure of the water keeps the valve closed until the water is expelled or allowed to escape from the chamber. Fig. 1 is a vertical section. The appliance comprises a cylindrical chamber 1 containing the rising and falling main valve 2, which normally rests upon a seating 3 at the upper end of an outlet passage 4, leading to the discharge or flush pipe 5, and forming, with the walls of the lower part of the top chamber, an annular space 6, which at one side opens into a branch pipe 7 connected to the main supply. The valve 2 overhangs the seating, so that when closed the pressure of the water acts on the underside of its outer edge, and tends to lift it off its seating. Leading from the inlet branch 7 into the top chamber 1 is a by-pass 8, through which the chamber is filled with water, the pressure of which normally keeps the main valve upon its seating. The by-pass 8 is provided with a regulating screw 8*a*, so as to vary the quantity of water that passes, and thus the time the chamber takes to fill and the period of the flush. The main valve is fitted with a relief valve, comprising two parts, consisting of a small preliminary relief valve 9, and a larger or main relief valve 10. The latter rests upon a seating 11 upon the main flush valve 2, so as to close an opening 12, whilst the small valve 9 is carried by the upper end of a vertical stem 13, passing through a guide passage in the valve member 10, and is adapted, when lifted, to open an outlet passage 14, so as to thereby ease the pressure in the top chamber prior to the large valve chamber being lifted, thus rendering the operation of the hand-lever easier. The central valve stem is directly lifted by the actuating device, and is provided near its lower end with a shoulder 15, which, after the valve 9 has lifted a little way and relieved the pressure, engages with the main member 10 of the relief valve, so that both parts then rise together to allow of the emptying of the top chamber, and relieving the pressure upon the main valve. The actuating device is an external lever-handle 16, carried by a transverse spindle 17, turning in bearings and passing through stuffing glands for preventing leakage. The spindle carries a lever arm 18, which engages a pin 19 within a guide hole in a bridge-piece 20. This pin has a head 21 provided with a recess 22, which normally comes beneath the lower pointed end of a rocking member 23, pivoted between the sides of the forked lower end 24 of the valve stem 13. When the handle 16 is actuated, the arm 18 lifts the pin 19, causing the recess 22 in the head 21 to engage with the rocking member 23, and lift the relief valve 9, 10, off its seating. In order to prevent a continuous flush from being obtained by keeping the external handle depressed, the chamber 25 opens at the top through a restricted entrance 26, and within this chamber is a ring float 27, which carries arms 28 and a ring or band 29. When the flush occurs the water, in passing through the appliance, enters the float chamber, and so lifts the float, and the ring 29 strikes a lateral arm 30 of the member 23, causing the latter to swing aside, as shown by dotted lines, and its lower end to disengage itself from the recess 22. The float chamber has a small outlet passage 31, controlled by a screw 32, through which the water can gradually escape. Thus the float falls, and after a predetermined time allows the swinging member 23 to asume its normal position, and re-establish the connection between the relief valve and operating handle. October 18, 1911.

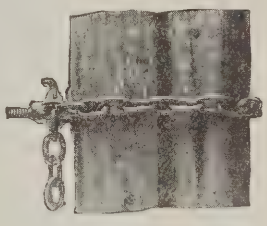
Fig. 1.



"SCAFFIXER" SCAFFOLD TIES.

The latest pamphlet issued by the Patent Rapid Scaffold Tie Company, Limited, 124, Victoria Street, S.W., is splendid evidence that the device has "caught on" among the large contractors throughout the country. The list of users is a long and imposing one, and it is backed up by a number of photographs of recent big jobs showing scaffolding with the Scaffixer ties. These ties are British steel forgings, while the scaffixer blocks are sheradised and perfectly rustless. In working they are simple and strong. To make a ledger tie, for instance, it is only necessary to hook the end link of one chain on to horn "A," next to pass this chain round the standard or to horn "B" by nearest link; the end of a second chain is hooked on to horn "C," and is then passed round the standard to horn "D." This lower chain must be pushed well up behind the standard, and then screwed up. It is hardly necessary to mention that before commencing to fix the chains it is necessary to drive the spike of the block firmly into the pole after screwing the nut well down to the base-plate. For light scaffolds a ledger tie may be made with one chain fixed diagonally, say from "A" to "D." In a hemping or bracing tie the end link of the chain is hooked to one horn of the hook plate, the chain is then passed round the poles to the opposite horn, and the block is then screwed up. The Company have also a Scaffixer Bracket for temporarily supporting the ledger (horizontal) pole until the permanent Scaffixer ties are made.





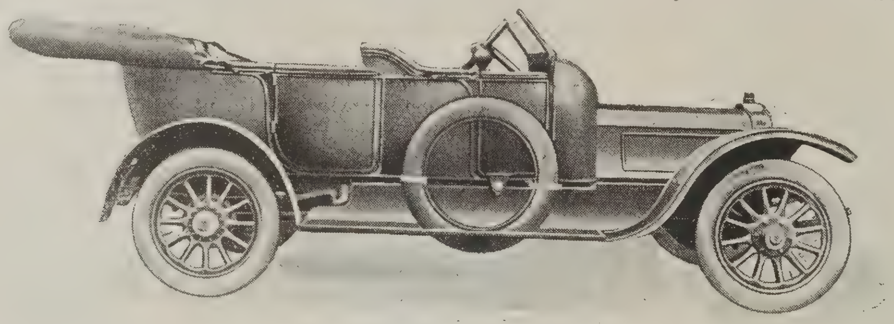
The above explains how the Scaffixer ties are used. And now a word as to why they are used and by whom they are used. Perhaps the former is best explained by the following letter sent by Messrs. W. J. Fryer & Co., who exclusively employed them in erecting large new works at Hayes, Middlesex:—"We have now gone into the costs of erecting the scaffolding at Hayes (a £20,000 contract), and are pleased to be able to inform you that the use of your Scaffixer ties has enabled us to effect a very considerable saving, both in the amount of scaffolding and in the rapidity of its erection, and we have therefore decided to use your scaffold ties." Among the London jobs shown in the booklet are the Middlesex Theatre of Varieties, Drury Lane, W.C. (contractors, Messrs. Allen & Co.); the new Hovis Bread Mills, Vauxhall Bridge, S.W. (contractors, the British Fireproof Construction Co.); the new Money Order Office, Holloway, N. (contractors, Messrs. Leslie & Co., Ltd.); the Y.M.C.A. building in the Tottenham Court Road (contractors, Messrs. John Greenwood, Ltd.); the new Victoria Palace of Varieties, Victoria Street, S.W. (contractors, Messrs. H. Lovatt, Ltd.); the Imperial Hotel Extension, Southampton Row, W.C. (contractors, Messrs. Jas. Smith & Sons (Norwood), Ltd.); the Savoy Hotel extension, 1910 (contractors, Messrs. Leslie & Co., Ltd.); the Peabody Trust Buildings, at Fulham (contractors, Messrs. W. Cubitt & Co.); L.C.C. Repair Depôt, Woolwich (Chas. Wall, Ltd.). The list of names includes, of course, firms in the provinces as well as in London. In conclusion, we may mention that the ties may be hired at a nominal expense with the option of purchasing or returning them.

The Vestry of the parish of Birmingham have passed a resolution authorising the enclosure of some 46 acres of land or thereabouts in the parish of Hales Owen for the purpose of a burial ground, the laying out of the land and the building of the necessary chapel or chapels at a sum not exceeding £25,000. This resolution also sanctioned the borrowing of any money required not exceeding that sum.

THE TALBOT MOTOR-CAR.

If we were asked to select an industry that seemed to be "booming" more than any other, our choice would certainly fall on the motor industry. That really does appear to "move." What would the organisers of the Building Trades Exhibitions at Olympia give to be able to rival the attendance during the first two days of the present Motor Exhibition there—40,000 people! This must constitute a record for any show at Addison Road. The reasons for such popularity are no doubt very varied. A fair proportion of those forty thousand visitors must have been directly connected with the industry, while very many others were intending purchasers, and others again went to admire the cars from an abstract point of view. The time has not yet come when motor cars will be as common as bicycles, though prophets stoutly affirm that it is not far off. But whether that is correct or not, there can be no shadow of a doubt the motor-car is becoming an every-day necessity for professional men, and that the man of moderate means welcomes the possibility of acquiring one at not too costly a figure, and yet which is of perfect reliability.

Such a car is the "Invincible Talbot," and every visitor to the Motor Exhibition should make a point of calling at the Company's stand. We give this opinion with no timidity (though freely admitting the possession of only a layman's knowledge), because of the record of the Talbot car established in many contests during the present year. Here are three results: (1) in an "efficiency" contest arranged by the Bradford and Huddersfield Clubs at Meltham Hill a 15 h.p. Talbot scored 1.4933 marks, while the next highest was a 20 h.p. car with 1.4280 marks; (2) a Talbot car weighing 3,662 lb. won the Transvaal Park trophy by running 166 miles on 3⅛ gallons of petrol; and (3) last month in the Caerphilly hill climb contest the Talbot was not only first in its class, but made the fastest time, and won five gold medals.



THE 15 H.-P.

TALBOT.

One of the fascinations about motors is that each month, if not each week, seems to bring some improvement in the mechanism. Keen competition keeps the various makers on the qui vive for new ideas. In the latest type of Talbot the novel features include a Stewart-Talbot carburettor by which automatically the car can be driven at anything from a child's crawl to highest racing speed, and which when once adjusted need not be touched again so long as the car is in use. Other improvements are a new clutch and a new sprag. The Talbot is a highly efficient car, with an unusually accessible engine, of low consumption, and splendid hill climbing powers.

VARIETIES.

The Saddleworth District Council have secured an option to purchase over twenty acres of land, on which they propose to erect workmen's dwellings as a relief to the existing house famine.

Dalkeith Town Council have resolved to erect a concrete bridge over the North Esk, giving an improved entrance from Eskbank to Dalkeith Public Park, which the Duke of Buccleuch presented to the inhabitants in commemoration of his golden wedding. The expenses of the bridge have been partly met by subscriptions in Dalkeith and Eskbank.

The Hamilton School Board have approved of plans for a new school, near the site of the old Academy in Hope Street, to accommodate 700 elementary and 300 intermediate pupils, at an estimated cost of from £10,000 to £12,000, and an infant school at Woodside, to cost £2,720, accommodating 250 scholars.

Mr. H. R. Cooper held a Local Government Board inquiry at the Wolverhampton Town Hall recently into the Corporation application for sanction to borrow £11,000 for the extension of the buildings and plant at the electricity generating station, Commercial Road. It is proposed to spend £5,600 in buildings and structural work, including battery room £1,900, sub-station £800, workshop and stores £1,440, offices £760, and travelling crane and steelwork for substation £540. Further, there is £400 for workshop equipment, and another £5,000 for electrical machinery and switch gear.

The Local Government Board have written to the Middlesex County Council sanctioning the borrowing of £65,449 for the erection of the new Guildhall, the Board having deducted from the amount asked for by the County Council £7,186 in respect of the debt outstanding on superseded work, less value of old materials.

At the general meeting of the Wolverhampton and District Architectural Association, held at the Library, Waterloo Road, the following officers for the year 1912 were appointed: Mr. T. H. Fleming, president; Mr. W. J. Oliver, vice-president; Mr. A. W. Worrall, hon. treasurer; Mr. W. Weller, hon. secretary (15 King Street); Messrs. F. T. Beck, W. Edwards, and A. Eaton Painter, members of the Council.

The Spalding Gentlemen's Society, which has existed since 1709, and is the oldest antiquarian Society in the country, last week established themselves in a new home, and opened a new museum and library. The opening ceremony was performed by Sir Henry H. Howorth, K.C.I.E., F.R.S., F.S.A., President of the Royal Archæological Institute, and of the Royal Numismatical Society. The new building has been erected to celebrate the bi-centenary of the foundation of the Society, and to form a memorial to the founder, Mr. Maurice Johnson. Its erection was rendered possible by the generosity of the late Mr. Edward Bentle, of Spalding, and other members of the Society. The building is in the Tudor style, the front being of dark red brick work, with stone dressing.

The foundation-stone of a new church at Woodlands, Doncaster, has been laid by Mrs. Thellusson, of Brodsworth Hall, the Bishop of Sheffield officiating. The church when completed will consist of a nave with north and south aisles, with tower and spire at the north-west corner, and a chancel with sacristy, choir vestry, and organ chamber, and morning chapel. It will have seating accommodation for 500 persons. Messrs. Mullins & Richardson, builders, Doncaster, are carrying out the work, which is from the designs of Mr. W. H. Wood, F.R.I.B.A., successor to the late Mr. C. Hodgson Fowler, F.S.A., of Newcastle and Durham.

Tenders are invited by the municipal authorities at Montreal for the supply and erection of a 12,000,000-gallon steam-driven, high-lift centrifugal pump at the low level pumping station in that city. Sealed tenders, enclosed in special envelopes, will be received by the Board of Commissioners, City Hall, Montreal, up to December 1. A deposit of $4,000 (about £820) must accompany each tender. Copies of the specification, &c., may be obtained on application to the Superintendent of the Water Works, City Hall, Montreal. A copy may be seen by British makers at the Commercial Intelligence branch of the Board of Trade, 73 Basinghall Street, London, E.C.

In his report on the trade of Saxony, Mr. Vice-Consul R. Turner refers to the extremely active nature of building operations at Leipzig and other industrial centres of the kingdom during the past year, and specially alludes to the new central railway station in the city just named, the erection of which is making rapid progress, and which will, when finished, have cost the town, the Saxon Government, and the Prussian Government £7,000,000. This work is being carried out almost entirely by local firms. In Leipzig there appears to be a remarkable movement for the demolition of old buildings, both residential and industrial, and the erection of new and more commodious ones in their place, which is taken to be a satisfactory indication of the growing prosperity of the district.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bristol.—Messrs. H. J. Packer & Co., Ltd., chocolate manufacturers, invite designs for a pavilion proposed to be erected on the recreation grounds. A premium of £10 will be awarded to the architect whose design is accepted. Apply to Messrs. H. J. Packer & Co., Ltd., Greenbank, Bristol.

Hastings.—Dec. 31.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1s. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Port of London Authority invite preliminary sketch designs in competition for new head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1*s*., which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Sofia (Bulgaria).—Dec. 15.—H.M. Minister at Sofia reports that the "Commission Permanente de l'arrondissement de Sofia" invite the submission of designs for a municipal building which it is proposed to erect at that place. Four prizes to the value of 7,000 fr. (£280), 3,000 fr. (£120), 2,000 fr. (£80), and 1,000 fr. (£40) respectively will be awarded. Architects desirous of competing must submit their designs at Sofia by Dec. 15. Copies of the programme, &c., may be obtained on application to the "Commission," as above. A copy of the programme, together with a drawing, may be seen at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Stafford.—The Corporation invite designs for a public library. A professional assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—Nov. 30.—The Cardiff Education Committee invite designs and estimates for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s*., which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

Campbell & Christmas	232	0	0

CLECKHEATON.

For the various works required in erection of pavilion, boundary walls, laying of green, &c., at Park View. Mr. W. Morton, architect, Cleckheaton. Quantities by architect.

Accepted tenders.

A. Drake & Sons, mason.
W. Isherwood, joiner.
J. W. Taylor, plumber and heating.
N. Parkinson, plasterer and concreter.
H. T. Crowther, painter.
James Smithies, tiler.

SCOTLAND.

For extension of the School of Domestic Science, 352 King Street, Aberdeen, for the Governors of Robert Gordon's Technical College. Messrs. Kelly & Nicol, architects, Aberdeen.

Accepted tenders.

G. Hall, mason	£2,755	0	0
D. Macandrew & Co., carpenters	1,563	0	0
J. Blaikie & Sons, plumbers	1,244	0	0
J. Stephen & Son, plasterers	948	0	0
Pratt & Keith, electrical work	188	15	0
G. Bisset, smith's work	159	10	0
Kynoch & Robertson, painters and glaziers.	157	10	0
J. Scott & Son, asphalters	113	6	8
A. Harper & Sons, slaters	111	0	0

All of Aberdeen.

For works in connection with new epileptic colony, East Muckcroft, Chryston, for the Glasgow Parish Council. Mr. R. Tannock, architect, Parish Chambers, Glasgow.

Heating and ventilating.

Taylor & Fraser	£1,694	0	0
Arnot	1,675	0	0
Combe & Son, Glasgow (*accepted*)	1,635	12	2

Steel and iron works.

McMillan & Co.	£256	5	9
Baird & Sons	244	3	1
J. Mundy, Glasgow (*accepted*)	242	14	1

Tile work.

Decorative Tile and Fireplace Co.	£426	5	3
Kean & Wardrobe	409	9	3
Brown & Sons, Ltd., Paisley (*accepted*)	394	13	0

Painter work.

Edgar	£845	18	0
McKerracher	826	15	8
Lindsay & Son, Glasgow (*accepted*)	795	9	5

WALES.

For erection of 28 dwelling-houses and premises at Ystalyfera and works connected therewith, together with the construction of a road, for the Pontardawe Rural District Council. Mr. J. Morgan, engineer and surveyor, Pontardawe.

W. & J. R. Watson	£7,900	0	0

LONDON ASSOCIATION OF MASTER DECORATORS.

At the October quarterly meeting of the London Association of Master Decorators, various matters of importance were discussed. The proceedings were opened by an address from the President on his visit to the Convention at Derby.

It was reported that the Water Board had been approached with reference to certain charges made by them for water used for washing down outsides of houses, and as the result of the representations made by the Association, the practice has been modified, so that a charge is only made where the building is being generally repaired and decorated, or where the work is otherwise extensive, and needs absolutely cleanliness.

On the subject of scholarships, it was also reported that the Educational Committee is corresponding with the London County Council, and is at present visiting their technical schools with a view to devising a scheme for the better training of decorators. The question of white lead was also discussed, and it was resolved:—"That as no suitable substitute for white lead has been found its use be continued under reasonable regulations."

HINTS ON ILLUMINATION.

The study of illumination has not only become an exact science in these days of perfection in artificial lighting, but every householder is eagerly reading anything that will give him a greater insight into this most difficult study.

Many a poorly lighted room can be easily remedied by changing the light fixtures or repapering. It was formerly the custom to blame the oil, or the gas, or the electricity if there were dark shadows in the room or if the light failed to dispel the evening darkness. Now it has been proved that these same rooms, be they at home or in the office or the store, can be made almost as light as day with even less candle-power than before, all with a little study and planning.

A wallpaper which will "absorb" light is the greatest enemy to artificial light in the home. An illuminant is powerless to light a room if the colour of the walls absorb most of the rays. The illuminating engineers of one of the leading electrical firms claim that a white wall will reflect 50 per cent. of light, whereas a red wallpaper will reflect only 15 per cent. A light buff or yellow will reflect 45 per cent.; a dark brown about 12½ per cent. A light apple-green wallpaper will reflect 40 per cent.; a dark green will give us 15 per cent. Dark wood trimmings absorb light; white wood reflects it. Velvets and chintzes will also absorb light; so will wallpaper, whatever its colour, but a tinted surface wall reflects the light. Wallpaper in patterns is not only one of the greatest of all known absorbers of light, but it also has a bad effect on nerves and eyes.

The plainer the wallpaper the better for nerves and body, and the smoother the surface the more light it will reflect. In selecting wallpaper the way the room faces must also be taken into consideration. Those rooms facing north and east require lighter coloured papers than do rooms facing south and west.

Care in the selection of tints and wallpaper will not only lead to a better and a cheaper artificial light, but will protect the eyesight and save the nerves and temper. It will enable all to realise to the greatest degree the many advantages of artificial light from the electric current where many are now using some inferior illuminant because of an incorrect impression that electric light is too expensive.

In the year 1781 a German scientist, working in his laboratory by the light from tallow candles, discovered a metal which he found impossible to melt in his crude charcoal furnace. He called the new metal tungsten, from the Swedish "tung" (heavy) and "sten" (stone), because the heavy ores had come from Sweden.

Twenty-five years ago the first successful incandescent electric lamp was produced, after the world's scientists had worked for nearly fifty years to perfect the device. The filaments for these first lamps were made of carbonised strips of bamboo heated white-hot in a vacuum globe by electricity. Subsequently carbonised cotton cellulose was used for the filaments, and it seemed as though the lamp had surely reached perfection.

The filaments of incandescent electric lamps were made of carbon, because no other material could be found which would withstand the intense heat. Every well-known metal was tried, but melted before reaching the required temperatures. Then the inventors began to experiment with the more uncommon metals, and again a German scientist took up the study of tungsten. At first the great trouble was to secure pure tungsten. This difficulty was overcome with the aid of an electric furnace, but the product, in the form of a grey, metallic powder, proved so refractory that it could not be melted into ingots or drawn out into wire. An experimental filament was made by mixing the fine powder with a paste and squirting the mixture through a die, much the same as a spider spins his web. This thread was in turn heated in an electric furnace till the powder was fused into the form of a fine wire. With the melting point of tungsten so much higher than any other known metal, it was possible to heat the filament to greater incandescence, producing more and better light with less waste of current in useless heat.

Then the electrical inventors awoke to the fact that the very substance they were seeking, that which Edison had scoured the world to find, lay under their hand all the time, and tungsten, useless and practically unknown for over a century, came into its own, and began the wonderful task of revolutionising incandescent electric lighting.

The advent of the new tungsten lamp, or metallic filament lamp as it is popularly known, was startling to the users of electricity for lighting purposes. A home that was lighted by electricity for 8*s*. a month could be lighted with the new lamps for 2*s*. 6*d*. Not only that, but the light from the new tungsten lamps proved to be pure white.

When the metallic filament lamp made its appearance it was thought the apex of achievement in incandescent electrical illumination had been reached. Yet the present year has witnessed a still further advance in the manufacture of electric lamps. In the early autumn it was announced that a British firm of electrical engineers had succeeded in rendering tungsten into a ductile form and drawing it into a wire one-thousandth part of an inch in thickness, and were making filaments of electric lamps out of it. Thus has the last, and perhaps the only, defect of tungsten for electric lamp filaments been removed.

The lamp will replace those now in use without special fixtures; in fact, any 16 candle-power incandescent lamp can be replaced with a 32 candle-power tungsten, which will give twice the light and save 20 per cent. of the cost. In size, shape, and general appearance the new lamps are the same as carbon lamps, the difference being in the light-giving filament within the glass bulb.

INSTITUTE OF SANITARY ENGINEERS.

The annual dinner of the Institute of Sanitary Engineers was held at the Holborn Restaurant, W.C., on Wednesday, November 15. Mr. A. J. Martin, M.Inst.C.E., F.G.S., F.R.San.I., the president, occupied the chair. Among those present were the Hon. Sir John McCall, M.D., Lieut.-Colonel Melville, R.A.M.C., Mr. Edwin T. Hall, F.R.I.B.A., Professor Henry Adams, Mr. G. W. Aldwinckle, Mr. H. P. Boulnois, M.Inst.C.E., Professor E. G. Coker, Dr. F. E. Freemantle, Mr. P. M. Fraser, A.R.I.B.A., Mr. Geo. W. Chilvers, Mr. F. W. Mason, Mr. H. S. Couchman, Mr. E. R. Palmer, Mr. A. W. S. Sweetland, Professor A. Bostock Hill, the Mayor of Richmond, and Mr. P. N. Hasluck, the secretary.

After the loyal toasts had been honoured, Mr. H. Percy Boulnois, M.Inst.C.E. (chairman of the Council of the Royal Sanitary Institute), proposed "Our Public Health Authorities." There were, he remarked, some ten thousand health authorities in England and Wales. Consequently they must admit this country was well looked after in that respect.

Alderman R. W. Simpson, J.P. (Mayor of Richmond), said that in Richmond they had cleared away slum areas at a cost of £45,000; and as the population was only 30,000 they felt they had done fairly well. Moreover, whereas fifteen years ago the death-rate stood at 17.9, last year it was reduced to 8 per thousand. They had come also to a very desirable agreement with their neighbours to preserve the amenities of the Thames between Richmond and Twickenham.

Professor A. Bostock Hill, M.Sc., M.D. (President of the Society of Medical Officers of Health), said that the sanitary authorities had done much of which they could be proud. Sanitary science practically dated from 1875. Typical of its enormous developments was the advance in the study of bacteriology. The public were now becoming educated in the science of hygiene, and in that education of the public lay the most important part of the movement. Any further big advance was impossible until the public realised what hygiene could do for them. He looked forward to there being formed another and higher health authority, viz. the health authority of well-informed public opinion, and to the time when health authorities would say "This is preventable, and therefore shall be prevented."

The Hon. Sir John McCall, M.D. (Agent-General for Tasmania), in proposing "The Institute of Sanitary Engineers," argued that it was the duty of the Institute to see that the qualifications of their members were recognised by the people of this country. At present all sorts of people described themselves as sanitary engineers. One of the first aims of the Institute ought to be to see that no man was allowed to call himself a sanitary engineer unless he had some qualification. When a man employed a sanitary engineer he had as much right to protection against incompetence as when he employed a lawyer or a doctor.

Mr. Arthur J. Martin, M.Inst.C.E., F.G.S., F.R.San.I. (the President), heartily agreed that the public ought to be protected from people who were not what they pretended to be. Their Institute had made a good start in its work in the present session: their meetings had reached a very high standard, the attendance was good, and there had been valuable discussions. They had been promised a series of excellent papers by men eminent in different walks of life. He knew that success was a matter of sheer hard work. There was a great post-graduate university for the country at large in the learned societies and in the trade unions, which were making good the defects of early education. Most important of all were societies such as their own which served as schools of citizenship, in which they learnt and practised the duties of loyalty, hard work, discipline, and self-repression, by which alone this country could retain her present high place.

Professor E. G. Coker, M.A., D.Sc. (Past President), proposed "Kindred Institutions," to which Mr. W. Whitaker, B.A., and Mr. A. D. Greatorex, M.Inst.C.E. (President of the Municipal and County Engineers), replied.

Mr. H. T. Wakelam, M.Inst.C.E. (Past President), proposed "The Visitors," and Lieut.-Colonel Melville and Mr. Cuthbert Brown, A.M.Inst.C.E., replied.

The final toast was "The Press."

During the evening a musical programme was gone through.

THE BEER STONE COMPANY, LTD.

Last week the inauguration of the Beer Stone Co., Ltd., was marked by a successful dinner given by the directors at Beer. Mr. J. Ford occupied the chair. For many years the company was known as the Beer Freestone and Lime Company, Ltd., but for various reasons it was decided to drop the lime connection, and a new company has now been formed. The board of directors include Messrs. J. Ford, C. Ford, A. W. Page (of the United Stone Firms), A. Vere Oakley, and Mrs. Ford, with Mr. E. Terrell as secretary and manager. The stone has an excellent history behind it. As one of the speakers remarked, the Church for centuries past had been a great patroness of the products of the quarries, for, go where they would throughout the diocese of Exeter, they would find Beer stone in some part or other of the fabric of the churches. There was a great quantity of Beer stone in Exeter Cathedral, and also in most of the parish churches. The stone had been worked for centuries. It could be traced as far back as the Norman Conquest; while some people said it went back to Roman times, pointing to the trough in the quarries in support of their contention. The use of the stone, however, was not limited to the diocese of Exeter, for it had gone far beyond the bounds of Devon and Dorset. They would find it in Winchester Cathedral, and also in the crypt of St. Stephen's, at Westminster. A sailor once told the speaker that the first thing he saw when he arrived in Australia was a quantity of stone from Beer. So that the reputation of the stone had evidently spread far and wide. The advantages of Beer stone were that it was white and had a beautiful grain. The latter made it easy to carve. The United Stone Firms, Ltd., will act as sole agents for the company.

The Education Committee of the London County Council on Tuesday decided to recommend the appointment of Mr. F. V. Burridge, principal of the Liverpool School of Art, as principal of the Central School of Arts and Crafts, at a salary of £1,200 a year.

An adjourned meeting of the National Builders' Labourers' Union was held on the 27th ult. at the Co-operative Hall, Downing Street, Manchester, to consider a letter received from employers in the trade in reply to a communication sent by the union asking for an increase of wages which would mean a minimum of 6*d*. per hour. Mr. T. O'Garr, President of the Building Trades Federation, presided.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

CHESHIRE.
Chester.—Laundry Instruction Centre.
CORNWALL.
Gyllyngdune.—Art Gallery.
Tywardreath.—House, Beaumont Road. (Particulars from Mr. Gillard, Fountain Terrace, St. Blazey.)
CUMBERLAND.
Hensingham.—(Supplementary to October 6) Church (£5,000).
Legburthwaite.—Council Elementary School.
Penrith.—Shop and banking premises. Mr. J. F. Curwen, F.R.I.B.A. (of Kendal), architect.
DERBYSHIRE.
Derby.—Council "Pear Tree" School: enlargement. Messrs. Naylor & Sale, FF.R.I.B.A., architects.
Loscoe Grange.—Mission church.
Pinxton.—Picture Palace. Mr. J. Tomlinson (of South Normandon), architect.
DORSET.
Weymouth.—Secondary School (£9,000).
DURHAM.
Sunderland.—Workhouse Infirmary: two blocks for consumptives (43 patients). £4,000 to £5,000.
ESSEX.
Billericay.—Three pairs of semi-detached cottages at Great Bursted (£1,175). Mr. H. R. Bird, architect.
Romford.—House, Balgores Lane.
Four houses, Brentwood Road.
House, Reed Pond Walk.
House, stable, and workshop, Heath Park Road.
Shop, Mawney Road.
Eight shops, Hare Hall Lane.
Southend-on-Sea.—Sunday School buildings.
Thundersley.—Church Schools enlargement.
Westcliff-on-Sea.—Pier and buildings (accommodation to seat 3,000). £17,000.
Swimming Bath on Esplanade (£5,000).
HAMPSHIRE.
Bournemouth.—Law Courts.
Science, Art and Technical Schools at Lansdowne.
Southampton.—St. Mary's Church: tower and spire completion.
Winchester.—(Supplementary to October 13) Council School, Danemark Estate. Mr. S. Salter (of Southsea), contractor (£4,494).
KENT.
Ashford.—Head Post Office.
Ramsgate.—Council Schools, St. Lawrence.
LANCASHIRE.
Accrington.—Church. Messrs. Grimshaw & Cunliffe, architects.
Blackburn.—Wesleyan Mission Hall, Darwen Street.
Bolton.—(Supplementary to October 27) St. Margaret's Church. Messrs. Austin & Paley, A.R.I.B.A. (of Lancaster), architects (£9,500). Separate contracts.
Infirmary Nurses' Home (Edward VII. Memorial).
Rishton.—Primitive Methodist Church.
Wigan.—Church at Pemberton (£1,400).
Withington.—Public Baths, Burton Road (£15,000). Mr. H. Price, A.R.I.B.A. (of Manchester), city architect.
LINCOLNSHIRE.
Ashby.—Church.
Lincoln.—St. Andrew's Parish Hall, Sausthorpe and Cross Streets.
MIDDLESEX.
Hampton Court.—Firemen's houses at the Palace.
NORTHAMPTONSHIRE.
Church Brampton.—L. and N.W. Railway Station.
Kettering.—Baptist Church (accommodation for 750). Messrs. Cooper & Williams, architects; Messrs. Lewin & Son, contractors (£3,500).
NORTHUMBERLAND.
Morpeth.—R.C. School enlargement (accommodation for 100 additional children).
NOTTINGHAMSHIRE.
Nottingham.—United Methodist Chapel, Independent Street. (£850.) Mr. W. H. Higginbottom, architect. (Accommodation for 250.)
STAFFORDSHIRE.
Fenton.—Mount Pleasant Church and School.
Kidsgrove.—Primitive Methodist Church, Balls Bank. Messrs. E. Jones & Jackson (of Hanley), architects.
SURREY.
Ash.—Church of England Heathcote Memorial Schools enlargement (extra accommodation for 100 scholars). £1,600.
Chertsey.—Electric Cinematograph Theatre, Guildford Street.
Guildford.—Hippodrome (accommodation for 700).
Haslemere.—Mortuary.
SUSSEX.
Bexhill-on-Sea.—Convalescent Home for London children at Cooden.
Lewes.—Secondary School.
Shoreham.—Grammar School extension.
Worthing.—Girls' Secondary School.
WESTMORLAND.
Ambleside.—Public Library.
WORCESTERSHIRE.
Bromsgrove.—Guild buildings extension.
YORKSHIRE.
Bradford.—Board of Guardians' Children's Home, Thackley. Mr. F. Holland, architect.
Elland.—Church at Southgate.
Harrogate.—House and lodges. Messrs. Empsall & Clarkson (of Bradford), architects.
Cairn Hydropathic addition and alterations. Messrs. Bland & Bown, FF.R.I.B.A., architects.
Rishworth.—Church.
Sheffield.—R.C. Church, Burngreave Road, Pitsmoor.
Whitby.—Two houses and shops, and one house, Sandsend. Mr. T. Dowson, architect.
Two houses, Robin Hood's Bay. Mr. E. Russell, architect.
House, Egton Bridge. Mr. J. Wilson, architect.
House, Sandsend.

WALES.

Caerphilly.—Twenty (or more) houses for the Pontygwindy Building Club. Mr. H. G. Jones (of Hengoed), architect.
Denbigh.—Bacon factory for the Vale of Clwyd (£500).
Ogmore Vale.—Constitutional Club: additions and alterations. Mr. L. V. Evans (of Pencoed), architect.

SCOTLAND.

Ballachulish.—Slaughter-house. Mr. T. Macinnes, contractor (£178 15*s.*).
Broughty Ferry.—(Supplementary to November 10) Board School. Mr. J. A. Langlands (of Dundee), architect.
Canonbie.—Public Hall (accommodation for 400). £800.
Cathcart.—Workshop and offices, Muirend Road.
Dumfries.—Dumfries and Galloway Royal Infirmary: reconstruction.
Fort William.—(Supplementary to September 29) Additions and alterations to Camesky Lodge. Mr. J. G. Falconer, architect. Separate trade contractors.
Giffnock.—Five shops, Kilmarnock Road.
Three double villas, off Kilmarnock Road, between Giffnock and Whitecraigs.
Glasgow.—Double villa, Tinto Road, Hillpark.
St. Margaret's Episcopal Church, Newlands (accommodation for 758). £4,000. Mr. P. M. Chalmers, F.S.A. (of Glasgow), architect.
Three terrace houses, Mossgiel Road, Newlands.
(See also Port Glasgow.)
Inverchaolain.—Board School and teacher's house.
Inverkeithing.—Board School for 100 pupils.
Largs.—Refuse destructor. Mr. Robertson, burgh electrical engineer (£2,500).
Newton-Mearns.—Cottage, Eaglesham Road.
Port Glasgow.—Caledonian Railway Station.
Rutherglen.—Manse and offices.
Thornhill.—Post Office.

IRELAND.

Donnybrook.—Royal Hospital for Incurables: Pavilion for Consumptives. Messrs. Kaye-Parry & Ross (of Dublin), architects.
Waterford.—Free Church School (£2,800).

THE Kingstown Urban District Council are applying for authority to spend £7,625 on the erection of working class lodging houses, and £1,000 on baths and wash-houses.

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the completed specification.

No. 23,921. Oct. 15, 1910.—Improvements in Smoke-Abating Devices. F. H. Spicer, of The Grange, Littlemore, Oxford. The object of this invention is to provide an efficient device for entraining or trapping dust, smoke, or condensible vapours, and in particular the smoke and vapours given off from furnaces. The device is intended to be used either in conjunction with or in place of a chimney. When applied to an existing furnace having a draught chimney, the latter is fitted with a damper at a suitable height (say 20 ft.), and a smoke pipe is fitted to the chimney communicating with the interior below the damper. This smoke pipe is downwardly inclined, and has near its upper end a water ejector which is supplied with water under pressure, and which directs this water in streams or spray in a direction parallel or substantially parallel with the axis of the smoke pipe. The vacuum produced by the ejector causes the gases and smoke to be drawn from the chimney into the smoke pipe, where they are entrained in the sprayed water. The smoke pipe terminates in an enlargement or chamber of funnel-shape, from which leads a vertical or substantially vertical downtake, which terminates at or near the surface of the water-level in a reservoir or depositing tank. Fig. 1 shows a vertical section of the apparatus. The ejector in the smoke pipe *a* is designed to produce an annular or conical sheet of water around the smoke pipe by means of an annular spraying nozzle *b*, and within or outside this sheet of water a series of streams by means of the supplementary ring nozzle *c*, or one or more conical jets of sprayed water or jets of spray. The ejector may be supplied with water either from any water mains delivering water at suitable pressure or by means of the pump *d*, which may form part of a closed circuit between the filter-bed e^1 of the depositing tank *e* and the ejector. The stream of water which collects in the smoke pipe towards its lower end is given a helical movement as it enters the funnel-shaped chamber at the end of the smoke pipe, and this movement may conveniently be imparted by means of one or more suitable guide blades *f* on the under side of the lower end of the smoke pipe adapted to deliver the stream of water more or less tangentially to the funnel-shaped chamber *g*, in which the smoke pipe terminates. The chamber *g* at the top of the downtake *h* may also be provided with an auxiliary water ejector g^1, which consists of an annular group of nozzles supplied with water at suitable pressure and directed downwardly coaxial with the downtake. The inner baffles are conical or pyramidal, and closed at the apices and supplementary nozzles, *e.g.* the ring nozzles *k* are provided at different points of the downtake, by means of which streams of water or spray are directed downwardly across the path of the furnace gases and smoke as these are deflected inwardly and outwardly in succession by the outer baffles *i* and the inner baffles *j*. Oct. 25, 1911.

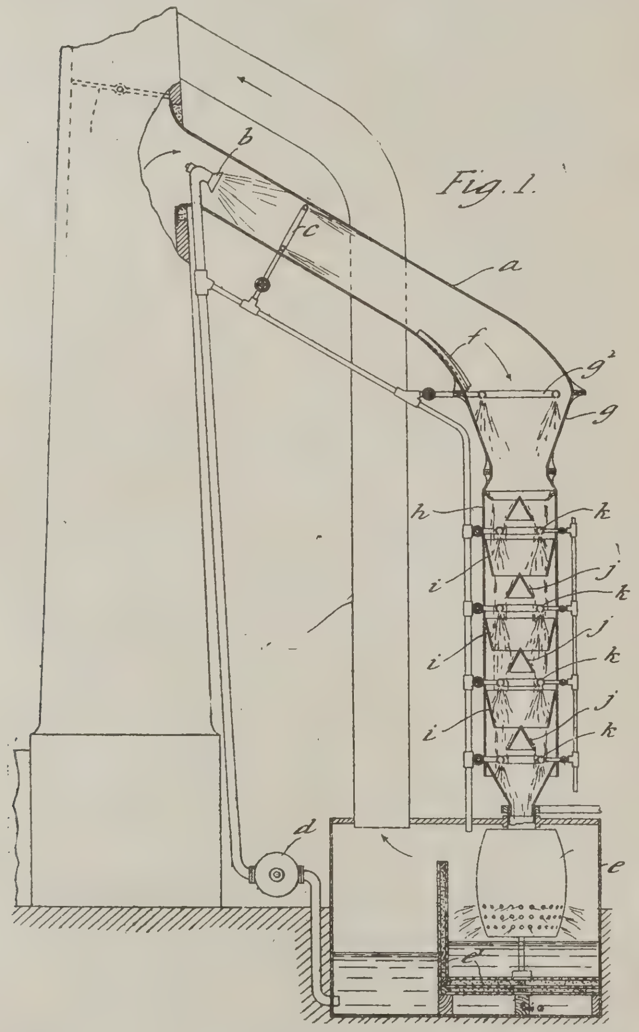

Fig. 1.

No. 24,287. Oct. 19, 1910.—Improvements in Building Cranes. August Wiehe, of Buhren, Westphalia, Germany. —This invention relates to a building crane in which the slueing of the jib is effected automatically. For this purpose the pulley for the hoisting rope is mounted between two chain wheels adapted to be engaged by a chain of the Gall type, which terminates the rope, the spindle of the pulley being turned by such engagement so as to operate a slueing device. Means are provided for switching off the slueing device when the jib has been turned through a suitable angle and also for automatically locking and unlocking the notched wheels. Fig. 1 is an elevation. Fig. 2 a plan of the same. The jib *f* is fitted on its outer end with bearings for a spindle *n*, on which the rope pulley is loosely mounted. The hoisting rope *b* is guided over the pulley and thence along the post *g*, which carries the crane, one end of the rope being connected to the hoisting device at the foot of the post, the other end being fastened to the chain *a*, at the lower end of which hooks or the like are provided for receiving the load. At each side of the pulley sprocket wheels *k* are provided, which are both fast on the

Fig. 1.

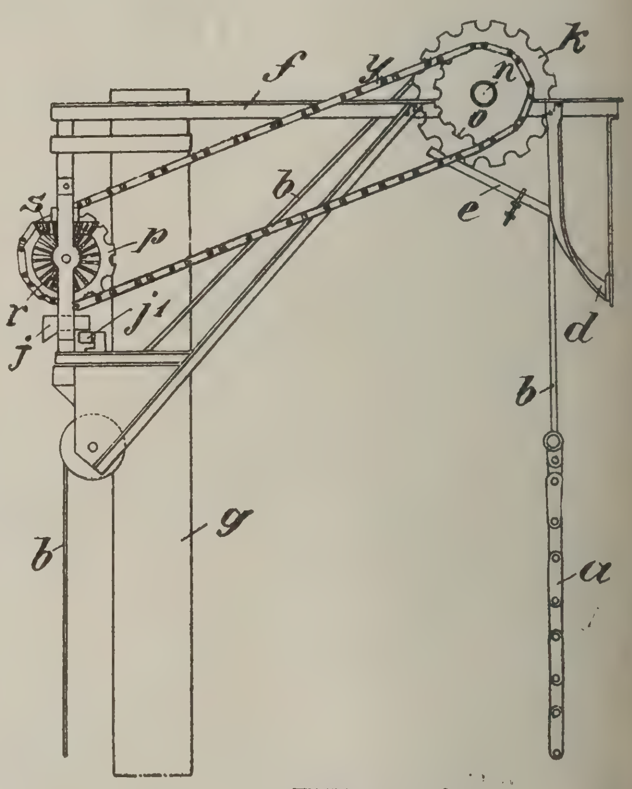

Fig. 2.

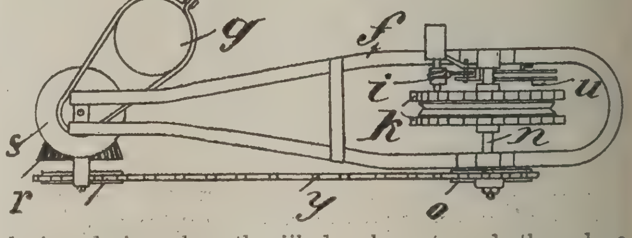

spindle *n*, the notches of both wheels being adapted to receive the thickened parts of the cross-members of the chain *a* when the latter has been raised by the rope into engagement with the wheels. Such engagement effects a rotation of the spindle *n*, at one end of which a sprocket wheel *o* is mounted for communicating the rotation to a sprocket wheel *p*. The sprocket wheel *p* is mounted with its shaft in a frame connected to the post *g*, and is fixed to a toothed bevel gear *r*, which meshes with a wheel *s* mounted on a vertical shaft. This shaft is rotatably held in brackets connected to the post *g*, and is adapted to carry the jib. The wheel *s* is slidably feathered on the vertical shaft, and connected by means of a sleeve to a disc *j* provided with a cam face. When the shaft and jib have been turned, owing to the rotation of the gearing, through about 90 deg., the cam face of the disc *j* engages a roller j^1 and rides upon the same so as to put the wheel *s* out of mesh with the wheel *r*, the slueing of the jib being then stopped. Since the chain may be turned by the twisting of the rope *b*, a guide bracket *d* is provided at the outer end of the jib to guide the chain on to the wheels *k*. Before the chain *a* reaches the wheels *k*, the latter are locked by a spindle *i*, which is rotatably and slidably mounted in a bearing. This spindle is fitted with a worm which is in engagement with a stationary pin, not shown, so that a rotation of the same effects a longitudinal displacement of the spindle. The spindle is rotated by a curved rack-bar, which is guided with its rear edge on a grooved roller and adapted to work in the worm. One end of the rack-bar is connected to a double-armed lever *e*, the opposite end of which is disposed so as to be engaged by a projection on the first link of the chain *a* before this link reaches the wheels *k*. Such engagement turns the lever about its pivot, the rack-bar being thereby actuated and the worm of the spindle *i* rotated so as to retract the spindle from its slot in the wheel *k*, which can now be revolved by the continually moving chain *a* for slueing the jib. Oct. 25, 1911.

PATENT SPECIFICATIONS PUBLISHED NOVEMBER 9, 1911.

Selected by Mr. James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

23921. Oct. 15, 1910.—F. H. Spicer, The Grange, Littlemore, Oxford. Improvements in smoke-abating devices.

23947. Oct. 15, 1910.—Hermann Penner, Akazienstr 30, Berlin-Schoneberg. Improvements in electric time alarm apparatus.

23991. Oct. 17, 1910.—Jasper Wetter, 37 Essex Street, Strand. Improvements in sifting appliances suitable for separating mixture of slate and coal.

24102. Oct. 18, 1910.—Edwin Austin, 8 Florence Street, Armley, Leeds. An improved automatic water heater.

24152. Oct. 18, 1910.—A. E. Podmore, 271 Norwood Road, Herne Hill. Improvements in inverted burners for incandescent gas lighting.

24202. Oct. 19, 1910.—Charles Hewitt, 60 Other Road, Redditch, Worcester, and Dale Marshall, 30 Winchcombe Street, Cheltenham. Improvements in or connected with suspension means for pictures.

24287. Oct. 19, 1910.—August Wiehe, Buhren, Westphalia. Improvements in building cranes.

24314. Oct. 20, 1910.—Dixon Provand, Falkland House, Ayr. An improved device for feeding fuel below the fire in grates, stoves, and ranges.

13946. June 12, 1911.—Convention application Jan. 19, 1911. C. A. P. Turner, 816 Phœnix Building, Minneapolis, U.S. Improvements in and relating to reinforced concrete floor construction.

14159. June 14. 1911.—James Gordon, 81 Knightrider Street, E.C. Improved steam valve.

14222. June 15, 1911.—Herman Mieth, 1232 Hornby Street, Vancouver. British Columbia. Electrically heated vessel.

16110. July 12, 1911.—R. W. Walkey, 52 Upper Richmond Road, East Sheen, S.W. An apparatus for sterilisation of milk, beer, water, or other liquids by means of the ultra violet rays.

17142. July 26, 1911.—Convention application Aug. 2, 1910. C. B. Larzelere, Culebra, Canal Zone, Panama. Improvements in and relating to electro-magnetically operated switches.

17257. July 28, 1911.—Franz Wagner, 31 Rotenditmolderstr, Cassel, Germany. Improvements in devices for lighting and extinguishing gas lamps by variation in the gas pressure.

17842. Aug. 5, 1911.—F. J. J. Gibbons, St. John's Works, Church Lane, Wolverhampton. Improvements in the construction of lockers.

17972. Aug. 8, 1911.—Convention application Aug. 26, 1910. T. F. Fitzsimons, 46 Campbell Street, North Sydney, New South Wales. Venting and discharging valve for vessels containing liquids.

20981. Sept. 22, 1911. W. T. E. Barker, 40 Eddystone Road, Crofton Park, Kent, and J. B. Rowell, 33 Old Queen Street, Westminster, S.W. Improvements in quadrant inlet ventilators.

COMPETITION NEWS.

Blyth.—The Education Committee have selected the designs by Messrs. Fenwicke & Watson, Pearl Buildings, Newcastle, submitted in a limited competition for an elementary school, Princess Louise Road, Blyth, to accommodate 1,200 children.

TRADE NOTES.

Under the direction of Mr. W. McPherson, F.S.I., architect, Drymen, the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to Drymen Schools, Drymen, N.B.

Messrs. George Mills & Co., Ltd., of Radcliffe, have just received instructions to fix up a complete installation of the "Titan" patent automatic sprinklers with alarms at a very large mansion in Scotland.

The Brilliant Sign Co., Ltd., 38 Gray's Inn Road, W.C., have just secured an order for plate glass facias, which, when fixed, will be the largest in London. They are for Palmers' Stores, Ltd., King Street, Hammersmith, and will run the entire length of the four shops, and contain brilliant letters, stamped out of stout copper from steel dies, and gilt with 23-carat English gold leaf, and measuring nearly 4 feet deep. The company are also supplying their "Permenart" fired on background, which is a new process recently registered by the company.

Chubb & Son's Lock and Safe Co., Ltd., 128 Queen Victoria Street, E.C., have received an unreserved apology from a Birmingham firm who, as recently appointed Birmingham agents for the sale of padlocks made by a German manufacturer, at the request of their principal, distributed certain illustrated catalogues of padlocks. On several pages the name of "Chubb" or "Chubbs" has been wrongfully applied to locks not of "Chubbs" manufacture. The catalogues are to be recalled, and in due course to be returned to Germany.

The new Workhouse Infirmary, Christchurch, the Cumberland Infirmary, Carlisle, and the Nelson Hospital Wimbledon, are being supplied with Shorland's double-fronted patent Manchester stoves with descending smoke flues; the Eldon Church Hall, County Durham, is being ventilated by means of Shorland's patent exhaust roof ventilators and special inlet ventilators; the Shipcote Hall, Gateshead, is being fitted with Shorland's exhaust roof ventilators, and the Royal Berks Hospital, Reading, is to be warmed with Shorland's double-fronted patent Manchester stoves and patent Manchester grates. All the above equipment is being supplied by Messrs. E. H. Shorland and Brother, Ltd., of Failsworth, Manchester.

A number of the leading firms of electricians throughout the country are this week celebrating an "Osram Week." The recent economies in the manufacturing processes, the improved knowledge of the metal Tungsten from which filaments are made, and the widely increased general use of the Osram lamp have enabled the General Electric Co., Ltd., to substantially reduce the prices. Many firms have a special show of the lamps in their shop windows, and they will be retailed at the reduced prices recently announced. When the lamp was introduced a few years ago, it brought about a revolution in electric lighting, for it effected a saving of current of 75 per cent. compared with carbon lamps, and it also gave a vastly better light. Certainly in the early days the lamp was somewhat fragile. But in common with all other metal filament lamps that weakness was considered a necessary condition. The manufacturers, however, were not satisfied on the point, and the Osram lamp has been immensely increased in strength. The company claim that there is no stronger lamp on the market. The various types of Osram lamps have been adopted for street lighting in over 200 towns in Great Britain alone.

VARIETIES.

The Penybont District Council ha e instructed Mr. T. J. Moss-Flower, C.E., of Victoria Street, Westminster, and Bristol, to prepare a scheme of sewerage and sewage disposal for the district of Pencoed, and which will include about nine miles of sewers.

The Southgate Urban District Council intends to ask authority for a town planning scheme, dealing with the whole district of 3,597 acres. The council has already acquired sixty-three acres for a park, and surrounding it is an estate of 240 acres which will be laid out on town planning lines as agreed with the owners as part of the purchase consideration.

Last week a scheme involving an outlay of a quarter of a million to revive the sugar industry at Bristol was considered by the City Council, who agreed to lease land adjoining the Royal Edward Docks at Avonmouth to the Bristol Sugar Company. The scheme provides that the Docks Committee shall build a warehouse costing £30,000, whilst the lessees are to erect a factory costing £70,000.

The Aspatria (Cumberland) Urban District Council have adopted a scheme for dealing with the sewage within their Urban District, which has been prepared by Mr. Fred. J. Rodwell (Messrs. Spinks, Pilling & Rodwell), Leeds. The scheme is estimated to cost, without land and easements, £7,500.

At the last meeting of the Hull Corporation, the Bridges Committee recommended that powers be sought to reconstruct the North Bridge over the River Hull at an estimated cost (exclusive of the purchase of property for approaches, &c.) of £56,000. After some discussion, in which it was urged that the scheme would cost much more than that, the committee's recommendation was adopted.

The Glasgow Town Council last week adopted a minute of the Municipal Buildings Committee which recommended, in connection with the erection of proposed buildings upon the area of ground on the north side of Cochrane Street to the east of John Street, the purchase of four additional properties containing 1,926 square yards at the agreed price of £29,600 (which is equal to an average rate of £15 7*s.* 3*d.* per square yard).

The Southampton Town Council having applied to the Local Government Board for sanction to borrow £4,200 for the purchase of the properties known as Tudor House and King John's Palace, situated in Bugle Street and Western Esplanade respectively, Mr. F. H. Tulloch, M.Inst.C.E., the Inspector, attended at the Municipal Offices last week and held an inquiry. It is proposed to convert these ancient buildings into an antiquarian museum.

A Council meeting of the London Master Builders' Association was held at Koh-i-Noor House, Kingsway, W.C., on the 9th instant. The President (Mr. G. Bird Godson) presided. The report of the Bricklayers' Trade Committee *re* the overtime payments, and other matters of trade interest were considered. The following were elected members of the Association:—(1) Ordinary Member: Mr. A. E. Symes, Stratford, E.; (2) Associate Members: Messrs. John Russell & Co., Ltd., 145 Queen Victoria Street, E.C. Messrs. The Patent Rapid Scaffold Tie Co., Ltd., 124 Victoria Street, Westminster, S.W., were nominated as Associate Members.

The Estate and Property Committee of the Newcastle Corporation on Monday agreed to recommend the City Council to erect plunge and slipper baths at Benwell and Walker, the total outlay not to exceed £20,000. It was also agreed that £1,000 of this sum should be absorbed in erecting cottage baths in the poorest parts of the city. If the latter scheme is adopted, baths will be fixed in houses selected for the purpose, and a trifling charge made for their use.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* P.M. *on Thursdays.*

COMPETITIONS OPEN.

AUSTRALIA.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

BOLTON.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

BOLTON.—The King Edward VII. Memorial Fund Committee invite competitive plans from architects now practising as principals within the county borough of Bolton for the King Edward VII. Memorial Nurses' Home proposed to be erected at the Bolton Infirmary. Plan of the site and instructions may be obtained upon payment of £1 1s., which sum will be returned to the competitors provided they shall have sent in *bona fide* plans and particulars and shall have returned all documents, plans, &c. Mr. Samuel Parker, hon. secretary of the Committee, Town Hall, Bolton.

Bristol.—Messrs. H. J. Packer & Co., Ltd., chocolate manufacturers, invite designs for a pavilion proposed to be erected on the recreation grounds. A premium of £10 will be awarded to the architect whose design is accepted. Apply to Messrs. H. J. Packer & Co., Ltd., Greenbank, Bristol.

Hastings.—Dec. 31.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s*. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—The Port of London Authority invite preliminary sketch designs in competition for new head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1*s*., which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Sofia (Bulgaria).—Dec. 15.—H.M. Minister at Sofia reports that the "Commission Permanente de l'arrondissement de Sofia" invite the submission of designs for a municipal building which it is proposed to erect at that place. Four prizes to the value of 7,000 fr. (£280), 3,000 fr. (£120), 2,000 fr. (£80), and 1,000 fr. (£40) respectively will be awarded. Architects desirous of competing must submit their designs at Sofia by Dec. 15. Copies of the programme, &c., may be obtained on application to the "Commission," as above. A copy of the programme, together with a drawing, may be seen at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Spennymoor.—Jan. 9.—The Urban District Council invite competitive plans and designs for a public hall, market, and offices, &c. Particulars may be obtained on payment of a deposit of £2 2*s*., which will be returned on receipt of a *bona fide* design. Premiums of £50, £25, and £10 are offered. Mr. F. Badcock, clerk, Council Offices, 3 James Street, Spennymoor. (See advertisement.)

Stafford.—Jan. 6.—The Corporation invite designs for a public library. An assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—Nov. 30.—The Cardiff Education Committee invite designs and estimates for a technical institute proposed to be erected in Cathays Park. Mr. J. S. Gibson, architect, will act as assessor. Full particulars will be sent to architects on application, accompanied by a deposit of £2 2*s*., which will be returned to all architects submitting bona-fide designs or who return the conditions within six weeks. Mr. J. Jackson, director of education, Education Offices, City Hall, Cardiff.

CONTRACTS OPEN.

Alnwick.—Nov. 27.—For making alterations to Clayport House, for proposed post office. Forward names by Nov. 27 to Mr. J. G. Burrell, architect and surveyor, Market Place Chambers, Durham.

Audlem.—Nov. 29.—For alterations and additions to the Audlem Grammar School, Cheshire. Deposit £1. Mr. H. Beswick, F.R.I.B.A., county architect, Newgate Street, Chester.

Batley.—Dec. 4.—For the works required in alterations and additions to the elementary schools in Mill Lane. Messrs. W. Hanstock & Son, Branch Road, Batley.

Birstall.—Nov. 30.—For the whole or any of the trades in connection with the proposed extension at the infectious diseases and smallpox hospital in Owler Lane, for the Oakwell Joint Hospital Board. Send names and addresses, with £1 1*s*. deposit, by Nov. 30, to Mr. J. W. Burrows, architect, Birstall, Yorks.

Bradfield.—Nov. 27.—The Guardians of the Bradfield Union invite tenders for certain Sewage disposal works, re-drainage and additions and alterations to the infirmary and workhouse. Deposit £5. Mr. H. Howard Humphreys, 28 Victoria Street, in the City of Westminster.

Mr. Jas. Dalrymple, General Manager, Glasgow.

Haslington.—Dec. 18.—For erection of nine single dwelling-houses and nine sets of farm buildings on the Haslington Estate, near Crewe. Deposit £1. The County Estate Office, 49 Northgate Street, Chester, and the Estate Office, 137 Nantwich Road, Crewe.

Hoole.—Nov. 29.—For erection of a proposed Council school at Hoole, Cheshire. Deposit £2 2*s*. Messrs. J. H. Davies & Sons, architects, 14 Newgate Street, Chester.

Hull.—Nov. 30.—For additions to the girls' school at Hessle. Deposit £1. Mr. J. Bilson, architect, 23 Parliament Street, Hull.

Ireland.—Dec. 12.—For erection of 22 labourers' single cottages, seven double cottages, and fencing plots, for the Kilkeel District Council. Board Room, Kilkeel.

Lancaster.—Dec. 13.—For erection of the girls' grammar school on the High Street estate. Mr. H. Littler, county architect, 16 Ribblesdale Place, Preston.

Leeds.—For bricklayers', joiners', plumbers', ironfounders', slaters', and painters' work required in erection of factory, Woodhouse Street, for Messrs. Jackson's Stores, Ltd. Forward names to Messrs. Garside & Pennington, architects, Pontefract and Castleford.

Liverpool.—Nov. 30.—For extensive alterations at the Territorial quarters and drill hall, consisting of Nos. 73, 75, 77 and 79 Shaw Street, for the West Lancashire Association. Deposit £1 1*s*. Mr. J. C. Walker, architect, Westminster Chambers, Crosshall Street, Liverpool.

London.—Nov. 30.—For alterations, &c., at the receiving homes, Hornsey Rise, N., for the Guardians of St. Mary, Islington. Deposit £1. Mr. H. Goodchild, 409 Holloway Road, N.

London.—Nov. 28.—For the supply and fixing of rustic bandstand at Roundwood Park, in the parish of Willesden, for the Willesden District Council. Deposit £1 1*s*. Mr. O. Claude Robson, M.I.C.E., engineer, Public Offices, Dyne Road, Kilburn, N.W.

London.—Nov. 30.—For plastering the walls of two wards and other rooms, and for certain painting works in connection with the same at their infirmary, Highgate Hill, for the Guardians of St. Mary, Islington. Deposit £2. Mr. E. J. Harrison, 9 Gray's Inn Square, W.C.

London.—Dec. 6.—For forming bathroom accommodation in the isolation block at the North-Western Fever Hospital, Lawn Road, Hampstead, for the Metropolitan Asylums Board. Deposit £1. Mr. W. T. Hatch, M.I.C.E., M.I.M.E., engineer-in-chief, the office of the Board, Embankment, E.C.

London.—Dec. 7.—For certain sundry works at their schools, Green Street, Upton Park, E., for the Guardians of St. George-in-the-East. Copies of specification and forms of tender can be obtained on personal application only, on Nov. 27 or 28, between 10 A.M. and 1 P.M., at the offices of Mr. W. Watson, A.R.I.B.A., 53 and 54 Chancery Lane, W.C.

Manchester.—Nov. 29.—For rebuilding part of the boundary wall between the Crumpsall Workhouse and the Prestwich Union Workhouse, for the Manchester Board of Guardians. Deposit 10*s*. 6*d*. Mr. A. J. Murgatroyd, architect, 23 Strutt Street, Manchester.

Manchester.—Dec. 5.—For extensions to the buildings at the tramways depot, Queen's Road, Cheetham. Deposit £1 1*s*. Mr. J. M. McElroy, general manager, Corporation Tramways, 55 Piccadilly, Manchester, or at the Engineer's Office, 55 Piccadilly, Manchester.

Newquay.—Dec. 21.—For erecting a classroom, cloakroom, &c., at the Newquay Council School, Cornwall. Mr. B. C. Andrew, architect to the committee, Biddick's Court, St. Austell.

Penrith.—Dec. 3.—For erection of new shop and bank premises at Penrith (whole or separate trade contracts), for the Bank of Liverpool, Ltd. Mr. J. F. Curwen, F.R.I.B.A., F.S.A., architect and sanitary engineer, 26 Highgate, Kendal.

Portsmouth.—Nov. 28.—For the erection, completion and maintenance for six months of a house as residence for the engineer in charge, on the east side of the Eastney pumping station. Deposit £1 1*s*. The Borough Engineer's Offices, Town Hall, Portsmouth.

Radcliffe.—Nov. 30.—For alterations and additions (including new court-house and cells) to the county police station at Radcliffe, near Bury. Deposit £2. Mr. H. Littler, county architect, 16 Ribblesdale Place, Preston.

St. Neots.—Dec. 4.—For alterations and additions to St. Neots Council School, Hunts. Deposit £1 1*s*. Mr. H. Leete, county surveyor, Huntingdon.

Salford.—Nov. 28.—For construction of lodge at entrance of Peel Park. Deposit £1 1*s*. Mr. W. H. Matley, architect, 14 Ridgefield, Manchester.

Sheffield.—Dec. 5.—For the following, for the Sheffield United Gaslight Co.—viz.: (Tender No. 1) supply and erection of a steel roof and floor, forming a purifying house, 167 ft. long by 47 ft. 6 in. wide; (Tender No. 2) supply and erection of five cast-iron purifier boxes, 38 ft. by 32 ft. by 6 ft. 3 in., with luteless steel covers. Mr. J. W. Morrison, M.I.C.E., Commercial Street, Sheffield.

Stanwell (Middlesex).—Dec. 4.—For erection of a boys' home upon their land adjoining the union workhouse in the parish of Stanwell, for the Guardians of Staines Union. Deposit £2 2*s*. Mr. G. W. Manning, architect, London Road, Ashford, Middlesex.

Tinsley.—Dec. 5.—For the whole of the works in connection with additions and alterations to the Church of England day schools, Tinsley, Sheffield. Deposit £1. Mr. G. A. Wilson, architect and surveyor, Hartshead Chambers, Sheffield.

Tredington.—Dec. 2.—For erection of an isolation hospital with outbuildings and for alterations and additions to the existing hospital at Tredington, near Tewkesbury. Deposit £1 1*s*. Mr. J. Villar, F.S.I., M.S.A., architect, 5 Essex Place, Cheltenham.

Wales.—Nov. 27.—For erection of quarry manager's house and office at Penstrowed Quarry, Caersws, for the Montgomery County Council. Deposit £1 1*s*. The County Surveyor, Broad Street, Newtown, or Mr. G. R. D. Harrison, clerk of the County Council, Welshpool.

Wales.—Nov. 28.—For erection of 22 houses near the Mardy Hospital, Merthyr Tydfil, for the Mardy Building Club. Messrs. Johnson & Richards, architects, Merthyr Tydfil.

Wales.—Nov. 29.—For the following works for the Glamorgan County Council—viz.: (1) New school at Oldcastle, Bridgend; (2) new boys' school at Cwmaber, near Caerphilly; (3) alterations to the mixed school at Gilfach Fargoed; (4) fencing at Rhydygwern Council school, near Machen; (5) improvement of playground at the Nanthir Council school, near Blaengarw. The County Council Offices, Westgate Street, Cardiff.

Wales.—Nov. 30.—For erection of an electric theatre at Troedyrhiw (Glam.), for the Troedyrhiw Cinema Co., Ltd. Deposit £1 1*s*. Messrs. Johnson & Richards, architects, Merthyr Tydfil.

Wales.—Nov. 30.—For erection of an electric theatre at Aberdare, for the Aberdare Cinemas, Ltd. Deposit £2 2*s*. Messrs. Johnson & Richards, architects, Merthyr Tydfil.

Wales.—Nov. 30.—For alterations and improvements at the Dowlais Police Station, for the Corporation of Merthyr Tydfil. The Borough Surveyor, Town Hall, Merthyr.

Wales.—Dec. 1.—For proposed church and institute at Pontypridd, for the Glamorgan Mission to the Deaf and Dumb. Deposit £2 2*s*. Mr. E. Rees, architect and surveyor, Alexandra Chambers, Taff Street, Pontypridd.

Wales.—Dec. 4.—For erection of an electric theatre at Pontmorlais, Merthyr Tydfil, for the Merthyr Palace, Ltd. Deposit £2 2*s*. Mr. O. P. Bevan, architect, Express Chambers, Merthyr Tydfil.

Wales.—Dec. 6.—For erection of 12 houses at Ynys-y-Gored, Aberfan (Glam.), for the Grove Building Club, No. 2. Mr. T. E. Rees, architect, Merthyr Tydfil.

Wales.—Dec. 9.—For alterations and additions to the Ogmore Constitutional Club, Ogmore Vale. Deposit £1. Mr. L. Vaughan Evans, architect, The Court, Pencoed.

Welwyn.—Nov. 29.—For erection of engineer's cottage at Welwyn, Herts. Mr. H. F. Mence, architect, 11 St. Peter's Street, St. Albans.

York.—Dec. 4.—For alterations and additions to White Cross Lodge, Haxby Road, for converting the premises into a laundry and cookery centre, for the Corporation. Deposit £1 1*s*. Mr. F. W. Spurr, city engineer, Guildhall, York.

Dr. Charles Waldstein, in a letter to the Vice-Chancellor of Cambridge, resigning the Slade Professorship of Fine Art, says:—"The study of Art and Archæology has now arrived at a new phase in your University, which calls for the exertion of the same energies and single-minded efforts which more than thirty years ago was needed for the establishment of Classical Archæology alone. I have come to the conclusion that my personal qualifications to face the arduous tasks now before me do not fit me to do the work as I consider it ought to be done. Meanwhile, funds are urgently required to carry on what we have undertaken with regard to the architectural studies and the wider teaching of Art history at this moment. I therefore beg to offer to the University from my wife and myself (in memory of the late Mr. and Mrs. D. Leinster) the sum of £1,000, which we should like the University to use, either in capital or in interest, as they think fit, to take the first steps in the advancement of these studies. I may add that I have already received the promise of a further sum of £500 for such a purpose, which, I hope, will soon be forthcoming, and I am sanguine enough to hope that further sums will be contributed." Dr. Waldstein, who was born in New York in 1856, was lecturer and reader in classical archæology in the University in 1880 and 1882 respectively, Slade Professor from 1895 to 1901, and again from 1904 till 1911.

The Incorporated Church Building Society held its usual monthly meeting last week at the Society's house, 7 Dean's Yard, Westminster Abbey, S.W. Grants of money were made in aid of the following objects—viz.: Building new churches at Caversham, St. Andrew, Oxford, £50; Copnor, St. Alban, Portsmouth, £120; Plymouth, St. Mary-the-Virgin and St. Mary Magdalene, £160; and St. Budeaux, St. Boniface, Devon, £100; and towards enlarging or otherwise improving the accommodation in the churches at Bethnal Green, St. Simon Zelotes, Middlesex, £10; Chessington, St. Mary-the-Virgin, Surrey, £15; Chillington, St. James, Somerset, £10; Festiniog, St. Michael, Merioneth, £15; Grove Park, St. Augustine, Kent, £50; Penrhiwceiber, St. Winifred, Glam., £30; and Westhorpe, St. Margaret, Suffolk, £15. Grants were also made from the Special Mission Buildings Fund towards building mission churches at Abersoch, St. John, Carnarvon, £25; Bispham, St. Stephen, Lancs., £40; Bridgmary, Elson, Hants, £25; and Pont-y-Gwyddel, St. John-the-Baptist, Denbigh, £10. The sum of £625 was paid towards the repairs of twenty-five churches from trust funds held by the Society. The funds of the Society are practically exhausted by the grants voted at this meeting.

TENDERS.

HINDLEY.

For hospital extensions, Sandy Lane, for the Urban District Council. Mr. O. P. Abbot, surveyor, Hindley.

Byron, Hindley (*accepted*)

IRELAND.

For alterations and additions to Beaulieu House, Drogheda. Mr. S. Wilson Reside, C.E., architect, Newry.

CORRESPONDENCE.

Marylebone New Municipal Buildings.

Sir,—I have to inform you that the designs forwarded in connection with the competition for the above buildings will be open to view by the public on Friday and Saturday, the 1st and 2nd prox., at the Council's Baths, Marylebone Road, between the hours of 9 a.m. and 5 p.m.—Yours faithfully,

J. Wilson, Town Clerk.

Town Hall, Marylebone Lane; Nov. 23, 1911.

TRADE NOTE.

Cowell's Sanatorium Air-Brick Company, 58 Denmark Road, Southport, have received an order for 150 9-inch by 9-inch Sanatorium air-bricks for the new school at Tottenham, N. Messrs. Rowley Bros. are the contractors.

The Surbiton Urban District Council have referred back a recommendation that the front of the proposed fire station should be in Ewell Road, not Berrylands Road, and that certain architects be invited to submit plans and estimates for the erection of a station at a cost not exceeding £2,500, the accommodation to include four separate tenements or flats for firemen.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

Buckinghamshire.

Farnham Royal.—House, Templewood Lane.

Shop and garage.

Fulmer Common.—Cottage and garage at the Black Firs.

Cambridgeshire.

Cambridge.—Solar Physics Observatory.

Cheshire.

Bickerton.—Primitive Methodist Church, Brown Knowl.

Macclesfield.—Infirmary; Women's Ward.

Nantwich.—Church House, also Church Schools extension. (£1,600.)

Cumberland.

Aspatria.—Dwelling-house and offices, No. 5 Colliery.

Derbyshire.

Ilkeston.—Holy Trinity Church: improvements.

Ripley.—Cottage hospital.

Devon.

Brixham.—Picture Theatre on a portion of the Market. Mr. F. W. Vanstone (of Paignton), architect.

Exmouth.—Alterations and extensions to "Fairfield." Mr. J. Crocker, F.R.I.B.A. (of Exeter), architect.

Plymouth.—32 houses in Kingswood Park Avenue and Frederick, Jephson and Peverell Park Roads.

Stonehouse.—Police cells.

Refuse destructor. Council surveyor.

Dorset.

Poole.—Hospital extension. Mr. S. J. Newman, borough surveyor.

Durham.

Blaydon-on-Tyne.—Church hall. Messrs. Clark & Moscrop, FF.R.I.B.A. (of Darlington), architects.

Essex.

Ilford.—Swimming bath. Council surveyor.

Greenock.—Four one-storey cottages, Border Street. Mr. A. Houston, builder.

Board School, Newton Street.

Lerwick.—H.M. Admiralty Signal Station, Ander Hill. Mr. A. D. Douglas, contractor.

May Island (Firth of Forth).—H.M. Admiralty Signal Station. Messrs. J. Jackson & Son (of Burntisland), contractors.

Oban.—Kippering Houses for the Callander and Oban Railway Company.

Wick.—Public slaughterhouse, Ackergill Street.

IRELAND.

Ballywalter.—Rectory. Mr. W. J. Fennell, F.R.I.B.A. (of Belfast), architect.

Dublin.—The Four Courts: new block for the Registry of Titles.

University College: new buildings.

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the completed specification.

No. 459. Jan. 7, 1911.—Improvements in the Regulation of the Air Supply to Rotary Kilns.—William Gilbert, of 47 Victoria Street, Westminster, S.W.—When using rotary kilns for the manufacture of Portland cement, the fuel in general use is powdered coal, which is blown into the firing end of the kiln by a high-pressure fan, or similar apparatus. The delivery pipe from the fan (sometimes termed the coal-feed pipe) is fitted with an internal nozzle from which the air issues at a velocity due to a water-gauge of from 6 inches to 10 inches. The powdered coal is fed from a hopper by a screw conveyor or similar device, and is delivered immediately in front of the nozzle. It is picked up by the blast and carried along the coal-feed pipe into the kiln. It is customary to supply only a proportion of the air by means of the high-pressure fan which blows in the coal; the remaining air enters the kiln by the shoot leading from the clinker-cooler, or it is blown into the kiln by a low-pressure fan, by means of a pipe, which may or may not envelope the coal-feed pipe. This invention has for its object the provision of improved means whereby the correct amount of air necessary to support combustion is supplied to the kiln whatever the rate of coal feed may be, or, if required, the air supply may be more or less than the theoretical amount required for any coal feed, and according to a predetermined ratio. The high-pressure coal-firing fan is provided with a nozzle suited to pass into the kiln a small proportion of the maximum air supply, together with the powdered coal, and the remainder of the air is supplied by a separate fan at a lower pressure and not exceeding 3 inches water gauge or thereabouts. Both fans run at a constant speed. In the suction or in the delivery pipe of the low-pressure fan a damper or slide is inserted in such a manner that the opening or closing of the damper will regulate the amount of air delivered by the low-pressure fan. Referring to fig. 1, *a* is the high-pressure coal-firing fan, which delivers air through the nozzle *b*. Powdered coal is taken from the hopper *c* by the screw conveyer *d* and delivered in front of the nozzle *b*. The mixture of air and coal is blown along the coal-firing pipe *e*, and into the rotary kiln *f*. The remainder of the air necessary for combustion, and which is usually hot air drawn from the clinker-cooler, is supplied by the low-pressure fan *g*, through the delivery trunk *h* and regulating damper or dampers *i i*, the delivery trunk in this instance being arranged to envelope the coal-firing pipe *e* at, or near, its entrance to the front hood *j* of the kiln. The speed of rotation of the coal conveyor *d* may be regulated as desired by the medium of the speed cones *k* and *l*, which are connected by an endless belt *x*. The cone *k* is driven at constant speed from a line shaft, and the conveyor *d* is rotated by a spur gearing and a belt from a pulley mounted on the shaft of the variable speed cone *l*, as indicated. The belt *x* connecting the speed cones *k* and *l* can be moved along each cone by a fork mounted on guides, and suitably arranged to be traversed parallel to the axis of the speed cones by the rotation of the square-threaded screw *m*. The attendant, watching the process of burning the raw materials to a cement clinker through the portholes in the front hood *j* of the kiln, alters the rate of coal feed as required by operating the chain *n*. The chain *n* is geared to the chain n^1, and the movement of the latter chain rotates the screw *m* by means of a chain-wheel secured to the screw shaft. A second chain-wheel, also secured to the shaft of the screw *m*, adjusts the opening between the regulating dampers *i i* by means of the chain *o* and the chain-wheel *p*. The regulating dampers *i i* and the operating gear are shown to an enlarged scale in fig. 2. The damper is formed of two rectangular plates *i i* hinged at one end and connected by a suitable link, so that the opening between the two plates is always symmetrical with regard to the centre of the casing or trunking *h* in which the dampers are placed. The chain-wheel *p* is mounted on the same shaft as the bevel wheel and drives the worm by means of the bevel-wheel. The worm-wheel is keyed to the same shaft as the cam *q*, and the latter operates the damper plates through the link *v*; a balance-weight serves to keep the roller under the cam *q* in contact with it. The cam *q* is shaped so that the opening between the damper plates *i i* at any instant is suitable to pass the required amount of air for the existing coal feed, allowance having been made for the constant supply entering the kiln from the nozzle *b* and through the shoot *u* leading to the clinker-cooler, the latter quantity being in general very small. November 1.

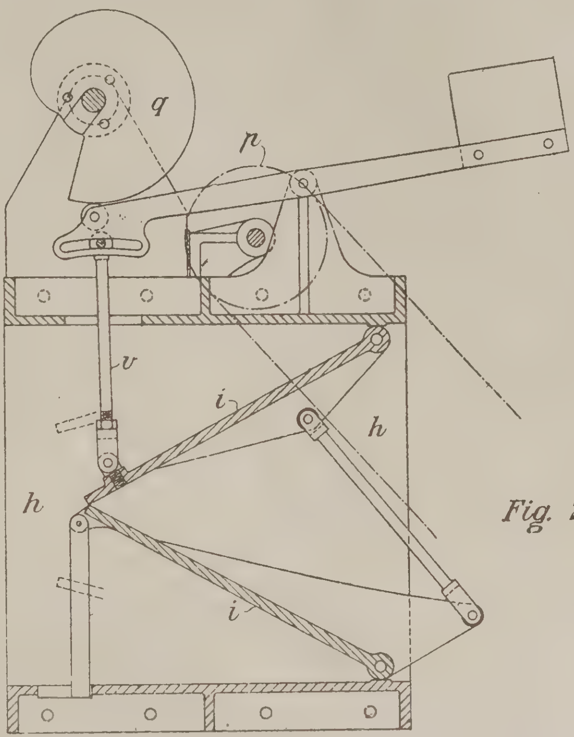

Fig. 2.

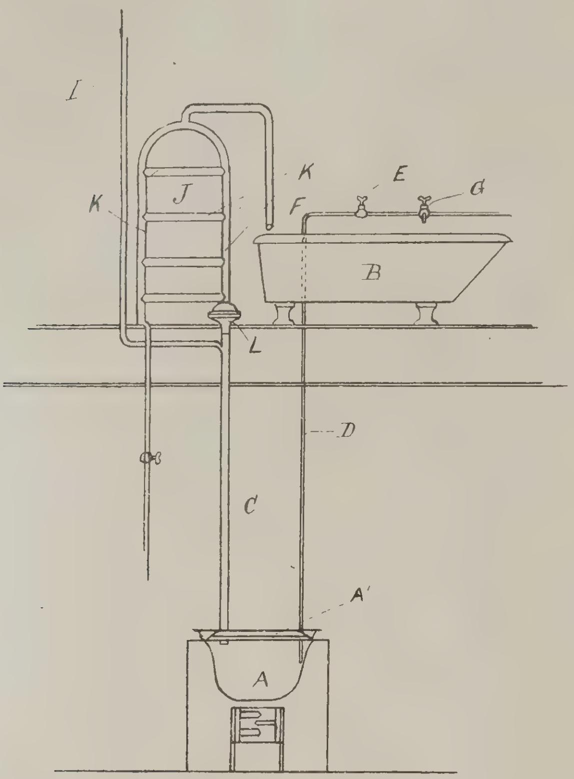
No. 13,053. Nov. 30, 1910.—Improvements in and relating to the Supply of Hot Water for Domestic Purposes. W. W. Smith, 14 Upper Stone Street, Maidstone.—This invention has reference to the supply of hot water for domestic purposes, and it has for its objects to provide means whereby hot water intended for use for domestic purposes may be obtained in a simple and more efficient manner. It is designed more particularly to enable hot water from a copper to be delivered to a bath, hot-closet heater, or other receptacle, on floors above, the water from the copper being forced to any desired height by the ordinary pressure of cold water from the main or other source of supply. Fig. 1 is a general arrangement wherein the heated water is led from the copper through a hot-closet heater to a bath. The heater consists of a number of tubular shelves, uprights, hangers, or rails, through which the heated water circulates on its way to the bath, and it may be of any convenient outline or shape. Fig. 2 is a cross-section of a form of improved lid wherein the lid is secured in its closed position within an annular pan-shaped upper framework by thumbscrews and is free to be removed from the copper when not required. *a* is a furnace pan or copper of ordinary construction, and a^1 the improved lid fitted thereto to make the water-tight joint; *b* is a bath, *c* a pipe to convey hot water from the copper *a* through the heater *j* to the bath. *d* is a pipe from the main or other supply, through which, when the stop-cock *e* is open, the cold water therefrom forces the water from the copper *a* up the pipe *c*. The cock *e* is a cold-water cock, but should be labelled "hot," as it is only opened when the lid a^1 is to be closed, in order that hot water may be conveyed to the bath through pipe *f*, which is always open, in order that a safety valve will not be required. *g* is a cold-water bib-cock for the bath; *i* is a pipe to carry off steam when the copper *a* is being used for ordinary purposes with the lid

Fig 1



a^1 in the open position; *k k* are tubular shelves and uprights, and *l* a valve of any suitable type to prevent water in the heater *j* running back into the copper *a* when the pressure in the pipe *c* has been taken off. In fig. 2 j^1 is the lid, provided with webs e^1 to strengthen same. Its outer rim fits into a channel f^1 in the top frame work f^2 fitted to the copper, which framework is bolted or rivetted to the furnace pan, the rim of the lid resting upon an annular strip or layer of rubber *a*, or other suitable resilient substance, that will make a watertight joint. *h* represents the thumb-screws on the screw pins *i* secured to the framework f^2, around which pins the slotted lugs l^1 on the lid j^1 take, whereby the lid is held down against the pressure of the water within the copper. l^2 is a screw socket to receive the cold-water supply pipe, and k^1 a length of pipe to convey the cold water towards the bottom of the furnace pan. The framework, f^2, which is of an annular pan-shape, having an open centre, serves to receive and hold the back-flow of the water from the superposed pipes whenever the lid of the copper is removed. November 1.

PATENT SPECIFICATIONS PUBLISHED NOVEMBER 16, 1911.

Selected by Mr. James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

13053. Nov. 30, 1910.—W. W. Smith, 14 Upper Stone Street, Maidstone. Improvements in or relating to the supply of hot water for domestic purposes.

14661. Jan. 17, 1910.—Conrad Dressler, 2a Wetherby Terrace, Earl's Court, S.W. Improvements in or relating to power presses for the manufacture of tiles and the like.

24294. Oct. 20, 1910.—O. R. Williams and John Stevenson, The Railway Appliance Works, Cathcart, Glasgow. Improvements in electric switch contact devices for lowering gears for arc lamps.

24328. Oct. 20, 1910.—W. M. Llewellin, 15 King Square, Bristol. Improvements in workmen's time recorders and the like.

24493. Oct. 21, 1910.—David Anderson, 18 Farringdon Road, E.C. Improvements in or relating to gas lamps.

24508. Oct. 21, 1910.—Convention application Oct. 22, 1909. The Hiltruper Terrazzo und Cementwaarenwerke Akt.-Ges., 8 Windthorstrasse, Munster, Westphalia. Improvements in lining shafts with concrete.

24573. Oct. 22, 1910.—D. M. Nesbit, Ashwell Lodge, Barkley Lane, Leicester. Improvements in or relating to water-heaters and the applications thereof.

24574. Oct. 22, 1910.—A. Klarwasser, Pfalzerstrasse 21, Cologne. An improved device for bending pipes and profile pieces.

24609. Oct. 24, 1910.—H. Askew, "Stubbin," Rawmarsh, Rotherham. Improvements in or relating to furnaces of steam-boilers and other furnaces.

24617. Oct. 24, 1910.—B. W. Tolhurst, 20 Royal Terrace, Southend-on-Sea, and C. R. Stevens, 37 Canterbury Road, Kilburn, N.W. Improved combination radiator and hot-water boiler.

24704. Oct. 24, 1910.—J. Hanna and T. F. Shillington, both of Musgrave & Co., Ltd., St. Ann's Iron Works, Belfast. Improvements in and relating to the separation of dust and similar impurities from, and the humidification of, air and other gases.

24853. Oct. 26, 1910.—John Armstrong, 5 Victoria Street, S.W. Improvements in the construction of furnaces, ovens, chimneys, and the like.

24880. Oct. 26, 1910.—Convention application Dec. 20, 1909. A. E. E. Clifton and W. W. Preston, Connersville, Fayette, Indiana, U.S.A. Improvements in vacuum cleaners.

25142. Oct. 29, 1910.—J. H. Lowry, Ranelagh Road, Liverpool. Improvements in the manufacture of cement or plaster and structures thereof.

25195. Oct. 29, 1910.—E. J. & W. R. Hume, Flinders Street, Adelaide. Concrete pipes, columns, girders, blocks, and other structural material, and method of and means for manufacturing the same.

26387. Nov. 14, 1910.—W. J. Lineham, 21 Newstead Road, Lee, S.E. Means for supporting picture frames and similar hanging objects.

26461. Nov. 15, 1910.—Arthur Jones, Sichfield Street, Fazeley, Tamworth, and James Lupane, Fazeley, Tamworth. A device for removing deposits of carbon or other obstruction in and from the gas holes of acetylene burners, incandescent burners, by-passes, and the like.

27163. Nov. 22, 1910.—Karl Ritzmann, Sternstrasse 66, Breslau, and Dr. M. Wolfke, Herzogstrasse 6, Breslau, and Franz Lissy, Friedrichstrasse 32, Kattowitz, Germany. Improvements in electric vapour lamps.

27807. Nov. 30, 1910.—Ralph Pennington, 93 Greenfield Road, St. Helens. Improvements in cements.

28004. Dec. 2, 1910.—William Green, 206 Peel Mount, Burnley Road, Accrington, and the Huncoat Plastic Brick and Terra Cotta Co., Ltd., Huncoat, near Accrington. Improvements in or appertaining to Gay-Lussac and Glover or other towers used in the manufacture of sulphuric acid and the like towers where gases come in contact with liquids.

28183. Dec. 3, 1910.—J. W. White, Strathdene, Woolton, Lancs. Improvements relating to self-tipping carriers for aerial ropeways and runways, tramways, and the like.

28736. Dec. 10, 1910.—Geo. Crossley, of Mather and Platt, Park Works, Manchester. Improvements in and relating to fireproof doors and the like.

28974. Dec. 13, 1910.—Société L'Optique Commerciale, 7 rue du Malte, Paris. An improved reflector lamp or lantern.

29853. Dec. 23, 1910.—Walter Allott, 18 Swinbourne Grove, Withington, Manchester. Improvements in clothes and like pegs, curtain-rod, supporting bracket, and other wall-fitments.

29915. Dec. 23, 1910.—Convention application Feb. 25, 1910. Auguste Reichert, Hotel d'Angleterre, 13 Quai du Leman, Geneva. Improvements in and relating to cooking apparatus.

30365. Dec. 31, 1910.—John Shanks, Tubal Works, Barrhead, Renfrew. Improvements in and relating to valve fittings for bidets.

30368. Dec. 31, 1910.—Hans Bachl, 81 Kaiserstrasse, Magdeburg. Briquette-making press with revolving table.

317. Jan. 11, 1911.—William Sugg & Co., Ltd., and W. S. Wright, Vincent Works, Regency Street, Westminster. Improvements relating to slow-combustion stoves.

459. Jan. 7, 1911.—William Gilbert, 47 Victoria Street, Westminster. Improvements in regulation of the air-supply to rotary kilns.

1496. Jan. 20, 1911.—W. E. Hipkins, of W. & T. Avery, Ltd., Soho Foundry, Birmingham. Improvements in automatic weighing-apparatus for weighing granular or like material.

1997. Jan. 26, 1911.—Ed. Beetlestone, The Glass Works, West Smethwick. Improvements relating to glass rolling.

2574. Feb. 1, 1911.—W. R. G. Whiting, M.A., 2 Larkspur Terrace, Newcastle-on-Tyne. Strain indicator for use on any structure subjected to stress or in connection with testing and like machines.

2776. Feb. 3, 1911.—C. H. Kruger, Ebor Garage, John Gate, Bower Street, Bradford, and C. W. Collinson, Kirklands Cottage, Baildon, Bradford. Improvements in and relating to lamps and reflectors for same.

3083. Feb. 7, 1911.—F. V. Detwiler, 1107 Monadnock Building, Chicago. Improvements in gas and like cooking stoves.

3530. Feb. 11, 1911.—P. R. Davison, 42 Cobham Street, Gravesend. Improvements in or relating to cranes.

3726. Feb. 14, 1911.—Percy Elford, 115 Woodstock Road, Oxford, and James Wilson, 85 Islip Road, Oxford. Improvements in or relating to desk seats and other seats of a like character.

4097. Feb. 17, 1911.—John Gittins, 4 Park Road, Tan-y-Fron, Wrexham, and J. H. Roberts, 28 Park Road, Tan-y-Fron, Wrexham. Improvements relating to clips for haulage ropes and other like purposes.

4569. Feb. 23, 1911.—W. A. Wilson, Carlton Works, Armley, Leeds. Improvements in and relating to gas-stove and like burners.

4767. Feb. 25, 1911.—G. W. Bousfield, Quarry Hill Close, Sandal, near Wakefield. Improvements in or relating to machine for pulverising stone, coal, and other materials.

5516. March 6, 1911.—Walter Wallis, 15 Osborne Terrace, Springfield, Sale. Improvements in devices for raising and lowering curtain poles.

5968. March 9, 1911.—Albert Scheidegger, 7 Baumgartenweg, Basel. Protecting cover for incandescent inverted mantles.

6297. March 13, 1911.—Adelbert Sauer, 5115 Rosetta Street, Pittsburg, U.S.A. Improvements relating to steam superheaters and feed-water heaters.

7434. March 24, 1911.—Convention application April 2, 1910. Hermann Nilolaus, 59 Ungargasse, Vienna 111, Austria. Improvements in sliding windows.

7612. March 27, 1911.—Convention application June 1, 1910. Max Wachsmuth, 7 Hartelstrasse, Leipzig. Improvements in vapour lamps.

7640. March 27, 1911.—Heinrich Zschocke, Fabrikstrasse, Kaiserslautern, Germany. Improvements in and relating to filters for separating suspended impurities from gas.

7975. March 30, 1911.—T. G. Rhodes and R. Gaunt, both of the Valveless Syphon Co., Kirkstall, near Leeds. Improvements in or relating to siphonic flushing-apparatus.

8468. April 5, 1911.—Konstantine Keonman, 28 Rue Wazon, Liege. Process for the preservation of wood.

8744. Oct. 20, 1911.—J. W. Wall, 61 Oriel Road, Bootle, Liverpool. Improvements in hinges.

9700. April 21, 1911.—A. M. Kennard, The Falkirk Iron Co., Falkirk, and D. Campbell, 17 James Street, Falkirk. Improvements in cooking ranges.

9719. April 21, 1911.—Convention application April 21, 1910. Otto Schaller, Berlinstrasse 24, Sudende, near Berlin. Electric incandescent lamp.

9806. April 22, 1911.—E. & N. R. Booth, 9 Heath Villas, Halifax. Improved reflectors for incandescent electric lamps.

9919. April 24, 1911.—Convention application July 18, 1910. Egard Frankignoul, 62 Rue Du St. Esprit, Liege. Improved means for constructing pile foundations.

10413. April 29, 1911.—James Wilson, 81 The Grove, Wandsworth. Improvements in and relating to apparatus for filtering liquids.

10861. May 4, 1911.—Harry Simmons, Junr., 7 Lucerne Road, Highbury Park, N. Improved window-fastener.

11199. May 9, 1911.—Convention application Oct. 12, 1910. E. A. Donat, Wanamakers, Lehigh, Pennsylvania, U.S.A. Improvements in and relating to sash-locks.

11590. May 13, 1911.—E. M. Ackerman, 610 Sixth Avenue, New Westminster, British Columbia, Canada. Draught-excluder.

12625. May 25, 1911.—Louis Rossi, Veytaux, Waadt, Switzerland. Improvements in and relating to compasses for drawing purposes.

13663. June 8, 1911.—E. D. Farr, "Glanrhyd," 32 Maeshyfryd Road, Holyhead. Combined protractor and parallel ruler.

13773. June 9, 1911.—H. Christophery, 12 Obere Muhle, Isellohn, Germany. Improvements in or relating to the manufacture of handles for windows, doors, and the like.

14209. June 15, 1911.—Carl Drewes, 24a Neubert Strasse, Hamburg. Improvements in or relating to the decoration of surfaces with mosaic-like effects.

14767. June 21, 1911.—E. A. Kunze, Aussig, Bohemia. Improvements in gas generators.

14879. Oct. 24, 1911.—W. H. Barker, Junr., "Berea," King Street, Fenton, Stoke-on-Trent. Improvements in conveyors or screens for coal and other minerals or materials.

15185. June 29, 1911.—Convention application July 5, 1910. J. H. Carlstedt, 34 Nygatan, Gefle, Sweden. Improvements in gravity locks.

16234. July 13, 1911.—Convention application July 15, 1910. E. E. F. Creighton, Schenectady, New York, U.S.A. Improvements in or relating to protective devices of the type known as lightning arresters.

17226. July 27, 1911.—F. Ehlers, Luneburger, Alle 28, Celle, and A. Rommel, Garssen, near Celle, Germany. An improved artificial stone composition for building and like purposes.

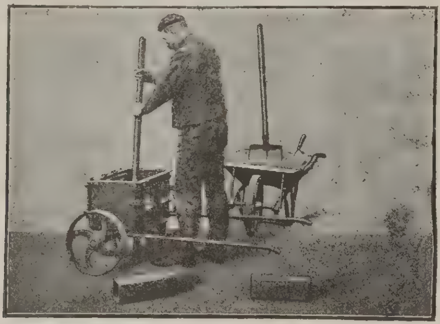
17400. July 31, 1911.—Convention application Dec. 12, 1910. F. S. Howard, Lombard, Dupage, Illinois, U.S.A. Improvements in or relating to roof-joints.

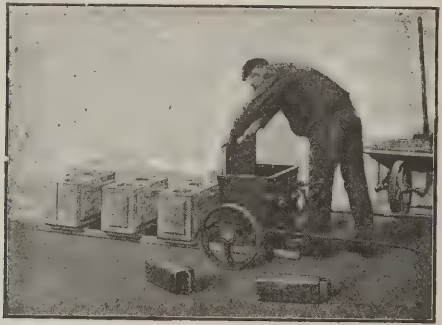
THE NEW PATENTED HOLLOW BLOCK MACHINE "PHŒNIX."

Great interest is now widely felt on the subject of employing concrete hollow blocks. This method of building undoubtedly presents many advantages. The main advantage is the cheapness and the short time in which the works can be erected. Concrete hollow blocks can be employed not only for simple cottages, dwelling-houses for workmen, &c., but also for modern town buildings and business premises. In the United States this manner of building has spread enormously. Experienced and unexperienced people, however, have constructed hollow block machines of all shapes and designs, and makers of other countries have used these machines as samples, often without bothering whether they answer the latest requirements. A German factory, the well-known machine works, "Leipziger Cementindustrie" (Dr. Gaspary & Co.) at Markrahstaedt, near Leipzig, who are specialists in the manufacture of machines for the utilisation of sand, make herein a noteworthy exception. They have

devoted themselves to the construction of hollow block machines, and now have the satisfaction to have placed on the market a new machine, called the "Phœnix," which they claim to be far superior to any other hitherto constructed.

Formerly people used to manufacture hollow blocks either by stamping them on tables at a convenient height, so as to allow of easily carrying them away on their supports, and placing them on the floor, or they were stamped directly on the floor, in order to avoid their transport. With the first mode of manufacture nearly always two workmen were necessary for removing the blocks, each being equal to twelve bricks and weighing about 50 kilos, and thus too heavy to be carried away by one man. Furthermore, there was the danger of shaking and breaking the block as the supports bent, in consequence of the relatively heavy load resting upon them. The disadvantage of the other way of working is that the stamping has to be done in a bent position, and thus unnecessarily tiring the workman. The hollow block machine "Phœnix" removes all these drawbacks with one stroke. Its ingenious construction (which is patented) allows of stamping the blocks in a convenient position, and placing them directly on the ground by simply tilting the machine. The machine is portable and provided with wheels. The weight of the stamped block does not affect the workman. When the block has been placed on the floor, the machine is pulled back on its wheels. While with the old machine blocks in the size of 12 bricks could be made only, the "Phœnix" allows of making them in the size of 16 bricks without necessitating more than one workman, and this one workman is able to obtain an output by one-third larger than reached with machines of the old type. The inventors have also foreseen the possibility of manufacturing all other kinds of blocks required by the building trade, viz., half blocks, cut in the length and in the breadth, corner blocks as well as plain and figured ones, &c., &c.





Everybody interested in this industry should write for the special prospectus, No. 97, of the said firm, which is sent free of charge, explanatory of the new "Phœnix" machine for manufacturing hollow concrete blocks.

VARIETIES.

The Senate of Belfast University are going to apply to the Treasury for a sum of £25,000 to be spent during the ensuing financial year on new buildings.

Mr. Joseph Graham, consulting engineer, Carlisle, has prepared a scheme of water supply for fifteen parishes in the Carlisle Rural area. The cost is estimated at £57,500.

The Esher and Dittons Urban Council have approved a plan of proposed additions at the sewage works, the estimated cost being £6,094.

Mr. C. Orlando Law, M.S.A., L.R.I.B.A., architect and surveyor, has changed his address from "Dacre House," Arundel Street, W.C., to 15 Rossetti Mansions, Cheyne Gardens, S.W.

The Goole Urban District Council have received the approval of the Local Government Board to their proposed sewerage scheme. The scheme, which it is estimated will cost £35,000, is to be carried out under the supervision of Mr. G. Midgeley Taylor, engineer, of Westminster, and it is proposed to start next spring.

In the list of awards relating to the Gidea Park Town Planning and Modern House and Cottage Exhibition which was given in our issue of Nov. 10, the Coalbrookdale Company exhibit, to which the silver medal was awarded, was described as the "B.K." This should have been the "K.B." Kitchen Range (Gibson's Patent).

The Humber Conservancy Board have under consideration a scheme presented by the conservator and the engineer (Mr. A. F. Butterfield) for improving the river at a total estimated cost of £327,000. Of this amount over £231,000 would be spent on five half-tide retaining walls.

The memorial to be placed in Lincoln Cathedral in memory of the late Bishop King will take the form of a sitting figure in bronze. Sir William Richmond, R.A., is to be entrusted with the work. The statue will be placed in the morning chapel.

Montgomery County Council have decided to acquire Forden Workhouse for the purposes of a county asylum at a cost of £7,000, and to convert it at a cost, exclusive of furniture and equipment, architect's commission, &c., of £31,000. The alternative scheme, to build an entirely new asylum, costing £82,000, was defeated by twenty-five votes to fourteen.

The *Edinburgh Gazette* last week contained an intimation of the intention of the Commissioners of His Majesty's Works and Public Buildings to promote an Act of Parliament to acquire, by compulsory purchase or otherwise, certain houses, lands, and buildings on the north-west side of Lothian Street and the east side of Brighton Street for the purpose of extending the Royal Scottish Museum. The houses and lands in question lie behind the present museum buildings.

An important dock and river extension scheme has been adopted by the Blyth Harbour Commissioners. To carry out the enterprise a bill will be promoted in Parliament next session conferring powers to borrow £800,000. The scheme has been approved by Sir William Matthews. The upper reaches of the river will be developed to meet the increasing trade in coal shipments and a large dock and a breakwater constructed. It will take seven years to mature the scheme. Conjointly with the harbour development the North-Eastern Railway Company intend to construct shipping staiths costing £250,000.

An interesting function took place on Friday last at Frascati's (Louis XIV. Room), when Mr. T. Dawson Hayton, who has for the long period of twenty-five years represented the Patent Victoria Stone Co., Ltd., was entertained at dinner by his colleagues and friends, and presented with a silver salver on his retirement. Mr. H. T. Elliston, the secretary of the company, presided, and was supported by Mr. F. W Laws (works manager), and eleven other gentlemen, the length of whose services averaged twenty years each.

The Anglo-American Oil Co., Ltd., Tea Rose Wharf, Fulham, propose to provide for the storage at the wharf of 100,000 gallons of petroleum spirit. The plans provide for the conversion of the oil-filling warehouse into a one-floor fire-resisting building constructed wholly of uninflammable materials, and to be used solely for spirit filling purposes; while five additional tanks of 12,000 gallons capacity will be constructed partly beneath this building, and partly beneath ground which is not built upon. The proposed arrangements have received the approval of the L.C.C. Public Control Committee.

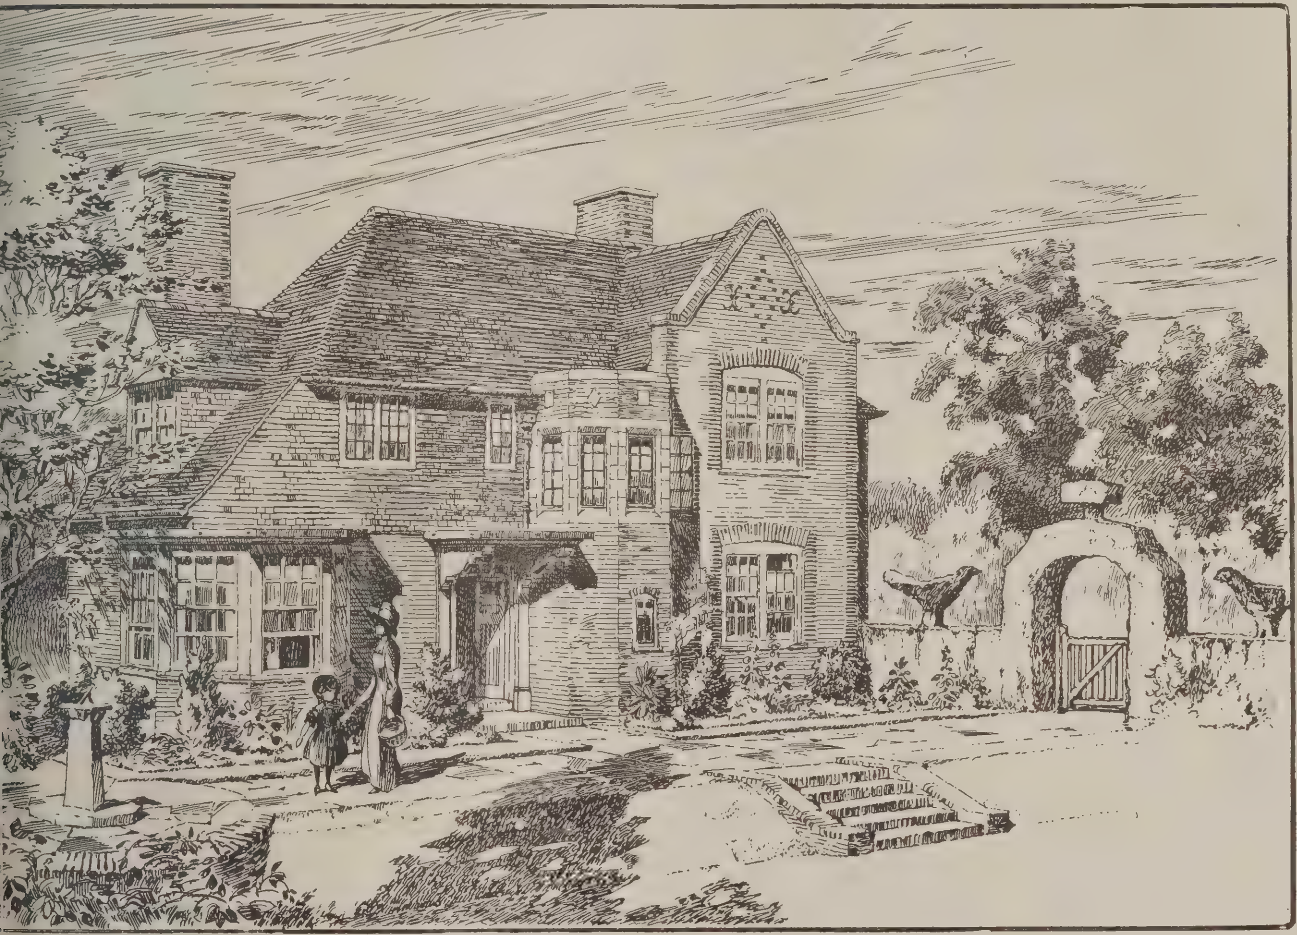
The Lord Provost's Committee of the Edinburgh Town Council last week considered a letter from the secretary of the Edinburgh, Leith, and District Building Trades Association, transmitting a copy of the following resolution unanimously passed at a meeting of the association:—"That building contracts containing more than one of the recognised separate building trades, and exceeding a gross value of £500, should be tendered for separately and directly by individual firms belonging to the different recognised building trades." The committee, on the motion of Councillor Cameron, agreed to remit the motion for consideration to a sub-committee, the object of the mover being to "discountenance as far as possible the practice of sub-contracting in important city building contracts."

WEEK-END COTTAGES, BUNGALOWS, AND OTHER SMALL HOUSES.

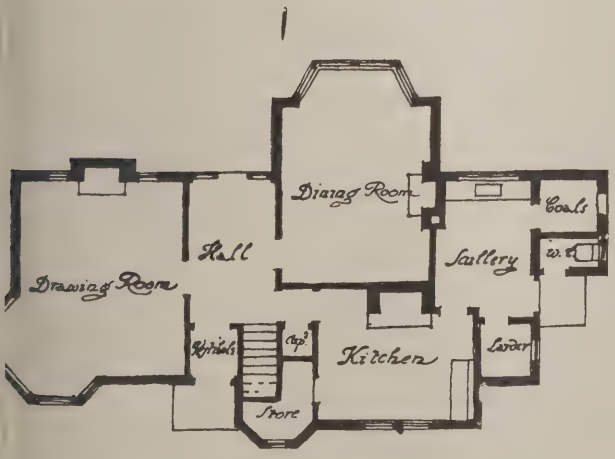
VE continue herewith the series of monthly supplements which appear in *The Architect* on the last Friday in each month and contain examples of original and unexecuted sketch designs by various architects. Most of the designs illusated this month are for houses costing less than £1000.

The Editor of *The Architect* will be pleased to introduce the authors of the designs published to any one who may sh to have a house built in accordance with the plans or a modification of them.

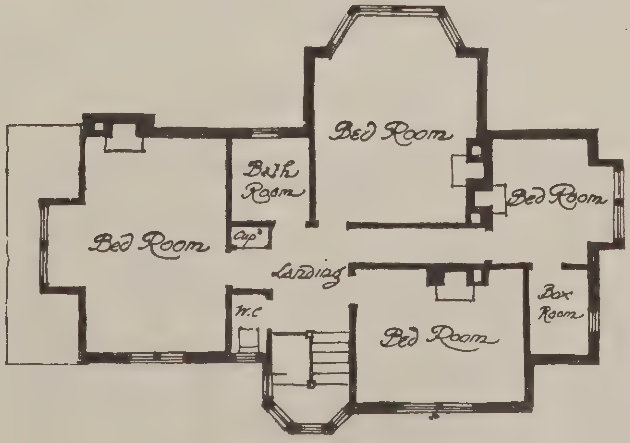
DESIGN NO. 13.



ENTRANCE FRONT FROM GARDEN.



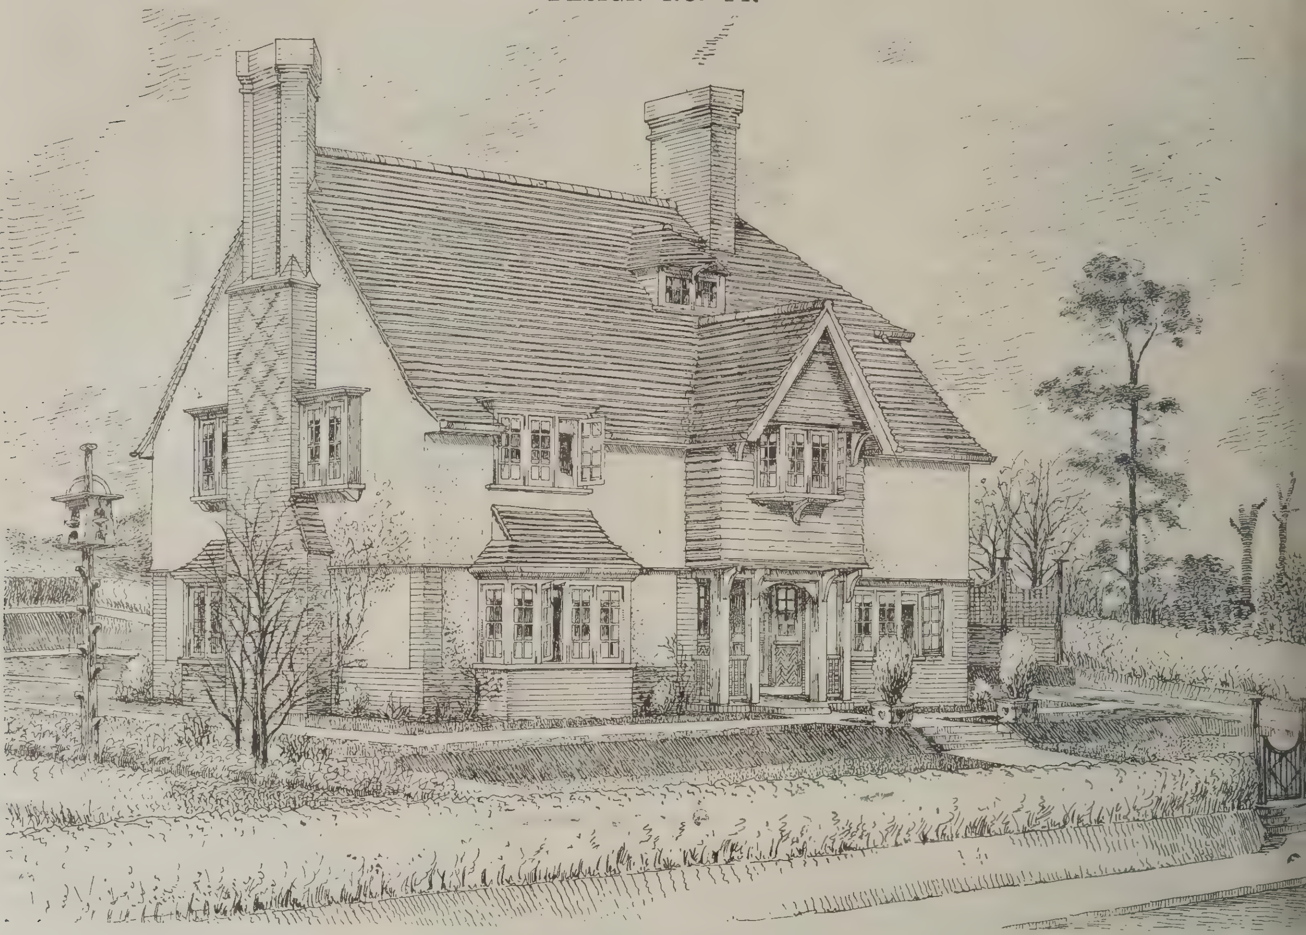
Ground Floor Plan



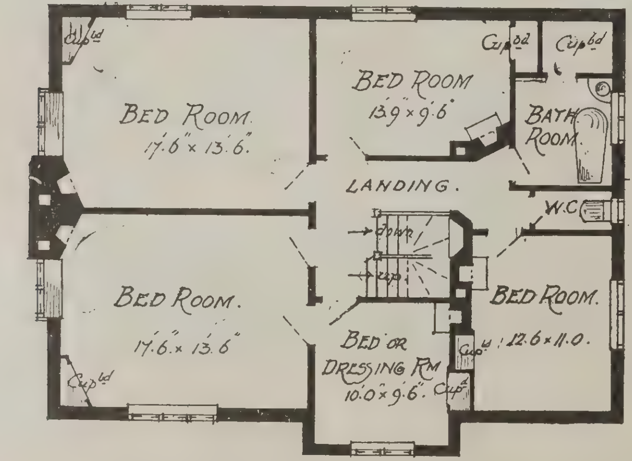
First Floor Plan

In this picturesque little house the walls would be constructed of mingled bricks with purple quoins and copings d Bath stone dressings. Parts of the upper floor would be tile hung and the roofs covered with sand-faced tiles. Double ung sash windows are provided to the chief rooms. The cost would be about £675.

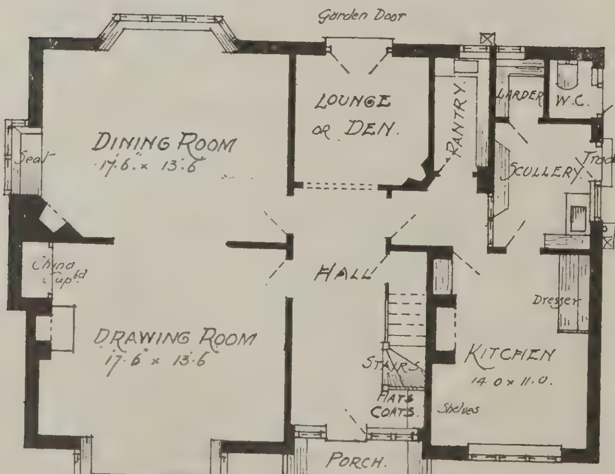
DESIGN NO. 14.



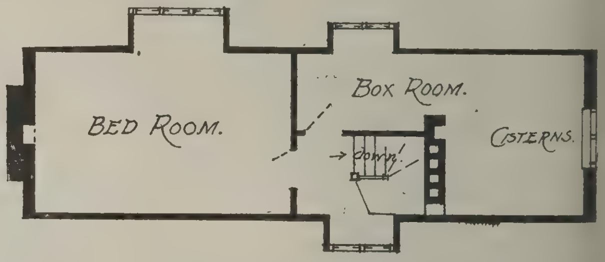
THE ENTRANCE FRONT.



FIRST FLOOR PLAN



GROUND PLAN.

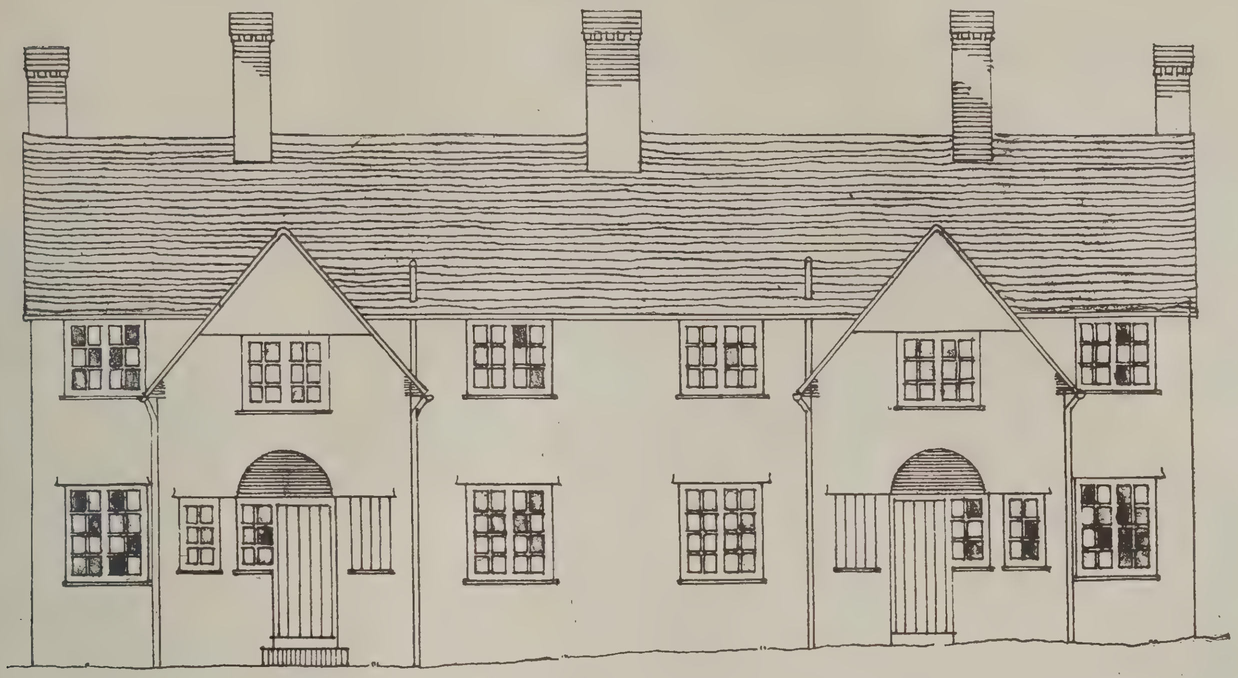


ATTIC PLAN.

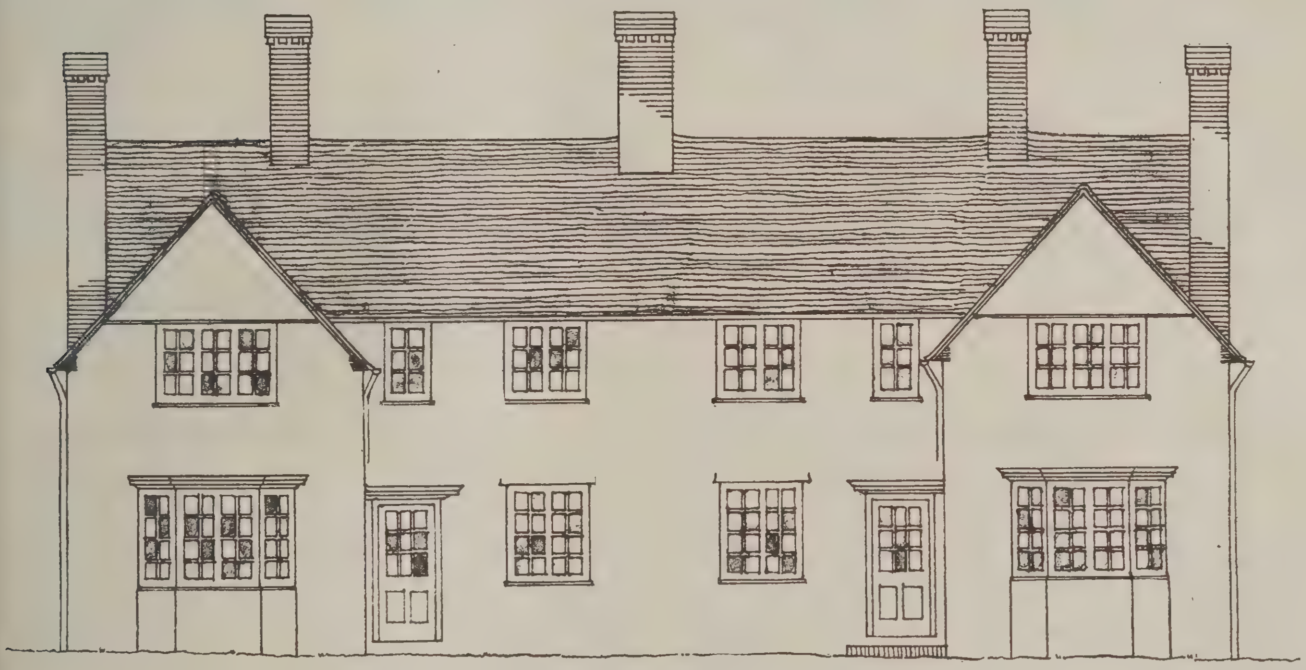
This house has been specially designed to provide the requirements of a small country house or cottage. The special features of the plan are that the reception rooms can be thrown into one if required; the lounge, opposite hall, can either be thrown into same or separated and used for study. These are entirely cut off from the kitchen department. On the first floor are provided five bedrooms, two of which are large rooms and one can communicate with a small room for a dressing room. Bathroom and w.c. are also included. The servants' room, box-room and cisterns are placed in the attics. The whole is comprised in a square and compact plan. The exterior as seen by the view is simple and attractive and would suit almost any site. The walls are finished in rough-cast except where faced with bricks on ground floor and to chimneys. The projecting front gable could be tile-hung or covered with elm boarding. The roof would be tiled and boarded underneath.

The cost would be about £810 with the attic or £765 without attic, finished internally very simply with few mouldings and cornices. Though, of course, the interior could be finished in any style and with elaboration.

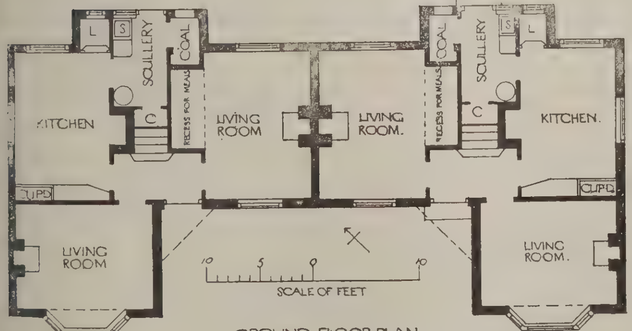
DESIGN NO. 15.



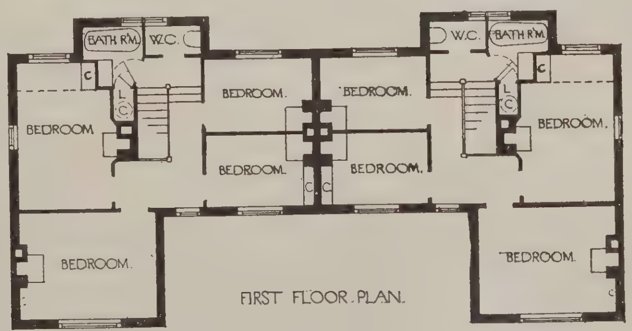
N.E. ELEVATION.



S.W. ELEVATION.

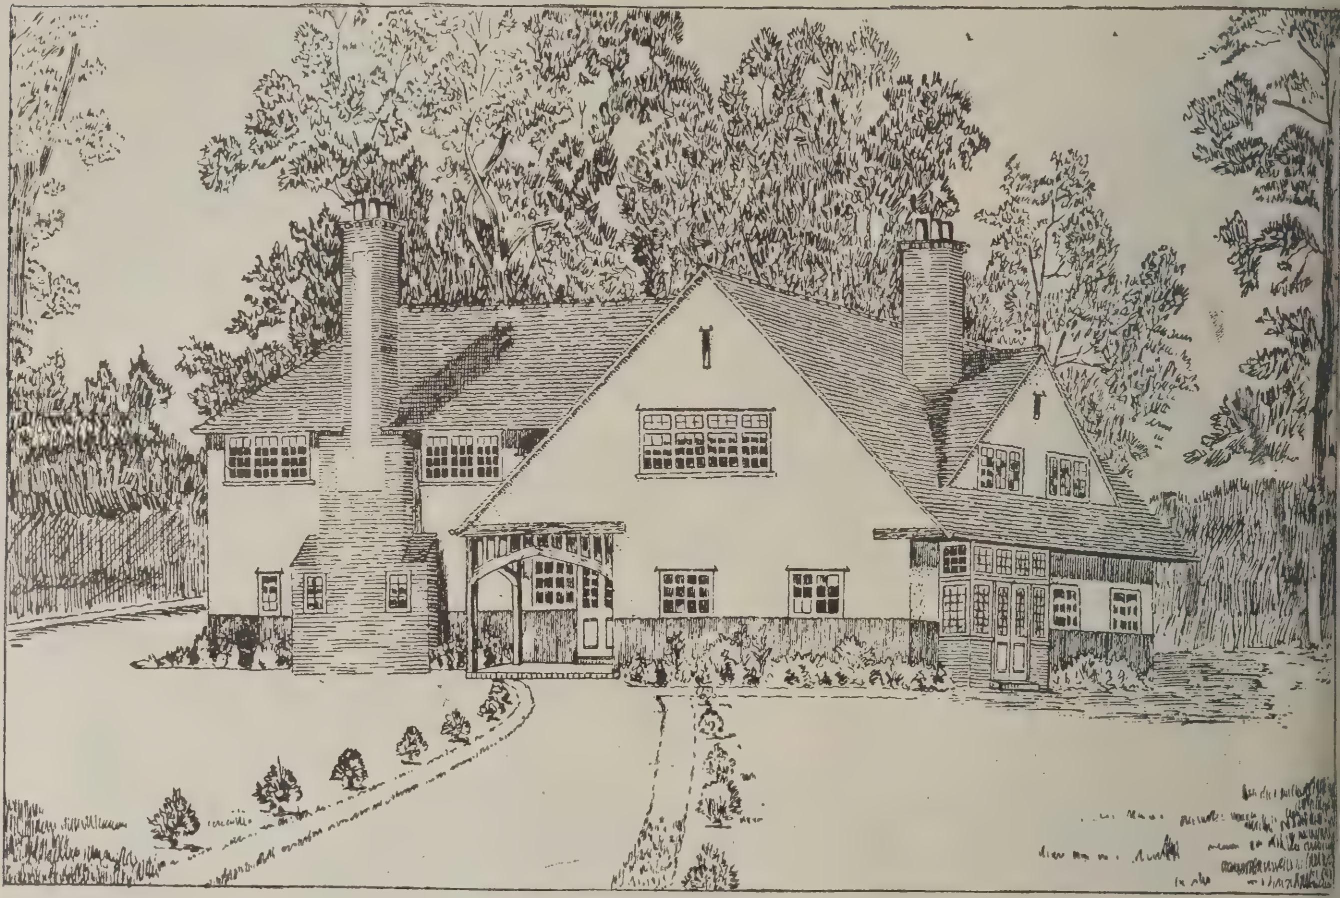


GROUND FLOOR PLAN.

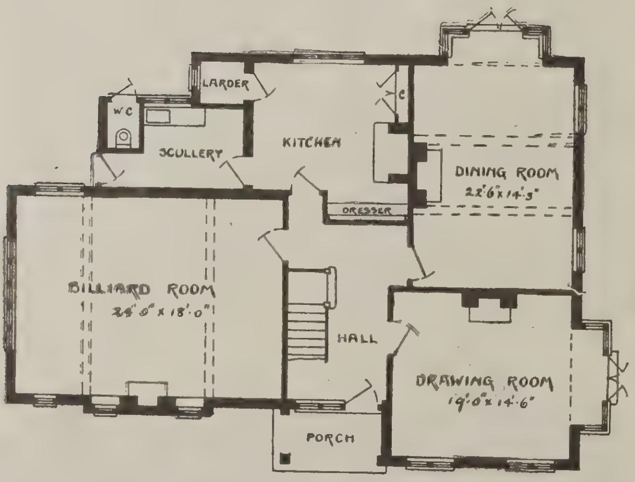


These cottages are intended to be built of local bricks covered with a rough-cast face scored with a bass broom and finished with a weather-resisting distemper wash made of lime, stale beer, copperas and Russian tallow. The plinth would be of tarred bricks and the roof covered with hand-made tiles which would also be used for the filling under arches. The cost of this pair of cottages would be about £730.

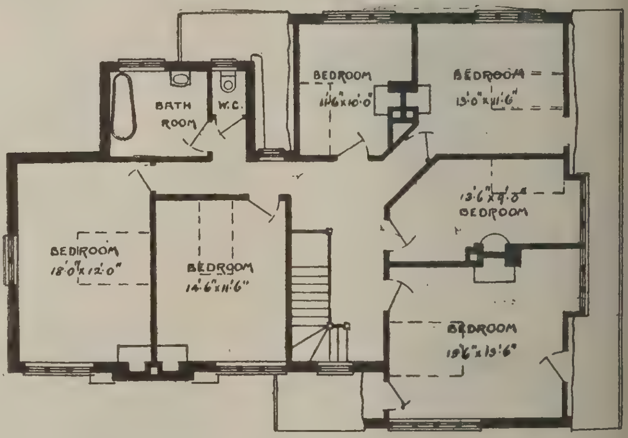
DESIGN NO. 16.



ENTRANCE FRONT.



GROUND FLOOR PLAN.

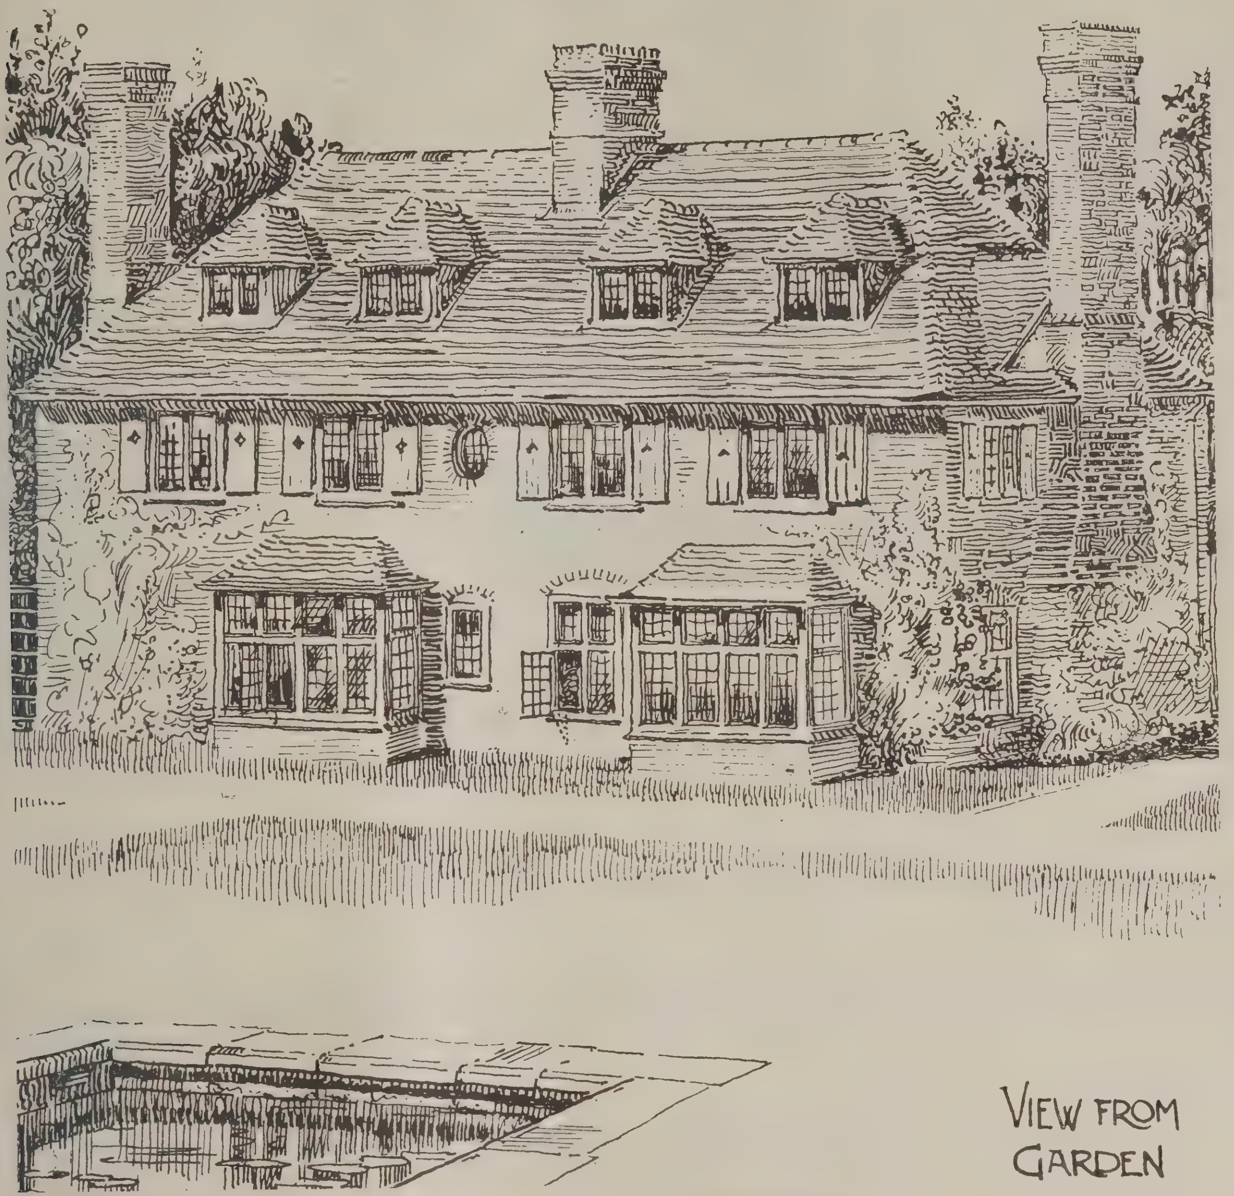


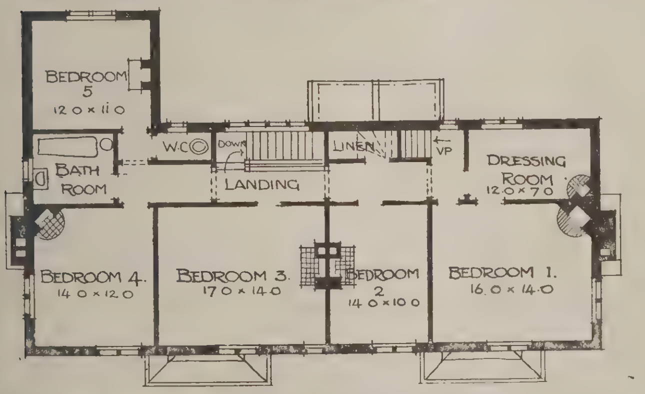
FIRST FLOOR PLAN.

This house is planned as a country residence with six bedrooms and large reception rooms. A billiard room has been included in the accommodation for amusement in the wet weather, &c. The house is planned with two floors only so as to minimise the labour. A pantry has not been included for the same reason and to reduce the plumbing work. The design is proposed to be carried out in rough-cast with a tarred base about three feet high. The chimney-stacks in mottled red bricks. The roof of dark sand-faced tiles. The windows to be casements with lead lights and the whole of the woodwork treated with "Solignum."

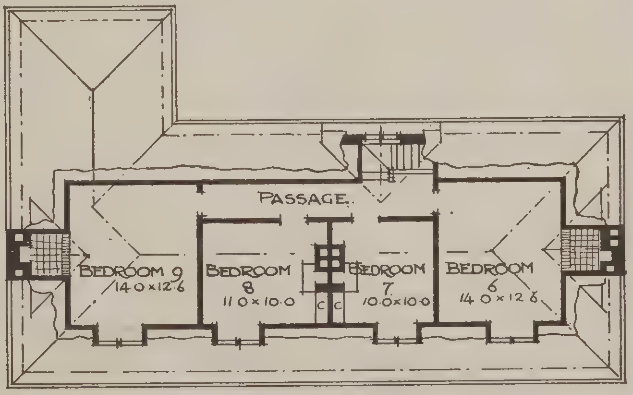
The cost of erecting same would be about £1100.

DESIGN NO. 17.

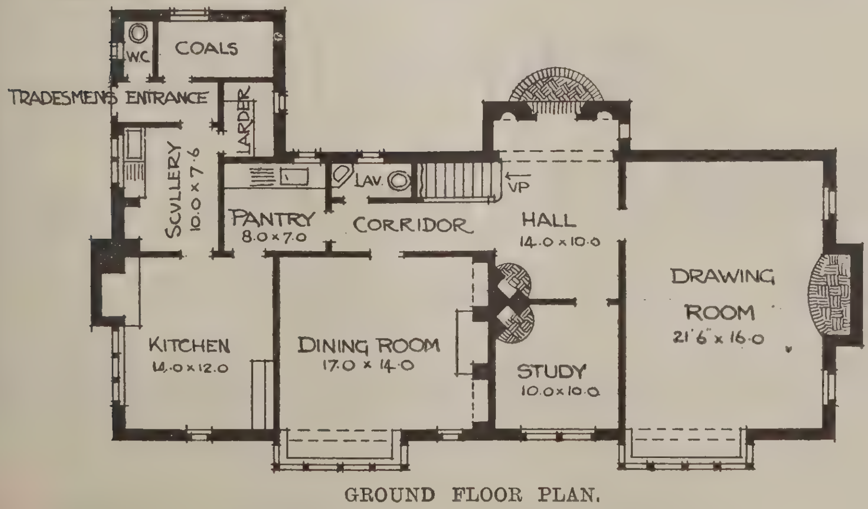




FIRST FLOOR PLAN.



SECOND FLOOR PLAN.



GROUND FLOOR PLAN.

A carefully planned house, which would make an ideal country or week-end house, containing three sitting-rooms and ten bedrooms. The simplicity of the plan would render this house economical in construction. Practically all the walls on the ground floor run up through the other floors, and the roof is extremely simple. The serving arrangements are compact and unobtrusive. Fireplaces are provided in all bedrooms. Walls and roof of good hand-made bricks and tiles, and leaded light windows in white-painted casement frames would produce a restful and dignified effect.

The cost would be about £1200.

Dauntsey House, Chippenham.

Installed with Cox's Air Gas.

Cox's Air Gas

is daily displacing Coal Gas all over the World.

¶ Cox's Air Gas effects enormous savings over coal gas and electric light. Non-explosive and passed by the leading Insurance Companies without extra premium.

ON APPLICATION—Full particulars and Estimates of saving we can effect from :—

The Machine Gas Ltd., 14-15 D'Arblay St., Great Marlborough St., W.

NEW SEASON CATALOGUES NOW READY.

The Berkefeld Filter.

Dr. ANDREW WILSON says:

"No house or office, hospital or school, should be without one of these efficient 'Berkefeld' Filters."

GERM PROOF

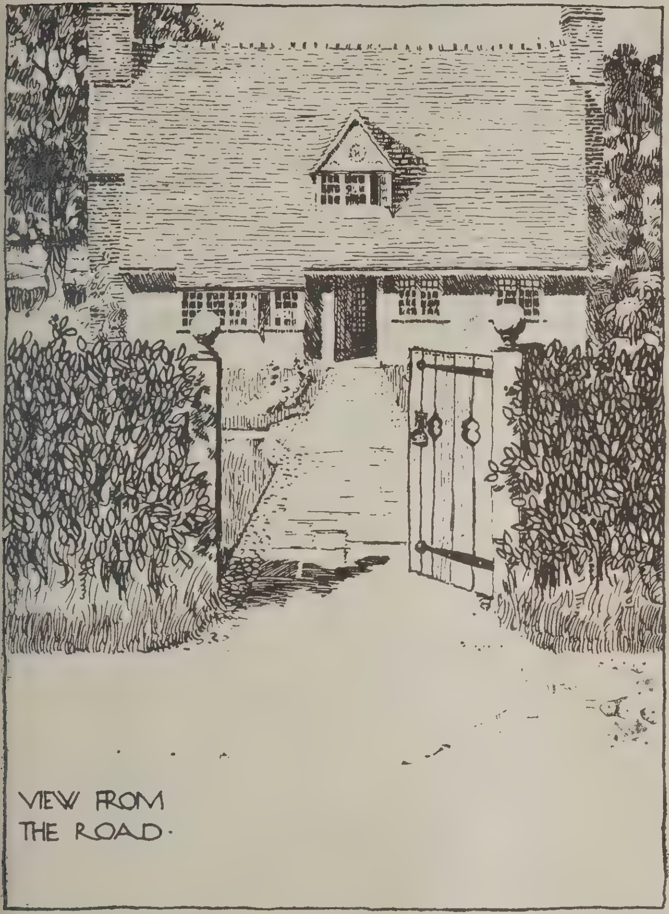
In use all over the world. Avoid imitations, insist on having an original

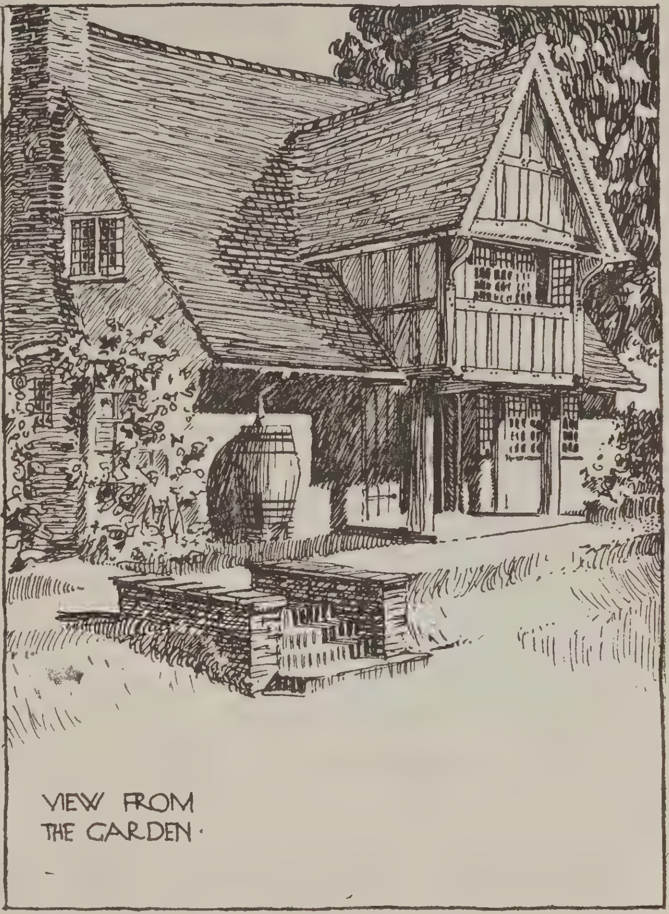
"BERKEFELD."

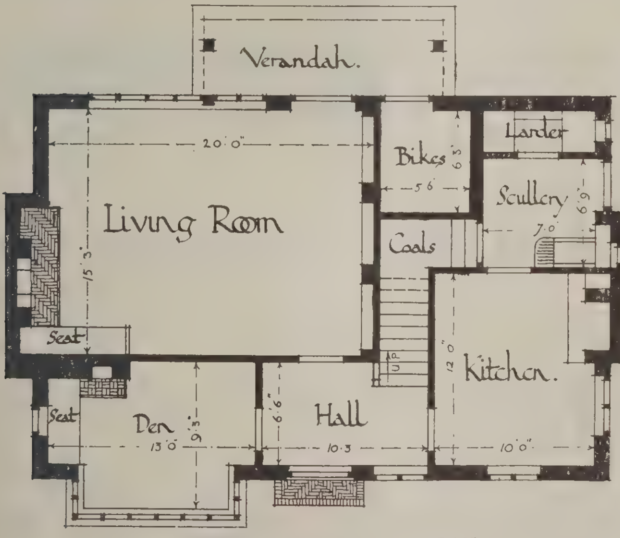
The Berkefeld Filter Co., Ltd.,

121 OXFORD STREET, LONDON, W.

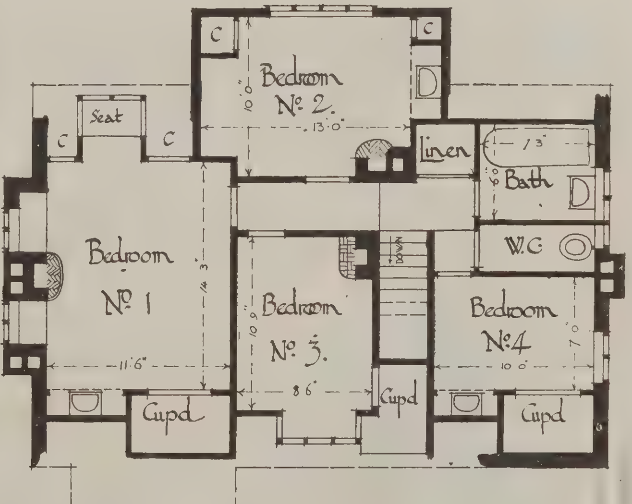
DESIGN NO. 18.







GROUND FLOOR PLAN.



FIRST FLOOR PLAN.

Economy in working and upkeep is the keynote of this design. The accommodation is admirably adapted to meet the requirements of the week-end party or small family. A large living room (with its brick fireplace) opening on to the verandah provides ample elbow room for social purposes, while the small den or study will add materially to the comfort of the house. The bedrooms are so arranged that the minimum amount of movable furniture is required; lavatory basins are provided in the bedrooms and each room has ample wardrobe accommodation. In the best bedroom chests of drawers are shown, built on each side of the fireplace, while similar fittings could be provided in the other bedrooms. The walls to be built of 9 inch brickwork rough-cast outside in cement, with the chimney-stacks in red bricks of varied shades. The half-timbered gable on garden elevation to be in oak. The roof covered with hand-made sand-faced tiles.

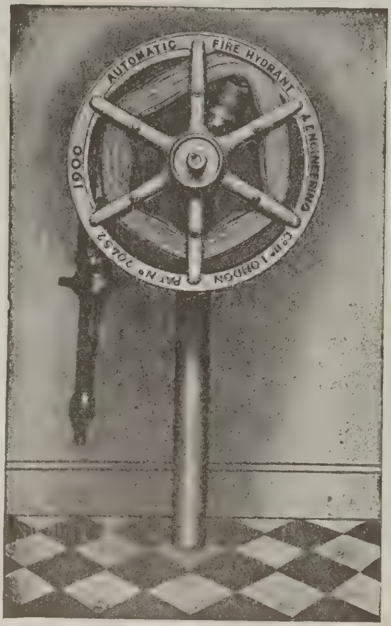
The cost of the house would be about £650; this price would allow for an excellent quality of fitting throughout the house.

For week-end purposes a gas heater in the scullery would be provided, so that hot water might be drawn from any tap in the house at a moment's notice.

. . Patent . .

Automatic Fire Hydrant

and Combined Hose Reel.



Water Valve opens automatically.

Can be instantly operated by any unskilled person.

Hose runs off reel without Kinking or Twisting.

No Delay and No Failure.

Can be worked by Women and Children.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1*s*. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bolton.—The King Edward VII. Memorial Fund Committee invite competitive plans from architects now practising as principals within the county borough of Bolton for the King Edward VII. Memorial Nurses' Home proposed to be erected at the Bolton Infirmary. Plan of the site and instructions may be obtained upon payment of £1 1*s*., which sum will be returned to the competitors provided they shall have sent in *bona fide* plans and particulars and shall have returned all documents, plans, &c. Mr. Samuel Parker, hon. secretary of the Committee, Town Hall, Bolton.

Hastings.—Dec. 31.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s.* deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—Feb. 17.—The Port of London Authority invite preliminary sketch designs in competition for head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1*s.*, which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Sofia (Bulgaria).—Dec. 15.—H.M. Minister at Sofia reports that the "Commission Permanente de l'arrondissement de Sofia" invite the submission of designs for a municipal building which it is proposed to erect at that place. Four prizes to the value of 7,000 fr. (£280), 3,000 fr. (£120), 2,000 fr. (£80), and 1,000 fr. (£40) respectively will be awarded. Architects desirous of competing must submit their designs at Sofia by Dec. 15. Copies of the programme, &c., may be obtained on application to the "Commission," as above. A copy of the programme, together with a drawing, may be seen at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Spennymoor.—Jan. 9.—The Urban District Council invite competitive plans and designs for a public hall, market, and offices, &c. Particulars may be obtained on payment of a deposit of £2 2*s.*, which will be returned on receipt of a *bona fide* design. Premiums of £50, £25, and £10 are offered. Mr. F. Badcock, clerk, Council Offices, 3 James Street, Spennymoor. (See advertisement.)

Stafford.—Jan. 6.—The Corporation invite designs for a public library. An assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

CONTRACTS OPEN.

The South Eastern Railway Company are about to undertake very extensive alterations and extensions at the Cannon Street Hotel, London, E.C.

The will of Mr. Robert Evans, J.P., aged 78, of Nottingham, senior partner in the firm of Messrs. Evans & Sons, architects, of Eldon Chambers, Wheeler Gate, Nottingham, has been proved at £32,221.

The Brentford Board of Guardians have instructed their clerk to obtain the names and addresses of half a dozen capable architects practising within the county of Middlesex or the administrative county of London in connection with the proposed extension of the workhouse laundry. The list will be submitted to the Local Government Board for their selection.

The Warrington Education Committee last week discussed at some length a resolution of the Sites and Buildings Committee for the proposed appointment of an architectural assistant to their surveyor, to design and act as clerk of works during the erection of four contemplated new schools which are to be built within the next six years. The suggested salary was £200 a year, and it was contended there would be a large saving in fees. Strong opposition was raised to the proposal. An amendment to refer the proposal back was carried by a large majority.

The Education Committee of the London County Council recommend that as from September 12, 1911, Professor W. R. Lethaby should be retained as art adviser in the education officer's department, and that he be paid for his part-time services £100 a year. The L.C.C. in 1904 decided that Professor Lethaby should be placed on the permanent staff of the education officer's department as art adviser and principal of the Central School of Arts and Crafts, at a salary of £400. Professor Lethaby was originally appointed by the late Technical Education Board in 1894 as inspector of art schools and of craft classes, at a salary of £300 a year, in consideration of which he was not required to devote his whole time to the Council's service. His salary as a part-time officer was raised, as from April 1, 1897, to £400 a year, it being understood that £300 was in respect of his services as part-time principal of the Central School and £100 for his services as art adviser. Early this year Professor Lethaby intimated that he was not able to continue as principal of the Central School, and the Council thereupon decided to recommend the appointment of a full-time principal in place of a part-time principal. Professor Lethaby resigned his appointment as principal of the Central School as from September 11, 1911, but it is desired to retain his services as art adviser.

At the last meeting of the Durham County Council, among the contracts sealed for erection of schools were the following:—Messrs. Clerey & Charlton, Wheatley Hill School, £4,150; Mr. J. W. White, Shiney Row, £9,069; Mr. F. D. Cowieson, Barlow, £724, Town Law, £722, and Easington Temporary, £333; Mr. W. B. Cooper, Seaham Harbour upper standard, £5,819; Mr. T. Manners, Butterknowle, £2,355; Mr. W. Hudson, Escomb, £583; and Messrs. Clerey & Charlton, Ford, £2.998. Recommendations for new school buildings were made by the Education Committee as follows:—Infants' department for 400 places at Dunston Hill School, £4,000; school caretaker's house at Easington Colliery, £300; new school at Etherley to accommodate 320 scholars, £4,490; additional sum in connection with proposed new school at Oxhill, £954; Seaham Harbour temporary school, £177 7*s.* 5*d.*; proposed extension at Sherburn, £1.025; and a new iron school at Station Town, £2,900. The committee have provisionally arranged for the purchase of school sites at Shildon, Silksworth, Station Town, and Barnard Castle. They also proposed to acquire by compulsory purchase sites at West Cornforth, Blackhall Mill Colliery, East Hetton, Browney Colliery, North Brancepeth, Brandon Colliery, and Oakenshaw.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

Cheshire.

Haslington.—Nine dwelling houses and nine sets of farm buildings.

Macclesfield.—St. George's School: alterations.

Cornwall.

Lostwithiel.—Working-men's Institute: additions.

Penzance.—School for 700 children.

Cumberland.

Mealsgate.—Filter house and Manager's house at Quarry Hill, for the Aspatria, Silloth and district Joint Water Board. Mr. J. Graham, C.E. (of Carlisle), engineer.

Durham.

Byers Green.—Council School.

Chester-le-Street.—Drill Hall.

Chopwell and Eldon.—Houses. Mr. W. Rushworth (of Durham), architect.

Durham.—Laundry for the Co-operative Laundries, Ltd. (£7,000 to £8,000).

Eldon.—See above.

Fence Houses.—Council School (for about 940 children). Mr. Rushworth, architect.

Gateshead.—Drill Hall at Felling.

Newbottle.—Council School (for about 260 children). Mr. Rushworth, architect.

Sacriston.—Council School: additions and alterations. Mr. Rushworth, architect.

Sherburn.—Council School.

Whickham.—Council School at Dunston Hill.

Essex.

Canewdon.—Endowed School: alterations. County Architect.

Orsett.—Two artisans' cottages, Langdon Hills (£530). Mr. Hill-Willis, architect.

Thorpe-le-Soken.—Village Hall.

Hampshire.

Bournemouth.—Church at Winton (£6,000).

Hertfordshire.

Bishop's Stortford.—Electric Theatre (conversion of Wesleyan Chapel).

Kent.

Folkestone.—Harvey Grammar School.

Hartley Wintney.—Workhouse Chapel (£500).

Hurst.—Sunday School, Queen Street: additions and alterations (£500).

Lancashire.

Blackburn.—Wesleyan Mission Hall buildings.

Blackpool.—Elementary School (£15,000).

Bootle.—Borough Hospital: additions and alterations (£17,000).

Lancaster.—Farm and Industrial Colony extension (£12,000).

Liverpool.—University Settlement buildings (£9,500).

Manchester.—Tramways Depôt buildings: extensions, Queen's Road, Cheetham.

Leicestershire.

Loughborough.—St. George's (new) Church (£5,750).

Lincolnshire.

Donington.—Parochial Room (£800).

Frodingham.—St. Laurence's Church: enlargement (£5,000). Sir Chas. Nicholson, Bart., F.R.I.B.A., architect.

Mablethorpe.—Isolation Hospital.

Middlesex.

Ealing.—Synagogue.

Stanwell.—Boys' Home for the Staines Union. Mr. G. W. Manning (of Ashford), architect.

Willesden.—Infirmary extension: completion of block "A."

Northamptonshire.

Burton Latimer.—House, Station Road.

Offices for Coales' Boot Company.

Wellingborough.—Wesleyan Sunday Schools.

Northumberland.

Tynemouth.—Infirmary Operating Theatre (£600).

Staffordshire.

Burton-on-Trent.—Bottling stores extensions in Curzon Street for Ind, Coope & Co., Ltd. (£10,000).

Newcastle.—Post Office.

Walsall.—Mission Church.

Suffolk.

Eye.—Workhouse.

Ipswich.—St. Helen's Council School.

Lowestoft.—Beaconsfield Working Men's Club. Mr. W. J. Roberts, architect. Messrs. Brightwell & Parker, contractors.

Surrey.

Bisley.—Village Hall.

Bookham, Great.—Congregational Church.

Chertsey.—Girls' secondary school (£10,000).

Coulsdon and Purley.—Secondary school for 250 boys; conversion of the Commemoration Hall (£5,500).

Farnham.—Church house.

Mixed school for 250 children.

Sussex.

Midhurst.—Six cells for casual tramps.

Rushington.—School additions and alterations. Mr. Wentworth Hyde (of Worthing), architect.

Warwickshire.

Coventry.—Slipper baths (£2,000).

Wiltshire.

Bradford-on-Avon.—Village club. Messrs. Samson & Colthurst (of Taunton), architects. Messrs. Poole & Son (of Milverton), contractors.

Worcestershire.

Evesham.—Infants' school.

Worcester.—Infirmary extensions (King Edward VII. Memorial).

Yorkshire.

Birstall.—Infectious diseases hospital, Owler Lane: extension. Mr. J. W. Burrows, architect.

Bradford.—Photo works extension, Idle Road. Mr. H. E. Priestley, architect.

Brighouse.—Municipal baths, Mill Royd Street (£6,000).

Earby.—Picture palace and three lock-up shops, New Road.

Kelbrook.—Datcliffe shed: extension for 200 additional looms.

Kimberworth.—Higher Standard and Infants' School (£18,000).

Leeds.—Elementary School, Roundhay.

Loftus.—House for East Cleveland Co-operative Society.

Pickering.—Church institute.

Silkstone Common.—Schools for 235 children and infants.

Tinsley.—Church of England day schools: additions and alterations. Mr. G. A. Wilson (of Sheffield), architect.

WALES.

Briton Ferry.—Council school at Cwrt Sart.

Caersws.—Manager's house and office at Penstrowed Quarry. County Surveyor (Newtown, Montgomeryshire).

Cefn Cribbwr.—Council school: additional accommodation for 100 scholars.

Forden.—Workhouse adaptation as Montgomeryshire Asylum (£56,900).

Godre'rgraig.—Council school for 200 children.

Llanfachraeth.—Council school: additions and alterations. Mr. J. Owen, F.R.I.B.A. (of Menai Bridge), county architect.

Pontypridd.—Church and institute for the Glamorgan Mission to the Deaf and Dumb. Mr. E. Rees, architect.

Rhymney.—Parish hall.

Ruthin.—Technical school.

Sketty and Trebanos.—Council schools.

SCOTLAND.

Broughty Ferry.—Houses, Ramsay Place (adjoining). School at Whinnybrae.

Cinematograph theatre, Lawrence Street.

Dundee.—No. 22, Mains Road: additions.

Cinematograph theatre, Main Street.

Cinematograph theatre, Small's Wynd: additions.

Warehouses, Stannergate Road, for the Northern Agricultural Co., Ltd.

Dunfermline.—Public house, with offices and dwelling-house, East Port Street.

Dunkeld.—Four workmen's houses at the Highland Railway Station. Mr. W. Robarts (of Inverness), engineer-in-chief to the Company.

Edinburgh.—Nurses' home at Craiglockhart (accommodation for 30).

Five blocks of flatted villas, Joppa Gardens.

Ten flatted villas, Restalrig Road, for the Co-operative Building Company.

Theatre Royal alterations.

Giffnock.—Villa, Eglinton Drive.
Glasgow.—Municipal Buildings (£150,000).
Mission Hall, New Street, Halfwayhouses.
Double cottage, Harvey Street, Yoker.
Johnstone.—R. C. school.
Paisley.—Mercerising house, Blackland Mill.
Rasay.—Forty workmen's houses. Mr. J. G. Falconer (of Fort William) architect.

IRELAND.

Abbeyleix.—Labourers' cottages. Council Engineer.
Kingstown.—Baths and wash-houses (£1,000).
Lisburn.—School buildings, Wallace Avenue: for the Railway Street Presbyterian Church. Mr. J. Hunter, architect.

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the completed specification.

No. 8307. April 3, 1911.—Improvements relating to machines for moulding bricks, blocks, tiles, or other similar articles. T. W. Atkinson, of Thorne House, Sadberge, via Darlington, and W. C. Chapman, of Laing Street, Stockton-on-Tees. This invention has reference to brick-making machines of the horizontally sliding box type for moulding bricks, blocks, tiles, &c., and more particularly to that kind in which a number of partition plates are adapted to be moved into and out of the moulding chamber by a toothed rack and pinion. The invention provides a brick-making machine in which the end cover is automatically opened and closed as the machine is operated so that a higher rate of speed with greater ease is attainable. Fig. 1 represents a side elevation of the machine closed. Fig. 2 is a side elevation showing the machine open. *a* indicates the bottom plate of the machine, which is provided with feet or standards *b*. Mounted upon the plate *a* so as to slide thereon are portions *c* forming the sides of a box-like structure, and transversely arranged between said slides *c* and detachably secured thereto such as by bolts is a plate forming the rear wall of the said box. Hinged as at *f* to the plate *a* is the front plate *g* having means such as a locking bar *h* whereby it may be locked to the side walls *c*, as shown in fig. 1. Secured to plates by means of bolts are a number of dividing blades passing through slots formed in a vertical partition secured to the plate *a*. Each of the side walls *c* is provided with a toothed rack *l* adapted to engage with pinions *m* mounted upon a transverse shaft *n*, revolvably mounted in suitable bearings secured to the plate *a*, a handwheel *o* being keyed to said shaft *n*, whereby it may be rotated. Mounted upon brackets *p* secured to each side of plate *g* are rollers *q* adapted to bear upon runners *r* fixed to the sliding box-like structure. The operation when making solid bricks is as follows:—The parts being in the position illustrated in fig. 1, upon raising the locking bar *h* and rotating handwheel *o* in the direction of the arrow the box-like structure formed by the plates *c* will be moved rearwardly into the position shown in fig. 2, at the same time drawing the dividing blades out of action. The operator then arranges upon plate *a* a false bottom or pallet plate *s*, fig. 2, having either a smooth face or bearing upon its surface any desired pattern. The handwheel *o* is then rotated in the opposite direction, the runner *r* engaging with the rollered bracket *p* turns the end cover about its pivot *f*, thus returning the parts to the initial closed position. The material from which the bricks or tiles are to be made is then filled into the machine up to the top, roughly tamped and levelled off. The handwheel is then again operated to move the sliding portion of the machine rearwardly and permit the end cover to drop, thus leaving the bricks exposed upon the pallet plate *s*, together with which they may be removed for drying. The dividing blades may be readily detached when the machine is employed for moulding articles other than bricks, such as cornice strings, plain ashlar veneer blocks, or floor tiles, by unscrewing the bolts serving to secure them. Nov. 8, 1911.

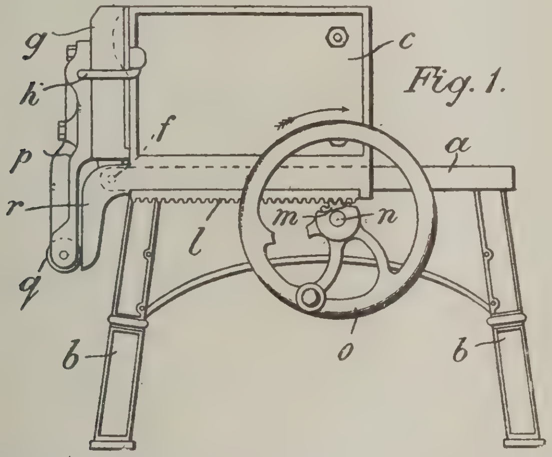

Fig. 1.

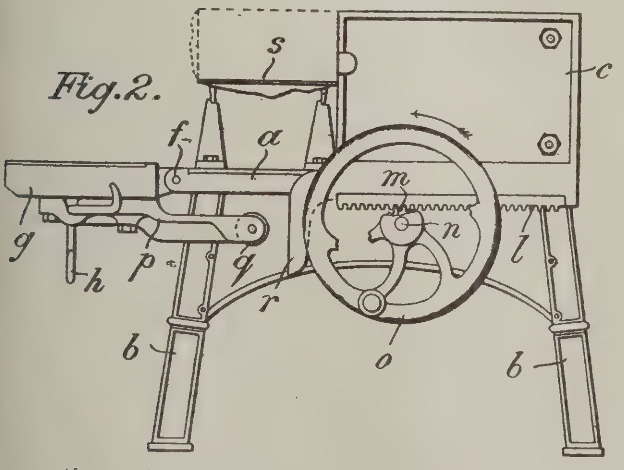

Fig. 2.

No. 7955. March 30, 1911.—Improvements in fire stoves. M. J. Adams, The Red House, Stocksfield-on-Tyne. This invention relates to stoves or fireplaces with heat-radiating walls or surfaces composed of a refractory and semi-transparent or translucent material, arranged in contact with the flames or with the fuel in active combustion. For this purpose the stove or fireplace is constructed with covers, panels, or like parts made of a refractory and semi-transparent or translucent material such as fused silica, which may form doors, dampers, or other movable parts of the stove or fireplace, or may be arranged as fixed parts of the same. The material employed being semi-transparent or translucent allows the glow of the flames or fire enclosed thereby to be seen, and owing to its refractory character it can be employed in positions in which it is in actual contact with the flames or hot fuel, in which positions it becomes highly heated and provides effective heat-radiating and glowing surfaces. Fig. 1 shows a stove in central vertical section. *a* is the frame or body of the stove provided with a fuel door *b*, fireclay back *c*, ashpan *d*, and smoke pipe *e*, all of ordinary construction. The front of this stove is fitted with panels *f* of fused silica, which, whilst preventing access of air to the combustion space otherwise than through the ashpit or suitable dampers, permit the glow of the fire to be seen, and when heated by the fire act as heat-radiating surfaces, the panels themselves glowing. It should be noted that the panels *f* enclose, in part, the space containing the combustible, and come into direct contact with the burning fuel or the flames thereof. Nov. 22, 1911.

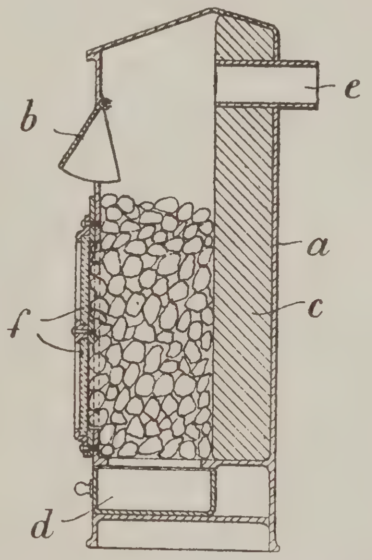

Fig. 1.

No. 935. Jan. 13, 1911.—Cement. John Craig and J. M. Ralston, both of Arthurlie Street, Barrhead, Renfrewshire. This invention has for its object to provide a cement which is waterproof and non-absorbent, and stronger than ordinary cement, which can be exposed to all kinds of weather without deterioration, which forms a strong bond to stone, wood, and metals, which has a uniform wear throughout and which not only sets very quickly, but will also set in water, and which can be used for street paving, roofing, and all other purposes for which cement at present in use can be applied. First mix certain proportions according to the use to which the cement is to be put of whinstone in the form of dust, powder, or grit with chalk, calcined magnesite, and magnesium chloride in the form of powder or as a solution, and then add cold water to bring the mixture to the proper plastic consistency. The proportions vary according to the use to which the cement is to be used, but the following is one example—viz. whinstone dust 150 parts, calcined magnesite 50 parts, and magnesium chloride 40 parts, and chalk 5 parts. Blocks formed of the above composition can be cut or carved in any way similar to ordinary stone, and still have the same smooth surface. Nov. 8, 1911.

PATENT SPECIFICATIONS PUBLISHED NOVEMBER 23, 1911.

Selected by Mr. James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

No. 24905. Oct. 26, 1910.—Richter & Richter, 11 Dorotheenstr, Berlin. A process for manufacturing filter carbon.

25149. Oct. 29, 1910.—Convention application dated April 29, 1910. David Cohen, 2 rue de Paris, Soisy-Sous-Montmorency, Seine-et-Oise. A method of inlaying and apparatus therefor.

25219. Oct. 31, 1911.—Harold Moorcraft, of Marsden Tiles, Ltd., Dale Street, Burslem. Improvements in the method of and means for manufacturing tiles and the like.

25371. Nov. 1, 1910.—S. W. Maddick, 133 Hambalt Road, Clapham Park, S.W. Method of and the means for the electric lighting of pictures, works of art, and the like.

25465. Nov. 2, 1910.—Frederick Lennard, 85 Gracechurch Street, E.C. Manufacture and production of material for use in making roads, pathways, and the like.

25478. Nov. 2, 1910.—E. I. Parkes, of Idolholme, Lancester Road, New Barnet, Herts. Improvements in and relating to ceiling roses and like electrical fittings.

25682. Nov. 4, 1910.—J. A. Averine, Sperin House, Poslannikoff Street, Moscow. Improvements in or relating to filters.

26547. Nov. 15, 1910.—A. G. Coffin, 9 Lancashire Court, New Bond Street, W. Improvements in apparatus for heating and circulating water.

28524. Dec. 8, 1910.—James Williams, Emberton Lodge, Newport Pagnell, Olney, Bucks. Improved apparatus for supplying carburetted air.

29314. Dec. 16, 1910.—Herbert Smithson and E. R. Sharpe, of Sykes Street, Hulme, Manchester. Improvements in apparatus for electric arc lamps and other purposes.

29336. Dec. 17, 1910.—T. A. Orme and Albert Stansfield, of Atlas Meter Works, Oldham, and Meters, Ltd., 6 Mawson Chambers, Deansgate, Manchester. Improvements applicable to wet-gas meters and valves and keys for use in connection therewith.

367. Jan. 6, 1911.—William Dixon, Vespers Road, Kirkstall, Leeds. Plough for the removal of deposit or incrustation in sewers or pipes.

520. Jan. 9, 1911.—F. R. Jarvis, Cambridge Villa, Stock, near Ingatestone. Improvements in means for opening and closing fanlight windows and the like.

935. Jan. 13, 1911.—John Craig and J. M. Ralston, both of Arthurlie Street, Barrhead, Renfrewshire. Cement.

1710. Jan. 23, 1911.—Hugh Leader, A.M.I.C.E., Thornedene, Oakleigh Park, London. An improved method of and means for jointing metal sash bars of unequal size.

1863. Jan. 25, 1911.—Frederick Evans, 37 Gordon Road, Seaforth, Liverpool. Timber sampling machine.

2011. Jan. 26, 1911.—John Cable, 27 Blackett Street, Putney. Improvements connected with casement and like windows.

3526. Feb. 11, 1911.—G. A. Phillips, St. Ann's Terrace, Shaw Lane, Headingley, and H. M. Phillips, 13 Cromwell Road, Beckenham. Improvements for supporting electric incandescent lamps and other articles.

5730. March 7, 1911.—Alexander Struthers, 2 Alfriston Road, Clapham Common, West Side. Improvements connected with window sashes.

5924. March 9, 1911.—The Electric Construction Co., Ltd., and Ralph Jay, both of Bushbury, near Wolverhampton. Improvements in the construction of rotary fans.

6025. March 10, 1911.—J. H. Leighton, 96 Ninian Road, Cardiff, and J. A. Williams, 53 Cowbridge Road, Pontyclun. Improvements relating to tube sockets in sanitary and other similar tubing.

6276. March 13, 1911.—Friedrich Ruppel, 22 Kleberplatz, Strassburg. Improved valve discharge flushing apparatus.

6471. March 15, 1911.—W. E. Hipkins, Soho Foundry, Birmingham, and J. M. McGrath, 15 Cowcross Street, E.C. Improvements connected with platform weighing apparatus and weighbridges.

6672. March 17, 1911.—Alfred Platt, Stockport Road, Gee Cross, Hyde, Cheshire. Alarm (worked by gas).

7750. March 28, 1911.—C. H. Simkins and W. D. Hadley, 73 Union Street, Willenhall. Improvements relating to door and lock furniture.

7955. March 30, 1911.—M. J. Adams, The Red House, Stocksfield-on-Tyne. Improvements in fire stoves.

8307. April 3, 1911.—T. W. Atkinson, Thorne House, Sadberge, via Darlington, and W. C. Chapman, Laing Street, Stockton-on-Tees. Improvements relating to machines for moulding bricks, blocks, tiles, or other similar articles.

9704. April 21, 1911.—Johann Kreuer, Coln-Ehrenfeld, Subbeeratherstr 282. An improved screw nail for hammering into non-perforated material.

10285. April 28, 1911.—Henry Anderson, 22 Jordan Lane, Edinburgh. Improvements in means for lighting gas from a distance.

11073. May 8, 1911.—H. J. Wagner, Dellwood, Erie, New York. Improvements in and relating to combination cornice and gutters.

11103. May 8, 1911.—A. J. Boult, 111 Hatton Garden, E.C. Communication from Eduard Flugger, 19 Rodingsmarkt, Hamburg. Improved manufacture of zinc oxide and zinc sulphide.

11163. May 9, 1911.—William Podmore, West View House, Porthill, Staffs., and C. F. Bailey, Greenbank, Lawton, Chester. An improved filtration process and apparatus for the filtration of ceramic slip.

11223. May 9, 1911.—E. B. Symons, Majestic Building, Milwaukee, Wisconsin. Improvements in crushing machines.

11595. May 13, 1911.—D. B. Jones, Gilfach House, Gilfachcoch, via Bridgend. Fire extinguishing sprinklers and the like.

11810. May 16, 1911.—H. J. Wagner, Dellwood, Erie, New York, U.S.A. Improvements in and relating to eavestroughs and gutters.

12547. May 24, 1911.—Eduard Dafinger, 6 Sailerwohr, Passau, Germany. Automatic brick-cutting machine.

12563. May 24, 1911.—William Martin, of Normanhurst, Oswestry. Improvements in and relating to sash fasteners for sliding windows.

12583. May 24, 1911.—Thomas Durrans, 1 Cornwall Terrace, Regent's Park, architect. Improvements in brackets.

12779. May 26, 1911.—Hermann Allard, of Giertruidenberg, Holland. Improvements for eliminating moist air from drying rooms or the like.

15396. July 3, 1911.—C. E. Wilson, Carlton Works, Armley, Leeds. Improvements in fuel for gas fires and the like.

16061. July 11, 1911.—George Cremer, 133 Sebastianstr, Cologne-Niehl, Germany. Improvements in or relating to greenhouses, forcing-frames, and the like.

17598. Aug. 1, 1911.—R. C. Holton, 87 Waterston Avenue, Wollaston, Norfolk, Mass., U.S.A., and C. F. Brown, 12 Charles Street, Dorchester, Suffolk, Mass., U.S.A. Improvements in and relating to pipe couplings.

17789. May 9, 1911.—Convention application May 26, 1910. Ladislas Penkala, 7 rue Condorcet, Courbevoie, Seine. Improvements in presses for moulding plastic materials.

19152. Aug. 26, 1911.—Geo. Wilkinson, Beech Mount, Harrogate, York. Improvements in direct steam pressure apparatus for forcing liquids.

A sub-committee of the Liverpool Corporation last week considered a scheme for the provision of new baths at the Pierhead on a portion of the George's Dock site. The cost will, it is estimated, amount to nearly £60,000.

PURIFICATION OF WATER IN SWIMMING BATHS.*

The purity of water in public swimming ponds is a matter which undoubtedly concerns the general public health of cities and towns.

In introducing this subject, I can only just refer to the increasing popularity of swimming baths, the yearly increase in the number of baths throughout the country, and the benefit afforded to the general public by municipal bodies in providing them.

Although the management of baths may be conducted with the greatest care, still the proprietors incur serious responsibility by the possibility of the spread of some infectious complaint being attributed to impure water.

A reliable system, therefore, that not only purifies the water bacterially and chemically, but also greatly improves its appearance, is bound in time to become very popular.

Until recently the general method adopted in swimming baths to keep the water in pure condition has been to sweep out the sediment, and to empty the pond and refill it with fresh water periodically and whenever the water appeared dirty.

In the majority of baths the water is kept in far too long, and there are no means for purifying it. Although its appearance after a few days' use may not be very bad, it is nevertheless bacterially dirty after the first batch of bathers have used it.

The chief impurities contracted from bathers are bacteria, greasy excretions, and other organic impurities from the skin, and perspiration; these give the water a dull, milky appearance.

The bath water suffers more from bathers when its temperature is high, and, in my opinion, it should never be made hotter than 74° Fahr.

It will interest many to know that some recent bacteriological examinations of water from a public swimming bath gave the following startling results:—

The fresh water supply as it was delivered to the pond contained less than 1,000 germs per cc., whilst the bath water after three days' use, by a total of about 1,000 bathers, contained 300,000 germs per cc.

Germicides have been, and are, used in some cases as a means of sterilising the water, but it is very inadvisable to apply them to baths unless the baths are equipped with a proper system of filtration.

Filtration of the bath water continuously undoubtedly improves it, and aeration added to this makes a still further improvement, and with some waters the results are wonderfully good. None of these methods of purification alone, however, approach results obtained from the process of continuous precipitation in addition to filtration and aeration.

Continuous aeration and filtration have been in use for a number of years, but I think I can claim to be the first to apply the additional process of continuous precipitation.

Before entering into the merits of this process, the following is a brief outline of the cycle of operations:—

Water is drawn from the deep end of the pond by a centrifugal pump, through a preliminary strainer, and is delivered to an aerator, whence the pump draws it and delivers it through a filter and a heater back to the shallow end of the pond. The precipitant is applied to the water on its way to the filter in the form of a weak solution.

It is particularly to the precipitation process that I wish to draw your attention. This takes place in the water immediately before it is filtered.

Whilst the precipitate is forming it enmeshes the impurities, bacteria, and colour particles in the water. The action is complete, and after coagulation of the precipitate has taken place, it and the enmeshed impurities and bacteria are easily caught in the filter bed.

There is nothing foreign added to the water, and I challenge any chemist to prove that anything has been added detrimental to the water, or that what is added does not already form in a more or less degree one of its natural constituents. No valid objections can, therefore, be raised against the system in this respect, or if any are made they cannot be substantiated. Time does not permit my going further into the matter of treatment, and I can, therefore, only state that the system is nothing more than Nature's own method of natural purification of water, perfected by mechanical means to increase its rapidity.

Although the precipitation process is, perhaps, the distinctive feature of the system, it is by no means indispensable, as many may think. There are the other parts of the apparatus which assist greatly in producing the good results attained, and at certain times, when bathing is slack, these are sufficient to keep the water in first-class condition.

The filter used is the "Turn-over" patent, and is absolutely distinctive in design from any other on the market, and in the means adopted for cleansing the bed. This latter is performed by slowly revolving the chamber to completely upset the filtering material, whilst only a slight reverse flow of water is used to wash out the impurities. A syphon arrangement is also used to get rid quickly of the impurities and save washwater.

Pure, crushed quartz crystals form the filtering medium. This material is of an absolutely non-absorbent nature, sharp, extremely hard, is easily washed perfectly clean, and never requires to be renewed.

The pumps used are of the centrifugal type, and possess certain distinct advantages for the economical and rapid circulation of the large volumes of water at low heads.

They are driven by one fly-wheel engine, using the steam expansively, the exhaust being used to heat the water in the pond. The same engine serves to drive the laundry machinery. I consider this more economical than using separate steam-driven pumps.

Bathers are unanimous in their opinion that the water is very much clearer, brighter, and better than on the old system, and that it is also much superior to a newly-filled pond.

No one can dispute that the crucial test of the purity of the water is by bacterial analyses. Repeated tests have been made after the water has been in use by bathers for many months, during which time it has been subjected to the purification treatment in the bathing hours, and they all prove that the water is purer under this system than when the ponds were worked on the old system of refilling periodically. No colon bacilli were found present in any instance, and the number of ordinary germs counted per cc. were less than in the fresh town supply.

Another practical proof of the purity of the water is the fact that no odour whatever is given off from it. That distinct pungent odour which undoubtedly arises with the vapour of the heated water, and which is generally noticeable, and more or less diffused through the building, in baths which have no system of purification, has been remarkable by its entire absence with the purification system.

Whether the water used to supply the baths is pumped from a well or obtained from the town supply, the saving by the adoption of the purification system is very considerable, apart altogether from the other advantages. If this system of purification is adopted a smaller boiler suffices, the laundry engine can be dispensed with, and no large storage tanks are necessary.

By using the process of precipitation the purification of the water is effected very much quicker and better. This, therefore, means a considerable saving in time required to work the plant and in the consumption of fuel.

St. Lawrence's Church, Frodingham, Lincs., is to be enlarged at an estimated cost of £5,000. The plans have been prepared by Sir Chas. Nicholson, M.A., F.R.I.B.A., the diocesan architect.

Messrs. Robert Neill & Sons, builders and contractors, Manchester, on Tuesday filed a petition in bankruptcy in the Salford County Court, and a receiving order was made. The creditors of the firm met in the Memorial Hall, Manchester, four weeks ago, and a statement then presented showed a deficiency of £96,684 on the total liabilities estimated to rank amounting to £120,096.

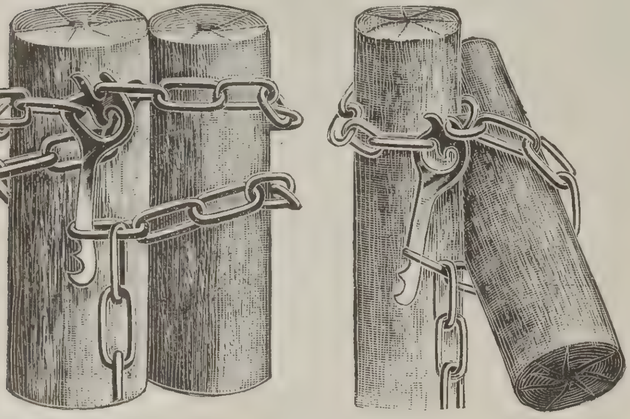
As a large estate on the boundary of Droylsden and Clayton is to be laid out as a garden city, and another estate on the Droylsden side of Clayton Bridge is also to be developed, the Droylsden Council have appointed a committee to prepare a preliminary scheme for putting the Town Planning Act into operation. In a report issued by the surveyor and engineer of the Council, it was stated that if that step were not taken the district "would be cut up in such a way as to prohibit any definite well-defined scheme, much to the detriment of that city suburb." On the Alderdale estate in the same Manchester suburb, where there is to be a garden city, the land has already been planned out for streets. The houses will be of the modern semi-detached type, with gardens back and front. It is proposed to build there nearly two thousand houses.

---

* **Abstract of a Paper presented to the Congress of the Royal Sanitary Institute at Belfast by Mr. Balfour Bramwell.**

TRADE NOTES.

We illustrate this week a new form of scaffolding chain which is about to be put on the market by Messrs. H. Elliott & Co., The Mall, Ealing, W., and to which the trade name of "Perfect" has been given. In use the chain is first slung round the poles and then hooked into the adjustable device at the upper end of the spring lever; then wind the chain round the pole, and hook the other end in the lower part of the lever at whatever point it may be required, so that the pole rests on the chain. The chain thus ensures that the greater the load on the scaffolding the firmer shall be its connection round the pole, and the greater the impossibility of slipping. The standard length of the chains is about 3 feet, but they can be made in any lengths required. They are about five-sixteenths of an inch thick, and of high strength. The fixing is, it will be seen, quite simple, and can be done quickly by any workman. The first cost is moderate and the subsequent outlay is nil.



The "Grundy" system of Automatic Temperature Control (patented by John Grundy, Ltd., heating engineers and ventilating specialists, 393a City Road, E.C.) goes to the root of one of the greatest troubles in heating. The margin between a room too cold and a room too hot is quickly bridged by many heating systems which rather err on the side of over-efficiency. The golden mean between the two is difficult to attain and still more difficult to keep. Control appliances are, of course, common enough—but most of them show obvious shortcomings. These seem to be avoided by the Grundy system, which embodies the principle of the thermometer, depending for its action upon the movement, consequent upon changes of temperature, of a column of mercury. This action of the thermostat is communicated electrically to the valve controlling the flow of steam or hot water through the apparatus. The Grundy thermostat, when applied to domestic heating apparatus, is arranged to operate within a margin of half a degree above and below the predetermined temperature, but for special purposes any desired temperature can be maintained under approved conditions for long periods without greater variation than 1-1,000° Fahr. The thermostat is made in several forms, and may be applied to gas as well as steam heating, automatic air gratings, and electric fans. In tests carried out at the National Physical Laboratory the exactness of the temperature controlled by two independent regulators was most marked. Col. Crompton, C.B., M.Inst.C.E., &c., reporting on the Grundy system, says:—"It has never failed in its action and I see no reason why it ever should fail. . . It therefore daily saves a considerable sum in wages. . . There is a large field for this apparatus, as there is nothing similar which can do the same work on the market." The system has been approved and adopted by many important bodies, including the L.C.C. and the Metropolitan Asylums Board.

The Bath Stone Firms, Ltd., have, it is understood, changed their name to the "Bath and Portland Stone Firms, Ltd.," in consequence of their very large interests at Portland.

VARIETIES.

The Worcestershire Standing Joint Committee have deferred consideration of a plan for new county offices to be erected at Worcester at a cost of £10,500.

Mr. Bligh Bond, F.R.I.B.A., has taken into partnership Mr. W. E. Ellery Anderson, from the office of Mr. J. Comper. The office of the firm of Messrs. Bond & Anderson will be at Glastonbury, with a sub-office at the Star Life Building, Bristol.

Messrs. Read & Waring, civil engineers, Westminster, have been appointed by the Berwick Town Council as engineers to the joint water scheme, which is estimated to cost £18,000.

Preparations are being made in the Matlock district for the carrying out of a scheme of sewerage estimated to cost nearly £50,000. Matlock has obtained sanction to borrow £35,000, and Matlock Bath £12,000.

The Sheffield City Council are applying for sanction to borrow £61,099 for the extension of the Neepsend Electricity Generating Station. The Local Government Board inquiry will be held at the Town Hall on December 7.

Messrs. Jarvis & Richards, architects, have prepared plans for a Girls' Secondary School which it is proposed to erect at Chertsey at a cost of £10,134. The accommodation is for 200 students.

The Farnham Burial Board have approved plans and estimates for laying out five acres of land in Wrecclesham as an additional burial ground at a cost of £3,100. The work includes a chapel and caretaker's lodge.

Messrs. Alfred Price & Sons, architects, Sandbach, have prepared plans for proposed alterations to the parish church at Buglawton, Cheshire. Amongst other works intended are the erection of a quasi-chancel, the making of a centre aisle, and the setting up of a new reredos.

The Bury Corporation General Purposes Committee recommend the Town Council to appoint as borough engineer Mr. Ainsworth Settle, the borough engineer of Heywood. The salary will be £450, rising in three years to £500. There were 92 applicants.

Mr. Macdonald, the city engineer to the Glasgow Corporation, is to be appointed as architect for the reconstruction of the area in the Trongate, formerly occupied by the old Tontine Warehouse recently destroyed by fire. A proposal that the work should be put out to competition was lost.

A large scheme of church extension is now being entered upon at Preston. A grant of £5,000 is recommended towards a church in the proposed parish of St. Cuthbert. Another grant of £1,500 is recommended towards a site in the Deepdale district and a new church in place of a temporary building. For a site and a church in the Frenchwood district £5,500 is recommended. Towards a site for a church in Fulwood £500 is suggested. A site for St. Cuthbert's Church has been given by Sir William E. M. Tomlinson, and £2,000 has been raised in the district towards the cost of the building. A site has also been acquired for a church in the Frenchwood district.

The Winnipeg Builders' Exchange, which has been sharing in the present prosperity of Western Canada, are to have an important thirteen-storey building erected with a special view to their requirements. The work will be commenced early next year. In the same town substantial progress is being made towards the completion of a Hall of Industry under the management of the Winnipeg Development and Industrial Bureau. This building will have a main street frontage of 378½ feet and a further frontage of 200 feet. Amongst the offices to be provided therein are those for the city planning commission.

Plans for the extension of the General Post Office, George Square, Glasgow, have now been approved, and building operations will shortly be commenced on the South Frederick Street site, from which the old buildings have already been removed. The scheme, which is estimated to cost about £80,000, shows an increase of over 50 per cent. on the present accommodation. Reinforced concrete will be largely used in the construction of the buildings. The architect for the building is Mr. W. T. Oldrieve, F.R.I.B.A., of H.M. Office of Works, Edinburgh. Messrs. Perry & Co., Ltd., are the contractors for the reinforced concrete work, and Messrs. George Newton & Son are the general contractors.

Mr. Batsford will shortly publish a book by Mr. C. R. Ashbee entitled "Should we Stop Teaching Art?" The volume is partly the outcome of the recent findings of the Departmental Committee of the Royal College of Art. Mr. Ashbee pleads for the organisation of craftsmen throughout the country, and for financial assistance from the State to enable them to combat successfully the decentralising influences upon their work resulting from uncontrolled mechanism. Mr. Ashbee offers a solution of the difficulty, and deals with the serious effect of mechanism in the last ten years upon the quality of the national output in the arts, upon the organisation of our schools, and upon the lives of our craftsmen.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

*** *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1*s*. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bolton.—The King Edward VII. Memorial Fund Committee invite competitive plans from architects now practising as principals within the county borough of Bolton for the King Edward VII. Memorial Nurses' Home proposed to be erected at the Bolton Infirmary. Plan of the site and instructions may be obtained upon payment of £1 1*s*., which sum will be returned to the competitors provided they shall have sent in *bona fide* plans and particulars and shall have returned all documents, plans, &c. Mr. Samuel Parker, hon. secretary of the Committee, Town Hall, Bolton.

Banbury.—Jan. 8.—The Town Council invite designs by January 8 for workmen's dwellings to be erected within the borough. Applications for particulars, accompanied by 10s. deposit, which will be returned on receipt of bonâ-fide designs, should be made to Mr. Arthur Stockton, town clerk, Town Hall, Banbury.

Hastings.—Dec. 31.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1s. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

London.—Feb. 17.—The Port of London Authority invite preliminary sketch designs in competition for head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1s., which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Sofia (Bulgaria).—Dec. 15.—H.M. Minister at Sofia reports that the "Commission Permanente de l'arrondissement de Sofia" invite the submission of designs for a municipal building which it is proposed to erect at that place. Four prizes to the value of 7,000 fr. (£280), 3,000 fr. (£120), 2,000 fr. (£80), and 1,000 fr. (£40) respectively will be awarded. Architects desirous of competing must submit their designs at Sofia by Dec. 15. Copies of the programme, &c., may be obtained on application to the "Commission," as above. A copy of the programme, together with a drawing, may be seen at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

Spennymoor.—Jan. 9.—The Urban District Council invite competitive plans and designs for a public hall, market, and offices, &c. Particulars may be obtained on payment of a deposit of £2 2s., which will be returned on receipt of a *bona fide* design. Premiums of £50, £25, and £10 are offered. Mr. F. Badcock, clerk, Council Offices, 3 James Street, Spennymoor. (See advertisement.)

Stafford.—Jan. 6.—The Corporation invite designs for a public library. An assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

CONTRACTS OPEN.

Aston.—Dec. 30.—For erection of an extension to the station in Chester Street, Aston, for the Birmingham Electric Supply Committee (Messrs. A. Harrison & Cox, architects, 109 Colmore Row, Birmingham). Send names and £2 2s. by Dec. 14 to Mr. Christopher Silk, quantity surveyor, 33 Newhall Street, Birmingham.

Audenshaw.—Dec. 12.—For the erection of leather-dressing works at Audenshaw, near Manchester. Send names by Dec. 12 to Messrs. Lindley & Gibson, architects and surveyors, Ashton-under-Lyne.

Barking.—Dec. 14.—For the erection of Barking new post office for the Commissioners of H.M. Works and Public Buildings. Deposit £1 1s. Barking Post Office and H.M. Office of Works, Storey's Gate, S.W.

Barking.—Dec. 22.—For the works comprised in the extension of the electricity works, East Street. Deposit £2 2s. Mr. C. F. Dawson, surveyor, Public Offices, Barking, Essex.

Barrow-in-Furness.—Dec. 20.—For the construction of conveniences in Hindpool Road and Salthouse Road, and the extension of the existing convenience in Church Street. Borough Engineer and Surveyor, Town Hall, Barrow-in-Furness.

Beaminster.—Dec. 16.—For erection of additions to the masters' house at the grammar school, Beaminster, Dorset. Mr. H. H. Hounsell, architect, Bridport.

Birmingham.—Dec. 13.—For erection of Delivery Office at the Lawley Street Goods Depôt, for the Midland Railway Co. The Engineer's offices, Midland Railway, Derby.

Broadclyst.—Dec. 30.—For rebuilding Elbury farm buildings, in the parish of Broadclyst, Devon. Messrs. E. H. Harbottle & Son, architects, County Chambers, Exeter.

Bromley.—Dec. 19.—For erection of a women's convenience on the Martin's Hill recreation ground. Deposit £1. The Borough Engineer's office, Municipal Offices, Bromley, Kent.

Brough (Yorks.).—Dec. 16.—For erection of a police station and courthouse at Brough, for the Standing Joint Committee of the East Riding. Deposit £1 1s. Mr. J. Watson, quantity surveyor, Cogan Chambers, Hull, and the County Surveyor, Beverley.

Denby Dale.—Dec. 15.—For the various works required in erection of three dwelling houses and boundary walls at Kitchenroyd, Denby Dale, Yorks. Messrs. J. Kirk & Sons, architects, Central Buildings, Market Place, Huddersfield.

Durham.—Dec. 19.—For erection of three dwelling-houses at Earl's House Industrial School, for the County Council. Mr. W. Rushworth, Shire Hall, Durham.

Earlsheaton.—Dec. 18.—For erection of four houses at Bank Top, Earlsheaton, York. Messrs. J. Barton & Son, architects and surveyors, Halifax Road, Dewsbury.

Edinburgh.—Dec. 18.—For erection of the fire-resisting floors, &c., in connection with the alterations and extension of the central telephone exchange, Rose Street, Edinburgh, for the Commissioners of H.M. Works and Public Buildings. Any system of construction may be adopted for the work. Deposit £1. H.M. Office of Works, 3 Parliament Square, Edinburgh, or at H.M. Office of Works, G.P.O., Glasgow.

Fence Houses.—Dec. 12.—For erection of a school (for about 940 children), for the Durham County Council. Mr. W. Rushworth, Shire Hall, Durham.

Glasgow.—Dec. 12.—For the following works required in connection with the proposed re-instatement of the property in Albion Street recently damaged by fire, viz. :—(1) Mason and brick works; (2) joiner work; (3) plumber and gasfitter work; (4) plaster and tile works; and (5) painter work. Offerers may tender for all or any of the above works. The Office of Public Works, 64 Cochrane Street, Glasgow.

Haslington.—Dec. 18.—For erection of nine single dwelling-houses and nine sets of farm buildings on the Haslington Estate, near Crewe. Deposit £1. The County Estate Office, 49 Northgate Street, Chester, and the Estate Office, 137 Nantwich Road, Crewe.

Hendon.—Dec. 12.—For erection of an elementary school for about 1,000 scholars in the garden suburb district. Send names by Dec. 12 to Mr. James Anderson, secretary to the Committee, Council Offices, Hendon.

Hipperholme.—Dec. 16.—For the mason's, joiner's, slater's, plasterer's, concretor's, plumber's and heating work required in additions to the Wesleyan school. Mr. J. F. Walsh, F.S.I., architect and surveyor, 10 Harrison Road, Halifax.

Horsham.—Dec. 26.—For alterations and additions to the Horsham Grammar School, for the West Sussex and Chichester Joint Education Committee. Send names and £1 1s. deposit by Dec. 11 to Mr. H. P. Roberts, A.R.I.B.A., county education architect, Thurloe House, High Street, Worthing.

Hounslow.—Dec. 23.—For constructing a hospital and other work at Staines Road, Hounslow. Deposit £1 1*s*. Mr. H. R. Peake, 213 High Street, Hounslow.

Ireland.—Dec. 23.—For building a rectory at Ballywalter, co. Down. Mr. William J. Fennell, F.R.I.B.A., architect, 2 Wellington Place, Belfast.

Keighley.—Dec. 13.—For erection of conveniences in West Lane. The Borough Engineer, Keighley.

Kendal.—Dec. 22.—For the whole or separate artificers' works required in constructing the Allen Technical Institute and Museum on the Albert Buildings site. Mr. S. Shaw, F.R.I.B.A., architect, Kendal.

Lancaster.—Dec. 13.—For erection of the girls' grammar school on the High Street estate. Mr. H. Littler, county architect, 16 Ribblesdale Place, Preston.

London.—Dec. 12.—For the builders' work necessary in the erection of a disinfecting station and cottage in Factory Lane, Croydon, for the Corporation. Deposit £1 1*s*. The Borough Engineer, Town Hall, Croydon.

London, Dec. 12.—For re-plastering the ceilings at the Central Library, High Street, Lewisham, and at the Forest Hill library, Dartmouth Road, Forest Hill, for the Lewisham Public Libraries Committee. Surveyor's department, Town Hall, Catford.

London.—Dec. 18.—For proposed additions and internal structural alterations to and redecorating of the administrative block at the isolation hospital, Gap Road, Wimbledon, for the Corporation. Deposit £1 1*s*. The Borough Engineer and Surveyor, Town Hall, Wimbledon.

Macclesfield.—Dec. 23.—For erection at the workhouse of a nurses' home, mortuary, and an extension of the infirmary. Deposit £1 1*s*. Messrs. Whittaker & Bradburn, 19 King Edward Street, Macclesfield.

Newquay.—Dec. 21.—For erecting a classroom, cloakroom, &c., at the Newquay Council School, Cornwall. Mr. B. C. Andrew, architect to the committee, Biddick's Court, St. Austell.

Oldham.—Dec. 20.—For the builders' work required to be done in erection and completion of a number of lock-up shops adjoining the Victoria Market Hall. The Borough Surveyor's Office.

Old Trafford.—Dec. 18.—For the extension of the technical institute, Stretford Road, for the Stretford Education Authority. Deposit £3 3*s*. Messrs. J. Bowden & Co., architects, 14 Ridgefield, Manchester.

Shoreham-by-Sea.—Dec. 16.—For erection of the Shoreham-by-Sea Sunday Schools. Deposit £1 1*s*. Mr. A. W. Nye, M.S.A., Town Hall, Shoreham-by-Sea, Sussex.

South Bank.—Dec. 11.—For the whole of the works required in erection of a school, providing accommodation for 820 children, in Victoria Street, South Bank, for the North Riding of Yorkshire County Council. Send names and addresses by Dec. 11 to Messrs. J. M. Bottomley & Wellburn, architects, 28 Albert Road, Middlesbrough, and 2 Basinghall Square, Leeds.

Stevenage.—Dec. 18.—For erection of a fire station. Deposit 10*s*. 6*d*. Mr. W. O. Times, clerk, Council offices, Stevenage, Herts.

Storrington (Sussex).—Dec. 26.—For proposed alterations and additions to the Council School, for the West Sussex and Chichester Joint Education Committee. Deposit £1 1*s*. Mr. H. P. Roberts, A.R.I.B.A., county education architect, Thurloe House, High Street, Worthing.

Stourbridge.—Dec. 12.—For alterations and additions to the goods offices at Stourbridge Town Station, for the Great Western Railway Co. The Engineer, at Wolverhampton Station.

Swingfield and Elham (Maidstone).—Dec. 16.—For the following works for the Kent County Council: (1) Red House, Swingfield—(*a*) erection of a cowshed, (*b*) carrying out repairs to house, buildings, &c.; (2) Fir Tree Farm, Elham—carrying out repairs to house and buildings. Mr. A. Barker, county land agent, 38 King Street, Maidstone.

Tattenhall.—Dec. 16.—For new Council school at Tattenhall, Chester. Deposit £1. Mr. H. Beswick, F.R.I.B.A., county architect, Newgate Street, Chester.

Teignmouth.—Dec. 14.—For extension of Teignmouth post office, for the Commissioners of H.M. Works and Public Buildings. Deposit £1 1*s*. The Postmaster at Teignmouth Post Office, or H.M. Office of Works, &c., Storey's Gate, S.W.

Tyldesley.—Dec. 20.—For the erection of an elementary Council School to accommodate 500 scholars. Deposit £2. Mr. Henry Littler, county architect, 16 Ribblesdale Place, Preston.

Wales.—Dec. 12.—For erection of stores at Abercrave (Brecon), for the Abercrave Co-operative Society. Deposit 5*s*. Manager, Co-operative Society, Abercrave, Brecon.

Wales.—Dec. 12.—For erection of an electric theatre at Dowlais, for the Victoria Cinema Co., Ltd. Deposit £2 2*s*. Messrs. Johnson & Richards, architects, Merthyr Tydfil.

Wales.—Dec. 12.—For the rebuilding of the Victoria Inn, Dowlais, for Messrs. The Pontycapel Brewery Co. Deposit £1 1*s*. Messrs. Johnson & Richards, architects, Merthyr Tydfil.

Wales.—Dec. 14.—For erection of a stores at Llantwit Fardre, for the Llantrisant and Llantwit Fardre Rural District Council. Mr. T. Saunders, School Street, Pontyclun.

Wales.—Dec. 16.—For erection of a cottage and homestead on Holding Henllys No. 1, Newport (Mon.), for the Monmouthshire Small Holdings and Allotments Committee. Mr. C. R. Harding, county land agent, County Council Offices, Newport, Mon.

Wales.—Dec. 21.—For erection of 42 houses at Seven Sisters, near Neath, for the Bryndulais Building Club. Mr. J. C. Rees, M.S.A., Parade Chambers, Neath.

Wales.—Jan. 5.—For the following works, for the Breconshire Education Committee—namely: Crickhowell Council School, erection of cloakrooms and sundry other alterations to the existing building; Llanganten Council School, addition of class room (32 places), cloakrooms, &c., and sundry alterations to the existing building; Talgarth Council School, erection of girls' cloakroom and other works. Mr. C. W. Best, surveyor to the committee, County Hall, Brecon.

Waltham Cross.—Dec. 14.—For erection and completion of a County Council school at Waltham Cross, Hertfordshire (accommodation 408). Mr. U. A. Smith, county surveyor, Hatfield.

Washington (Durham).—Dec. 18.—For erection of 42 dwelling-houses under the Housing of the Working Classes Act, 1890. Send names and £5 deposit by Dec. 4 to Mr. J. H. Mole, surveyor, Chester-le-Street.

Wigan.—Dec. 18.—For renovation and alterations to St. Catherine's Church, Wigan—viz.: (1) thoroughly cleaning and decorating interior; (2) provision of two new staircases to galleries, new doors, &c.; (3) an efficient system of ventilation. Mr. A. J. Yates, 12 Colinfield, Wigan.

Mr. William Forrest Salmon, F.R.I.B.A., of Rowantreehill, Kilmacolm, and of Glasgow, architect, who died on October 7 last, left personal estate valued at £7,008, of which £6,691 is in Scotland.

Mr. W. H. Ward read a paper last Monday before the Liverpool Architectural Society on "French Renaissance Architecture." The paper was read in place of one entitled "Architecture as an Expression of Faith," by Mr. George Hubbard, F.S.A., who was unable to attend owing to serious illness.

The Executive Committee of the Liverpool Cathedral have accepted the design submitted by Mr. Gilbert Scott for the reredos which is to extend the full width of the sanctuary, and will be about 50 feet in height. The work, which is the gift of a local lady, will cost some £10,000.

Among the papers to be read before the Royal Society of Arts after Christmas are "The Development of Artistic Skill in the Applied Arts," by Mr. Charles C. Allom; "Illuminated MSS.," by Mr. Cyril Davenport; "The Influence of Ozone in Ventilation," by Dr. Leonard Hill and Dr. Martin Flack; "Greek Sculpture," by Professor E. A. Gardner; and three lectures by Mr. Noel Heaton on "Materials and Methods of Decorative Painting."

COMPETITION NEWS.

Cheltenham.—The Town Council decided on Monday to arrange an open competition, instead of one limited to the town, in order to obtain designs for the proposed municipal offices on the Winter Gardens site (south side).

London.—The Willesden Board of Guardians have agreed to invite Messrs. A. Saxon Snell, G. A. Sexton, J. Cash, and W. Jacques to submit sketch plans for the homes for children proposed to be erected on a site adjoining the receiving house.

Manchester.—The City Council on Wednesday approved of the recommendation of Professor R. Blomfield, A.R.A., the assessor, that the design submitted by Messrs. Crouch, Butler & Savage, of Birmingham, in the competition for the proposed library and art gallery on the old Infirmary site in Piccadilly, should be awarded the first premium. The resolution was necessary to fulfil the Council's obligations to those who sent in competitive plans. One of the conditions of the competition was that "in the event of the Corporation not giving any instructions to proceed with the work within twelve months of the assessor's award the selected architect will be paid an additional sum of 400 guineas, which sum, with the initial payment of 100 guineas, will merge in the commission of 5 per cent. if and when the buildings are carried out; and, in the event of the Corporation abandoning the work altogether, the selected architect will be paid a further sum of 500 guineas, making, with the previous payments, a total premium on the entire competition of 1,000 guineas."

York.—At the last meeting of the City Council, a report was received from the Education Committee stating they had advertised for competitive plans for a new school in the South Bank district, the commission offered to the successful architect being 4 per cent. on the estimated outlay, £10,000. Mr. W. Birch moved an instruction to the Education Committee that the conditions be amended so as to allow members of the Royal Institute of British Architects to compete. This instruction was adopted with two dissentients.

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.

An ordinary meeting of the Council of the above body was held on Monday at No. 31 South Frederick Street, Dublin. The President, Mr. A. E. Murray, R.H.A., F.R.I.B.A., occupied the chair, and there were also present:—Messrs. F. Batchelor, J. H. Webb, Lucius O'Callaghan, W. Kaye-Parry, C. H. Ashworth, F. G. Hicks, F. Hayes, G. C. Ashlin, G. P. Sheridan, and C. A. Owen, Hon. Secretary. Mr. Ashlin proposed a resolution of condolence with the relatives of the late Mr. James Rawson Carroll, Fellow of the Institute, and for many years a member of the Council. The draft report of Council for 1911 was read, amended, and adopted. It was resolved to nominate Mr. W. H. Lynn, R.H.A., architect, of Belfast, as a fit and proper recipient of the Royal Gold medal for the year 1912, in recognition of his long and distinguished services to architecture.

BACK-TO-BACK HOUSES IN SCOTLAND.

An appeal was brought in the Court of Session last week by the Corporation of Edinburgh against a judgment of the Edinburgh Dean of Guild Court granting a warrant to the Murrayfield Real Estate Company, Ltd., 63 Frederick Street, Edinburgh, to erect four tenements of three storeys each of dwelling-houses at Piersfield Grove, Edinburgh. There were to be four houses on each floor—two to the front and two to the back. The houses to the front were to be separated from the houses to the back by a longitudinal wall in which there were certain doors into a common staircase.

The application was opposed by the Corporation on the ground that the proposed houses were back-to-back houses within the meaning of section 43 of the Housing and Town-Planning Act, 1909, and that the plans did not make sufficient provision for light and ventilation.

Dean of Guild Carter said that the parties and the Court suffered under the great disadvantage of having to consider the terms of an Act which had been made applicable to Scotland, but the language of which was totally inapplicable to Scottish conditions. Having been informed, after inquiry, of what back-to-back houses in England were, the Dean of Guild Court considered that the houses in the present case were not back-to-back houses within the meaning of section 43. They considered, however, that the system of having four houses on each floor, as proposed in the present plans, was objectionable from the point of view of ventilation, because proper ventilation could not be obtained merely by means of the well of the staircase.

The Corporation appealed on the ground that section 43 was applicable to the proposed houses. There was no appearance for the respondents.

The Court of Session on the 1st inst. recalled the judgment of the Dean of Guild, and remitted to him to refuse the warrant. The Corporation did not ask expenses.

Lord Dundas said the houses in the present case might be back-to-back houses although they did not correspond to English back-to-back houses. The phrase "back-to-back houses" was not technical; rather it was one of colloquial meaning. If one looked at the plans of the houses here one should think that they were back-to-back houses. His Lordship did not propose to attempt any definition of what "back-to-back houses" might mean—an attempt which probably wisely had not been made by the Act of Parliament—but looking to the plans it did seem to him clear enough that the front houses and the back houses stood to one another in the relation of back-to-back houses. The only thing in the nature of openings between them was the doors in the common well of the staircase; and then they had it from the Dean of Guild, whom upon matters of practical knowledge and experience they took as final, that the proposed houses were objectionable from the point of view of ventilation. That was just the kind of objection which section 43 desired to have sustained when it prohibited back-to-back houses; and when one read the section in the light of that objection one might reasonably conclude, without attempting any general definition of the phrase, that the proposed buildings were back-to-back houses within the meaning of the section.

The other two Judges concurred.

The Local Government Board, in sanctioning the loan of £4,200 for the erection of twenty working class dwellings at Guildford, express the view that the deficiency will only be partially met by the houses now proposed to be erected.

The District Committee of the Lower Ward of Lanarkshire report that plans were passed during the year for buildings valued at £78,900. This showed an increase of £15,905 over the previous year, and of £22,240 compared with 1909.

The Netherlands *Staatscourant* of November 25 notifies that (1) the provincial authorities of Groningen have decided to erect a hospital for mental diseases at Het Boterdiep, in Groningen, at a cost of £20,833; (2) the provincial authorities of Utrecht have decided to erect a pharmaceutical laboratory at Catharijnesingel, at a cost of £16,500.

The Southport Town Council on Tuesday discussed the municipal buildings scheme, the estimated cost of which is £25,000. Only that part of it which is for the remodelling of the Council chamber to admit the Birkdale councillors was adopted, and the other part was referred back for reconsideration.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

Cheshire.

Robroyston.—Smallpox hospital.
Pittenweem.—Board School.

Croydon Town Council propose carrying out works during the ensuing winter costing about £35,000, to provide work for the unemployed. The Council have decided to spend £18,000 on a boys' secondary school, and the work will be largely carried out during the winter months.

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the completed specification.

No. 30043. Dec. 28, 1910.—Improved machine for mixing concrete, powders, and the like. Francis Johnson, 64 Westcott Street, Hull, and Edgar Smailes, 2 Salmon Avenue, Cottingham Road, Hull. This invention relates to machines for mixing cement, powders and other materials of that kind, in which blades are mounted on a shaft rotable in bearings. The invention has for its object improvements in the mounting of the mixing blades, whereby such blades will give to any undue pressure, and are not liable themselves to be damaged, and in mounting the door which closes the outlet through which the contents of the machine are discharged whereby such door can be readily locked in its closed and its open positions as required. Fig. 1 is a front elevation. Fig. 2 is a plan view with the hopper removed. A body A of U or similar shape in cross section interiorly is provided with ends A^1, A^2 mounted on legs B, B^1. At one side, at about the centre of its length, is an opening, C, for the discharge of the contents of the machine after such contents have been mixed, enclosed at the sides and bottom by a spout-like casing, C^1, and provided with a door, D, swung on a horizontal spindle, D^1, mounted in suitable brackets or bearings, E, E^1, and in other bearings or brackets F, F^1 on the body of the machine. On the spindle D^1 are formed two eccentrics G, G^1, one end of the spindle being provided with a hand-wheel or handle, *d*, by which it can be rotated to a certain extent. The bearings E, E^1 are provided each with a lug or projection d^1, d^2, and the bearings F, F^1 on the machine body have each a notch in the top or a lug *f*, f^1, in which notches or lugs the lugs or projections d^1, d^2, on the brackets or bearings on the door will rest on the door being raised. Two angle pieces J, J^1, are fitted to the inside of the casing C^1, into which the bottom of the door will slide when the door is closed. The shaft K carries curved blades, passing through the body of the machine, and is mounted in bearings L, L^1. A short shaft M is mounted at one end of the machine, having a fast and loose pulley M^1, M^2, and a pinion wheel, M^3, mounted on it, the pinion wheel M^3 gearing with a spur wheel K^1 on the shaft K. The shaft K has metal arms N, N^1, N^2, N^3, in which are pivoted rocking levers O, to which are fitted the curved blades P, P^1. Each rocking lever has a helical spring connected to it, there being four such springs R, one for each rocking lever, the opposite end of each spring being connected to the bracket. As the shaft rotates and carries the blades around in the machine, should any hard substance get between the machine body or casing and the blades, the blades, by their elastic connection to the shaft, will give to the pressure, and move towards the shaft. The hopper S is provided for the materials. November 15, 1911.

FIG. 1.

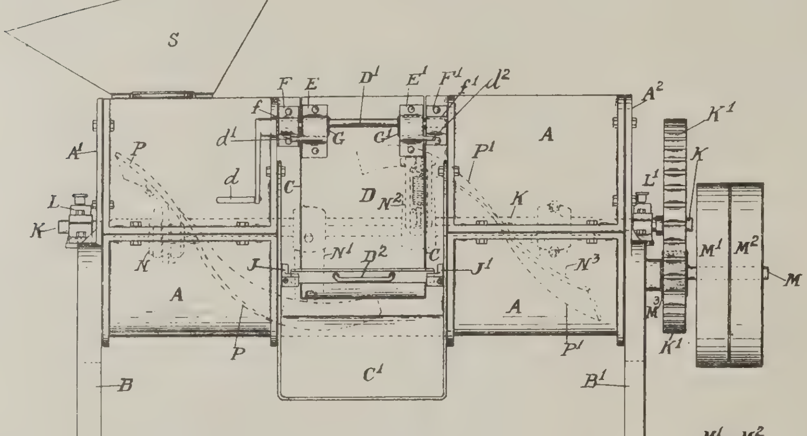

FIG. 2.

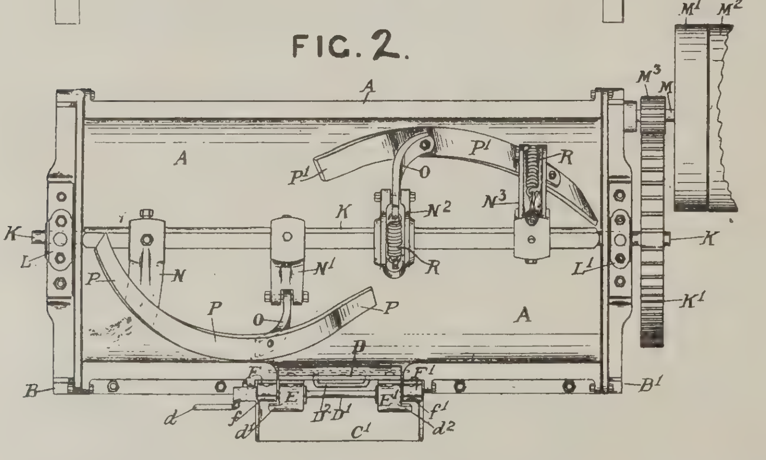

No. 27528. Nov. 26, 1910.—Improvements in the reinforcement of columns, ferro-concrete pillars and the like. Robert Thomson, architect, and W. A. Thomson, both of 164 Nithsdale Road, Pollokshields, Glasgow. This invention relates to the reinforcement of columns, ferro-concrete pillars, and the like (piles for example), and has for its object to provide reinforcing means applicable to existing or in new columns such that they may safely take increased loads and be more economically constructed than heretofore. The reinforcing means consist essentially of a series of rings arranged in horizontal planes eccentrically, or spiral windings, arranged eccentrically about the vertical axis of the column embracing a central axial metal core. The reinforcing may conveniently be made out of mild steel rods, a suitable size of rod being three-eighths of an inch diameter. These rings are easily and cheaply bent cold from rods of such length that the ends overlap. The spring in the metal easily allows of these ends being temporarily separated from each other to allow of the ring being slipped sideways over the vertical core. These rings are in series preferably arranged spirally around the core so as to form opposing members, which act together across the centre of the pillar, their distance apart, vertically, being fixed in accordance with the work they have to do. The rings may be embedded in the plastic concrete as it is filled into the temporary encasing mould, or they may first be fixed in position, then the usual shuttering and the concrete be finally run in around them. Fig. 1 is a plan. Fig. 2 an example of a column with the improved reinforcing means arranged about the axial core. Fig. 3 an example of a ring. B is the core. The outline of the column is indicated by dotted lines A, and in fig. 3 the core of the column by dotted lines B. The rings are formed of such length that their ends overlap. They are assembled during the building

FIG. 1.

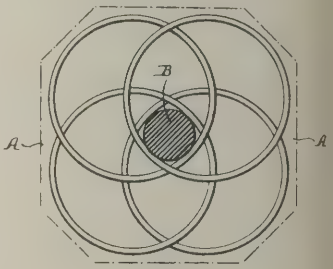

FIG. 2.

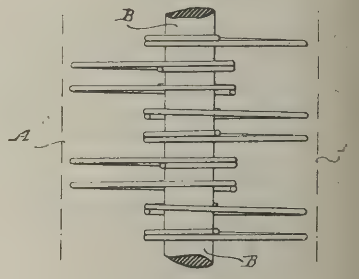

FIG. 3

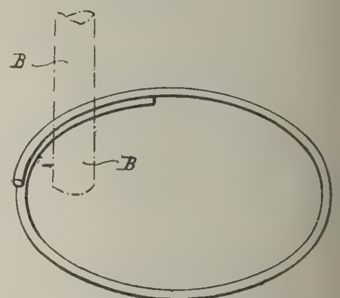

of the column—usual shuttering being used—in horizontal planes radially about an axial core B one above another. Each ring thus embraces a mass of concrete, which is put in compression by any outward radial strain tending to distort the ring and so reduce its contained area. November 15, 1911.

VARIETIES.

The Board of Management of the Chester Infirmary on Tuesday decided to proceed at once with their scheme for the extension and renovation of the infirmary, at a cost of over £25,000. The abandonment by the Chester Town Council of the electricity works as a site for the refuse destructor was reported.

The Evesham Town Council have received the sanction of the Local Government Board to proceed with the scheme for improving and extending the Evesham Sewerage Works. The Board have approved the borrowing of £7,286 for structural work, &c., £1,503 for machinery and distributors, and £300 for ferro-concrete work.

H.M. Consul at Sao Paulo (Mr. D. R. O'Sullivan-Beare) reports that a company has been formed at that place, with a capital of about £333,000, for the purpose of erecting in the city a large hotel with all modern improvements. All material required for the construction and equipment of the hotel may be imported free of duty. The name of the company may be obtained by British manufacturers on application to the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

The Conveners' Committee of the Scottish Exhibition recently held in Glasgow have accepted the following tenders for the material of the exhibition buildings:—Mr. Charles Brand, Dundee, the Palace of Industry, Concert Hall, Fire Station, and certain smaller buildings, £1,740; Mr. John F. Glass, Glasgow, the Kelvin Hall, the Amphitheatre club and restaurants connected with it, £147, the Popular Restaurant £127, and other buildings, making a total price of £575; Mr. James P. Christie, Glasgow, the Palace of Fine Art, £289, and the Palace of History, £130; and Messrs. Jackson & Co., Scotstoun, the Atholl Restaurant at £340.

In view of the demand for houses in Great Harwood, near Blackburn, the District Council have decided to obtain tenders for proposed municipal dwellings without waiting for the sanction of the Local Government Board. The Board held their public inquiry several months ago; but they object to the financial basis of the scheme and to the fact that the plans do not conform to the Council's own by-laws. A movement is on foot for preparing a petition for presentation to Mr. John Burns.

The Director-General of Commercial Intelligence of British India has forwarded to the Board of Trade a copy of the Calcutta Improvement Act, 1911, providing for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings, &c. A board of trustees is to be set up to carry out the provisions of the Act. The copy of the Act may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, E.C.

The next ordinary general meeting of the Surveyors' Institution, being the first of the two afternoon meetings arranged for the convenience of country members, will be held in the Lecture Hall of the Institution, 12 Great George Street, S.W., on Monday, 11th inst., when a paper will be read by Mr. W. A. Haviland, entitled "The Burden of Upkeep on Rural Estates and its relief under Section 69 of the Finance Act, 1910." The chair will be taken at five o'clock.

The Commissioners of National Education in Ireland, in their report for the school year 1910-11, call attention to the inadequacy of the grants for the building and improvement of national schoolhouses, and state that in correspondence with the Treasury they had frequently adverted to the fact that many of the existing buildings were so unsuitable and insanitary as to be a source of positive danger to the health of the pupils. The Treasury in April last informed the Commissioners that further provision would be made to enable them to deal with the urgent cases submitted to them to such an extent as would permit of their sanctioning grants by the end of the current financial year (March 31, 1912), to the approximation of £108,000.

The Glasgow Corporation have agreed that the borrowing powers of the Corporation for the purpose of the Municipal Buildings Act, 1878, be increased from £660,000 to £860,000. The additional powers are required for the payment of the purchase price of properties in John Street and George Street recently acquired by the Corporation and to meet the cost of such buildings as the Corporation might resolve to erect upon the land belonging to them on the east side of John Street between Cochrane Street and George Street. The cost of the site (including buildings already acquired) was stated to be £30,000, and the cost of new buildings and furnishings £170,000.

Mr. John Burns, M.P., replying in the House of Commons on Monday to Mr. Sylvester Horne, who asked what pressure was being exercised by the Local Government Board upon the local authorities to insure that all the new colliery districts should be built as required by the Town Planning Act, said:—A conference was held in May last of representatives of the local authorities in the Doncaster district, at which I understand it was decided to be advisable that plans should be prepared of areas suitable for town planning under the Housing and Town Planning Act, 1909, with a view to the preparation of a comprehensive scheme. No definite decision had been come to by the Doncaster Rural District Council at the end of October last to prepare a town planning scheme for any area in their district. I have not lost sight of the matter, or of its importance; but there are considerable difficulties arising in connection with the area in question which must not be under-estimated.

The Manchester City Council on Wednesday approved of a resolution of the Highways and Paving Committee accepting tenders for the construction of main sewerage works in Claremont Road, Bolton Road, and Queen Street, Pendleton, for £4,346, and in Dock Road, Langworthy Road, Liverpool Street, for £16,532.

TRADE NOTES.

A large number of towns in the vicinity of London now possess motor fire engines. Among them may be mentioned Tottenham, Finchley, Harrow, Willesden, Bromley, Chislehurst, Dartford, Merton, Heston and Isleworth. Two more must now be added—namely, Penge and Mitcham; and both have selected the Merryweather petrol-driven motor fire engine, with "Hatfield" reciprocating pump. The decision of the Penge Council was not arrived at until the capabilities of the "Hatfield" design and of a rival engine fitted with the turbine type of pump had been exhaustively compared in a series of tests. The Penge engine will have a pumping capacity of 350 gallons per minute. In the case of Mitcham, a 300-gallon engine has been selected. It is twenty-seven years ago since the Mitcham Fire Brigade obtained their existing horse-drawn steam fire engine from Messrs. Merryweather. It is still in service.

Under the direction of Mr. H. R. Crabb, A.M.I.C.E., borough surveyor, Pembroke, the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to the Town Hall, Pembroke.

Actors, authors, and others in the public eye have sometimes an amiable weakness for Press Notices, and these they industriously gather and paste in a special book. But it can be rarely indeed that the verdict is so unanimous as in the case in a sixty-page pamphlet issued by Messrs. Clement Talbot, Ltd., automobile engineers, North Kensington, W., concerning their "Invincible" Talbot cars. In it are collected the opinions of nearly fifty leading papers on the firm's exhibit at the recent Motor Show at Olympia, and with one voice they praise. This is not to be wondered at, for, apart from the improvements in detail shown for the first time, the Talbot cars have all the prestige of an extraordinarily high record of success in open competitions. A copy of the booklet will be sent on application to Messrs. Clement Talbot, Ltd.

Anyone weighed down by the responsibility of selecting Christmas presents may be recommended to call in at the premises of Messrs. Oetzmann & Co., Ltd., in the Hampstead Road, W. As the field of choice is a very wide one, it may be advisable to obtain one or more, at any rate, of their small catalogues before entering, so as to have a definite department to steer for. The choice may range between suites of furniture and a salt-cellar, or a billiard-table and fire-irons.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Banbury.—Jan. 8.—The Town Council invite designs by January 8 for workmen's dwellings to be erected within the borough. Applications for particulars, accompanied by 10s. deposit, which will be returned on receipt of bonâ-fide designs, should be made to Mr. Arthur Stockton, town clerk, Town Hall, Banbury.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bolton.—The King Edward VII. Memorial Fund Committee invite competitive plans from architects now practising as principals within the county borough of Bolton for the King Edward VII. Memorial Nurses' Home proposed to be erected at the Bolton Infirmary. Plan of the site and instructions may be obtained upon payment of £1 1s., which sum will be returned to the competitors provided they shall have sent in *bona fide* plans and particulars and shall have returned all documents, plans, &c. Mr. Samuel Parker, hon. secretary of the Committee, Town Hall, Bolton.

ARCHITECTURAL CATALOGUE No. 17, Section III., SENT ON APPLICATION.

LONDON: Craven House, Kingsway, W.C.
LIVERPOOL: 22 & 24 South Castle St.
EDINBURGH: 22 Picardy Place.
GLASGOW: 32 & 34 Bothwell St.
Works: FALKIRK, N.B.

Cosford.—Dec. 28.—The Rural District Council are prepared to receive plans for the erection of cottages throughout their district, where required. The plans should show the class of cottage, and are to state the probable cost of erection either in rows of six or in pairs. Mr. Alfred Newman, Clerk to the Council, Hadleigh, Suffolk.

Hastings.—Dec. 31.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s*. deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

Ireland.—Jan. 9.—The Magherafelt Technical Instruction Committee invite competitive designs for a technical school, proposed to be erected in Magherafelt, the total expenditure, including provision of sewerage and water supply, not to exceed £1,200. Mr. W. D. Cousins, County Technical Office, Courthouse, Coleraine.

London.—Feb. 17.—The Port of London Authority invite preliminary sketch designs in competition for head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1*s*., which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

Rochdale.—Dec. 22.—The Board of Management of the Infirmary invite architects practising in Rochdale prior to January 1, 1911, to submit plans, designs, and estimates for extending the present buildings. Conditions of competition, with other information, together with instructions to architects, can be obtained on application to the secretary. An assessor has been appointed by the committee. Mr. T. Elvyn Kershaw, secretary, Secretary's Office, the Infirmary, Rochdale.

Spennymoor.—Jan. 9.—The Urban District Council invite competitive plans and designs for a public hall, market, and offices, &c. Particulars may be obtained on payment of a deposit of £2 2*s*., which will be returned on receipt of a *bona fide* design. Premiums of £50, £25, and £10 are offered. Mr. F. Badcock, clerk, Council Offices, 3 James Street, Spennymoor. (See advertisement.)

Stafford.—Jan. 6.—The Corporation invite designs for a public library. An assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

CONTRACTS OPEN.

Ashford.—Dec. 18.—For the builder's work in connection with the heating of the cloakroom and the erection of a roof over portion of open yard to form a cycle shed, required to be carried out at the Ashford County School for Girls, Kent. Mr. J. Quick, correspondent, Technical Institute, Folkestone.

Barking.—Dec. 22.—For the works comprised in the extension of the electricity works, East Street. Deposit £2 2*s*. Mr. C. F. Dawson, surveyor, Public Offices, Barking, Essex.

Barrow-in-Furness.—Dec. 20.—For the construction of conveniences in Hindpool Road and Salthouse Road, and the extension of the existing convenience in Church Street. Borough Engineer and Surveyor, Town Hall, Barrow-in-Furness.

Beckenham.—Dec. 18.—For certain works of decoration and repairs to be carried out at the public elementary schools during the Christmas holidays. Deposit £1. Mr. John A. Angell, surveyor, Council Offices, Beckenham.

Bexley.—Jan. 5.—For erection of a Council school to accommodate 250 scholars at Bexley, Welling, Kent. Send names and £1 deposit by Dec. 18 to Mr. F. W. Crook, secretary, Caxton House, Westminster, S.W.

Birkdale.—Dec. 28.—For erection of caretaker's lodge, cricket pavilion, and bowls-house at the Bedford Road Recreation Ground. Deposit 30*s*. The Town Hall, Birkdale, Lancs.

Birmingham.—Dec. 22.—For the construction of a subway at Birmingham new parcel office, for the Commissioners of H.M. Works and Public Buildings. Deposit £1 1*s*. Mr. J. Tosh, H.M. Office of Works, Pinfold Street, Birmingham, and H.M. Office of Works, &c., Storey's Gate, S.W.

Bradford.—Dec. 20.—For (*a*) building a switch-room and an air filtration chamber at Valley Road Electricity Works (Contract "R. 18"), and (*b*) supplying and erecting the constructional iron and steel work for the foregoing buildings (Contract "R. 19"), for the Corporation. Deposit £1 1*s*. each. Mr. T. Roles, city electrical engineer and manager, Electricity Offices, Town Hall, Bradford.

Broadclyst.—Dec. 30.—For rebuilding Elbury farm buildings, in the parish of Broadclyst, Devon. Messrs. E. H. Harbottle & Son, architects, County Chambers, Exeter.

Bromley.—Dec. 19.—For erection of a women's convenience on the Martin's Hill recreation ground. Deposit £1. The Borough Engineer's office, Municipal Offices, Bromley, Kent.

Carlisle.—Dec. 18.—The Board of Guardians invite provisional tenders (subject to the sanction of the Local Government Board) for erection of nurses' home and pavilions for consumptives at Fusehill Workhouse. Send names by Dec. 18 to Mr. G. Armstrong, architect, 24 Bank Street, Carlisle.

Dorchester.—Dec. 19.—For the construction of sheep pens and concrete base for temporary sheep pens at the Cattle Market. The Borough Engineer, Dorchester.

East Ham.—Dec. 18.—For the demolition of the old vicarage building adjoining Vicarage Lane School and for the removal of the old materials resulting from such demolition, for the Education Committee. Mr. H. C. Padgett, secretary, Town Hall, East Ham.

Edenbridge.—Jan. 5.—For erection of a special subjects building at Edenbridge, Kent. Send names and £1 deposit by Dec. 18 to Mr. F. W. Crook, secretary, Caxton House, Westminster, S.W.

Edinburgh.—Dec. 18.—For erection of the fire-resisting floors, &c., in connection with the alterations and extension of the central telephone exchange, Rose Street, Edinburgh, for the Commissioners of H.M. Works and Public Buildings. Any system of construction may be adopted for the work. Deposit £1. H.M. Office of Works, 3 Parliament Square, Edinburgh, or at H.M. Office of Works, G.P.O., Glasgow.

Esh Winning.—Dec. 18.—For erection of new printing premises. Messrs M. D. Elliott & Sons, printers, Durham Road, Esh Winning, Durham.

Fakenham.—Jan. 11.—For erection of new school at Fakenham and for the erection of cookery and manual instruction rooms on the same site, for the Norfolk Education Committee. Send names and 1*l*. 1*s*. deposit by Dec. 23 to Mr. H. J. Green, architect, Castle Meadow, Norwich, and Paradise Chambers, King's Lynn.

Great Yarmouth.—Dec. 20.—For erection of a boys' school at Cobholm Island for 440 children. The Borough Surveyor, Town Hall, Great Yarmouth.

Guildford.—Dec. 29.—For the following works, &c., for Guildford Gas Light and Coke Co.—viz.: (*a*) brickwork and and slating for the new coal store; (*b*) supply of materials for (excluding steelwork) and erection of an exhauster house; (*c*) tiling of engine-room in basement of present retort house. Deposit £1 1*s*. Mr. P. C. Cleasby, Gasworks, Guildford.

Guildford.—Jan. 6.—For the erection of 20 cottages in Cline Road. Deposit £2 2*s*. Mr. A. D. Jenkins, Town Clerk, Bridge Street, Guildford, Surrey.

Haslington.—Dec. 18.—For erection of nine single dwelling-houses and nine sets of farm buildings on the Haslington Estate, near Crewe. Deposit £1. The County Estate Office, 49 Northgate Street, Chester, and the Estate Office, 137 Nantwich Road, Crewe.

Houghton-le-Spring (Durham).—Dec. 20.—For erection of two wards, with lavatories annexed, and three nurses' rooms, also corridors to connect same with existing buildings, for the Rural District Council. Deposit £1 1*s*. Mr. W. Morley, sanitary surveyor, Le Spring House, Houghton-le-Spring, Durham.

Hounslow.—Dec. 23.—For constructing a hospital and other work at Staines Road, Hounslow. Deposit £1 1*s*. Mr. H. R. Peake, 213 High Street, Hounslow.

Huddersfield.—Dec. 23.—For the various works required in erection of 38 workmen's tenement dwellings, Wakefield Road, Mold Green, for the Corporation. Mr. K. F. Campbell, M.Inst.C.E., borough engineer and surveyor, 1 Peel Street.

Ireland.—Dec. 23.—For building a rectory at Ballywalter, co. Down. Mr. William J. Fennell, F.R.I.B.A., architect, 2 Wellington Place, Belfast.

Keighley.—Dec. 23.—For extensions to the Technical Institute. Send names by Dec. 23 to Messrs W. H. & A. Sugden, architects, North Street, Keighley.

Kendal.—Dec. 22.—For the whole or separate artificers' works required in constructing the Allen Technical Institute and Museum on the Albert Buildings site. Mr. S. Shaw, F.R.I.B.A., architect, Kendal.

Loose.—Jan. 8.—For erection of a Council school to accommodate 400 scholars, at Loose, Kent. Send names and £1 deposit by Dec. 18 to Mr. F. W. Crook, secretary, Caxton House, Westminster, S.W.

London.—Dec. 19.—For the construction of a weighbridge pit and the erection of a corrugated iron office at the sewage works, Warple Way, Acton. The Surveyor, Council Offices, Winchester Street, Acton.

London.—Jan. 10.—The Guardians of the Poor of the Parish of St. Giles, Camberwell, invite tenders for the erection of additional accommodation for nurses at their Workhouse, Constance Road, East Dulwich, S.E. Deposit £2 2*s*. Mr. A. E. Mullins, architect, 48 Peckham Road, Camberwell, S.E.

Macclesfield.—Dec. 23.—For erection at the workhouse of a nurses' home, mortuary, and an extension of the infirmary. Deposit £1 1*s*. Messrs. Whittaker & Bradburn, 19 King Edward Street, Macclesfield.

Manchester.—Jan. 6.—For the following work, &c., for the Manchester Education Committee—viz.: (1) erection of the municipal school of domestic economy, High Street, Chorlton-on-Medlock (deposit £2 2*s*.); (2) supply of red terra cotta (deposit £1 1*s*.); and (3) supply of buff terra cotta in connection therewith (deposit £1 1*s*.). The Education Offices, Deansgate, Manchester.

Milborne St. Andrew (Dorset).—Dec. 22.—For alterations to the County Boys' Home Industrial School. The County Boys' Home, Milborne St. Andrew, Dorset, and Messrs. Fletcher, Son & Brett, Wimborne.

Milnrow.—Jan. 5.—For erection of an elementary school at Milnrow, near Rochdale, to accommodate 400 children, for the Lancashire Education Committee. Deposit £2. Mr. H. Littler, county architect, 16 Ribblesdale Place, Preston.

Newquay.—Dec. 21.—For erecting a classroom, cloakroom, &c., at the Newquay Council School, Cornwall. Mr. B. C. Andrew, architect to the committee, Biddick's Court, St. Austell.

Oldham.—Dec. 20.—For the builders' work required to be done in erection and completion of a number of lock-up shops adjoining the Victoria Market Hall. The Borough Surveyor's Office.

Old Trafford.—Dec. 18.—For the extension of the technical institute, Stretford Road, for the Stretford Education Authority. Deposit £3 3*s*. Messrs. J. Bowden & Co., architects, 14 Ridgefield, Manchester.

Stevenage.—Dec. 18.—For erection of a fire station. Deposit 10*s*. 6*d*. Mr. W. O. Times, clerk, Council offices, Stevenage, Herts.

Stockport.—Dec. 19.—For construction of butchery department, Brinksway branch, for the Stockport Industrial and Equitable Co-operative Society, Ltd. Deposit 10*s*. 6*d*. Messrs. Wrathmell & Blackshaw, architects, Queen's Buildings, St. Peter's Square, Stockport.

Storrington (Sussex).—Dec. 26.—For proposed alterations and additions to the Council School, for the West Sussex and Chichester Joint Education Committee. Deposit £1 1*s*. Mr. H. P. Roberts, A.R.I.B.A., county education architect, Thurloe House, High Street, Worthing.

Tyldesley.—Dec. 20.—For the erection of an elementary Council School to accommodate 500 scholars. Deposit £2. Mr. Henry Littler, county architect, 16 Ribblesdale Place, Preston.

Wales.—Dec. 20.—For the erection of 18 (more or less) houses on the Tir Merchant estate, Bedwas Road, Caerphilly, for the Tir Merchant No. 1 Building Club. Messrs. T. E. Richards & Kaye, architects, Pontypridd and Cardiff.

Wales.—Dec. 21.—For erection of 42 houses at Seven Sisters, near Neath, for the Bryndulais Building Club. Mr. J. C. Rees, M.S.A., Parade Chambers, Neath.

Wales.—Dec. 21.—For work to be done to Newport House, Treharris, for the Workmen's Co-operative Society. Mr. W. Dowdeswell, M.S.A., architect, Treharris.

Wales.—Dec. 22.—For erection of a new farmhouse and buildings forming a new homestead at Henfryn, Caersws, also for carrying out additions and alterations to the existing dwelling-house and buildings at Henfryn, for the Montgomeryshire County Council. Mr. P. Wilson-Jones, F.A.I., county agent, Newtown.

Wales.—Jan. 5.—For the erection of a culvert bridge and wing walls at Aberporth, for the Cardigan Rural District Council. Mr. D. Davies, clerk, Cardigan.

Wales.—Jan. 5.—For the following works, for the Breconshire Education Committee—namely: Crickhowell Council School, erection of cloakrooms and sundry other alterations to the existing building; Llanganten Council School, addition of class room (32 places), cloakrooms, &c., and sundry alterations to the existing building; Talgarth Council School, erection of girls' cloakroom and other works. Mr. C. W. Best, surveyor to the committee, County Hall, Brecon.

Wales.—Jan. 8.—For erection of a Council school building at St. Ishmaels, in the county of Pembroke. Mr. D. E. Thomas, architect, 17 Victoria Place, Haverfordwest.

Wallasey (Cheshire).—Dec. 18.—For the erection of shelter and bowl-house, North Seacombe Recreation Ground, Demesne Street, Seacombe, for the Corporation. Deposit £1. Mr. W. H. Travers, A.M.I.C.E., borough engineer and surveyor, 18 Falkland Road, Egremont, Wallasey.

Walthamstow.—Jan. 11.—For erection of a county high school for 300 girls at Church Hill, Walthamstow. Deposit £5. Mr. C. J. Dawson, F.R.I.B.A., architect, 11 Cranbrook Road, Ilford, Essex.

Warrington.—Dec. 18.—For erection of a bathroom to 72 Mersey Street, for the Finance and Estates Committee. The Borough Surveyor, Town Hall, Warrington.

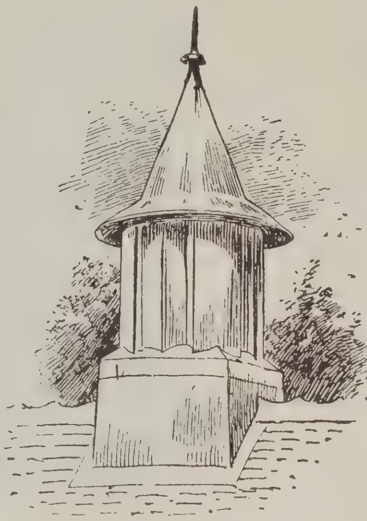
TRADE NOTES.

Messrs. Kershaw, Brassington & Co., Lancaster and Settle, have been favoured with an order for ventilating Dallas Road Schools, Lancaster, from the Corporation. The work is now in progress, and open to inspection under the surveyor, Mr. A. G. Bradshaw.

How many thousands of London's buildings are rendered unsightly by the hideous contrivances which do duty for chimney pots! In some instances, otherwise fine dwellings present a shabby and dilapidated picture when the eye wanders to the distorted and broken "tin pot" apologies for chimney pots. Fortunately a desire is growing to remedy this defect. Be the building of stone, terra-cotta, or brick, chimney pots of pleasing design in buff terra-cotta or salt glaze are gaining great favour, not only because of the splendid finish they give, but chiefly for their primary object, which is the curing of smoky chimneys, to say nothing of their value as ventilators in summer time. Ninety per cent. of cures is something to be proud of, and the Patent Chimney Pot Co., Ltd., of 105 Albion Street, Leeds, the makers of the "Champion," well deserve the response which they continue to receive at home and abroad for so valuable and well tried an invention.

The diagram here given illustrates the latest design for Boyle's patent "air-pump" ventilator. It is claimed for it that it possesses double the extracting power of earlier forms, while it is only one-half the price. It is strongly made of the best cold rolled galvanised steel, which is afterwards painted. This design, which is numbered 175B, is another addition to the long list of successes which have fallen to Messrs. Robert Boyle & Son, 64 Holborn Viaduct, E.C., and 110 Bothwell Street, Glasgow.



The steady progress made by "Ceresit"—the patent waterproofing material for brick, stone and concrete structures—since its introduction into this country less than two years ago is sure evidence that the claims of its sponsors, the British Ceresit Waterproofing Co., Ltd., of 315 Princes Mansions, Victoria Street, S.W., are well founded. It is being used by H.M. Office of Works, the War Office, the leading railway companies, and a large number of public bodies. The photograph here produced is of the Gainsborough Hospital, in North Lincolnshire, the architect for which, Mr. W. Eyre, specified the use of "Ceresit" with a view of making the roof absolutely waterproof. The present opportunity may be taken to impress on all interested the fact that "Ceresit" is not a "paint." It is used only in combination with sand and cement, and a rendering of these materials from $\frac{3}{4}$ of an inch to 1 inch in depth will keep out all wet and moisture, even under a pressure of 50 lbs. to the square inch.

SELECTED DESIGN FOR NEW LI

LONDON ASSOCIATION OF MASTER STONEMASONS.

The third annual dinner of the London Association of Master Stonemasons was held at Cannon Street Hotel, E.C., on the 12th instant. The chair was taken by Mr. Fred Corben, president. Among those present were Mr. F. T. Shadbolt (Master of the Worshipful Company of Masons), Mr. Gerald C. Horsley, F.R.I.B.A. (President of the A.A.), Mr. G. Bird Godson (President of the London Master Builders' Association), Mr. A. L. Blow (Past-Master of the Worshipful Company of Masons), Mr. C. Stanley Peach, F.R.I.B.A., Mr. Stephen Collins, M.P., J.P., Mr. Harold A. Woodington, A.R.I.B.A., Mr. T. Sturge Cotterell, J.P., Mr. R. H. Weymouth, F.R.I.B.A., Mr. A. H. Ryan-Tenison, F.R.I.B.A., and Mr. Walpole Collins, hon. secretary.

After the loyal toasts had been musically honoured, Mr. Stephen Collins, M.P., J.P., proposed "The City Companies," tracing their growth from the old guilds until the present day.

Mr. F. T. Shadbolt (Master of the Worshipful Company of Masons) in replying to the toast, said the origin of the masons was lost in antiquity. It was regrettable that the custom of apprenticeship had not been maintained by which the boy who joined at fourteen was turned out a fully-qualified workman at the age of twenty-one. The Masons' Company had been very powerful at various times since its formation about 1420, though it was only a small company now. Sir Christopher Wren was a member, and so were Thomas Strong and Edward Strong, who carried out the work.

Mr. Fred Corben, the President, proposed "The Association." While recently in Rome he had, he said, been greatly impressed by the Colosseum. The structure was a magnificent example of the durability of stone. Furthermore, it showed that when once stone had left the mason's hands and found its proper position in a building, it was practically of no value whatever for any other purpose. When the power of Rome declined the authorities raised money by tearing out the bronze clamps between each block. The large holes so caused are to be seen all over the surface. What would have happened if the stone had been worth pulling down? The Association had been spending considerable energy in endeavouring to squash a contract clause the effect of which would be to prevent builders from sub-letting their stonework. They, as a body, were essentially sub-contractors. Why there seemed to be a certain amount of odium attaching to that word it was difficult to say. To his mind it was wrong. Modern methods of stone working necessitated the putting down of such expensive machinery that the majority of builders would rather not do it. But the master mason is so situated that if he receives the sub-contract he can get it done in the best possible way. Their Association argued that no one was better fitted to carry out stonework than the man who had given his life to the trade. They considered they had a grievance in that clause, and they appealed for support in their contention that they had a right to do this stonework under a sub-contract. Prices to-day were even still lower than they were twelve months ago, notwithstanding the fact that prices had been raised by the quarry owners, and notwithstanding the Insurance Bill. The present prices were the lowest they had ever touched in the past twenty-five years. Outside competition had something to do with it. But he believed that anything artificial would never take the place of real stone, and he also believed that an architect could get a good Bath stone front for the same price as he paid for the artificial.

Mr. F. J. Barnes, C.C., in proposing "The Architects and Surveyors," said they would have to go beyong the cradle of civilisation to find a time when architects were not. There never had been a period when the architect was so appreciated as at the present day, because his problems had never been so complex. The surveyors were the "handy men."

Mr. Gerald C. Horsley, F.R.I.B.A., in replying for the architects, remarked that amongst the building crafts there was none more ancient or more distinguished than the craft of the mason. During the passage of the centuries the dividing line between the art of fine masonry and the fine art of architecture had always been a thin one, while the sympathy between the two has been of the fullest and most practical kind. Some of the ablest sculptors the world has seen began life in a mason's yard. Thus the mason's craft is the *fons et origo* of many sublime manifestations in art. No one could survey the mediæval cathedrals or some of the ancient temples without being conscious that the sculptors and architects of those

days were in many cases the master masons. The mason of some centuries ago must have had much more creative and artistic instinct than at present, and he was able to grasp and carry out the design of the master mind without the elaborate drawings now necessary. This to some extent proves that the ordinary craftsman has now become more mechanical. In St. Paul's Cathedral, though first place in honours is given to the great architect who planned and designed it, yet all would recognise that the masons employed there knew their work; yet they must have carried it out without the aid of such elaborate drawings as they had nowadays. An architect would be much aided in his work if the craftsmen working under him were more highly trained. The aim then should surely be to re-inspire the artistic and creative insight in the young mason, while at the same time to give him a thorough technical education so that he should understand any design submitted to him, first through his intelligence, and then through his technical skill. Support ought, therefore, to be given to the schools and classes for the training of a young mason in the higher branches of his craft; for instance, in the setting out of difficult problems of masonry such as domes, vaultings, covings, spiral staircases, &c. Such special work as this, with some study of the rudiments of architecture, in order better to grasp the meaning of drawings, should be undertaken by all young craftsmen in the schools. Nor would this interfere with the admirable apprenticeship system—on the contrary, it would be in addition to it. The higher and more thorough this training is, the more grateful will architects be; for the architect thoroughly acknowledges and comprehends that the success of his design largely rests with the stonemason, and that what ministers to the honour and progress of one art must minister to the honour and progress of the other.

Mr. W. A. Haskins, F.S.I., responded for the surveyors. Stonemasons and quantity surveyors were, he said, growing more and more into touch. While believing that the English system of including the different building contracts under one contractor to be the best one, he did consider that the way the stonemasons were treated was very bad indeed, and it was a wonder to him why they permitted it to exist. Stonemasons now occupied a most insignificant position, and were not even recognised as sub-contractors. It rested with them to change that condition of affairs, and to see that architects treated them on the same footing as the other sub-contractors who received their instructions direct. They would have to make themselves heard more, and to knock on the doors of the architects.

Mr. C. W. Courtenay, J.P., proposed "The Builders and Contractors," and Mr. G. Bird Godson, who responded, said that the word "unity" had hitherto been left out of the speeches, though it ought to be a password. There would come a time when they would find it absolutely necessary to have unity. Possibly there would be trouble in the near future in the building trades, and they would require unity, not for the purpose of oppressing the weak, but to resist the strong. He felt sure that if any unreasonable demands should be made, there would be all the unity that was necessary between the London Master Builders' Association and the London Association of Master Stonemasons.

Mr. T. Sturge Cotterell, J.P., proposed "The Visitors," and Mr. Alexander Ritchie, J.P., responded.

The toast of "The President" was given by Mr. Frank Mortimer, and, after being musically honoured, was replied to by Mr. Fred Corben.

A musical entertainment was gone through.

Mr. Walter Brierly has prepared plans for the erection of a new mansion on the site of "Zion Hill," near Thirsk.

The Royal Institute of British Architects at their business meeting on the 4th inst. elected five Fellows, fifty-six Associates, forty-three Licentiates, and two Honorary Associates.

The Senate of the University of London on Wednesday were informed that a gentleman who desired for the present to remain anonymous has offered to erect at University College "a building for (*a*) the combined School of Architecture (resulting from the amalgamation of the schools at present separately conducted at University College and King's College), together with the following, so far as a sum of £30,000 will suffice, viz.:—(*b*) studies for the teaching of sculpture and the rearrangement of the School of Fine Art, and (*c*) the Department of Applied Statistics, including the Laboratory of Eugenics."

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

Berkshire.
Wokingham.—Cottage, Gipsy Lane.
Guardians' Children's Scattered Homes, Oxford Road.
"High Close" and "Tithe Barn": additions.

Cheshire.
Macclesfield.—Eleven houses, Ryle Street. Mr. O. P. Milne (of London), architect.

PATENT SPECIFICATIONS PUBLISHED DECEMBER 7, 1911.

Selected by Mr. James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

No. 24,543. April 22, 1911.—William Podmore, West View House, Porthill, Stafford, and C. F. Bailey, Greenbank, Lawton, Chester. Improvements in or pertaining to filtering apparatus.

26,394. Nov. 14, 1910.—John Hutton, 19 Blenheim Street, Newcastle-on-Tyne. An improved gully grid.

26,508. Nov. 15, 1910.—The Richmond Gas Stove and Meter Co., Ltd., Academy Street, Warrington, Lancaster, and J. A. Ransome, "Shirley," Hill Cliffe, Warrington, and Leslie Dixon Chippendale, Cross Lane, Latchford Without, Warrington. Means for controlling the supply of gas to burners.

26,788. Nov. 17, 1910.—J. C. Moulden and H. W. Webster, both of Seaton Carew, Durham. Improvements in or relating to zinc distillation.

26,789. Nov. 17, 1910.—E. A. Muskett and Rubber Substitute (1910), Ltd., both of 5 Great Winchester Street, London. Improvements in or relating to waterproofing solutions.

27,082. Nov. 22, 1910.—Robert Thomson, architect, and W. A. Thomson, both of 164 Nithsdale Road, Pollokshields, Glasgow. Improvements in ferro-concrete floors.

27,277. Nov. 23, 1910.—W. Kennedy-Laurie Dickson, 4 Denman Street, Piccadilly Circus, W. Improved thermally-actuated electric switch.

27,363. Nov. 24, 1910.—C. P. Ogilvie, Lawford Place, Manningtree, Essex, and George Mitchell, 39 Victoria Street, Westminster. Improvements in or relating to wood working machines.

27,373. Nov. 24, 1910.—George Hatton, Saltwells, Brierley Hill, Stafford. An improved bar for use in reinforced concrete.

27,374. Nov. 24, 1910.—George Hatton, Saltwells, Brierley Hill, Stafford. An improvement in reinforced concrete.

27,488. Nov. 25, 1910.—Convention application Nov. 25, 1909. Friedrich Schmid, 49a Ludwigstrasse, Stuttgart. Improved earth anchor.

27,653. Nov. 28, 1910.—Vittorio Storti, 44 Via Goldoni, Milan. An improved method of and apparatus for reproducing solids, statuary, and the like.

27,862. Nov. 30, 1910.—J. A. Kittridge, 8 Montpelier Gardens, East Ham, Essex, and T. E. Davis, 38 Hatherly Gardens, East Ham. Improvements in means for fastening and securing smoke-boxes and other doors.

27,986. Dec. 1, 1910.—T. F. Canning, 51 Wanstead Park Road, Ilford. Electric apparatus for gas lighting and extinguishing purposes.

28,818.—Dec. 12, 1910.—F. J. Cox and The Machine Gas, Ltd., Welsbach House, Gray's Inn Road, W.C. Improvements relating to air-gas apparatus.

28,838. Dec. 12, 1910.—F. B. Burley, 75 Mildred Avenue, Watford, and E. Jones, 215 Whippendell Road, Watford. Improvements in and relating to combination ranges, coppers, and baths.

29,608. Dec. 20, 1910.—Harvey Lea, 6 Upper Northbrook Avenue, North Strand, Dublin. Improvements relating to apparatus for marbling or ornamenting paper and other substances.

29,680. Dec. 21, 1910.—John Barron, 52 Cow Cross Street, E.C. Improvements in locking stopper valves for resisting back pressure from pent-up sewer gases.

30,126. Dec. 28, 1910.—P. J. Pankhurst, Meirionfa, Lowyn Road, Blaenau-Festiniog, North Wales. Improvements in and/or connected with slate-dressing machines.

402. Jan. 6, 1911.—Johnson & Phillips, Ltd., 14 Union Court, Old Broad Street, E.C., and James Brockie, 41 London Road, Forest Hill. Improvements in lamp globes, particularly for electric arc lamps.

642. Jan. 10, 1911.—W. C. Jennings, 39 Station Road, Ashley Down, Bristol. Improvement in sliding and pivoted windows.

1,168. Jan. 16, 1911.—R. Waygood & Co., Ltd., Falmouth Road, S.E., and H. C. Walker, 46 Tressillian Road, Brockley, S.E. Improvements in and connected with lifts and hoists.

1,278. Jan. 18, 1911.—James Arnott, 11 Broomfield Place, Chapel Lane, Headingley, Leeds. A chemical preparation of certain materials for the incrustation and laying of dust on roadways in the course of watering the same roadways.

1,822. Jan. 24, 1911.—G. L. Huntress, jun., 221 Columbus Avenue, Boston, Mass. Improvements in water level gauges.

2,942. Feb. 6, 1911.—William Anderson, Scotia Villa, Newport, Fife. Improvements in and relating to syphon cisterns.

3,633. Feb. 13, 1911.—Convention application Feb. 12, 1910. Heinrich Rauchholz, 84 Konniggratze Strasse, Berlin, S.W. 11. Improvements in pressure gauges.

3,673. Feb. 14, 1911.—William Clark, 68 New Row, Dunfermline, Fife. Improvements in and relating to the trimming of wall paper.

3,966. Feb. 16, 1911.—F. A. Bullivant, 72 Mark Lane, London. Improvements in apparatus for use in lifting weights.

4,167. Feb. 18, 1911.—B. P. Walker and R. Waygood & Co., Ltd., both of Falmouth Road, Great Dover Street, S.E. Improvements in or relating to the brake mechanism of lifts, cranes, and the like.

4,538. Feb. 23, 1911.—Charles Cusworth, 16 St. Ronan's Road, Abbeydale, Sheffield. Improvements in means for connecting together lengths of tubing or a length of tubing to a tubular portion of an article or the like.

4,964. Feb. 28, 1911.—D. G. Sayer, 22 Risca Road, Newport, Mon. Improvements in or relating to acetylene gas generators and lamps.

5,059. Feb. 28, 1911.—A. F. Bethell, 4 Woodcote Green, Wallington, Surrey. Improvements in sand-paper and like abrasive materials.

5,182. March 1, 1911.—D. P. Moore, 902 F Street, Washington, D.C., and S. B. Pack, 3149 Mount Pleasant Street, Washington, D.C. Improvements in or relating to suction-cleaning machines.

5,609. March 6, 1911.—Convention application March 7, 1910. Clemens Graff, 17 Linkstrasse, Berlin, W. 9, and Hans Mikorey, 13 Wartburgstrasse, Schoneburg, nr. Berlin. Transportable fire-extinguisher.

5,753. March 8, 1911.—G. W. J. Allen, 15 Victoria Park, Fishponds, Bristol. Improvements in automatic fountains.

7,185. March 22, 1911.—F. H. Crittall, Manor Works, Braintree, Essex. Improvements in the manufacture of metal casements.

8,513. April 5, 1911.—The Kitson Empire Lighting Co., Ltd., of Wharf Road, Stamford, and A. Noblett, 21 Priory Road, Stamford. Improvements in or pertaining to vapour-burning apparatus.

9,213. Nov. 14, 1911.—William Tattersall, 53 Tremellen Street, Accrington. Improvements in radiators for heating, cooling, or condensing fluids.

9,644. April 20, 1911.—Otto Kasulke and Willy Otto, Grunewald, Neustettin, Germany. Improved apparatus for effecting the circulation of air.

12,006. May 18, 1911.—Soc. dite Etab. J. J. Carnaud et Forges de Basse-Indre and Hector Petin, all of 3 rue d'Argout, Paris. Improved machine for scouring tinplates and other metal sheets.

12,655. May 25, 1911.—Convention application Dec. 23, 1910. Celestin Delmez, 15 rue du Petit Chien, Antwerp. Apparatus for mechanically cleaning the rails of tramways or the like.

12,904. May 29, 1911.—E. L. Pemberton, 50 Livingstone Street, New Haven, Conn., U.S.A. Improvements in teeth for excavating buckets.

12,905. May 29, 1911.—R. de Wilt, Burdick, Lincklaen, Chenango, New York, and W. A. Wilcox, 511 Cole Building, Nashville, Davidson, Tennessee, U.S. Improvements in wood screws.

13,956. June 12, 1911.—Convention application Dec. 10, 1910.—Ferdinand Burchartz, architect, 1 Madison Avenue, Manhattan, New York. Improvements in hollow building bricks.

16,294. July 14, 1911.—A. J. Michelin, 105 Boulevard Pereire, Paris. An improved process for coating iron or steel.

17,055. July 25, 1911.—Convention application March 1, 1911. Eduard Korner, 1 Blumenstrasse, Coblentz-Lutzel, Germany. Improvements in apparatus for controlling the operation of gas valves from a distance.

17,433. July 31, 1911.—A. N. Kelley, 2875 Grand Boulevard East, Detroit, Michigan, U.S.A. Improvements in machines for making cores and moulds.

18,448. August 15, 1911.—Convention application Jan. 25, 1911. Arota Gesell. mit Beschrankter Haftung, commercial firm of Clausthal & Kontorkhaus, Barkhof, Hamburg. Improvements in and relating to preservative compositions.

CHRISTMAS HOLIDAY ARRANGEMENTS.

WEEK-END tickets, available by any train (mail and boat expresses excepted), will be issued by the South-Eastern and Chatham Railway from London on December 22, 23, and 24, available for return on December 24, 25, 26 or 27, to Tunbridge Wells, Bexhill, St. Leonards, Hastings, Canterbury, Whitstable, Herne Bay, Birchington, Westgate, Margate, Broadstairs, Ramsgate, Sandwich, Deal, Walmer, Dover, Folkestone, Shorncliffe, Hythe, Sandgate, and New Romney (Littlestone-on-Sea). On December 23 a fast train will be run to Chatham, Sittingbourne, Sheerness, Faversham, Whitstable, Herne Bay, Birchington, Westgate, Margate, Broadstairs, Ramsgate, Canterbury, Walmer, Deal and Dover, leaving Victoria at 12.30 midnight, and Holborn 12.25 midnight, calling at St. Paul's 12.27 A.M., Elephant and Castle, Brixton, Loughborough Junction, and Herne Hill. A similar train will also run on the 23rd inst. to Sevenoaks, Tunbridge Wells, St. Leonards, Hastings, Ashford, Canterbury, Ramsgate, Margate, Folkestone, and Dover, leaving Charing Cross at 12.14 midnight, Waterloo 12.17 A.M., Cannon Street 12.22, London Bridge 12.28, and New Cross at 12.37 A.M. Cheap tickets at the week-end fares will be issued by these trains for stations to which week-end bookings are in force. On Christmas Day several extra trains will run, but the ordinary services will be as on Sundays. Frequent trains will run to the Crystal Palace (High Level Station). During the holidays several trains will be withdrawn or altered. Full particulars will be found in the holiday programme and special train service supplement.

Cheap return tickets will be issued from London to Marseilles, Cannes, Nice, Monte Carlo, Mentone, and other stations on the French Riviera, *via* Folkestone and Calais, leaving Charing Cross Station at 1.0 P.M. on December 22, returning any day up to January 30. Cheap excursions will be run from London to Paris, *via* Dover-Calais and Folkestone-Boulogne, on December 21-24; also from London to Brussels, *via* Dover-Calais, Folkestone-Boulogne, and Dover-Ostend from December 21 to the 26th inst. inclusive. Cheap tickets will be issued to Boulogne on those days also. Cheap tickets will also be issued to Calais, Ostend, and Flushing. For the winter sports in Switzerland special arrangements have been made.

Christmas with its holly, mistletoe and yule log is essentially the "home holiday" of the year, and in these days of expeditious and comfortable travel, the unfavourable weather conditions need not exclude any who may wish to join the family circle at this festive season. We have just received a copy of a most attractive programme issued by the Great Central Railway Company. It is intended for those who are spending their Christmas in the Midlands, Yorkshire, Lancashire, Lincolnshire, or North of England. On Saturday and Sunday, December 23 and 24, special expresses will leave Marylebone at suitable times for over 500 different stations. The tickets, issued at extremely low fares, will be available for return on the following Tuesday, Wednesday, or Saturday, enabling those who may so desire to spend the special Bank Holiday period with their friends. Breakfast, luncheon, or restaurant cars will be attached to the trains, and the compartments represent the acme of comfort, being well lighted, and maintained at a genial temperature. Shopkeepers and others whose business will keep them in town until late on Saturday evening will have the advantage of suitable night trains. Copies of this special A B C programme can be obtained free at Marylebone Station, G.C.R. town offices and agencies, or post free from Publicity Department, 216 Marylebone Road, London, N.W.

M. V. A. F. LALOUX, architect, Membre de l'Institut, Commandeur de la Legion d'Honneur, Paris, has been nominated as hon. corresponding member of the R.I.B.A.

MR. ARTHUR C. MARTIN, architect, 11 Hart Street, Bloomsbury, W.C., has prepared a design for a large hostel for theological students, proposed to be erected in connection with King's College, London.

MESSRS. PATMAN & FOTHERINGHAM, LTD., 100 and 102 Theobald's Road, W.C., have secured the contract for the erection of a large factory and warehouses at Camden Town, N.W., for Messrs. Goodall & Son, Ltd., playing card makers.

MR. WILLIAMSON, City Superintendent of Works to the Edinburgh Town Council, has prepared plans for proposed new police headquarters, to be erected on a site facing the Grassmarket. The cost is estimated at £43,750.

THE present cast-iron Town Bridge at Boston, Lincs., has been condemned as unsafe, and a new steel bridge will be erected in its place. Mr. J. J. Webster, M.I.C.E., of Westminster, is acting as consulting engineer.

A NEW church and schools are to be erected at the corner of Bourne Hill Road and New Road, Southgate, N., from the designs of Messrs. George Baines & Son, architects, 5 Clement's Inn, Strand, London, W.C. The buildings are designed in a late period of Gothic freely treated, and embrace a church accommodating about 500 persons and commodious school premises. Externally the buildings will be faced with red brick.

THE local school managers at Ripley last week considered alternative schemes for new buildings. The accommodation and cost of the various schemes were: (1) 942 children, £13,797 13*s.*, cost per head £14 13*s.*; (2) 1,016, £17,528, £17 9*s.*; (3) 1,000, £14,500, £14 10*s.*; (4) 1,092, £17,338, £15 17*s.* The scheme favoured is No. 3, the chief difficulty being the acquisition of a suitable site in a central position.

THE South African *Mining Journal* (Johannesburg) of November 4 publishes the following particulars of the estimated values of buildings, the plans of which have been approved by the Municipal Councils of the towns in question during the month of September, 1911:—Johannesburg £239,364, Boksburg £2,265, Germiston £8,670, Roodepoort £3,250, Krugersdorp £12,025, Pretoria £13,507, and Springs £1,200, making a total value of £280,281. The value of the tenders accepted by the Government for public buildings during the month, and not included in the above amount, was £24,254.

CHRISTMAS HOLIDAYS.

All alterations or fresh copy for advertisements for the next issue must reach us by Saturday morning next, the 23rd inst.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than* 2 p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Banbury.—Jan. 8.—The Town Council invite designs by January 8 for workmen's dwellings to be erected within the borough. Applications for particulars, accompanied by 10*s.* deposit, which will be returned on receipt of bonâ-fide designs, should be made to Mr. Arthur Stockton, town clerk, Town Hall, Banbury.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1*s.* Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bolton.—The King Edward VII. Memorial Fund Committee invite competitive plans from architects now practising as principals within the county borough of Bolton for the King Edward VII. Memorial Nurses' Home proposed to be erected at the Bolton Infirmary. Plan of the site and instructions may be obtained upon payment of £1 1*s.*, which sum will be returned to the competitors provided they shall have sent in *bona fide* plans and particulars and shall have returned all documents, plans, &c. Mr. Samuel Parker, hon. secretary of the Committee, Town Hall, Bolton.

COSFORD.—Dec. 28.—The Rural District Council are prepared to receive plans for the erection of cottages throughout their district, where required. The plans should show the class of cottage, and are to state the probable cost of erection either in rows of six or in pairs. Mr. Alfred Newman, Clerk to the Council, Hadleigh, Suffolk.

HASTINGS.—Dec. 31.—The Joint Committee of the East Sussex Hospital and the King Edward VII. Memorial Fund invites architects to submit designs in competition for the proposed new hospital. Mr. Edwin T. Hall, F.R.I.B.A., has been appointed assessor. Premiums of £125, £75, and £50 are offered. Conditions and instructions may be obtained (on payment of £1 1*s.* deposit) from Mr. W. M. Rhodes, East Sussex Hospital, Hastings.

IRELAND.—Jan. 9.—The Magherafelt Technical Instruction Committee invite competitive designs for a technical school, proposed to be erected in Magherafelt, the total expenditure, including provision of sewerage and water supply, not to exceed £1,200. Mr. W. D. Cousins, County Technical Office, Courthouse, Coleraine.

LONDON.—Feb. 17.—The Port of London Authority invite preliminary sketch designs in competition for head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1*s.*, which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

SPENNYMOOR.—Jan. 9.—The Urban District Council invite competitive plans and designs for a public hall, market, and offices, &c. Particulars may be obtained on payment of a deposit of £2 2*s.*, which will be returned on receipt of a *bona fide* design. Premiums of £50, £25, and £10 are offered. Mr. F. Badcock, clerk, Council Offices, 3 James Street, Spennymoor. (See advertisement.)

STAFFORD.—Jan. 6.—The Corporation invite designs for a public library. An assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

URUGUAY.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

WALES.—March 15.—Lord Aberconway and the Trustees of the Prestatyn estate, North Wales, invite designs for the laying out of the estate. Premiums of £50, £30, and £20. Assessor, Mr. H. V. Lanchester, F.R.I.B.A. Send applications for conditions, plan, and bye-laws, with 10*s.* 6*d.* deposit (which will be returned on receipt of *bona fide* designs or return of the conditions, &c., within fourteen days of receipt), by January 8, to Lord Aberconway and the Trustees of the Prestatyn Estate, 33 Henrietta Street, Strand, W.C.

CONTRACTS OPEN.

GLASGOW INSTITUTE OF ARCHITECTS.

A quarterly general meeting of the Glasgow Institute of Architects was held on the 13th inst. within the secretary's chambers, 115 St. Vincent Street, Mr. John B. Wilson, F.R.I.B.A., president, in the chair. The Secretary submitted a report on the matters which had been dealt with by the council since last meeting. Messrs. William A. Arbuckle, Office of Public Works, Glasgow; Arthur Gossman, 58 West Regent Street; and Alexander Smellie, 59 Montgomery Street, Girvan, had been elected associate members. Representations had been made for amendment of the conditions of two competitions, and in one of these the council had been successful in arranging for a fully qualified assessor being appointed. A proposal that a town planning exhibition be held in Glasgow had been received with satisfaction, and the council hoped that arrangements would be made to hold such an exhibition in the city. It was reported that the council had fully considered the amendments on the proposed new articles of association suggested at the extraordinary general meeting of the Institute held recently, and an informal discussion took place on the alterations proposed by the council. It was reported that the proposals would be brought before the Institute at an early date for approval. The Secretary reported that intimation had been received from the R.I.B.A. that it was absolutely necessary that all applications for election to the class of Licentiates should be in the hands of the secretary of the Royal Institute by April 30, 1912, at latest.

The Glasgow Dean of Guild Court last week granted a lining to the Glasgow Royal Infirmary to demolish the existing buildings in Cathedral Square and Vicar's Alley, and erect new buildings there. The cost of this section of the reconstruction of the Royal Infirmary is estimated at over £80,000. Mr. Miller, A.R.S.A., Glasgow, is the architect.

ARLIDGE *v.* THE HAMPSTEAD BOROUGH COUNCIL.

Mr. Edward Leonard, an Inspector of the Local Government Board, held a public inquiry on the 8th inst. at the Hampstead Town Hall to hear an appeal by Mr. William Arlidge against the refusal of the Hampstead Council to determine a closing order made under the Housing, Town Planning, &c., Act, 1909, on January 12, 1911, in respect of 83 Palmerston Road, Hampstead, N.W. Mr. Turner appeared for the Council and Mr. J. S. Rubinstein (Rubinstein, Nash & Co.) for the appellant.

On behalf of the Council the closing order was supported mainly on the ground that the premises were built on a wet clay soil, and that as a result the basement was so damp as to render the premises unfit for human habitation. The Medical Officer for Health and the Senior Sanitary Inspector stated that for the same reason notices had been served on thirty houses in the same street, and that with the exception of the appellant their notices had been complied with.

On behalf of the appellant witnesses were called to prove that the house was not built on a clay soil, and that dampness did not in fact exist. Samples of the earth, of the bricks, mortar, and boarding in the basement were produced, and reports made by Dr. Winter Blythe and Messrs. Potters were put in. The witnesses called included the present occupier and his wife, who had resided in the house for the last nine months, and who stated that neither they nor their children had had a day's illness during that period.

At the conclusion of the inquiry the inspector stated he would inspect the premises and report the result to the Local Government Board.

LONDON MASTER BUILDERS' ASSOCIATION.

The Council of the above met on December 14, when the President (Mr. G. Bird Godson) occupied the chair.

After receiving and approving the Finance Committee's report, the Council proceeded to consider various trade matters, the National Insurance Bill, the Trade Disputes Act (1906), National Federation communications, and the next issue of the Association Hand-Book and Diary.

It was decided to hold the annual dinner on Thursday, February 22 next, and the annual general meeting of the Association on the following Thursday (February 29).

Messrs. the Patent Rapid Scaffold Tie Company, Ltd., 124 Victoria Street, Westminster, S.W., was elected an associate member, and the following were nominated as ordinary members: Mr. B. E. Nightingale, Albert Works, Albert Embankment, S.E.; Messrs. E. A. Roome & Co., 36 Basinghall Street, E.C.; Messrs. William F. Blay, Ltd., Dartford, Kent; Messrs. Lole & Co., 12a Trafalgar Square, Chelsea, S.W.; and Messrs. F. & F. J. Wood, 64 Cleveland Street, Mile End, E.

LONDON ASSOCIATION OF MASTER DECORATORS.

The London Association of Master Decorators has been figuring in the recent protest against the Insurance Bill. We understand that the Association would have taken independent steps earlier, but were relying upon two resolutions passed by the National Association of Master House Painters of England and Wales at their recent Conference, but which were afterwards considered irregular.

At the last meeting of the London Association, the matter was discussed, and the fear was expressed that it was too late to take any effective action in the matter. As, however, there was a unanimous opinion that no pains should be spared to oppose the measure, the Secretary was authorised to do what he could in the matter, and both he and Mr. Dakin, the Vice-President, were present at the meeting at the Cannon Street Hotel.

Various other matters of importance were dealt with at the last Committee meeting of the Association, including the election of several new members. The Secretary also intimated that he had signed, on behalf of the Association, a memorial to the Prime Minister praying for certain alterations of the law with relation to picketing at strikes, and other matters in connection therewith. It was resolved to strengthen the memorial by obtaining from the members of the Committee statements of their personal experiences of inconveniences caused during the recent railway strike.

The Educational Committee is still in negotiation with the L.C.C. on the subject of the better training of decorators, and good results may soon follow.

VARIETIES.

The Court of Common Council at their last meeting voted 200 guineas to the Maintenance Fund in connection with the fabric of St. Paul's Cathedral.

Mr. J. J. Burnet, A.R.S.A., architect, Glasgow, has prepared plans for a memorial church hall proposed to be erected at Kilmacolm at a cost of about £2,000.

Mr. Vincent Cattermole Brown, quantity surveyor, of Paignton, has retired on account of ill-health. His practice has been acquired by Mr. George Sealley Harris, of Paignton, Devon.

Plans for a Carnegie Library proposed to be erected at Ebenezer, near Carnarvon, have been prepared by Mr. A. H. Fennell, architect, Chester-le-Street, Co. Durham. It is to be erected at a cost of £2,000.

The Harrow Council have agreed to invite designs in competition for proposed public offices. Premiums of 30 guineas, 20 guineas, and 15 guineas are to be offered. The competition will close on March 16.

Mr. John Todd, the district surveyor of the East District of the City, has presented the Corporation, for the Guildhall Museum, with a set of photographs of buildings about to be demolished in his district.

The Devon County Council are about to make application to the Board of Education for their sanction in connection with the provision or enlargement of secondary schools at Ashburton, Newton Abbot, Ottery St. Mary, Tiverton, and Torquay.

The Royal Institute of the Architects of Ireland held their annual general meeting last week at 31 South Frederick Street, Dublin. The following gentlemen were duly elected on the Council for the year 1912: Messrs. C. H. Ashworth, G. P. Sheridan, J. H. Webb, L. O'Callaghan, F. G. Hicks, H. Allberry, W. Kaye-Parry, A. G. C. Millar, W. A. Scott.

The Building Committee of the Stepps United Free Church has decided to proceed at once with the erection of a church from plans prepared by Mr. Andrew Balfour, F.R.I.B.A., architect, Glasgow. The church, which will be built of white stone, will have seating accommodation for 650, capable of extension to 810 without structural alterations. The estimated cost is £5,000.

Mr. Arthur Nunweek, architect, Sheffield, has been notified of the Pontefract Council's acceptance of his plans for the erection of public baths in that borough. The competition was limited to architects practising in the West Riding of Yorkshire. According to the conditions the cost was not to exceed £4,500.

An amalgamation of brickmakers, to be known as the Manchester and District Common Brickmakers' Association, has been formed (a correspondent of the *Manchester Guardian* writes) for the regulation of prices for common bricks in the area. Negotiations with this object have been proceeding since March of this year, but it is only within the past few days that the agreement has been signed by the firms concerned. The scheme is on lines that have been successfully worked in London and Liverpool, and provides that no member of the association shall sell at less than the minimum rate agreed upon for bricks delivered in any part of the district. The Manchester and district brickmakers have been among the last to adopt a scheme of this character, but they now state that some such arrangement is absolutely necessary in view of the fierce competition that has been proceeding for several years. The scheme comes into operation on January 1.

The men employed in the building and allied trades in Truro recently demanded a standard rate of 7*d.* per hour for the carpenters, masons, and painters, and 5½*d.* for labourers. The masters replied that any employee who had a grievance with regard to wages must discuss the same with the employer. The communication was discussed by the men's committee, who decided not to reply to the employers, but to submit all correspondence to the Press with the following resolution:—"That the letter sent by the employers to the men is not regarded as being at all satisfactory, and not in the same spirit as that which actuated the men in their first letter; and that the men looked upon it as a means to an end to mark those who dared to ask for an increase; and that while they, at present, can do nothing further, they propose in the near future to fight out the whole question of wages of the building trade for the city of Truro."

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

ENGLAND.

Berkshire.
Reading.—Factory, Basingstoke Road (near the Palmer Schools).

Cambridgeshire.
Cambridge.—Clergy Training School: Dining Hall and other additions.

Cheshire.
Tattenhall.—Council School. Mr. H. Beswick, F.R.I.B.A. (of Chester), County architect.

Cornwall.
Fowey.—Cottage Hospital.
Penzance.—Stores, Causewayhead. Mr. H. Maddern, architect.
Truro.—House, Castle Street. Mr. A. J. Cornelius, architect.

Cumberland.
Beaumont.—Farmhouse reconstruction, Casson Dyke.
Belle Vue.—Piggeries, Beivor Farm.
Blackwell.—Three cottages. Mr. H. Higginson (of Carlisle), architect.

Derbyshire.
Alfreton.—St. Martin's Mission Schoolroom and Parish room (£700).
Horsley-Woodhouse and Kilburn.—Public Elementary Schools for 225 and 250 places respectively.
Normanton-by-Derby.—Parochial Room (£2,500).

Devon.
Exmouth.—R.C. Church of the Holy Ghost.

Durham.
Easington Colliery.—Two hundred and fourteen houses for the Easington Coal Co., Ltd.
Etherley.—Public Elementary School for about 320 places.
South Shields.—Primitive Methodist Church.
Spennymoor.—Market Hall, Council Offices, &c.

Essex.
Chelmsford.—Council Offices.
Orsett.—Fever Hospital pavilion for 25 beds (£2,150). Mr. C. M. Shiner, A.R.I.B.A., architect.

Kent.
Ashford.—"Gore Hill House": additions.
Margate.—Eight-cell Refuse Destructor (£13,218).
Northfleet.—Cinematograph Theatre, High Street.
Sheldwich.—Schools: alterations and improvements.

Lancashire.
Bolton.—Four houses, Church Avenue.
Fifteen houses, Willows Lane.
Primitive Methodist Chapel School: extension, Egyptian Street.
Shop, Willows Lane, for the Bolton Co-operative Society.
Oldham.—Central Conservative Club: extension.
Southport.—Boys' Secondary School.

Lincolnshire.
Fleet, Lutton, Bourne, Sutton St. James, Tydd St. Mary, Whaplode.—Cottages. Mr. R. H. H. Hand (of Spalding), architect.

Monmouthshire.
Panteg.—Mobilisation Store for No. 3 Battery R.F.A. Mr. E. H. Linton (of Newport), architect.

Northamptonshire.
Sawtry.—Wesleyan Methodist Church.

Northumberland.
Blyth.—Waterloo Hotel: rebuilding.
Twenty-six houses, Rosemary Terrace.
Secondary School (£9,600).

Shropshire.
Shrewsbury.—St. Mary's Parish room.

Somerset.
Taunton.—Somerset County Club: additions and alterations.
Council Schools, East Reach.
Weston-super Mare.—Abattoirs.

Staffordshire.
Hatton.—Primitive Methodist Chapel.
Hednesford.—Technical Institute.
Newchapel.—Parish Church: addition of chancel and vestries (£1,000).
Stoke-upon-Trent.—Offices, Wolfe Street. Mr. R. T. Longden (of Burslem), architect.

Suffolk.
Ipswich.—Bethesda Chapel: rebuilding.

Surrey.
Cobham.—Infants' Council School for 150 places.

Sussex.
Bexhill-on-Sea.—Drill Hall for the Engineers.
Horsham.—All Saints' Council School: enlargement by 200 places.

Westmorland.
Casterton.—Cottage. Mr. J. Hutton, M.R.S.I. (of Kendal), architect.

Worcestershire.
Broadway.—Sixty cottages. Messrs. Dicks & Waldron (of Evesham), architects.

Yorkshire.
Keighley.—Technical Institute: extensions. Messrs. W. H. & A. Sugden, architects.
Middlesbrough.—Police residences, Cannon Street: additions and alterations. Mr. S. E. Burgess, M.Inst.C.E., Borough engineer.
Wombwell.—Public Baths, Hough Lane.

WALES.

Brynmawr.—Church.
Caerphilly.—Eighteen (or more) houses on the Tir Merchant Estate, Bedwas Road. Messrs. T. E. Richards & Kaye (of Pontypridd and Cardiff), architects.
St. Ishmael's.—Council School. Mr. D. E. Thomas (of Haverfordwest), architect to the Pembrokeshire Education Authority.
Swansea.—Alterations to "Coopers' Arms," Neath Road.
Seven houses in Eversley, Manselton, Neath, Penvillia and Sketty Roads.
Two houses in Cecil Street.
Eight houses and shops, Carmarthen and Llangyfelach Roads.
One house and shop, Monterey Street.
Schoolroom for the Manselton Road Congregational Chapel.
Two lock-up shops, Bernard Street.
One shop, Neath Road.
Two shops, Castle Street.
Six shops and offices, Castle Street.
New Y.M.C.A. premises, St. Helen's Road.
Tonyrefail.—Church Hall, Coed Ely. Messrs. Thomas & Morgan (of Pontypridd), architects.
Treboeth.—Two houses, New Road.

SCOTLAND.

Arbroath.—Infirmary reconstruction (£8,000).
Broughty Ferry.—Baptist Hall.
Buckie.—Post Office, East Church Street.
Burntisland.—Poorhouse: alterations (£1,000).
Cathcart.—Cottage, Muirend Road.
Clydebank.—Carnegie Public Library (£10,000).
Fyvie.—House, Mill of Ardlogie.
Schoolhouse: additions.
Glasgow.—Royal Infirmary: reconstruction (£80,000).
Mortar mill, house, and an extension of melting shop, Hannay Street, for the Steel Co. of Scotland, Ltd.
Tenement of dwelling-houses, Drumother Drive, Parkhead.
Hamilton.—Municipal Offices (£8,500).
Inverkeithing.—Board School for 900 places (£11,000).
Irvine.—Factory for fireclay retorts, Gailes Road (£3,000).
Kirn.—Dunoon Steam Laundry: additions, Hamilton St.
"Dunclutha": alterations for the Glasgow Parish Council as a "Home" (£500).
Newport.—Forgan School: reconstruction.
Oldhall.—Cottage.
Pittenweem.—(Supplementary to Dec. 8) Board School for 450 places. (£4,500.)
Queensferry, North.—Board School (£7,000).
Springfield.—Asylum: extensions for 100 more patients. Mr. Gillespie (of Glasgow), architect.
Stonehaven.—Garage (100 feet by 44 feet), Victoria Street.
Turriff.—House, Balmellie Road. Mr. W. L. Duncan, architect.
Wick.—Fish mart with offices. Mr. Coulcher, engineer.

IRELAND.

Belfast.—Tenement houses (£5,000).
Enniscorthy.—Twenty-four artisans' dwellings (£3,000).

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the completed specification.

Fig. 1.

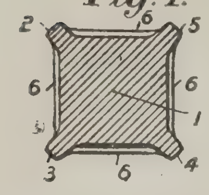

Fig 2.

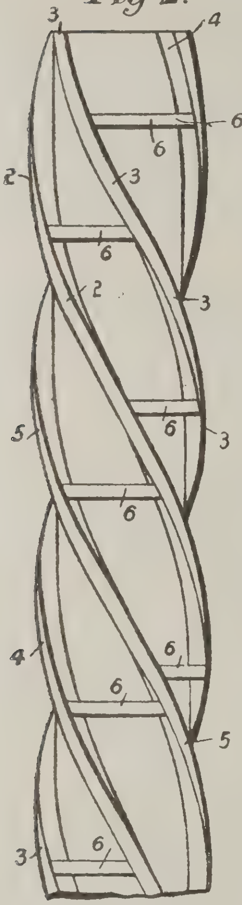


No. 27,373. Nov. 24, 1910.—An improved bar for use in reinforced concrete. George Hatton, of Saltwells, Brierley Hill, Stafford. This invention consists of an improved rolled iron or steel bar for use in reinforced concrete structures, the improved bar being so shaped and formed as to afford a much better anchorage in the concrete than can be obtained with rolled iron and steel bars as at present made for that purpose. The kind of bar to which the invention relates is that having a number of pronounced outstanding longitudinal ribs, and the invention consists in forming the longitudinal ribs to a spiral shape by a process of twisting the ribbed bar. Considerable difficulty has hitherto been encountered in the manufacture of spiral ribs by rolling, whereas by this invention bars are manufactured in a cheaper and more satisfactory manner. Fig. 1 is a cross-sectional view of one of the improved rolled iron or steel bars. Fig. 2 is a side view of the same. The section of rolled iron or steel bar which it is preferred to use is that shown, by which it will be seen that the body, 1, of the bar is of substantially square shape with four somewhat square shaped ribs, 2, 3, 4, and 5, projecting respectively at the four corners. This bar is twisted axially so as to form four projecting spiral ribs or screw threads, 2, 3, 4, and 5, round the bar, as seen in fig. 2. These pronounced outstanding spiral ribs, 2, 3, 4, and 5, or screw threads, owing to the depth of the valleys between them and to their sides being nearly radii of the bar, enable the bar, 1, to have a much better anchorage in the concrete when embedded therein than is possible with one of the well-known square section twisted bars which is not made with these pronounced projecting spiral ribs. In combination with the spiral ribs or screw threads, such, for instance, as 2, 3, 4, and 5, the bar may be rolled with cross ribs at suitable intervals apart, such, for instance, as marked 6 extending across the spaces between the longitudinal spiral ribs, and thus forming an increased anchorage to the concrete when the said bar is embedded in the concrete. Nov. 22, 1911.

No. 1278. Jan. 18, 1911.—A chemical preparation of certain materials for the incrustation and laying of dust on roadways in the course of watering the same roadways. James Arnott, of 11 Broomfield Place, Chapel Lane, Headingley, Leeds, and Edward Weston, of Victoria Chambers, Leeds. The object of this invention is to provide a composition for applying to roads, streets, permanent ways of railways and the like for the purpose of laying the dust and to prevent the raising of dust in dry weather by the traffic of motor cars or other vehicles on the said roads, or simply by the wind. For this purpose a solution of muriate of soda and sulphate of alumina is distributed in suitable proportions, according to the construction and condition of the roadways to which it is applied. And to which is added a small percentage of crude carbolic acid or powder, or any other deodoriser for disinfecting purposes. This solution is used in the proportion of about one gallon to ten gallons of ordinary water, or in such proportions as may be deemed necessary according to the construction and condition of the roadways, upon which it is distributed by ordinary watering carts, or any other suitable means of spraying the surface, until the road is well soaked and impregnated with the liquid. This solution so used tends to incrustate the dust and bind it to the constituent surface of the road; the sulphate of alumina possessing the property of crystallising the dust and binding it to the roadway, whilst the muriate of soda will retain the moisture and draw moisture from the atmosphere when damp, for the sake of example, during the night. After a certain number of applications, the operation need not be repeated for a considerable time, and thereby expense will be saved in watering the roads. The solution may be carried for sake of convenience in a concentrated form, and be diluted in such proportions as required by the roadway, the carbolic acid or powder, or any other deodoriser that may be preferred, to be added in such quantity as may be necessary for disinfecting purposes. The composition is made up in a solid form in the proportion of:—Muriate of soda twelve pounds, sulphate of alumina four pounds, and the carbolic powder or any other deodoriser for disinfecting purposes, one pound. When the composition is made up in liquid form, the same proportion of the muriate of soda and sulphate of alumina, with one quarter pound of crude carbolic acid to, say, fifty gallons of water. Nov. 22. 1911.

PATENT SPECIFICATIONS PUBLISHED DECEMBER 14, 1911.

Selected by Mr. James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

No. 21604. Sept. 16, 1910.—E. B. Pollatschek, 383 Boite Postale, Alexandria, Egypt. Improvements in or relating to incandescent burners for liquid fuel.

No. 26611. Nov. 16, 1910.—J. B. Colbran, 58 Chiswell Street, E.C. Improvements in and relating to inverted incandescent gas burners.

No. 26759. Nov. 17, 1910.—James Johannes, 15 Canal East Street, Calcutta. Improvements relating to the treatment of lac.

No. 27002. Nov. 21, 1910.—H. G. Atkinson, 54 Hillcrest Road, Acton, and F. F. Scruby, 28 Pleydell Avenue, Chiswick. Moulded and decorated panel (fibre) boards.

No. 27067. Nov. 21, 1910.—Carl Jost, Standard Building, Hornby Road, Bombay. Improvements in or relating to air cooling and purifying devices.

No. 27186. Nov. 22, 1910.—F. T. Dunn, "Bonair," Park Lane, Congleton, Cheshire. Improvements in machines for measuring tiles or other articles.

No. 27250. Nov. 23, 1910.—The Douglas Manufacturing Company, Ltd., St. Stephen's House, Victoria Embankment, and William Meaby, 51 Cottage Grove, Southsea. Improvements in or relating to door bolts and fastenings of a like character.

No. 27280. Nov. 23, 1910.—W. W. Pilkington, "The Hazels," Prescot, Lancashire. Improvements in the method of, and means for, cooling glass plates.

No. 27465. Nov. 25, 1910.—Mrs. Ernestine Levesque, Pontpoint (Oise), France, and Lucien Franchemont, 7 Place Carnot, Creil (Oise), France. Portable stone saw.

No. 28450. Dec. 7, 1910.—M. J. Adams, The Red House, Stocksfield-on-Tyne. An improved flushing arrangement.

No. 28644. Dec. 9, 1910.—Walter Eichelkraut, 6—8 Seehofstrasse, Zehlendorf, near Berlin, architect. Improvements in apparatus for regulating and controlling the access of persons to cashiers' windows and like payment apertures.

No. 28996. Dec. 14, 1910.—Robert Thomson, architect, and W. A. Thomson, 164 Nithsdale Road, Pollokshields, Glasgow. Improvements in walls.

No. 29095. Dec. 14, 1910.—Geo. Lunney, Ingleborough View, Bentham, Yorks. Improvements in fire or similar hose couplings of the screw type.

No. 648. Jan. 10, 1911.—William Gilbert, 47 Victoria Street, S.W. Improvements in mixers for Portland cement and the like.

No. 926. Jan. 13, 1911.—A. C. Stevens, "Lulworth," Queen's Road, Hounslow. Improvements in tubular locks.

No. 1893. Jan. 25, 1911.—James Muirhead, 530 Gairbraid Street, Maryhill, Glasgow. Improvements in ventilating appliances for buildings.

No. 2339. Jan. 30, 1911.—Chas. Hart, Oakland, Alameda, California, U.S.A. Improvements in storage tanks of hot water systems.

No. 2703. Feb. 2, 1911.—Carolus Casteleyn, Zeebrugge, Belgium. An improved waterproofing composition.

No. 2906. Feb. 4, 1911.—Miroslaus Matgorzewick, 1 Marschalkowska, Warsaw, and Josef Krysinski, 16 Fokal Street, Warsaw. Improvements in door locks.

No. 3381. Feb. 10, 1911.—Henry Wakerley, 116 Bankes Road, Small Heath, Birmingham, and Walter Wakerley, 313 Charles Road, Small Heath, Birmingham. A device for securing papers to drawing boards, notice boards and the like.

No. 3663. Feb. 14, 1911.—E. O. Smith, 79 St. Stephen's Road, Preston, Lancashire. Anti-rattling device for sliding doors and the like.

No. 4902. Feb. 27, 1911.—Thomas Glover, Gothic Works, Angel Road, Edmonton. Improved construction of elbow or bend for metal pipe flues or the like.

No. 7157. March 22, 1911.—A. W. Colenutt, "Mayfield," Sandown, Isle of Wight. Improvements relating to multiple bolt fastenings for doors and the like.

No. 8301. April 3, 1911.—Thomas Glover, Gothic Works, Angel Road, Edmonton. Improved construction of valve.

No. 8622. April 6, 1911.—W. H. Rymer, 87 Merton Road, Bootle, Liverpool. Improvements in flexible coverings for roofs, walls, and the like.

No. 8976. April 11, 1911.—E. T. Hendee, 16th and Rockwell Streets, Chicago. High-speed friction saw.

No. 9368. April 15, 1911.—Mrs. Marie Hildebrand, 4 Schramm Strasse, Wilmersdorf, Berlin. Improvements in and relating to heat-interchangers.

No. 9430. April 18, 1911.—A. W. Colenutt, "Mayfield," Sandown, Isle of Wight. An improved locking device for doors and the like.

No. 9845. April 22, 1911. Convention application, April 23, 1910. K. & Th. Moller-Gesell, mit Beschrankter Haftung, Brackwede, Westphalia. Improvements in or relating to filters for air.

No. 10029. April 25, 1911.—Emmanuel Bossut, 17 Rue de la Gare, Roubaix, France, and Paul Renart, 97 Rue Victor Hugo, Roubaix. Improvements in dust separating apparatus.

No. 10536. May 1, 1911. Convention application April 29, 1910.—Firm Franz Schonweitz, 21 Knauerstrasse, Hamburg. Process for the manufacture of objects imitating marble, quartz, or majolica.

No. 11098. May 8, 1911.—Andres Giacometti, 90 Route de Gonesse, Stains (Seine), France. Device applicable to locks for wedging the bars of doors.

No. 11638. May 13, 1911.—J. H. Siemens, Obrienstr., Heligoland, Germany. An improved fire escape.

No. 11930. May 17, 1911.—G. R. Tellander, 4 Kungsportsavenyen, Goteborg, Sweden. Improved ventilation valve.

No. 11960. May 18, 1911.—Geo. Field, 56 Holloway Road, Birmingham. Improvements in or relating to ventilators.

No. 13106. May 31, 1911. Convention application Aug. 29, 1910.—Horace Chrisman, Edgewood Park, Alleghany. Improvements in apparatus for measuring or indicating the flow of fluid from a conduit.

No. 14751. June 21, 1911.—G. J. Money, 39 Rochester Road, London. Improvements in or relating to fastening devices or latches for doors, windows or the like.

No. 15727. July 6, 1911.—Heinrich Bebie, 8 Mozart Strasse, Altona-Bahrenfeld, Germany.—Device for fixing windows, window shutters and doors in open position.

No. 15862. July 8, 1911.—F. S. Worsley, "Windermere," Orchard Road, Erdington, Warwick. Improved clutch mechanism for the detachable attachment of arc lamps or other appliances to a post or high up support or suspender.

No. 16451. July 17, 1911.—H. W. Sanderson, of The Wall-Paper Manufacturers, Ltd., A. Sanderson & Sons' branch, Chiswick. Improvements in apparatus for use in the production of printed and embossed wall papers and the like.

No. 23368. Oct. 23, 1911.—Franz Sierling, Altfriesack, nr. Wustrau, Ruppin, Germany. Improvements in dust filters.

THE NEW BULLOCK SLAUGHTER-HOUSES AT THE METROPOLITAN CATTLE MARKET, ISLINGTON.

One of our great-grandmothers (whose pictured presentment, painted by her grandson, gazes down upon us as we write) was wont to use the phrase, "As ignorant as bull-beef." Wherein lies the especial quality of nescience on the part of this marketable commodity, we know not, but we are fain to profess our sympathy with bullocks, if they cannot intelligently appreciate the fine new buildings provided for their——? well, not their delectation, perhaps, but for their reception. Compared with the neighbouring houses, erected only six or seven years ago, the advance is noteworthy; in fact, the new houses are supposed to represent the penultimate, even if it be not claimed for them that they represent the ultimate phase in abattoir development.

We may, however, be permitted to suggest that humanitarians would disapprove of two animals being slaughtered in each other's presence; and it would have been preferable if the Corporation had expended the comparatively little more in order to provide separate abattoirs for each animal. And it may also be suggested that the notices to be affixed on the doors between the pens and the houses should appear on the face toward the former rather than the latter (as we noticed in the older houses), for it is conceivable that under existing conditions the men engaged may on many occasions overlook the injunction to shut the doors; consequently there is no assurance that the animals in waiting will not be conscious, "through the medium of hearing, sight and smell," of the tragedies being enacted on the other side of the wall.

There are five slaughter-houses, each 29 feet in depth with widths of 25 feet centres; sliding doors give entry from the pens, two of the latter appertaining to each house. There is a complete equipment of overhead running tracks; and an electric hoist for lifting the animals after slaughter (two hoists to each house) is an innovation in England, though not unknown on the Continent. Six hundred animals can be dealt with per day. To promote cleanliness, glazed bricks line the walls and blue Pennant stone is used as a paving.

A wide gangway separates the abattoirs proper from the range of five chill-rooms; the refrigerating machinery is supplied by the Haslam Foundry Engineering Co. of Derby, and it can deal simultaneously with 440 sides (that is to say, 220 carcases), the temperature employed being 34° Fahr.

Mr. G. J. Berridge, Chairman of the Cattle Markets Committee, performed the simple opening ceremony on Friday, 1st inst., and he received from the contractors a gold key as a memento of the function. He took occasion to refer to the serious diminution in the supply of home-bred cattle. The encomiums that he passed upon the City Surveyor, Mr. Sydney Perks, F.R.I.B.A., who designed the buildings, and upon the contractors, Messrs. William Johnson & Co., Ltd., of Wandsworth Common, are well merited. A sum of over £60,000 has been expended by the Corporation upon these buildings, which are in substitution of the private slaughter-houses that formerly existed in this market.

SPRINKLERS IN AN EDINBURGH THEATRE.

In addition to existing precautions against the possible outbreak of fire in the King's Theatre, Edinburgh, the proprietors of the theatre, the Edinburgh Construction Co., Ltd., have introduced an installation of Mills' "Titan" sprinklers into the stage part of the building. A successful demonstration of the working of the sprinklers was given on December 14 in the workshop underneath the stage. Amongst those who witnessed the demonstration were Dean of Guild Carter, Councillor Smith Elliot, Mr. Pordage, Firemaster, the Chairman of the Directors, and Mr. Robert Wyllie, representative in Scotland of Messrs. Mills & Co., Ltd., Radcliffe, near Manchester. For the purposes of the demonstration a large heap of dry shavings was collected on the floor of the stage workshop and saturated with inflammable oil. The material was set alight, and within half a minute the sprinkler on the roof above had fused, and a stream of water descended automatically on to the flames. In a short time the flames had been extinguished. Immediately the sprinkler acted the gong on the outside of the theatre resounded loudly, attracting much attention, and at the same time the May-Oatway alarm gave warning to the Fire Brigade, and within about three minutes a steamer and tender were at the theatre prepared to deal with an outbreak, but the fire was already out. Alluding afterwards to the success of the experiment, Dean of Guild Carter thanked the directors for the opportunity which had been afforded of witnessing it, and expressed the hope that the occasions for the use of the sprinklers would be few and far between. The Chairman of the Directors said the object of the installation was the additional security of the community. They had done everything they could think of to prevent the outbreak of fire, and to ensure the safety of the public. He mentioned incidentally that the installation of the sprinkler would involve a reduction in the matter of insurance. Councillor Smith Elliot remarked on the celerity with which the Fire Brigade appeared on the scene after the alarm had been given.

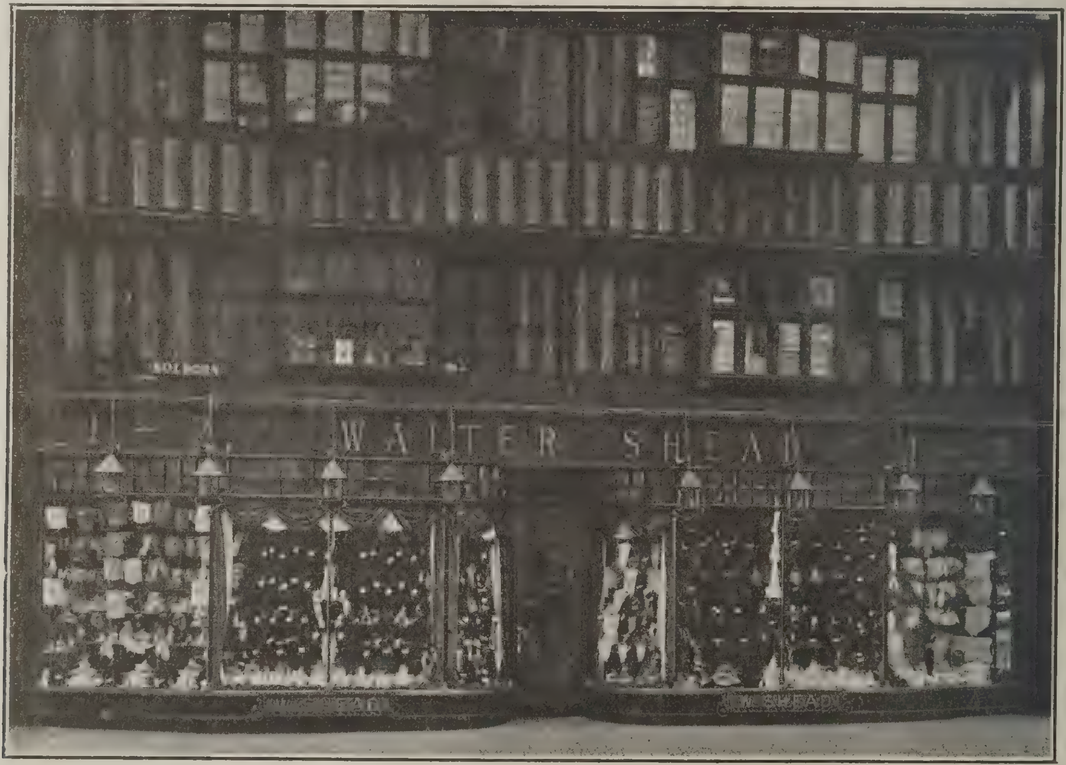
SHOP FRONTS.

There can be no class of men more alive to the necessity of presenting an attractive "outside" to the world than shopkeepers, for they know to the full how apt everybody is to judge by appearances. In their experience the setting is half the battle. It is no wonder that window-dressers are said to earn handsome salaries, and that there is keen competition for the foremost of these artists. But the best endeavours they can make must be more or less conditioned by the stage on which they cunningly display their wares, *i.e.* by the shop fronts. This truth, obvious though it may appear, was not at first realised. Owners were content with slipping in a girder on the ground floor ceiling line to carry the weight above, and then filling the void below with a plain expanse of glass. The result was displeasing to the artistic eye, and also to the owner when he realised that it did not take full advantage of possibilities. Of later years there has been very great ingenuity shown in providing fronts that would attract the most critical, and yet without sacrifice of their capacity for display.

In this class of construction the reputation of Messrs. Stanley Jones & Co., Ltd., 8 Gray's Inn Road, W.C., is secure. Their work as shopfitters is to be seen all over the country, for the reason that among their customers are companies having branches in both the large towns and small villages. It is produced under exceptionally favourable circumstances at their new freehold model factory at Stowe Road, Shepherd's Bush, W., which covers over two acres. They claim it to be the finest of its kind in the trade, and that it enables them to execute contracts at a saving of from 10 per cent. to 15 per cent. against the prices quoted by competitors who are handicapped by heavy London rents and taxes. This factory is fully equipped with the latest labour-saving plant, which enables them to execute any size contract expeditiously, cheaply, and satisfactorily.

The Company have just issued a brochure which reproduces photographs of some of their recent contracts. The ones we particularly like are those showing the premises of (1) Messrs. W. H. Smith & Son, 100 Westbourne Grove, W.; (2) Messrs. Tecla, 30 Old Bond Street, and 8 New Bond Street, W.; (3) Messrs. Waring's, Ltd., Oxford Street, W. (which were the first fronts of importance in London made on their arcade and island showcase principle); and (4) of Mr. W. Shead, 1 and 2 Holborn, E.C. Some of the photographs show the very important interior fittings. In this latter connection we may mention that Messrs. Stanley Jones & Co., Ltd., received an order from the Board of Trade for 15,000 feet of show cases for the recent Brussels Exhibition. Shop fronts are, of course, a matter of taste, and so it may seem invidious for us to single out the above examples. It is open for everyone to make their own selection.

Our illustration suggests how the firm grappled with the difficult problem of inserting a new shop front into the old half-timber buildings at Holborn Bars. The front is carried out in teak, and is perfectly plain. Although it is modern to a certain extent, it cannot be said to clash with the overhanging floors above.



THE ENLARGEMENT OF THE GUILDHALL, LONDON.

In the course of a short while, plans will be presented for rebuilding the blocks of offices on the east side of Guildhall Yard in order to provide additional accommodation for the Lord Mayor's Court and the Art Gallery. The plans, the *City Press* understands, have been approved by the four committees immediately concerned, and now the sole question to be decided is whether the Court of Common Council will grant the money needed for carrying out the scheme. The sum involved is said to be about £50,000. The idea is to sweep away completely the existing buildings from the Guildhall Yard to the Guildhall Tavern, including the Irish Chamber; and to erect on the site a new block according to a design harmonising with the architecture of the Guildhall itself. The buildings on the west side are also, we understand, to be dealt with in like fashion. Under the plans, the Art Gallery, which at present is housed under conditions the very reverse of favourable, will be provided with three magnificent galleries, each seventy feet in length, together with a number of smaller rooms, equally suitable for the exhibition of the art treasures the City possesses. For a long time the Library Committee have felt the necessity of extension—not only for the suitable housing of the pictures at present possessed, but in order that they may appeal with success to art patrons for the presentation of pictures which will make the collection really worthy of the City of London. The Art Gallery under the scheme will occupy the top floors; while the Mayor's Court, Irish Chamber, and other business departments will be accommodated on the ground floor and basement. The thoroughfare from the Guildhall Yard to Basinghall Street will be bridged over so as to make the line of buildings continuous from the Guildhall itself to the Guildhall Tavern.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

Special Position Spaces.—Unless ordered for weekly insertions the Proprietors cannot guarantee particular dates.

EDITORIAL NOTICES.

The Editor will always be pleased to examine drawings or articles with a view to publication, but cannot be responsible for the safety of those sent, though every reasonable care will be taken. Contributors desiring payment should clearly state their wishes. No payment will be made until after publication, and a commission to prepare articles or drawings does not necessarily imply acceptance or approval.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

We have upon our staff a very eminent Barrister, who will be glad to answer in the columns of this paper any legal question that may be of interest to our readers. All letters must be addressed "Legal Adviser," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit the insertion of lengthy communications.

TENDERS, ETC.

⁂ *As great disappointment is frequently expressed at the nonappearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2* p.m. *on Thursdays.*

COMPETITIONS OPEN.

Australia.—Jan. 31.—The Government of the Commonwealth of Australia invite competitive designs for the laying-out of the Federal Capital City, and offer premiums of £1,750, £750, and £500. The conditions under which designs are invited, together with plans and instructions, may be obtained from the High Commissioner for Australia, 72 Victoria Street, S.W. Designs must be delivered to the Department of Home Affairs, Melbourne, Australia, by January 31, 1912. Mr. K. O'Malley, Minister of State for Home Affairs.

Banbury.—Jan. 8.—The Town Council invite designs by January 8 for workmen's dwellings to be erected within the borough. Applications for particulars, accompanied by 10s. deposit, which will be returned on receipt of bonâ-fide designs, should be made to Mr. Arthur Stockton, town clerk, Town Hall, Banbury.

Bolton.—Jan. 6.—The Lancashire and Cheshire Miners' Federation invite architects in independent practice within a radius of twenty-five miles of the Town Hall, Bolton, to submit in competition designs for the proposed central hall, offices, and caretaker's quarters, Bolton. Mr. Jonathan Simpson, F.R.I.B.A., will act as assessor. Premiums of £50 and £25 are offered. Deposit £1 1s. Messrs. Fielding & Fernihough, solicitors, 7 Fold Street, Bolton. N.B.—The time for sending in applications and designs has been extended from Dec. 1 to Jan. 6.

Bolton.—The King Edward VII. Memorial Fund Committee invite competitive plans from architects now practising as principals within the county borough of Bolton for the King Edward VII. Memorial Nurses' Home proposed to be erected at the Bolton Infirmary. Plan of the site and instructions may be obtained upon payment of £1 1s., which

sum will be returned to the competitors provided they shall have sent in *bona fide* plans and particulars and shall have returned all documents, plans, &c. Mr. Samuel Parker, hon. secretary of the Committee, Town Hall, Bolton.

Ireland.—Jan. 9.—The Magherafelt Technical Instruction Committee invite competitive designs for a technical school, proposed to be erected in Magherafelt, the total expenditure, including provision of sewerage and water supply, not to exceed £1,200. Mr. W. D. Cousins, County Technical Office, Courthouse, Coleraine.

London.—Feb. 17.—The Port of London Authority invite preliminary sketch designs in competition for head offices proposed to be erected in Trinity Square, and for the laying out of the remainder of the land as a building site. From the sketches submitted the authors of not more than six designs will be selected to submit designs in a final competition at an honorarium of 200 guineas each, the Authority reserving to themselves the right, on the advice of their assessor, to invite not more than six other architects to send designs in the final competition. The assessor appointed is Sir Aston Webb, R.A. Conditions of the competition, with full particulars of the accommodation required, plan of the site, and photographs of the adjoining buildings, can be obtained on application, on payment of £1 1*s*., which sum will be refunded on receipt of a bona-fide design, or on the return of the particulars within three weeks, to The Secretary, Port of London Authority, 109 Leadenhall Street, E.C.

Spennymoor.—Jan. 9.—The Urban District Council invite competitive plans and designs for a public hall, market, and offices, &c. Particulars may be obtained on payment of a deposit of £2 2*s*., which will be returned on receipt of a *bona fide* design. Premiums of £50, £25, and £10 are offered. Mr. F. Badcock, clerk, Council Offices, 3 James Street, Spennymoor. (See advertisement.)

Stafford.—Jan. 6.—The Corporation invite designs for a public library. An assessor has been appointed. Send £1 deposit, which will be returned on receipt of a bona-fide design, or the return of the conditions, &c., within one month of receipt. Mr. William Plant, A.M.Inst.C.E., borough engineer, Borough Hall, Stafford.

Uruguay.—Jan. 30.—The Ministry of Public Works invite competitive plans for a town-improvement scheme and for a new Government Palace at Monte Video. Premiums of about £1,060, £640, and £425 are offered for the former scheme, and about £2,215 and £850 for the latter. Designs for the Government Palace must be submitted by Jan. 29, 1912, and for the town-improvement scheme by Jan. 30. A statement of the conditions of the competition (in Spanish) may be seen by British firms at the Commercial Intelligence Branch of the Board of Trade, 73 Basinghall Street, London, E.C.

Wales.—March 15.—Lord Aberconway and the Trustees of the Prestatyn estate, North Wales, invite designs for the laying out of the estate. Premiums of £50, £30, and £20. Assessor, Mr. H. V. Lanchester, F.R.I.B.A. Send applications for conditions, plan, and bye-laws, with 10*s*. 6*d*. deposit (which will be returned on receipt of *bona fide* designs or return of the conditions, &c., within fourteen days of receipt), by January 8, to Lord Aberconway and the Trustees of the Prestatyn Estate, 33 Henrietta Street, Strand, W.C.

CONTRACTS OPEN.

CORRESPONDENCE.

[The Editor will not be responsible for the opinions expressed by Correspondents.]

New Parliament Buildings for Manitoba.

Sir,—Herewith I beg to send you copy of a letter which has just reached the High Commissioner from the Hon. Colin H. Campbell, K.C., Minister of Public Works for Manitoba, relative to a competition which is being advertised for plans for the proposed new Parliament buildings at Winnipeg.

Copies of the conditions referred to by the Minister will be supplied to architects who apply to me at this address.—I am, yours faithfully,

W. L. Griffith.

17 Victoria Street, London, S.W.,
December 22, 1911.

(Copy.)

Public Works Department, Manitoba.
Winnipeg, December 8, 1911.

The High Commissioner for Canada,
17 Victoria Street, London, S.W.

My dear Sir,—The Government of the Province of Manitoba are advertising for plans for the new Parliament buildings to be erected in the city of Winnipeg.

I am sending you seventy-five (75) copies of the conditions of the competition.

Architects in the United Kingdom may apply to you and desire a copy of these conditions; if so, we would ask you to kindly supply same.—Yours faithfully,

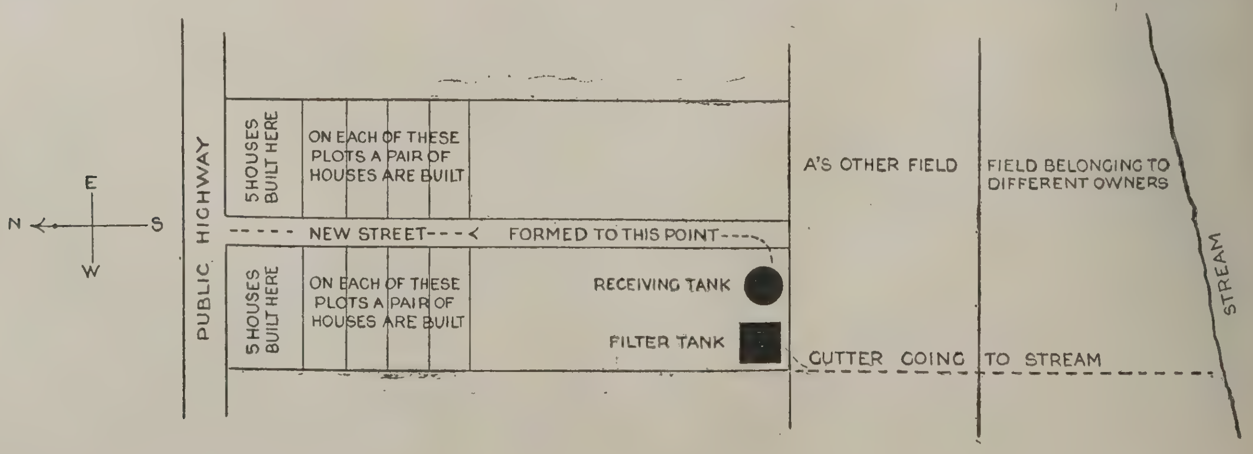
(Signed) Colin H. Campbell.

[H.M. Trade Commissioner for Canada (Mr. R. Grigg) reports to the Board of Trade that the Provincial Government of Manitoba intend to obtain plans at once for new Government buildings at Winnipeg, estimated to cost over 2,000,000 dollars (about £411,000). It is stated that out of the sketch designs about five will be selected, and the competitors submitting them will be invited to make out full specifications and plans, from which a final choice will be made.—Ed.]

ANSWERS TO CORRESPONDENTS.

Drainage (North Riding Architect).—A having complied with the demands of the Rural District Council on several occasions, and also consented to his main drain being used as a public sewer for a considerable time, thus allowing various cesspools to become disused, he cannot now upset existing arrangements by repudiating liability for the result of his own conduct. He should have made definite arrangements with the different owners when they connected their houses with his main sewer, and should have come to terms with the local authority before allowing his drain to become a public sewer. The best thing to do now is to come to reasonable terms if possible with the Rural District authority.

Seven years ago A laid out a field for building. The field is an oblong, one end on the north bounded by a public highway, the other (south) end by another field belonging to A, the two long sides (east and west) of the field bounded by the land of adjoining owners. Beyond A's field on the south was a field owned by another person, and beyond that a stream. Here is a sketch plan showing the field and its surroundings and indicating the laying-out plan of A's building field, which laying-out plan was approved by the Rural District Council in whose district the land is situate:—



Plans for the 26 houses on the indicated plots were at various times extending over three years submitted to and approved by the R.D. Council. All these plans showed "cesspool" arrangements, the district having no sewage system. After a time A, without submitting any plan, put a main drain down the centre of the street, constructed a reception tank and a filter (shown by dots), the overflow from the filter going into the gutter belonging to A at first, from there into the gutter belonging "different owner," and so into the stream. After these constructions the different owners of the houses (about a dozen owners), some with the consent of A, some without, disused their cesspools and connected their houses with the drain which A had put in.

After a time the Rural District Council began to call upon A to abate a nuisance which existed at the tanks. On several occasions A complied with their demands, but as he was under no obligation to the owners of houses to provide sewers and no one had contributed to the cost of sewer and tanks, he refused two years ago to do any more in the way of attending to the sewer or tanks and requested the Rural District Council to make the owners of the various houses put their premises into conformity with the plans which they (the Council) had approved, further stating that he (A) would proceed to take up the main drain which he had put in, fill up the tanks and thus end the matter so far as he was concerned.

The Clerk of the Council then informed A that the Council could not now compel compliance with the deposited and approved plans, that A could not disturb the main drain, which owing to its serving more than a certain number of houses had become a public sewer (and presumably, though he did not say so, vested in the Council as the "authority"), adding that the Council would hold A responsible for any nuisance arising on his (A's) property and further requiring A to so deal with the tanks as to ensure a pure outflow issuing therefrom and so going into the stream. To this demand A has not returned any reply.

It may be well to add that independent of A's property altogether other sewage, some quite crude, goes into the stream.

What is the position as between A, the owners of houses connected with the drain and tanks, and the Council respectively?

North Riding Architect.

The foundations of the new London County Hall are expected to be completed about the middle of 1913. The central block of the buildings is expected to be completed about three years later.

The Wigton Rural District Council have adopted a scheme, to cost £13,000, for supplying ten parishes in its area with water, to be procured from the Aspatria and Silloth Water Board's gravitation supply. Thirty miles of mains will be required.

Mr. W. P. Robinson, age 31, chief assistant county surveyor and engineer to the County Council of Durham, has been appointed out of 135 applicants surveyor for the northern division of Devonshire, at a salary of £400 a year and £160 travelling allowances.

The Tynemouth Town Council have accepted the tender of Mr. W. T. Weir, of Howdon-upon-Tyne, amounting to £6,200, for the extension of the North Shields fish quay, in order to provide additional boat berthage. The Council is also considering tenders for carrying out a scheme for the reclamation of land to the eastward of the fish market.

BUILDING PROGRESS IN THE PROVINCES AND SUBURBS.

A LIST OF WORKS PROJECTED OR COMMENCED.

(N.B.—Local Authorities, architects and others are invited to submit full particulars for insertion in this weekly list.)

THE Birmingham Royal Society of Artists are considering a scheme for the rebuilding of their present gallery in New Street.

THE Greenock Corporation have agreed to approach the Secretary for Scotland for powers to borrow £20,000 for extension of the electricity works.

MR. ALFRED ROUTLEDGE, of Stanley, has been appointed surveyor to the Stanley Urban District Council, in succession to his father, the late Mr. J. Routledge. There were 199 applicants, and in the final ballot Mr. Routledge received eight votes, as against six recorded for Mr. H. Pickering, surveyor, Northampton. The salary is £250 per annum.

BRITISH PATENT SPECIFICATIONS.

Selected and abridged by James D. Roots, M.I.Mech.E., Thanet House, Temple Bar, London.

The first date given is the date of application; the second, at the end, the date of the advertisement of the acceptance of the completed specification.

No. 642. Jan. 10, 1911.—W. C. Jennings, 39 Station Road, Ashley Down, Bristol. An improvement in sliding and pivoted windows. The object of this invention is an improvement in window frames and sashes providing for the sliding in a vertical or nearly vertical direction of one or more sashes. Each sash not only slides in the grooves provided for the purpose, but shall be so pivoted to a hanging stile that it shall be capable of opening on pivots to a plane convenient to enable the exterior face of glass to come into a position that it can easily be cleaned, thus allowing both faces of glass to be cleaned from the same position, preferably inside the building. The window frame is made with box cased sides to take weights K K K and pulleys, in pulley stiles N forming part of box casings. The sashes slide in the frame guided by top beads F, parting beads J, or projecting casings, thus forming a single groove in the case of one sash or a double groove in the case of two sashes. Sash stiles (see Figs. 1 and 2) on each side of sash are formed in two parts rebated together. The part which fits into groove is termed the sliding stile (see Fig. 2), the sash stile fitting this (see Fig. 1). The sliding stile and sash stile are pivoted at a point preferably below the centre, so that sash can open inwards, leaving the sliding stile still contained between stop beads, parting beads, or projecting casings. In the sliding stile I is a groove G to receive the sash cord C, which is brought from weights K K K in box casings over pulleys in frame, through a groove G in the sliding stile I, and threaded through a small pulley D (Fig. 2), in the sliding stile. The end of cord C is fixed to sash stile with attachment fitting, the cord being knotted and fixed under bent part of attacher B. Fig. 1 is a perspective view of sash stile. Fig. 2 is a view of sliding stile containing pulley. The cord is passed down the groove and threaded under pulley. Fig. 3 shows horizontal section of box framing with its various parts. A is the diverting pulley frame in which diverter pulley is pivoted or fixed. B, the cord attacher. C, the cord. D, the diverting pulley which guides sash cord at an angle. E, the outside casing. E E, the inside casing. F, the stop bead with groove M. I, the sliding stiles with groove G. H, the sash stiles pivoted to sliding stile. J, the parting bead. K, the weights which may consist of a single weight for each pair of sashes each side of window frame with a sheave pulley in each, and a cord passing under sheave pulley, the weight being connected at one end to top sash, and the other end to bottom sash after passing over pulleys in pulley stiles. L, is a plate fixed to each sliding stile engaging in groove M in stop bead, or in MM of casting E. N, is the pulley stile with sash pulleys fitted to same. When it is desired to clean the outside of glass of top sash any fastenings employed are disengaged, and bottom sash is raised into an open rebate formed by a false head. This then allows the top sash to be lowered sufficiently far to clear under the bottom sash, the cords sustaining the weight of the sash. Pivot centres being low the larger portion of sash is thus brought into the room for cleaning purposes. When bottom sash has to be cleaned the fastenings are disengaged, and the sash swung over and sustained on cords. Nov. 22, 1911.

NEW CATALOGUES.

Messrs. Robert Jenkins & Co., Rotherham, have produced an excellent catalogue which deals with some of the various apparatus they know so well how to manufacture. The pages number a little over a hundred, and are well printed, concisely written, and adequately illustrated. Particular attention is drawn to the Jenkins patent steel sectional boiler of an improved design, the "Haslar" boiler, for hot-water supply, their recent "Eausho" hot-water supply boiler, and the Dual Independent Boiler, for combined heating and hot-water supply service. All of these embody new ideas, and are confidently recommended by the patentees and makers. Concerning the two latter specialities, we gave some interesting particulars in our Supplement of August 11. But we may add that Messrs. Jenkins & Co. have since received substantial testimony as to their efficacy. For instance, they appear to have done remarkably well under difficult conditions at the last Yorkshire Agricultural Show. Besides a multiplicity of boilers, the catalogue shows various pipes and connections, furnace fronts, elbows, air cocks, hot-water valves, cylinders, pans, and other fittings.

Joseph Wright & Co., Tipton, have devoted a special catalogue to their important chain and anchor departments, which is distinct from their engineering department and forge department. In connection with it they are also issuing a large working load table for hanging up in workshops. Perhaps the most widely known brand of any is their "A 1 Special Best Best J. W. & Co. (Regd.)" for chains and iron. This brand is exclusively rolled from special material by the latest process, and is sound, reliable, lasting, and most economical. It is an easy step from chains to hooks, pulley blocks, and hand hoists. All these play an important part in the building trades, and are succinctly dealt with in the latest catalogue.

The electrical world moves so rapidly that it is no wonder to find the General Electric Company, Ltd., 67 Queen Victoria Street, E.C., have had to issue a thirteenth edition of their new list—Section S—dealing with electric light supplies. Its publication has, we are informed, been delayed to include a considerable number of new designs and improved apparatus. The prices are as low as possible consistent with first-class material and workmanship, and all the accessories are of their own British manufacture throughout. Attention is particularly called to the "Home Office Accessories," specially designed and manufactured to comply with the requirements of the Electrical Inspector of Factories and Workshops—namely, distribution boards, shielded fuses, branch switches, wall plugs and adaptors, factory plugs, cut-outs, "Coates" lamp-holder shields, and china lamp-holders. The new "Slick" flat switch (introduced since the issue of their last list) has met with great favour, and the firm confidently assert that there is no better value on the market.

From the Carron Company we have received a cloth-bound copy of the new edition of their Stable, Cowhouse, and Piggery Fittings Catalogue. What they say about the horse in the following introduction applies equally well to cows and pigs: "The condition of the stud largely depends on the stabling. Proper drainage and ventilation are just as essential to the well-being of the horse as proper food. In 'Carron' stabling every requirement has been anticipated to ensure the comfort and health of the animals, as well as the convenience of those attending them. 'Carron' Stable, Cowhouse, and Piggery Fittings are the outcome of 150 years' experience, and in point of utility, durability, and sanitary efficiency are regarded as 'The World's Standard.' 'Carron' fittings have been adopted by the leading stockbreeders and corporations, and by the gentry and nobility throughout the country." The catalogue is prefaced by some brief suggestive notes and hints for those about to build. The Company seem to have overlooked no detail which can promote the well-being of the live-stock, and their catalogue is marked with the clearness and excellence characteristic of the Carron products.

John Tann's Reliance Safes have won many honours since the business was first established in 1795. We do not know what the earliest was; but we believe the latest (but not the last) was the selection of one of the "Anchor Reliance" safes by his Majesty for securing the Crown jewels worn at the recent Durbar on the voyage to India on the *Medina*. Another very recent testimonial is in the form of a letter from a firm of London manufacturing jewellers, who report that in October last a gang of well-equipped burglars were unable to force an "Anchor Reliance" safe containing about £3,000 worth of goods after some hours of obviously desperate work. Messrs. D. Kirkaldy & Son in April last carried out experiments to ascertain the resistance to drilling of four pieces of their hardened steel safe plates. "It was found impracticable to drill holes through the plates with steel drills in a power drilling machine, the drills being either blunted or shattered when reaching or tried on the hardened steel layer in the plates." John Tann's latest catalogue is remarkably complete, for, besides showing safes of all kinds, strong rooms, and strong-room doors, it includes deed and cash boxes, steel shelving, special ventilators, strong-room fittings, party-wall doors, and tabernacle safes. We may note in conclusion that Mr. Tann has recently removed from his old address, No. 11 Newgate Street, to more commodious premises, almost exactly opposite, and that the new offices and showrooms are now at No. 117 Newgate Street, E.C.

A clever little booklet is that issued by the Yost Typewriter Co., calling attention to the value of their machines. In a busy newspaper office the number of circulars and trade catalogues forwarded is enormous, and it is not always possible to take note of every one forwarded. The Yost circular claims attention from the excellent way in which it has been produced.

VARIETIES.

The Tynemouth Town Council have adopted a recommendation for the purchase of two school sites and the building of a junior mixed school and a mixed school, each for 550 children.

The Reading Board of Guardians are about to expend £4,185 on the provision of headquarters for their scattered homes. The plans have been prepared by Mr. W. Roland Howell, architect.

The tender of Messrs. Hardy & Co., Woking, of £5,192, for carrying out the work of the proposed sewerage extensions, has been accepted by the Frimley Urban District Council. Sixteen tenders were received.

The London and North Western Railway Company have decided upon important improvements at New Street Station, Birmingham, and an extension of the Queen's Hotel adjoining, involving an outlay of £100,000. By far the larger portion of this amount will be expended on the enlargement of the hotel by the erection of a new wing.

The Abertillery and District Water Board have accepted the tender of Messrs. Underwood & Brother, of Dukinfield, Cheshire, at £261,745, to construct a dam and reservoir in the Grwyne Fawr Valley, Breconshire, a new road ten miles long, water mains thirty-three miles long, a tunnel through the Coity Mountain, Blaenavon, and service reservoirs at Abertillery and Abercarn. The service will supply the greater part of industrial Monmouthshire. The engineer is Mr. Baldwin Latham, of Westminster.

The Board of Education have finally approved the plans and specification for the construction of a new swimming-bath and of alterations to the gymnasium at Reading. The Education Committee have instructed Messrs. Henry Cooper & Sons, surveyors, to prepare the bills of quantities preparatory to inviting tenders from five local builders.

Eight sets of plans have been submitted for the town planning competition at Halifax, in which Mr. J. H. Whitley, M.P., offered awards amounting to £150. Professor Adshead, of the Department of Civic Design, Liverpool University, will visit Halifax shortly to go over the areas concerned, and afterwards will consider the merits of the various plans.

The Corporation of Hertford have deposited a Bill for next session by which Parliament will be asked to confirm an agreement between the Marquis of Salisbury and the Corporation for the preservation of Hertford Castle and its grounds as a place of historical interest and as a place of recreation for the public. The Marquis of Salisbury grants to the Corporation the castle and grounds of about five acres under lease for a term of seventy-five years at the yearly rental of 2*s.* 6*d.*

The British Thomson-Houston Company desire us to announce that they have organised an illuminating engineering department to freely give expert assistance to architects, engineers and contractors in the planning of illumination along the most approved and efficient lines. This department is capable of undertaking all kinds of illuminating engineering work from the home to the office, and from the shop to the largest interiors, depots, railway stations, assembly halls, auditoriums, &c. The illuminating engineering department of this company have offices and engineers at Rugby, London, Manchester, and Sheffield.

An expenditure of £100,000 is suggested towards the establishment of the Federal capital city of Australia. It is proposed to acquire the privately owned lands within a radius of seven miles of the city site, and other properties on which works for various purposes will be constructed, such as pipe lines, reservoirs, bridges, weirs, &c. Provided these lands are acquired immediately, a sum of £50,000 could be profitably expended on necessary works during the year. These works embrace the construction of a weir on the Cotton River, a bridge over the Murrumbidgee River, laying of water pipes, construction of a reservoir, a temporary railway from Queanbeyan to the centre of distribution of material, power plant, brickmaking plant, supply of timber, road-making, &c.

The various carpenters' and joiners' societies and furnishing and cabinet makers' societies in London have made a number of important alterations in their working rules for the district, and notice of them has been sent to the London Master Builders' Association. The most important of the proposed new rules stipulate for an increase of 1½*d.* an hour in wages, bringing the minimum rate to 1*s.* per hour; a reduction of the working hours in summer from 50 to 47 per week, the winter hours to remain at 44 per week as at present; and in order to reduce overtime as much as possible payment for overtime at the rate of double time. Six months' notice has to be given to the master builders to terminate existing rules, the new proposals coming into operation on June 8, 1912.

TRADE NOTES.

Under the direction of Mr. Arthur C. Blomfield, M.A., Boyle's latest patent "air-pump" ventilators have been applied at the Bank of England, Threadneedle Street, E.C.

Messrs. W. Potts & Sons, Ltd., clock manufacturers, Leeds, have erected new clocks at the following places:—Abbey Town, Cumberland, illuminated clock and bell; clock and bell, Loch Lomond, Scotland; illuminated clocks with dials at the Conservative Club, Clayton, Manchester, and at Clayton West, Huddersfield; a clock striking hours, bronze dial, Sherburn, near York; a Coronation clock at Holme, near York; a chime clock and illuminated dials, Lower Darwen, Blackburn; St. Aidan's Church, West Hartlepool; Easton, near Middlesbrough. Messrs. Potts have clocks to erect at Pelton Church, near Newcastle-on-Tyne; Ashington Town Hall, Northumberland; Brough, Westmoreland; West Butterwick Church, Lincolnshire; and large dials to a church in London.

The new Council Schools, Macclesfield, and the Addington Schools, Surrey, have been supplied with Shorland's warm-air ventilating patent Manchester grates. The additions to the Colchester Infirmary are being supplied with Shorland's warm-air ventilating patent Manchester stoves, with descending smoke flues. The new picture theatre, Featherstone, and the church of the Holy Trinity, Southport, are being ventilated by Shorland's patent exhaust roof ventilators. All the above were supplied by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

COMPETITIONS.

PRESTATYN, NORTH WALES.
TOWN PLAN

LORD ABERCONWAY and the Trustees of the Prestatyn Estate invite DESIGNS for the laying out of the Estate. Designs to be delivered on or before March 15, 1912. Premiums £50, £30, and £20. Judge, Mr. H. V. Lanchester, F.R.I.B.A.

Applications for copies of Conditions, Plan, and Bye-laws, and accompanied by a deposit of 10*s.* 6*d.*, which sum will be returned to Competitors who submit bona-fide designs or return the conditions, etc., within 14 days of their receipt, should be sent on or before January 8, 1912, addressed to Lord Aberconway and the Trustees of the Prestatyn Estate, 33 Henrietta Street, Strand, W.C.

BOROUGH OF BANBURY.

THE Town Council of the Borough of Banbury invite DESIGNS for Workmen's Dwellings, to be erected on a site within the Borough.

Applications for particulars, accompanied by a deposit of Ten Shillings, which will be returned on receipt of bona fide designs, should be made to the undersigned.

Designs must be sent in to me not later than the 8th day of January, 1912.

ARTHUR STOCKTON,
Town Clerk.
Town Hall, Banbury
December 5, 1911.

URBAN DISTRICT COUNCIL OF SPENNYMOOR.

ERECTION OF A PUBLIC HALL, MARKET AND OFFICES, &c.

THE above Council invite COMPETITIVE PLANS and DESIGNS of a Public Hall, Market and Offices, etc.

Particulars of the accommodation required, and of the conditions of the competition, together with a plan of the site and the necessary levels, may be obtained on payment of a deposit of £2 2*s.* 0*d.*, which will be returned on receipt of a bona-fide design.

Three premiums are offered, viz., £50, £25, and £10, as first, second and third respectively.

The competitor whose plans are considered most suitable will be awarded the first premium and will be engaged to carry out the work, in which case his premium will merge in his commission.

The Council are not bound to accept any of the designs submitted.

The designs obtaining premiums are to remain the property of the Council.

Designs must be delivered at my office not later than January 9, 1912.

Council Offices, (By Order), F. BADCOCK,
3 James Street, Spennymoor: Clerk to the Council
November 25, 1911.

TENDER.

G. R.

WAR DEPARTMENT CONTRACT.

THE Secretary of State for War hereby invites TENDERS for the following work:—The Demolition of Water Tower and the erection of new Administrative, Operation and Ward Blocks and Boiler House, at the Military Hospital, Fort Pitt, Chatham, in the Eastern Command.

Plans, specification and conditions of contract may be inspected at the office of the Director of Barrack Construction, 80 Pall Mall, London, S.W., or at the Barrack Construction Office, Old Government House, Line Barracks, Chatham, from January 1 to January 12, 1912, inclusive.

Those desiring to tender and to receive a copy of the bills of quantities must apply to the Director of Barrack Construction not later than Friday, January 5. The application must be accompanied by a deposit of Ten Shillings, which will be returned if a bona-fide tender is received from the applicant, Cheques or orders to be made payable to the Assistant Financial Secretary, and crossed "Bank of England for credit to Army Funds."

Tenders on the form supplied with the bills of quantities must be delivered in sealed envelopes, marked "Tender for Remodelling and Extending the Military Hospital, Fort Pitt, Chatham," not later than 12 noon on Monday, January 15, 1912, addressed to the Director of Army Contracts, War Office, Whitehall, London, S.W. The bills of quantities should accompany tender in a separate sealed envelope, similarly addressed, and marked "Bills of Quantities for Remodelling and Extending the Military Hospital, Fort Pitt, Chatham," with the contractor's name and address thereon.

The Secretary of State does not bind himself to accept the lowest or any tender.

(Signed) H. DE LA BÈRE,
Director of Army Contracts.
War Office,
Whitehall, London, S.W.
December, 1911.

OFFICES TO LET.

MR. T. J. NICHOLSON (Decorative Artist) 17 Connaught Street, Marble Arch, W., would like to share his up-to-date OFFICES with an Architect or Surveyor. Terms on application.

LIGHT and Convenient Offices to LET Central position of City. Moderate rentals. Office. decorated to suit tenants.—Apply for particulars to A. H., SHEPHERD, Imperial Buildings, Ludgate Circus, or E. SLOMAN, Salters' Hall Court Cannon Street.

TO BE SOLD.

A SUBSTANTIALLY well built DOUBLE-FRONTED FREEHOLD DETACHED HOUSE, standing in its own grounds of 100 feet frontage, and 132 feet deep, or thereabouts, with entrance on two roads.

Within about 100 yards of the Parish Church, and two minutes' walk of a Congregational Chapel.

Close to sea, and within 100 yards of the tram lines, known as "Cliffside," Burtley Road, and Church Road, Southbourne, Hants.

The house contains on the ground floor entrance hall, drawing, dining and morning rooms, good kitchen, scullery, and well ventilated larder with housemaid's pantry, hot and cold supply, lavatory, and w.c. At the rear of the premises necessary servants' offices, coal shed, stores, cupboards, &c.

On the half landing one bedroom, on landing to right two good bedrooms, bathroom, and w.c. On the left hand one large bedroom, with dressing room, and good bedroom adjoining, the three en suite, but detachable by sound English made doors.

The whole of the interior walls of the house are built with best bricks, the roof is thoroughly water-tight, in fact the whole house is substantially built.

The Garden contains one large tennis lawn and a croquet lawn, and is well stocked with flowering shrubs, trees, rose. &c.

Opening from the drawing room is a well constructed greenhouse.

The house was valued for present owner by Messrs. Bissiker, Surveyors, at £1,350.

The garden has since been enlarged by an extra freehold Plot, for which the present owner paid £285.

The whole to be sold for the sum of £1,450, or near offer.

If disposed of during the next two months £800 may remain on mortgage at 4 per cent. Or the whole would be let to a good tenant on three years agreement at £75 per annum, or on 7, 14, or 21 years lease at £65 per annum. The premises are let at £60. The house is in good decorative repair.

Apply to Owner at "Cliffside," or 54 Avenue Road, Highgate London, N.

By Order of the Executors.

HAMPSTEAD.—Within 5 minutes of the Hampstead Tube Station, from which the City and West End is reached in 15 and 20 minutes respectively, in the best part of the district close to the famous Heath.

A substantially built residence, containing 10 bedrooms, 2 bathrooms, 4 handsome reception rooms, spacious billiard room, and ample domestic offices, with capital stabling for four horses, double coach house, coachman's rooms and outbuildings. Charming grounds with full-sized tennis court, well timbered and secluded. There are 4 heated greenhouses.

Electric Light throughout, modern up-to-date sanitation. The House stands in its own grounds and is approached by a carriage drive having double entrance gates. The House was planned and erected under the supervision of the eminent Architect, Mr. NORMAN SHAW, and is an ideal English Home, The Freehold is for sale.—Apply to CARRIDEN, 54 Avenue Road, Highgate, London, N.

MODERN COLD STORAGE AND REFRIGERATION.

ESTIMATES & ADVICE FREE

GRANITE

value for value, is the cheapest building material on the market.

INITIAL cost is seldom a reliable basis from which to estimate the economy of one material against another.

ECONOMY in building material is an altogether larger question, involving the consideration of durability, strength, appearance and resistance to atmospheric conditions.

GLENDOUGLO GREY
GLENDOUGLO RED
DOUGLAS GREY

THESE are three of the granites handled by The Douglas Granite Co., Ltd. They have been pronounced by experts to be beautiful in colour and quite free from stripes, clouds and spots.

PLEASE write for our illustrated booklet containing full particulars and exact reproductions in colour of these and other granites, large stocks of which are always ready for immediate delivery.

THE

Cornwall County News.

CORNWALL'S COUNTY PAPER.

EIGHT PAGES.
ONE HALFPENNY.

The best printed, the most popular, the most widely read, the most up-to-date. The only paper printed and published in Truro on Wednesday (Market Day).

OSCAR BLACKFORD, F.J.I.,
Printer to their Majesties
the King and Queen,
ROYAL PRINTERIES, TRURO.

THE NORTHAMPTON MERCURY

(With which is incorporated the *Northamptonshire Guardian*, the *Northampton Weekly Reporter*, and the *Daventry Spectator*).

Oldest and leading County Newspaper, comprising 8 pages (64 long columns). Price 1*d.* Established May 2, 1720.
Circulates extensively throughout the town and county and in the adjoining counties of Bedford, Buckingham, Huntingdon, Leicester, Lincoln, Oxford, Warwick, Cambridge, &c.
Published Fridays at 4.0, 5.20, and 6.45 p.m. Price per news post, 1*s.* 8*d.* per quarter prepaid; 2*s.* booked.

The Northampton Daily Reporter.

Oldest and Leading Daily in Northampton and District, comprising 4 pages (24 long columns). Price ½*d.* Established February 9, 1880.
Published daily (at 3.30, 4.0, 5.20, 6.15, and 6.45 p.m.) Fridays excepted. Price per news post, 5*s.* per quarter prepaid, 5*s.* 6*d.* booked.
These journals have the largest circulations, and are the recognised Organs of the Boot and Shoe Trade.

The Loveliest of Inland Holiday Resorts.

FOR River, Dale, Woodland and Hilly Scenery, Rural Walks, Bracing and Salubrious Mountain Air, the Sweet VALE OF LLANGOLLEN is unrivalled. It is a "scenic fairyland of verdure and foliage."—*Sketch.* "A delightful . . delicious . . and enchanted spot." —Wm. Hazlitt. An ideal quiet recuperating rest for the busy commercial man. Secure Apartments through the

"Llangollen Advertiser,"
☞ *25 words, 9d.; three insertions, 1s. 6d.*
— **HUGH JONES, Proprietor.** —

SOUTH WALES DAILY NEWS.—Pre-eminent as an advertising medium, affording exceptionally wide and effective publicity throughout Wales and the West of England, particularly amongst the commercial and moneyed classes. No appeal for capital in the above-named district can be successful without recourse being had to the *South Wales Daily News*, which each day has a special article on "South Wales Finance."—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

SOUTH WALES ECHO.—Eight editions daily, 36 columns, ½d. One of the largest and most attractive evening papers in the provinces. Circulation greater than that of all the other evening papers in Wales and Monmouthshire added together. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

CARDIFF TIMES (Weekly, 1*d.*)—For thirty years at the head of the weekly press of Wales and the West of England. One of the largest penny weeklies in the world. On being reduced from a 2*d.* to a 1*d.* paper it attained a circulation of 81,155 copies. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

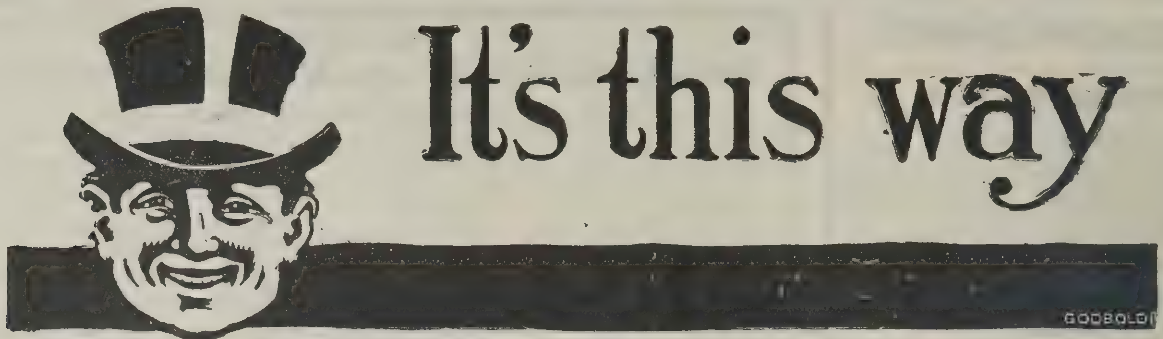
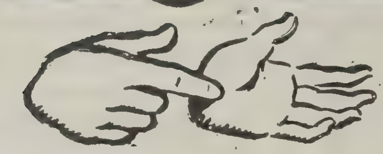
Price **10/6**, free by post.

Send remittance to P. A. GILBERT WOOD, 6–11 Imperial Buildings, Ludgate Circus, London.





IF asphalte damp courses cost from 3/6 to 5/- a yard, slate ditto about 2/6 to 3/-, whilst cement or concrete treated with Ceresit comes out at only 1/9 a yard—yet gives better results—surely it's to your advantage to use Ceresit ?

Ceresit is not a paint nor is it put on with a brush. Ceresit is a compound which can only be used mixed with cement mortar. Its use requires no skill ; it mixes readily, and does not add one penny to the labour cost.

There are no half measures about Ceresit. It makes structures absolutely "dust dry," and waterproofs not only on the surface, but right through.

May we send you a copy of the Ceresit Booklet ? It's free and very interesting.

PORTMADOC SLATES

The Quarries associated as

THE FESTINIOG DISTRICT SLATE QUARRY PROPRIETORS' ASSOCIATION,

whose names are subjoined, are the Sole Producers of **Genuine Portmadoc Slates.**

They are the largest slate producers in the world, their average annual output being **115,000 tons.**

The quality and durability of these slates has been proved by their universal use during the past 200 years.

Portmadoc Slates are extensively used by the Admiralty, War Office, the Local Government Board, Ireland, and other Government Departments. By the London County Council, the majority of Municipal and Local Authorities in Great Britain, and the leading Railway Companies.

The **Export** trade in **Portmadoc Slates** to the Continent, Colonies, and foreign countries generally is larger than that from any other district.

Portmadoc Slates have been awarded the **Grand Prix**, for Excellence of Quality and Manufacture, at the **Brussels International Exhibition, 1910.**
